- I&O ratio; electrolytes: potassium, sodium, chlorine
- Hepatic studies: AST, ALT, bilirubin, alk phos
- Dehydration or hypovolemia
- Rebound hypertension after 1-2 hr
- Cardiac rate, respiration: rate, rhythm, character, chest pain
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding, excretion unknown

Evaluate:

- Therapeutic response: decrease in atrial fibrillation/flutter

Teach patient/family:

- To report side effects immediately, pain at injection site
- About reason for medication

icatibant (Rx)

Firazyr

Func. class.: Bradykinin receptor antagonists

USES: Hereditary angioedema

DOSAGE AND ROUTES:

• **Adult: SUBCUT** 30 mg at onset of acute attack, may repeat dose every 6 hr as needed for recurring symptoms or inadequate response, max 3 doses (90 mg total)/24 hr

Available forms: Injection (SUBCUT) 10 mg/mL (30 mg)

icosapent (Rx)

(eye-koe'sa-pent)

Vascepa

Func. class.: Antilipidemic

Chem. class.: Omega-3 fatty acid ethylester

USES: As adjunct to diet in adults with severe hypertriglyceridemia (≥500 mg/dL)

CONTRAINDICATIONS: Hypersensitivity to icosapent ethyl

DOSAGE AND ROUTES

• **Adult: PO** 2 g bid with food

Available forms: Soft gel cap 0.5 g, 1 g

HIGH ALERT

IDArubicin (Rx)

(eye-dah-roob'ih-sin)

Idamycin PFS

Func. class.: Antineoplastic, antibiotic

Chem. class.: Anthracycline glycoside

Do not confuse:
IDArubicin/DOXOrubicin

ACTION: Non–cell-cycle specific; topoisomerase II inhibitor; vesicant; intercalating between DNA base pairs, causing shape change, low free radicals

USES: Used in combination with other antineoplastics for acute myelocytic leukemia in adults

Unlabeled uses: Breast cancer, liquid tumors, non-Hodgkin's lymphoma, ALL, CML, NHL

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity to this product or other anthracyclines/anthracenediones, severe infection, maximum cumulative dose of IDArubicin, DOXOrubicin, daunorubicin, epiRUBicin, or other anthracenediones

Black Box Warning: Myelosuppression, bilirubin >5 mg/dL

Precautions: Children, gout, bone marrow depression, preexisting CV disease, dehydration, electrolyte imbalance, infection, vaccination

Black Box Warning: Renal/hepatic disease, heart failure

DOSAGE AND ROUTES

• **Adult: IV** 8-12 mg/m^2/day × 3 days in combination with cytarabine (induction)

• **Adolescent/child (unlabeled): IV** 10-12 mg/m^2/day × 3 days

Black Box Warning: Renal/hepatic dose: Adult: IV CCr >2.5 mg/dL, reduce dose; bilirubin 2.5-5 mg/dL, reduce dose by 50%; bilirubin >5 mg/dL, do not use

Available forms: Inj 1 mg/mL in 5-mL, 10-mL, 20-mL single-use vials

Administer:

• Intermittent ice compress after stopping infusion for extravasation (½ hr immediately, then ½ hr qid × 3 days), elevate extremity; early wide excision of area may be considered if severe pain persists

• Store at room temperature for 3 days after reconstituting or 7 days refrigerated

Intermittent IV INFUSION route

• Do not give IM/SUBCUT

• Use cytotoxic handling procedures after preparing in biologic cabinet wearing gown, gloves, mask

• Antiemetic 30-60 min before product and 6-10 hr after treatment to prevent vomiting
• After reconstituting 5-mg vial with 5 mL 0.9% NaCl (1 mg/1 mL), give over 10-15 min through Y-tube or 3-way stopcock of infusion of D_5W or NS; discard unused portion; use caution when needle inserted into vial (negative pressure)
• Use a free-flowing IV; do not give IM/SUBCUT
• A vesicant, monitor for necrosis

Y-site compatibilities: Amifostine, amikacin, aztreonam, cimetidine, cladribine, cyclophosphamide, cytarabine, diphenhydrAMINE, droperidol, erythromycin, filgrastim, granisetron, imipenem/CISplatin, magnesium sulfate, mannitol, melphalan, metoclopramide, potassium chloride, raNITIdine, sargramostim, thiotepa, vinorelbine

SIDE EFFECTS

CNS: Fever, chills, *headache,* seizures
CV: Dysrhythmias, HF, pericarditis, myocarditis, peripheral edema, angina, MI, myocardial toxicity
GI: *Nausea, vomiting, abdominal pain, mucositis, diarrhea,* hepatotoxicity
GU: Nephrotoxicity, red urine
HEMA: Thrombocytopenia, leukopenia, anemia
INTEG: Rash, extravasation, dermatitis, *reversible alopecia,* urticaria; thrombophlebitis and tissue necrosis at inj site; radiation recall
SYST: Infection, tumor lysis syndrome, anaphylaxis, infection, shock, myelodysplastic syndrome

PHARMACOKINETICS

Half-life 22 hr; metabolized by liver; crosses placenta; excreted in bile, urine (primarily as metabolites); 97% protein binding

INTERACTIONS

Increase: bleeding risk—anticoagulants, salicylates, NSAIDs, thrombolytics; avoid concurrent use
Decrease: IDArubicin effect—corticosteroids
Increase: HF, ventricular dysfunction—trastuzumab
Increase: ECG changes (QT prolongation, changes in QRS voltage)—class IA/III antidysrhythmias, some phenothiazines, and other products that increase QT prolongation
Increase: cardiotoxicity—cyclophosphamide
Increase: toxicity—other antineoplastics or radiation
Decrease: antibody response—live virus vaccines

Drug/Lab Test
Decrease: calcium, platelets, neutrophils
Increase: uric acid, phosphate, potassium, LFTs

NURSING CONSIDERATIONS

Assess:

Black Box Warning: CBC, differential, platelet count weekly; notify prescriber of results, severe myelosuppression can occur

• Renal studies: BUN, serum uric acid, urine CCr; electrolytes before, during therapy
• Tumor lysis syndrome: hyperkalemia, hyperphosphatemia, hyperuricemia, hypocalcemia
• I&O ratio; report fall in urine output to <30 mL/hr
• Monitor temperature; fever may indicate beginning infection

Black Box Warning: Hepatic studies before, during therapy: bilirubin, AST, ALT, alk phos prn or monthly; check for jaundice of skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea, do not use if bilirubin >5 mg/dL

Black Box Warning: Cardiac toxicity: HF, dysrhythmias, cardiomyopathy; cardiac studies before and periodically during treatment: ECG, chest x-ray, MUGA; ECG: watch for ST-T wave changes, low QRS and T, possible dysrhythmias (sinus tachycardia, heart block, PVCs)

• **Bleeding:** hematuria, guaiac stools, bruising or petechiae, mucosa or orifices

• Effects of alopecia on body image; discuss feelings about body changes
• Inflammation of mucosa, breaks in skin
• Buccal cavity for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia

Black Box Warning: Local irritation, pain, burning at inj site; extravasation (vesicant)

• GI symptoms: frequency of stools, cramping
• Increase fluid intake to 2-3 L/day to prevent urate and calculi formation
• **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding

Evaluate:
• Therapeutic response: decreased liquid tumor, spread of malignancy

Teach patient/family:
• To report signs of HF, cardiac toxicity, beginning infection
• That hair may be lost during treatment; that wig or hairpiece may make patient feel better; that new hair may be different in color, texture
• To avoid foods with citric acid, hot temperature, or rough texture
• To avoid crowds, persons with upper respiratory illness
• To report any bleeding, white spots, ulcerations in mouth; to examine mouth daily
• That urine may be red-orange for 48 hr; that all body fluids will change color
• To report if pregnancy is planned or suspected; to use contraception during treatment and for ≥4 mo after treatment

idarucizumab (Rx)

(eye-da-roo-siz′uh-mab)

Praxbind

Func. class.: Antidote (dabigatran)
Chem. class.: Monoclonal antibody

Do not confuse:
Praxbind/digibind
Idarucizumab/idarubicin

ACTION:

A humanized monoclonal antibody fragment (Fab) that binds specifically to dabigatran and its acylglucuronide metabolites with a higher affinity for dabigatran to thrombin and neutralizes the anticoagulant effect within minutes

USES:

Reversal of dabigatran

CONTRAINDICATIONS:

Hypersensitivity, fructose intolerance, sobitol parenterally, children <18 yr
Precautions: Pregnancy, breastfeeding, liver disease

DOSAGE AND ROUTES

Adult IV Bolus: 5 g (given as 2 separate 2.5-g/50 mL doses no more than 15 min apart)
Available forms: Injection 2.5 g/50 mL in single-use vials
Administer:

IV route
• For IV use only
• Do not shake
• Prior to use, flush preexisting IV line with NSS
• Give dose undiluted as an IV bolus by syringe or as an infusion by hanging the vials
• Do not mix with other drugs or give any other infusion in the same IV line
• Give promptly once solution has been removed from vial. Infusion of each vial should take no longer than 5 to 10 min, with the second vial of 2.5 g administered no later than 15 min after the end of the first 2.5-g vial
• Store intact vials at 2°C to 8°C (36°F to 46°F) in original packaging (to protect from light), do not freeze. May store intact vials in the original packaging (to protect from light) at room temperature, 25°C (77°F), for up to 48 hr or up to 6 hr if exposed to light

SIDE EFFECTS

CNS: Headache, delirium
GI: Constipation

MISC: Hypersensitivity (fever, pruritus, rash)
RESP: Bronchospasm, pneumonia
CV: Thrombotic event
GU: UTI

PHARMACOKINETICS
Onset a few minutes, peak unknown, duration 24 hr, half-life 10.3 hr

INTERACTIONS:
None known
Drug/Lab: Increase: aPtt, ecarin clotting time (ECT)
Decrease: Potassium

NURSING CONSIDERATIONS
Assess:
• **Thrombotic risk:** Resume anticoagulant treatment as soon as possible to decrease the risk of thrombosis formation, may restart after 24 hr
• **Hypersensitivity:** Assess for hypersensitivity (bronchospasm, fever, pruritus, dyspnea, rash); hereditary fructose intolerance, product contains sorbitol
• **Pregnancy/breastfeeding:** No well-controlled studies, use only if clearly needed, cautious use in breastfeeding
Evaluate:
• Therapeutic response: Dabigatran reversal
Teach patient/family:
• Reason for product and expected result
• To notify provider of bleeding or clots (numbness, weakness on one side of the body; pain, redness, tenderness, warmth, swelling in the arms or legs; change in color of an arm or leg; chest pain; shortness of breath; coughing up blood); allergic reaction (rash; hives; itching; red, swollen, blistered, or peeling skin with or without fever; wheezing; tightness in the chest, throat; trouble breathing, swallowing; swelling of the mouth, face, lips, tongue, throat)
• **Pregnancy/breastfeeding:** To notify provider if pregnancy is planned or suspected or if breastfeeding

⚠ HIGH ALERT

idelalisib (Rx)
(eye-del′a-lis′ib)
Zydelig
Func. class.: Antineoplastic, biologic response modifier
Chem. class.: Signal transduction inhibitor (STI)

ACTION: Selective, small-molecule inhibitor of one kinase (expressed in both normal and malignant B-cells). Induces apoptosis and inhibited proliferation, inhibits several cell signaling pathways

USES: Treatment of relapsed chronic lymphocytic leukemia (CLL), in combination with riTUXimab, in those for whom riTUXimab alone should not be used; non-Hodgkin's lymphoma (NHL), relapsed follicular B-cell non-Hodgkin's lymphoma in those who have received at least 2 prior systemic therapies and are refractory to both riTUXimab/alkylating agent

CONTRAINDICATIONS: Infusion-related reaction, serious rash, pregnancy
Precautions: Serious allergic reactions, grade 3 or 4 neutropenia, breastfeeding, hyperglycemia/hypoglycemia

Black Box Warning: Serious hepatotoxicity, grade 3 or higher diarrhea or colitis, fatal/serious pneumonitis, GI perforation, infection

DOSAGE AND ROUTES
Follicular lymphoma
• **Adult: PO** 150 mg bid until disease progression or unacceptable toxicity
Chronic lymphocytic leukemia
• **Adult: PO** 150 mg bid with rituximab 375 mg/m^2 **IV**, then 500 mg/m^2 **IV** q2wk for 4 doses, then q4wk for 3 doses, for a total of 8 infusions

Hepatic dose

- **AST/ALT >3-5 × ULN:** No change; monitor AST/ALT at least every week until ≤1 × ULN
- **AST/ALT >5-20 × ULN:** Hold doses, monitor AST/ALT at least every week, when AST/ALT are ≤1 × ULN, resume at 100 mg bid
- **AST/ALT >20 × ULN:** Permanently discontinue
- **Bilirubin >1.5-3 × ULN:** No change; monitor bilirubin at least every week until ≤1 × ULN
- **Bilirubin >3-10 × ULN:** Hold treatment; monitor bilirubin at least every week; when bilirubin is ≤1 × ULN, resume treatment at 100 mg bid
- **Bilirubin >10 × ULN:** Permanently discontinue

Available forms: Tabs 100, 150 mg

Administer:

- Take without regard to food; do not crush or dissolve tabs
- Do not take 2 doses at the same time; if a dose is missed by <6 hr, take the dose, take next dose at usual time

Therapeutic drug monitoring: dosage adjustments due to treatment-related toxicity

- **Moderate diarrhea (4-6 stools/day over baseline):** Continue current dosing; monitor at least every week until diarrhea is resolved
- **Severe diarrhea (≥7 stools/day over baseline) or diarrhea requiring hospitalization:** Hold treatment, and monitor at least every week for resolution. When diarrhea has resolved, resume with 100 mg bid
- **Life-threatening diarrhea:** Permanently discontinue treatment
- **Neutropenia: ANC 1000-1499 cells/mm^3:** no change; **ANC 500-999 cells/mm^3:** continue current dosing; monitor ANC at least every week; **ANC <500 cells/mm^3:** hold treatment and monitor ANC at least every week, when ANC ≥500 cells/mm^3, resume treatment at 100 mg bid
- **Thrombocytopenia: Platelet count 50,000-75,000 cells/mm^3:** no change; **platelet count 25,000-49,000 cells/mm^3:** continue dose; monitor platelet count at least every week; **platelet count <25,000 cells/mm^3:** hold treatment, monitor platelet count at least every week, when platelet count ≥25,000 cells/mm^3, resume treatment at 100 mg bid
- **Symptomatic pneumonitis (any severity):** Discontinue treatment
- **Other severe or life-threatening toxicities:** Hold until toxicity is resolved; if resuming treatment, reduce the dose to 100 mg bid; permanently discontinue treatment for any recurrence of severe or life-threatening toxicity after rechallenge

SIDE EFFECTS

CNS: Insomnia, fatigue, *fever, headache, chills, pain*

RESP: Pneumonitis, dyspnea, cough, severe infection

ENDO: Hypoglycemia, hyperglycemia, hyponatremia

INTEG: Rash

EENT: Sinusitis

GI: Nausea, vomiting, hepatic failure, GI perforation, stomatitis, colitis, diarrhea, anorexia, abdominal pain, GERD

HEMA: Thrombocytopenia, neutropenia, anemia

SYST: Serious/fatal rashes, infection, sepsis

PHARMACOKINETICS

84% protein binding, half-life 8.2 hr, peak 1.5 hr

INTERACTIONS

Avoid use with CYP3A4 inhibitors, inducers, substrates

- **Decrease:** Action with strong CYP3A inducers (phenytoin, carBAMazepine, rifAMPin) may need dosage increase
- **Increase toxicity**—CYP3A inhibitors (ketoconazole, verapamil, dilTIAZem)
- **Increase:** CYP3A substrates (cycloSPORINE, fentanyl, tacrolimus, ergots, warfarin), avoid concurrent use

Drug/Lab Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Hepatic failure: increased LFTs within the first 12 wk and were reversible with dose interruption. Monitor LFTs q2wk × 3 mo, then q4wk for 3 mo, and q1-3mo thereafter; monitor weekly if AST or ALT are >3 times the upper limit of normal (ULN) or bilirubin >1.5 × ULN. Hepatotoxicity may require treatment interruption, dose reduction, or discontinuation of therapy

Black Box Warning: Severe diarrhea/GI perforation: The occurrence of ≥7 stools/day over baseline or hospitalization due to diarrhea may require interruption, dose reduction, or permanent discontinuation. Assess for abdominal pain, chills, fever, or nausea/vomiting. If intestinal perforation occurs, permanently discontinue

Black Box Warning: Infections/pneumonitis: monitor for cough, dyspnea, hypoxia, and bilateral interstitial infiltrates, or a decline in O_2 saturation by >5%. If pneumonitis is suspected, hold therapy. Permanently discontinue for pneumonitis and consider corticosteroids

• **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding

Evaluate:

• Therapeutic response: Decreased disease progression

Teach patient/family:

• **Pregnancy/breastfeeding:** to report planned or suspected pregnancy; to use effective contraception during treatment and for at least 1 mo after the last dose; to avoid breastfeeding

• To report new or worsening side effects

• To take tabs whole, not to crush or chew; to take with food for GI upset

⚠ HIGH ALERT

ifosfamide (Rx)

(i-foss′fa-mide)

Ifex

Func. class.: Antineoplastic alkylating agent

Chem. class.: Nitrogen mustard

Do not confuse:

ifosfamide/cyclophosphamide

ACTION: Alkylates DNA, inhibits enzymes that allow synthesis of amino acids in proteins; also responsible for cross-linking DNA strands; activity is not cell-cycle–stage specific

USES: Germ cell testicular cancer in combination

Unlabeled uses: Soft tissue sarcoma, ALL, Ewing sarcoma, NHL, NSCLC, osteogenic sarcoma, penile cancer

CONTRAINDICATIONS: Pregnancy, hypersensitivity

Precautions: Breastfeeding, children, renal/hepatic/cardiac disease, accidental exposure, infection, varicella, anemia, chronic lung disease, geriatrics, radiation therapy

Black Box Warning: Coma, hemorrhagic cystitis, bone marrow suppression, neurotoxicity, nephrotoxicity, encephalopathy

DOSAGE AND ROUTES

Germ cell testicular cancer

• Give with mesna for uroprotective treatment

• **Adult: IV** 1.2-2 g/m²/day × 5 days, repeat course q3wk, given with mesna, in combination with 1-2 other antineoplastic agents

Sarcoma of soft tissue (orphan drug designation) (unlabeled)

• **Adult: IV INFUSION MAID regimen:** DOXOrubicin 60 mg/m² and dacarbazine 1000 mg/m², mixed or administered separately via **CONT IV INFUSION** over 4 days, ifosfamide 6000 mg/m² and mesna 10,000 mg/m² mixed or infused separately over 3 days (ifosfamide) and 4 days (mesna); repeat q21days if tolerated; OR MAID regimen: DOXOrubicin 60 mg/m² and dacarbazine 900 mg/m², mixed and administered through central venous access via **CONT IV INFUSION** over 3 days, ifosfamide 7500 mg/m² and mesna 10,000 mg/m² mixed or infused separately through a peripheral

line via a **CONT IV INFUSION** over 3 days (ifosfamide) and 4 days (mesna); repeat q21days if tolerated

Renal dose

- **Adult: IV** CCr 31-60 mL/min, give 75% of dose; CCr 10-30 mL/min, give 50% of dose; CCr <10 mL/min, do not give

Available forms: Inj 1-, 3-g vials

Administer:

- Antiemetic 30-60 min before product to prevent vomiting
- Give mesna IV concurrently and 4 and 8 hr after each dose being 20% of ifosfamide dose
- Visually inspect parenteral products for particulate matter and discoloration before use
- Store powder at room temperature

Intermittant/continuous IV infusion route

- Give as an intermittent infusion or continuous infusion
- Well hydrate with ≥2 L/day of oral or IV fluids to prevent bladder toxicity
- Close hematologic monitoring is recommended; WBC count, platelet count, and hemoglobin should be obtained before each use and periodically thereafter
- A urinalysis should be performed before each dose to monitor for hematuria

Reconstitution and further dilution:

- Reconstitute 1 or 3 g with 20 or 60 mL, respectively, of sterile water for injection or bacteriostatic water for injection containing parabens or benzyl alcohol to give IV solutions containing 50 mg/mL
- Solutions may be diluted further to achieve concentrations of 0.6-20 mg/mL in the following solutions: D_5W, NS, LR, or sterile water for injection
- Infuse slowly over at least 30 min
- Diluted and reconstituted solutions must be refrigerated and used within 24 hr

Y-site compatibilities: Acyclovir, alatrofloxacin, alemtuzumab, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone amphotericin B cholesteryl (amphotec), amphotericin B conventional colloidal, amphotericin B lipid complex (abelcet), amphotericin B liposome (ambisome), ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, arsenic trioxide, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, cefTAZidime (L-arginine), ceftizoxime, cefTRIAXone, cefuroxime, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, codeine, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, DAUNOrubicin liposome, dexamethasone phosphate, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium, DOXOrubicin, DOXOrubicin liposomal, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, gallium nitrate, ganciclovir, gatifloxacin, gemcitabine, gemtuzumab, gentamicin, granisetron, haloperidol, heparin, hydrocortisone phosphate/succinate, HYDROmorphone, hydrOXYzine, IDArubicin, imipenem-cilastatin, inamrinone, insulin (regular), isoproterenol, ketorolac, labetalol, lansoprazole, lepirudin, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, melphalan, meperidine, meropenem, mesna, methohexital, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoMYcin, mitoXANTRONE, mivacurium, morphine, moxifloxacin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ofloxacin, ondansetron, oxaliplatin, PACLitaxel (solvent/surfactant), palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, PENTobarbital, PHENobarbital, phenylephrine, piperacillin, piperacillin-tazobactam, potassium acetate/chloride,

procainamide, prochlorperazine, promethazine, propofol, propranolol, quinupristin-dalfopristin, raNITIdine, rapacuronium, remifentanil, riTUXimab, rocuronium, sargramostim, sodium acetate/bicarbonate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, TNA (3-in-1), tobramycin, topotecan, TPN (2-in-1), trastuzumab, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Facial paresthesia, fever, malaise, somnolence, confusion, depression, hallucinations, dizziness, disorientation, seizures, coma, cranial nerve dysfunction, encephalopathy
GI: *Nausea, vomiting,* anorexia, hepatotoxicity, stomatitis, dyslipidemia, hyperglycemia, constipation, diarrhea
GU: Hematuria, nephrotoxicity, *hemorrhagic cystitis,* dysuria, urinary frequency
HEMA: *Thrombocytopenia, leukopenia, anemia,* retrograde ejaculation
INTEG: Dermatitis, *alopecia,* pain at inj site, hyperpigmentation
META: Metabolic acidosis, infection
RESP: Pulmonary toxicity

PHARMACOKINETICS

Metabolized by liver; saturation occurs at high doses; excreted in urine, breast milk; half-life 7-15 hr, depends on dose; onset unknown, peak 1-2 wk, duration 3 wk

INTERACTIONS

Do not use within 24 hr of hematopoietic progenitor cells
Increase: myelosuppression—other antineoplastics, radiation
Increase: toxicity—CYP3A4, inducers, (barbiturates, carbamazepine, phenytoin, rifampin)
Increase: bleeding risk—NSAIDs, anticoagulants, salicylates, thrombolytics
Decrease: antibody response—live virus vaccines
Decrease: effect of ifosfamide—CYP3A4 inhibitors
Drug/Herb
Increase: toxicity—St. John's Wort
Drug/Lab
Increase: LFTs, BUN, creatinine
Decrease: Platelets, WBC
Drug/Food
Increase: levels avoid with grapefruit juice

NURSING CONSIDERATIONS

Assess:

• **Hepatic studies before, during therapy** (bilirubin, AST, ALT, LDH) monthly or as needed; jaundice of skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea

Black Box Warning: Bone marrow suppression: CBC, differential, platelet count weekly; withhold product if WBC <2000/mm^3 or platelet count <50,000/mm^3; notify prescriber; severe myelosuppression may occur, nadir of leukopenia, thrombocytopenia 7-14 days, recovery 21 days

• Monitor temperature, flu like symptoms (may indicate beginning infection)
• B/P, pulse, respirations, baseline and periodically during treatment
• **Blood dyscrasias** (anemia, granulocytopenia); bruising, fatigue, bleeding, poor healing
• **Allergic reactions:** dermatitis, exfoliative dermatitis, pruritus, urticaria

Black Box Warning: Hemorrhagic cystitis: I&O ratio; monitor for hematuria; hemorrhagic cystitis can occur; increase fluids to 3 L/day; urinalysis before each dose, not to give at night, give with mesna to prevent this condition

Black Box Warning: Neurotoxicity: hallucinations, confusion, disorientation, coma; product should be discontinued, usually resolves in 3-4 days

• **Bleeding:** hematuria, guaiac, bruising or petechiae, mucosa or orifices; avoid IM injections
• **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding

Evaluate:
• Therapeutic response: decrease in size and spread of tumor
Teach patient/family:
• To notify prescriber of sore throat, swollen lymph nodes, malaise, fever; other infections may occur, to discuss encephalopathy, neurotoxicity
• Not to have live virus vaccinations during or for 3 mo-1 yr after treatment
• That hair may be lost during treatment; that wig or hairpiece may make the patient feel better; that new hair may be different in color, texture
• To report signs of anemia: fatigue, headache, faintness, SOB, irritability
• To report bleeding; to avoid use of razors, commercial mouthwash; to avoid use of aspirin products, NSAIDs, ibuprofen because hemorrhage can occur
• To avoid crowds, persons with infections
• To report confusion, hallucinations, extreme drowsiness, numbness, tingling; to avoid alcohol use for ≥4 mo after treatment
• To avoid driving, hazardous activities until reaction is known
• To use excessive fluids and urinate often to prevent hemorrhagic cystitis; to report pink or red urine
• To notify prescriber if pregnancy is planned or suspected; to use contraceptive measures during therapy; not to breastfeed

iloperidone (Rx)

(ill-o-pehr'ih-dohn)

Fanapt

Func. class.: 2nd-generation atypical antipsychotic
Chem. class.: Benzisoxazole derivative

Do not confuse:
Fanapt/Xanax

ACTION: Unknown; may be mediated through both DOPamine type 2 (D2) and serotonin type 2 (5-HT2) antagonism, high receptor binding affinity for norepinephrine (alpha 1)

USES: Schizophrenia

CONTRAINDICATIONS: Breastfeeding, hypersensitivity
Precautions: Pregnancy, children, geriatric patients, renal/hepatic disease, breast cancer, Parkinson's disease, dementia with Lewy bodies, seizure disorder, QT prolongation, bundle branch block, acute MI, ambient temperature increase, AV block, stroke, substance abuse, suicidal ideation, tardive dyskinesia, torsades de pointes, blood dyscrasias, dysphagia

Black Box Warning: Increased mortality in elderly patients with dementia-related psychosis; opioids

DOSAGE AND ROUTES

• **Adult: PO** 1 mg bid, may increase to target dose of 6-12 mg bid with daily dose adjustment of max 2 mg bid, titrate slowly; max 24 mg/day in 2 divided doses; reduce dose by 50% in patient who is a poor metabolizer of CYP2D6 or when used with strong CYP2D6/CYP3A4 inhibitors
Available forms: Tabs 1, 2, 4, 6, 8, 10, 12 mg; titration pack
Administer:
• Use without regard to meals
• Reduced dose in geriatric patients
• Anticholinergic agent for EPS
• Avoid use with CNS depressants
• Store in tight, light-resistant container

SIDE EFFECTS

CNS: *EPS, pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia; drowsiness,* seizures, neuroleptic malignant syndrome, dizziness, delirium, depression, paranoia, fatigue, hostility, lethargy, restlessness, vertigo, tremor
CV: Orthostatic hypotension, heart failure, AV block, QT prolongation, tachycardia
EENT: Blurred vision, cataracts, nystagmus, tinnitus, nasal congestion

GI: *Nausea,* vomiting, *anorexia, constipation,* jaundice, weight gain/loss, abdominal pain, stomatitis, xerostomia, dry mouth
GU: Urinary retention/incontinence, priapism
HEMA: Agranulocytosis, leukopenia, neutropenia
MISC: ↻, Decreased bone density hyperglycemia, dyslipidemia
SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

PO: Extensively metabolized by liver to major active metabolite by ↻ CYP2D6, CYP3A4; protein binding 95%; peak 2-4 hr; excreted in urine and feces; ↻ terminal half-life 18 hr in extensive metabolizers; 33 hr in poor metabolizers

INTERACTIONS

Increase: sedation—other CNS depressants, alcohol, opioids
Increase: iloperidone effect, decreased clearance—CYP2D6 (fluoxetine, paroxetine), CYP3A4 inhibitors (delavirdine, indinavir, isoniazid, itraconazole, dalfopristin, ritonavir, tipranavir); reduce dose
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine
Decrease: iloperidone action—CYP2D6, CYP3A4 inducers (carBAMazepine, barbiturates, phenytoins, rifAMPin)
Drug/Lab Test
Increase: prolactin levels, cholesterol, glucose, lipids, triglycerides
Decrease: potassium

NURSING CONSIDERATIONS

Assess:
• AIMS assessment, lipid panel, blood glucose, CBC, glycosylated hemoglobin A1c, LFTs, neurologic function, pregnancy test, serum creatinine, electrolytes, prolactin, thyroid function studies, weight
• Affect, orientation, LOC, reflexes, gait, coordination, sleep-pattern disturbances
• B/P standing and lying, pulse, respirations q4hr during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; watch for ECG changes; QT prolongation may occur; dizziness, faintness, palpitations, tachycardia on rising
• **Extrapyramidal symptoms,** including akathisia, tardive dyskinesia (bizarre movements of the jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait)
• Check to see the patient swallows the medication

Black Box Warning: Dementia-related psychosis: sudden death; not to be used in the elderly with dementia

• **Neuroleptic malignant syndrome:** hyperthermia, increased CPK, altered mental status, muscle rigidity, seizures, diaphoresis; discontinue immediately, notify prescriber

Black Box Warning: Opioids: Use only if alternative agents are not effective

• Constipation, urinary retention daily; if these occur, increase bulk and water in diet
• Weight gain, BMI, waist circumference, hyperglycemia, metabolic changes in diabetes
• Supervised ambulation until patient is stabilized on medication; do not involve patient in strenuous exercise program because fainting is possible; patient should not stand still for long periods
• Sips of water, candy, gum for dry mouth
• **Beers:** avoid in older adults except for schizophrenia, bipolar disorder, or short-term use as an antiemetic during chemotherapy; increased risk of stroke
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; infant exposed to product during 3rd trimester may exhibit EPS; do not breastfeed, excretion unknown

Evaluate:
• Therapeutic response: decrease in emotional excitement, hallucinations, delusions, paranoia; reorganization of patterns of thought, speech

Teach patient/family:
• That orthostatic hypotension may occur; to rise from sitting or lying position gradually
• To avoid hot tubs, hot showers, tub baths because hypotension may occur; that heat stroke may occur in hot weather; to take extra precautions to stay cool
• To avoid abrupt withdrawal of product because extrapyramidal symptoms may result; that product should be withdrawn slowly; to review symptoms of neuroleptic malignant syndrome

Black Box Warning: Opioids: Teach patient/family/caregiver, to seek medical care immediately if dizziness, drowsiness, trouble breathing occur

• To avoid OTC preparations (cough, hay fever, cold), herbals, supplements unless discussed by prescriber because serious product interactions may occur; to avoid use of alcohol because increased drowsiness may occur
• To use gum, lozenges for dry mouth
• To avoid hazardous activities if drowsy or dizziness occurs
• To comply with product regimen, to take as prescribed, not to skip or double doses, if medication is missed for >3 days start as initial dose
• To report impaired vision, tremors, muscle twitching
• That follow-up exams will be needed
• To use contraception; to inform prescriber if pregnancy is planned or suspected; if pregnant, should enroll in the Atypical Antipsychotic National Pregnancy Registry: 866-961-2388

TREATMENT OF OVERDOSE:
Lavage if orally ingested; provide airway; *do not induce vomiting*

iloprost (Rx)
[eye′-loe-prost]
Ventavis
Func. class.: Pulmonary vasodilator
Chem. class.: Prostacyclin analog

ACTION:
Produces vasodilation and antiproliferative effects; mechanism for vasodilation is unclear. Hemodynamic effects following relaxation of vascular smooth muscle and vasodilation include decreased pulmonary vascular resistance, increased cardiac index, increased oxygen delivery. Also decreases platelet aggregation

USES:
PAH in those with NYHA Class III or IV symptoms

CONTRAINDICATIONS:
Hypersensitivity
Precautions: Asthma, breastfeeding, children, COPD, driving, geriatrics, hepatic disease, hypotension, pregnancy, pulmonary edema

DOSAGE AND ROUTES
• **Adult: INH** 2.5 mcg using adaptive aerosol delivery (AAD) or Prodose (AAD); may increase to 5 mcg 6-9×/day as needed separated by ≥2 hr, max 5 mcg 9×/day
• **Geriatric: INH** start at low end of dose

Hepatic dose
• **Adult:** INH increase dosing interval to q3-4h

Available forms: INH solution 10, 20 mcg/mL

Administer:
• Use only delivery devices provided
• Do not take orally; avoid ocular exposure, contact with skin
• If signs of pulmonary edema occur in those with pulmonary hypertension, treatment should be stopped immediately; this may be a sign of pulmonary venous hypertension

SIDE EFFECTS
CNS: Headache, insomnia, syncope
CV: Hypotension, chest pain, vasodilation, palpitations, heart failure, supraventricular tachycardia, edema

GI: Nausea, vomiting, mouth/tongue discomfort
GU: Renal failure
RESP: Cough, dyspnea, pneumonia, flu-like symptoms

PHARMACOKINETICS
Half-life 30 min, peak 5 min, duration 30-60 min

INTERACTIONS
Increase: bleeding risk—anticoagulants, platelet inhibitors; assess for bleeding
Increase: hypotension—antihypertensives, vasodilators; monitor B/P
Drug/Lab Test:
Increase: alkaline phosphatase

NURSING CONSIDERATIONS
Assess:
• **Pulmonary arterial hypertension (PAH):** dizziness, light-headedness, fainting because of lowered B/P; patients should use caution when driving or operating machinery until effect is known
• **Syncope:** because of risk of syncope, vital signs should be monitored while initiating; in those with low systemic blood pressure, avoid further hypotension; do not use in systolic blood pressure <85 mm Hg; if syncope occurs during physical exertion, dose may need to be adjusted
• **Renal failure:** monitor closely in patients with renal impairment; effect may be extended
• **Bronchospasm:** may occur especially in susceptible patients with hyperreactive airways; avoid use in COPD, severe asthma, acute respiratory infection
• **Pregnancy/breastfeeding:** use during pregnancy only if benefits to mother clearly outweigh potential risk to fetus; not known whether product crosses placenta
Teach patient/family:
• To take as prescribed; not to double doses; to take 2 hr before physical exertion; not to save leftover product; to always keep enough product and backup inhalation device; not to mix with other medications; not to miss doses or stop abruptly, risk of rebound hypertension
• To keep away from skin and eyes
• To avoid driving or other hazardous activities until reaction is known; dizziness, syncope may occur; to rise slowly to minimize orthostatic hypotension
• To monitor B/P; do not take if systolic B/P <85 mm Hg

⚠ HIGH ALERT

imatinib (Rx)
(im-ah-tin′ib)
Gleevec
Func. class.: Antineoplastic—miscellaneous
Chem. class.: Protein-tyrosine kinase inhibitor

I

ACTION: Inhibits Bcr-Abl tyrosine kinase created in patients with chronic myeloid leukemia (CML), also inhibits tyrosine kinases

USES: Treatment of CML; Philadelphia chromosome–positive (Ph+) in blast-cell crisis or in chronic failure; gastrointestinal stromal tumors (GIST) positive for c-Kit; chronic eosinophilic leukemia, (CEL) Ph+ acute lymphocytic leukemia, dermatofibrosarcoma protuberans, myelodysplastic syndrome, systemic mastocytosis, HES

CONTRAINDICATIONS: Pregnancy, hypersensitivity
Precautions: Breastfeeding, children, geriatric patients, cardiac/renal/hepatic disease, GI bleeding, bone marrow suppression, infection, thrombocytopenia, neutropenia, immunosuppression

DOSAGE AND ROUTES
For the treatment of Ph+ CML chronic phase as initial therapy
• **Adult: PO** 400 mg/day, continue as long as beneficial; may increase to 600 mg/day in the absence of severe adverse reactions and severe non–leukemia-related neutropenia or thrombocytopenia
• **Adolescent/child >2 yr: PO** 340 mg/m²/day, max 600 mg/day; the daily dose

may be given as a single dose or split into 2 doses given once in the morning and once in the evening

Ph+ acute lymphocytic leukemia (ALL)

• **Adult: PO** 600 mg every day, continue as long as beneficial

GIST

• **Adult: PO** 400-600 mg every day, may increase to 400 mg bid

Adjuvant treatment of *Kit* (CD117)-positive GIST after complete gross resection

• **Adult: PO** 400 mg/day

HES/CEL

• **Adult: PO** 400 mg/day in those who are FIPL1L-PDGFR α-fusion kinase negative or unknown; for HES/CEL patients with demonstrated FIP1L1-PDGFR α-fusion kinase, 100 mg/day, may increase to 400 mg

MDS/MPD

• **Adult: PO** 400 mg/day

Aggressive systemic mastocytosis (ASM) without D816V c-Kit mutation or with c-Kit mutation status unknown

• **Adult: PO** 400 mg/day

DFSP

• **Adult: PO** 400 mg twice daily

Renal dose

• **Adult: PO** CCr 40-59 mL/min, max 600 mg/day; CCr 20-39 mL/min, decrease initial dose by 50%, max 400 mg/day; CCr <20 mL/min, use with caution, 100 mg/day

Hepatic dose

• **Adult: PO** Total bilirubin 1.5-3 × ULN and any AST, decrease initial dose to 400 mg/day; total bilirubin >3 × ULN and any AST, decrease initial dose to 300 mg/day

Available forms: Tabs 100, 400 mg

Administer:

• With meal and large glass of water to decrease GI symptoms; doses of 800 mg should be given as 400 mg bid

• Tab may be dispersed in a glass of water or apple juice, use 50 mL of liquid for 100-mg tab, 200-mL liquid for 400-mg tab

• Use low-molecular-weight anticoagulant for anticoagulant if needed, not warfarin

• Continue as long as beneficial

• Store at 77°F (25°C)

SIDE EFFECTS

CNS: Headache, dizziness, insomnia, subdural hematoma, CNS hemorrhage

CV: Hemorrhage, heart failure, cardiac tamponade, cardiac toxicity

EENT: Blurred vision, conjunctivitis

GI: *Nausea,* hepatotoxicity, vomiting, dyspepsia, *anorexia, abdominal pain,* GI perforation, diarrhea

HEMA: Neutropenia, thrombocytopenia, bleeding, hypereosinophilia

INTEG: *Rash, pruritus,* alopecia, photosensitivity, drug rash with eosinophilia and systemic symptoms (DRESS)

META: *Fluid retention, hypokalemia, edema*

MISC: Fatigue, epistaxis, pyrexia, night sweats, increased weight, flulike symptoms, hypothyroidism, tumor lysis syndrome

MS: Cramps, pain, arthralgia, myalgia

RESP: Cough, dyspnea, nasopharyngitis, pneumonia, pleural effusion

PHARMACOKINETICS

Well absorbed (98%); protein binding 95%; metabolized by CYP3A4; excreted in feces, small amount in urine; peak 2-4 hr; duration 24 hr (imatinib), 40 hr (metabolite); half-life 18-40 hr

INTERACTIONS

Increase: imatinib concentrations—CYP3A4 inhibitors (ketoconazole, itraconazole, erythromycin, clarithromycin)

Increase: plasma concentrations of simvastatin, calcium channel blockers, ergots

Increase: plasma concentration of warfarin; avoid use with warfarin; use low-molecular-weight anticoagulants instead

Decrease: imatinib concentrations—CYP3A4 inducers (dexamethasone, phenytoin, carBAMazepine, rifAMPin, PHENobarbital)

Drug/Herb

Decrease: imatinib concentration—St. John's wort

Drug/Food
Increase: effect of grapefruit juice, avoid use

Drug/Lab Test
Increase: bilirubin, amylase, LFTs
Decrease: albumin, calcium, potassium, sodium, phosphate, platelets, neutrophils, leukocytes, lymphocytes

NURSING CONSIDERATIONS

Assess:

- **Bone marrow suppression:** ANC, platelets; during chronic phase, if ANC <1 × 10^9/L and/or platelets <50 × 10^9/L, stop until ANC >1.5 × 10^9/L and platelets >75 × 10^9/L; during accelerated phase/blast crisis, if ANC <0.5 × 10^9/L and/or platelets <10 × 10^9/L, determine whether cytopenia related to biopsy/aspirate; if not, reduce dose by 200 mg; if cytopenia continues, reduce dose by another 100 mg; if cytopenia continues for 4 wk, stop product until ANC ≥1 × 10^9/L
- Monitor CBC weekly for first month, biweekly next month and periodically thereafter; may cause neutropenia (2-3 wk) and thrombocytopenia (3-4 wk) and anemia; may need dosage decrease or discontinuation
- **Renal toxicity:** if bilirubin >3 × UNL, withhold imatinib until bilirubin levels return to <1.5 × UNL
- **DRESS:** swelling of face, fever, rash, later hepatitis, myocarditis may occur, discontinue if present (rare)
- **Hepatotoxicity:** monitor LFTs before and during treatment monthly; if liver transaminases >5 × UNL, withhold imatinib until transaminase levels return to <2.5 × UNL
- Signs of fluid retention, edema: weigh, monitor lung sounds, assess for edema; some fluid retention is dose dependent
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decrease in leukemic cells or size of tumor

Teach patient/family:

- To report adverse reactions immediately: shortness of breath, swelling of extremities, bleeding
- About reason for treatment, expected results
- That effect on male infertility is unknown
- Not to stop or change dose
- To avoid hazardous activities until response is known, dizziness may occur
- To take with food and water; for those unable to swallow tabs, to mix in liquid (30 mL for 100 mg); after dissolved, stir and consume; avoid grapefruit juice
- To avoid OTC products unless approved by prescriber
- To notify prescriber if pregnancy is planned or suspected; not to breastfeed; to use effective contraception

I

imipenem/cilastatin (Rx)

(i-me-pen´em/sye-la-stat´in)

Primaxin IM, Primaxin IV

Func. class.: Antiinfective—miscellaneous

Chem. class.: Carbapenem

ACTION: Interferes with cell-wall replication of susceptible organisms; osmotically unstable cell-wall swells, bursts from osmotic pressure; addition of cilastatin prevents renal inactivation that occurs with high urinary concentrations of imipenem

USES: Serious infections caused by gram-positive *Streptococcus pneumoniae,* group A β-hemolytic streptococci, *Staphylococcus aureus,* enterococcus; gram-negative *Klebsiella, Proteus, Escherichia coli, Acinetobacter, Serratia, Pseudomonas aeruginosa, Salmonella, Shigella, Haemophilus influenzae, Listeria* sp.; lower respiratory tract infections, UTIs, septicemia, endocarditis, bone/joint infections, skin structure infections

CONTRAINDICATIONS:
Hypersensitivity to this product, amide local anesthetics, or carbapenems; AV block, shock (IM), breastfeeding

Precautions: Pregnancy, breastfeeding, children, geriatric patients, seizure disorders, renal disease, head trauma; hypersensitivity to cephalosporins, penicillins; CDAD, ulcerative colitis, diabetes mellitus

DOSAGE AND ROUTES
Doses based on imipenem content are to be used IV infusion only

Most infections

- **Adult IV** 500–1000 mg every 6-8 hours depending on indication and organism susceptibility; max 4 g/day.
- **Adolescent/child/infant ≥3 mo: IV** 15-25 mg/kg every 6 hr
- **Infant 1-3 mo and ≥1500 g: IV** 25 mg/kg every 6 hr
- **Neonate 1-4 wk and ≥1500 g: IV** 25 mg/kg every 8 hr
- **Neonate <7 days and ≥1500 g: IV** 25 mg/kg every 12 hr

Renal dose

- **Adult: CCr 60-89 mL/min:** adjust to 400 mg every 6 hr for starting dose of 500 mg every 6 hr, to 500 mg every 6 hr for starting dose of 1 g every 8 hr, to 750 mg every 8 hr for starting dose of 1 g every 6 hr

CCr 30-59 mL/min: adjust to 300 mg every 6 hr for starting dose of 500 mg every 6 hr, to 500 mg every 8 hr for starting dose of 1 g every 8 hr, to 500 mg every 6 hr for starting dose of 1 g every 6 hr

CCr 15-29 mL/min: adjust to 200 mg every 6 hr for starting dose of 500 mg every 6 hr, to 500 mg every 12 hr for starting dose of 1 g every 6 or 8 hr

CCr <15 mL/min: Do not use unless hemodialysis is instituted within 48 hr

Available forms: Powder for sol inj 250, 500 mg

Administer:

- After C&S is taken, may start treatment before results are received

Intermittent IV infusion route

- After reconstitution of 250 or 500 mg with 10 mL of diluent and shake, add to ≥100 mL of same infusion sol
- 250-500 mg over 20-30 min; ≥750 mg over 40-60 min; give through Y-tube or 3-way stopcock; do not give by IV bolus or if cloudy, do not admix with other antibiotics separate by ≥1 hr (aminoglycosides)

Y-site compatibilities: Acyclovir, alfentanil, amifostine, amikacin, aminocaproic acid, anidulafungin, argatroban, ascorbic acid, atenolol, atracurium, atropine, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, cefuroxime, chloramphenicol, cimetidine, cisatracurium, CISplatin, clindamycin, codeine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, dexamethasone, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, DOXOrubicin liposomal, doxycycline, enalaprilat, famotidine, fludarabine, foscarnet, granisetron, IDArubicin, insulin (regular), melphalan, methotrexate, ondansetron, propofol, remifentanil, tacrolimus, teniposide, thiotepa, vinorelbine, zidovudine

SIDE EFFECTS
CNS: *Fever, somnolence, seizures,* confusion, *dizziness,* weakness, myoclonus, drowsiness

CV: Hypotension, palpitations, tachycardia

GI: *Diarrhea, nausea, vomiting,* CDAD, hepatitis, glossitis, gastroenteritis, abdominal pain, jaundice

HEMA: Eosinophilia
INTEG: *Rash, urticaria, pruritus,* pain at inj site, phlebitis, erythema at inj site, erythema multiforme, Stevens-Johnson syndrome, toxic epidermal necrolysis, angioedema
EENT: Hearing loss, tinnitus
SYST: Anaphylaxis, electrolyte abnormalities

PHARMACOKINETICS

IV: Onset immediate, peak 20 min-1 hr; duration 6-8 hr
70%-80% excreted unchanged in urine

INTERACTIONS

Increase: imipenem plasma levels—probenecid
Increase: antagonistic effect—β-lactam antibiotics
Increase: seizure risk—ganciclovir, theophylline, aminophylline, cycloSPORINE
Decrease: effect of valproic acid
Decrease: effect aminoglycosides if admixed
Drug/Lab Test
Increase: AST, ALT, LDH, BUN, alk phos, bilirubin, creatinine, potassium, chloride
Decrease: sodium
False positive: direct Coombs' test

NURSING CONSIDERATIONS

Assess:
• Renal studies: creatinine/BUN, electrolytes
• **Seizures:** product decreases seizure threshold and may decrease effectiveness of seizure medications; monitor closely
• **Infection:** increased temperature, WBC, characteristics of wounds, sputum, urine or stool culture
• Sensitivity to penicillin, other β-lactams—may have sensitivity to this product
• Renal disease: lower dose may be required
• **CDAD:** Bowel pattern daily; if severe diarrhea occurs, product should be discontinued; may indicate CDAD
• **Allergic reactions, anaphylaxis:** rash, urticaria, pruritus, wheezing, laryngeal edema; may occur a few days after therapy begins; have EPINEPHrine, antihistamine, emergency equipment available
• **Overgrowth of infection:** perineal itching, fever, malaise, redness, pain, swelling, drainage, rash, diarrhea, change in cough, sputum
• **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; use caution in breastfeeding, excretion unknown
Evaluate:
• Therapeutic response: negative C&S; absence of signs and symptoms of infection
Teach patient/family:
• To report severe diarrhea; may indicate CDAD

TREATMENT OF ANAPHYLAXIS: EPINEPHrine, antihistamines; resuscitate if needed

imipenem/cilastatin/relebactam (Rx)

(im'i-pen'em/sye'la-stat'in/rel'e-bak'tam)

Recarbrio

Func. class.: Antiinfective

USES:

Intraabdominal infection, complicated, pneumonia, hospital acquired or ventilator associated, urinary tract infection, complicated (including pyelonephritis)

CONTRAINDICATIONS:

Severe hypersensitivity
Precautions: Cross-reactivity for carbapenems, penicillins, cephalosporins

DOSAGE AND ROUTES

Intra-abdominal infection, complicated:
Adult: IV: 1.25 g every 6 hr. Total duration of therapy is 4 to 7 days following adequate source control
Pneumonia, hospital acquired or ventilator associated:
Adult: IV: 1.25 g every 6 hr × 7 days as part of an appropriate combination regimen

Urinary tract infection, complicated (including pyelonephritis):
Adult: IV: 1.25 g every 6 hr × 5 to 14 days
Available forms: Powder for injection

imipramine (Rx)

(im-ip′ra-meen)

Impril, Novo-Pramine, Toframil

Func. class.: Antidepressant, tricyclic
Chem. class.: Dibenzazepine, tertiary amine

Do not confuse:
imipramine/desipramine

ACTION: Blocks reuptake of norepinephrine, serotonin into nerve endings, thereby increasing action of norepinephrine, serotonin in nerve cells

USES: Major depression, enuresis
Unlabeled uses: Bulimia, neuropathic pain, panic disorder, ADHD, stress/urge incontinence, social phobia

CONTRAINDICATIONS: Pregnancy, hypersensitivity to this product or carBAMazepine; acute MI, MAOI therapy
Precautions: Breastfeeding, geriatric patients, suicidal patients, severe depression, increased intraocular pressure, closed-angle glaucoma, urinary retention, cardiac/hepatic disease, hyperthyroidism, electroshock therapy, elective surgery, seizure disorders, prostatic hypertrophy, MI, AV block, bundle branch block, ileus, QT prolongation, hypersensitivity to tricyclics

Black Box Warning: Children; suicidal ideation

DOSAGE AND ROUTES

Depression
- **Adult: PO** 75-100 mg/day in divided doses, may increase by 25-50 mg to 200 mg/day (outpatients), 300 mg/day (inpatients); may give daily dose at bedtime
- **Adolescent/geriatric: PO** 30-40 mg at bedtime, may increase to 100 mg/day in divided doses
- **Child ≥6 yr (unlabeled): PO** 1.5 mg/kg/day in divided doses, max 2.5 mg/kg/day

Enuresis
- **Adolescents: PO** 25 mg daily, 1 hr prior to bedtime, max 75 mg/day
- **Child 6-12 yr: PO** 25 mg daily 1 hr prior to bedtime; max 50 mg/day

Available forms: Tabs 10, 25, 50, 75 mg; caps 75, 100, 125, 150 mg
Administer:
PO route
- Improvement may take 1-2 wk (sleep, energy); 1-4 wk (improved mood) 6-12 wk (optimal mood)
- Not to break, crush, or chew caps
- With food or milk for GI symptoms
- Dosage at bedtime if oversedation occurs during day; may take entire dose at bedtime; geriatric patients may not tolerate once-daily dosing
- Sugarless gum, hard candy, or frequent sips of water for dry mouth
- Do not discontinue abruptly, taper 50% × 3 days, another 50% × 3 days, then stop
- Store in tight container at room temperature; do not freeze

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, seizures, headache, anxiety, insomnia, suicidal ideation, paresthesia
CV: *Orthostatic hypotension, ECG changes, tachycardia,* dysrhythmias
EENT: Blurred vision, mydriasis, tinnitus
ENDO: Hyperglycemia, hypo/hyperthyroidism, SIADH
GI: *Diarrhea, dry mouth,* nausea, vomiting, paralytic ileus, increased appetite, taste change
GU: *Retention,* decreased libido
HEMA: Agranulocytosis, thrombocytopenia, eosinophilia, leukopenia
INTEG: Rash, urticaria, pruritus, photosensitivity

PHARMACOKINETICS

Metabolized to desipramine in liver by CYP2D6; excreted in urine, breast milk, feces; crosses placenta; half-life 8-16 hr, protein binding 90%-95%

INTERACTIONS

• **Increase:** Hyperpyretic crisis, seizures, hypertensive episode: MAOIs, cloNIDine

• **Increase:** serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs, serotonin-receptor agonists, bupropion, cyclobenzapine, trazadone, tramadil, tricyclics; avoid concurrent use, linezolid, methylene blue IV

Increase: QT interval—class IA/III antidysrhythmics, tricyclics, gatifloxacin, levoFLOXacin, moxifloxacin, ziprasidone

Increase: effects of direct-acting sympathomimetics (EPINEPHrine), alcohol, barbiturates, benzodiazepines, CNS depressants

Decrease: effects of guanethidine, cloNIDine, indirect-acting sympathomimetics (ePHEDrine)

Drug/Herb

Increase: serotonin syndrome—SAM-e, St. John's wort

Increase: sedation—chamomile, kava, valerian

Drug/Lab Test

Increase: serum bilirubin, alk phos, blood glucose, LFTs

Mental status: mood, sensorium, affect, **suicidal tendencies** especially in children, young adults; increase in psychiatric symptoms: depression, panic, monitor weekly × 1 mo, then 3 wk give limited amount of product

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Depression: mood, behavior, sleep, lability; mental status, suicidal tendencies especially in children, young adults; increase in psychiatric symptoms, panic, monitor weekly × 1 mo, then q3 wk, give limited amount of medication

• **CV:** B/P (lying, standing), pulse; if systolic B/P drops 20 mm Hg, hold product, notify prescriber, monitor HR, rhythm, take ECG baseline in those with CV disease

• Blood studies: CBC, leukocytes, differential, cardiac enzymes, serum imipramine levels (125-250 ng/mL) if patient is receiving long-term therapy

• Hepatic studies: AST, ALT, bilirubin

• Weight weekly; appetite may increase with product

• **QT prolongation:** monitor ECG for flattening of T wave, bundle branch block, AV block, dysrhythmias in cardiac patients

• EPS primarily in geriatric patients: rigidity, dystonia, akathisia

• Urinary retention, constipation; constipation is more likely to occur in children, geriatric patients; increase fluids, bulk in diet

• **Withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness, diarrhea, insomnia, restlessness; not usual unless product is discontinued abruptly

• **Serotonin syndrome, hypertensive episodes, orthostatic hypotension:** identify drug interactions before use of product

• Alcohol consumption; if alcohol is consumed, hold dose until morning

• Assistance with ambulation during beginning therapy because drowsiness, dizziness, orthostatic hypotension may occur

• Safety measures, primarily for geriatric patients

• **Beers:** avoid in older adults; highly anticholinergic, high risk of delirium, orthostatic hypotension

Evaluate:

• Therapeutic response: decreased depression, enuresis

Teach patient/family:

• That full therapeutic effects may take 2-3 wk

• That product may be dispensed in small amounts because of suicide potential, especially at beginning of therapy

• To use caution when driving, performing other activities requiring alertness

because of drowsiness, dizziness, blurred vision
• To report urinary retention immediately
• To avoid alcohol, other CNS depressants during treatment
• Not to discontinue medication abruptly after long-term use; may cause nausea, headache, malaise
• To wear sunscreen or large hat because photosensitivity occurs
• To rise slowly, orthostatic hypotension may occur

Black Box Warning: To report suicidal thoughts, behaviors immediately; more common in children, young adults

• **Pregnancy/breastfeeding:** Identify if pregnancy is planned or suspected or if breastfeeding

TREATMENT OF OVERDOSE:

ECG monitoring; lavage if recently ingested; sodium bicarbonate (cardiac effects); administer anticonvulsant, antidysrrthmics

immune globulin IM (IMIG/IGIM) (Rx)

Bay Gam 15%, Flebogamma 5%, Flebogamma DIF 5%, Gammagard, GamaSTAN S/D, Gamunex 10%, Privigen 10%, Vivaglobin 10%

immune globulin IV (IGIV, IVIG) (Rx)

Bay Gam 15%, Carimune NF, Flebogamma 5%, Flebogamma 10% DIF, Gammagard S/D, Gammagard Liquid 10%, Gammaked, Gammaplex, Gammar-P IV, Gamunex, Iveegam EN, Octagam, Polygam S/D, Privigen, Vivaglobin

immune globulin SC (SCIG/IGSC) (Rx)

Bay Gam 15%, Flebogamma 5%, Flebogamma DIF 5%, Gammagard 10%, Gammaked, Gammaplex, Gamunex 10%, Privigen 10%, Vivaglobin, Hizentra

Func. class.: Immune serum
Chem. class.: IgG

USES:

Replacement for primary and secondary hormonal immunodeficiency syndrome; B-cell chronic lymphocytic leukemia; Kawasaki syndrome; bone marrow transplantation; pediatric HIV infection; agammaglobulinemia; hepatitis A, B exposure; measles exposure; measles vaccine complications; purpura; rubella exposure; chickenpox exposure; chronic inflammatory demyelinating polyneuropathy, multifocal motor neuropathy, MS, RA, myasthenia gravis

CONTRAINDICATIONS:

Hypersensitivity, coagulopathy, hemophilia, IgA deficiency, thrombocytopenia, fructose intolerance

DOSAGE AND ROUTES

Immune globulin IM (IMIG, IGIM)

Hepatitis A prophylaxis

• **Adult/geriatric/adolescent/child/infant (unlabeled): IM** 0.02 mL/kg for those who have not received hepatitis A vaccine and have been exposed during the prior 2 wk

Measles prophylaxis (exposed during prior 6 days)

• **Adult: IM** 0.25 mL/kg (immunocompetent)
• **Child (unlabeled): IM** 0.5 mL/kg as a single dose, max 15 mL (immunocompromised)

Varicella prophylaxis

• **Adult: IM** 0.6-1.2 mL/kg as soon as possible and if varicella-zoster immune globulin is not available

Rubella prophylaxis in exposed/susceptible individual who will not consider a therapeutic abortion
• **Adult pregnant women: IM** 0.55 mL/kg
Immunoglobulin deficiency
• **Adult: IM** 1.32 mL/kg, then 0.66 mL/kg (≥100 mg/kg) q3-4wk

Immune globulin IV (IVIG, IGIV)
Primary immunodeficiency
Gammagard S/D
• **Adult/adolescent/child: IV** 300-600 mg/kg q3-4wk
Polygam S/D
• **Adult/adolescent/child: IV** 100 mg/kg/mo; initially 200-400 mg/kg may be used
Gammar-P IV
• **Adult: IV** 200-400 mg/kg q3-4wk
• **Adolescent/child: IV** 200 mg/kg q3-4wk
Gamunex
• **Adult/adolescent/child: IV INFUSION** 300-600 mg/kg (3-6 mL/kg) q3-4wk, initial infusion rate 1 mg/kg/min (max 8 mg/kg/min)
Iveegam EN
• **Adult/adolescent/child: IV** 200 mg/kg monthly, max 800 mg/kg/mo
Carimune NF
• **Adult/adolescent/child: IV** 200 mg/kg/mo
Gammagard Liquid/Flebogamma 5%
• **Adult/adolescent/child: IV** 300-600 mg/kg q3-4wk
Privigen
• **Adult/adolescent/child ≥3 yr: IV** 200-800 mg q3wk

Idiopathic thrombocytopenic purpura (ITP)
Carimune NF
• **Adult/child: IV** 400 mg/kg daily × 2-5 days; with acute ITP of childhood, only 2 of 5 days are needed if initial platelets are 30,000-50,000 microliters after 2 doses
Gammagard S/D/Polygam S/D
• **Adult/adolescent/child: IV** 1000 mg/kg as a single dose; may give on alternate days for up to 3 doses
Gamunex
• **Adult/adolescent/child: IV INFUSION** total dose of 2000 mg/kg on 2 consecutive days; initial rate is 1 mg/kg/min (max 8 mg/kg/min); if after 1st dose adequate platelets are observed after 24 hr, may withhold 2nd dose
Privigen
• **Adult/adolescent ≥15 yr: IV** 1 g/kg/day × 2 days

Kawasaki disease
Iveegam EN
• **Child: IV** 400 mg/kg daily × 4 consecutive days or a single dose of 2000 mg/kg over 10 hr, given with aspirin 100 mg/kg/day through 14th day of illness, then 3-5 mg/kg each day thereafter for 5 wk
Gammagard S/D/Polygam S/D
• **Infant/child: IV** 1000 mg/kg as a single dose or 400 mg/kg/day × 4 days beginning within 7 days of fever onset, with aspirin 80-100 mg/kg/day × 4 divided doses
Immune globulin SC (SCIG/IGSC)
• **Adult/child >2 yr: SUBCUT INFUSION** 100-200 mg/kg weekly, **Vivaglobin** brand of SCIG 160 mg IgG/mL, **SUBCUT** inj 15 mL/inj site, given at max of 20 mL/hr
Hizentra
• **Adult/child:** multiply the previous IVIG dose by 1.37, then divide into weekly dose based on previous week treatment

imiquimod (Rx)
(i-mi-kwi′mod)
Aldara, Vyloma, Zyclara, Zyclara Pump
Func. class.: Immunosuppressant

USES:
Actinic keratosis, genital and perianal warts, superficial basal cell carcinoma

DOSAGE AND ROUTES
Actinic keratosis
Adult: Topical: 2.5% and 3.75% cream: Apply thin film (using up to 2 packets or 2 full pump actuations) daily before bedtime for 2 wk to the skin of the affected area (either the entire face or balding scalp, but not both concurrently); leave on

for ~8 hr, then remove with mild soap and water. After a 2-wk period of no treatment, repeat with a second 2-wk treatment (do not extend treatment cycles because of missed doses or rest periods)

Genital and perianal warts:

Adult/child ≥12

Topical: **3.75% cream:** Apply a thin layer once daily (using up to 1 packet or 1 full actuation of pump) prior to bedtime; leave on skin for ~8 hr, then remove with mild soap and water. Continue treatment until there is total clearance of the warts or for a maximum duration of therapy of 8 wk

Superficial basal cell carcinoma (Aldara 5% cream):

Adult: Topical: Apply once daily 5 days per week, prior to normal sleeping hours, for 6 wk; leave on skin for ~8 hr, then remove with mild soap and water. Apply enough cream to cover the treatment area, including 1 cm of skin surrounding the tumor. Tumor treatment area should not exceed 3 cm

indacaterol (Rx)

(in-da-kat′er-ol)

Arcapta Neohaler, Onbrez Breezhal ER

Func. class.: β-2 agonist, long-acting respiratory

Chem. class.: Indene

ACTION: An agonist at β-2 receptors. Stimulation of β-2 receptors in the lung causes relaxation of bronchial smooth muscle, which produces bronchodilation and an increase in bronchial airflow

USES: Bronchitis, chronic obstructive pulmonary disease (COPD), emphysema

CONTRAINDICATIONS: Acute bronchospasm, acute asthma attack, status asthmaticus, acute respiratory insufficiency, monotherapy of asthma, hypersensitivity, child <18 yr

Precautions: Ischemic cardiac disease (coronary artery disease), hypertension, cardiac arrhythmias, tachycardia, QT prolongation, congenital long QT syndrome, torsades de pointes history, hyperthyroidism (thyrotoxicosis, thyroid disease), pheochromocytoma, unusual responsiveness to other sympathomimetic amines, seizure disorder, diabetes mellitus, hypokalemia, milk protein hypersensitivity, severe hepatic disease, pregnancy, breastfeeding

Black Box Warning: Asthma-related deaths

DOSAGE AND ROUTES

• **Adult: INH** 75 mcg (contents of 1 capsule) inhaled once daily; max 1 dose in 24 hours

Available forms: Powder in capsules for inhalation 75 mcg

Administer:

Inhalation route

• For oral inhalation use only; DO NOT swallow the capsules; always use the Neohaler Inhaler; DO NOT use with a spacer

• Use dry hands to remove a capsule from the blister pack immediately before use and place into the capsule chamber of the Neohaler Inhaler; click closed; holding the inhaler upright, depress buttons fully once; have patient breathe out fully away from inhaler, place inhaler in the mouth with buttons positioned to the left and right, close lips around mouthpiece, then breathe deeply; check the chamber to see if any powder remains; repeat inhalation steps until no powder remains

SIDE EFFECTS

CNS: Headache, dizziness

CV: Tachycardia, palpitations, peripheral edema

ENDO: Hyperglycemia

GI: *Nausea,* dry mouth

MS: *Muscle cramps/spasm,* musculoskeletal pain

RESP: Paradoxical bronchospasm, cough, dyspnea, upper respiratory tract infection, *sputum purulence/volume, wheezing, pneumonia, URI*

EENT: Oropharyngeal pain, nasopharyngitis, sinusitis

INTEG: Rash, pruritus

PHARMACOKINETICS: Protein binding 94%-96%, metabolized by CYP3A4, CYP1A1, CYP2D6, UGT1A1; half-life of 45.5-126 hours; excreted renally (2%-6%), fecally (>90%); onset 5 min, peak 15 min

INTERACTIONS: **Increase:** QT prolongation—class IA/III antiarrhythmics, flecainide, propafenone, some antipsychotics (phenothiazines, pimozide, haloperidol risperiDONE, sertindole, ziprasidone), amoxapine, arsenic trioxide, astemizole, bepridil, cisapride, citalopram, chloroquine, clarithromycin, dasatinib, dolasetron, dronedarone, droperidol, erythromycin, halofantrine, halogenated anesthetics, levomethadyl, maprotiline, methadone, some quinolones (ofloxacin, gatifloxacin, gemifloxacin, grepafloxacin, levoFLOXacin, moxifloxacin, sparfloxacin), ondansetron, paliperidone, palonosetron, pentamidine, probucol, propafenone, ranolazine, SUNItinib, terfenadine, thioridazine, tricyclic antidepressants, troleandomycin, vorinostat, tetrabenazine
Increase: cardiovascular reactions—MAOIs

NURSING CONSIDERATIONS

Assess

Black Box Warning: Asthma-related death; not to be used in asthma

- **COPD, emphysema, bronchospasm:** monitor pulmonary function tests, respiratory status (dyspnea, rate, breath sounds before and during treatment)
- **QT prolongation:** monitor ECG, ejection fraction for QT prolongation
- **Paradoxical bronchospasm:** if paradoxical bronchospasm occurs, discontinue product immediately, use a short-acting β-agonist for rescue therapy, as appropriate
- **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; use caution in breastfeeding, excretion unknown

Teach patient/family

- To report dyspnea, wheezing, bronchospasm
- Not to use with other products unless approved by prescriber; there are many interactions; it is always prescribed with a short-acting beta-2 inhaler or steroidal inhaler

Black Box Warning: Do not use for asthma

- How to use Neohaler; not to stop treatment unless approved by prescriber
- The symptoms of allergic reactions
- To inform other providers of use

indapamide (Rx)

(in-dap'a-mide)

Lozide

Func. class.: Diuretic—thiazide-like, antihypertensive

Chem. class.: Indoline

ACTION: Acts on proximal section of distal renal tubule by inhibiting reabsorption of sodium; may act by direct vasodilation caused by blocking of calcium channels

USES: Edema of HF, mild-moderate hypertension may be used alone or in combination

CONTRAINDICATIONS: Hypersensitivity to this product or sulfonamides; anuria, hepatic coma
Precautions: Breastfeeding, hypokalemia, dehydration, ascites, hepatic disease, severe renal disease, CCr <30 mL/min (not effective), diabetes mellitus, gout, pregnancy, cardiac dysrhythmias, geriatrics

DOSAGE AND ROUTES

Edema

- **Adult: PO** 2.5 mg/day in AM; may be increased to 5 mg/day if needed after 1 wk

Antihypertensive

- **Adult: PO** 1.25 mg/day in AM; may increase to 2.5 mg/day after 4 wk; if not effective after 4 wk, may increase to max dose of 5 mg/day

Available forms: Tabs 1.25, 2.5 mg

Administer:

- In AM to avoid interference with sleep
- With food if nausea occurs; absorption may be decreased slightly
- If ineffective at 2.5 mg/day, may add another antihypertensive agent (hypertension)

SIDE EFFECTS

CNS: *Headache, dizziness, fatigue,* weakness, nervousness, agitation, extremity numbness, depression
CV: Orthostatic hypotension, volume depletion, palpitations, dysrhythmias, PVCs, vasculitis
EENT: Blurred vision, nasal congestion, increased intraocular pressure
ELECT: *Hypochloremic alkalosis, hypomagnesemia, hyperuricemia, hypercalcemia, hyponatremia, hypokalemia,* hyperglycemia
GI: *Nausea,* diarrhea, dry mouth, vomiting, anorexia, cramps, constipation, abdominal pain, hypercholesterolemia
GU: *Polyuria,* nocturia, urinary frequency, impotence
HEMA: Agranulocytosis, anemia
INTEG: *Rash, pruritus,* Stevens-Johnson syndrome
MS: *Cramps*

PHARMACOKINETICS

Well absorbed (PO); widely distributed; metabolized by liver; excreted by kidney (small amounts); onset 1-2 hr; peak 2 hr; duration up to 36 hr; excreted in urine, feces; half-life 14-18 hr

INTERACTIONS

Increase: Dysrrthmias, torsades de pointes risk: class Ia, III antidysrhythmias, phenothiazides, benzamide/butyrophenone antipsychotics
Increase: hyperglycemia—diazoxide
Increase: toxicity of muscle relaxants, steroids, lithium, digoxin
Increase: hypokalemia—corticosteroids, amphotericin B, loop diuretics, thiazide diuretics
Decrease: effects—antidiabetics, antigout agents, anticoagulants
Decrease: absorption—cholestyramine, colestipol
Decrease: hypotensive effect—indomethacin, NSAIDs
Drug/Food
Increase: severe hypokalemia—licorice
Drug/Herb
Increase: antihypertensive effect—hawthorn
Drug/Lab Test
Increase: calcium, parathyroid test, glucose, uric acid

NURSING CONSIDERATIONS

Assess:
• Weight, I&O daily to determine fluid loss; effect of product may be decreased if used daily
• Rate, depth, rhythm of respirations, effect of exertion
• B/P lying, standing; postural hypotension may occur
• Electrolytes: potassium, magnesium, sodium, chloride: include BUN, CBC, serum creatinine, blood pH, ABGs, uric acid, Ca, glucose
• Signs of metabolic alkalosis, hypokalemia
• Rashes, fever daily; allergy to sulfa products
• Confusion, especially in geriatric patients; take safety precautions if needed
• Hydration: skin turgor, thirst, dry mucous membranes
• **Beers:** use with caution in older adults; may cause or exacerbate syndrome of inappropriate antidiuretic hormone secretion
• **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; do not breastfeed, excretion unknown
Evaluate:
• Therapeutic response: improvement in edema of feet, legs, sacral area daily; decreased B/P
Teach patient/family:
• To consume diet high in potassium; to rise slowly from lying or sitting position
• To recognize adverse reactions: muscle cramps, weakness, nausea, dizziness
• To take with food, milk for GI symptoms; to take early in day to prevent nocturia; to avoid alcohol
• To notify prescriber if urinary output decreases; to monitor daily weight
• Not to stop product abruptly

TREATMENT OF OVERDOSE:

Lavage if taken orally; monitor electrolytes, administer IV fluids; monitor hydration, CV, renal status

indomethacin (Rx)

(in-doe-meth'a-sin)

Indocid, Indocin, Indocin IV

Func. class.: Nonsteroidal antiinflammatory product (NSAID), antirheumatic

Chem. class.: Acetic acid derivative

Do not confuse:
Indocin/Endocet/minocin/Vicodin

ACTION: Inhibits prostaglandin synthesis by decreasing enzyme needed for biosynthesis; analgesic, antiinflammatory, antipyretic

USES: RA, ankylosing spondylitis, osteoarthritis, bursitis, tendinitis, acute gouty arthritis; closure of patent ductus arteriosus in premature infants (IV)
Unlabeled uses: Heterotopic ossification, juvenile rheumatoid arthritis, pericarditis, intraventricular hemorrhage prevention

CONTRAINDICATIONS: Pregnancy 3rd trimester, aortic coarctation, bleeding, salicylate/NSAID hypersensitivity, GI bleeding

Black Box Warning: Perioperative pain in CABG, GI bleeding/perforation

Precautions: Pregnancy 1st trimester, breastfeeding, children, bleeding disorders, GI disorders, cardiac disorders, depression, renal/hepatic disease, asthma, diabetes, acute bronchospasm, ulcerative colitis, seizures, Parkinson's disease, neonates, stroke

Black Box Warning: Stroke, MI, those taking NSAIDs are at greater risk of MI and stroke, even in first few weeks of therapy, thromboembolism

DOSAGE AND ROUTES

Arthritis/antiinflammatory
- **Adult: PO** 25-50 mg bid-tid; max 200 mg/day; **EXT REL** 75 mg/day, may increase to 75 mg bid

Gout
- **Adult: PO** 50 mg tid; use only for acute attack, then reduce dose

Rectal route for all uses
- **Adult: PR** 50 mg bid or 100 mg at bedtime (max 200 mg/day)

Patent ductus arteriosus
- **Neonate >8 days: IV** Initially, 0.2 mg/kg, then, if necessary, 2 more doses of 0.25 mg/kg at 12-hr intervals if urine output is >1 mL/kg/hr after prior dose or at 24-hr intervals if urine output is <1 mL/kg/hr; hold in cases of oliguria (<0.6 mL/kg/hr) or anuria
- **Neonate 2-7 days: IV** Initially, 0.2 mg/kg, then, if necessary, 2 more doses of 0.2 mg/kg at 12-hr intervals if urine output is >1 mL/kg/hr after prior dose or at 24-hr intervals if urine output is <1 mL/kg/hr; hold in cases of oliguria (<0.6 mL/kg/hr) or anuria
- **Neonate <2 days: IV** Initially, 0.2 mg/kg, then, if necessary, 1 or 2 doses of 0.1 mg/kg at 12-hr intervals if urine output is >1 mL/kg/hr after prior dose or at 24-hr intervals if urine output is <1 mL/kg/hr; hold in cases of oliguria (<0.6 mL/kg/hr) or anuria
- **Neonate: PO** Doses of 0.3 mg/kg daily × 2 days have been used

Available forms: Caps 20, 25, 50 mg; ext rel caps 75 mg; powder for inj 1-mg vial; rectal suppository 50 mg; oral susp 5 mg/mL (25 mg/5 mL)

Administer:

PO route
- Do not break, crush, or chew sus rel cap or reg caps
- With food to decrease GI symptoms and prevent ulcerations
- Shake susp; do not mix with other liquids
- Store at room temperature

Rectal route
- Use suppository that is not soft, may place in refrigerator for 15 min before use

IV route
- After reconstituting 1 mg with 1 or 2 mL NS or sterile water for inj without preservative; to give 1 or 0.5 mg/mL, respectively; do not dilute further
- Infuse over 20-30 min; avoid extravasation
- Do not inject/infuse via umbilical catheter to avoid dramatic shift in cerebral blood flow

SIDE EFFECTS

CNS: Dizziness, drowsiness, fatigue, confusion, insomnia, anxiety, depression, *headache*
CV: Peripheral edema, hypertension, CV thrombotic events, MI, stroke
EENT: Tinnitus, hearing loss, blurred vision
GI: *Nausea,* anorexia, *vomiting,* diarrhea, jaundice, *constipation,* flatulence, cramps, peptic ulcer, ulceration, perforation, GI bleeding
GU: Nephrotoxicity: dysuria, hematuria, oliguria; azotemia (IV)
HEMA: Blood dyscrasias, prolonged bleeding
INTEG: Purpura, rash, pruritus, sweating, phlebitis at IV site

PHARMACOKINETICS

PO: Onset 30 min; peak 2 hr; duration 4-6 hr; metabolized in liver, kidneys; excreted in urine 60%, feces 33%; crosses placenta; excreted in breast milk; 99% protein binding; half-life 1 hr 1st pass, 2.6-11.2 hr 2nd pass

INTERACTIONS

Increase: hyperkalemia—potassium-sparing diuretics
Increase: toxicity—lithium, methotrexate, cycloSPORINE, probenecid, cidofovir
Increase: effect of—digoxin, phenytoin, aminoglycosides
Increase: bleeding risk—anticoagulants, abciximab, clopidogrel, eptifibatide, plicamycin, ticlopidine, tirofiban, thrombolytics, aspirin, SSRIs, SNRIs
Decrease: effect of—antihypertensives, diuretics
Drug/Herb
Increased: bleeding risk—chamomile, clove, dong quai, garlic, ginger, ginkgo
Drug/Lab
Increase: Potassium, LFTs
Decrease: Hb, Hct

NURSING CONSIDERATIONS

Assess:
• **Arthritis symptoms:** ROM, pain, swelling before and 2 hr after treatment
• **Hypersensitivity:** monitor for rash (those with aspirin sensitivity, nasal polyps are at greater risk)

Black Box Warning: Cardiac disease, CV, thrombotic events (MI, stroke) before administration, not to be used in perioperative pain in CABG surgery

• Patent ductus arteriosus: respiratory rate, character, heart sounds
• **Renal, hepatic, blood studies:** BUN, creatinine, AST, ALT, HB before treatment, periodically thereafter; if renal function has decreased, do not give subsequent doses
• **Eye/ear problems:** blurred vision, tinnitus; may indicate toxicity; audiometric, ophthalmic exam before, during, after treatment if patient receiving long-term therapy
• Confusion, mood changes, hallucinations, especially among geriatric patients
• Asthma, nasal polyps, aspirin sensitivity, may develop hypersensitivity to indomethacin

Black Box Warning: GI bleeding/perforation: chronic use can lead to GI bleeding, use cautiously in those with a history of active GI disease

Black Box Warning: MI, stroke: may be greater with longer-term use and in those with CV risk factors

• **Beers:** avoid use in older adults; more likely to cause CNS effects
• **Pregnancy/breastfeeding:** do not use after 30 wk gestation; use only if benefits outweigh fetal risk <30 wk gestation; do not breastfeed, excreted in breast milk
Evaluate:
• Therapeutic response: decreased pain, stiffness, swelling in joints; ability to move more easily, PDA closure
Teach patient/family:
• To report blurred vision, ringing, roaring in ears; may indicate toxicity
• To avoid driving, other hazardous activities if dizziness, drowsiness occurs

• To report change in urine pattern, increased weight, edema, increased pain in joints, fever, blood in urine; may indicate nephrotoxicity
• To take with food for GI upset, to use as prescribed, not to skip or double doses, to take with 8 oz of water
• To report signs of GI bleeding: dark stools, hematemesis
• To report mood changes: anxiety, depression
• To use sunscreen, protective clothing, hat to prevent burns
• That therapeutic antiinflammatory effects may take up to 1 mo
• To avoid alcohol, NSAIDs, salicylates because bleeding may occur, discuss all OTC, Rx, herbals, supplements with health care professional
• To report use to all health care providers

Black Box Warning: MI/stroke: to immediately report and seek medical attention for signs/symptoms of MI/stroke; discontinue product

inFLIXimab (Rx)
(in-fliks'ih-mab)
Remicade
infliximab-abda (Rx)
Renflexis
infliximab-dyyb (Rx)
Inflectra
infliximab-qbtx (Rx)
Ixifi
Func. class.: Biologic response modifiers
Chem. class.: Tumor necrosis factor modifiers

Do not confuse:
Remicade/Renacidin
inFLIXimab/riTUXimab

ACTION: Monoclonal antibody that neutralizes the activity of tumor necrosis factor-alpha (TNF-α) found in Crohn's disease; decreased infiltration of inflammatory cells

USES: Ankylosing spondylitis, Crohn's disease (adult/child), plaque psoriasis, psoriatic arthritis, rheumatoid arthritis, ulcerative colitis (adult/child)
Unlabeled uses: Behcet's (uveitis) syndrome, resistant Kawasaki disease, multisystem inflammatory syndrome in children

CONTRAINDICATIONS: Hypersensitivity to murines, moderate to severe HF (NYHA class III/IV)
Precautions: Pregnancy, breastfeeding, children, geriatric patients, COPD, hepatotoxicity, hematologic abnormalities, hepatitis B, Guillain-Barré syndrome, seizures, multiple sclerosis

Black Box Warning: Infection, neoplastic disease, TB

DOSAGE AND ROUTES
Rheumatoid arthritis (in combination with methotrexate therapy)
Adult: IV: 3 mg/kg at 0, 2, and 6 wk, followed by a maintenance regimen of 3 mg/kg every 8 wk thereafter; may adjust dose up to 10 mg/kg every 4-8 wk
Ankylosing spondylitis
Adult: IV: 5 mg/kg at 0, 2, and 6 wk, followed by 5 mg/kg every 6 wk thereafter
Crohn's disease
Adult: IV: 5 mg/kg at 0, 2, and 6 wk, followed by 5 mg/kg every 8 wk thereafter; may increase to 10 mg/kg every 8 wk in patients who respond but then lose their response. If no response by wk 14, consider discontinuing therapy
Plaque psoriasis
Adult: IV: 5 mg/kg at 0, 2, and 6 wk, followed by 5 mg/kg every 8 wk thereafter
Psoriatic arthritis (with or without methotrexate)
Adult: IV: 5 mg/kg at 0, 2, and 6 wk, followed by 5 mg/kg every 8 wk thereafter
Ulcerative colitis
Adult
IV: 5 mg/kg at 0, 2, and 6 wk, followed by 5 mg/kg every 8 wk thereafter

Crohn's disease: Remicade/ Inflectra/Renflexis:

Children ≥6 yr and adolescents: IV:

Initial: 5 mg/kg/dose at 0, 2, and 6 wk, followed by maintenance: 5 mg/kg/dose every 8 wk thereafter

Juvenile idiopathic arthritis; refractory to conventional disease-modifying drugs:

Children ≥4 yr and adolescents: IV: Initial: 3 mg/kg at 0, 2, and 6 wk; then 3 to 6 mg/kg/dose every 8 wk thereafter in combination with methotrexate during induction and maintenance. Alternatively, some studies used 6 mg/kg/dose starting at wk 14 of a methotrexate induction regimen (wk 0 to 13); repeat dose (6 mg/kg/dose) at wk 16 and 20, then every 8 wk thereafter

Kawasaki disease, refractory to IVIG:

Infants and children: IV: 5 mg/kg/dose as a single infusion

Ulcerative colitis: Remicade:

Children ≥6 yr and adolescents: IV:

Initial: 5 mg/kg/dose at 0, 2, and 6 wk, followed by maintenance: 5 mg/kg/dose every 8 wk thereafter

Available forms: Powder for inj 100 mg

Administer:

Intermittent IV INFUSION route

- Pretreat with diphenhydrAMINE, acetaminophen, predniSONE if a reaction is infusion related
- Give immediately after reconstitution; reconstitute each vial with 10 mL sterile water for inj; further dilute total dose/250 mL of 0.9% NaCl inj to a total concentration of 0.4-4 mg/mL; use 21-G or smaller needle for reconstitution; direct sterile water at glass wall of vial; gently swirl; do not shake; may foam; allow to stand for 5 min, give within 3 hr
- Give over ≥2 hr, use polyethylene-lined infusion with in-line, sterile, low–protein-binding filter
- Do not admix
- Refrigerated storage; do not freeze

SIDE EFFECTS

CNS: *Headache, dizziness, depression, vertigo, fatigue, anxiety, fever,* seizures, *chills, flulike symptoms,* demyelinating disease

CV: Chest pain, hypo/hypertension, tachycardia, HF, acute coronary syndrome

GI: *Nausea, vomiting, abdominal pain, stomatitis, constipation, dyspepsia, flatulence*

GU: Dysuria, urinary frequency

HEMA: Anemia, leukopenia, thrombocytopenia, pancytopenia

INTEG: *Rash, dermatitis, urticaria,* dry skin, sweating, flushing, hematoma, pruritus, keratoderma blenorrhagicum

MS: Myalgia, back pain, arthralgia

RESP: URI, pharyngitis, bronchitis, cough, dyspnea, sinusitis

SYST: Anaphylaxis, fatal infections, sepsis, malignancies, immunogenicity, Stevens-Johnson syndrome, toxic epidermal necrolysis, sarcoidosis

PHARMACOKINETICS

Distributed to vascular compartment, half-life 9.5 days

INTERACTIONS

Increase: infections, neutropenia—TNF blockers (abatacept, anakinra, golimumab, rilonacept); avoid concurrent use

- Do not administer live vaccines concurrently

NURSING CONSIDERATIONS

Assess:

- **RA:** pain, joints involved, ROM, aggravating ameliorating factors baseline and periodically
- **Plaque psoriasis:** lesions, body areas affected baseline and periodically
- **Ulcerative colitis/Crohn's disease:** pain, cramping, diarrhea, change in life style baseline and periodically
- GI symptoms: nausea, vomiting, abdominal pain
- Periodic blood counts (CBC with differential), ANA titer, LFTs, baseline and periodically, may cause blood dyscrasia, discontinue if present
- CV status: B/P, pulse, chest pain
- **Allergic reaction, anaphylaxis:** rash, dermatitis, urticaria, dyspnea, hypotension,

fever, chills; discontinue if severe, administer EPINEPHrine, corticosteroids, antihistamines; assess for allergies to murine proteins before starting therapy

Black Box Warning: Fatal infections: discontinue if infection occurs, do not administer to patients with active infection; identify TB before beginning treatment; a TB test should be obtained; if present, TB should be treated before patient receives product; exercise caution when switching from 1 DMARD to another

Black Box Warning: For neoplastic disease in those <18 yr, including hepatosplenic T-cell lymphoma; usually occurs in those with inflammatory bowel disease

• **Pregnancy/breastfeeding:** does not cross placenta during 1st trimester, but does 2nd/3rd trimester; discontinue 8-10 wk before birth; do not breastfeed. Not to breastfeed while taking this product

Evaluate:
• Therapeutic response: absence of fever, mucus in stools

Teach patient/family:
• That infusion reaction should be reported immediately
• To notify prescriber immediately if infection occurs
• To notify prescriber of GI symptoms, hypersensitivity reactions, heart symptoms
• Not to operate machinery or drive if dizziness, vertigo occur
• To avoid live virus vaccinations; bring up-to-date before use
• **Malignancy:** check skin for changes, growths, or color changes
• **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected

inotersen (Rx)

(in-oh-ter′sen)

Tegsedi

Func. class.: Metabolic agent

USES:

Polyneuropathy of hereditary transthyretin mediated amyloidosis

CONTRAINDICATIONS

Hypersensitivity to inotersen or any component; platelet count <100,000/mm^3; history of acute glomerulonephritis caused by inotersen

DOSAGE AND ROUTES

Adult: SUBCUT 284 mg once weekly
Available forms: Prefilled syringe solution for injection 284 mg/1.5 mL

⚠ HIGH ALERT

inotuzumab ozogamicin (Rx)

(ih-noh-too′-zoo-mab oh′-zoh-ga-MIH-sin)

Besponsa

Func. class.: Antineoplastic monoclonal antibodies

ACTION: A CD22-directed antibody-drug conjugate; CD22 is expressed on pre–B cells and mature B cells. It consists of a cytotoxic agent; it induces DNA breaks, resulting in cell-cycle arrest and apoptotic cell death

USES: For the treatment of adults with relapsed or refractory B-cell precursor acute lymphoblastic leukemia

CONTRAINDICATIONS: Pregnancy, hypersensitivity

Black Box Warning: Hepatic disease, hepatotoxicity, mortality, sinusoidal obstructive disease, veno-occlusive disease

Precautions: Alcoholism, bleeding, breastfeeding, contraception requirements, diabetes mellitus, electrolyte imbalances, females, geriatric patients, infertility, male-mediated teratogenicity, neutropenia, bone marrow suppression, infection, reproductive risk,

thrombocytopenia, thyroid disease, QT prolongation

DOSAGE AND ROUTES

Relapsed or refractory B-cell precursor ALL

• **Adult: IV** 0.8 mg/m^2 day 1 and 0.5 mg/m^2 days 8 and 15 (cycle 1). Length of cycle 1 is 21 days, may increase to 28 days

Management of treatment-related toxicity

• Do not interrupt doses within a treatment cycle (day 8 or day 15 dose) for neutropenia or thrombocytopenia. Dosing interruptions within a cycle are recommended for nonhematologic toxicity. If a dose reduction is necessary, do not re-escalate the dose

Hematologic toxicity

• **Absolute neutrophil count (ANC) of ≥1 × 10^9 cells/L before starting therapy:** if the ANC decreases, hold next cycle until recovery of the ANC to 1 × 10^9 cells/L or greater. Discontinue therapy if low ANC lasts >28 days and is suspected to be due to inotuzumab ozogamicin

• **Platelet count of ≥50 × 10^9 cells/L before starting therapy:** if platelet count decreases, hold next cycle until the platelet count recovers to 50 × 10^9 cells/L or greater. Discontinue therapy if low platelet count lasts >28 days and is suspected to be due to inotuzumab ozogamicin

• **ANC was <1 × 10^9 cells/L and/or platelet count was <50 × 10^9 cells/L before starting therapy:** if the ANC or platelet count decreases, hold the next cycle until at least 1 of the following occurs: the ANC and platelet counts recover to baseline or better for the prior cycle; the ANC recovers to 1 × 10^9 cells/L or greater and the platelet count recovers to 50 × 10^9 cells/L or greater; the patient has stable or improved disease (based on most recent bone marrow assessment) and the ANC and platelet count decrease is considered to be due to the underlying disease and not product-related toxicity

Available forms: Powder for injection 0.9 mg

Administer:

IV route

• Visually inspect for particulate matter and discoloration before use

• Follow cytotoxic handling procedures

• Available as a single-dose, preservative-free, 0.9-mg lyophilized powder vial

• Premedication with a corticosteroid, an antipyretic agent (acetaminophen), and an antihistamine before each dose is recommended; observe patients during and for at least 1 hr after the end of the infusion for symptoms of infusion-related reactions

Reconstitution

• After calculating the number of vials needed, add 4 mL of Sterile Water for Injection to each vial for a final vial concentration of 0.25 mg/mL (0.9 mg/3.6 mL); gently swirl the vial to dissolve powder; do not shake

• The reconstitution solution should be clear to opalescent, colorless to slightly yellow, and free of visible foreign matter

• **Storage of reconstituted vials:** if not further diluted immediately, vials may be stored in the refrigerator (at 2°C-8°C or 36°F-46°F) for up to 4 hr after reconstitution; protect from light, do not freeze

Dilution:

• Add required dose/volume from the reconstituted vials to an infusion container made of polyvinyl chloride (PVC) (or non–DEHP-containing), polyolefin (polypropylene and/or polyethylene), or ethylene vinyl acetate (EVA); discard any unused portion

• Add 0.9% sodium chloride injection to the infusion container for a final total volume of 50 mL; gently invert to mix, do not shake

• **Storage of admixture:** if not infused immediately, the diluted solution may be stored at room temperature (20°C-25°C or 68°F-77°F) for up to 4 hr or refriger-

ated (2°C-8°C or 36°F-46°F) for up to 3 hr; protect from light and do not freeze

Intravenous (IV) Infusion:

- Allow refrigerated admixtures to warm to room temperature for 1 hr before use
- Give admixture (protected from light) as an IV infusion over 1 hr through an infusion line made of PVC, polyolefin (polypropylene and/or polyethylene), or polybutadiene
- Complete infusion within 8 hr of reconstitution
- The diluted solution does not need to be filtered; if it is filtered, use polyethersulfone (PES)-, polyvinylidene fluoride (PVDF)-, or hydrophilic polysulfone (HPS)-based filters
- Do not use filters made of nylon or mixed cellulose ester (MCE)
- Do not mix with or administer as an infusion with other drugs

SIDE EFFECTS

CNS: Fatigue, fever, headache, migraine, chills

GI: Nausea, vomiting, diarrhea, stomatitis, constipation, anorexia, abdominal pain, hepatotoxicity

HEMA: Anemia, thrombocytopenia, bleeding, hematoma, hematuria, ecchymosis, veno-occlusive disease

MISC: Infection, asthenia, QT prolongation, tumor lysis syndrome, sinusoidal obstruction syndrome

PHARMACOKINETICS

Protein binding 97%

INTERACTIONS

Increase: QT prolongation—other products that increase QT prolongation

Drug/Lab Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

- **Serious infection:** some may be fatal. Monitor patients for signs and symptoms of infection; use prophylactic anti-infectives as appropriate
- **Severe myelosuppression/bone marrow suppression:** thrombocytopenia, neutropenia; obtain a CBC before each dose; therapy interruption or permanent discontinuation may be necessary in patients who develop severe myelosuppression
- **QT prolongation:** obtain an electrocardiogram (ECG) and monitor serum electrolytes before the start of treatment and periodically as needed. Use with caution in a history of QT prolongation or electrolyte imbalance.

Black Box Warning: Severe or life-threatening hepatotoxicity including veno-occlusive disease (VOD)/sinusoidal obstruction syndrome (SOS): monitor liver function tests (LFTs), total bilirubin, alkaline phosphatase levels before and following each dosage change; therapy interruption, dose reduction, or permanent discontinuation may be necessary in those who develop LFT abnormalities. Closely monitor for VOD/SOS (hepatomegaly, rapid weight gain, and ascites). Permanently discontinue in those who develop VOD/SOS; in those who undergo a hematopoietic stem-cell transplant (HSCT), monitor LFTs frequently during the first month post-HSCT; then, continue to monitor LFTs but less often. Time from HSCT to onset of VOD/SOS was 15 days (range, 3 to 57 days). The risk of VOD/SOS may be greater in patients who receive an HSCT or a conditioning regimen that contains 2 alkylating agents before HSCT and in patients who have an increased total bilirubin level before an HSCT; other risk factors include hepatic disease (e.g., cirrhosis, nodular regenerative hyperplasia, active hepatitis), a prior HSCT, increased age, later salvage lines, and a greater number of treatment cycles

Black Box Warning: Mortality: those who underwent a hematopoietic stem-cell transplant (HSCT) may have a higher 100-day post-HSCT nonrelapse mortality; monitor closely for post-HSCT toxicity. The most common causes of post-HSCT death were veno-occlusive disease/sinusoidal obstruction syndrome and infectious complications

• **Pregnancy/breastfeeding:** product can cause fetal harm; females of reproductive potential should avoid becoming pregnant during and for 8 mo after final dose; obtain pregnancy test before starting product; do not breastfeed during and for at least 2 mo after last dose; men with female partners of reproductive potential should avoid fathering a child and use effective contraception during and for at least 5 mo after therapy

Evaluate:

• Therapeutic response: improving blood counts

Teach patient/familiy:

• To report adverse reactions immediately: bleeding; report diarrhea, hepatic, hematologic symptoms/toxicity, flulike symptoms

• About reason for treatment, expected results

• That monitoring for infusion reactions will be needed for at least 1 hr after infusion has ended

• **Pregnancy/breastfeeding:** to notify provider if pregnancy is planned or suspected; to use effective contraception during treatment and for 8 mo after discontinuing treatment; not to breastfeed during treatment or for 2 mo after final dose; that men with female partners of reproductive potential should avoid fathering a child and use effective contraception during and for at least 5 mo after therapy

⚠ HIGH ALERT

insulin, inhaled (Rx)

(in´su-lin)

Afrezza

Func. class.: Antidiabetic—insulin

ACTION: Endogenous insulin regulates carbohydrate, fat, and protein metabolism by the storage of and inhibiting the breakdown of glucose, fat, and amino acids. Insulin decreases glucose concentrations by the uptake of glucose in muscle and adipose tissue, and by inhibiting hepatic glucose production. Insulin also regulates fat metabolism by the storage of fat and inhibiting the mobilization of fat for energy in adipose tissues (lipolysis and free fatty acid oxidation)

USES: Diabetes mellitus types 1 and 2

CONTRAINDICATIONS: Hypersensitivity, lung cancer, hypoglycemia, smoking

Precautions: Hepatic disease, renal impairment, renal failure, diabetic ketoacidosis (DKA), hypokalemia, pregnancy, breastfeeding, child <18 yr

Black Box Warning: Asthma, COPD, pulmonary disease

Black Box Warning: Acute bronchospasm

DOSAGE AND ROUTES

• **Adult: INH:** (type 1) the average initial dose is 0.5-0.6 unit/kg/day, usually ≥3 administrations/day; (type 2) the average initial dose is 0.2-0.6 unit/kg/day. When used in combination with oral hypoglycemic agents, may only need a single dose of a longer-acting insulin at a dosage of 10 units or 0.2 unit/kg/day

Available forms: Inhalation 4 units powder in 4-, 8-, 12-unit cartridges

Administer:

• Give by inhalation only; use at beginning of a meal (blue cartridge = 4 units of regular insulin, green cartridge = 8 units of regular insulin), multiple cartridges may be needed, for single-use only, inhaler should be discarded after 15 days; store unopened cartridge packages in refrigerator; if not refrigerated, use within 10 days

• Sealed (unopened) blister cards and strips must be used within 10 days. Cartridges left over in an opened strip must be used within 3 days. Remove a blister card from the foil package

SIDE EFFECTS

CNS: Headache, fatigue

GI: Nausea, diarrhea

MISC: Urinary tract infection, weight gain, hypokalemia, peripheral edema
RESP: Cough, throat irritation/pain, productive cough, decreased pulmonary function tests, bronchitis, **acute bronchospasm**
ENDO: Hypoglycemia

INTERACTIONS

Increase: inhaled insulin effect—bronchodilators, other inhaled products, agonists, salicylates, alcohol, fenfluramine, MAOIs
Increase: heart failure, ischemic events—pioglitazone, troglitazone
Increase: hypoglycemia—β-blockers, ACE inhibitors, angiotensin II receptor antagonists, disopyramide, guanethidine, octreotide
Increase or decrease: hypoglycemic effects—cloNIDine, metoclopramide, tegaserod, testosterone derivatives, or anabolic steroids
Increase: hyperglycemia—niacin (nicotinic acid), bumetanide, furosemide, torsemide
Decrease: hypoglycemic effects—dextrothyroxine, triamterene, thiazide diuretics; thyroid hormones, estrogens, progestins, or oral contraceptives; danazol, corticosteroids, EPINEPHrine

NURSING CONSIDERATIONS

Assess:
• Fasting blood glucose, A1c may be drawn to identify treatment effectiveness
• Urine ketones during illness, insulin requirements may increase during times of stress, trauma, illness, surgery
• Hypoglycemic reaction can occur during peak times (sweating, weakness, dizziness, chills, confusion, headache, nausea; rapid, weak pulse)
• Hyperglycemia: acetone breath, polyuria, fatigue, polydipsia, flushed dry skin, lethargy
• **Smoking status:** not recommended in current smokers or those with recent cessation
• **Beers:** avoid in older adults; higher risk of hypoglycemia without improvement in hyperglycemia management

Evaluate:
• Therapeutic response: decrease in blood glucose levels

Teach patient/family:
• That blurred vision occurs, not to operate machinery until effect is known, do not change corrective lenses for at least 1 month
• To keep all insulin equipment available at all times
• That product does not cure, but controls symptoms
• To carry ID as diabetic
• About the symptoms of hypoglycemia, hyperglycemia, ketoacidosis
• About dosage and how to use product, that the rest of the plan must be followed; do not change the dose without prescriber approval; cartridges should be at room temperature for 10 min, do not invert inhaler, do not leave used cartridge in the inhaler

Func. class.: Antidiabetic, pancreatic hormone

Chem. class.: Modified structures of endogenous human insulin

Do not confuse

Humulin N/Humalog/Novoli N/ Humulin/ Novolin/Nogolog

ACTION: Decreases blood glucose; by transport of glucose into cells and the conversion of glucose to glycogen, indirectly increases blood pyruvate and lactate, decreases phosphate and potassium; insulin may be human (processed by recombinant DNA technologies)

USES: Type 1 diabetes mellitus, type 2 diabetes mellitus, gestational diabetes; insulin lispro may be used in combination with sulfonylureas in children >3 yr

CONTRAINDICATIONS: Hypersensitivity to protamine; creosol (aspart)
Precautions: Pregnancy

DOSAGE AND ROUTES

Insulin glulisine

- **Adult/adolescent/child ≥4 yr: SUBCUT** dosage individualized, give within 15 min before or 20 min after starting a meal
- **Adult: IV** dilute to 1 unit/mL in infusion systems with 0.9% NaCl, use PVC Viaflex infusion bags and PVC tubing, use dedicated line

Insulin aspart

- **Adult/adolescent/child ≥6 yr: INTERMITTENT SUBCUT** Total daily dose is given as 2-4 inj/day just before beginning of meal; in general, 50%-70% of total daily insulin may be given as insulin aspart, remainder should be intermediate- or long-acting insulin; **CONTINUOUS SUBCUT** used with external insulin pump via cont

SUBCUT insulin infusion (CSII), insulin dose should be based on insulin dose from previous regimen

Insulin lispro

• **Adult/adolescent/child ≥3 yr: SUBCUT** 15 min before meals; **CONT SUBCUT INFUSION (external insulin pump):** total daily dose should be based on insulin dose from previous regimen, 50% of total dose can be given as meal-related boluses, remainder as basal infusion; intermittent SUBCUT (Lyumjev)

• **Adult: SUBCUT** 0.4-1 unit/kg/day

Human regular

• **Adult: SUBCUT** ½-1 hr before meals

Insulin, isophane suspension

• **Adult: SUBCUT** dosage individualized by blood, urine glucose; usual dose 7-26 units; may increase by 2-10 units/day if needed

Insulin degludec

• **Adult: SUBCUT** dosage individualized

Insulin detemir

• **Adult/adolescent/child ≥2 yr: SUBCUT** 1-2×/day; if 1×, give with evening meal

Insulin glargine

• **Adult and child ≥6 yr: SUBCUT** 10 units/day, range 2-100 units/day, but may go much higher

Regular insulin (ketoacidosis)

• **Adult: IV** 5-10 units, then 5-10 units/hr until desired response, then switch to **SUBCUT** dose; **IV/INFUSION** 2-12 units (50 units/500 mL of normal saline)

• **Child: IV** 0.1 units/kg

Replacement

• **Adult/child: SUBCUT** 0.5-1 units/kg/day qid given 30 min before meals

• **Adolescent: SUBCUT** 0.8-1.2 units/kg/day; this dosage is used during rapid growth

Available forms: ***NPH*** Inj 100 units/mL; ***regular*** inj 100 units/mL, cartridges 100 units/mL; ***insulin analog*** inj 100 units/mL; ***isophane insulin*** inj 100 units/mL, cartridges 100 units/mL; **insulin lispro** 100 units/mL, 1.5-mL cartridges, HumaLOG Pen sol for inj 100 units/mL, Humalog KwikPen; ***insulin glulisine*** inj 100 units/mL; ***insulin glargine*** inj 100, 300 units/mL; 3-mL single prefilled pen; ***insulin degludec*** solution for inj 100 units/mL (u-100), 200 units/mL (u-200); ***insulin detemir*** inj 100 units/mL in 10 vials, 3-mL cartridges; ***insulin aspart*** inj 100 units/mL

Administer:

• Store at room temperature for <1 mo (some insulins); keep away from heat and sunlight; refrigerate all other supply; NPH, premixed insulins are cloudy; regular, rapid-acting analogs, long-acting analogs are clear; do not freeze—IV route, regular only

SUBCUT route

• After warming to room temperature by rotating in palms; use only insulin syringes with markings or syringe matching units/mL; rotate inj sites within one area: abdomen, upper back, thighs, upper arm, buttocks; keep record of sites

• Increased dosages if tolerance occurs

• Premixed insulins, NPH are cloudy suspensions

• Regular human insulin, rapid-acting analogs, long-acting analogs are clear; do not use if cloudy, thick, or discolored

CONT SUBCUT route (insulin infusion CSII)

• Do not mix with other insulins when using a pump

• Insulin lispro 3-mL cartridges to be used in Disetronic H-TRON plus V100 pump using Disetronic rapid infusion sets; infusion set and cartridge adapter should be changed q3days; replace 3-mL cartridge q6days

IV route (insulin glulisine only)

• Dilute to 1 international unit/mL in infusion systems with 0.9% NaCl using PVC viaflex infusion bags and PVC tubing; use dedicated line; do not admix

IV route (regular only)

When regular insulin is administered IV, monitor glucose, potassium often to prevent fatal hypoglycemia, hypokalemia

• IV direct, undiluted via vein, Y-site, 3-way stopcock; give at ≤50 units/min

• By cont infusion after diluting with IV sol and run at prescribed rate; use

IV infusion pump for correct dosing; give reduced dose at serum glucose level of 250 mg/100 mL

Y-site compatibilities: Amiodarone, ampicillin, ampicillin/sulbactam, aztreonam, ceFAZolin, cefoTEtan, DOBUTamine, esmolol, famotidine, gentamicin, heparin, heparin/hydrocortisone, imipenem/cilastatin, indomethacin, magnesium sulfate, meperidine, meropenem, midazolam, morphine, nitroglycerin, oxytocin, PENTobarbital, potassium chloride, propofol, ritodrine, sodium bicarbonate, sodium nitroprusside, tacrolimus, terbutaline, ticarcillin, ticarcillin/clavulanate, tobramycin, vancomycin, vit B/C

SIDE EFFECTS

EENT: Blurred vision, dry mouth
INTEG: Flushing, rash, urticaria, warmth, lipodystrophy, lipohypertrophy, swelling, redness
META: *Hypoglycemia,* rebound hyperglycemia (Somogyi effect 12-72 hr or longer)
MISC: Peripheral edema
SYST: Anaphylaxis

PHARMACOKINETICS

Rapid acting
Insulin glulisine: Onset 15-30 min, peak ½-1½ hr, duration 3-4 hr
Insulin aspart: Onset 10-20 min, peak 1-3 hr, duration 3-5 hr
Insulin lispro: Onset 15-30 min, peak ½-1½ hr, duration 3-5 hr
Short acting
Insulin regular: Onset 30 min, peak 2.5-5 hr, duration up to 7 hr
Intermediate acting
Insulin, isophane suspension (NPH): Onset 1.5-4 hr, peak 4-12 hr, duration ≤24 hr
Insulin degludec: Peak 12 hr, duration 42 hr after 8 doses
Long acting
Insulin detemir: Onset 0.8-2 hr, peak unknown, duration ≤24 hr (concentration dependent)
Insulin glargine: Onset 1.5 hr, no peak identified, duration ≥24 hr
Mixtures
Insulin, isophane suspension and regular insulin (70/30): Onset 10-20 min, peak 2.4 hr, duration ≤24 hr
Insophane insulin suspension (NPH) and insulin mixtures (50/50): Onset ½-1 hr, peak dual, duration 10-16 hr

INTERACTIONS

Increase: hypoglycemia—salicylate, alcohol, β-blockers, anabolic steroids, phenylbutazone, sulfinpyrazone, guanethidine, oral hypoglycemics, MAOIs, tetracycline
Decrease: hypoglycemia—thiazides, thyroid hormones, oral contraceptives, corticosteroids, estrogens, DOBUTamine, EPINEPHrine
Drug/Lab Test
Increase: VMA
Decrease: potassium, calcium
Interference: LFTs, thyroid function studies

NURSING CONSIDERATIONS

Assess:
• Fasting blood glucose; A1c may be drawn to identify treatment effectiveness q3mo
• Urine ketones during illness; insulin requirements may increase during stress, illness, surgery
• Hypoglycemic reaction that can occur during peak time (sweating, weakness, dizziness, chills, confusion, headache, nausea, rapid weak pulse, fatigue, tachycardia, memory lapses, slurred speech, staggering gait, anxiety, tremors, hunger)
• **Hyperglycemia:** acetone breath; polyuria; fatigue; polydipsia; flushed, dry skin; lethargy
• **Beers:** avoid use of short- or rapid-acting insulin in older adults; sliding-scale insulin poses a higher risk of hypoglycemia without improvement in hyperglycemia management

Evaluate:
• Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait, blood glucose HBA1c within normal limits
Teach patient/family:

• That blurred vision occurs; not to change corrective lenses until vision is stabilized after 1-2 mo
• To keep insulin, equipment available at all times; to carry a glucagon kit, candy, or oral glucose preparation to treat hypoglycemia
• That product does not cure diabetes but controls symptoms
• To carry emergency ID as diabetic
• To recognize hypoglycemia reaction: headache, tremors, fatigue, weakness, tachycardia
• To recognize hyperglycemia reaction: frequent urination, thirst, fatigue, hunger
• About the dosage, route, mixing instructions, diet restrictions (if any), disease process
• About the symptoms of ketoacidosis: nausea; thirst; polyuria; dry mouth; decreased B/P; dry, flushed skin; acetone breath; drowsiness; Kussmaul respirations
• That a plan is necessary for diet, exercise; that all food on diet should be eaten; that exercise routine should not vary
• About blood glucose testing; how to determine glucose level
• To avoid OTC products unless directed by prescriber

Interferon alfa 2b (Rx)

(In´ter-fear´on al´fa 2b)

Intron A

Func. class.: Antineoplastic, interferon

USES: Hairy cell leukemia, malignant melanoma, follicular lymphoma, Kaposi sarcoma caused by AIDS, some genital warts, and chronic hepatitis B or C in adults and to treat chronic hepatitis B in children ≥1 yr old

DOSAGE AND ROUTES

Hairy cell leukemia: NOTE: Administer interferon alfa-2b subcutaneously as opposed to intramuscularly if the patient's platelet count is <50,000/mm^3.
Adults: IM/SUBCUT 2 million international units/m^2 3 times a wk for up to 6 mo

Aggressive, follicular non-Hodgkin lymphoma (NHL) with an anthracycline
• **Adults: SUBCUT** 5 million IU 3 times per wk for up to 18 mo in combination with an anthracycline

AIDS-related Kaposi sarcoma
• **Adult: IM/SUBCUT** 30 million international units/m^2, 3 times/wk, continue for max response after 16 wk

Chronic HBV infection
• **Adult: IM/SUBCUT** 30-35 million IU/wk X 16 weeks either as 5 million IU/day or 10 million IU 3 times per wk
• **Child 1-17 yr: SUBCUT** 3 million IU/m^2 3 times per week for the first week, then escalated to 6 million IU/m^2 (max 10 million IU) 3 times per week X 16 to 24 wk

Available forms: Solution for injection 18, 25 million international units (6 and 10 million international units/mL); powder for injection 10, 18, 50 million international units/vial with diluent

interferon beta-1a (Rx)

(in-ter-feer´on)

Avonex, Rebif

interferon beta-1b (Rx)

Betaseron, Extavia

Func. class.: Antiviral
Chem. class.: Interferon, *Escherichia coli* derivative

ACTION: Antiviral, immunoregulatory; action not clearly understood; biologic response-modifying properties mediated through specific receptors on cells, inducing expression of interferon-induced gene products

USES: Ambulatory patients with relapsing or remitting MS

CONTRAINDICATIONS: Hypersensitivity to natural or recombinant interferon-β or human albumin, hamster protein, rotavirus vaccine

Precautions: Pregnancy, breastfeeding, children <18 yr, chronic progressive MS, depression, mental disorders, seizure disorder, latex allergy, autoimmune disorders, bone marrow suppression, hepatotoxicity, cardiac disease, alcoholism, chickenpox, herpes zoster

DOSAGE AND ROUTES

Interferon beta-1a

Multiple sclerosis

- **Adult: IM** (Avonex) 30 mcg/wk
- **Adult: SUBCUT** (Rebif) 22 or 44 mcg 3×/wk with each dose 48 hr apart, titrate to full dose over 4-wk period

Interferon beta-1b

Multiple sclerosis

- **Adult: SUBCUT** 0.0625 mg every other day for wk 1 and 2, then 0.125 mg every other day for wk 3 and 4, then 0.1875 mg every other day for wk 5 and 6, then 0.25 mg every other day thereafter; higher doses should not be used

Available forms: *beta-1a:* (Avonex) 30 mcg (6.6 million international units/vial) (autoinjector pen); (Rebif) 22 mcg, 44 mcg/0.5 mL; *beta-1b:* powder for inj 0.3 mg kit

Administer

Interferon beta-1a

- Visually inspect parenteral products for particulate matter and discoloration before use
- Store in refrigerator; do not freeze

IM route

- Premedicate with acetaminophen or ibuprofen and give at bedtime to lessen flulike symptoms
- Interferon-β1a (Avonex) 30 mcg = 6 million IU
- If a dose is missed, give it as soon as possible; continue regular schedule but do not give 2 injections within 2 days; all products are single-use only; do not reuse needles, syringes, prefilled syringes, or autoinjectors
- Rotate injection sites to minimize injection-site reactions
- Do not inject into an area where skin is irritated, reddened, bruised, infected, or scarred
- Check site after 2 hr for redness, edema, or tenderness
- The manufacturer of Avonex offers free training on IM use for patients and health care partners; contact Above MS for more information (800-456-2255)

Reconstitution and administration of Avonex lyophilized powder for IM route

- Use aseptic technique for preparation of solution
- Sites include the thigh or upper arm
- Slowly add 1.1 mL sterile water for injection, preservative-free (supplied by manufacturer) to the vial; rapid addition of the diluent can cause foaming
- Gently swirl; do not shake; final concentration should be 30 mcg/mL (6 million IU/mL)
- The solution should be clear to slightly yellow without particles; discard if the reconstituted product contains particulate or is discolored
- Withdraw 1 mL of reconstituted solution into a syringe; attach the sterile needle and inject IM
- A 25-G 1-inch needle for IM may be substituted for the 23-G 1¼-inch needle provided
- **Storage:** Use within 6 hr of reconstitution; store reconstituted solution in refrigerator; *do not freeze;* discard any unused solution; both drug and diluent vials are single-use only

Administration of Avonex prefilled syringe

- The first injection should be performed under the supervision of an appropriately qualified person
- If self-injecting, rotate injection site between thighs
- Wash hands before handling the Dose Pack
- Remove prefilled syringe from the refrigerator to warm to room temperature (usually 30 min before use); do not use external heat sources such as hot water to warm the syringe
- Refer to the Patient Medication Guide for detailed instructions for preparing and giving a dose

• **Storage:** Store refrigerated; if refrigeration is unavailable, may store at 77°F or less for up to 7 days; after removing from refrigerator, do not store product above 25°C

Administration of Avonex prefilled autoinjector

• The first injection should be performed under the supervision of provider
• Remove one Administration Dose Pack from the refrigerator to warm to room temperature (about 30 min before use); do not use external heat sources such as hot water to warm the syringe Dose Pack
• Do not use the injection if the liquid is colored, cloudy, or has lumps or particles; air bubbles will not affect the dose
• Avonex Pen should be injected into the upper outer thigh
• Refer to the Patient Medication Guide for detailed instructions for preparing and giving a dose
• **Storage:** Store at 36°F-46°F (2°C-8°C); if refrigeration is unavailable, may store at 77°F or less for up to 7 days; after removing from refrigerator, do not store product above 25°C; do not expose to high temperatures; do not freeze; protect from light

Subcutaneous administration

• Give at the same time (preferably late in the afternoon or evening) on the same days of the week at least 48 hours apart
• Do not give on two consecutive days; if a dose is missed, administer the dose as soon as possible, then skip the following day; return to the regular schedule the following week
• Premedication with acetaminophen or ibuprofen can lessen the severity of flulike symptoms
• Interferon-β1a (Rebif) 44 mcg is equivalent to 12 million IU
• Rotate injection sites
• A Starter Pack containing a lower dose of Rebif syringes is available for the initial titration period

Injection (Rebif)

• Interferon-β1a (Rebif) is available in a prefilled syringe with a 29-G needle
• Inject subcut into the outer surface of the upper arm, abdomen, thigh, or buttock, do not inject the area near the navel or waistline; take care not to inject intradermally
• Discard any unused solution; prefilled syringes do not contain preservatives and are single-use only

Interferon beta-1b

SUBCUT route

• The manufacturers of Betaseron and of Extavia offer materials to assist with training on subcut use, call 1-800-788-1467 (Betaseron), 1-888-669-6682 (Extavia)
• Premedication with acetaminophen or ibuprofen and use of product at bedtime can lessen the severity of flulike symptoms
• Visually inspect parenteral products for particulate matter and discoloration before use; do not use if particulate matter is present

Reconstitution

• Add 1.2 mL of 0.54% sodium chloride injection (supplied by the manufacturer) to the vial by using the vial adapter to attach the prefilled syringe that contains the diluent
• If not used immediately, store in the refrigerator for up to 3 hr; do not freeze; discard any unused portion after 3 hr

Injection

• Withdraw the desired amount of the reconstituted solution into the syringe
• Choose an injection site on the upper back arm, abdomen, buttock, or front thigh; do not inject within 2 inches of the navel or in a site where the skin is red, bruised, infected, broken, painful, uneven, or scabbed; rotate injection sites
• Inject subcut; take care not to inject intradermally

SIDE EFFECTS

CNS: *Headache, fever, pain, chills, mental changes, depression,* hypertonia, suicide attempts, seizures
CV: *Migraine, palpitations, hypertension,* tachycardia, peripheral vascular disorders
EENT: *Conjunctivitis,* blurred vision

GI: *Diarrhea, constipation, vomiting, abdominal pain*
GU: *Dysmenorrhea, irregular menses, metrorrhagia,* cystitis, breast pain
HEMA: Decreased lymphocytes, ANC, WBC, *lymphadenopathy,* anemia
INTEG: *Sweating, inj-site reaction*
MS: *Myalgia,* myasthenia
RESP: *Sinusitis,* dyspnea

PHARMACOKINETICS

β-1a: Onset ≤12 hr, peak 16 hr, duration 4 days, half-life 8.6 hr
β-1b: Onset rapid, peak 2-8 hr, duration unknown, half-life 8 min-4.3 hr

INTERACTIONS

Increase: hepatic damage—antiretrovirals (NNRTIs, NRTIs, protease inhibitors)
Increase: myelosuppression—antineoplastics
Decrease: clearance of zidovudine
Drug/Herb
• Change in immunomodulation: astragalus, echinacea, melatonin
Drug/Lab Test
Interference: vaccines, toxoids; avoid concurrent use
Increase: LFTs

NURSING CONSIDERATIONS

Assess:
• Blood, hepatic studies: CBC, differential, platelet counts, BUN, creatinine, ALT, urinalysis; if absolute neutrophil count <750/mm^3 or if AST/ALT is 10× normal, discontinue product
• CNS symptoms: headache, fatigue, depression
• GI status: diarrhea or constipation, vomiting, abdominal pain
• Cardiac status: increased B/P, tachycardia
• Mental status: depression, depersonalization, suicidal thoughts, insomnia
• Lupus-like symptoms
• Multiple sclerosis symptoms
Evaluate:
• Therapeutic response: decreased symptoms of multiple sclerosis
Teach patient/family:
• With written, detailed information about product
• That blurred vision, hearing loss, sweating may occur
• That female patients may experience irregular menses, dysmenorrhea or metrorrhagia, breast pain
• To use sunscreen to prevent photosensitivity
• About injection technique, care of equipment
• To notify prescriber of increased temperature, chills, muscle soreness, fatigue, depression, symptoms of hepatotoxicity
• To notify prescriber if pregnancy is suspected

interferon gamma-1b (Rx)

(in-ter-feer′on)

Actimmune

Func. class.: Biologic response modifier
Chem. class.: Lymphokine, interleukin type

USES: Serious infections associated with chronic granulomatous disease, osteopetrosis

CONTRAINDICATIONS: Hypersensitivity to interferon-γ, *Escherichia coli*–derived products
Precautions: Pregnancy, breastfeeding, children <1 yr, cardiac disease, seizure disorders, CNS disorders, myelosuppression

DOSAGE AND ROUTES

• **Adult: SUBCUT** 50 mcg/m^2 (1.5 million units/m^2) for patients with surface area >0.5 m^2; 1.5 mcg/kg/dose for patients with surface area <0.5 m^2; give Monday, Wednesday, Friday for 3×/wk dosing

⚠ HIGH ALERT

ipilimumab (Rx)

(ip-i-lim′ue-mab)

Yervoy

Func. class.: Antineoplastic; biologic response modifier
Chem. class.: CTLA-4-directed blocking antibody

ACTION: Human IgGIk monoclonal antibody that binds to the cytotoxic T-lymphocyte–associated antigen 4 (CTLA-4); action is indirect, possibly through T-cell–mediated antitumor immune responses

USES: Colorectal cancer, metastatic (microsatellite instability-high or mismatch repair deficient), hepatocellular carcinoma, adjuvant treatment, melanoma, unresectable or metastatic, non-small cell lung cancer (metastatic), non-small cell lung cancer (metastatic or recurrent), advanced renal cell carcinoma

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Pregnancy, breastfeeding, Crohn's disease, hepatitis, immunosuppression, inflammatory bowel disease, iritis, ocular disease, organ transplant, pancreatitis, renal disease, rheumatoid arthritis, sarcoidosis, systemic lupus erythematosus, thyroid disease, ulcerative colitis, uveitis

Black Box Warning: Adrenal insufficiency, diarrhea, Guillain-Barré syndrome, hepatic disease, myasthenia gravis, hypo/hyperthyroidism, hypopituitarism, peripheral neuropathy, serious rash, hypophysitis

DOSAGE AND ROUTES

When given in combination with nivolumab, if nivolumab is withheld, ipilimumab should also be withheld, and if ipilimumab is withheld, nivolumab should be withheld

Colorectal cancer, metastatic

Adult IV: 1 mg/kg every 3 wk (in combination with nivolumab) for 4 combination doses, followed by nivolumab monotherapy until disease progression or unacceptable toxicity

Hepatocellular carcinoma

Adult: IV: 3 mg/kg once every 3 wk (in combination with nivolumab) for 4 combination doses, followed by nivolumab monotherapy until disease progression or unacceptable toxicity

Melanoma, metastatic with brain metastases (unlabeled)

Adult: IV: 3 mg/kg once every 3 wk (in combination with nivolumab) for 4 combination doses, followed by nivolumab monotherapy; total duration of nivolumab therapy is up to 24 mo, or until disease progression or unacceptable toxicity

Melanoma, unresectable or metastatic

Adult: IV: 3 mg/kg every 3 wk for a maximum of 4 doses

Children ≥12 yr and adolescents: IV: 3 mg/kg every 3 wk for a maximum of 4 doses; doses may be delayed due to toxicity, but all doses must be administered within 16 wk of the initial dose

Non-small cell lung cancer, metastatic, PD-L1 expressing

Adult: IV: 1 mg/kg once every 6 wk (in combination with nivolumab; refer to nivolumab monograph for nivolumab dosing information) until disease progression, unacceptable toxicity, or up to 2 yr in patients without disease progression

Non-small cell lung cancer, metastatic or recurrent

Adult: IV: 1 mg/kg once every 6 wk (in combination with nivolumab and 2 cycles of histology-based platinum-doublet chemotherapy; refer to nivolumab monograph for nivolumab dosing information) until disease progression, unacceptable toxicity, or up to 2 yr in patients without disease progression

Renal cell cancer, advanced, combination therapy

Adult: IV: 1 mg/kg once every 3 wk (in combination with nivolumab) for 4 combination doses, followed by nivolumab monotherapy (refer to nivolumab monograph for nivolumab dosing information) until disease progression or unacceptable toxicity. **Small cell lung cancer, progressive (off-label use): IV:** 3 mg/kg every 3 wk (in combination with nivolumab) for 4 combination doses, followed by nivolumab monotherapy

Colorectal cancer, metastatic (microsatellite instability-high [MSI-H]) or mismatch repair deficient (dMMR)

Children ≥12 yr and adolescents: IV:

1 mg/kg/dose once every 3 wk (in combination with nivolumab) for up to 4 doses

Available forms: Sol for inj 50 mg/10 mL, 200 mg/40 mL

Administer:

Intermittent IV INFUSION route

- Visually inspect parenteral products for particulate matter and discoloration before using; sol may have a pale yellow color and have translucent to white, amorphous particles; discard the vial if sol is cloudy, if there is pronounced discoloration, or if particulate matter is present
- Allow to stand at room temperature for 5 min before infusion preparation; withdraw the required volume and transfer into an IV bag; discard partially used vials or empty vials; dilute with 0.9% sodium chloride injection or 5% dextrose injection to a final concentration (1-2 mg/mL); mix diluted sol by gentle inversion; do not admix
- Give infusion over 90 min through an IV line with a low-protein binding in-line filter, do not give with other products; after each infusion, flush the line with 0.9% sodium chloride injection or 0.5% dextrose injection
- Store once diluted for no more than 24 hr refrigerated or at room temperature

SIDE EFFECTS

CNS: Severe and fatal immune-mediated neuropathies, fatigue, headache, fever

EENT: Uveitis, iritis, episcleritis

ENDO: Severe and fatal immune-mediated endocrinopathies

GI: Severe and fatal immune-mediated enterocolitis, hepatitis, pancreatitis, abdominal pain, nausea, diarrhea, appetite decreased, vomiting, constipation, colitis

INTEG: Severe and fatal immune-mediated dermatitis, pruritus, rash, urticaria

MISC: Cough, dyspnea, anemia, eosinophilia, nephritis

SYST: Antibody formation, Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS:

Steady-state by 3rd dose; terminal half-life 15.4 days

NURSING CONSIDERATIONS

Assess:

- **Serious skin disorders: Stevens-Johnson syndrome, toxic epidermal necrolysis:** permanently discontinue in these or rash complicated by full-thickness dermal ulceration; give systemic corticosteroids at a dose of 1-2 mg/kg/day of predniSONE or equivalent; when dermatitis is controlled, taper corticosteroids over at least 1 mo, withhold in patients with moderate to severe reactions; for mild to moderate dermatitis (localized rash and pruritus), give topical or systemic corticosteroids

Black Box Warning: Immune-mediated reactions: before starting treatment, assess for enterocolitis, hepatitis, dermatitis, neuropathy, endocrinopathy; take LFTs, ACTH, and thyroid function tests; permanently discontinue if these conditions occur

- **Hepatotoxicity:** LFTs baseline and before each dose; increase the frequency of liver function test monitoring until resolution; permanently discontinue in grade 3-5 toxicity; give systemic corticosteroids at a dose of 1-2 mg/kg/day of predniSONE or equivalent
- **Neuropathy:** monitor for motor or sensory neuropathy (unilateral or bilateral weakness, sensory alterations, or paresthesias) before each dose; permanently discontinue if severe neuropathy (interfering with daily activities), such as Guillain-Barré–like syndromes, occurs
- **Endocrinopathy:** monitor thyroid function tests at baseline and before each dose; monitor hypophysitis, adrenal insufficiency, adrenal crisis, hypo/hyperthyroidism (fatigue, headache, mental status changes, abdominal pain, unusual bowel habits, hypotension, or nonspecific symptoms that may resemble other causes)
- **Vision changes:** uveitis, iritis, episcleritis; corticosteroids may be used

Black Box Warning: Pregnancy/breastfeeding: do not use in pregnancy, breastfeeding

Evaluate:
• Decreasing spread or recurrence of malignant melanoma
Teach patient/family:
• To immediately report allergic reactions, skin rash, severe abdominal pain, yellowing of skin or eyes, tingling of extremities, change in bowel habits
• About the reason for treatment and expected results; to read medication guide provided
• **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected or if breastfeeding; to use contraception during and for 3 mo after final dose

ipratropium (Rx)

(i-pra-troe'pee-um)
Atrovent, Atrovent HFA, Atrovent Nasal Spray
Func. class.: Anticholinergic, bronchodilator
Chem. class.: Synthetic quaternary ammonium compound

Do not confuse:
Atrovent/Natru-Vent

ACTION: Inhibits interaction of acetylcholine at receptor sites on the bronchial smooth muscle, thereby resulting in decreased cGMP and bronchodilation

USES: Maintenance treatment of bronchospasm associated with COPD; rhinorrhea (nasal spray)

CONTRAINDICATIONS: Hypersensitivity to this product, atropine, bromide, soybean or peanut products
Precautions: Breastfeeding, children <12 yr, angioedema, heart failure, surgery, acute bronchospasm, bladder obstruction, closed-angle glaucoma, prostatic hypertrophy, urinary retention, pregnancy

DOSAGE AND ROUTES

Bronchospasm in chronic bronchitis/emphysema
• **Adult: INH** 2 sprays (17 mcg/spray) 3-4×/day, max 12 **INH**/24 hr; **SOL** 500 mcg (1 unit dose) given 3-4×/day by nebulizer; nasal spray: 2 sprays (42 mcg/spray) 3-4×/day
• **Child 5-11 yr: INH** 4-8 inhalations q20min as needed for ≤3 hr (asthma, unlabeled); **NEB** 250-500 mcg q20min as needed for ≤3 hr (asthma, unlabeled)
Rhinorrhea perennial rhinitis
• **Adult/child ≥6 yr: INTRANASAL** 2 sprays (43 mcg)/nostril bid or tid
• **Child 5-12 yr: INTRANASAL** 2 sprays (0.03%) in each nostril 3×/day
Available forms: Aerosol 17 mcg/actuation; nasal spray 0.03%, 0.06%; sol for inh 0.0125%, 0.02%
Administer:
• Store at room temperature
Nebulizer route
• Use sol in nebulizer with a mouthpiece rather than a face mask
Intranasal route
• Priming pump initially requires 7 actuations of pump; priming again is not necessary if used regularly, tilt head backward after dose

SIDE EFFECTS

CNS: *Anxiety, dizziness, headache,* nervousness
CV: Palpitation
EENT: Dry mouth, blurred vision, nasal congestion
GI: *Nausea, vomiting, cramps*
INTEG: Rash
RESP: *Cough, worsening of symptoms,* bronchospasms

PHARMACOKINETICS

Half-life 2 hr, does not cross blood-brain barrier

INTERACTIONS

Increase: toxicity—other bronchodilators (INH)
Increase: anticholinergic action—phenothiazines, antihistamines, disopyramide
Drug/Herb
Increase: anticholinergic effect—belladonna
Increase: bronchodilator effect—green tea (large amts), guarana

NURSING CONSIDERATIONS

Assess:

- **Palpitations:** if severe, product may have to be changed
- Tolerance over long-term therapy; dose may have to be increased or changed
- **Atropine sensitivity:** patient may also be sensitive to this product
- **Respiratory status:** rate, rhythm, auscultate breath sounds before and after administration, vital capacity, FEV, ABGs/VBGs, heart rate, rhythm
- Hard candy, frequent drinks, sugarless gum to relieve dry mouth
- **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; use caution in breastfeeding, excretion unknown

Evaluate:

- Therapeutic response: ability to breathe adequately

Teach patient/family:

- That compliance is necessary with number of inhalations/24 hr or overdose may occur; about spacer device for geriatric patients; that max therapeutic effects may take 2-3 mo
- How to use equipment properly and take medication as directed; to take missed doses as soon as remembered unless almost time for the next dose; to space remaining doses evenly during the day; not to double doses
- That rinsing mouth after use of the inhaler, good oral hygiene, and sugarless gum or candy may minimize dry mouth; to notify health care professional if stomatitis occurs or if dry mouth persists for more than 2 wk
- **Inhalation:** not to exceed 12 doses within 24 hr; to notify heath care professional if symptoms do not improve within 30 min after administration of medication or if condition worsens
- About the need for pulmonary function tests baseline and periodically during therapy to determine effectiveness
- To avoid spraying in eyes; may cause irritation
- To inform prescriber if cough, nervousness, headache, dizziness, nausea occurs
- **Nasal spray:** instruct patient in proper use of nasal spray. Clear nasal passages before use. Do not inhale during administration. Prime pump initially with 7 actuations. If used regularly, no further priming is needed. If not used in 24 hr, prime with 2 actuations. If not used for >7 days, prime with 7 actuations

ipratropium/albuterol (Rx)

(i-pra-troe´pee-um/al-byoo-ter-ole)

Combivent Respimat

Func. class.: Anticholinergic agent, $beta_2$-adrenergic agonist

USES: COPD

CONTRAINDICATIONS

Hypersensitivity to ipratropium, albuterol, atropine

DOSAGE AND ROUTES

Adult: Oral inhalation (soft-mist inhaler) 1 INH 4 times daily (max 6 INH/day); NEB: Initial: 1 vial (3 mL) (ipratropium bromide 0.5 mg/albuterol 2.5 mg) every 6 hr (max: 6 vials [18 mL]/day)

irbesartan (Rx)

(er-be-sar´tan)

Avapro

Func. class.: Antihypertensive

Chem. class.: Angiotensin II receptor blocker (Type AT_1)

Do not confuse:

Avapro/Anaprox

ACTION: Blocks the vasoconstrictor and aldosterone-secreting effects of angiotensin II; selectively blocks the binding of angiotensin II to the AT_1 receptor found in tissues

USES: Hypertension, alone or in combination; nephropathy in type 2 diabetic patients; proteinuria

CONTRAINDICATIONS:

Hypersensitivity

Black Box Warning: Do not use in pregnancy

Precautions: Breastfeeding, children <6 yr, geriatric patients, hypersensitivity to ACE inhibitors; hepatic/renal disease; renal artery stenosis, African descent, angioedema

DOSAGES AND ROUTES

Hypertension

• **Adult: PO** 150 mg/day; may be increased to 300 mg/day, volume-depleted patients: start with 75 mg/day

Nephropathy in type 2 diabetic patients

• **Adult: PO** maintenance dose 300 mg/day, start 75 mg/day

Available forms: Tabs 75, 150, 300 mg

Administer:

• Without regard to meals

• May be used with other antihypertensives, diuretic

• Volume depletion should be corrected before use

SIDE EFFECTS

CNS: *Dizziness,* anxiety, *headache, fatigue,* syncope

CV: Hypotension

GI: *Diarrhea, dyspepsia,* hepatitis, cholestasis

HEMA: Thrombocytopenia

MISC: Edema, chest pain, rash, tachycardia, UTI, angioedema, hyperkalemia

RESP: *Cough, upper respiratory tract infection,* sinus disorder, pharyngitis, rhinitis

PHARMACOKINETICS

Peak 1.5-2 hr, extensively metabolized by CYP2C9, half-life 11-15 hr, highly bound to plasma proteins, excreted in urine and feces, protein binding 90%

INTERACTIONS

Increase: hyperkalemia—potassium-sparing diuretics, potassium salt substitutes, ACE inhibitors

Increase: irbesartan level—CYP2C9 inhibitors (amiodarone, delavirdine, fluconazole, FLUoxetine, fluvastatin, fluvoxaMINE, imatinib, sulfonamides, sulfinpyrazone, voriconazole, zafirlukast)

Decrease: antihypertensive effect—NSAIDs

Drug/Herb

Increase: antihypertensive effect—black cohosh, garlic, goldenseal, hawthorn, kelp

Increase or decrease: antihypertensive effect—astragalus, cola tree

Decrease: antihypertensive effect—guarana, khat, licorice, yohimbe

NURSING CONSIDERATIONS

Assess:

• **Hypotension:** for severe hypotension, place in supine position and give IV infusion of NS, drug may be continued after B/P is restored

• B/P, pulse q4hr; note rate, rhythm, quality

• Baselines of renal/hepatic studies before therapy begins; periodically monitor LFTs, total/direct bilirubin

• Skin turgor, dryness of mucous membranes for hydration status; edema in feet, legs daily

Evaluate:

• Therapeutic response: decreased B/P

Teach patient/family:

• To comply with dosage schedule, even if feeling better; that max therapeutic effects may take 2-3 mo, to take without regard to food

• That product may cause dizziness, fainting, light-headedness

• To rise slowly to sitting or standing position to minimize orthostatic hypotension

• Not to stop product abruptly

Black Box Warning: To notify prescriber if pregnancy is suspected; discontinue if pregnant

irbesartan/hydrochlorothiazide (Rx)

(ir-be-sar′tan/hye-droe-klor-oh-thye′a-zide)

Avalide

Func. class.: Angiotensin II receptor blocker, antihypertensive, diuretic, thiazide

USES: Hypertension

CONTRAINDICATIONS

Hypersensitivity to irbesartan, hydrochlorothiazide, sulfonamide-derived drugs; concomitant use with aliskiren in those with diabetes mellitus; anuria

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Adult PO Initial therapy: Irbesartan 150 mg/hydrochlorothiazide 12.5 mg once daily. If initial response is inadequate, may titrate dose after 1 to 2 wk (max daily dose: irbesartan 300 mg/hydrochlorothiazide 25 mg)

⚠ HIGH ALERT

irinotecan (Rx)

(ear-een-oh-tee′kan)

Camptosar

Func. class.: Antineoplastic

Chem. class.: Camptothecin analog

ACTION: Cytotoxic by producing damage to single-strand DNA during DNA synthesis; binds to topoisomerase I

USES: Metastatic carcinoma of the colon or rectum or 1st-line treatment in combination with 5-FU and leucovorin for metastatic colon or rectal carcinomas
Unlabeled uses: Pancreatic cancer

CONTRAINDICATIONS:

Pregnancy, hypersensitivity
Precautions: Breastfeeding, children, geriatric patients, irradiation, hepatic disease

Black Box Warning: Myelosuppression, diarrhea/dehydration

DOSAGE AND ROUTES

Premedications: atropine 0.25 to 1 mg IV or SUBCUT in patients with cholinergic symptoms (increased salivation, rhinitis, miosis, diaphoresis, abdominal cramping) or early-onset diarrhea. Antiemetics are recommended

First-line treatment colorectal cancer, metastatic with 5-FU
Adult: IV: 125 mg/m^2 over 90 min followed by leucovorin 20 mg/m^2 IV bolus, then 5-FU 500 mg/m^2 IV bolus on days 1, 8, 15, and 22 of a 6-wk treatment cycle (may adjust upward to 150 mg/m^2 if tolerated);

Non-small cell lung cancer, advanced (unlabeled)
Adult: IV: 60 mg/m^2 days 1, 8, and 15 every 4 wk (in combination with cisplatin)

Pancreatic cancer, advanced or metastatic (unlabeled)
Adult: IV: FOLFIRINOX regimen: 180 mg/m^2 over 90 min every 2 wk (in combination with oxaliplatin, leucovorin, and fluorouracil)

Available forms: Inj 20 mg/mL
Administer:
- Use cytotoxic handling precautions

IV route
- Premedicate with antiemetic dexamethasone plus another antiemetic agent, such as a 5-HT$_3$ blocker, given at least 30 min before use
- Before beginning a course of therapy, the granulocyte count should be ≥1.5 × 10 9/L, the platelet count recovered to ≥100 × 10 9/L, and treatment-related diarrhea should be fully resolved

Dilution
- Dilute appropriate dose in D_5W (preferred) or NS injection to a final concentration of 0.12-2.8 mg/mL
- Store up to 24 hr at room temperature and room lighting; however, because of possible microbial contamination during preparation, an admixture prepared with D_5W or NS should be used within 6 hr, solutions prepared with D_5W, refrigerated, protected from light must be used within 48 hr; avoid refrigeration if prepared with NS

Intravenous infusion
- Infuse over 90 min

Y-site compatibilities: Alemtuzumab, alfentanil, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bretylium, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, capreomycin, CARBOplatin, caspofungin, ceFAZolin, cefotetan, cefOXitin, cefTAZidime, cefTAZidime (L-arginine), ceftizoxime, cefuroxime, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DAPTOmycin, DAUNOrubicin liposome, DAUNOrubicin, dexamethasone, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, DOXOrubicin liposomal, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, foscarnet, gallium, garenoxacin, gatifloxacin, gemtuzumab, gentamicin, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, imipenem-cilastatin, inamrinone, insulin, regular, isoproterenol, ketorolac, labetalol, lepirudin, leucovorin, levoFLOXacin, LEVOleucovorin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, meperidine, meropenem, mesna, metaraminol, methadone, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoXANTRONE, mivacurium, morphine, moxifloxacin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, PACLitaxel (solvent/surfactant), palonosetron, pancuronium, pantoprazole, pentamidine, pentazocine, PHENobarbital, phentolamine, phenylephrine, polymyxin B, potassium acetate, chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, riTUXimab, rocuronium, sodium acetate, bicarbonate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Fever, headache, chills, dizziness
CV: Vasodilation, edema, thromboembolism
GI: Severe diarrhea, *nausea, vomiting,* anorexia, constipation, cramps, flatus, stomatitis, dyspepsia, hepatotoxicity
HEMA: Leukopenia, anemia, neutropenia
INTEG: Irritation at site, rash, sweating, alopecia
MISC: Edema, asthenia, weight loss, back pain
RESP: Dyspnea, increased cough, rhinitis

PHARMACOKINETICS

Rapidly and completely absorbed, excreted in urine and bile as metabolites, half-life 6-12 hr, bound to plasma proteins 30%-68%, increased risk for toxicity in patients homozygous for UGT1A1 28

INTERACTIONS

Increase: toxicity—fluorouracil
Increase: bleeding risk—NSAIDs, anticoagulants
Increase: irinotecan levels—some CYP3A4 inhibitors (ketoconazole)
Increase: myelosuppression, diarrhea—other antineoplastics, radiation
Increase: lymphocytopenia, hyperglycemia—dexamethasone
Increase: akathisia—prochlorperazine
Increase: dehydration—diuretics
Decrease: irinotecan levels—CYP3A4 inducers (phenytoin, carBAMazepine, PHENobarbital)

Drug/Herb

Decrease: product level—St. John's wort; avoid concurrent use

Drug/Lab Test

Increase: alk phos, LFTs, bilirubin
Decrease: platelets, WBC, neutrophils, HB/HcT

NURSING CONSIDERATIONS

Assess:

• CNS symptoms: fever, headache, chills, dizziness

Black Box Warning: Myelosuppression: CBC, differential, platelet count weekly; use colony-stimulating factor if WBC <2000/mm^3 or platelet count <100,000/mm^3, HB ≤9 g/dL, neutrophil ≤1000/mm^3; notify prescriber of results; product should be discontinued

• Buccal cavity for dryness, sores or ulceration, white patches, oral pain, bleeding, dysphagia

Black Box Warning: GI symptoms: frequency of stools; cramping; severe, life-threatening diarrhea may occur with fluid and electrolyte imbalances, treat diarrhea within 24 hr of use with 0.25-1 mg atropine IV; treat diarrhea >24 hr of use with loperamide, diarrhea >24 hr (late diarrhea) can be fatal

• **Signs of dehydration:** rapid respirations, poor skin turgor, decreased urine output, dry skin, restlessness, weakness
• **Bone marrow depression:** bruising, bleeding, blood in stools, urine, sputum, emesis
• Increased fluid intake to 2-3 L/day to prevent dehydration unless contraindicated

Evaluate:

• Therapeutic response: decrease in tumor size, spread of cancer

Teach patient/family:

• To avoid foods with citric acid, hot temperature, or rough texture if stomatitis is present; to drink adequate fluids
• To report stomatitis; any bleeding, white spots, ulcerations in mouth; to examine mouth daily, report symptoms
• To report signs of anemia: fatigue, headache, faintness, SOB, irritability, infection, rash
• To use contraception during therapy
• To avoid salicylates, NSAIDs, alcohol because bleeding may occur; to avoid all products unless approved by prescriber
• About alopecia; that when hair grows back, it may be different in texture, thickness
• To avoid vaccinations while taking this product

Black Box Warning: To report diarrhea that occurs 24 hr after administration; severe dehydration can occur rapidly, may be fatal

• To report immediately injection site pain, irritation
• To report vomiting, dizziness
• That regular lab exams will be needed
• To report if pregnancy is planned or suspected; to use contraception during therapy

⚠ HIGH ALERT

irinotecan liposome (Rx)

(eye-rye-no-tee′-kan lye-po-so′m)

Onivyde

Func. class.: Antineoplastic agent, camptothecin, topoisomerase I inhibitor

USES: Pancreatic adenocarcinoma, metastatic

CONTRAINDICATIONS

Severe hypersensitivity to irinotecan liposome, irinotecan hydrochloride, or any component

Black Box Warning: Diarrhea, GI obstruction, neutropenia

DOSAGE AND ROUTES

Pancreatic adenocarcinoma, metastatic

Adult: IV: 70 mg/m^2 once every 2 wk (in combination with fluorouracil and leucovorin); reduce initial starting dose to 50 mg/m^2 in patients known to be homozygous for the UGT1A1*28 allele; the dose may be increased to 70 mg/m^2 as tolerated in subsequent cycles

Available forms: Injection 43 mg/10 mL

iron dextran, injection (Rx)

Dexiron 🍁, INFeD

Func. class.: Hematinic

Chem. class.: Ferric hydroxide complex with dextran

ACTION: Iron is carried by transferrin to the bone marrow, where it is incorporated into hemoglobin

USES: Iron-deficiency anemia

CONTRAINDICATIONS:

Repeated blood transfusions, vitamin E deficiency

Black Box Warning: Hypersensitivity

Precautions: Pregnancy, breastfeeding, neonates, infants <4 mo, children, acute renal disease, asthma, rheumatoid arthritis (IV), ankylosing spondylitis, lupus, hypotension, all anemias excluding iron-deficiency anemia, hepatic/cardiac/renal disease

DOSAGE AND ROUTES

- **Adult/child: IM** 0.5 mL as a test dose by Z-track, then no more than the following total dose including test dose per day:
- **Adult/adolescent/child (>15 kg):** Total iron dextran dose in mL = [0.0442 × (Desired Hb − observed Hb) × LBW] + (0.26 × LBW), max of undiluted is 100 mg (2 mL)/day
- **Child (10-15 kg):** Total iron dextran dose in mL = [0.0442 × (Desired Hb − observed Hb) × LBW] + (0.26 × ABW), max of undiluted iron dextran is 100 mg (2 mL)/day
- **Child/Infant >4 mo (5-9.9 kg):** Total iron dextran dose in mL = [0.0442 × (Desired Hb − observed Hb) × LBW] + (0.26 × ABW)
- **Infants >4 mo (<5 kg):** Total iron dextran dose in mL = [0.0442 × (Desired Hb − observed Hb) × LBW] + (0.26 × ABW)

Administer:

- D/C oral iron before parenteral; give only after test dose of 25 mg by preferred route; wait at least 1 hr before giving remaining portion
- Store at room temperature in cool environment
- Recumbent position 30 min after IV inj to prevent orthostatic hypotension

IM route

- IM deeply in large muscle mass; use Z-track method, 19- to 20-G 2- to 3-in needle; ensure needle long enough to place product deep in muscle; change needles after withdrawing product and before injecting to prevent skin, tissue staining
- **Only with EPINEPHrine available in case of anaphylactic reaction during dose**

IV route

• IV after flushing with 10 mL 0.9% NaCl; give undiluted; may be diluted in 50-250 mL NS for infusion; give ≤1 mL (50 mg) over ≥1 min; flush line after use with 10 mL 0.9% NaCl; patient should remain recumbent for ½-1 hr
• IV inj requires single-dose vial without preservative; verify on label that IV use approved

SIDE EFFECTS

CNS: Headache, paresthesia, dizziness, shivering, weakness, seizures
CV: Chest pain, shock, hypotension, tachycardia
GI: *Nausea,* vomiting, metallic taste, abdominal pain
HEMA: Leukocytosis
INTEG: Rash, pruritus, urticaria, fever, sweating, chills, brown skin discoloration, pain at inj site, necrosis, sterile abscesses, phlebitis
OTHER: Anaphylaxis
RESP: Dyspnea

PHARMACOKINETICS

IM: Excreted in feces, urine, bile, breast milk; crosses placenta; most absorbed through lymphatics; can be gradually absorbed over weeks/months from fixed locations

INTERACTIONS

Increase: toxicity—oral iron; do not use
Decrease: reticulocyte response—chloramphenicol
Drug/Lab Test
False increase: serum bilirubin
False decrease: serum calcium
False positive: ^{99m}Tc diphosphate bone scan, iron test (large doses >2 mL)

NURSING CONSIDERATIONS

Assess:
• Observe for 1 hr after first dose to monitor for anaphylactic reactions
• Blood studies: Hct, HB, reticulocytes, transferrin, plasma iron concentrations, ferritin, total iron binding, bilirubin before treatment, at least monthly

Black Box Warning: Allergy: anaphylaxis, rash, pruritus, fever, chills, wheezing; notify prescriber immediately, keep emergency equipment available

• Cardiac status: anginal pain, hypotension, tachycardia
• Nutrition: amount of iron in diet (meat, dark green leafy vegetables, dried beans, dried fruits, eggs)
• Cause of iron loss or anemia, including use of salicylates, sulfonamides
• **Toxicity:** nausea, vomiting, diarrhea, fever, abdominal pain (early symptoms), cyanotic-looking lips, nailbeds, seizures, CV collapse (late symptoms)
• **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; use caution in breastfeeding, trace amounts appear in breast milk

Evaluate:
• Therapeutic response: increased serum iron level, increased HB, Hct

Teach patient/family:
• That iron poisoning may occur if increased beyond recommended level; not to take oral iron preparation or vitamins containing iron
• That delayed reaction may occur 1-2 days after administration and last 3-4 days (IV), 3-7 days (IM); to report fever, chills, malaise; muscle, joint aches; nausea, vomiting, backache
• To avoid breastfeeding
• That stools may become dark

TREATMENT OF OVERDOSE:

Discontinue product, treat allergic reaction, give diphenhydrAMINE or EPINEPHrine as needed, give iron-chelating product for acute poisoning

iron sucrose (Rx)

Velphoro, Venofer
Func. class.: Hematinic
Chem. class.: Ferric hydroxide complex with dextran

ACTION: Iron is carried by transferrin to the bone marrow, where it is incorporated into hemoglobin

USES: Iron-deficiency anemia, hyperphosphatemia in chronic kidney disease on dialysis
Unlabeled uses: Dystrophic epidermolysis bullosa (DEB)

CONTRAINDICATIONS: Hypersensitivity, all anemias excluding iron-deficiency anemia, iron overload
Precautions: Pregnancy, breastfeeding, children, geriatric patients, abdominal pain, anaphylactic shock, arthralgia, chest pain, cough, diarrhea, dizziness, dyspnea, edema, increased LFTs, fever, headache, heart failure, hypo/hypertension, infection, MS pain, nausea/vomiting, seizures, weakness

DOSAGE AND ROUTES

• **Adult: IV** 5 mL (100 mg of elemental iron) given during dialysis; most will need 1000 mg of elemental iron over 10 sequential dialysis sessions
• **Child ≥2 yr/adolescents: IV** 0.5 mg/kg by slow IV inj over 5 min (undiluted) or diluted in 25 mL of 0.9% NaCl, give over 5-60 min, max 100 mg every 2 wk × 12 wk

Hyperphosphatemia in chronic kidney disease
• **Adult: PO** 500 mg tid with meals
Available forms: Inj 20 mg/mL; chew tab 500 mg
Administer:
PO route
• Give with meals
• Do not crush or chew
• Only with EPINEPHrine, SOLU-Medrol available in case of anaphylactic reaction during dose
IV route
• Do not use if particulate is present or if discolored
• Give directly in dialysis line by slow inj or infusion; give by slow inj at 1 mL/min (5 min/vial); for infusion, dilute each vial exclusively in ≤100 mL 0.9% NaCl, give at 100 mg of iron/15 min; discard unused portions
• Do not use with IV products
• Store at room temperature in cool environment; do not freeze

SIDE EFFECTS

CNS: Headache, dizziness
CV: Chest pain, hypo/hypertension, hypervolemia, heart failure
GI: *Nausea, vomiting, abdominal pain*
INTEG: Rash, pruritus, urticaria, fever, sweating, chills
OTHER: Anaphylaxis, hyperglycemia
RESP: Dyspnea, pneumonia, cough

PHARMACOKINETICS

Excreted in urine, half-life 6 hr

INTERACTIONS

Increase: toxicity—oral iron, dimercaprol; do not use
Decrease: iron sucrose effect—chloramphenicol
Drug/Lab Test
Increase: glucose

NURSING CONSIDERATIONS

Assess:
• Blood studies: Hct, HB, reticulocytes, transferrin, plasma iron concentrations, ferritin, total iron binding; bilirubin before treatment, at least monthly
• **Allergy, anaphylaxis:** rash, pruritus, fever, chills, wheezing; notify prescriber immediately, keep emergency equipment available
• Cardiac status: hypo/hypertension, hypervolemia
• **Toxicity:** nausea, vomiting, diarrhea, fever, abdominal pain (early symptoms), cyanotic-looking lips, nailbeds, seizures, CV collapse (late symptoms)
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding
Evaluate:
• Therapeutic response: increased serum iron levels, Hct, HB
Teach patient/family:
• To report itching, rash, chest pain, headache, vertigo, nausea, vomiting, abdominal pain, joint/muscle pain, numbness, tingling
• That iron poisoning may occur if dosage is increased beyond recommended level; not to take oral iron preparation

TREATMENT OF OVERDOSE:
Discontinue product, treat allergic reaction, give diphenhydrAMINE or EPINEPHrine as needed, give iron-chelating product for acute poisoning

isavuconazonium (Rx)
(eye-sa-vue-koe-na-zoe′nee-um)

Cresemba

Func. class.: Antifungal, systemic

Chem. class.: Azole

ACTION:
Exerts antifungal activity by inhibiting the synthesis of ergosterol, an essential component of the fungal cell membrane. The depletion of ergosterol within the fungal cell membrane results in increased cellular permeability, causing leakage of cellular content

USES:
Aspergillus flavus, Aspergillus fumigatus, Aspergillus niger, Rhizopus oryzae, Mucormycetes species; do NOT use for infections of *Candida, Blastomyces, Histoplasma*

CONTRAINDICATIONS:
Hypersensitivity, short QT syndrome

Precautions: Azole hypersensitivity, pregnancy, breastfeeding, infusion-related reactions, hepatic disease

DOSAGE AND ROUTES
• **Adult: PO** loading dose of 2 caps (372 mg) q8hr × 6 doses. Then, 2 caps (372 mg) daily. Start maintenance dosing 12-24 hr after the last loading dose; treatment may last 6-12 wk up to 6 mo. **IV** loading dose of 372 mg q8hr × 6 doses, then 372 mg/day, beginning 12-24 hr after the last loading dose; use a 0.2- to 1.2-micron in-line filter and administer over a minimum of 1 hr; an additional loading dose is not needed when switching to PO

Administer:

PO route

• Swallow whole; do not chew, crush, dissolve, open the capsules; may be used without regard to food

IV route

• Visually inspect for particulate matter and discoloration; diluted solution may contain translucent to white particulates that will be removed by the in-line filter

Reconstitution

• Reconstitute the dry powder with 5 mL sterile water for injection, gently shake until dissolved

• Storage: the reconstituted solution may be stored below 77°F (25°C) for a maximum of 1 hr before further dilution

Dilution

• Remove 5 mL of the reconstituted solution and add it to 250 mL of either 0.9% NaCl or D_5W (1.5 mg/mL)

• Gently mix the solution or roll the bag. DO NOT shake. Do not place in a pneumatic transport system

• Apply an in-line filter (0.2-1.2 microns), adhere an in-line filter reminder sticker to the infusion bag

• Give within ≤6 hr of dilution

• Storage: may be stored immediately after dilution at 36°F to 46°F (2°C to 8°C); administration MUST be completed within 24 hr of the time of dilution. Do NOT freeze

• Product only after C&S confirms organism, product needed to treat condition; make sure product is used in life-threatening infections

• Flush IV lines with 0.9% sodium chloride or 5% dextrose in water before and after administration of the infusion

• Must be administered through a 0.2- to 1.2-micron filter; give over ≥1 hr. Do not give by bolus

• Do not admix

Available forms: Caps 186 mg; powder for injection 382 mg

SIDE EFFECTS
CNS: *Headache,* paresthesias, peripheral neuropathy, *hallucinations,* depression, insomnia, dizziness, fever, vertigo, tremor, confusion

CV: Tachypnea, supraventricular tachycardia, atrial fibrillation/flutter

EENT: Tinnitus

GI: Nausea, vomiting, anorexia, diarrhea, cramps, hepatitis, stomatitis
GU: *Hypokalemia,* renal failure
HEMA: Anemia, eosinophilia, hypomagnesemia, thrombocytopenia, leukopenia
INTEG: *Burning, irritation,* pain, necrosis at inj site with extravasation, *rash*
MISC: Cough

PHARMACOKINETICS

Metabolized by CYP3A4, CYP3A5, UGT, P-gp, OCT2 enzymes; eliminated in urine/feces; peak 2 hr (PO), Chinese patients (levels 40% lower), protein binding >99%

INTERACTIONS

Increase: effects of benzodiazepines, calcium channel blockers, cycloSPORINE, ergots, HMG-CoA reductase inhibitors, pimozide, quiNIDine, prednisoLONE, sirolimus, sulfonylureas, tacrolimus, vinca alkaloids, warfarin, rifabutin, proton pump inhibitors, NNRTIs, protease inhibitors, phenytoin
Increase: isavuconazonium effect—CYP3A4 substrates
Decrease: isavuconazonium effect—CYP3A4 inhibitors
Decrease: bupropion effect—dose may need to be increased

Drug/Herb

- Do not use with St. John's wort

Drug/Lab Test

Increase: AST/ALT, alk phos, creatinine, bilirubin
Decrease: HB/Hct, platelets, WBC

NURSING CONSIDERATIONS

Assess:

- **Short QT syndrome:** do not use in this condition
- VS q15-30min during first infusion; note changes in pulse, B/P
- Blood studies: CBC, potassium, sodium, calcium, magnesium, q2wk; obtain culture and sensitivity before starting first dose; may start treatment before results are received
- **Hepatotoxicity:** increases in AST, ALT, alk phos, bilirubin, baseline and periodically
- **Allergic reaction:** dermatitis, rash; product should be discontinued, antihistamines (mild reaction) or epinephrine (severe reaction) administered
- **Hypokalemia:** anorexia, drowsiness, weakness, decreased reflexes, dizziness, increased urinary output, increased thirst, paresthesias
- **Ototoxicity:** tinnitus (ringing, roaring in ears), vertigo
- **Infusion-related reactions:** dizziness, chills, fever, hypotension, dyspnea; discontinue if these occur
- **Pregnancy/breastfeeding:** test for pregnancy before starting treatment; do not use in or breastfeed

Evaluate:

- Therapeutic response: resolution of fungal infection, negative C&S

Teach patient/family:

- That long-term therapy may be needed to clear infection (2 wk-3 mo, depending on type of infection); not to discontinue unless approved by prescriber
- To notify prescriber of bleeding, bruising, soft-tissue swelling, dark urine, persistent nausea or diarrhea, headache, rash, yellow skin/eyes
- That women of childbearing age should use effective contraceptive; not to breastfeed
- To notify provider of all OTC, Rx, herbal products or supplements taken and to avoid new products unless approved by prescriber
- That lab exams will be required

isoniazid (Rx)

(eye-soe-nye'a-zid)

Isotamine

Func. class.: Antitubercular
Chem. class.: Isonicotinic acid hydrazide

ACTION: Bactericidal interference with lipid, nucleic acid biosynthesis

USES: Treatment, prevention of TB

CONTRAINDICATIONS:
Hypersensitivity

Black Box Warning: Acute hepatic disease

Precautions: Pregnancy, renal disease, diabetic retinopathy, cataracts, ocular defects, IV drug users, >35 yr, postpartum, HIV, neuropathy

Black Box Warning: Alcoholism, females (African descent/Hispanic patients)

DOSAGE AND ROUTES
- **Adult/adolescent: PO/IM** 5 mg/kg/day up to 300 mg/day or 15 mg/kg 2-3×/wk, max 900 mg 2-3×/wk
- **Child/infant with HIV: PO/IM** 10-15 mg/kg/day, max 300 mg/day

Available forms: Tabs 100, 300 mg; inj 100 mg/mL; oral sol 10 mg/mL

Administer:

PO route
- PO with meals to decrease GI symptoms; better to take on empty stomach 1 hr before or 2 hr after meals

IM route
- IM deep in large muscle mass; massage; rotate injection site; warm inj to room temperature to dissolve crystals

SIDE EFFECTS
CNS: *Peripheral neuropathy, dizziness,* memory impairment, seizures, psychosis
EENT: Blurred vision, optic neuritis
GI: *Nausea, vomiting,* fatal hepatitis
HEMA: Agranulocytosis, hemolytic, aplastic anemia, thrombocytopenia, eosinophilia, methemoglobinemia
Hypersensitivity: DRESS, Stevens-Johnson syndrome, toxic epidermal necrolysis, rash, fever

PHARMACOKINETICS
Metabolized in liver, 50% of patients may metabolize slowly, increasing toxicity; excreted in urine (metabolites), crosses placenta, excreted in breast milk; half life 1-4 hr (slow acetylators), 0.5-1.5 hr (fast acetylators)
PO: Peak 1-2 hr
IM: Peak 45-60 min

INTERACTIONS
Increase: toxicity—tyramine foods, alcohol, cycloSERINE, ethionamide, rifAMPin, carBAMazepine, phenytoin, benzodiazepines, meperidine
Increase: serotonin syndrome—SSRIs, SNRIs
Decrease: absorption—aluminum antacids
Decrease: effectiveness of BCG vaccine—ketoconazole

Drug/Food
- Do not give with high-tyramine foods, alcohol

Drug/Lab Test
Increase: LFTs, bilirubin, glucose
Decrease: platelets, granulocytes

NURSING CONSIDERATIONS
Assess:

Black Box Warning: Hepatic studies weekly: baseline in all patients, those >35 yr and all women should be monitored periodically; ALT, AST, bilirubin; increased test results may indicate hepatitis; hepatic status: decreased appetite, jaundice, dark urine, fatigue; those with fast acetylation may metabolize product more than 5 times faster (black, Asian patients are at greater risk than some Caucasian patients); fatal hepatitis is a greater risk in black or Hispanic patients after giving birth

- **DRESS:** fever, flulike symptoms, rash, lymphadenopathy, facial swelling, may involve other organ systems
- **Stevens-Johnson syndrome, toxic epidermal necrolysis:** rash, fever, fatigue, blistering, discontinue immediately if these occur
- Mental status often: affect, mood, behavioral changes; psychosis may occur
- Paresthesia in hands, feet
- **Susceptibility testing:** obtain susceptibility tests before treatment and periodically; half of Mexicans, blacks, Caucasians, and Native Americans may be

slow acetylators; Asians, Eskimos may be fast acetylators
• **Pregnancy/breastfeeding:** use during pregnancy even 1st trimester for active TB, use only if benefits outweigh fetal risk for other indications; compatible with breastfeeding

Evaluate:
• Therapeutic response: decreased symptoms of TB

Teach patient/family:
• That compliance with dosage schedule, duration is necessary; not to skip or double dose
• That scheduled appointments must be kept or relapse may occur
• To avoid alcohol while taking product; may increase risk for hepatic injury
• If diabetic, to use blood glucose monitor to obtain correct result
• To report weakness, fatigue, loss of appetite, nausea, vomiting, jaundice of skin or eyes, tingling/numbness of hands/feet

Black Box Warning: Fatal hepatitis: to notify prescriber immediately of yellow skin/eyes, dark urine, loss of appetite

⚠ HIGH ALERT

isoproterenol (Rx)

(eye-soe-proe-ter′-e-nole)

Isuprel

Func. class.: Beta$_1$- and beta$_2$-adrenergic agonist agent

USES: Acute bronchospasm, Adam-Stokes syndrome, cardiac arrest, cardiogenic shock, HF, septic shock AV block

CONTRAINDICATIONS

Angina, preexisting ventricular arrhythmias, tachyarrhythmias; cardiac glycoside intoxication

DOSAGE AND ROUTES

Bradyarrhythmias, AV nodal block

Adult: Continuous IV infusion: Usual range: 2 to 10 mcg/min; titrate to patient response

Cardiogenic shock due to bradycardia (unlabeled)

Adult: Continuous IV infusion: N2 to 20 mcg/min

Provocation during tilt table testing for syncope (unlabeled):

Adult: Continuous IV infusion: Initial: 1 mcg/min; increase as necessary based on response; maximum dose: 5 mcg/min

Provocation of ventricular arrhythmias in suspected arrhythmogenic right ventricular cardiomyopathy (unlabeled)

Adult: 45 mcg/min for 3 min (regardless of initial heart rate) followed by evaluation for arrhythmia

isosorbide dinitrate (Rx)

(eye-soe-sor′bide)

Apo-ISON 🍁, Isochron, IsoDitrate, Isordil

isosorbide mononitrate (Rx)

Imdur 🍁

Func. class.: Antianginal, vasodilator

Chem. class.: Nitrate

Do not confuse:
Isordil/Plendil

ACTION: Relaxation of vascular smooth muscle, which leads to decreased preload, afterload, which is responsible for decreasing left ventricular end-diastolic pressure, systemic vascular resistance, and reducing cardiac oxygen demand

USES: Treatment, prevention of chronic stable angina pectoris

Unlabeled uses: Heart failure (dinitrate), esophageal spasms without GERD

CONTRAINDICATIONS: Hypersensitivity to this product or nitrates; severe anemia, closed-angle glaucoma

Precautions: Pregnancy, breastfeeding, children, orthostatic hypotension, MI,

HF, severe renal/hepatic disease, increased intracranial pressure, cerebral hemorrhage, acute MI, geriatric patients, GI disease, syncope

DOSAGE AND ROUTES

Dinitrate

• **Adult: PO** 5-20 mg bid-tid initially, maintenance 10-40 mg bid-tid; **EXT REL** 40-80 mg q8-12hr, max 160 mg/day

Mononitrate

• **Adult: PO** (tablets) 10-20 mg bid, 7 hr apart; (extended release) initiate at 30-60 mg/day as a single dose, increase q3days as needed, may increase to 120 mg/day, max 240 mg/day

Available forms: ***Dinitrate:*** ext rel tabs 40 mg; tabs 5, 10, 20, 30, 40 mg; ***mononitrate:*** tabs 10, 20 mg; ext rel 30, 60, 120 mg

Administer:

• Do not break, crush, or chew extended-release capsules

• After checking expiration date

• PO with 8 oz water on empty stomach

• **Extended release capsule/tablet:** allow dosing interval >18 hr

SIDE EFFECTS

CNS: *Vascular headache, flushing, dizziness,* weakness

CV: *Orthostatic hypotension,* tachycardia, collapse, syncope

GI: Nausea, vomiting

INTEG: Pallor, sweating, rash

MISC: Twitching, hemolytic anemia, methemoglobinemia, tolerance, xerostomia

PHARMACOKINETICS

Dinitrate

Metabolized by liver, excreted in urine as metabolites (80%-100%)

PO: Onset 15-30 min, duration 4-6 hr, half-life 5-6 hr

SUS REL: Onset ≤4 hr, duration 6-8 hr

Mononitrate

SUS REL: Onset 30-60 min, peak 1-4 hr, duration 6-8 hr, half-life 5 hr

INTERACTIONS

• Fatal hypotension: avanafil, sildenafil, tadalafil, vardenafil; do not use together

Increase: hypotension—β-blockers, diuretics, antihypertensives, alcohol, calcium channel blockers, phenothiazines

Increase: heart rate, B/P—sympathomimetics

Increase: myocardial ischemia—rosiglitazone; avoid concurrent use

NURSING CONSIDERATIONS

Assess:

• **Anginal pain:** duration, time started, activity being performed, character

• **Methemoglobinemia (rare):** cyanosis of lips, nausea/vomiting, coma, shock; usually caused by high dose of product but may occur with normal dosing

• B/P, pulse, respirations during beginning therapy and periodically thereafter

• Tolerance if taken over long period; to prevent, allow intervals of 12-14 hr/day without product

• Headache, light-headedness, decreased B/P; may indicate a need for decreased dosage, treat headache with OTC analgesics

• **Beers:** use with caution in older adults; may exacerbate episodes of syncope

• **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decrease or prevention of anginal pain

Teach patient/family:

• To leave tabs in original container

• To avoid alcohol, OTC products unless approved by prescriber

• That product may cause headache; that taking with meals may reduce or eliminate headache; to take no later than 7 PM (last dose)

• To avoid hazardous activities if dizziness occurs

• About the importance of complying with complete medical regimen

• To make position changes slowly to prevent orthostatic hypotension

• Not to use with avanafil, sildenafil, tadalafil, vardenafil with nitrates; may cause serious drop in B/P

• Not to discontinue abruptly, may cause heart attack

• To use at beginning of angina symptoms, may repeat every 15 min; if no relief, seek medical attention immediately

isosorbide/hydralazine (Rx)

(eye-soe-sor′bide/hye-dral′a-zeen)

BiDil

Func. class.: Antihypertensive, vasodilator

USES: Heart failure with reduced ejection fraction (HFrEF)

CONTRAINDICATIONS

Hypersensitivity to organic nitrates or any component; concomitant use with phosphodiesterase 5 inhibitors (avanafil, sildenafil, tadalafil, vardenafil); concomitant use with riociguat

DOSAGE AND ROUTES

Heart failure with reduced ejection fraction (HFrEF)

Adult: PO Initial: 1 tablet (20 mg isosorbide/37.5 mg hydralazine) 3 times daily; titrate dose in 2 to 4 wk to a max 2 tablets (total of 40 mg isosorbide/75 mg hydralazine) 3 times daily

Available forms: Tablet 20 mg/37.5 mg

ISOtretinoin (Rx)

(eye-soe-tret′i-noyn)

Absorica, Accutane, Amnesteem, Claravis, Clarus, E Puris, Myorisan, Sotret, Zenatane

Func. class.: Antiacne agent, retinoid

USES: Severe recalcitrant nodulocystic acne

CONTRAINDICATIONS: Hypersensitivity to this product, parabens, retinoids, inflamed skin, blood donation

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

• **Adult: PO** 0.5-2 mg/kg/day in 2 divided doses × 15-20 wk; if relapse occurs, repeat after 2 mo off product

Available forms: Capsule 8,10, 20, 25, 30, 35, 40 mg

istradefylline (Rx)

(iz-tra′de-fye′leen)

Nourianz

Func. class.: Anti-Parkinson agent

Chem. class.: Adenosine receptor antagonist

I

ACTION: Adenosine A_{2A} receptor antagonist that acts through a nondopaminergic mechanism to improve motor function

USES: Adjuvant treatment in patients with Parkinson's disease experiencing "off" episodes

CONTRAINDICATIONS

Hypersensitivity

Precautions:

Behavioral changes, breastfeeding, children, contraception requirements, dyskinesia, geriatric, hepatic disease, impulse control symptoms, infants, pregnancy, psychosis, reproductive risk, tobacco smoking

DOSAGE AND ROUTES

Adults PO 20 mg daily; adjust dose based on response and tolerability; max: 40 mg daily; 20 or more cigarettes, 40 mg daily

Available forms: Tabs 20, 40 mg

Administer: May give without regard to meals

SIDE EFFECTS

CNS: *Dyskinesia,* psychosis, dizziness, hallucinations, insomnia

GI: Nausea, constipation

PHARMACOKINETICS

• Protein binding 98%, metabolized by CYP1A1, CYP3A4, with a minor contribution

from CYP1A2, CYP2B6, CYP2C8, CYP2C9, CYP2C18, and CYP2D6 metabolites 39% and excreted urine (39%), feces (48%); half-life 83 hr; dosage modifications are needed in heavy smoking; peak 4 hr (fasting), increased with high-fat meal

INTERACTIONS

Increased: istradefylline effect—strong CYP3A4 inhibitors (ketoconazole, itraconazole, clarithromycin); max 20 mg daily

Decreased: istradefylline effect—strong CYP3A4 inducers (carBAMazepine, rifAMPin, phenytoin, St. John's wort); avoid using together

Drug: herb

Decreased: istradefylline effect—St. John's wort; avoid using together

NURSING CONSIDERATIONS

Assess:

- **Parkinson's disease:** Assess for decreasing "off" episodes, tremors usually first appearing in hands/foot while at rest, slow movement, rigidity, postural instability, problems with speech and voice, incontinence, difficulty swallowing, inability to start movements or continue repeated movement, excessive sweating, constipation, dry skin, mood changes
- **Dyskinesia:** Assess for grimacing, eye blinking, lip smacking, repetitive movements, these should lessen with treatment
- **Hallucinations/psychosis/impulse control/compulsive behaviors:** Assess for these effects, and if present, decreased dose or discontinuation of treatment may be needed
- Monitor LFTs in hepatic disease

Evaluate:

- Therapeutic response: decreasing symptoms of Parkinson's disease

Teach patient/family:

- To identify if tobacco is used and, if so, how much per day; dosage change may be needed
- To identify all Rx, OTC, herbals, supplements that are used and discuss with health care provider
- **Pregnancy/breastfeeding:** Identify if pregnancy is planned or suspected or if breastfeeding, use in pregnancy is not recommended; adequate contraception should be used in women of childbearing age

itraconazole (Rx)

(it-ra-con´a-zol)

Onmel ✱, Sporanox, Tolsura

Func. class.: Antifungal, systemic

Chem. class.: Triazole derivative

ACTION: Alters cell membranes; inhibits several fungal enzymes

USES: Histoplasmosis, blastomycosis (pulmonary and extrapulmonary), aspergillosis, onychomycosis of toenail/fingernail

Unlabeled uses: Dermatomycosis, histoplasmosis, chromoblastomycosis, coccidioidomycosis, pityriasis versicolor, sebopsoriasis, vaginal candidiasis, cryptococcus, subcutaneous mycoses, dimorphic infections, fungal keratitis, zygomycosis, superficial mycoses (dermatophytosis), chronic mucocutaneous candidiasis

CONTRAINDICATIONS: Hypersensitivity, fungal meningitis; onychomycosis or dermatomycosis with cardiac dysfunction, in pregnant women

Black Box Warning: Heart failure, ventricular dysfunction, coadministration with other products

Precautions: Pregnancy, breastfeeding, children, cardiac/renal/hepatic disease, achlorhydria or hypochlorhydria (product-induced), dialysis, hearing loss, cystic fibrosis neuropathy

DOSAGE AND ROUTES

Capsules and oral solution are not interchangeable, oral solution is used only for oral/esophageal candidiasis

Pulmonary or disseminated extrapulmonary blastomycosis

Adults PO (capsules) 200 mg PO 3 times daily for 3 days followed by 200 mg PO 1 or 2 times daily for 6 to 12 months;

PO (Tolsura) 130 mg PO once daily with 65 mg increment dose increases to a maximum of 260 mg/day if there is no obvious improvement or there is evidence of progressive fungal disease. Administer doses above 130 mg/day in 2 divided doses

Treatment of Serious, Life-threatening Systemic Fungal Infections

Adult: PO (Capsules): Loading dosage of 200 mg 3 times daily (600 mg daily) for the first 3 days, then 200–400 mg daily, usually continued for 3 months and until clinical parameters and laboratory tests indicate that the active fungal infection has subsided

Treatment of Pulmonary or Extrapulmonary Aspergillosis

Adult: PO (Capsules): 200–400 mg daily X at least 3 months

Treatment of Pulmonary or Extrapulmonary Blastomycosis

Adult: PO (Capsules): 200 mg once daily. If there is evidence of progression or no apparent improvement, increase dosage in 100-mg increments daily up to a max 400 mg daily for 6–12 months

Treatment of Oropharyngeal Candidiasis

Adult PO (Oral solution): 200 mg (20 mL) daily for 1–2 weeks. Generally resolves within several days; retreatment in patients who failed to respond to or are refractory to oral fluconazole: Manufacturer recommends 100 mg (10 mL) twice daily. A response to itraconazole in these patients generally is evident within 2–4 weeks; relapse may be expected shortly after the drug is discontinued

HIV-infected adults (oral solution): 200 mg daily X 7–14 days

Treatment of Esophageal Candidiasis

Adult PO Oral solution: 100 mg (10 mL) daily; depending on patient response, up to 200 mg (20 mL) daily may be given for >- 3 wks, continue for 2 weeks after symptoms resolve

Available forms: Caps 100 mg; oral sol 10 mg/mL; tab 200 mg

Pulmonary or disseminated extrapulmonary blastomycosis

Adults: PO (capsules) 200 mg PO 3 times daily for 3 days followed by 200 mg PO 1 or 2 times daily for 6-12 mo;

PO (Tolsura) 130 mg PO once daily with 65-mg-increment dose increases to a maximum of 260 mg/day if there is no obvious improvement or there is evidence of progressive fungal disease. Administer doses above 130 mg/day in 2 divided doses

Treatment of serious, life-threatening systemic fungal infections

Adult: PO (capsules) Loading dosage of 200 mg 3 times daily (600 mg daily) for the first 3 days, then 200-400 mg daily, usually continued for 3 mo and until clinical parameters and laboratory tests indicate that the active fungal infection has subsided

Treatment of pulmonary or extrapulmonary aspergillosis

Adult: PO (capsules) 200-400 mg daily for at least 3 mo

Treatment of pulmonary or extrapulmonary blastomycosis

Adult: PO (capsules) 200 mg once daily. If there is evidence of progression or no apparent improvement, increase dosage in 100-mg increments daily up to a max 400 mg daily for 6-12 mo

Treatment of oropharyngeal candidiasis

Adult: PO (oral solution) 200 mg (20 mL) daily for 1-2 wk. Generally resolves within several days; retreatment in patients who failed to respond to or are refractory to oral fluconazole: Manufacturer recommends 100 mg (10 mL) twice daily. A response to itraconazole in these patients generally is evident within 2-4 wk; relapse may be expected shortly after the drug is discontinued

HIV-infected adults (oral solution)
200 mg daily ×7-14 days

Treatment of esophageal candidiasis

Adult: PO (oral solution) 100 mg (10 mL) daily; depending on patient response, up to 200 mg (20 mL) daily may be given for ≥3 wk, continue for 2 wk after symptoms resolve

Administer:
• In the presence of acid products only; do not use alkaline products, antacids within 2 hr of product; may give coffee, tea, acidic fruit juices
PO route
• Swallow caps whole; do not break, crush, or chew caps
• Give caps after full meal to ensure absorption
• Oral sol: patient should swish in mouth vigorously, use on empty stomach
• Oral sol and caps are not interchangeable on mg/mg basis
• Store in tight container at room temperature, do not freeze

SIDE EFFECTS

CNS: *Headache, dizziness,* insomnia, somnolence, depression
CV: Hypertension, HF
GI: *Nausea, vomiting, anorexia, diarrhea,* cramps, *abdominal pain,* flatulence, GI bleeding, hepatotoxicity
GU: Gynecomastia, impotence, decreased libido
INTEG: *Pruritus,* fever, *rash,* toxic epidermal necrolysis, Stevens-Johnson syndrome
MISC: *Edema, fatigue,* malaise, hypokalemia, tinnitus, rhabdomyolysis
RESP: Rhinitis, sinusitis, upper respiratory infection, pulmonary edema

PHARMACOKINETICS

PO: Peak 3-4 hr; half-life 21 hr, IV 35.4 hr; metabolized in liver; excreted in bile, feces, urine 40%; requires acid pH for absorption; distributed poorly to CSF; 99.8% protein bound; inhibits CYP3A4

INTERACTIONS

• Life-threatening CV reactions—pimozide, quiNIDine, dofetilide, levomethadyl, dronedarone
Increase: tinnitus, hearing loss—quiNIDine
Increase: hepatotoxicity—other hepatotoxic products
Increase: edema—calcium channel blockers
Increase: severe hypoglycemia—oral hypoglycemics
Increase: sedation—ALPRAZolam, clorazepate, diazePAM, estazolam, flurazepam, triazolam, oral midazolam
Increase: levels, toxicity—busPIRone, busulfan, clarithromycin, cycloSPORINE, diazePAM, digoxin, felodipine, fentaNYL, atorvastatin, carBAMazepine, disopyramide, indinavir, isradipine, niCARdipine, NiFEdipine, niMODipine, phenytoin, quiNIDine, QUEtiapine, ritonavir, saquinavir, tacrolimus, warfarin
Decrease: itraconazole action—antacids, H_2-receptor antagonists, rifamycins, didanosine, carBAMazepine, isoniazid, proton pump inhibitors
Drug/Food
• Food increases absorption
• Grapefruit juice decreases itraconazole level
Drug/Lab Test
Increase: LFTs, alk phos, bilirubin, triglyceride, GGT

NURSING CONSIDERATIONS

Assess:
• **HF:** if present, discontinue product
• Type of infection; may begin treatment before obtaining results
• **Infection:** temperature, WBC, sputum at baseline and periodically
• I&O ratio, potassium levels
• Hepatic studies (ALT, AST, bilirubin) if patient receiving long-term therapy
• Allergic reaction: rash, photosensitivity, urticaria, dermatitis
• **Hepatotoxicity:** nausea, vomiting, jaundice, clay-colored stools, fatigue
• **Pregnancy/breastfeeding:** do not use in onychomycosis; use for other conditions only if benefits outweigh fetal risk; do not use in breastfeeding
Evaluate:
• Therapeutic response: decreased fever, malaise, rash, negative C&S for infecting organism
Teach patient/family:
• That long-term therapy may be needed to clear infection (1 wk-6 mo, depending on infection)

• To avoid hazardous activities if dizziness occurs
• To take 2 hr before administration of other products that increase gastric pH (antacids, H_2-blockers, omeprazole, sucralfate, anticholinergics); to avoid grapefruit juice; to notify health care provider of all medications taken; to take after a full meal (caps) or on empty stomach (oral sol)
• About the importance of compliance with product regimen; to use alternative methods of contraception
• To notify prescriber of GI symptoms; signs of hepatic dysfunction (fatigue, jaundice, nausea, anorexia, vomiting, dark urine, pale stools); heart failure (trouble breathing, unusual weight gain, fatigue, swelling); hearing changes

ivacaftor (Rx)

(eye′va-kaf′tor)

Kalydeco

Func. class.: Respiratory agent

USES: Cystic fibrosis in those with G551D, G1244E, G1349D, G178R, G5515S, S1255P, S549N, S549R mutation in the CFTR gene

DOSAGE AND ROUTES

• **Adult/adolescent/child ≥6 yr: PO** 150 mg q12hr with fat-containing food **Child 4-6 mon, ≥5 kg: PO** One 25-mg packet of granules q12 hr with fat-containing food; **6 mo-<6 yr, 5-<7 kg:** One 25-mg packet of granules q12 hr; mix with fat containing food; **6-<6 yr, 7-<14 kg:** One 50-mg packet of granules q12hr; mix with fat containing food; **6 mo-<6 yr, ≥14 kg:** One 75-mg packet of granules q12hr with fat containing food

ivabradine (Rx)

Corlanor

Func. class.: CV agent, misc

DOSAGE AND ROUTES

Stable symptomatic heart failure

• **Adults: PO** 5 mg bid; after 2 wk, adjust to achieve a resting HR between 50 and 60 bpm
• **Child/adolescent ≥40 kg: PO** 2.5 mg bid, adjust by 2.5 mg at 2-wk intervals to a target HR reduction of at least 20% based on tolerability
• **Child/adolescent <40 kg: PO** 0.05 mg/kg/dose bid, adjust by 0.05 mg/kg at 2-wk intervals to a target HR reduction of at least 20% based on tolerability
• **Infants 6-11 mo: PO** 0.05 mg/kg/dose bid, adjust by 0.05 mg/kg at 2-wk intervals to a target HR reduction of at least 20% based on tolerability

Available forms: Tablets 5, 7.5 mg; oral solution 5 mg/5 mL (1 mg/mL)

ivosidenib (Rx)

(I′-voh-sih′-deh-nib)

Tibsovo

Func. class.: Antineoplastic

USES: Relapsed or refractory AML with an isocitrate dehydrogenase-1 (IDH1) mutation

CONTRAINDICATIONS: Hypersensitivity, pregnancy

Black Box Warning: Differentiation syndrome

DOSAGE AND ROUTES

• **Adult: PO** 500 mg daily until disease progression or unacceptable toxicity

⚠ HIGH ALERT

ixabepilone (Rx)

(ix-ab-ep′i-lone)

Ixempra

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Epothilone, B analogue

ACTION: Microtubule stabilizing agent; microtubules are needed for cell division

USES:
Breast cancer

CONTRAINDICATIONS:
Pregnancy, breastfeeding, hypersensitivity to products with polyoxyethylated castor oil, neutropenia of <1500/mm^3, thrombocytopenia

Black Box Warning: Hepatic disease

Precautions: Children, geriatric patients, alcoholism, bone marrow suppression, cardiac dysrhythmias, cardiac/renal disease, diabetes mellitus, peripheral neuropathy, ventricular dysfunction

DOSAGE AND ROUTES
• **Adult: IV INFUSION** 40 mg/m^2 over 3 hr q3wk

Dosage reduction in those taking a strong CYP3A4 inhibitor
• **Adult: IV INFUSION** 20 mg/m^2 over 3 hr q3wk

Hepatic dose
• **Adult:** IV 20 mg/m^2 q3wk, max 30 mg/m^2

Available forms: Powder for inj 15, 45 mg

Administer:
• Premedicate with histamine antagonists 1 hr before use, prevents hypersensitivity
• Antiemetic 30-60 min before product and prn

IV route
• Let kit stand at room temperature for 30 min; to reconstitute, withdraw supplied diluent (8 mL for 15-mg vials, 23.5 mL for 45-mg vials); slowly inject sol into vial; gently swirl and invert to mix, final concentration 2 mg/mL; further dilute in LR in DEHP-free bags, final concentration should be between 0.2 and 0.6 mg/mL; after added, mix by manual rotation
• Diluted sol stable for 6 hr at room temperature; infusion must be completed within 6 hr
• Use in-line filter, 0.2-1.2 micron
• Give over 3 hr

SIDE EFFECTS
CNS: *Peripheral neuropathy,* impaired cognition, chills, fatigue, fever, flushing, headache, insomnia, *asthenia*
CV: Bradycardia, *hypotension,* abnormal ECG, angina, atrial flutter, cardiomyopathy, chest pain, edema, MI, vasculitis
GI: *Nausea, vomiting, diarrhea,* abdominal pain, anorexia, colitis, constipation, gastritis, jaundice, GERD, hepatic failure, trismus
GU: Renal failure
HEMA: Neutropenia, thrombocytopenia, anemia, infections, coagulopathy
INTEG: *Alopecia,* rash, hot flashes
META: Hypokalemia, metabolic acidosis
MS: *Arthralgia, myalgia*
RESP: Bronchospasm, cough, dyspnea
SYST: *Hypersensitivity reactions,* anaphylaxis, dehydration, radiation recall reaction

PHARMACOKINETICS
Metabolized in liver by CYP3A4; excreted in feces (65%) and urine (21%); terminal half-life 52 hr

INTERACTIONS
Increase: ixabepilone level—CYP3A4 inhibitors (amiodarone, amprenavir, aprepitant, atazanavir, chloramphenicol, clarithromycin, conivaptan, cycloSPORINE, danazol, darunavir, dalfopristin, delavirdine, diltiaZEM, erythromycin, estradiol, fluconazole, fluvoxaMINE, fosamprenavir, imatinib, indinavir, isoniazid, itraconazole, ketoconazole, lopinavir, miconazole, nefazodone, nelfinavir, propoxyphene, ritonavir, RU-486, saquinavir, tamoxifen, telithromycin, troleandomycin, verapamil, voriconazole, zafirlukast)
Decrease: ixabepilone levels—CYP3A4 inducers (aminoglutethimide, barbiturates, bexarotene, bosentan, carBAMazepine, dexamethasone, efavirenz, griseofulvin, modafinil, nafcillin, nevirapine, OXcarbazepine, phenytoin, rifamycin, topiramate)

Drug/Herb
• Avoid use with St. John's wort

Drug/Food
• Avoid use with grapefruit products

NURSING CONSIDERATIONS

Assess:

- CBC, differential, platelet count before treatment and weekly; withhold product if WBC is <1500/mm^3 or platelet count is <100,000/mm^3, notify prescriber
- Monitor temperature q4hr (may indicate beginning infection)

Black Box Warning: Hepatic disease: liver function tests before, during therapy (bilirubin, AST, ALT, LDH) prn or monthly; check for jaundiced skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea; contraindicated in combination with capecitabine if AST or ALT is >2.5 × ULN or bilirubin >1 × ULN due to risk of toxicity and neutropenia-related death

- VS during 1st hr of infusion; check IV site for signs of infiltration
- **Hypersensitivity reactions, anaphylaxis** including hypotension, dyspnea, angioedema, generalized urticaria; discontinue infusion immediately; keep emergency equipment available
- Effects of alopecia on body image; discuss feelings about body changes
- **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding

Evaluate:

- Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:

- To report signs of infection: fever, sore throat, flulike symptoms
- To report signs of anemia: fatigue, headache, faintness, SOB
- To report any complaints or side effects to nurse or prescriber
- That hair may be lost during treatment; that a wig or hairpiece may make patient feel better; that new hair may be different in color, texture
- That pain in muscles and joints 2-5 days after infusion is common
- To use nonhormonal type of contraception
- To avoid receiving vaccinations while receiving product

ixazomib (Rx)

(ix-az′-oh-mib)

Ninlaro

Func. class.: Antineoplastic agent

Chem. class.: Proteasome inhibitor

ACTION:

Reversibly inhibits proteasomes, enzyme complexes that regulate protein homeostasis within the cell; reversibly inhibits chymotrypsin-like activity of the beta 5 subunit of the 20S proteasome, leading to activation of signaling cascades, cell-cycle arrest, and apoptosis

USES:

Multiple myeloma

CONTRAINDICATIONS

Hypersensitivity

Precautions:

- Bone marrow suppression, dermatologic toxicity, gastrointestinal toxicity, hepatic disease, herpes zoster infection, peripheral edema, peripheral neuropathy, thrombotic microangiopathy, renal disease

SIDE EFFECTS

CV: Peripheral edema
INTEG: Rash
GI: Constipation, diarrhea, nausea, vomiting
HEMA: Thrombocytopenia, neutropenia
CNS: Peripheral neuropathy, peripheral sensory neuropathy
MS: Back pain
EENT: Eye disease
RESP: URI

PHARMACOKINETICS

Onset unknown, peak 1 hr, duration unknown, half-life 9.5 days

INTERACTIONS

Decrease: ixazomib effect—CYP3A4 inducers (carbamazepine, phenytoins, rifamycins), avoid using together

Drug/Herb
Decrease: ixazomib effect—St. John's wort, avoid using together

DOSAGE AND ROUTES

Multiple myeloma
Adult: PO 4 mg once weekly on days 1, 8, and 15 of a 28-day treatment cycle (in combination with lenalidomide and dexamethasone); continue until disease progression or unacceptable toxicity
Available forms:
Capsules 2.3, 3, 4 mg
Administer:
• Use cytotoxic handling procedure, do not touch capsules, use gloves
• Give 1 hr before or 2 hr after food, capsules should be swallowed whole
• If a dose is missed, give only if the next scheduled dose is ≥72 hr, do not take a missed dose within 3 days of the next scheduled dose; do not double doses to make up for the missed dose. If vomiting occurs, do not repeat the dose; resume dosing at the next scheduled dose
• Store at room temperature, do not freeze

NURSING CONSIDERATIONS

Assess:
• **Bone marrow suppression:** Platelet nadirs (14 to 21 days) of each cycle with a recovery to baseline by the start of the next cycle. Monitor platelet counts at least monthly, more frequent monitoring during the initial 3 cycles. May require therapy interruption, dosage reduction, and/or platelet transfusions. Monitor CBC (with differential) for neutropenia; therapy interruption or dosage modification may be needed; monitor for bleeding, bruising
• **Dermatologic toxicity:** Monitor for dermatologic toxicity and use supportive care or dosage modification of ixazomib and/or lenalidomide (for grade 2 or higher toxicity); SJS may occur (rare)
• **Gastrointestinal toxicity:** Monitor diarrhea, constipation, nausea, and vomiting have been reported, antidiarrheals, antiemetics, and supportive care, dosage change for grade 3 or 4 symptoms
• **Hepatotoxicity:** Monitor LFTs baseline and regularly; may require dosage adjustment for grade 3 or 4 toxicity
• **Herpes zoster infection:** May use an antiviral prophylaxis to decrease the risk of herpes zoster reactivation
• **Peripheral edema:** Assess for potential underlying causes and provide supportive care
• **Peripheral neuropathy:** Monitor for neuropathy; may require dosage adjustment (of ixazomib and/or lenalidomide) or treatment discontinuation
• **Thrombotic microangiopathy:** Monitor for signs/symptoms. Interrupt therapy if TTP/HUS is suspected
• **Renal disease:** Reduced initial doses for 30 mL/min or end-stage renal disease requiring dialysis
• **Pregnancy/breastfeeding:** Males and females of reproductive potential should use effective contraception during and for 90 days after last dose. Women using hormonal contraception should also use a barrier method
Evaluate:
• Therapeutic response: Delayed progression of multiple myeloma with minimum toxicity
Teach patient/family:
• To take at the same time of day on the same day of the week for 3 wk out of 4 wk, do not double or skip doses, take whole
• Not to touch capsule, use gloves
• To notify provider of adverse reactions: bleeding, bruising, severe diarrhea, constipation, burning/tingling of feet or hands, weight gain, rash, yellow skin, eyes, clay-colored stools, pain in right upper area of abdomen
• **Pregnancy/breastfeeding:** To report if pregnancy is planned or suspected or if breastfeeding; not to use during pregnancy, both males and females should use contraception during and for 90 days after last dose, women taking hormonal contraceptive should also use barrier method, not to breastfeed

ixekizumab (Rx)

(ix'e-kiz'ue-mab)

Taltz

Func. class.: Immunosuppressive

ACTION: A human IgG4 monoclonal antibody that selectively binds to the interleukin 17A (IL-17A) cytokine, inhibiting its interaction with the IL-17 receptor. Treatment inhibits the release of proinflammatory cytokines and chemokines

USES: The treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy, active psoriatic arthritis

CONTRAINDICATIONS: Risk of serious hypersensitivity reactions or anaphylaxis

Precautions: Breastfeeding, children, Crohn's disease, immunosuppression, infection, inflammatory bowel disease, pregnancy, tuberculosis, ulcerative colitis, vaccination

DOSAGE AND ROUTES

- **Adult: SUBCUT** 160 mg at week 0 (administered as two 80-mg injections) followed by 80 mg at weeks 2, 4, 6, 8, 10, and 12, then 80 mg q4wk; for active psoriatic arthritis maintenance 80 mg q4wk
- **Available forms:** Solution for injection 80 mg/mL, autoinjector 80 mg/mL

Administer:

Subcut route

- Administer by subcutaneous injection only
- Visually inspect for particulate matter and discoloration before use. The solution should be free of visible particles, clear, and colorless to slightly yellow
- Available as a prefilled syringe and as an autoinjector; each device contains 80 mg
- Use upper arms, thighs, and any quadrant of the abdomen for injection sites
- Do not use where skin is tender, bruised, erythematous, indurated, or affected by psoriasis; rotate sites with each dose
- Does not contain preservatives; discard any unused product
- **Missed doses:** If a dose is missed, give as soon as possible. Then, resume dosing at the regular scheduled time
- **Storage of unopened prefilled syringes and autoinjectors:** Protect from light; store refrigerated at 2°C-8°C (36°F-46°F) until time of use. Do not freeze and do not use the injection if it has been frozen. Do not shake

SIDE EFFECTS

SYST: antibody formation, infection, angioedema

INTEG: injection site reaction, urticaria

HEMA: neutropenia

PHARMACOKINETICS

Half-life is 13 days; bioavailability 60% to 81%, injection in the thigh achieved higher bioavailability; peak 4 days

INTERACTIONS

- Do not use concurrently with vaccines; immunizations should be brought up-to-date before treatment
- Avoid use with immunosuppressives

NURSING CONSIDERATIONS

Assess:

- **TB:** TB testing should be done before use
- For injection-site reactions, redness, swelling, pain
- Bring immunizations up-to-date before use
- **Infection:** monitor for fever, sore throat, cough; do not use in active infections
- **Pregnancy/breastfeeding:** avoid in pregnancy and breastfeeding

Evaluate: Therapeutic response: decreased psoriasis

Teach Patient/Family:

- That product must be continued for prescribed time to be effective, to use as prescribed
- Not to receive vaccinations during treatment
- **Infection:** to notify prescriber of possible infections, respiratory or other, or of allergic reactions
- Injection techniques and disposal of equipment, not to reuse needles, syringes

ketoconazole (Rx)

(kee-toe-koe′na-zole)
Func. class.: Antifungal
Chem. class.: Imidazole derivative

USES: Chronic mucocandidiasis, oral thrush, candiduria, coccidioidomycosis, histoplasmosis, chromomycosis, paracoccidioidomycosis, blastomycosis; tinea cruris, tinea corporis, tinea versicolor, *Pityrosporum ovale* in patients who are intolerant to other antifungal therapies or for whom other antifungal therapies have failed

CONTRAINDICATIONS: Breastfeeding, hypersensitivity, fungal meningitis

Black Box Warning: Coadministration with other products (ergot derivatives, cisapride, or triazolam) may cause fatal cardiac arrhythmias due to inhibition of CYP3A4 enzyme system

Black Box Warning: Hepatic disease

DOSAGE AND ROUTES

- **Adult: PO** 200-400 mg/day for 1-2 wk (candidiasis), 6 mo (other infections)
- **Child ≥2 yr: PO** 3.3-6.6 mg/kg/day as a single daily dose

Prostate cancer (unlabeled)

- **Adult: PO** 400 mg tid with PO hydrocortisone

Available forms: Tabs 200 mg

ketoconazole (topical) (Rx)

(kee-toe-koe′na-zole)
Extina, Ketoderm ✱, Ketozole ✱, Nizoral, Nizoral A-D, Xolegel
Func. class.: Topical antifungal
Chem. class.: Imidazole derivative

ACTION: Antifungal activity results from altering cell membrane permeability

USES: Seborrheic dermatitis (immunocompromised), tinea corporis, tinea cruris, tinea pedis, tinea versicolor, dandruff

CONTRAINDICATIONS: Hypersensitivity, sulfite allergy
Precautions: Pregnancy, breastfeeding, children

DOSAGE AND ROUTES

Seborrheic dermatitis

- **Adult/child ≥12 yr: TOP FOAM** apply to affected areas bid × 4 wk; **GEL** apply to affected areas daily × 2 wk

Tinea corporis, tinea cruris, tinea pedis, tinea versicolor

- **Adult: TOP** cover areas daily × 2 wk

Dandruff

- **Adult: SHAMPOO** wet hair, lather, massage for 1 min, rinse, repeat 2×/wk spaced by 3 days, for up to 8 wk, then as needed

Available forms: Topical gel, foam, cream 2%; shampoo 1%, 2%

Administer:

Topical route

- For external use only; do not use skin products near the eyes, nose, or mouth, wash hands before and after use
- **Cream/lotion:** Apply to the cleansed affected area, massage gently into affected areas, do not use on skin that is broken or irritated

SIDE EFFECTS

INTEG: Irritation, stinging, pustules, pruritus

NURSING CONSIDERATIONS

Assess allergic reaction:

- Assess for hypersensitivity; product may need to be discontinued
- Assess for sulfite allergy; may be life-threatening

Evaluate:

- Therapeutic response: decreased itching, scaling

Teach patient/family:

Topical route

- These products are not for intravaginal therapy, external use only; do not use skin products near the eyes, nose, or mouth; wash hands before and after use; do not wash affected area for ≥3 hr after application
- **Cream/ointment/lotion:** apply a thin film to the cleansed affected area, massage gently

• **Foam formulations:** do not dispense foam directly onto hands or face; dispense directly into the cap or onto a cool surface; cover the affected area(s); to apply, pick up small amounts of the foam with the fingertips and gently massage into the affected areas
• To continue for prescribed time, tinea corporis/cruris ≥2 wk

ketoprofen (OTC, Rx)

(ke-toe-proe′fen)

Apo-Keto

Func. class.: Nonsteroidal antiinflammatory product (NSAID), antirheumatic, analgesic

Chem. class.: Propionic acid derivative

Do not confuse:
ketoprofen/ketorolac

ACTION: May inhibit prostaglandin synthesis; analgesic, antiinflammatory, antipyretic

USES: Mild to moderate pain, osteoarthritis, rheumatoid arthritis, dysmenorrhea; OTC relief of minor aches, pains

Black Box Warning: CABG, GI bleeding/perforation, thromboembolism

DOSAGE AND ROUTES

Analgesic
• **Adult: PO** 25-50 mg q6-8hr, max 300 mg/day
Rheumatoid arthritis, osteoarthritis
• **Adult: PO** 50 mg qid or 75 mg tid, max 300 mg/day or **EXT REL** up to 200 mg/day
Dysmenorrhea
• **Adult: PO** 25-50 mg q6-8hr (immediate release) up to max 300 mg/day
Ankylosing spondylitis (unlabeled)
• **Adults: PO** 100 bid
Renal/hepatic dose
• **Adult: PO** GFR <25 mL/min/1.73m^2, albumin <3.5 g/dL, decreased hepatic function, or ESRD, max 100 mg/day

Available forms: Caps 25, 50, 75, 100 mg; ext rel cap 200 mg

ketorolac (ophthalmic) (Rx)

(kee′toe-role-ak)

Acular, Acular LS, Acuvail

Func. class.: Antiinflammatory (ophthalmic)

Chem. class.: Nonsteroidal antiinflammatory drug (NSAID)

ACTION: Inhibits miosis by inhibiting the biosynthesis of ocular prostaglandins; prostaglandins play a role in the miotic response produced during ocular surgery by constricting the iris sphincter

USES: Pain and inflammation after cataract surgery, refractive surgery, seasonal allergic conjunctivitis

CONTRAINDICATIONS: Hypersensitivity to this product, NSAIDs, salicylates
Precautions: Bleeding disorders, complicated ocular surgery, corneal denervation, diabetes mellitus, rheumatoid arthritis, dry eye syndrome, pregnancy, breastfeeding, children, contact lenses

DOSAGE AND ROUTES

Seasonal allergic conjunctivitis (Acular)
• **Adult/child ≥2 yr: OPHTH** Instill 1 drop into affected eye qid
Inflammation after cataract extraction (Acular)
• **Adult: OPHTH** 1 drop in affected eye qid beginning 24 hr after surgery × 2 wk
Corneal refracture surgery, pain, burning (Acular LS)
• **Adult: OPHTH** 1 drop in affected eye qid × ≤4 days
Cataract surgery, pain, inflammation (Acuvail)
• **Adult: OPHTH** 1 drop bid in affected eye, starting 1 day before surgery, on the day of surgery, × 2 wk after surgery

Available forms: Ophthalmic solution Acular (0.5%), Acular LS (0.4%), Acuvail (0.45%)

Administer:

- Apply topically to the eye, separate by ≥5 min when using with other ophthalmics
- Remove contact lenses before instillation of solution
- Instruct patient on proper instillation of eye solution
- Do not touch the tip of the dropper to the eye, fingertips, or other surface
- Do not share bottle with other patients

SIDE EFFECTS

CNS: Headache

EENT: Abnormal sensation in eye, conjunctival hyperemia, ocular irritation, ocular pain, ocular pruritus, conjunctival hyperemia, iritis, keratitis, blurred vision, transient burning/stinging

NURSING CONSIDERATIONS

Assess:

- **Eyes:** for pain, inflammation, burning, redness after cataract surgery, visual acuity

Evaluate:

- Therapeutic response: decreased pain and inflammation after cataract surgery, refractive surgery, seasonal allergic conjunctivitis

Teach patient/family:

- To apply topically to the eye
- To remove contact lenses before instillation of solution, wait 10 min before reinserting
- Proper instillation of eye solution
- Not to touch the tip of the dropper to the eye, fingertips, or other surface
- Not to share bottle with other patients

ketorolac (systemic, nasal) (Rx)

(kee-toe′role-ak)

Toradol ✱, Sprix

Func. class.: NSAIDs

Chem. class.: Acetic acid

Do not confuse:

ketorolac/Ketalar, ketoprofen

ACTION: Inhibits prostaglandin synthesis; analgesic antiinflammatory antipyretic effects

USES: Mild to moderate pain (short term), including postsurgery

CONTRAINDICATIONS: Pregnancy 3rd trimester, hypersensitivity to this product, salicylates, asthma, hepatic disease, peptic ulcer disease, CV bleeding, C-section, intracranial bleeding

Black Box Warning: Severe renal disease, L&D, before major surgery, epidural/intrathecal administration, GI bleeding/perforation, hypovolemia, NSAID hypersensitivity, peptic ulcer disease, CABG, hematologic disease, intracranial bleeding

Precautions: Pregnancy/breastfeeding, GI/cardiac disorders, hypersensitivity to other antiinflammatory agents, CCr <25 mL/min

Black Box Warning: Bleeding, MI, stroke; limit duration of use; geriatric patients, children, infants/neonates, serious hypersensitivity reactions or anaphylaxis

DOSAGE AND ROUTES

Max 5 combined days of all routes, only use PO as continuation to IV/IM

- **Adult: IM/IV: Single dose: ≥50 kg** 60 mg IM or 30 mg IV once; **<50 kg** 30 mg IM or 15 mg IV once
- **Adult: IM/IV: Multiple dose: ≥50 kg** 30 mg IM/IV q6hr as needed; max 120 mg/day; **Nasal** 31.5 mg q6-8hr (1 spray each nostril); **<50 kg** 15 mg IM/IV q6hr as needed; max 60 mg/day; **Nasal** 15.75 mg q6-8hr (1 spray in 1 nostril). Continuation therapy (should not be given as an initial dose)
- **Adult: PO ≥50 kg** 20 mg once, then 10 mg q4-6hr as needed; **<50 kg:** 10 mg, then 10 mg q4-6hr as needed, max 40 mg/day

Renal dose

- **Adults: PO** 10 mg, then 10 mg q4-6hr, max 40 mg

Available forms: Inj 15, 30 mg/mL (prefilled syringes), 60 mg/2 mL; tab 10 mg; nasal spray 15.75 mg/spray

Administer:

- Store at room temperature

IM route

- IM inj deeply and slowly in large muscle mass, painful

Nasal route

- Prime pump before using for the first time, point away from person/pets, pump activator 5 times, no need to reprime
- For single-use only, discard 24 hr after opening if not used
- Do not share with others
- Have patient blow nose, sit upright to spray

IV route

- Give undiluted over ≥15 sec, protect from light

SIDE EFFECTS

CNS: Dizziness, *drowsiness,* tremors, seizures, headache

CV: Hypertension, pallor, edema, CV thrombotic events, MI, stroke

EENT: Tinnitus, hearing loss, blurred vision

GI: Nausea, anorexia, vomiting, diarrhea, constipation, flatulence, cramps, dry mouth, peptic ulcer, GI bleeding, perforation, taste change, hepatic failure

GU: Nephrotoxicity: dysuria, hematuria, oliguria

HEMA: Blood dyscrasias, prolonged bleeding

INTEG: Purpura, rash, pruritus, sweating, angioedema, Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS

Enters breast milk, metabolized by liver, excreted by kidneys

PO: Onset 30-60 min, peak 2-3 hr, duration 4-6 hr, half-life 2-9 hr

IM: Onset 30 min, duration 4-6 hr, half-life 5-6 hr

IV: Onset 30 min, peak 2-3 hr, duration 4-6 hr

INTERACTIONS

Increase: toxicity—methotrexate, lithium, cycloSPORINE, pentoxifylline, probenecid, cidofovir

Increase: bleeding risk—anticoagulants, salicylates, tirofiban, thrombolytics, SSRIs, SNRIs

Increase: renal impairment—ACE inhibitors, ARBs

Increase: GI effects—corticosteroids, alcohol, aspirin, NSAIDs

Decrease: effects—antihypertensives, diuretics

Drug/Lab Test

Increase: AST, ALT, LDH, bleeding time

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Aspirin sensitivity, asthma: patients may be more likely to develop hypersensitivity to NSAIDs; monitor for hypersensitivity

- **Pain:** type, location, intensity, ROM before and 1 hr after treatment, do not use long term or for minor pain

Black Box Warning: Renal, hepatic, blood studies: BUN, creatinine, AST, ALT, HB before treatment, periodically thereafter; check for dehydration

Black Box Warning: Bleeding: check for bruising, bleeding, occult blood in urine, stool guaiac, can prolong bleeding time

Black Box Warning: Do not use epidurally, intrathecally; alcohol is present in the solution

- Eye/ear problems: blurred vision, tinnitus (may indicate toxicity)
- **Hepatic dysfunction:** jaundice, yellow sclera and skin, clay-colored stools

Black Box Warning: CV thrombotic events: MI, stroke; do not use in perioperative pain in CABG

- Audiometric, ophthalmic exam before, during, after treatment

Black Box Warning: Beers: avoid in older adults; increased risk of GI bleeding, peptic ulcer disease; those >65 and 50 kg, adjust dose to CCr, risk is increased; max 60 mg/day

Evaluate:
• Therapeutic response: decreased pain, stiffness, swelling in joints, ability to move more easily

Teach patient/family:

Black Box Warning: To report blurred vision, ringing/roaring in ears (may indicate toxicity)

• To avoid driving, other hazardous activities if dizziness or drowsiness occurs

Black Box Warning: To report change in urine pattern, weight increase, edema; pain increase in joints, fever, blood in urine **(indicates nephrotoxicity);** bruising, black tarry stools **(indicates bleeding);** pruritus, jaundice, nausea, right upper quadrant pain, abdominal pain **(hepatotoxicity);** to notify prescriber immediately

• To report immediately signs of MI, stroke
• To maintain hydration
• To take with food (PO)
• That pain may occur with IM
• To avoid alcohol, salicylates, other NSAIDs
• To report product use to all health care providers, not to use with other products unless approved by prescriber; use for ≤5 days
• **Nasal:** to discard within 24 hr of opening; may cause irritation, may drink water after dose, to read instructions provided

Black Box Warning: Pregnancy/breastfeeding: to notify prescriber if pregnancy is planned or suspected; not to breastfeed; contraindicated during labor and delivery

ketotifen (ophthalmic) (Rx)

(kee-toe-tye′fen)

Alaway, Zaditor, ZyrTEC Itchy Eye, Claritin Eye

Func. class.: Antihistamine (ophthalmic)

Chem. class.: Histamine 1 receptor antagonist/mast cell stabilizer

ACTION: A topically active, direct H_1-receptor antagonist and mast cell stabilizer; by reducing these inflammatory mediators, relieves the ocular pruritus associated with allergic conjunctivitis

USES: For the temporary relief of ocular pruritus due to ragweed, pollen, grass, animal hair, animal dander

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, contact lenses

DOSAGE AND ROUTES

• **Adult/child ≥3 yr: OPHTH** instill 1 drop in affected eye(s) every 8-12 hr
Available forms: Ophthalmic solution 0.025%
Administer:
Ophthalmic route
• For topical ophthalmic use only
• Wash hands before and after use; squeeze drops into the conjunctival sac
• Do not touch the tip of the dropper to the eye, fingertips, or other surface
• Wait ≥10 min after instilling the ophthalmic solution before inserting contact lenses; contact lenses should not be worn if eye is red

SIDE EFFECTS

CNS: Headache
EENT: Conjunctival hyperemia, rhinitis, allergic reactions, ocular irritation consisting of burning or stinging, conjunctivitis, eyelid disorder, flu syndrome, keratitis, lacrimation disorder, mydriasis, ocular discharge, ocular pain, pharyngitis,

photophobia, pruritus, rash, xerophthalmia (dry eyes)

NURSING CONSIDERATIONS

Assess:

- Eyes: for itching, redness, tearing, use of soft or hard contact lens

Evaluate:

- Absence of redness, itching in the eyes

Teach patient/family:

Ophthalmic route

- That product is for topical ophthalmic use only
- To wash hands before and after use; tilt the head back slightly and pull the lower eyelid down with the index finger; squeeze drops into the conjunctival sac and gently close eyes for 1-2 min; not to blink
- Not to touch the tip of the dropper to the eye, fingertips, or other surface
- To wait ≥10 min after instilling the ophthalmic solution before inserting contact lenses; contact lenses should not be worn if eye is red
- Not to share ophthalmic drops with others
- To remove contact lenses before use; the preservative benzalkonium chloride may be absorbed by soft contact lenses

⚠ HIGH ALERT

labetalol (Rx)

(la-bet'a-lole)

Trandate

Func. class.: Antihypertensive, antianginal

Chem. class.: α-1/β-Blocker

Do not confuse:
labetalol/Lamictal/lamotrigine

ACTION: Produces decreases in B/P without reflex tachycardia or significant reduction in heart rate through mixture of α-blocking, β-blocking effects; elevated plasma renins are reduced

USES: Mild to moderate hypertension; treatment of severe hypertension (IV)

CONTRAINDICATIONS: Hypersensitivity to β-blockers, cardiogenic shock, heart block (2nd or 3rd degree), sinus bradycardia, HF, bronchial asthma
Precautions: Pregnancy, breastfeeding, geriatric patients, major surgery, diabetes mellitus, thyroid/renal/hepatic disease, COPD, well-compensated heart failure, nonallergic bronchospasm, peripheral vascular disease

Black Box Warning: Abrupt discontinuation

DOSAGE AND ROUTES

Hypertension

• **Adult: PO Outpatient** 100 mg bid; may be given with diuretic; may increase to 200 mg bid after 2 days; may increase q1-3days; max 2400 mg/day in divided doses; **Inpatient** 200 mg then 200-400 mg in 6-12 hr, depends on response; may increase by 200 mg bid at 1-day intervals

• **Child/adolescent (unlabeled): PO** 1-3 mg/kg/day, titrate to max 10-12 mg/kg/day based on B/P, max 12 mg/kg/day, max 1200 mg/day; **IV** 0.2-1 mg/kg over 2 min; **IV INFUSION** 0.25-3 mg/kg/hr, max 3 mg/kg/hr

Hypertensive crisis

• **Adult: IV Intermittent** 20 mg over 2 min; may repeat 20-80 mg over 2 min q10min, max 300 mg; **IV Cont INFUSION** after loading dose give 1-2 mg/min until desired response or max 300 mg

Available forms: Tabs 100, 200, 300 mg; inj 5 mg/mL, 20-, 40-mL vials

Administer:

PO route

• PO before meals, or with meals; tab may be crushed or swallowed whole; give with meals to increase absorption

• Take pulse before use; if <50 bpm, hold dose, notify prescriber

• Take apical pulse before use; if <50 bpm, withhold; notify prescriber

• When discontinuing IV and starting PO, begin PO when B/P rises; start at 200 mg, then 200-400 mg in 6-12 hr; adjust as needed

• Do not discontinue before surgery or abruptly

• Store in dry area at room temperature; do not freeze

Direct IV route

• Give undiluted (5 mg/mL) over 2 min

Continuous IV INFUSION route

• Give at a rate of 2 mg/min after diluting in LR, D_5W, D_5 in 0.2%, 0.9%, 0.33% NaCl, Ringer's inj; infusion is titrated to patient response; 200 mg of product/160 mL sol = 1 mg/mL; 300 mg of product/240 mL sol = 1 mg/mL; 200 mg of product/250 mL sol = 2 mg/3 mL; use infusion pump

• Keep patient recumbent during and for 3 hr after administration; monitor VS q5-15min

Y-site compatibilities: Alemtuzumab, alfentanil, amikacin, aminocaproic acid, aminophylline, amiodarone, anidulafungin, argatroban, arsenic trioxide, ascorbic acid injection, atracurium, atropine, azithromycin, aztreonam, benztropine, bivalirudin, bleomycin, bretylium, bumetanide, buprenorphine, butorphanol, calcium

chloride/gluconate, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, ceftaroline, cefTAZidime, ceftizoxime, chlorproMAZINE, cimetidine, CISplatin, cloNIDine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, DAUNOrubicin liposome, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium, DOXOrubicin, DOXOrubicin liposomal, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin lactobionate, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, gallium, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, HYDROmorphone, hydroxyzine, IDArubicin, ifosfamide, imipenem-cilastatin, inamrinone, irinotecan, isoproterenol, lactated Ringer's injection, lepirudin, leucovorin, levofloxacin, lidocaine, linezolid injection, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoXANtrone, morphine, moxifloxacin, multiple vitamins injection, mycophenolate, nalbuphine, naloxone, netilmicin, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, polymyxin B, potassium acetate/chloride/phosphates, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, ranitidine, Ringer's injection, rocuronium, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, telavancin, teniposide, theophylline, thiamine, thiotepa, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: *Dizziness,* mental changes, drowsiness, *fatigue,* headache, depression, anxiety, nightmares, paresthesias, lethargy
CV: *Orthostatic hypotension, bradycardia,* HF, chest pain, ventricular dysrhythmias
EENT: Visual changes; double vision; dry, burning eyes; floppy iris syndrome; nasal congestion
ENDO: Hyperkalemia
GI: *Nausea, vomiting, diarrhea,* dyspepsia, taste distortion, hepatotoxicity
GU: Impotence, dysuria, ejaculatory failure
INTEG: Rash, urticaria, pruritus, fever
RESP: Bronchospasm, dyspnea, wheezing

PHARMACOKINETICS

Half-life 2.5-8 hr, metabolized by liver (metabolites inactive), excreted in urine, crosses placenta, excreted in breast milk, protein binding 50%
PO: Onset 30 min, peak 1-4 hr, duration 8-24 hr
IV: Onset 2-5 min, peak 5-15 min, duration 2-4 hr

INTERACTIONS

- Do not use within 2 wk of MAOIs

Increase: myocardial depression—hydantoins, general anesthetics, verapamil, class I antidysrhythmics
Increase: tremor—tricyclic antidepressants
Increase: hypotension—diuretics, other antihypertensives, cimetidine, nitroglycerin, alcohol, nitrates
Decrease: effects of—sympathomimetics, lidocaine, theophylline, β-blockers, bronchodilators, xanthines
Decrease: antihypertensive effect—NSAIDs, salicylates
Increase or decrease: effects of—antidiabetics; monitor blood glucose
Drug/Herb
Increase: antihypertensive effect—hawthorn

Decrease: antihypertensive effect—ephedra (ma huang)
Drug/Lab Test
Increase: ANA titer, blood glucose, alk phos, LDH, AST, ALT, uric acid
False increase: urinary catecholamines

NURSING CONSIDERATIONS

Assess:
• **Hypertension:** monitor B/P before starting treatment, periodically thereafter; note pulse, rate, rhythm, quality; apical/radial pulse before administration; notify prescriber of any significant changes, watch for orthostatic hypotension
• **HF:** I&O, weight daily; fluid overload: weight gain, jugular venous distention, edema, crackles in lungs; report weight gain >5 lb

Black Box Warning: Abrupt discontinuation: product should be tapered to prevent adverse reactions

• Baselines of renal/hepatic studies before therapy begins
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; use caution in breastfeeding
Evaluate:
• Therapeutic response: decreased B/P after 1-2 wk
Teach patient/family:

Black Box Warning: Not to discontinue product abruptly; to taper over 2 wk; may cause precipitate angina

• Not to use OTC products containing α-adrenergic stimulants (nasal decongestants, OTC cold preparations) unless directed by prescriber
• To report bradycardia, dizziness, confusion, depression, fever, difficulty breathing, cold extremities, confusion, rash, sore throat
• To take pulse at home; advise when to notify prescriber
• May mask symptoms of hypoglycemia; monitor blood glucose closely in diabetes
• To avoid alcohol, smoking, increased sodium intake
• **Hypertension:** To comply with weight control, dietary adjustments, modified exercise program
• To carry emergency ID to identify product, allergies
• To avoid hazardous activities if dizziness is present
• To avoid hot baths, showers
• **To report symptoms of HF:** difficulty breathing, especially on exertion or when lying down; night cough; swelling of extremities
• To advise providers of use before surgery
• To avoid driving or other hazardous activities until response is known; dizziness, drowsiness, may occur

TREATMENT OF OVERDOSE:

Lavage, IV glucagon or atropine for bradycardia, theophylline (nebulizer) for bronchospasm; digoxin, O_2, diuretic for cardiac failure; hemodialysis useful for removal/hypotension; administer vasopressor, cardiac monitor (hypertensive urgency)

lacosamide (Rx)

(la-koe′sa-mide)
Vimpat
Func. class.: Anticonvulsant, miscellaneous
Chem. class.: Functionalized amino acid
Controlled Substance Schedule V

ACTION: May act through action at sodium channels; exact action is unknown

USES: Partial-onset seizures

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, allergies, cardiac/renal/hepatic disease, acute MI, atrial fibrillation/flutter, AV block, bradycardia, HF, dehydration, depression, dialysis, hazardous activity, electrolyte imbalance, heart failure, labor, PR prolongation, sick sinus syndrome,

substance abuse, suicidal ideation, syncope, torsades de pointes

DOSAGE AND ROUTES

Adjunct therapy

• **Adult and adolescent ≥17 yr: PO** 50 mg bid, may increase weekly by 100 mg bid to 200-400 mg/day; **IV** 50 mg bid, infuse over 30-60 min, may be increased by 100 mg/day weekly up to 200-400 mg/day maintenance

Monotherapy

• **Adult: PO** 100 mg bid; may increase weekly by 100 mg/day in 2 divided doses, increase to 300-400 mg/day in 2 divided doses or 200-mg single loading dose then 12 hr later start 100 mg bid

Renal/hepatic dose

• **Adult: PO/IV** max 300 mg/day for mild to moderate hepatic disease or CCr ≤30 mL/min; do not use in severe hepatic disease; reduce dose in renal/hepatic disease in those who are taking strong CYP3A4, CYP2C9 inhibitors

Available forms: Film-coated tabs 50, 100, 150, 200 mg; solution for injection IV 20-mL single-use vials (200 mg/20 mL); oral sol 10 mg/mL

Administer:

• Store PO products/IV vials at room temperature; sol is stable for 24 hr when mixed with compatible diluents in glass or PVC bags at room temperature

PO route

• **Tablet:** give without regard to meals

• **Oral sol:** measure with calibrated measuring device

IV route

• May give undiluted or mixed in 0.9% NaCl, D_5W, or LR

• Infuse over 30-60 min

• Do not use if discolored or if particulates are present; discard unused portions

SIDE EFFECTS

CNS: Dizziness, syncope, tremor, drowsiness, fever, paresthesias, depression, fatigue, headache, suicidal ideation

CV: Atrial fibrillation/flutter, bradycardia, orthostatic hypotension, palpitations

EENT: Diplopia, blurred vision, tinnitus

GI: Nausea, constipation, vomiting, hepatitis, diarrhea, dyspepsia

HEMA: Anemia, neutropenia, agranulocytosis

INTEG: Rash, erythema, inj-site reaction, pruritus

SYST: Drug reaction with eosinophilia, systemic symptoms (DRESS), Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS

Metabolized by liver; excreted by kidneys, 40%; protein binding <15%

PO: Peak 1-4 hr

IV: Peak 30-60 min; half-life 13 hr

INTERACTIONS

• **Increase:** PR prolongation—β-blockers, calcium channel blockers, atazanavir, dronedarone, digoxin, lopinavir, ritonavir

• **Increase:** lacosamide effect—CYP2C19 inhibitors (fluconazole, isoniazid, miconazole)

Drug/Lab Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

• **Seizures:** duration, type, intensity, precipitating factors

• Renal function: albumin concentration

• CV status: orthostatic hypotension, PR prolongation; monitor cardiac status throughout treatment; ECG prior to therapy (IV), AV block may occur

• **Mental status:** mood, sensorium, affect, memory (long, short term), depression, suicidal ideation, psychologic dependence

• **Serious skin reactions:** discontinue product at first sign of rash

• **Pregnancy/breastfeeding:** Pregnant patient should enroll in North American Antiepileptic Drugs Pregnancy Registry, 1-888-233-2334; use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

• **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function

Evaluate:
• Therapeutic response: increased seizure control
Teach patient/family:
• Not to discontinue product abruptly; to taper over 1 wk because seizures may occur
• To report blurred vision, nausea, dizziness, syncope; to avoid hazardous activities until stabilized on product
• To carry emergency ID stating product use
• To notify prescriber of suicidal thoughts/behaviors, syncope, cardiac changes
• To report rash, fever, fatigue, yellowing of skin, eyes, dark urine; may be hypersensitivity reaction
• To notify prescriber immediately if pregnancy is planned or suspected; to enroll in pregnancy registry at 888-233-2334, www.aedpregnancyregistry.org
• That interactions with other medications may occur; to report all OTC, Rx medications, herbals and supplements taken; not to use with alcohol
• To consult MedGuide for proper use, risks, and review with patient

lactitol (Rx)

(lac'ti-tol)

Pizensy

Func. class.: Laxative
Chem. class.: Hyperosmolar product

ACTION:

Influx of water into the small intestine by osmosis, provide a laxative effect

USES:

Chronic idiopathic constipation

CONTRAINDICATIONS:

GI obstruction/perforation, galactosemia
Precautions: Pregnancy, children, breastfeeding

DOSAGE AND ROUTES

• **Adult: PO** 20 g with meals daily

Available forms: Powder for oral solution 10 g (single dose), 280 g, 560 g
Administer:
• Give with meals, if possible
• Give other oral medications separated by ≥2 hr
• Dilute powder for oral solution before use
• Using lactitol multidose bottle: **20-g dose:** Fill the measuring cap twice to the top of the white section in cap marked by the arrow; **10-g dose:** Fill the measuring cap once to the top of the white section in cap marked by the arrow
• Pour the measured dose into an empty 8-oz glass
• Add 120 mL to 240 mL (4-8 ounces) of water, juice, or other common beverage (coffee, tea, soda) and stir to dissolve
• Have the patient drink the entire contents of the glass
• Using lactitol unit-dose packets: pour the contents of 1 or 2 unit-dose packets, as prescribed, into an empty 8-oz glass; add 120 mL to 240 mL (4-8 ounces) of water, juice, or other common beverage (coffee, tea, soda) and stir to dissolve; have the patient drink the entire contents of the glass

SIDE EFFECTS

CV: Hypertension
GI: Abdominal pain, diarrhea, distention/flatulence
GU: UTI

PHARMACOKINETICS

Peak 3.6 hr, half-life 2.4 hr

INTERACTIONS

• All medications (PO): separate by 2 hr

NURSING CONSIDERATIONS

Assess:
• Constipation: Assess for continuing constipation or relief
• Identify if pregnancy is suspected, not known if there is harm to fetus

Evaluate:
• Therapeutic response: Relief of constipation
Teach patient/family:
• To separate all other oral medications by ≥2 hr

lactulose (Rx)
(lak′tyoo-lose)
Constulose, Enulose, Generlac, Kristalose
Func. class.: Laxative; ammonia detoxicant (hyperosmotic)
Chem. class.: Lactose synthetic derivative

Do not confuse:
lactulose/lactose

ACTION:
Prevents absorption of ammonia in colon by acidifying stool; increases water, softens stool

USES:
Chronic constipation, portal-systemic encephalopathy (PSE) in patients with hepatic disease

CONTRAINDICATIONS:
Hypersensitivity, low-galactose diet
Precautions: Pregnancy, breastfeeding, geriatric patients, debilitated patients, diabetes mellitus

DOSAGE AND ROUTES
Chronic constipation
• **Adult: PO** 15-30 mL/day (10-20 g), may increase to 60 mL/day prn
• **Child: PO** 1.5-3 mL/kg/day once or twice daily
Hepatic encephalopathy
• **Adult: PO** 30-45 mL (20-30 g) tid or qid until stools soft; **RETENTION ENEMA** 300 mL (200 g) diluted
• **Child: PO (unlabeled)** 40-90 mL/day in 3-4 divided doses
• **Infant: PO (unlabeled)** 2.5-10 mL/day in divided doses
Available forms: Oral sol 10 g/15 mL; packets 10, 20 g; rectal sol 10 g/15 mL
Administer:
PO route
• With 8 oz fruit juice, water, milk to increase palatability of oral form; for rapid effect, give on empty stomach
• Increased fluids to 2 L/day; do not give with other laxatives; if diarrhea occurs, reduce dosage
• **Kristalose:** dissolve contents of packet/4 oz water
Rectal route
• **Retention enema (no commercial product)** by diluting 300 mL lactulose/700 mL of water; administer by rectal balloon catheter; retain for >30 min; if retained for <30 min, repeat

SIDE EFFECTS
GI: *Nausea, vomiting, anorexia, abdominal cramps,* diarrhea, flatulence, distention, belching
META: Hypernatremia, hypokalemia; hyperglycemia (diabetes)

PHARMACOKINETICS
Metabolized in colon, excretion kidneys, unchanged, onset 1-2 days, peak unknown, duration unknown

INTERACTIONS
• Do not use with other laxatives (hepatic encephalopathy)
Decrease: lactulose effects—other oral antiinfectives, antacids
Drug/Herb
Increase: laxative action—flax, senna
Drug/Lab Test
Increase: blood glucose (diabetic patients)
Decrease: blood ammonia

NURSING CONSIDERATIONS
Assess:
• **Stool:** amount, color, consistency, frequency, abdominal pain/distention, bowel sounds prior to use and after use
• **Cause of constipation;** determine whether fluids, bulk, or exercise is missing from lifestyle; use of constipating products
• **Hepatic encephalopathy:** blood ammonia level (15-45 mcg/dL or 35-65 umol/L is normal range); may decrease ammonia level by 25%-50%; monitor for

L

clearing of confusion, lethargy, restlessness, irritability if portal-systemic encephalopathy; monitor sodium in higher doses
• Monitor sodium in higher levels
• Blood, urine electrolytes if product used often; may cause diarrhea, hypokalemia, hyponatremia
• I&O ratio to identify fluid loss, replace any loss
• Cramping, rectal bleeding, nausea, vomiting; if these symptoms occur, product should be discontinued

Evaluate:
• Therapeutic response: decreased constipation, decreased blood ammonia level, clearing of mental state

Teach patient/family:
• Not to use as a laxative long term, to use as prescribed
• To dilute with water or fruit juice to counteract sweet taste
• To store in cool environment; not to freeze
• To take on an empty stomach for rapid action
• To report diarrhea, number, amount, consistency of stools; may indicate overdose

lamiVUDine 3TC (Rx)

(lam-i-voo′deen)

Epivir, Epivir HBV, Heptovir

Func. class.: Antiretroviral

Chem. class.: Nucleoside reverse transcriptase inhibitor (NRTI)

Do not confuse:
lamiVUDine/lamoTRIgine

ACTION: Inhibits replication of HIV virus by incorporating into cellular DNA by viral reverse transcriptase, thereby terminating cellular DNA chain

USES: HIV-1–related infection in combination with at least 2 other antiretrovirals; chronic hepatitis B (Epivir HBV)
Unlabeled uses: HIV-1 nonoccupational postexposure prophylaxis, prevention of perinatal HIV transmission

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, geriatric patients, granulocyte count <1000/mm^3 or HB <9.5 g/dL, renal disease, pancreatitis, peripheral neuropathy

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Initiation of therapy for HIV treatment

For adults, initiation of treatment immediately (or as soon as possible) after HIV diagnosis is recommended in all patients to reduce the risk of disease progression and to prevent the transmission of HIV, including perinatal transmission and transmission to sexual partners. Starting antiretroviral therapy early is particularly important for patients with AIDS-defining conditions, those with acute or recent HIV infection, and individuals who are pregnant; delaying therapy in these subpopulations has been associated with high risks of morbidity, mortality, and HIV transmission

Antiretroviral drug-resistance testing

• Genotypic drug-resistance testing is recommended prior to initiation of therapy and prior to changing therapy for treatment failure
• Phenotypic resistance testing may be used in conjunction with the genotypic test for patients with known or suspected complex drug-resistance mutation patterns
• HIV-1 proviral DNA resistance testing is available for use in patients with HIV RNA concentrations below the limits of detection or with low-level viremia (i.e., <1000 copies/mL), where genotypic testing is unlikely to be successful; however, the clinical utility of this assay has not been fully determined
• Pediatric guidelines are also available

Therapy for HIV treatment

• For pregnant and nonpregnant patients, lamivudine plus tenofovir alafenamide,

tenofovir disoproxil fumarate, or abacavir (HLA-B*5701–negative patients only) are preferred 2-NRTI backbones
• In nonpregnant patients unable to take abacavir or tenofovir, lamivudine may be given with dolutegravir (if pretreatment HIV RNA is <500,000 copies/mL and without HBV coinfection) or darunavir boosted with ritonavir (if without HBV coinfection)
• Lamivudine is used as part of a 3-drug combination antiretroviral regimen with zidovudine and either nevirapine or raltegravir for the prevention of perinatal HIV transmission in neonates with presumed HIV exposure or those at high risk for perinatal HIV transmission (i.e., mother has not received antepartum antiretroviral therapy)
• Pediatric guidelines are also available
Per the manufacturer, this drug has been shown to be active against most strains of the following microorganisms either in vitro and/or in clinical infections: hepatitis B virus, human immunodeficiency virus (HIV)

HBV infection (Epivir-HBV) Adult PO: 100mg daily
HIV infection (Epivir) Adult PO: 150mg twice daily or 300mg once daily
Renal dose
• **Adult/adolescents: PO** CCr 30-49 mL/min: **Epivir** 150 mg/day; **Epivir HBV** 100 mg 1st dose, then 50 mg/day; CCr 15-29 mL/min: **Epivir** 150 mg 1st dose, then 100 mg/day; **Epivir** HBV 100 mg 1st dose, then 25 mg/day; CCr 5-14 mL/min: **Epivir** 150 mg 1st dose, then 50 mg/day; **Epivir** HBV 35 mg 1st dose, then 15 mg/day; CCr <5 mL/min: **Epivir** 50 mg 1st dose, then 25 mg/day; **Epivir HBV** 35 mg 1st dose, then 10 mg/day
Available forms: (Epivir) oral sol 10 mg/mL; tabs 150, 300 mg; **(Epivir HBV)** oral sol 5 mg/mL; tabs 100 mg
Administer:
• PO daily or bid, without regard to meals
• Epivir and Epivir HBV are not interchangeable
• Use with other antiretrovirals only; do not use triple antiretroviral with abacavir or didanosine; resistance may occur
• Store in cool environment; protect from light

SIDE EFFECTS

CNS: *Fever, headache, malaise, dizziness, insomnia, depression, fatigue, chills,* seizures, peripheral neuropathy, paresthesias
EENT: Taste change, hearing loss, photophobia
GI: *Nausea, vomiting, diarrhea,* anorexia, cramps, dyspepsia, hepatomegaly with steatosis; pancreatitis (more common in children)
HEMA: Neutropenia, anemia, thrombocytopenia
INTEG: *Rash*
MS: *Myalgia, arthralgia, pain*
RESP: *Cough*
SYST: Lactic acidosis, anaphylaxis, Stevens-Johnson syndrome, immune reconstitution syndrome

PHARMACOKINETICS

Rapidly absorbed, distributed to extravascular space, excreted unchanged in urine, protein binding <36%, half-life 5-7 hr, child 2 hr, peak 3.2 hr

INTERACTIONS

Decrease: both products—zalcitabine; avoid concurrent use
Increase: pancreatitis—other products that cause pancreatitis
Increase: lamotrigine level—sulfamethoxazole-trimethoprim
• Do not use with emtricitabine, duplication
Decrease: lamiVUDine effect—interferons
Drug/Lab Test
Increase: ALT, bilirubin
Decrease: HB, neutrophil, platelet count

NURSING CONSIDERATIONS

Assess:
• **HIV:** Test for HIV before starting treatment, blood counts q2wk; watch for neutropenia, thrombocytopenia, HB, CD4, viral load; if low, therapy may have to be discontinued and restarted after hematologic recovery; blood transfusions may be required; assess for lessening of symptoms; if HBV is present, a higher dose of Epivir HBV is needed

• Monitor CBC, with differential, platelets, blood glucose, cholesterol/lipids, urinalysis, BUN, creatinine baseline and periodically during treatment

Black Box Warning: Hepatitis B exacerbation: fatigue, anorexia, pruritus, jaundice during and for several months after discontinuation; AST, ALT, bilirubin; amylase, lipase, triglycerides periodically during treatment

• **Children for pancreatitis:** abdominal pain, nausea, vomiting, neuropathy; discontinuing may be required; monitor amylase, lipase; use cautiously in children

• **Lactic acidosis, severe hepatomegaly with steatosis:** obtain baseline LFTs; if elevated, discontinue treatment; discontinue even if LFTs are normal if lactic acidosis, severe hepatomegaly develops; may be fatal, especially in women

• **Pregnancy/breastfeeding:** Epivir is a drug that is used in pregnancy to treat HIV; enroll patient in the Antiretroviral Pregnancy Registry at 800-258-4263; do not breastfeed. Obtain pregnancy test prior to starting therapy

Evaluate:

• Therapeutic response: decreasing symptoms of HIV, CD4, viral load

Teach patient/family:

• That GI complaints, insomnia resolve after 3-4 wk of treatment

• That product is not a cure for HIV but will control symptoms; that compliance is necessary; to take as directed; to complete full course of treatment even if feeling better

• To notify prescriber of sore throat, swollen lymph nodes, malaise, fever, peripheral neuropathy; other infections may occur

• To report symptoms of pancreatitis, immune reconstitution syndrome immediately

• That patient is still infective, may pass HIV virus on to others

• That follow-up visits must be continued since serious toxicity may occur; that blood counts must be done

• That other products may be necessary to prevent other infections

• That product may cause fainting or dizziness

• **Pregnancy/breastfeeding:** to enroll in the Antiretroviral Pregnancy Registry at 800-258-4263; not to breastfeed, a pregnancy test will be required prior to beginning therapy in those who can become pregnant

lamivudine/tenofovir disoproxil (Rx)

(lam-i-voo′deen/ten-oh-foh′veer)

Cimduo, Temixys

Func. class.: Antiretroviral

USES: In combination with other antiretrovirals for human immunodeficiency virus (HIV) infection

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

• **Adult/adolescent/child ≥35 kg: PO**

1 tablet (lamivudine 300 mg; tenofovir 300 mg) daily

Available forms: Tabs 300 mg/300 mg

lamivudine/zidovudine (Rx)

(la-mi′vyoo-deen/zye-doe′vyoo-deen)

Combivir

Func. class.: Antiretroviral, reverse transcriptase inhibitor, nucleoside

USES: Treatment of HIV-1 infection in combination with other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity to lamivudine or zidovudine, or any component

Black Box Warning: Bone marrow suppression, hepatitis B exacerbation, hepatotoxicity, lactic acidosis, myopathy

DOSAGE AND ROUTES

Adult: PO 1 tablet (lamivudine 150 mg/zidovudine 300 mg) bid in combination with other antiretrovirals

Children and adolescents weighing ≥30 kg: PO 1 tablet bid, use in combination with at least one other antiretroviral agent

Available forms: Tabs 150 mg/300 mg

lamoTRIgine (Rx)

(la-moe′tri-geen)

LaMICtal, Lamictal CD, LaMICtal ODT, LaMICtal, Starter, LaMICtal XR, Subvenite, Subvenite Starter Kit-Blue, Subvenite Starter Kit-Green, Subvenite Starter Kit-Orange

Func. class.: Anticonvulsant—miscellaneous

Chem. class.: Phenyltriazine

Do not confuse:
lamoTRIgine/lamiVUDine/levothyroxine
LaMICtal/LamISIL

ACTION: Inhibits voltage-sensitive sodium channels, thus decreasing seizures

USES: Adjunct for the treatment of partial, tonic-clonic seizures; children with Lennox-Gastaut syndrome, bipolar disorder

Unlabeled uses: Absence seizures

CONTRAINDICATIONS: Hypersensitivity, mania

Precautions: Pregnancy (cleft lip/palate during 1st trimester), breastfeeding, geriatric patients, cardiac/renal/hepatic disease, severe depression, suicidal thoughts, blood dyscrasias, children <16 yr, risk of hemophagocytic lymphohistiocytosis (HLH), abrupt discontinuation, autoimmune disease, SLE

Black Box Warning: Serious rash

DOSAGE AND ROUTES

Seizures: monotherapy

- **Adult/adolescent ≥16 yr: PO** 50 mg/day while receiving 1 enzyme-inducing AED (carBAMazepine, PHENobarbital, phenytoin, primidone but not valproic acid) week 1-2, then increase to 100 mg divided bid week 3-4; maintenance 300-500 mg/day; **EXT REL** 50 mg/day × 1-2 wk, then 100 mg/day week 3-4, then 200 mg/day week 5, then 300 mg/day week 6, then 400 mg/day week 7; after week 7, range is 400-600 mg/day
- **Adolescent <16 yr/child: PO** 0.3 mg/kg/day week 1-2, then 0.6 mg/kg/day week 3-4; depends on use of AED; usual dose 4.5-7.5 mg/kg/day, max 300 mg/day

Monotherapy for patients taking valproate

- **Adult/adolescent ≥16 yr receiving lamoTRIgine and valproate without enzyme-inducing drug: PO** (immediate release) stabilize on valproate, target dose is 200 mg/day lamoTRIgine; if patient is not taking lamoTRIgine 200 mg/day, increase dose by 25-50 mg/day q1-2wk to reach 200 mg/day; while maintaining lamoTRIgine 200 mg/day, decrease valproate to 500 mg/day by ≤500 mg/day/wk, maintain valproate at 500 mg/day × 1 wk, then increase lamoTRIgine to 300 mg/day while decreasing valproate 250 mg/day × 1 wk, then discontinue valproate and increase lamoTRIgine by 100 mg/day/wk to maintenance of 500 mg/day

Seizures: multiple therapy with valproate

- **Adult/adolescent ≥16 yr: PO** 25 mg every other day, then 25 mg/day week 3-4, increase by 25-50 mg q1-2wk, maintenance 100-500 mg/day
- **Adolescent <16 yr/child: PO** 0.1-0.2 mg/kg/day initially, then increase q2wk as needed to 1-5 mg/kg/day or 200 mg/day

Hepatic dose

• **Adult: PO** moderate hepatic impairment or severe without ascites: reduce by 25%; severe hepatic impairment with ascites: reduce by 50%

Absence seizures (unlabeled)

• **Adolescent/child 3-13 yr: PO** 0.5 mg/kg/day in 2 divided doses × 2 wk, then 1 mg/kg/day in 2 divided doses × 2 wk, adjusted q5days

Available forms: Tabs 25, 100, 150, 200 mg; **PO** ext rel 25-50-100, 50-100-200 mg titration kit; PO 25-100 mg starter kit; **ext rel** 25, 50, 100, 250, 300 mg; **chew dispersible tabs** 5, 25 mg; **oral disintegrating tab** 25, 50, 100, 200 mg; **oral disintegrating tab** 25-50, 50-100 mg, 25-50-100 mg titration kit

Administer:

• Correct starter kit; severe side effects have occurred from incorrect starter kit

• Discontinue all products gradually over ≥2 wk; abrupt discontinuation can increase seizures

• All forms may be given without regard to meals

• Extended-release product is not to be used for conversion to monotherapy for ≥2 antiepileptic products

• **Orange starter kit:** for those **NOT** taking carBAMazepine, phenytoin, PHENobarbital, primidone, rifAMPin, valproate

• **Green starter kit:** for those taking carBAMazepine, phenytoin, PHENobarbital, primidone, rifAMPin but **NOT** valproate

• **Blue starter kit:** for those taking valproate

• If a dose is missed, take as soon as remembered unless next dose is in <4 hr, then skip and take next regularly scheduled dose

• **Chewable dispersible tab:** may be swallowed whole, chewed, mixed in water or fruit juice; to mix, add to small amount of liquid in glass or spoon; tabs will dissolve in 1 min, then mix in more liquid and swirl and swallow immediately; do not cut tabs in half

• **Orally disintegrating tabs:** place on tongue, move around in mouth; when disintegrated, swallow; examine blister pack before use, do not use if blisters are torn or missing

• **Extended-release tabs:** swallow whole; do not cut, break, chew; without regard to food

SIDE EFFECTS

CNS: *Dizziness,* ataxia, *headache,* fever, insomnia, tremor, depression, anxiety, suicidal ideation, seizures, poor concentration

EENT: Nystagmus, diplopia, blurred vision

GI: Nausea, vomiting, anorexia, abdominal pain, hepatotoxicity

GU: *Dysmenorrhea*

HEMA: Anemia, DIC, leukopenia, thrombocytopenia

INTEG: Rash (potentially life-threatening), alopecia, photosensitivity

CV: Chest pain, palpitations

MS: Neck pain, myalgias

SYST: Stevens-Johnson syndrome, angioedema, toxic epidermal necrolysis, DRESS

PHARMACOKINETICS

Half-life varies depending on dose; half-life 24 hr, 15 hr with enzyme inducers; rapidly, completely absorbed; metabolized by glucuronic acid conjunction; protein binding 55%; peak 1.4-2.3 hr, XR 4-10 hr; crosses placenta; excreted in breast milk

INTERACTIONS

Decrease: metabolic clearance of lamoTRIgine—valproic acid, CYP3A4 inhibitors

Decrease: lamoTRIgine concentration—carBAMazepine, acetaminophen, phenytoin, primidone, PHENobarbital, OXcarbazepine

Drug/Herb

Increase: anticonvulsant effect—ginkgo

Decrease: anticonvulsant effect—ginseng

Drug/Lab

False positive: PCP (rapid drug screen)

NURSING CONSIDERATIONS

Assess:

• **Seizure:** duration, type, intensity, halo before seizure baseline and periodically

Black Box Warning: Rash (Stevens-Johnson syndrome, toxic epidermal necrolysis) in pediatric patients: product should be discontinued at first sign of rash; more common in those taking multiple products for seizures; rash usually occurs during 2-8 wk of therapy

- **Bipolar disorder:** suicidal thoughts/behaviors
- **DRESS:** monitor for fever, rash, lymphadenopathy; may occur with hepatitis, nephritis, myocarditis; discontinue immediately, may involve multiple organ systems
- **Risk of hemophagocytic lymphohistiocytosis (HLH):** monitor for persistent fevers, rash, enlarged liver/spleen/lymph nodes, anemia, low platelets

Evaluate:

- Therapeutic response: decrease in severity of seizures or of bipolar symptoms

Teach patient/family:

- To take PO doses divided, with or after meals to decrease adverse effects; not to discontinue product abruptly because seizures may occur
- To avoid hazardous activities until stabilized on product
- To carry emergency ID; to notify prescriber of skin rash, increased seizure activity; to use sunscreen, protective clothing if photosensitivity occurs

Black Box Warning: Rash: to notify prescriber immediately if rash, fever, or swollen lymph nodes occur

- To notify prescriber immediately of suicidal thoughts/behaviors, new or worsening depression, anxiety, aggression
- **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected; to use a nonhormonal contraceptive; to enroll with the North American Antiepileptic Drug Pregnancy Registry at 888-233-2334 (www.aedpregnancyregistry.org); that product decreases folate; to avoid breastfeeding

lanadelumab-flyo (Rx)

(lan´a-del´ue-mab)

Takhzyro

Func. class.: Complement inhibitors

Chem. class.: Plasma kallikrein inhibitor

ACTION

A fully human monoclonal antibody (IgG1/κ-light chain) that binds plasma kallikrein and inhibits its proteolytic activity and decreases plasma kallikrein activity to control excess bradykinin generation in patients with HAE

USES

Prophylaxis to prevent attacks of hereditary angioedema (HAE) in those ≥12

CONTRAINDICATIONS

Hypersensitivity to this product or polysorbate 80 (some preparations)

DOSAGE AND ROUTES

Adult/child ≥12 yr: SUBCUT 300 mg q2wk; consider using q4 wk when attack free for >6 months

Available forms: Injection: 300 mg/2 mL (150 mg/mL) solution in a single-dose vial

Administer

- Give SUBCUT only
- Provided as a ready-to-use solution in a single-dose vial that does not require additional reconstitution or dilution for administration, clear to slightly opalescent, colorless to slightly yellow solution, do not use if discolored or contains visible particles, do not shake
- Allow to warm for 15 min after removing from refrigerator
- Using aseptic technique, withdraw the prescribed dose using an 18-gauge needle, change the needle on the syringe to a 27-gauge, ½-inch needle or other needle suitable for SUBCUT injection, inject SUBCUT into the abdomen, thigh, or upper arm
- Give within 2 hr of preparing, after syringe is prepared, it can be refrigerated at 36°F to 46°F (2°C to 8°C), use within 8 hr

SIDE EFFECTS

CNS: Headache, dizziness
GI: Diarrhea, increased LFTs
INTEG: Injection site reaction, rash
MS: Myalgia
RESP: URI
MISC: Antibody development, hypersensitivity

PHARMACOKINETICS

Onset unknown, peak 4.11-5.17 days, duration unknown, half-life 14.2-15 days

Interactions

None known

Drug/Lab

Increase: aPTT

NURSING CONSIDERATIONS

Assess:

- Symptoms of hereditary angioedema (HAE): Swelling of arms, legs, face, intestinal tract, airway, abdominal pain, vomiting, baseline and periodically after treatment
- Hypersensitivity: Monitor for allergic reactions

Evaluate:

- Therapeutic response
- Decreasing swelling of arms, legs, face, intestinal tract, airway, abdominal pain, vomiting

Teach patient/family:

- To report to provider headache, muscle pain, diarrhea, severe injection site irritation, fast heartbeat, severe dizziness
- Signs of an allergic reaction: rash; itching; red, swollen, blistered, peeling skin; wheezing; swelling of the mouth, face, lips, tongue, or throat; notify provider immediately
- Provide instructions to patient, caregiver on how to administer product using SUBCUT injection
- Pregnancy/breastfeeding: To advise provider if pregnancy is planned or suspected or if breastfeeding

lansoprazole (Rx, OTC)

(lan-so-prey′zole)

Prevacid, Prevacid SoluTab

Func. class.: Antiulcer, proton pump inhibitor

Chem. class.: Benzimidazole

ACTION: Suppresses gastric secretion by inhibiting hydrogen/potassium ATPase enzyme system in gastric parietal cell; characterized as gastric acid pump inhibitor because it blocks the final step of acid production

USES: Gastroesophageal reflux disease (GERD), severe erosive esophagitis, poorly responsive systemic GERD, pathologic hypersecretory conditions (Zollinger-Ellison syndrome, systemic mastocytosis, multiple endocrine adenomas); possibly effective for treatment of duodenal, gastric ulcers, maintenance of healed duodenal ulcers

Unlabeled uses: Dyspepsia, stress ulcer prophylaxis in critically-ill patients, GERD (infants/neonates), eosinophilic esophagitis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, hypomagnesemia, osteoporosis

DOSAGE AND ROUTES

Frequent heartburn

- **Adult: PO (OTC)** 15 mg daily up to 14 days

Duodenal ulcer (*H. pylori* eradication)

- **Adult: PO** 15 mg/day before eating for 4 wk, then 15 mg/day to maintain healing of ulcers; associated with *Helicobacter pylori:* 30 mg lansoprazole bid, 1 g amoxicillin bid; clarithromycin 500 mg bid × 10-14 day or lansoprazole tid with 1 g amoxicillin tid × 14 days

Pathologic hypersecretory conditions

- **Adult: PO** 60 mg/day, may give up to 90 mg bid, administer doses of >120 mg/day in divided doses

NSAID-related ulcer (continuing use)

- **Adult: PO** 30 mg daily × 8 wk

GERD/esophagitis

- **Adult/adolescent: PO** 15-30 mg/day × 8 wk
- **Child 1-11 yr (>30 kg): PO** 30 mg/day ≤12 wk
- **Child 1-11 yr (≤30 kg): PO** 15 mg/day ≤12 wk

• **Infant (unlabeled): PO** 1-1.74 mg/kg/day; limited data available
• **Neonate (unlabeled): PO** 0.5-1 mg/kg/day

Stress gastric prophylaxis

• **Adult: NG** Use 30 mg del rel caps or 30 mg disintegrating tab once daily

Available forms: Del rel caps 15, 30 mg; orally disintegrating tabs 15, 30 mg

Administer:

PO route

• Swallow caps whole 30 min before eating; do not crush or chew caps; caps may be opened and contents sprinkled on food

Delayed-release capsules

• Swallow intact, do not chew or crush, may be opened and contents sprinkled on 1 Tbsp applesauce or other soft food, swallow immediately; or contents may be mixed into a small volume of juice, mixed and swallowed, rinse with 2 or more oz volume of liquid and have patient take

NG route

• **Oral cap:** open cap and pour ¼ of granules into NG feeding syringe with plunger removed, slowly add water and depress plunger, repeat until all granules used; flush tube with 15 mL water
• Place on tongue, allow to dissolve, use without regard to water
• **Oral syringe:** dissolve 15 mg/4 mL or 30 mg/10 mL water, use extra water in syringe to remove all of the product

NG tube

• **Oral disintegrating tab:** mix 30 mg tab in 10 mL water, give via NG tube, flush tube with 10 mL sterile water, clamp for 60 min

SIDE EFFECTS

CNS: *Headache,* dizziness
GI: Diarrhea, abdominal pain, nausea, *constipation,* flatulence, acid regurgitation, anorexia, irritable colon, CDAD
GU: Hematuria, glycosuria, impotence, kidney calculus, breast enlargement

PHARMACOKINETICS

Absorption after granules leave stomach 80%; half-life 1½-2 hr; protein binding 97%; extensively metabolized in liver; excreted in urine, feces; clearance decreased in geriatric patients, renal/hepatic impairment, onset 1-3 hr, peak 1.7 hr duration 24 hr

INTERACTIONS

Increase: bleeding risk—warfarin
Decrease: lansoprazole absorption—sucralfate
Decrease: absorption of ketoconazole, itraconazole, iron salts, calcium carbonate, atazanavir, ampicillin
Increase: hypomagnesemia—loop/thiazide diuretics
Decrease: lansoprazole effect—antimuscarinics, H_2-blockers
• Avoid use with dasatinib, delavirdine

Drug/Herb

• Avoid use with red yeast rice, St. John's wort

Drug/Food

• Food decreases rate of absorption; use before food

NURSING CONSIDERATIONS

Assess:

• **CDAD:** bowel sounds, abdomen for pain, swelling; anorexia, blood in stool; may occur even after completion of therapy
• **Hepatic studies:** AST, ALT, alk phos during treatment
• INR and prothrombin time when taking warfarin
• Magnesium: low magnesium may occur, palpitations, muscle spasm, tremors
• **Beers:** avoid scheduled use for >8 wk unless for high-risk patients (oral corticosteroids/chronic NSAIDs use)
• **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:

• Therapeutic response: absence of epigastric pain, swelling, fullness

Teach patient/family:

• To report severe diarrhea, cramping, blood in stools, fever; product may have to be discontinued
• That hypoglycemia may occur if diabetic; to monitor blood glucose
• To avoid hazardous activities; that dizziness may occur
• To avoid alcohol, salicylates, ibuprofen; may cause GI irritation

- That if using OTC for heartburn, it may take 1-4 days to see full benefit
- Teach patient the reason for use and how to take, to take 30-60 min before eating
- Symptoms of low magnesium levels
- **Pregnancy:** to notify provider if pregnancy is planned or suspected or if breastfeeding

lansoprazole/amoxicillin/clarithromycin (Rx)

Func. class.: GI-related disorder agent

USES:

Helicobacter pylori eradication

DOSAGE AND ROUTES

H. pylori eradication:

- **Adults: PO** 30 mg lansoprazole, 1000 mg amoxicillin, 500 mg clarithromycin bid × 10 days

Available forms: Triple therapy pack/daily

lanthanum (Rx)

(lan′-tha-num)

Fosrenol

Func. class.: Phosphate binder

USES:

End-stage renal disease

CONTRAINDICATIONS:

Hypophosphatemia, hypersensitivity

DOSAGE AND ROUTES

- **Adult: PO** 750-1500 mg/day in divided doses with meals; titrate dose q2-3wk until an acceptable phosphate level is reached; tabs should be chewed completely before swallowing; intact tabs should not be swallowed; maintenance dose 1500-3000 mg/day divided with meals; max 3750 mg/day

Available forms: Tabs, chewable 500, 750, 1000 mg; oral powder 750, 1000 mg

⚠ HIGH ALERT

lapatinib (Rx)

(la-pa′tin-ib)

Tykerb

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Biologic response modifier, signal transduction inhibitor (STIs)

USES:

Advanced metastatic breast cancer patients with tumor that overexpresses HER2 protein and who have received previous chemotherapy

CONTRAINDICATIONS:

Pregnancy, breastfeeding, hypersensitivity

Black Box Warning: Hepatotoxicity

DOSAGE AND ROUTES

Advanced/metastatic breast cancer with HER2 overexpression who have received previous therapy

- **Adult: Lapatinib PO** 1250 mg (5 tabs)/day 1 hr before or after food on days 1-21 plus **capecitabine** 2000 mg/m^2/day in 2 divided doses on days 1-14 in a repeating 21-day cycle; continue until therapeutic response or toxicity occurs

Lapatinib/letrozole combination

- **Adult: PO** lapatinib 1500 mg (6 tablets) q2days with letrozole PO 2.5 mg daily

Metastatic breast cancer with HER2 overexpression for whom hormonal therapy is indicated

- **Adult: PO** 1500 mg (6 tabs) 1 hr before food with letrozole 2.5 mg/day

Hepatic dose

- **Adult: PO** (Child-Pugh C) 750 mg/day (with capecitabine); 1000 mg/day (with letrozole)

Available forms: Tabs 250 mg

⚠ HIGH ALERT

larotrectinib (Rx)

(layr′oh-trek′tih-nib)

Vitrakvi

Func. class.: Antineoplastic—TRK inhibitor

USES: Metastatic or surgically unresectable neurotrophic receptor tyrosine kinase (NTRK) gene fusion–positive solid tumors with no known acquired resistance mutation, in patients with no satisfactory alternative treatments or in patients who have progressed following treatment

CONTRAINDICATIONS:
Hypersensitivity, pregnancy

DOSAGE AND ROUTES
• **Adult/adolescent/child/infant: PO** For BSA ≥1 m^2, 100 mg bid; for BSA <1 m^2, 100 mg/m^2 bid; continue therapy until disease progression
Available forms: Oral solution 20 mg/mL; capsules 25, 100 mg

lasmiditan (Rx)
(las-mid′i-tan)
Reyvow
Func. class.: Antimigraine

USES: Migraine with or without aura in adults

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
• **Adults: PO** 50, 100, or 200 mg as a single dose; max: 1 dose in 24 hr
Available forms: Tabs 50, 100 mg

latanoprost (ophthalmic) (Rx)
(lah-tan′oh-prost)
Xalatan
Func. class.: Antiglaucoma agent
Chem. class.: Prostaglandin agonist

Do not confuse:
latanoprost/bimatoprost

ACTION: Increases aqueous humor outflow

USES: Increased intraocular pressure in those who have open-angle glaucoma/ocular hypertension and who do not respond to other IOP-lowering products

CONTRAINDICATIONS:
Hypersensitivity to this product, benzalkonium chloride
Precautions: Eye infections, angle-closure glaucoma, renal/hepatic function impairment, children, contact lenses, uveitis, keratitis

DOSAGE AND ROUTES
• **Adult: OPHTH** Instill 1 drop in each affected eye (conjunctival sac) every night
Available forms: Ophthalmic solution 0.005% (50 mcg/mL)
Administer:
Ophthalmic route
• Wash hands before and after use; contact lenses should be removed before using the product, reinsert 15 min after use; contains benzalkonium chloride, which may be absorbed by soft contact lenses
• The solution may be used concomitantly with other topical ophthalmic drug products to lower IOP; if more than one topical ophthalmic drug is being used, the drugs should be administered at least 5 min apart
• Store unopened bottle refrigerated; once opened, it may be stored at room temperature, protected from light, for up to 6 wk

SIDE EFFECTS
EENT: *Conjunctival hyperemia, iris color change, ocular pruritus,* xerophthalmia, visual disturbance, ocular irritation/burning, foreign body sensation, ocular pain, blepharitis, cataracts, and superficial punctate keratitis
INTEG: Rash, allergic reactions
MISC: Flulike symptoms
CV: Angina

PHARMACOKINETICS
Ophthalmic: Onset 3-4 hr, peak 8-12 hr; half-life 3 hr

NURSING CONSIDERATIONS
Assess:
• **Intraocular pressure:** in those with ongoing increased IOP

Evaluate:
• Therapeutic response: decreasing IOP

Teach patient/family:
Ophthalmic route
• To wash hands before and after use; that contact lenses should be removed, reinsert 15 min after use; contains benzalkonium chloride, which may be absorbed by soft contact lenses
• Tilt the head back slightly and pull lower eyelid down to form a pouch; squeeze drops into the pouch and close the eyes for 1-2 min; not to blink; to avoid contamination, do not touch the tip of the dropper to the eye, fingertips, or other surface
• May be used concomitantly with other topical ophthalmic products to lower IOP; if more than one is used, the drugs should be administered at least 5 min apart, do not exceed dose
• To store unopened bottle refrigerated; once opened, it may be stored at room temperature, protected from light, for up to 6 wk

⚠ HIGH ALERT

ledipasvir/sofosbuvir (Rx)

(le-dip′as-vir/soe-fos′bue-veer)

Harvoni

Func. class.: Antiviral, antihepatitis agent

Chem. class.: NS5A inhibitor

ACTION: A combination product with an HCV NS5A inhibitor (ledipasvir) and a nucleotide analog HCV NS5B polymerase inhibitor (sofosbuvir)

USES: Chronic hepatitis C virus (HCV) genotype 1 infection in patients with compensated liver disease

CONTRAINDICATIONS: Hypersensitivity

Precautions: Decompensated hepatic disease, decompensated cirrhosis, severe renal impairment (eGFR <30 mL/min/1.73 m^2), end-stage renal failure requiring dialysis, pregnancy, breastfeeding

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Treatment of chronic hepatitis C virus (HCV) genotype 1 infection:
• **Adult (treatment-naïve) without cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food; the recommended duration of treatment is 12 wk; however, 8-wk treatment can be considered for patients with a baseline HCV RNA <6 million IU/mL. Recommendation includes patients coinfected with HIV

Genotype 1
• **Adult (treatment-naïve) with compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food; the recommended duration of treatment is 12 wk (recommendation includes patients coinfected with HIV)
• **Adult (treatment-experienced) without cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food; the recommended duration of treatment is 12 wk (recommendation includes patients coinfected with HIV)
• **Adult (treatment-experienced) with compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food; for 24 wk
• **Adult (treatment-naïve and experienced) with decompensated (Child-Pugh B or C) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) **PO** daily with ribavirin (600 mg **PO** daily) for 12 wk. Ribavirin must be administered with food
• **Adult (treatment-naïve and experienced) transplantation and is without cirrhosis or has compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with ribavirin for 12 wk. Ribavirin must be administered with food

• **Child/adolescent 12-17 yr (treatment-naïve) without cirrhosis or with compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food × 12 wk
• **Child/adolescent 12-17 yr (treatment-experienced) without cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food × 12 wk
• **Child/adolescent 12-17 yr (treatment-experienced) with compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food × 24 wk

For the treatment of chronic hepatitis C virus (HCV) genotype 4, 5, 6 infection

• **Adult (treatment-naïve or experienced) without cirrhosis or who have compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food × 12 wk
• **Adult (treatment-naïve or experienced) who has undergone liver transplantation and is without cirrhosis or has compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with ribavirin for 12 wk. Ribavirin must be administered with food in 2 divided doses
• **Child/adolescent 12-17 yr (treatment-naïve or experienced) without cirrhosis or who has compensated (Child-Pugh A) cirrhosis: PO** 1 tablet (90 mg ledipasvir; 400 mg sofosbuvir) daily with or without food × 12 wk

Available forms: Tab 90 mg ledipasir/400 mg sofosbuvir

Administer:
• Without regard to food

SIDE EFFECTS

CNS: *Fatigue, headache,* insomnia
GI: Nausea, vomiting, diarrhea
INTEG: Rash
MS: Myalgia

PHARMACOKINETICS

Ledipasvir: >99.8% protein binding, elimination biliary excretion, half-life 47 hr, peak 4-5 hr
Sofosbuvir: 61%-65% protein binding, elimination by the kidneys, 80% recovered in the urine, peak 0.8-1 hr, half-life 0.4 hr, metabolite 27 hr

INTERACTIONS

Increase: digoxin level—digoxin
Decrease: ledipasvir level—antacids; separate by ≥4 hr
Decrease: ledipasvir/sofosbuvir level—anticonvulsants, antimycobacterials (rifabutin, rifapentine), P-glycoprotein inducers; avoid using together
Decrease: ledipasvir level—H_2 receptor antagonists (famotidine), separate by ≥12 hr, max dose of H_2 receptor antagonist should not exceed famotidine 40 mg bid equivalent
Drug/Lab Test:
Increase: bilirubin, lipase, CK

NURSING CONSIDERATIONS

Assess:
• **Hepatitis C:** monitor hepatitis C RNA, serum bilirubin, creatinine
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Black Box Warning: Hepatitis B: test prior to initiating therapy; risk of fulminant hepatitis and death

Evaluate:
• Therapeutic response: hepatitis C RNA reduction
• CHC is decreased

Teach patient/family:
• To report effects to the prescriber
• To notify all providers of product use
• To take at the same time each day, to use for full course even if feeling better, to take missed doses when remembered on the same day; not to double doses
• That the product will not decrease transmission of infection in others

• If antacids (magnesium, aluminum) are needed, take 4 hr before or after this product

lefamulin (Rx)

(le-FAMue-lin)

Xenleta

Func. class.: Antiifective

Chem. class.: Pleuromutilin antibiotics

ACTION: May be bacteriostatic or bactericidal depending on the organism; inhibits bacterial protein synthesis through interactions (hydrogen bonds, hydrophobic interactions, and Van der Waals forces) in rRNA of the 50S subunit

USES: Treatment of community acquired bacterial pneumonia caused by *Chlamydophila pneumoniae, Haemophilus influenzae (β-lactamase negative), Haemophilus influenzae (β-lactamase positive), Haemophilus parainfluenzae, Legionella pneumophila, Moraxella catarrhalis, Mycoplasma pneumoniae, Staphylococcus aureus* (MRSA), *Staphylococcus aureus* (MSSA), *Streptococcus agalactiae* (group B streptococci), *Streptococcus anginosus, Streptococcus mitis, Streptococcus pneumoniae, Streptococcus pyogenes* (group A β-hemolytic streptococci), *Streptococcus salivarius*

CONTRAINDICATIONS

Hypersensitivity to this product or pleuromutilin antibiotics; use with CYP3A4 substrates

Precautions:

Alcoholism, bradycardia, breastfeeding, cardiac disease, contraception requirements, CAD, diabetes mellitus, dialysis, diarrhea, geriatrics, hepatic disease, hypertension, hypocalcemia, hypokalemia, hypomagnesemia, long QT syndrome, renal failure, reproductive risk, thyroid disease, torsades de pointes, ventricular dysrhythmias

DOSAGE AND ROUTES

• **Adults: PO** 600 mg q12hr × 5 days; IV 150 mg q12hr × 5-7 days

Hepatic dose

• **Adults: IV** Give over 60 min q24hr (Child-Pugh Class C); PO not recommended for patients with moderate (Child-Pugh Class B) or severe (Child-Pugh Class C)

Available forms:

Tablet 600 mg; solution for injection 150 mg/15 mL (10 mg/mL)

Administer:

PO route

• If a dose is missed, give the dose as soon as possible and anytime up to 8 hr before the next scheduled dose; if less than 8 hr remain before the next scheduled dose, do not give the missed dose, and resume dosing at the next scheduled dose

• Administer at least 1 hour before a meal or 2 hr after a meal

• Swallow tablet whole with 6 to 8 ounces of water; do not crush or divide tablets

• **Intermittent IV route** Visually inspect for particulate matter and discoloration prior to use, do not use if present

Dilution: Dilute the entire 15-mL vial into the supplied diluent bag; mix thoroughly; do not use the diluent bag in series connections, do not admix

Storage: Store up to 24 hr at room temperature and up to 48 hr when refrigerated at 2°C to 8°C (36°F to 46°F)

• Infuse over 60 min

SIDE EFFECTS

GI: Nausea, diarrhea, CDAD, vomiting

CNS: Insomnia, headache

META: Hypokalemia

PHARMACOKINETICS

Protein binding 94.8% to 97.1%, metabolized by CYP3A4; excreted urine 15.5% (9.6%-14.1% unchanged) after IV, 5.3% (unchanged after PO, excreted feces 77.3% (4.2%-9.1% unchanged) after IV and 88.5% (7.8%-24.8% unchanged) after PO; half-life is 3-20 hr; is a CYP3A4 and P-glycoprotein (P-gp) substrate; inhibits CYP2C8, breast cancer resistance protein (BCRP), and MATE1; PO peak 0.88-2 hr

INTERACTIONS

Decreased: Lefamulin effect—strong or moderate CYP3A inducers or P-gp inducers; avoid using together; if used, monitor for reduced effect

Increased: lefamulin effect—strong CYP3A inhibitors or P-gp inhibitors; avoid using together; if used together, monitor for adverse reactions
Increased: QT interval—CYP3A substrates; do not use together

NURSING CONSIDERATIONS

Assess:
• **Pneumonia:** Assess for signs of pneumonia
• QT prolongation: Assess for QT prolongation
Evaluate:
Therapeutic response: decreasing symptoms of pneumonia, culture negative
Teach patient/family:
• Advise patients to take at least 1 hr before a meal or 2 hr after a meal and should be swallowed whole with water (6-8 ounces); do not crush or divide
• That nausea/vomiting is common
• That serious allergic reactions may occur and require immediate attention
• To take exactly as directed, not to skip doses or not complete the full course of therapy
• **CDAD, diarrhea:** Assess for diarrhea that is watery or has mucous, with or without fever, stomach cramps that may occur up to 2 months after final dose
• **Pregnancy/breastfeeding:** Identify if pregnancy is planned or suspect, or if breastfeeding, pregnancy testing will be needed before use; use adequate contraception during use and for 2 days after final dose; not to be used in pregnancy; if used inadvertently during pregnancy or if a patient becomes pregnant while receiving product, report exposure by calling 1-855-5NABRIVA to enroll; if breastfeeding, pump and discard milk for the duration of treatment and for 2 days after the final dose

leflunomide (Rx)

(leh-floo′noh-mide)

Arava

Func. class.: Antirheumatic (DMARDs)
Chem. class.: Immune modulator, pyrimidine synthesis inhibitor

ACTION: Inhibits an enzyme involved in pyrimidine synthesis; has antiproliferative, antiinflammatory effect

USES: RA: to reduce disease process and symptoms
Unlabeled uses: Juvenile RA, BK virus (viremia or nephropathy; in kidney transplant), cytomegalovirus disease (in transplant patients resistant to standard antivirals)

CONTRAINDICATIONS: Breastfeeding, hypersensitivity

Black Box Warning: Pregnancy

Precautions: Children, renal disorders, vaccinations, infection, alcoholism, immunosuppression, jaundice, lactase deficiency, hepatic disease

Black Box Warning: Hepatic disease (ALT >2 × ULN)

DOSAGE AND ROUTES

Rheumatoid arthritis
• **Adult: PO** Loading dose 100 mg/day × 3 days, maintenance 20 mg/day; may be decreased to 10 mg/day if not well tolerated
Juvenile rheumatoid arthritis (unlabeled)
• **Adolescent/child >40 kg: PO** 20 mg/day
• **Adolescent/child 20-40 kg: PO** 15 mg/day
• **Adolescent/child 10-19.9 kg: PO** 10 mg/day
Available forms: Tabs 10, 20 mg
Administer:
• With food for GI upset, give same time each day, loading dose is recommended
• **Drug elimination:** give cholestyramine 8 g tid × 11 days; check levels

SIDE EFFECTS

CNS: *Headache,* dizziness, insomnia, depression, paresthesia, anxiety, migraine, neuralgia
CV: Palpitations, hypertension, chest pain, angina pectoris, peripheral edema

EENT: Pharyngitis, oral candidiasis, stomatitis, dry mouth, blurred vision
GI: *Nausea, anorexia, vomiting, constipation, flatulence, diarrhea, elevated LFTs,* hepatotoxicity, weight loss
HEMA: Anemia, ecchymosis, hyperlipidemia
INTEG: Rash, pruritus, alopecia, acne, hematoma, herpes infections
RESP: Pharyngitis, rhinitis, bronchitis, cough, respiratory infection, pneumonia, sinusitis, interstitial lung disease
SYST: Opportunistic/fatal infections, Stevens-Johnson syndrome, toxic epidermal necrolysis, DRESS

PHARMACOKINETICS

Metabolized in liver to active metabolite, half-life of metabolite 2 wk, excreted in urine, protein binding, 99%, crosses placenta, onset 99 min, peak up to 6 min of RA effect

INTERACTIONS

Increase: NSAID effect—NSAIDs
Increase: hepatotoxicity—hepatotoxic agents, methotrexate
Increase: leflunomide levels—rifampin
Increase: bleeding risk—warfarin
Decrease: antibody response—live virus vaccines
Decrease: leflunomide effect—cholestyramine, use for overdose

NURSING CONSIDERATIONS

Assess:
• **Arthritic symptoms:** ROM, mobility, swelling of joints at baseline and during treatment
• Screen for latent TB before starting treatment; if TB is present, pretreat before using product
• **Interstitial lung disease:** increased or worsening cough, SOB, fever; product may need to be discontinued and drug elimination procedure initiated (rare)

Black Box Warning: Hepatic necrosis/failure: monitor LFTs, if ALT elevations are >2 × baseline, reduce dose to 10 mg/day; monitor monthly or more frequently

• CBC with differential monthly × 6 mo, then q6-8wk thereafter; pregnancy test; serum electrolytes
• **Infections:** fatal infections can occur
• Hypertension: B/P, weight; edema can occur
• **Stevens-Johnson syndrome, toxic epidermal necrolysis:** monitor for rash during treatment; if rash with fever, fatigue, joint aches, blisters is present, discontinue immediately, initiate drug elimination procedure

Black Box Warning: Pregnancy: determine that patient is not pregnant before treatment; not to be given to women of childbearing potential who are not using reliable contraception, not to use in males who could potentially father a child, use barrier protection during therapy and up to 2 yr after last dose

Evaluate:
• Therapeutic response: decreased inflammation, pain in joints

Teach patient/family:
• That continuing monitoring will be needed
• That product must be continued for prescribed time to be effective, that up to a month may be required for improvement, that other treatment may continue corticosteroids, NSAIDs
• To take with food, milk, or antacids to avoid GI upset; to take at same time of day
• To use caution when driving because drowsiness, dizziness may occur
• To take with a full glass of water to enhance absorption, may continue with correct prescribed treatment with other antiinflammatories
• To discuss with health care professional all Rx, OTC, herbals, supplements used
• That hair may be lost; review alternatives
• To avoid live virus vaccinations during treatment
• To notify prescriber of weight loss
• **Overdose treatment:** give cholestyramine 8 g tid × 11 days

Black Box Warning: Pregnancy/breastfeeding: not to become pregnant while taking this product; not to breastfeed while taking this product; men should also discontinue product and begin leflunomide removal protocol if pregnancy is planned

⚠ HIGH ALERT

lemborexant (Rx)

(lem-boe-rex′ant)

Dayvigo

Func. class.: Hypnotic

Chem. class.: Orexin receptor

Controlled substance schedule IV

ACTION:

Competitive antagonism of orexin receptors that are responsible for wakefulness

USES:

Insomnia

CONTRAINDICATIONS:

Hypersensitivity, narcolepsy

Precautions: Substance abuse, breastfeeding, pregnancy, depression, suicidal ideation, elderly, sleep apnea, COPD

DOSAGE AND ROUTES

Insomnia with sleep onset and/or sleep maintenance difficulties:

- **Adults: PO** 5 mg nightly immediately before going to bed, with at least 7 hr remaining before the planned time of awakening. The dose may be increased to the 10 mg max if needed

Available forms: Tabs 5, 10 mg

Administer:

- Give immediately before going to bed, with at least 7 hr remaining before the planned time of awakening
- Do not use >10 mg per night

SIDE EFFECTS

CNS: Fatigue, headache, nightmares, hallucinations, sleep paralysis, suicidal ideation

PHARMACOKINETICS

Peak 1-3 hr, half-life 17-19 hr, protein binding 94%

INTERACTIONS

Increase: CNS depression—other CNS depressants

Increase: lemborexant level: CYP3A4 inhibitors

Decrease: lemborexant level: CYP3A4 inducers

Decrease: effect of—CYP2B6 substrates

NURSING CONSIDERATIONS

Assess:

- **Mental status:** reason for medication, type of sleep problem, trouble falling asleep, staying asleep, complex sleep-related behaviors, sleep paralysis, suicidal ideation, depression

Evaluate:

- **Therapeutic response:** Ability to sleep throughout the night

Teach patient/family:

- **Suicidal ideation:** have patient report immediately
- To report complex sleep disorders, sleep paralysis, hallucinations, nightmares
- To avoid other CNS depressants
- Not to take others, medication, herbs without discussing with prescriber
- **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected or if breastfeeding

⚠ HIGH ALERT

lenvatinib (Rx)

(len-va′-ti-nib)

Lenvima

Func. class.: Antineoplastic

USES:

Locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer (DTC)

CONTRAINDICATIONS:

Hypersensitivity

DOSAGE AND ROUTES

Thyroid cancer

- **Adult: PO** 24 mg (two 10-mg capsules once daily

Advanced renal cell carcinoma after 1 prior treatment, used with everolimus

- **Adult: PO** 18 mg/day with everolimus 5 mg/day

Hepatocellular cancer, unrectable

- **Adult** ≥60 kg: **PO** 12 mg daily

Available forms: Capsules 4, 8, 10, 12, 14, 18, 20, 24 mg

letermovir (Rx)

(le-term-oh-vir)

Prevymis

Func. class.: Antiviral

USES: For the prevention of cytomegalovirus following allogenic hematopoietic stem cell transplant

DOSAGE AND ROUTES

Cytomegalovirus (CMV) disease prophylaxis

• **Adult: PO/IV** 480 mg/day started between day 0 and day 28 after transplantation (before or after engraftment) and continued through day 100 after transplantation

Cytomegalovirus (CMV) disease prophylaxis in patients with concurrent cycloSPORINE

• **Adult: PO/IV** 240 mg/day started between day 0 and day 28 after transplantation (before or after engraftment) and continued through day 100 after transplantation. If cyclosporine is initiated after starting letermovir, reduce letermovir to 240 mg with the next dose. If cyclosporine is discontinued after starting letermovir, increase the dose of letermovir to 480 mg. If cyclosporine dosing is interrupted due to high cyclosporine concentrations, no dosage adjustment of letermovir is needed

Available forms: Tabs 240, 480 mg; injection 240 mg/12 mL; 480 mg/24 mL single-use vials

⚠ HIGH ALERT

letrozole (Rx)

(let'roe-zole)

Femara

Func. class.: Antineoplastic, nonsteroidal aromatase inhibitor

Do not confuse:
Femara/Femhrt

ACTION: Binds to the heme group of aromatase; inhibits conversion of androgens to estrogens to reduce plasma estrogen levels

USES: Early, advanced, or metastatic breast cancer in postmenopausal women who are hormone receptor positive

Unlabeled uses: Infertility, ovarian cancer, idiopathic short stature, constitutional delayed puberty

CONTRAINDICATIONS: Pregnancy, premenopausal females, hypersensitivity

Precautions: Respiratory/hepatic disease, osteoporosis

DOSAGE AND ROUTES

• **Adult: PO** 2.5 mg/day

Infertility (unlabeled)

• **Adult: PO** 2.5, 5, 7.5 mg/day × 5 days, usually days 3-7 of menstrual cycle

Idiopathic short stature, constitutional delayed puberty (unlabeled)

• **Adolescent and child ≥9 (male): PO** 2.5 mg/day; use with testosterone for delayed puberty

Available forms: Tabs 2.5 mg

Administer:

• Without regard to meals; with small glass of water

• May administer bisphosphonates to increase bone density

SIDE EFFECTS

CNS: *Headache, lethargy,* somnolence, dizziness, depression, anxiety

CV: Angina, MI, CVA, thromboembolic events, hypertension, peripheral edema

GI: *Nausea, vomiting, anorexia,* constipation, heartburn, diarrhea

GU: Endometrial cancer, vaginal bleeding, endometrial proliferation disorders

INTEG: *Rash, pruritus,* alopecia, sweating

MISC: Hot flashes, night sweats, second malignancies, anaphylaxis, angioedema, infections

MS: Arthralgia, arthritis, bone fracture, myalgia, osteoporosis

RESP: Dyspnea, cough

PHARMACOKINETICS

Metabolized in liver, excreted in urine, peak 2 days, terminal half-life 48 hr, steady state 2-6 wk

INTERACTIONS

Decrease: letrozole effect—estrogens, oral contraceptives

NURSING CONSIDERATIONS

Assess:

- **Pain:** Assess pain baseline and periodically
- Hepatic studies before, during therapy (bilirubin, AST, ALT, LDH) as needed or monthly
- Bone density studies, cholesterol/ lipid levels, pregnancy testing

Evaluate:

- Therapeutic response: decrease in size of tumor

Teach patient/family:

- To report allergic reactions (rash; hives; difficulty breathing; tightness in chest; swelling of mouth, face, lips, tongue)
- To report vaginal bleeding, diarrhea, chest/bone pain
- To use adequate contraception in perimenopausal, recently postmenopausal women, fetal risk
- To avoid driving or other hazardous activities until response is known, dizziness may occur

leucovorin (Rx)

(loo-koe-vor'in)

Func. class.: Vitamin, folic acid/ methotrexate antagonist antidote

Chem. class.: Tetrahydrofolic acid derivative

Do not confuse:

leucovorin/Leukeran/levoleucovorin

USES: Megaloblastic or macrocytic anemia caused by folic acid deficiency, overdose of folic acid antagonist, methotrexate/pyrimethamine/trimetrexate/ trimethoprim toxicity, pneumocystosis, toxoplasmosis

CONTRAINDICATIONS: Hypersensitivity to this product or folic acid, benzyl alcohol; anemias other than megaloblastic not associated with vit B_{12} deficiency

DOSAGE AND ROUTES

Methotrexate toxicity/leucovorin rescue

- **Adult/child: PO/IM/IV normal elimination** given 6 hr after dose of methotrexate (10 mg/m^2) until methotrexate $<5 \times 10^{-8}$ m, CCr >50% above prior level, or methotrexate level 5×10^{-8} m at 24 hr or $>9 \times 10^{-8}$ m at 48 hr; give leucovorin 100 mg/m^2 q3hr until level drops to $<10^{-8}$ m

Megaloblastic anemia caused by enzyme deficiency (folate)

- **Adult/child: IV/IM** 1 mg/day

Pyrimethamine/trimethoprim toxicity prevention

- **Adult/child: PO/IV/IM** 5-15 mg/day

Advanced colorectal cancer

- **Adult: IV** 200 mg/m^2, then 5-FU 370 mg/m^2 or leucovorin 20 mg/m^2, then 5-FU 425 mg/m^2; give daily × 5 days q4-5wk

L

⚠ HIGH ALERT

leuprolide (Rx)

(loo-proe'lide)

Camcevia, Eligard, Fensolvi, Lupron Depot, Lupron Depot-Ped, Lupron

Func. class.: Antineoplastic hormone

Chem. class.: Gonadotropin-releasing hormone

ACTION: Causes initial increase in circulating levels of LH, FSH; continuous administration results in decreased LH, FSH; in men, testosterone is reduced to castrate levels; in premenopausal women, estrogen is reduced to menopausal levels

USES: Metastatic prostate cancer (inj implant), management of endometriosis, central precocious puberty, uterine leiomyomata (fibroids)

Unlabeled uses: Breast cancer, hormone therapy for transgender females (male-to-female), paraphilia

CONTRAINDICATIONS:

Pregnancy, breastfeeding, hypersensitivity to GnRH or analogs, thromboembolic disorders, undiagnosed vaginal bleeding; Eligard should not be used in women, children

Precautions: Edema, hepatic disease, CVA, MI, seizures, hypertension, diabetes mellitus, HF, depression, osteoporosis, spinal cord compression, urinary tract obstruction

DOSAGE AND ROUTES

Advanced prostate cancer

• **Adult: SUBCUT** 1 mg/day; **IM** 7.5 mg/depot dose monthly; **IM** 22.5 mg depot q3mo; or **IM** 30 mg depot q4mo; or **IM** 45 mg depot q6mo; **SUBCUT** (Eligard) 7.5 mg monthly; **SUBCUT** 22.5 mg (Eligard) q3mo; **SUBCUT** 45 mg (Eligard) q mo every 6 months

Endometriosis

• **Adult: IM** 3.75 mg depot monthly for 6 mo or 11.25 mg q3mo for 6 mo or 30 mg q4mo

Anemia related to uterine fibroids

• **Adult: IM** 3.75 mg depot monthly × 3 mo or 11.25 mg depot as a single dose

Central precocious puberty

• **Child: SUBCUT** 50 mcg/kg/day; may increase by 10 mcg/kg/day as needed

• **Child >37.5 kg: IM** Lepron Depot-Ped 15 mg q4wk

• **Child 25-37.5 kg: IM** Lepron Depot-Ped 11.25 mg q4wk

• **Child ≤25 kg: IM** Lepron Depot-Ped 7.5 mg q4wk

Benign prostatic hyperplasia (BPH) (unlabeled)

• **Adult: SUBCUT** (sol for inj) 1 mg/day, **IM**(injection susp) 3.75 mg q28day × 24 wk

Available forms: Depot inj: 3.75, 7.5, 11.25, 15, 22.5, 30, 45 mg; Solution for Subcut Inj: 5 mg/mL (2.8-mL multidose vials); emulsion for injection 42 mg injection kit

Administer:

• Never give IV

• Store in tight container at room temperature

• **SUBCUT:** No dilution needed if patient self-administering; make sure patient is using syringes provided by manufacturer

• **SUBCUT Eligard** bring to room temperature, once mixed, give within 30 min, prepare the 2 syringes for mixing, join the 2 syringes together by pushing in and twisting until secure; mix the product by pushing the contents of both syringes back and forth between syringes until uniform; should be light tan to tan, draw entire mixed product into syringe B (short, wide syringe) by depressing the syringe A plunger and slightly withdrawing syringe B plunger, uncouple syringe A, while pushing down on syringe A plunger, small air bubbles will remain, hold syringe B upright, remove pink cap, attach needle cartridge to the end of syringe B, remove needle cover, give by subcut

IM route

• **Monthly:** reconstitute single-use vial with 1 mL of diluent; if multiple vials used, withdraw 0.5 mL, inject into each vial (1 mL); withdraw all, inject at 90-degree angle (3.75 mg)

• **3-mo:** reconstitute microspheres using 1.5 mL of diluent, inject into vial; shake, withdraw, inject

SIDE EFFECTS

CNS: Memory impairment, depression, seizures

CV: MI, PE, dysrhythmias, peripheral edema

GI: Nausea, vomiting, anorexia, diarrhea, GI bleeding

GU: Edema, hot flashes, impotence, decreased libido, amenorrhea, vaginal dryness, gynecomastia, profuse vaginal bleeding

INTEG: Alopecia

MS: Bone pain

RESP: Dyspnea, pulmonary fibrosis, interstitial lung disease

PHARMACOKINETICS

IM/SUBCUT: Peak 1-2 mo, duration 1-3 mo; absorbed rapidly (SUBCUT), slowly (IM depot); half-life 3 hr

INTERACTIONS

Increase: antineoplastic action—flutamide, megestrol

Increase: seizure risk—SSRIs

Drug/Herb

- Do not use with black cohosh or chaste tree fruit; may interfere with treatment

NURSING CONSIDERATIONS

Assess:

- **Prostate cancer:** increased bone pain for first 4 wk of treatment; those with metastases in spinal column may exhibit severe back pain
- **Symptoms of endometriosis** (lower abdominal pain)/fibroids (pelvic pain, excessive vaginal bleeding, bloating) before, during, after treatment
- **Central precocious puberty (CPP)** diagnosis should have been confirmed by secondary S_4 characteristics in children <9 yr, estradiol/testosterone levels, GnRH test, tomography of head, adrenal steroids, chorionic gonadotropin, wrist x-ray, height, weight
- Hepatic studies (bilirubin, AST, ALT, LDH) before, during therapy monthly, as needed; PSA, calcium, testosterone with prostate cancer; bone mineral density; blood glucose, HbA1c
- Pituitary gonadotropic and gonadal function during therapy and 4-8 wk after therapy is discontinued
- **QT prolongation (depot):** ECG in CV patients using depot route
- **Tumor flare:** worsening of signs and symptoms; normal during beginning therapy
- Fatigue, increased pulse, pallor, lethargy; edema in feet, joints; stomach pain
- **Severe allergic reaction:** rash, pruritus, urticaria, purpuric skin lesions, itching, flushing

Evaluate:

- Therapeutic response: decreased tumor size and spread of malignancy; decrease in lesions, pain with endometriosis, fibroids, correction of CPP; increased follicle maturation

Teach patient/family:

- To notify prescriber if menstruation continues; menstruation should stop
- That bone pain will disappear after 1 wk
- To report any complaints, side effects to nurse, prescriber; that hot flashes may occur; to record weight, report gain of >2 lb/day
- How to prepare, give; to rotate sites for SUBCUT/IM inj; to use only syringes provided by manufacturer; to store depot at room temperature, to refrigerate unopened vials, to protect all from heat
- To keep accurate records of dose
- **That tumor flare may occur:** increase in size of tumor, increased bone pain, will subside rapidly; may take analgesics for pain, usually in prostate cancer or central precocious puberty
- That ongoing treatment is needed in central precocious puberty
- That voiding problems may increase during beginning of therapy but will decrease in several weeks
- **Pregnancy:** to notify prescriber if pregnancy is planned or suspected; not to breastfeed; to use nonhormonal form of contraception (women of childbearing age)

levalbuterol (Rx)

(lev-al-byoo´ter-ole)

Xopenex, Xopenex HFA

Func. class.: Bronchodilator, adrenergic β_2-agonist

ACTION: Causes bronchodilation by action on β_2 (pulmonary) receptors by increasing levels of cAMP, which relaxes smooth muscle; produces bronchodilation, CNS, cardiac stimulation as well as increased diuresis and gastric acid secretion

USES: Treatment or prevention of bronchospasm (reversible obstructive airway disease), asthma

CONTRAINDICATIONS: Hypersensitivity to sympathomimetics, this product, albuterol

Precautions: Pregnancy, breastfeeding, hyperthyroidism, diabetes mellitus, hypertension, prostatic hypertrophy, angle-closure glaucoma, seizures, renal disease, QT prolongation, tachydysrhythmias, severe cardiac disease, hypokalemia, children

DOSAGE AND ROUTES

Prevention of Bronchospasm in reversible obstructive airway disease

- **Adult/child ≥12 yr: INH** 0.63 mg tid q6-8hr by nebulization, may increase 1.25 mg q8hr
- **Adult/adolescent/child >4 yr:** (HFA, metered dose) 90 mcg **(2INH)** q4-6hr
- **Child 6-11 yr: INH** 0.31 mg tid by nebulization, max 0.63 mg tid

Available forms: Sol, inh pediatric 0.31 mg/3 mL; 0.63 mg/3 mL; 1.25 mg/3 mL; 1.25 mg/0.5 mL; 45 mcg per actuation (HFA)

Administer:

- Every 6-8 hr; wait ≥1 min between inhalation of aerosols

Inhalation route

- Keep unopened until ready for use; after opening, use within 2 wk; protect from light, heat
- Shake well before use; use a spacer device; prime with 4 test sprays in new canister or when not used for >3 days

Nebulizer route

- Dilute concentrated (1.25 mg/0.5 mL) with normal sterile saline before use

SIDE EFFECTS

CNS: *Tremors, anxiety,* insomnia, *headache,* dizziness
CV: Tachycardia
EENT: Dry nose, irritation of nose and throat, rhinitis
GI: Diarrhea, dyspepsia
INTEG: Rash
META: *Hypokalemia, hyperglycemia*
MS: Muscle cramps
RESP: Cough, dyspnea, bronchospasm
MISC: Flu-like symptoms

PHARMACOKINETICS

Metabolized in the liver and tissues; crosses placenta, breast milk, blood-brain barrier; half-life 3.3-4 hr
INH sol: Onset 10-17 min, peak 1½ hr, duration 5-6 hr; **INH aerosol:** onset 4.5-10.2 min, peak 76-78 min, duration ≤6 hr

INTERACTIONS

Increase: hypokalemia—loop/thiazide diuretics
Increase: action of aerosol bronchodilators
Increase: levalbuterol action—tricyclics, MAOIs, other adrenergics; avoid use within 2 wk of MAOIs
Decrease: levalbuterol action—other β-blockers; severe bronchospasm may occur
Decrease: digoxin effect—digoxin
Drug/Herb
Increase: stimulation—black/green tea, coffee, cola nut, guarana, yerba maté

NURSING CONSIDERATIONS

Assess:

- **Respiratory function:** vital capacity, pulse oximetry, forced expiratory volume, ABGs, lung sounds, heart rate and rhythm (baseline); character of sputum: color, consistency, amount
- Cardiac status: palpitations, increase/decrease in B/P, dysrhythmias
- **For evidence of allergic reactions, paradoxic bronchospasm, anaphylaxis, angioedema;** if these occur, hold dose, notify prescriber at once; bronchospasm may occur with new canister or vial
- **Pregnancy/breastfeeding:** avoid use in pregnancy, do not breastfeed, reaction is unknown

Evaluate:

- Therapeutic response: absence of dyspnea, wheezing after 1 hr; improved airway exchange, ABGs/VBGs

Teach patient/family:

- Not to use OTC medications because excess stimulation may occur
- To avoid getting aerosol in eyes because blurring may result

• To avoid smoking, smoke-filled rooms, persons with respiratory infections
• That paradoxic bronchospasm may occur; to stop product immediately, contact prescriber
• To limit caffeine products such as chocolate, coffee, tea, colas, and herbs such as cola nut, guarana, yerba maté
• **Inhaler:** to shake well before using and to breathe normally while using and mist goes into reservoir; to spray 4 times before first use or if not used for 3 days; to wash at least weekly
• To use this product first if using other inhalers; to wait 5 min or more between products; to rinse mouth with water after each dose to prevent dry mouth
• **Diabetes:** that diabetes may be exacerbated; that medications for diabetes may need to be adjusted

TREATMENT OF OVERDOSE:
Administer a β_1-adrenergic blocker

levETIRAcetam (Rx)
(lev-eh-teer-ass′eh-tam)
Keppra, Keppra XR, Spritam
Func. class.: Anticonvulsant
Chem. class.: Pyrrolidine derivative

Do not confuse:
Keppra/Kaletra/Keflexlevetiracetam/lamotrigine/levocarnitine/levofloxacin
levETIRAcetam/lamotrigine/levocarnitine/levofloxacin

ACTION: Unknown; may inhibit nerve impulses by limiting influx of sodium ions across cell membrane in motor cortex

USES: Adjunctive therapy for partial-onset seizures, primary generalized tonic-clonic seizures, myoclonic seizures in juvenile patients

CONTRAINDICATIONS: Hypersensitivity, breastfeeding
Precautions: Pregnancy, children, geriatric patients, renal/cardiac disease, psychosis

DOSAGE AND ROUTES
Adjunctive treatment of partial-onset seizures
• **Adult/adolescent ≥16 yr: IV** 500 mg bid, may be titrated by 1000 mg/day q2wk, max 3000 mg/day in divided doses; **EXT REL** 1000 mg/day, may increase q2wk, max 3000 mg/day
• **Adolescent <16 yr/child: 1 mo to <6 mo** (immediate-release tablet, injection or oral solution): Initially, 7 mg/kg **IV/PO** bid; increase by 14 mg/kg/day in 2 divided doses q2wk to target dose of 42 mg/kg/day in 2 divided doses. For **PO,** use oral sol with weight of ≤20 kg
6 mo to <4 yr (immediate-release tablet, injection, or oral sol): Initially, 10 mg/kg **IV/PO** bid; increase by 20 mg/kg/day in 2 divided doses q2wk to target dose of 50 mg/kg/day in 2 divided doses as tolerated. For oral administration, use oral sol with weight of ≤20 kg
4 yr to <16 yr and 20-40 kg (immediate-release tablet): Initially, 250 mg **PO** bid; titration, increase by 500 mg/day in 2 divided doses q2wk to max 1500 mg/day in 2 divided doses
4 yr to <16 yr and >40 kg (immediate-release tablet): Initially, 500 mg **PO** bid; increase by 1000 mg/day q2wk in 2 divided doses to max 3000 mg/day in 2 divided doses
4 yr to <16 yr (oral sol): Initially, 10 mg/kg orally bid; increase by 20 mg/kg/day in 2 divided doses q2wk to target dose of 60 mg/kg/day in 2 divided doses as tolerated
Myoclonic seizures/tonic-clonic seizures/partial seizures
• **Adult/adolescent ≥16 yr: PO/IV** 500 mg bid, may increase by 1000 mg/day q2wk, max 3000 mg/day in 2 divided doses
Adjunctive treatment of partial onset seizures in those with epilepsy (Spritam)
• **Adult/child ≥4 yr and >40 kg: PO** 500 mg bid, may increase q2wk by 500 mg bid, max 1500 mg bid

Renal dose

• **Adult: PO** CCr 50-80 mL/min, 500-1000 mg q12hr or **EXT REL** 1000-2000 mg q24hr, max 2000 mg/day; CCr 30-49 mL/min, 250-750 mg q12hr or **EXT REL** 500-1500 mg q24hr, max 1500 mg/day; CCr <30 mL/min, 250-500 mg q12hr or **EXT REL** 500-1000 mg q24hr, max 1000 mg/day

Available forms: Tabs 250, 500, 750, 1000 mg; oral sol 100 mg/mL; sol for inj 100 mg/mL; ext rel tab 500, 750 mg; premixed solution 1000 mg/100 mL 0.75% NaCl, 1500 mg/100 mL, 500 mg/100 mL 0.82% NaCl; tabs for oral suspension (Spirtam) 250, 500, 750, 1000 mg

Administer:

PO route

• Extended-release product should not be used in dialysis patients

• Swallow tab whole; do not break, crush, or chew

• With food, milk to decrease GI symptoms (rare) if needed

• Store at room temperature (PO)

Child:

• <20 kg should be given oral solution; use calibrated device

Tabs for oral suspension (Spirtam)

• Give only whole tabs

• Peel foil from blister; do not push through foil

• Place on tongue and swallow with a sip of liquid; do not swallow whole

• Tab can be added to a tablespoon of liquid in a cup; swirl gently, consume

Intermittent IV INFUSION route

• Single-use vials: dilute in 100 mL of 0.9% NaCl, D_5W, LR; give over 15 min, discard unused vial contents, do not use product with particulates or discoloration

• **Child:** max concentration of product 15 mg/mL (diluted solution); infuse over 15 min

• Diluted preparation stable for 24 hr at room temperature in polyvinyl bags

• Store vials at room temperature

SIDE EFFECTS

CNS: Dizziness, somnolence, asthenia, psychosis, suicidal ideation, nonpsychotic behavioral symptoms, headache, ataxia

EENT: Diplopia, conjunctivitis

GI: Nausea, vomiting, anorexia, diarrhea, constipation, hepatitis

HEMA: Infection, leukopenia

INTEG: Pruritus, rash

MISC: Infection, abdominal pain, pharyngitis

SYST: Stevens-Johnson syndrome, toxic epidermal necrolysis; dehydration (child <4 yr)

PHARMACOKINETICS

Rapidly absorbed; not protein bound; excreted via kidneys 66% unchanged; half-life 6-8 hr, longer in geriatric patients or with renal disease

INTERACTIONS

Increase: sedation—TCAs, antihistamines, benzodiazepines, other CNS depressants, alcohol

• Possible increased carBAMazepine toxicity: carBAMazepine

Decrease: levETIRAcetam absorption—sevelamer; separate by 1 hr before, 3 hr after sevelamer

Drug/Lab Test

Decrease: Hct/HB, WBC, RBC

NURSING CONSIDERATIONS

Assess:

• **Seizures:** type, location, duration, character, intensity, precipitating factors; provide seizure precautions

• Renal studies: urinalysis, BUN, urine creatinine q3mo

• Blood studies: CBC, LFTs

• **Mental status:** mood, sensorium, affect, behavioral changes, **suicidal** thoughts/behaviors; if mental status changes, notify prescriber

• Assistance with ambulation during early part of treatment; dizziness occurs

• **Beers:** avoid in older adults unless safer alternative is unavailable; may cause ataxia, impaired psychomotor function

• **Pregnancy:** if used during pregnancy, patient should enroll in the Antiepileptic Drug Pregnancy Registry at 888-233-2334; do not breastfeed

Evaluate:

• Therapeutic response: decreased seizure activity; document on patient's chart

Teach patient/family:

• To take with or without food
• Not to crush, break, chew tablets
• To carry emergency ID stating patient's name, products taken, condition, prescriber's name, phone number
• How to use oral sol; if trouble swallowing, measure oral sol in medicine cup or dropper, do not use teaspoon
• To avoid driving, other activities that require alertness until response is known; drowsiness occurs during first month
• Not to discontinue medication quickly after long-term use because withdrawal seizure may occur
• To immediately report suicidal thoughts or behaviors, mood changes, hostility; thoughts of death, dying
• **Pregnancy/breastfeeding:** to notify prescriber if pregnant, intending to become pregnant; not to breastfeed, excreted in breast milk

levobetaxolol ophthalmic

See Appendix B

levobunolol (ophthalmic) (Rx)

(lee′voe-byoo′no-lahl)

Betagan

Func. class.: Antiglaucoma

Chem. class.: β-Blocker

ACTION: Can decrease aqueous humor and increase outflows

USES: Treatment of chronic open-angle glaucoma and ocular hypertension

CONTRAINDICATIONS: Hypersensitivity, AV block, heart failure, bradycardia, sick sinus syndrome, asthma

Precautions: Abrupt discontinuation, children, pregnancy, breastfeeding, COPD, depression, diabetes mellitus, myasthenia gravis, hyperthyroidism, pulmonary disease, sulfite sensitivity, angle-closure glaucoma

DOSAGE AND ROUTES

• **Adult:** Instill 1-2 drops in the affected eyes once a day (0.5% solution), bid (0.25% solution)

Available forms: Ophthalmic solution 0.25%, 0.5%

Administer:

• For ophthalmic use only
• To prevent contamination, do not touch the tip of the dropper to the eye, fingertips, or other surface
• Wash hands before and after use; tilt head back slightly and pull the lower eyelid down with the index finger to form a pouch; squeeze the prescribed number of drops into the pouch; close eyes to spread drops; to avoid excessive systemic absorption, apply finger pressure on the lacrimal sac for 1-2 min after use
• If more than one topical ophthalmic drug product is being used, the drugs should be administered at least 5 min apart
• To avoid contamination or the spread of infection, do not use dropper for more than one person
• Decreased intraocular pressure can take several weeks; monitor IOP after a month

SIDE EFFECTS

CNS: Insomnia, headache, dizziness
CV: Palpitations
EENT: Eye stinging/burning, tearing, photophobia
RESP: Bronchospasm

PHARMACOKINETICS

Onset 60 min, peak 2-6 hr, duration 24 hr

INTERACTIONS

Increase: β-blocking effect—oral β-blockers

Increase: intraocular pressure reduction—topical miotics, dipivefrin, EPINEPHrine, carbonic anhydrase inhibitors; this may be beneficial

Increase: depression of AV nodal conduction, bradycardia, or hypotension—adenosine, cardiac glycosides, disopyramide, other antiarrhythmics, class 1C antiarrhythmic drugs (flecainide, propafenone, moricizine, encainide, quiNIDine), or drugs that significantly depress AV nodal conduction

Increase: Antihypertensive effect—other antihypertensives

NURSING CONSIDERATIONS

Assess:

- **Systemic absorption:** when used in the eye, systemic absorption is common with the same adverse reactions and interactions
- **Glaucoma:** monitor intraocular pressure

Evaluate:

- Therapeutic response: decreasing intraocular pressure

Teach patient/family:

- That product is for ophthalmic use only
- Not to touch the tip of the dropper to the eye, fingertips, or other surface to prevent contamination
- To wash hands before and after use; tilt the head back slightly and pull the lower eyelid down with the index finger to form a pouch; squeeze the prescribed number of drops into the pouch; close eyes to spread drops; to avoid excessive systemic absorption by applying finger pressure on the lacrimal sac for 1-2 min following use
- That if more than one topical ophthalmic drug product is being used, the drugs should be administered at least 5 min apart
- To avoid contamination or the spread of infection by not using dropper for more than one person

levocabastine ophthalmic

See Appendix B

levocetirizine (Rx)

(lee-voh-se-teer′ah-zeen)

Children's Xyzal Allergy 24 HR, Xyzal Allergy 24 HR

Func. class.: Antihistamine, low sedating

Chem. class.: H_1 histamine blocker

ACTION: Acts on blood vessels, GI, respiratory system by competing with histamine for H_1-receptor site; decreases allergic response by blocking pharmacologic effects of histamine; minimal anticholinergic action

USES: Perennial or seasonal rhinitis, allergy symptoms, chronic idiopathic urticaria

CONTRAINDICATIONS: Breastfeeding; children 6-11 yr with renal disease; end-stage renal disease; dialysis; hypersensitivity to this product, cetirizine, hydrOXYzine

Precautions: Pregnancy, driving, renal disease

DOSAGE AND ROUTES

- **Adult and child ≥12 yr: PO** 2.5-5 mg/day in the evening
- **Child 6-11 yr: PO** (oral solution) 2.5 mg/day in the evening
- **Child 2-5 yr: PO** (oral solution) 1.25 mg/day in the evening
- **Geriatric: PO** 2.5-5 mg/day in the evening

Renal dose

• **Adult: PO** CCr 50-80 mL/min, 2.5 mg/day; CCr 30-49 mL/min, 2.5 mg every other day; CCr 10-29 mL/min, 2.5 mg 2×/wk; CCr <10 mL/min, do not use

Available forms: Tabs 5 mg; oral sol 2.5 mg/5 mL

Administer:

• Without regard to meals in the evening; tabs scored, may be broken in half

• Store in tight, light-resistant container

SIDE EFFECTS

CNS: *Drowsiness, fatigue,* asthenia, dizziness

GI: Dry mouth, increased LFTs, hepatitis

MISC: Urinary retention

PHARMACOKINETICS

Rapid absorption; peak 0.9 hr; protein binding 91%-92%; half-life 8 hr; excreted in urine 85.4%, feces 12.9%

INTERACTIONS

Increase: CNS depression—alcohol, other CNS depressants

Increase: anticholinergic/sedative effect—MAOIs, phenothiazines, tricyclics

Decrease: clearance of levocetirizine—ritonavir

Drug/Lab Test

False negative: skin allergy tests

NURSING CONSIDERATIONS

Assess:

• **Allergy symptoms:** pruritus, urticaria, watering eyes at baseline, during treatment

• **Respiratory status:** rate, rhythm, increase in bronchial secretions, wheezing, chest tightness

• Liver function tests, serum creatinine, BUN

• **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed, excreted in breast milk

Evaluate:

• Therapeutic response: absence of running or congested nose or rashes

Teach patient/family:

• About all aspects of product use; to notify prescriber if confusion, sedation, hypotension occur, not to exceed recommended dose

• To avoid driving, other hazardous activities if drowsiness occurs

• To avoid alcohol, other CNS depressants

• Do not breastfeed

levodopa-carbidopa (Rx)

(lee-voe-doe′pa-kar-bi-doe′pa)

Duopa, Sinemet, Rytary

Func. class.: Antiparkinson agent

Chem. class.: Catecholamine

ACTION: Decarboxylation of levodopa in periphery is inhibited by carbidopa; more levodopa is made available for transport to the brain and for conversion to DOPamine in the brain

USES: Parkinson's disease, parkinsonism resulting from carbon monoxide, chronic manganese intoxication, cerebral arteriosclerosis, motor fluctuations in those with advanced Parkinson's disease

Unlabeled uses: Restless legs syndrome

CONTRAINDICATIONS: Hypersensitivity, malignant melanoma, history of malignant melanoma or undiagnosed skin lesions resembling melanoma

Precautions: Pregnancy, breastfeeding, diabetes, closed-angle glaucoma, respiratory/cardiac/renal/hepatic disease, MI with dysrhythmias, seizures, peptic ulcer, depression

DOSAGE AND ROUTES

Parkinson's disease

• **Adult: PO (immediate-release tablets)** 1 carbidopa 25 mg/levodopa 100-mg tablet tid, may increase by 1 tablet daily or every other day, max 8 tablets/day **Maintenance:** At least 70-100 mg of carbidopa per day should be used

Converting patients from levodopa to carbidopa-levodopa

25% of the previous dose of levodopa; usual dosage is 1 carbidopa 50 mg/levodopa 200-mg ext-rel tablet bid

For the treatment of restless legs syndrome (RLS) (unlabeled)

• **Adult: PO** A bedtime dose starting at 25 mg/100 mg levodopa

Available forms: Tabs 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa; ext rel tab 25 mg carbidopa/100 mg levodopa, 50 mg carbidopa/200 mg levodopa (Sinemet CR); oral disintegrating tab 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa; ext rel caps (Rytary) 23.75 mg/95 mg, 36.25 mg/145 mg, 48.75 mg/195 mg, 61.25 mg/245 mg; enteral suspension (Duopa) 20 mg/mL levodopa/4.63 mg/mL carbidopa

Administer:

• Pyridoxine (B_6) not effective for reversing Sinemet

PO route

• Do not crush or chew **ext rel tabs;** they may be broken in half; adjust dosage to response

• **Oral disintegrating tab** by gently removing from bottle, placing on tongue and swallowing with saliva; after tab dissolves, liquid is not necessary

• With meals if GI symptoms occur; limit protein taken with product

• Only after nonselective MAOIs have been discontinued for 2 wk; if patient has been previously treated with levodopa, discontinue for at least 12 hr before change to carbidopa-levodopa

Enteral route

• Fully thaw in refrigerator; remove 1 cassette from refrigerator 20 min before use, give through NG tube or a percutaneous endoscopic gastrostomy jejunostomy tube connected to the CADD-Legacy pump; disconnect after use and flush with water; cassettes are single-use only, label in order to be used based on date

SIDE EFFECTS

CNS: *Involuntary choreiform movements, hand tremors, fatigue, headache, anxiety, twitching, numbness, weakness, confusion, agitation, insomnia, nightmares,* psychosis, hallucination, hypomania, severe depression, dizziness, impulsive behaviors, neuroleptic malignant syndrome, suicidal ideation

CV: *Orthostatic hypotension,* tachycardia, hypertension, palpitation, MI

EENT: Blurred vision, diplopia, dilated pupils

GI: *Nausea, vomiting, anorexia, abdominal distress, dry mouth, flatulence, dysphagia,* bitter taste, diarrhea, constipation, GI bleeding

HEMA: Hemolytic anemia, leukopenia, agranulocytosis, thrombocytopenia

INTEG: Rash, sweating, alopecia

MISC: Urinary retention, incontinence, weight change, dark urine, increased libido, hypersensitivity, dark sweat

PHARMACOKINETICS

PO: Onset 30 min, peak 1-3 hr, excreted in urine (metabolites)

EXT REL: Onset 4-6 hr

Enteral: Peak 2.5 hr

INTERACTIONS

Increase: hypertensive crisis—nonselective MAOIs

Increase: risk for sedation—CNS depressants

Increase: hypotension—antihypertensives

Increase: CV reactions—dobutamine, dopamine, epinephrine, isoproterenol, norepinephrine, TCAs

Increase: effects of levodopa—antacids, metoclopramide

Decrease: effects of levodopa—anticholinergics, hydantoins, papaverine, pyridoxine, benzodiazepines, antipsychotics

Drug/Lab Test

Increase: BUN, AST, ALT, bilirubin, alk phos, LDH, serum glucose

Decrease: BUN, creatinine, uric acid

False positive: urine ketones (dipstick), Coombs' test

False negative: urine glucose

False increase: urine protein

Drug/Food

Decrease: absorption of levodopa—protein

NURSING CONSIDERATIONS

Assess:

- **Parkinson's symptoms:** tremors, pill rolling, drooling, akinesia, rigidity; shuffling gait before, during treatment
- B/P, respiration; orthostatic B/P
- Mental status: affect, mood, behavioral changes, depression, complete suicide assessment
- **Toxicity:** muscle twitching, blepharospasm
- Renal, hepatic, hematopoietic tests; also for diabetes, acromegaly if on long-term therapy
- End-of-dose akinesia, on/off phenomenon; akinesia paradoxica
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; product is excreted in breast milk

Evaluate:

- Therapeutic response: decrease in akathisia/bradykinesis, tremor, rigidity, improved mood

Teach patient/family:

- To change positions slowly to prevent orthostatic hypotension, especially during beginning of treatment
- That falling asleep when engaged in activities may occur
- To report side effects: twitching, eye spasms because these indicate overdose
- To use product as prescribed; not to double doses; if discontinued abruptly, parkinsonian crisis, neuroleptic malignant syndrome (NMS) may occur; to gradually taper
- To use ODT immediately after removing from container, to dissolve on tongue, swallow with saliva
- That urine, sweat may darken
- To use physical activities to maintain mobility, lessen spasms
- To use with meals to decrease GI upset; do not use high-protein meals
- That improvement may not occur for 2-4 mo; about "on-off phenomenon"
- Not to chew or crush extended-release product
- To immediately report nausea, vomiting, abdominal pain, ongoing constipation if using enteral product

levodopa-carbidopa-entacapone (Rx)

(lee-voe-doe′pa-kar-bi-doe′pa-en-ta′ka-pone)

Stalevo

Func. class.: Antiparkinson agent

Chem. class.: COMT inhibitor/decarboxylase inhibitor/dopamine precursor

ACTION

Levodopa: The precursor of dopamine, a chemical depleted in Parkinson disease. Levodopa is able to circulate in the plasma and cross the blood–brain barrier, converted by striatal enzymes to dopamine

Carbidopa: Inhibits the peripheral plasma breakdown of levodopa by inhibiting its decarboxylation; increases available levodopa at the blood–brain barrier

Entacapone: A reversible and selective inhibitor of catechol-O-methyltransferase (COMT). Alters the pharmacokinetics of levodopa, resulting in more sustained levodopa serum levels and increased concentrations available for absorption across the blood–brain barrier

USES: Parkinson disease

CONTRAINDICATIONS: Hypersensitivity, malignant melanoma, history of malignant melanoma or undiagnosed skin lesions resembling melanoma

Precautions: Pregnancy, breastfeeding, diabetes, closed-angle glaucoma, respiratory/cardiac/renal/hepatic disease, MI with dysrhythmias, seizures, peptic ulcer, depression

DOSAGE AND ROUTES

Adult: PO max daily dose: 8 tablets of Stalevo 50, 75, 100, 125, or 150, or 6 tablets of Stalevo 200, those receiving <70 to 100 mg of the carbidopa component may experience nausea and vomiting; **those previously treated with**

carbidopa/levodopa immediate-release tablets (ratio of 1:4): with current entacapone therapy: May switch directly to corresponding strength of combination tablet; **without entacapone therapy:** If current levodopa dose is >600 mg daily or history of moderate or severe dyskinesias: levodopa dose reduction may be required when adding entacapone to therapy; titrate dose using individual products, first carbidopa/levodopa immediate release with a ratio of 1:4 plus entacapone 200 mg; then transfer to combination product once stabilized; if current levodopa dose is <600 mg and without a history of dyskinesias: May transfer to corresponding dose of combination product

Available forms: Tablets 50, 75, 100, 125, 150, 200 mg

Administer:

- Administer whole; do not cut, break, or crush
- Avoid giving with a high-fat meal

SIDE EFFECTS

CNS: Involuntary choreiform movements, hand tremors, fatigue, headache, anxiety, twitching, numbness, weakness, confusion, agitation, insomnia, nightmares, psychosis, hallucination, hypomania, severe depression, dizziness, impulsive behaviors, neuroleptic malignant syndrome, suicidal ideation

CV: Orthostatic hypotension, tachycardia, hypertension, palpitation, MI

EENT: Blurred vision, diplopia, dilated pupils

GI: Nausea, vomiting, anorexia, abdominal distress, dry mouth, flatulence, dysphagia, bitter taste, diarrhea, constipation, GI bleeding

HEMA: Hemolytic anemia, leukopenia, agranulocytosis, thrombocytopenia

INTEG: Rash, sweating, alopecia

MISC: Urinary retention, incontinence, weight change, dark urine, increased libido, hypersensitivity, dark sweat

PHARMACOKINETICS

PO: Onset unknown, peak 1-3 hr, duration unknown

Interactions

Increase: hypertensive crisis—nonselective MAOIs

Increase: risk for sedation—CNS depressants

Increase: hypotension—antihypertensives

Increase: CV reactions—dobutamine, dopamine, epinephrine, isoproterenol, norepinephrine, TCAs

Increase: effects of levodopa—antacids, metoclopramide

Decrease: effects of levodopa—anticholinergics, hydantoins, papaverine, pyridoxine, benzodiazepines, antipsychotics

Drug/Lab Test

Increase: BUN, AST, ALT, bilirubin, alk phos, LDH, serum glucose

Decrease: BUN, creatinine, uric acid

False positive: urine ketones (dipstick), Coombs' test

False negative: urine glucose

False increase: urine protein

Drug/Food

Decrease: absorption of levodopa—protein

NURSING CONSIDERATIONS

Assess:

- **Parkinson symptoms:** tremors, pill rolling, drooling, akinesia, rigidity; shuffling gait before, during treatment
- B/P, respiration; orthostatic B/P
- **Mental status:** affect, mood, behavioral changes, depression, complete suicide assessment
- Toxicity: muscle twitching, blepharospasm
- Renal, hepatic, hematopoietic tests; also for diabetes, acromegaly if on long-term therapy
- End-of-dose akinesia; on/off phenomenon, akinesia paradoxica
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; product is excreted in breast milk

Evaluate:

- Therapeutic response: decrease in akathisia/bradykinesis, tremor, rigidity, improved mood

Teach patient/family:

• To change positions slowly to prevent orthostatic hypotension, especially during beginning of treatment
• To report side effects: twitching, eye spasms because these indicate overdose
• That falling asleep when engaged in activities may occur
• To use product as prescribed; not to double doses; if discontinued abruptly, parkinsonian crisis, neuroleptic malignant syndrome (NMS) may occur; to gradually taper
• That urine, sweat may darken
• To use physical activities to maintain mobility, lessen spasms
• To use with meals to decrease GI upset; do not use high-protein meals, distribute protein throughout the day

levofloxacin (Rx)

(lee-voh-floks'a-sin)
Func. class.: Antiinfective
Chem. class.: Fluoroquinolone

Do not confuse:
levofloxacin/levetiracetam

ACTION: Interferes with conversion of intermediate DNA fragments into high-molecular-weight DNA in bacteria; DNA gyrase inhibitor; inhibits topoisomerase IV

USES: Acute sinusitis, acute chronic bronchitis, community-acquired pneumonia, uncomplicated skin infections, UTI, cellulitis, prostatitis, inhalational anthrax (postexposure); acute pyelonephritis caused by *Streptococcus pneumoniae, Streptococcus pyogenes, Haemophilus influenzae, Haemophilus parainfluenzae, Moraxella catarrhalis, Escherichia coli, Serratia marcescens, Klebsiella pneumoniae, Chlamydia pneumoniae, Legionella pneumophila, Mycoplasma pneumoniae, Enterococcus faecalis, Staphylococcus epidermidis, Staphylococcus pyogenes, Staphylococcus aureus, Bacillus anthracis;* inhalation anthrax in children

Unlabeled uses: Adnexitis, Bartholin abscess, bartholinitis, cervicitis, epididymitis, gastroenteritis, *H. pylori* eradication, mastitis, MAC, nongonococcal urethritis, obstetric infections, PID, plague, SARS, shigellosis, TB, typhoid fever, disseminated; otitis media, otitis externa, tonsillitis, pharyngitis, sialadenitis

CONTRAINDICATIONS: Hypersensitivity to quinolones
Precautions: Pregnancy, breastfeeding, children, photosensitivity, acute MI, atrial fibrillation, colitis, dehydration, diabetes, QT prolongation, myasthenia gravis, renal disease, seizure disorder, syphilis

Black Box Warning: Tendon pain/rupture, tendinitis, myasthenia gravis, neurotoxicity, peripheral neuropathy, psychiatric events

L

DOSAGE AND ROUTES

Most infections
• **Adult: PO/IV** 250-750 mg q24hr
Inhalational anthrax postexposure
• **Adult: PO/IV** 500 mg daily × 60 days
• **Child >50 kg: PO/IV** 500 mg daily × 60 days
• **Child <50 kg, ≥6 mo: PO/IV** 8 mg/kg q12hr × 60 days, max 250 mg/dose
Plague
• **Adult: PO/IV** 500 mg q24hr × 10-14 days
• **Child >50 kg: PO/IV** 500 mg daily × 10-14 days
• **Child <50 kg ≥6 mo: PO/IV** 8 mg/kg q12hr × 10-14 days, max 250 mg/dose
Renal disease
• **Adult: PO/IV CCr 20-49 mL/min** for 750-mg doses, give 750 mg q48hr; for 500-mg doses, give 500 mg once, then 250 mg q24hr; for 250-mg doses, no adjustment; **CCr 10-19 mL/min** for 750-mg dose, give 750-mg once, then 500 mg q48hr; for 500-mg dose, give 500 mg once, then 250 mg q48hr; for 250-mg dose, give 250 mg q48hr, except when treating complicated UTI, then no dose adjustment; CCr <10 mL/min for 750 mg, give 500 mg, then 500 mg q2days, if 500

mg, give 500 mg, then 250 mg q2days, if 250 mg then 250 mg q2days

Available forms: Single-use vials 500, 750 mg; premixed flexible containers 250 mg/50 mL D_5W, 500 mg/100 mL D_5W, 750 mg/150 mL D_5W; tabs 250, 500, 750 mg; oral sol 25 mg/mL; ophthalmic solution 0.5%

Administer:

- Obtain C&S before treatment and periodically to determine resistance to product, treatment can start before results are obtained
- PO 2 hr before or after antacids, iron, calcium, zinc, sucralfate; give fluids
- **Oral solution:** Give 1 hr before or 2 hr after food

Intermittent IV INFUSION route

- Discard any unused sol in single-dose vial
- Visually inspect for particulate matter/discoloration before use
- Do not give by rapid or bolus IV, only slow infusion ≥60 min 250-, 500-mg dose, ≥90 min 750-mg dose
- Do not use flexible containers in series connections, could result in air embolism
- Do not admix with levofloxacin in 5% dextrose injections or infused through the same IV line; if the same line is used for additional infusions of multiple drugs, flush prior to and after use

IV (single-use vial)

- **500-mg/20-mL vials:** To prepare a dose of 500 mg, withdraw 20 mL from a 20-mL vial and dilute with a compatible IV solution (D_5W, NS) to a total volume of 50 mL; to prepare a 500-mg dosage, withdraw all 20 mL from the vial and dilute with a compatible intravenous solution to a total volume of 100 mL
- **750-mg/30-mL vials:** To prepare a dose of 750 mg, withdraw 30 mL from a 30-mL vial and dilute with a compatible intravenous solution (D_5W, NS) to a total volume of 150 mL
- The concentration of the diluted solution should be 5 mg/mL before administration; solutions contain no preservatives; any unused portions must be discarded
- **Storage:** The diluted solution may be stored for up to 72 hr at room temperature or 14 days refrigerated; solutions may be frozen for up to 6 mo

Premixed IV solution

- No dilution is necessary

Ophthalmic

- Do not share with others
- Do not touch tip to eye

SIDE EFFECTS

CNS: *Headache,* dizziness, *insomnia,* anxiety, seizures, *encephalopathy,* paresthesia, pseudotumor cerebri

CV: Chest pain, palpitations, vasodilation, QT prolongation, hypotension (rapid infusion)

EENT: Dry mouth, visual impairment, tinnitus

GI: *Nausea,* flatulence, *vomiting,* diarrhea, abdominal pain, CDAD, hepatotoxicity, esophagitis, pancreatitis

GU: Vaginitis, crystalluria

HEMA: Eosinophilia, hemolytic anemia, lymphopenia

INTEG: Rash, pruritus, *photosensitivity,* epidermal necrolysis, injection-site reaction, edema

MISC: Hypoglycemia, hypersensitivity, tendinitis, tendon rupture, rhabdomyolysis

RESP: Pneumonitis

SYST: Anaphylaxis, multisystem organ failure, Stevens-Johnson syndrome, angioedema, toxic epidermal necrolysis

PHARMACOKINETICS

Excreted in urine unchanged, half-life 6-8 hr, peak 1-2 hr

INTERACTIONS

Black Box Warning: Increase: tendon rupture—corticosteroids; assess for tendon pain

- Do not use with magnesium in same IV line

Increase: QT prolongation—products causing a QT prolongation; avoid concurrent use

Increase: levofloxacin levels—probenecid
Increase: CNS stimulation, seizures—NSAIDs, foscarnet, cycloSPORINE
Increase: bleeding risk—warfarin; monitor INR/PT
Decrease: levofloxacin absorption—antacids containing aluminum, magnesium; sucralfate, zinc, iron, calcium; give 2 hr before or after products
Decrease: clearance of theophylline; toxicity may result; monitor theophylline level

Drug/Herb
Increase: photosensitivity—St. John's wort

Drug/Lab Test
Increase: PT, INR
Decrease: glucose, lymphocytes

NURSING CONSIDERATIONS

Assess:
• Previous sensitivity reaction to quinolones
• **Signs, symptoms of infection:** characteristics of sputum, WBC >10,000/mm^3, fever; obtain baseline information before, during treatment
• C&S before beginning product therapy to identify if correct treatment initiated
• **Allergic reactions, anaphylaxis:** rash, urticaria, pruritus, chills, fever, joint pain; may occur a few days after therapy begins; EPINEPHrine and resuscitation equipment should be available for anaphylactic reaction
• **CDAD:** bowel pattern daily; if severe diarrhea, fever occur, product should be discontinued; assess for signs/symptoms of CDAD daily, diarrhea, abdominal pain/cramping, blood/pus in stool, fever
• **Overgrowth of infection:** perineal itching, fever, malaise, redness, pain, swelling, drainage, rash, diarrhea, change in cough, sputum
• Renal function (BUN/creatinine) increase fluid to 2 L/day to prevent crystalluria
• **Peripheral neuropathy:** tingling, pain, numbness, burning in extremities, can be permanent
• **Retinal detachment:** may occur up to 1 yr after last dose of oral treatment

Black Box Warning: Tendon rupture: discontinue product at first sign of tendon pain or inflammation, usually the Achilles tendon is affected; can occur up to a few months after treatment and may require surgical repair; risk is increased in elderly patients, transplant patients, or with use of steroids

Black Box Warning: Myasthenia gravis: do not use this product with this disease; may lead to life-threatening weakness of the respiratory muscles

Black Box Warning: Neurotoxicity: may occur within hours to weeks after starting use; may be irreversible; avoid use in those who have experienced peripheral neuropathy (numbness, tingling, burning in extremities); report to prescriber immediately

• Increased fluid intake to 2 L/day to prevent crystalluria
• **Seizures:** use with caution in those with CNS disorder
• **Hepatotoxicity:** acute hepatitis, liver failure has occurred; LFTs baseline and periodically
• **Pregnancy/breastfeeding:** avoid use in pregnancy; do not use in breastfeeding

Evaluate:
• Therapeutic response: absence of signs, symptoms of infection (WBC <10,000/mm^3, temperature WNL)

Teach patient/family:
• **Superinfection:** To contact prescriber if vaginal itching; loose, foul-smelling stools; furry tongue occur (may indicate superinfection); to report itching, rash, pruritus, urticaria, change in heartbeat
• **CDAD:** To notify prescriber of diarrhea with blood or purulent discharge in stool
• To take product 2 hr before or after antacids, iron, calcium, zinc products
• To complete full course of therapy, not to skip or double doses
• To avoid driving or other hazardous activities until response is known, dizziness may occur
• To use frequent rinsing of mouth, sugarless candy, or gum for dry mouth
• To avoid other medication unless approved by prescriber

• To prevent sun exposure or to use sunscreen to prevent photosensitivity
• To monitor glucose (diabetes); to notify prescriber of changes
• Not to use contact lenses if using ophthalmic product

Black Box Warning: To notify prescriber of tendon pain, inflammation; to avoid corticosteroids with this product

• **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected or if breastfeeding

levofloxacin ophthalmic

See Appendix B

levomilnacipran (Rx)

[lee′voe-mil-na′si-pran]

Fetzima, Fetzima Titration

milnacipran (Rx)

(mil-na′si-pran)

Savella, Savella Titration Pack

Func. class.: Antidepressant

Chem. class.: Serotonin-norepinephrine reuptake inhibitor (SNRI)

Do not confuse:
Fetzima/Farxiga

ACTION: May potentiate serotonergic, adrenergic activity in the CNS; is a potent inhibitor of adrenal serotonin and norepinephrine reuptake

USES: Major depressive disorder in adults

CONTRAINDICATIONS: Hypersensitivity, MAOI therapy

Precautions: Pregnancy, breastfeeding, geriatric patients, mania, hypertension, renal/cardiac disease, seizures, increased intraocular pressure, anorexia, bleeding, dehydration, diabetes, hypotension, hypovolemia, orthostatic hypotension, abrupt product withdrawal, alcohol intoxication, alcoholism, closed-angle glaucoma

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

Major depressive disorder (levomilnacipran)

• **Adult: PO** 20 mg/day × 2 days, then 40 mg/day; may increase in increments of 40 mg at intervals of at least 2 days, max 120 mg/day; max 80 mg/day (strong CYP3A4 inhibitors therapy)

Major depressive disorder (milnacipran)

• **Adult: PO** 12.5-25 mg bid, may titrate to 100 mg bid, max 200 mg/day

Fibromyalgia (levomilnacipran)

• **Adult: PO** 12.5 mg daily, increase to 12.5 mg bid on days 2 and 3, then 25 mg bid on days 4 to 7; increase to 50 mg bid after day 7; may increase to 100 mg bid as needed

Fibromyalgia (milnacipran)

• **Adult/adolescent ≥17 yr: PO** 12.5 mg once on day 1, then 12.5 mg bid on days 2-3, then 25 mg bid on days 4-7, and 50 mg bid thereafter

Renal dose (levomilnacipran)

• **Adult: PO** CCr 15-29 mL/min, max 40 mg/day; CCr 30-59 mL/min, max 80 mg/day; CCr <15 mL/min, do not use

Renal dose (milnacipran)

• **Adult: PO** CCr 5-29 mL/min, reduce maintenance dose by 50% (25-50 mg bid)

Available forms: Ext rel caps 20, 40, 80, 120 mg (levomilnacipran); tabs 12.5, 25, 50, 100 mg (milnacipran)

Administer:

• Swallow cap whole; do not break, crush, or chew; do not sprinkle on food or mix with liquid
• Without regard to food
• Give at the same time each day

SIDE EFFECTS

CNS: Dizziness, agitation, hallucinations, seizures, drowsiness, mania, migraine, paresthesias, suicidal ideation, syncope

CV: Hypertension, palpitations, dysrhythmia, sinus tachycardia

EENT: Teeth grinding, blurred vision

GI: Constipation, diarrhea, nausea, vomiting, anorexia, dry mouth, abdominal pain

GU: Urinary retention
SYST: Serotonin syndrome, Stevens-Johnson syndrome

PHARMACOKINETICS

Peak 6-8 hr metabolized (CYP2D6) in the liver; excretion 58% (urine), 22% protein binding, half-life 12 hr (levomilnacipran) 6-10 hr (milnacipran)

INTERACTIONS

- Do not use with linezolid or methylene blue IV, or within 14 days of MAOIs
- **Increase:** levomilnacipran effect—CYP34A inhibitors

Increase: serotonin syndrome—SSRIs, serotonin receptor agonists, SNRIs, lithium
Increase: bleeding risk—anticoagulants, antiplatelets, salicylates, NSAIDs
Increase: risk of neuroleptic malignant syndrome—antipsychotics, DOPamine antagonists; avoid concurrent use
Increase: bleeding risk—alfalfa, feverfew, dong quai, fish oil, ginseng, garlic, ginkgo biloba

Drug/Herb

- **Serotonin syndrome:** St. John's wort

Increase: CNS depression—kava, valerian

NURSING CONSIDERATIONS

Assess:

- **Neuroleptic malignant syndrome:** hyperthermia, rigidity, rapid fluctuations of vital signs, mental status changes; MAOIs: coadministration contraindicated within 14 days of MAOI

Black Box Warning: Depression: mood, sensorium, affect, suicidal tendencies, increase in psychiatric symptoms; panic; monitor children weekly face to face during first 4 wk, or dosage change, then every other week for the next 4 wk, then at 12 wk

- B/P lying, standing; pulse; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; take VS more often in patients with CV disease
- **Hepatic studies:** AST, ALT, bilirubin baseline and periodically
- **Withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness; not common unless product is discontinued abruptly
- Avoid alcohol, rapid absorption may occur

Black Box Warning: Serotonin syndrome: nausea, vomiting, dizziness, facial flush, shivering, sweating

- **Beers:** use with caution in older adults; may exacerbate or cause SIADH; monitor for hyponatremia
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; SSRIs should not be used; do not use in 3rd trimester; do not breastfeed

Evaluate:

- Therapeutic response: decreased depression

Teach patient/family:

- About signs and symptoms of bleeding (GI bleeding, nosebleed, ecchymosis, bruising)
- To use with caution when driving and performing other activities requiring alertness because of drowsiness and blurred vision
- To avoid ingestion of alcohol, MAOIs, other CNS depressants; not to use within 14 days of MAOIs; to notify all providers of use of this product
- Not to discontinue medication quickly after long-term use; may cause headache, malaise; taper
- That product may be used with or without food
- To swallow caps whole; do not break, crush, chew

Black Box Warning: That clinical worsening and suicidal risk may occur, usually worse in first few months of treatment; to notify prescriber immediately if suicidal thoughts/behaviors, aggression, hostility, agitation, panic attacks occur

- That improvement may occur in 4-8 wk or up to 12 wk (geriatric patients)
- To report trouble with urination

- **Serotonin syndrome:** to report immediately nausea, vomiting, dizziness, facial flush, shivering, sweating
- **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected or if breastfeeding

levothyroxine (T_4) (Rx) (nti)

(lee-voe-thye-rox´een)

Eltroxin, Euthyrox, Levoxyl, Synthroid, Tirosint, Tirosint-SOL, Unithroid

Func. class.: Thyroid hormone

Chem. class.: Levoisomer of thyroxine

Do not confuse:
Synthroid/Symmetrel
levothyroxine/lamotrigine/Lanoxin/liothyronine/Loxitane

ACTION: Increases metabolic rate; controls protein synthesis; increases cardiac output, renal blood flow, O_2 consumption, body temperature, blood volume, growth, development at cellular level via action on thyroid hormone receptors

USES: Hypothyroidism, myxedema coma, thyroid hormone replacement, thyrotoxicosis, congenital hypothyroidism, some types of thyroid cancer, pituitary TSH suppression

CONTRAINDICATIONS: Adrenal insufficiency, recent MI, thyrotoxicosis, hypersensitivity to beef, alcohol intolerance (inj only)

Black Box Warning: Obesity treatment

Precautions: Pregnancy, breastfeeding, geriatric patients, angina pectoris, hypertension, ischemia, cardiac disease, diabetes

DOSAGE AND ROUTES

Hypothyroidism

- **Adult ≤50 yr: PO** 1.6 mcg/kg/day, 6-8 wk, average dose 100-200 mcg/day; **IM/IV** 50-100 mcg/day as single dose or 50% of usual oral dosage
- **Adult >50 yr without heart disease or <50 yr with heart disease: PO** 25-50 mcg/day, titrate q6-8wk
- **Adult >50 yr with heart disease: PO** 12.5-25 mcg/day, titrate by 12.5-25 mcg q6-8wk
- **Child (puberty complete): PO** 1.7 mcg/kg/day
- **Child >12 yr (incomplete puberty): PO** 2-3 mcg/kg/day as single dose in AM
- **Child 6-12 yr: PO** 4-5 mcg/kg/day as single dose in AM
- **Child 1-5 yr: PO** 5-6 mcg/kg/day as single dose in AM
- **Child 6-12 mo: PO** 6-8 mcg/kg/day as single dose in AM
- **Child 3-6 mo: PO** 8-10 mcg/kg/day as single dose in AM
- **Infant/neonate to age 3 mo: PO** 10-15 mcg/kg/day; use in lower dose in those at risk for cardiac failure; may increase q4-6wk if needed

Myxedema coma

- **Adult: IV** 300-500 mcg initially, may increase by 100-300 mcg after 24 hr; give oral medication as soon as possible

Subclinical hypothyroidism

- **Adult: PO** 1 mcg/kg/day

Available forms: Powder for inj 100, 200, 500 mcg/vial; tabs 25, 50, 88, 100, 112, 125, 137, 150, 175, 200, 300 mcg; cap (liquid filled) 13, 25, 50, 75, 88, 100, 112, 125, 137, 150 mcg

Administer:

- Store in tight, light-resistant container; sol should be discarded if not used immediately
- Withdrawal of medication 4 wk before RAIU test

PO route

- In AM if possible as single dose to decrease sleeplessness; at same time each day to maintain product level; take on empty stomach
- Only for hormone imbalances; not to be used for obesity, male infertility, menstrual conditions, lethargy
- Use 8 oz of water on empty stomach

• Lowest dose that relieves symptoms; lower dose to geriatric patients and for those with cardiac diseases
• Crush and mix with water, nonsoy formula (decreased absorption), or breast milk for infants, children; give by spoon or dropper; may crush and sprinkle over applesauce or other food
• Separate antacids, iron, calcium products by 4 hr

Direct IV route

• IV after reconstituting with 5 mL normal saline injection (500 mcg/5 mL, 200 mcg/2 mL); shake; give through Y-tube or 3-way stopcock; give ≤100 mcg/1 min; do not add to IV infusion
• Considered to be incompatible in syringe with all other products

SIDE EFFECTS

CNS: *Anxiety, insomnia, tremors,* headache, thyroid storm, excitability
CV: *Tachycardia, palpitations, angina, dysrhythmias,* hypertension, cardiac arrest
GI: Nausea, diarrhea, increased or decreased appetite, cramps
MISC: Menstrual irregularities, weight loss, sweating, heat intolerance, fever, alopecia, decreased bone mineral density

PHARMACOKINETICS

Half-life euthyroid 6-7 days, hypothyroid 9-10 days, hyperthyroid 3-4 days, distributed throughout body tissues, protein binding 99%
PO: Onset 24 hr
IV: Onset 6-8 hr

INTERACTIONS

Increase: levothyroxine need—SSRIs, antiepileptics (carbamazepine, oxcarbazepine, phenobarbital, primidone, phenytoin), antimicrobials (rifampin, efavirenz, rifabutin, rifapentine); monitor levels of levothyroxine
Increase or Decrease: glucose levels—insulin, antidiabetics; monitor blood glucose, adjust levels
Increase: cardiac insufficiency risk—EPINEPHrine products
Increase: effects of both products—tricyclics, tetracyclics
Increase: effects of anticoagulants, sympathomimetics, tricyclics; monitor PT, INR if using with anticoagulants
Decrease: levothyroxine absorption—bile acid sequestrants, orlistat, ferrous sulfate
Decrease: levothyroxine effect—estrogens, antacids, sucralfate, aluminum, magnesium, calcium, iron, rifampin, rifabutin

Drug/Herb

Decrease: thyroid hormone effect—soy, horseradish

Drug/Lab Test

Increase: blood glucose
Decrease: thyroid function tests

Drug/Food

Decrease: product absorption—fiber, walnuts; avoid concurrent use or adjust dose

NURSING CONSIDERATIONS

Assess:

• B/P, pulse periodically during treatment
• Weight daily in same clothing, using same scale, at same time of day
• Height, growth rate of child
• Patient may require decreased anticoagulant; check for bleeding, bruising
• Cardiac status: angina, palpitation, chest pain, change in VS
• **CAD:** monitor for coronary insufficiency; also watch for cardiac changes in those receiving high, rapid dosing
• **Bone density:** test bone density baseline and periodically; bone loss may occur with long-term therapy
• **Pregnancy/breastfeeding:** may be used in pregnancy and breastfeeding

Hypothyroidism:

• T_3, T_4, FTIs, which are decreased; radiommunoassay of TSH, which is increased; radio uptake, which is increased if patient is receiving too low a dose of medication
• Increased nervousness, excitability, irritability, which may indicate too high a dose of medication, usually after 1-3 wk of treatment

Evaluate:
• Therapeutic response: absence of depression; increased weight loss, diuresis, pulse, appetite; absence of constipation, peripheral edema, cold intolerance; pale, cool, dry skin; brittle nails, alopecia, coarse hair, menorrhagia, night blindness, paresthesias, syncope, stupor, coma, rosy cheeks

Teach patient/family:
• That hair loss will occur in child, is temporary; that hypothyroid child will show almost immediate behavior/personality change
• To report excitability, irritability, anxiety, which indicate overdose
• Not to switch brands unless approved by prescriber; to protect from light, moisture

Black Box Warning: That product is not to be taken to reduce weight

• To avoid OTC preparations with iodine; to read labels; to separate antacids, iron, calcium products by 4 hr
• To take in AM on empty stomach, at least 30 min before food
• To avoid iodine-rich food, iodized salt, soybeans, tofu, turnips, high-iodine seafood, some bread products
• That product is not a cure but controls symptoms; that treatment is lifelong, full effect may take up to 6 wk
• That all products are not interchangeable
• **Pregnancy/breastfeeding:** to continue using during pregnancy, breastfeeding
• **Anticoagulants:** to have anticoagulant level monitored, dose adjusted as needed

⚠ HIGH ALERT

lidocaine (parenteral) (Rx)

(lye′doe-kane)

LidoPen Auto-Injector, Xylocaine, Xylocard

Func. class.: Antidysrhythmic (Class Ib)
Chem. class.: Aminoacyl amide

ACTION: Increases electrical stimulation threshold of ventricle, His-Purkinje system, which stabilizes cardiac membrane, decreases automaticity

USES: Ventricular tachycardia, ventricular dysrhythmias during cardiac surgery, digoxin toxicity, cardiac catheterization
Unlabeled uses: Attenuation of intracranial pressure increased during intubation/endotracheal tube suctioning

CONTRAINDICATIONS: Hypersensitivity to amides, severe heart block, supraventricular dysrhythmias, Adams-Stokes syndrome, Wolff-Parkinson-White syndrome
Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal/hepatic disease, HF, respiratory depression, malignant hyperthermia, myasthenia gravis, weight <50 kg

DOSAGE AND ROUTES

Ventricular arrhythmias caused by MI, cardiac manipulation/ glycosides
• **Adult: IV BOL** 50-100 mg (1-1.5 mg/kg) 25-50 mg/min, repeat q5min until arrhythmias are controlled, max 300 mg in 1 hr; begin **IV INFUSION; IV INFUSION** 1-4 mg/min (20-50 mcg/kg/min)
• **Child: IV/INTRAOSSEUS BOL** 1 mg/kg; start infusion at 30 mcg/kg/min

Renal/hepatic dose with heart failure
• **Adult <50 kg: IV** reduce dose

Available forms: IV INFUSION 0.2% (2 mg/mL), 0.4% (4 mg/mL), 0.8% (8 mg/mL); **IV** 4% (40 mg/mL), 10% (100 mg/mL), 20% (200 mg/mL); **IV dir** 1% (10 mg/mL), 2% (20 mg/mL); **Inj** (to IV admix) 20% (200 mg/mL)

Administer:
IV route
• Bolus undiluted (1%, 2% only), give ≤50 mg/1 min or dilute 1 g/250-500 mL D_5W; titrate to patient response; use infusion pump; pediatric infusion 120 mg

lidocaine/100 mL D_5W; 1-2.5 mL/kg/hr = 20-50 mcg/kg/min; use only 1%, 2% sol for IV bol
• Use a cardiac monitor
• Additive syringes/single-use vials are for infusions and must be diluted

Y-site compatibilities: Acetaminophen, alemtuzumab, alfentanil, alteplase, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B lipid/liposome, anidulafungin, argatroban, ascorbic acid injection, atenolol, atropine, atracurium, azithromycin, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, carmustine, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, ceftaroline, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clarithromycin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, DAUNOrubicin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, DOXOrubicin liposomal, doxycycline, enalaprilat, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etomidate, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, gentamicin, granisetron, haloperidol, heparin, hydrocortisone, imipenem/cilastatin, inamrinone, insulin, isoproterenol, ketorolac, labetalol, levofloxacin, linezolid, LORazepam, magnesium sulfate, meperidine, methylPREDNISolone sodium succinate, metoclopramide, metoprolol, metroNIDAZOLE, micafungin, midazolam, morphine, nafcillin, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, palonosetron, penicillin G potassium, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, quinupristin/dalfopristin, ranitidine, remifentanil, sodium bicarbonate, streptokinase, tacrolimus, theophylline, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, vancomycin, vasopressin, verapamil, vitamin B complex with C, voriconazole, warfarin

SIDE EFFECTS

CNS: *Headache, dizziness,* involuntary movement, confusion, tremor, drowsiness, euphoria, seizures, shivering
CV: *Hypotension, bradycardia,* heart block, CV collapse, arrest
EENT: Tinnitus, blurred vision
GI: Nausea, vomiting, anorexia
HEMA: Methemoglobinemia
INTEG: Rash, urticaria, edema, swelling, petechiae, pruritus
MISC: Febrile response, phlebitis at inj site
RESP: Dyspnea, respiratory depression

PHARMACOKINETICS

Half-life 8 min, 1-2 hr (terminal); metabolized in liver; excreted in urine; crosses placenta
IV: Onset 2 min, duration 20 min

INTERACTIONS

Increase: cardiac depression, toxicity—amiodarone, phenytoin, procainamide, propranolol, quiNIDine
Increase: hypotensive effects—MAOIs, antihypertensives
Increase: neuromuscular blockade—neuromuscular blockers, tubocurarine; monitor for adverse effects
Increase: lidocaine effects, toxicity—cimetidine, β-blockers, protease inhibitors, ritonavir
Increase: hypotension—ergots; avoid concurrent use
Decrease: lidocaine effects—barbiturates, ciprofloxacin, voriconazole
Decrease: effect of—cycloSPORINE

NURSING CONSIDERATIONS

Assess:
• **CV: B/P continuously for circulatory collapse decompensation;** ECG continuously to determine increased PR or QRS segments; if these develop, discontinue or

reduce rate; watch for increased ventricular ectopic beats, may have to rebolus; B/P
• **Drug levels:** therapeutic level 1.5-5 mcg/mL
• I&O ratio, electrolytes (potassium, sodium, chlorine)
• **Toxicity:** monitor for seizures, confusion, tremors; if these occur, discontinue immediately, notify prescriber; keep emergency equipment nearby
• **Malignant hyperthermia:** tachypnea, tachycardia, changes in B/P, increased temperature
• **Respiratory status:** rate, rhythm, lung fields for crackles, watch for respiratory depression; lung fields, bilateral crackles may occur with HF; increased respiration, pulse; product should be discontinued
• **CNS effects:** dizziness, confusion, psychosis, paresthesias, convulsions; product should be discontinued
• **Pregnancy/breastfeeding:** use only if clearly needed; use caution in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: decreased dysrhythmias

Teach patient/family:
• About the use of automatic lidocaine injection device if ordered for personal use
• To report signs of toxicity immediately

TREATMENT OF OVERDOSE:
O_2, artificial ventilation, ECG; administer DOPamine for circulatory depression, diazepam or thiopental for seizures; decrease product if needed

lidocaine ophthalmic
See Appendix B

lidocaine topical
See Appendix B

lifitegrast ophthalmic (Rx)
(lif-i-teg′rast)
Xiidra
Func. class.: Lymphocyte function-associated antigen 1 (LFA-1) antagonist

USES:
Signs and symptoms of dry eye disease

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Adult: Ophthalmic: Instill 1 drop into each eye q12h

Available forms: Opthalmic solution 5%

linaclotide (Rx)
(lin-ak′loe-tide)
Constella, Linzess
Func. class.: Gastrointestinal agent, miscellaneous

USES:
Chronic idiopathic constipation, IBS in adults

CONTRAINDICATIONS:
Hypersensitivity, child <6 yr; GI obstruction

DOSAGE AND ROUTES
Constipation
Adult PO: 72 or 145 mcg daily
Irritable bowel syndrome
• **Adult PO** 290 mcg daily on an empty stomach at least 30 min prior to first meal of the day

Available forms: Capsules 72, 145, 290 mcg

⚠ HIGH ALERT

linagliptin (Rx)
(lin′a-glip′tin)
Tradjenta, Trajenta
Func. class.: Antidiabetic
Chem. class.: Didipeptidyl peptidase-4 inhibitor

Do not confuse:
Tradjenta/Tanzeum/Tresiba/Trulicity

ACTION: Slows the inactivation of incretin hormones; concentrations of the active, intact hormones are increased, thereby increasing and prolonging the action of these hormones; incretin hormones are released by the intestine throughout the day, and levels are increased in response to a meal

USES: Type 2 diabetes mellitus

CONTRAINDICATIONS: Hypersensitivity to linagliptin, type 1 diabetes mellitus, diabetic ketoacidosis (DKA)
Precautions: Pregnancy, breastfeeding, adolescents or children <18 yr, debilitated physical condition, malnutrition, uncontrolled adrenal insufficiency, pituitary insufficiency, hypo/hyperthyroidism, diarrhea, gastroparesis, GI obstruction, ileus, female hormonal changes, high fever, severe psychologic stress, uncontrolled hypercortisolism, HF

DOSAGE AND ROUTES

• **Adult: PO** 5 mg daily; when used with a sulfonylurea or insulin, a lower dose of the sulfonylurea may be necessary to minimize the risk of hypoglycemia
Available forms: Tab 5 mg
Administer:
• Once daily; may give without regard to food
• May require an increased dose in stress, fever, surgery, trauma
• Store at room temperature

SIDE EFFECTS

CNS: Headache
EENT: Nasopharyngitis
ENDO: Hypoglycemia, hyperuricemia, hypertriglyceridemia
GI: Body weight loss, pancreatitis
INTEG: Serious hypersensitivity reactions, urticaria, angioedema, exfoliative dermatitis
MISC: Arthralgia, back pain
RESP: Bronchial hyperreactivity (with bronchospasm), nasopharyngitis, cough

PHARMACOKINETICS

Extensively distributed to tissues, protein binding is concentration-dependent, weak to moderate inhibitor of CYP3A4, half life of >100 hr; effective half-life 12 hr, 90% excreted unchanged, 85% excreted enterohepatic system urine (5%), rapidly absorbed, peak in 1.5 hr; bioavailability 30%

INTERACTIONS

• Long-term treatment in combination with strong CYP3A4 inducers, may reduce glycemic lowering effect of linagliptin
Increase: hypoglycemia—sulfonylureas, β-blockers, ACE inhibitors, angiotensin II receptor antagonists, disopyramide, guanethidine, cloNIDine, octreotide, fenfluramine, dexfenfluramine, fibric acid derivatives, monoamine oxidase inhibitors (MAOIs), FLUoxetine, salicylates
Increase: masking of the signs and symptoms of hypoglycemia—reserpine, β-blockers
Increase: need for dosing change—cisapride, metoclopramide, tegaserod, androgens, alcohol, lithium, quinolones
Decrease: hypoglycemic effect—dextrothyroxine, bumetanide, furosemide, ethacrynic acid, torsemide, estrogens, progestins, oral contraceptives, thyroid hormones, glucocorticoids, glucagon, carbonic anhydrase inhibitors, phenytoin, fosphenytoin, or ethotoin; atypical antipsychotics (ARIPiprazole, cloZAPine, OLANZapine, QUEtiapine, risperiDONE, and ziprasidone), phenothiazine, niacin (nicotinic acid), triamterene, thiazide diuretics
Decrease: effect of linagliptin—CYP3A4 inducers (topiramate, rifabutin, pioglitazone, OXcarbazepine, carBAMazepine, nevirapine, modafinil, metyrapone, etravirine, efavirenz, bosentan, barbiturates, aprepitant, fosaprepitant)
Drug/Herb
Decrease: linagliptin effect—St. John's wort
Drug/Lab Test
Increase: uric acid
Decrease: HbA1c level, fasting blood glucose

NURSING CONSIDERATIONS

Assess

- **Diabetes:** monitor blood glucose, A1c during treatment to determine diabetes control; monitor for hypoglycemia: confusion, sweating, tachycardia, anxiety; hyperglycemia: polydipsia, polyuria, polyphagia
- CBC baseline and periodically during treatment; report decreased blood counts
- **Pancreatitis (rare):** severe abdominal pain, nausea, vomiting; may be fatal; discontinue product immediately, use supportive therapy; monitor amylase, lipase, electrolytes
- **Arthralgia:** may be severe, but temporary
- **Pregnancy/breastfeeding:** use only if clearly needed; use caution in breastfeeding, excretion is unknown

Evaluate:

- Therapeutic response: improving blood glucose level, A1c; decreasing polydipsia, polyphagia, polyuria, clear sensorium, absence of dizziness

Teach patient/family:

- About the symptoms of hypo/hyperglycemia and what to do about each; to have glucagon emergency kit available, to carry sugar packets
- That product must be continued on a daily basis, about the consequences of discontinuing product abruptly; to take only as directed
- To avoid OTC products unless approved by prescriber
- That diabetes is a lifelong illness, that product will not cure diabetes
- To carry emergency ID with prescriber, condition and medications taken
- To immediately report skin disorders, swelling, difficulty breathing, or severe abdominal pain
- **Pregnancy/breastfeeding:** to notify provider if pregnancy is planned or suspected, or if breastfeeding

linagliptin/metformin (Rx)

(lin-a-glip′tin/met-for′min)

Jentadueto, Jentadueto XR

Func. class.: Antidiabetic agent, biguanide/dipeptidyl peptidase 4 (DPP-4) inhibitor

USES: An adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus

CONTRAINDICATIONS

Hypersensitivity to linagliptin, metformin, or any component; severe renal impairment (eGFR <30 mL/min/1.73 m^2); metabolic acidosis, diabetic ketoacidosis

Black Box Warning: Fatal lactic acidosis

DOSAGE AND ROUTES

Adult: PO (Immediate release): to 1 g bid; **(extended release)** linagliptin **those currently on metformin:** Initial: linagliptin 5 mg/day plus current daily dose of metformin; **those not on metformin:** Initial: linagliptin 5 mg/metformin 1 g/day; **conversion from IR to ER:** May switch to extended-release product containing linagliptin 5 mg and current daily dose of metformin once daily

Available forms: Tabs 2.5/500, 2.5/850, 2.5/1000 mg; tabs ext rel 2.5/1000, 5/1000 mg

lindane (Rx)

(lin′dane)

Func. class.: Scabicide, pediculicide

Chem. class.: Chlorinated hydrocarbon (synthetic)

ACTION: Stimulates nervous system of arthropods, resulting in seizures, death

USES: Scabies, lice (head/pubic/body), nits in those intolerant to or who do not respond to other agents

CONTRAINDICATIONS: Hypersensitivity, patients with known seizure disorders, Norwegian (crusted) scabies

Black Box Warning: Seizure disorder

Precautions: Pregnancy, breastfeeding, infants, children <10 yr, avoid contact with eyes

Black Box Warning: Neurotoxicity

DOSAGE AND ROUTES

Lice

• **Adult/child:** shampoo using 30 mL: work into lather, rub for 5 min, rinse, dry with towel; comb with fine-toothed comb to remove nits; most require 1 oz, max 2 oz

Available forms: shampoo, (1%)

Administer:

• Caregivers should wear gloves less permeable to lindane, thoroughly clean hands after application; avoid natural latex gloves

• **Shampoo:** for lice only; do not use other hair products before use; shake well; hair should be completely dry; use only enough shampoo to lightly coat hair and scalp, work into hair, do not use water; allow to remain only 4 min, rinse, lather away, towel briskly

• To scalp only; do not apply to face, lips, mouth, eyes, any mucous membrane, anus, or meatus

• Topical corticosteroids as ordered to decrease contact dermatitis; antihistamines

• Lotions of menthol or phenol to control itching

• Topical antibiotics for infection

SIDE EFFECTS

CNS: Seizures, CNS toxicity, stimulation, dizziness

INTEG: *Pruritus, rash, irritation, contact dermatitis*

PHARMACOKINETICS

Onset 3 hr, half-life 18-22 hr

INTERACTIONS

• Oils may increase absorption; if oil-based hair dressing used, shampoo, rinse, dry hair before applying lindane shampoo

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Abrasions, skin inflammation, breaks in skin: do not use on these areas, increased risk of neurotoxicity

• **Infestation:** head, hair for lice, nits before and after treatment; if scabies present, check all skin surfaces; identify source of infection: school, family, sexual contacts

• Isolation until areas on skin, scalp have cleared, treatment completed

• Removal of nits with fine-toothed comb rinsed in vinegar after treatment; use gloves

Black Box Warning: Seizures: avoid use in children with uncontrolled seizure disorders

Black Box Warning: Neurotoxicity: when large amounts are used, absorbed systemically, may cause death; use only second line

• **Pregnancy/breastfeeding:** avoid in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: decreased crusts, nits, brownish trails on skin, itching papules in skin folds, decreased itching after several weeks

Teach patient/family:

• To wash all inhabitants' clothing using insecticide; that preventive treatment may be required of all persons living in same house, using lotion or shampoo to decrease spread of infection; to use rubber gloves when applying product

• That itching may continue for 4-6 wk

• That product must be reapplied if accidentally washed off or treatment will be ineffective

• Not to apply to face; if accidental contact with eyes occurs, flush with water

Black Box Warning: To remove product after specified time to prevent toxicity

• To treat sexual contacts simultaneously

Black Box Warning: To check for CNS toxicity: dizziness, cramps, anxiety, nausea, vomiting, seizures

linezolid (Rx)

(line-zoe'lide)

Zyvox, Zyvoxam

Func. class.: Broad-spectrum antiinfective

Chem. class.: Oxazolidinone

Do not confuse:
Zyvox/Vioxx/Zovirax

ACTION: Inhibits protein synthesis by interfering with translation; binds to bacterial 23S ribosomal RNA of the 50S subunit, thus preventing formation of the bacterial translation process in primarily gram-positive organisms

USES: Vancomycin-resistant *Enterococcus faecium* infections, hospital-acquired pneumonia caused by *Staphylococcus aureus* or *Streptococcus pneumoniae,* uncomplicated or complicated skin and skin-structure infections, community-acquired pneumonia, *Pasteurella multocida,* viridans streptococci, *E. faecium* infections, *S. aureus, S. pyogenes;* can be used for MSSA/MRSA/MDRSP strains

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, thrombocytopenia, bone marrow suppression, hypertension, hyperthyroidism, pheochromocytoma, seizure disorder, ulcerative colitis, MI, PKU, renal/GI disease

DOSAGE AND ROUTES

Vancomycin-resistant *Enterococcus faecium* infections

- **Adult/adolescent/child ≥12 yr: IV/PO** 600 mg q12hr × 14-28 days; max 1200 mg/day
- **Child <12 yr/infant/term neonate: IV/PO** 10 mg/kg q8hr × 14-28 days

Pneumonia/complicated skin infections

- **Adult: IV/PO** 600 mg q12hr × 10-14 days; max 1200 mg/day
- **Child birth-11 yr: PO/IV** 10 mg/kg q8hr × 10-14 days

Uncomplicated skin infections caused by *S. aureus* (MSSA only) or *S. pyogenes*

- **Adult: PO** 400 mg q12hr × 10-14 days; max 1200 mg/day
- **Adolescent: PO** 600 mg q12hr × 10-14 days; max 1200 mg/day
- **Child 5-11 yr: PO** 10 mg/kg q12hr × 10-14 days
- **Neonate ≥7 days old/infant/child <5 yr: PO** 10 mg/kg q8hr × 10-14 days
- **Infant preterm <7 days old: PO** 10 mg/kg q12hr × 10-14 days

Available forms: Tabs 600 mg; oral susp 100 mg/5 mL; premixed infusion 200 mg/100 mL, 400 mg/200 mL, 600 mg/mL (2 mg/mL)

Administer:

- Obtain culture and sensitivity before starting treatment, may give before results are received

PO route

- With/without food
- Store reconstituted oral susp at room temperature; use within 3 wk

Intermittent IV INFUSION route

- Do not use if particulate is present, yellow color is normal
- Premixed sol ready to use (2 mg/mL), give over 30-120 min; do not use IV infusion bag in series connections; do not use with additives in sol; do not use with another product, administer separately, flush line before and after use
- Store at room temperature in original packaging

Y-site compatibilities: Acyclovir, alfentanil, amikacin, aminophylline, ampicillin, aztreonam, buprenorphine, butorphanol, calcium gluconate, CARBOplatin, ceFAZolin, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefuroxime, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, digoxin, furosemide, ganciclovir, gemcitabine, gentamicin, heparin, HYDROmorphone, ifosfamide, labetalol, leucovorin, levofloxacin, lidocaine, LORazepam,

magnesium sulfate, mannitol, meperidine, meropenem, mesna, methotrexate, methylPREDNISolone, metoclopramide, metroNIDAZOLE, midazolam, minocycline, mitoXANtrone, morphine, nalbuphine, naloxone, nitroglycerin, ofloxacin, ondansetron, PACLitaxel, PENTobarbital, PHENobarbital, piperacillin, potassium chloride, prochlorperazine, promethazine, propranolol, ranitidine, remifentanil, SUFentanil, theophylline, ticarcillin, tobramycin, vancomycin, vecuronium, verapamil, vinCRISTine, zidovudine

Solution compatibilities: D_5W, 0.9% NaCl, LR

SIDE EFFECTS

CNS: *Headache,* dizziness, insomnia

GI: *Nausea, diarrhea,* CDAD, increased ALT/AST, *vomiting,* taste change, tongue-color change

EENT: Optic neuropathy

HEMA: Myelosuppression

MISC: Vaginal moniliasis, fungal infection, oral moniliasis, lactic acidosis, anaphylaxis, angioedema, Stevens-Johnson syndrome, serotonin syndrome

PHARMACOKINETICS

Peak 1-2 hr, terminal half-life 4-5 hr, rapidly and extensively absorbed, protein binding 31%, metabolized by oxidation of the morpholine ring

INTERACTIONS

Do not use with MAOIs (or within 2 wk) or with products that possess MAOI-like action (furazolidone, isoniazid, INH, procarbazine); hypertensive crisis may occur

Increase: hypertensive crisis, seizures, coma—amoxapine, maprotiline, mirtazapine, traZODone, cyclobenzaprine, tricyclics, methyldopa

Increase: serotonin syndrome—bupropion, cyclobenzaprine, tramadol, trazadone, SSRIs, SNRIs, serotonin receptor agonists; notify prescriber immediately

Increase: effects of adrenergic agents (DOPamine, EPINEPHrine, pseudoephedrine); monitor B/P

Drug/Herb

- Avoid use with green tea, valerian, ginseng, yohimbine, kava, guarana, St. John's wort

Drug/Food

- Tyramine foods: avoid; increased pressor response

Drug/Lab Test

Increase: LFTs, alkaline phosphatase, amylase, lipase, BUN

Decrease: WBC, platelets, blood glucose

NURSING CONSIDERATIONS

Assess:

- **Infection:** VS, characteristics of sputum, wounds, stool, emesis; WBC baseline, periodically
- Vision change, optic neuritis may occur
- CBC with differential weekly, assess for myelosuppression (anemias, leukopenia, pancytopenia, thrombocytopenia)
- **Serotonin syndrome:** at least 2 wk should elapse between discontinuing linezolid and starting serotonergic agents; assess for increased heart rate, shivering, sweating, dilated pupils, tremor, high B/P, hyperthermia, headache, confusion; if these occur, stop linezolid, administer a serotonin antagonist if needed
- **Lactic acidosis:** repeated nausea/vomiting, unexplained acidosis, low bicarbonate level; notify prescriber immediately
- **Anaphylaxis/angioedema/Stevens-Johnson syndrome:** rash, pruritus, difficulty breathing, fever; have emergency equipment nearby
- **CNS symptoms:** headache, dizziness
- **Hepatic studies:** AST, ALT
- **Diabetes mellitus:** monitor those receiving insulin or oral antidiabetics for increased hypoglycemia
- **CDAD:** diarrhea, abdominal pain, fever, fatigue, anorexia, possible anemia, elevated WBC, low serum albumin; stop product, usually either vancomycin or IV metroNIDAZOLE given
- **Pregnancy/breastfeeding:** avoid use in pregnancy and breastfeeding

Evaluate:

• Therapeutic response: decreased symptoms of infection, blood cultures negative

Teach patient/family:

• If dizziness occurs, to ambulate, perform activities with assistance

• To complete full course of product therapy, use as directed, not to skip or double dose when remembered, unless close to next dose

• **Serotonin syndrome:** to notify prescriber immediately of fever, sweating, diarrhea, confusion

• To contact prescriber if adverse reaction occurs

• To inform prescriber if SSRIs or cold products, decongestants being used

• To avoid large amounts of high-tyramine foods (aged cheeses, red wine), drinks; provide list

• To report diarrhea, signs/symptoms of superinfection

• To notify health care professional of vision change

• To discuss with health care professional all Rx, OTC, herbals, supplements used

• **Pregnancy/breastfeeding:** Identify if pregnancy is planned or suspected or if breastfeeding

liothyronine (T_3) (Rx) (nti)

(lye-oh-thye′roe-neen)

Cytomel, Triostat

Func. class.: Thyroid hormone

Chem. class.: Synthetic T_3

Do not confuse:
liothyroxine/levothyroxine

USES: Hypothyroidism, myxedema coma, thyroid hormone replacement, congenital hypothyroidism, nontoxic goiter, T_3 suppression test

CONTRAINDICATIONS: Adrenal insufficiency, MI, thyrotoxicosis, untreated hypertension

Black Box Warning: Obesity treatment

DOSAGE AND ROUTES

• **Adult: PO** 25 mcg/day, increase by 12.5-25 mcg q1-2wk until desired response, maintenance dose 25-75 mcg/day, max 100 mcg/day

• **Geriatric: PO** 5 mcg/day, increase by 5 mcg/day q1-2wk, maintenance 25-75 mcg/day

Congenital hypothyroidism

• **Child >3 yr: PO** 50-100 mcg/day

• **Child <3 yr: PO** 5 mcg/day, increase by 5 mcg q3-4days titrated to response, infant maintenance 20 mcg/day; 1-3 yr 50 mcg/day

Myxedema, severe hypothyroidism

• **Adult: PO** 25-50 mcg, then may increase by 5-10 mcg q1-2wk; maintenance dose 50-100 mcg/day

Myxedema coma/precoma

• **Adult: IV** 25-50 mcg initially, 5 mcg in geriatric patients, 10-20 mcg with cardiac disease; give doses q4-12hr

Nontoxic goiter

• **Adult: PO** 5 mcg/day, increase by 12.5-25 mcg q1-2wk; maintenance dose 75 mcg/day

Suppression test

• **Adult: PO** 75-100 mcg/day × 1 wk; radioactive ^{131}I given before and after 1-wk dose

Available forms: Tabs 5, 25, 50 mcg; injection 10 mcg/mL/vial

⚠ HIGH ALERT

liraglutide (Rx)

(lir′a-gloo′tide)

Saxenda, Victoza

Func. class.: Antidiabetic agent

Chem. class.: Incretin mimetics

ACTION: Improved glycemic control and potential weight loss via activation of the glucagon-like peptide-1 (GLP-1) receptor

USES: Type 2 diabetes mellitus in combination with diet/exercise (Victoza), obesity (Saxenda)

CONTRAINDICATIONS: Hypersensitivity, medullary thyroid carcinoma (MTC), multiple endocrine neoplasia syndrome type 2 (MEN 2), thyroid cancer, pregnancy

Precautions: Breastfeeding, children, geriatric patients, alcoholism, cholelithiasis, ketoacidosis, diarrhea, fever, gastroparesis, hepatic/renal disease, hypoglycemia, infection, surgery, thyroid disease, trauma, vomiting, pancreatitis

Black Box Warning: Thyroid C-cell tumors

DOSAGES AND ROUTES

• **Adult: SUBCUT (Victoza)** 0.6 mg/day × 1 wk, then increase to 1.2 mg/day, max 1.8 mg/day; **Saxenda** (Initial BMI >27 kg/m^2): 0.6 mg/day × 1 wk, then 1.2 mg/day × 1 wk then 1.8 mg × 1 wk, then 2.4 mg/day × 1 wk, then 3 mg/day

Available forms: Solution for injection 0.6, 1.2, 1.8, 2.4, 3 mg prefilled pen (Saxenda); solution for injection 0.6, 1.2, 1.8 mg prefilled pen (Victoza)

Administer:

SUBCUT route

• Give subcut only, inspect for particulate matter, discoloration; do not use if unusually viscous, cloudy, discolored, or if particles present; give daily anytime, without regard to meals; pen needles must be purchased separately, use Novo Nordisk needle; before first use, prime, see manual for directions; give in thigh, abdomen, or upper arm; lightly pinch fold of skin, insert needle at 90-degree angle (45-degree angle if thin), release skin; aspiration is not needed, give over 6 sec, rotate injection sites

• If dose is missed, resume once-daily dosing at next scheduled dose; if >3 days have elapsed since last dose, reinitiate at 0.6 mg, titrate

• Storage: do not store pen with needle attached; avoid direct heat and sunlight; discard 30 days after first use; after first use may be stored at room temperature or refrigerated; do not freeze

SIDE EFFECTS

CNS: Dizziness, headache

CV: Hypertension

ENDO: Hypoglycemia

EENT: Sinusitis

GI: Abdominal pain, anorexia, constipation, diarrhea, dyspepsia, nausea, vomiting, pancreatitis

INTEG: erythema, injection site reaction, urticaria

MS: Back pain

SYST: Antibody formation, infection, influenza, secondary thyroid malignancy, anaphylaxis, angioedema

INTERACTIONS

Increase: hypoglycemic reactions—angiotensin II receptor antagonists, ACE inhibitors, other antidiabetics, β-blockers, dexfenfluramine, fenfluramine, disopyramide, FLUoxetine, fibric acid derivatives, mecasermin, MAOIs, octreotide, pegvisomant, salicylates

Decrease: liraglutide effect—protease inhibitors, phenothiazines, baclofen, atypical antipsychotics, corticosteroids, cycloSPORINE, tacrolimus, carbonic anhydrase inhibitors, dextrothyroxine, diazoxide, phenytoin, fosphenytoin, ethotoin, isoniazid, INH, niacin, nicotine, estrogens, progestins, oral contraceptives, growth hormones, sympathomimetics

Increase or decrease: hypoglycemic reactions—androgens, bortezomib, quinolones, cloNIDine, alcohol, lithium, pentamidine

Increase or decrease: effects of—atorvastatin, acetaminophen, griseofulvin

Decrease: levels of digoxin

Drug/Lab Test

Increase: calcitonin, lipase

Decrease: glucose

PHARMACOKINETICS

Protein binding (98%); half-life 12-13 hr; binds to albumin, then released into circulation; peak 8-12 hr; body weight significantly affects pharmacokinetics

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Thyroid C-cell tumors; monitor during treatment; if calcitonin is elevated or if nodules can be felt, referral is needed; do not use in those with a family history of MTC or in those with multiple endocrine neoplasia syndrome type 2

- **Diabetes:** that may occur soon after meals: hunger, sweating, weakness, dizziness, tremors, restlessness, tachycardia; serum glucose, A1c, CBC during treatment
- Hypersensitivity to this product
- **Insulin use with Victoza:** monitor for hypoglycemic reactions often
- **Stress:** those diabetic patients exposed to stress, surgery, fever, infections may require insulin administration temporarily
- **Serious skin reactions:** angioedema, hypersensitivity responses
- **Pancreatitis:** monitor for nausea, vomiting, severe abdominal pain; product should be discontinued; give supportive care; monitor amylase, lipase, electrolytes

Evaluate:

- Therapeutic response: stable and improved serum glucose, A1c, weight loss

Teach patient/family:

- **Hypersensitivity:** to report any allergic symptoms
- About symptoms of hypoglycemia/hyperglycemia and what to do for each; to have glucagon emergency kit available; to carry a carbohydrate source at all times
- About adverse reactions associated with therapy, such as nausea and vomiting; that upward dose titration can be delayed or ignored, depending on tolerance
- That diabetes is a lifelong illness; that product does not cure disease and must be continued on a daily basis
- To carry emergency ID with prescriber's phone number and medications taken
- To continue with other recommendations: diet, exercise
- To test blood glucose using a blood glucose meter
- To avoid other medications, herbs, supplements unless approved by prescriber
- To report serious skin effects, abdominal pain with nausea/vomiting immediately
- To consult written instructions if self-administration is ordered; to discard pen after 30 days
- That continuing follow-up exams will be needed
- That secondary malignancy is possible; that routine monitoring may be needed; to report trouble breathing, continuous hoarseness, lump in neck region immediately
- Not to share product with others; infections such as hepatitis may occur
- **Pregnancy/breastfeeding:** that product is not to be used in pregnancy or breastfeeding, that insulin is usually used in pregnancy, to notify health care professional if pregnancy is planned or suspected or if breastfeeding

lisdexamfetamine (Rx)

(lis-dex′am-fet′a-meen)

Vyvanse

Func. class.: CNS stimulant

Chem. class.: Amphetamine

Controlled Substance Schedule II

ACTION: Increases release of norepinephrine, DOPamine in cerebral cortex to reticular activating system

USES: Attention-deficit/hyperactivity disorder (ADHD), binge eating disorder

CONTRAINDICATIONS: Breastfeeding, hyperthyroidism, hypertension, glaucoma, severe arteriosclerosis, hypersensitivity to sympathomimetic amines

Black Box Warning: Substance abuse

Precautions: Pregnancy, children <6 yr, Gilles de la Tourette's disorder, depression, anorexia nervosa, psychosis, seizure disorder, suicidal ideation, MI,

heart failure, alcoholism, aortic stenosis, bipolar disorder, CV disease

DOSAGE AND ROUTES

ADHD

• **Adult/child 6-17 yr: PO** 30 mg/day in AM; may increase by 10-20 mg/day at weekly intervals, max 70 mg/day

Moderate to severe binge eating disorder

• **Adult: PO** 30 mg/day in AM, increase by 20 mg weekly to target of 50-70 mg/day

Renal dose

• **Adult: PO** Severe impairment (GFR 15-<30 mL/min/1.73 m^2): max 50 mg/day; ESRD (GFR <15 mL/min/1.73 m^2): max 30 mg/day

Available forms: Caps 10, 20, 30, 40, 50, 60, 70 mg

Administer:

• Give daily in AM
• Without regard to meals
• Caps: may take whole or opened and contents dissolved in water, take immediately

SIDE EFFECTS

CNS: *Hyperactivity, insomnia, restlessness, talkativeness,* dizziness, headache, dysphoria, irritability, CNS tumor, dependence, addiction, mild euphoria, somnolence, lability, psychosis, mania, hallucinations, aggression; movement disorders, psychiatric events (child)
CV: *Palpitations, tachycardia,* hypertension, decrease in heart rate, dysrhythmias, MI, cardiomyopathy
EENT: Blurred vision, mydriasis, diplopia
ENDO: Growth inhibition
GI: *Anorexia,* dry mouth, diarrhea, weight loss
GU: Impotence, change in libido
INTEG: Urticaria, angioedema, Stevens-Johnson syndrome, toxic epidermal necrolysis
MISC: Rhabdomyolysis

PHARMACOKINETICS

Metabolized by liver; urine excretion pH dependent; crosses placenta, breast milk; half-life <1 hr

INTERACTIONS

• **Hypertensive crisis:** MAOIs or within 14 days of MAOIs
Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs, serotonin-receptor agonists
Increase: lisdexamfetamine effect—acetaZOLAMIDE, antacids, sodium bicarbonate, urinary alkalinizers
Increase: CNS effect—haloperidol, tricyclics, phenothiazines, modafinil, meperidine, PHENobarbital, phenytoin
Increase: CNS stimulation—melatonin
Decrease: absorption of phenytoin
Decrease: lisdexamfetamine effect—ascorbic acid, ammonium chloride, urinary acidifiers
Decrease: effect of—adrenergic blockers, antidiabetics

Drug/Herb

• **Serotonin syndrome:** St. John's wort
Increase: stimulant effect—khat, melatonin, green tea, guarana
Decrease: stimulant effect—eucalyptus

Drug/Food

Increase: amine effect—caffeine

NURSING CONSIDERATIONS

Assess:

• **ADHD:** obtain history from parents, patient, counselors, as well as testing; confirm diagnosis before use
• **Binge eating disorder:** obtain history of diet bingeing times and food
• VS, B/P; product may reverse antihypertensives; check patients with cardiac disease often
• CBC, urinalysis; in diabetes: blood glucose; insulin changes may be required because eating may decrease
• Height, growth rate in children; growth rate may be decreased; treatment should be discontinued if this is present
• Mental status: mood, sensorium, affect, stimulation, insomnia, irritability
• **Serotonin syndrome, neuroleptic malignant syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist

if needed; at least 2 wk should elapse between discontinuation of serotonergic agents and start of product

• **Tolerance or dependency:** increased amount of product may be used to get same effect; will develop after long-term use

• Overdose: pain, fever, dehydration, insomnia, hyperactivity

Black Box Warning: Before giving this product, identify presence of substance abuse; high potential for abuse, may be fatal

• **Psychotic manic episodes:** may occur when patients have underlying psychiatric conditions

• Gum, hard candy, frequent sips of water for dry mouth

• **Pregnancy/breastfeeding:** avoid use in pregnancy and breastfeeding

Evaluate:

• Therapeutic response: increased CNS stimulation, decreased drowsiness

Teach patient/family:

• **Seizures:** that product may decrease seizure threshold; those with a seizure disorder should notify prescriber if seizure occurs

• To report CNS changes, blurred vision; decrease in dose may be needed

• To decrease caffeine consumption (coffee, tea, cola, chocolate); may increase irritability, stimulation

• To avoid OTC preparations unless approved by prescriber

• To taper product over several weeks; depression, increased sleeping, lethargy may occur

• To avoid alcohol ingestion

• To avoid breastfeeding

• To avoid hazardous activities until stabilized on medication

• To get needed rest; patient will feel more tired at end of day

Black Box Warning: Serious CV effects may occur from increasing dose

• **Pregnancy/breastfeeding:** to avoid use in pregnancy, breastfeeding

TREATMENT OF OVERDOSE:

Administer fluids, antihypertensive for increased B/P, ammonium chloride for increased excretion, chlorproMAZINE for antagonizing CNS effects

lisinopril (Rx)

(lyse-in′oh-pril)

Prinivil, Qbrelis

Func. class.: Antihypertensive, angiotensin-converting enzyme 1 (ACE) inhibitor

Chem. class.: Enalaprilat lysine analog

Do not confuse:

lisinopril/RisperDAL/Lipitor

Prinivil/Plendil/Proventil/PriLOSEC

ACTION:

Selectively suppresses renin-angiotensin-aldosterone system; inhibits ACE, thereby preventing conversion of angiotensin I to angiotensin II

USES:

Mild to moderate hypertension, adjunctive therapy of systolic HF, acute MI

Unlabeled uses: Diabetic retinopathy, proteinuria, post MI

CONTRAINDICATIONS:

Hypersensitivity, angioedema

Black Box Warning: Pregnancy

Precautions: Breastfeeding, renal disease, hyperkalemia, renal artery stenosis, HF, aortic stenosis

DOSAGE AND ROUTES

Hypertension

• **Adult: PO** initially 10 mg, 10-40 mg/day; max 80 mg/day

• **Child ≥6 yr: PO** 0.07 mg/kg/day up to 5 mg/day; titrate q1-2wk up to 0.6 mg/kg/day or 40 mg/day

• **Geriatric: PO** 2.5-5 mg/day, increase q7days

Heart failure

• **Adult: PO** 5 mg/day, increase if needed max 40 mg/day in hypernatremia of

<130 mEqL or creatinine >3 mg/dL or CCr <30 mL/min, 2.5 mg/day initially

Acute myocardial infarction

• **Adult: PO** give 5 mg within 24 hr of onset of symptoms, then 5 mg after 24 hr, 10 mg after 48 hr, then 10 mg daily

Renal dose

• **Adult: PO** CCr <30 mL/min, reduce dose by 50%, initially 5 mg/day, max 40 mg/day; CCr <10 mL/min, 2.5 mg/day, max 40 mg/day

Available forms: Tabs 2.5, 5, 10, 20, 30, 40 mg

Administer:

• Severe hypotension may occur after 1st dose of product; may be prevented by reducing or discontinuing diuretic therapy 3 days before beginning lisinopril therapy

• Without regard to food

SIDE EFFECTS

CNS: *Vertigo,* depression, stroke, insomnia, paresthesias, *headache, fatigue,* asthenia, *dizziness*

CV: Chest pain, *hypotension,* sinus tachycardia

EENT: Blurred vision, nasal congestion

GI: Nausea, vomiting, anorexia, constipation, flatulence, GI irritation, diarrhea, hepatic failure, hepatic necrosis, pancreatitis

GU: Proteinuria, renal insufficiency, sexual dysfunction, impotence

HEMA: Neutropenia, agranulocytosis

INTEG: Rash, pruritus

MISC: Muscle cramps, *hyperkalemia*

RESP: Dry cough, dyspnea

SYST: Angioedema, anaphylaxis, toxic epidermal necrolysis

PHARMACOKINETICS

Onset 1 hr, peak 6-8 hr, duration 24 hr, excreted unchanged in urine, half-life 12 hr

INTERACTIONS

Increase: hyperkalemia—potassium salt substitutes, potassium-sparing diuretics, potassium supplements, cycloSPORINE

Increase: possible toxicity—lithium

Increase: hypotensive effect—diuretics, other antihypertensives, probenecid, phenothiazines, nitrates, acute alcohol ingestion

Increase: hypersensitivity—allopurinol

Decrease: lisinopril effects—aspirin, indomethacin, NSAIDs; dose may need adjustment

Drug/Food

• High-potassium diet (bananas, orange juice, avocados, nuts, spinach) should be avoided; hyperkalemia may occur; monitor potassium levels

Drug/Lab Test

Interference: glucose/insulin tolerance tests, LFTs, BUN, creatinine

Drug/Herb

Increase: hypotensive effect—garlic

Increase: hypotensive effect—black licorice

NURSING CONSIDERATIONS

Assess:

• **Heart failure:** edema in feet, legs daily; weight daily; dyspnea, wet crackles

• Skin turgor, dryness of mucous membranes for hydration status

• **Acute MI:** can be used in combination with salicylates, β blockers, thrombolytics

• **Hypertension:** B/P, pulse q4hr during beginning treatment and periodically; black patients should take in combination with diuretics thereafter; note rate, rhythm, quality; apical/pedal pulse before administration; notify prescriber of any significant changes

• Blood studies, platelets; WBC with differential at baseline, periodically q3mo; if neutrophils <1000/mm^3, discontinue treatment (recommended with collagen-vascular disease)

• Baselines of renal, hepatic studies before therapy begins, periodically; LFTs, uric acid, glucose may be increased

• **Angioedema, anaphylaxis, toxic epidermal necrolysis:** facial swelling, dyspnea, tongue swelling (rare); have emergency equipment nearby; may be more common in black patients

• Electrolytes: potassium, sodium, chlorine

Black Box Warning: Pregnancy/breastfeeding: assess pregnancy, breastfeeding status before giving this product; if pregnant, do not use; do not breastfeed

Evaluate:
• Therapeutic response: decreased B/P, HF symptoms
Teach patient/family:
• Not to discontinue product abruptly; to taper
• To rise slowly to sitting or standing position to minimize orthostatic hypotension
• To avoid increasing potassium in the diet
• To report dry cough

Black Box Warning: Pregnancy/breastfeeding: to report if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE:
Lavage, IV atropine for bradycardia, IV theophylline for bronchospasm, digoxin, O_2, diuretic for cardiac failure

lisinopril/hydrochlorothiazide (Rx)
(lyse-in′oh-pril/hye-droe-klor-oh-thye′a-zide)

Zestoretic

Func. class.: Antihypertensive, angiotensin-converting enzyme 1 (ACE) inhibitor/diuretic, thiazide
Chem. class.: Enalaprilat lysine analog

ACTION:
Lisinopril: Competitive inhibitor of ACE; prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; results in lower levels of angiotensin II, which causes an increase in plasma renin activity and a reduction in aldosterone secretion
Hydrochlorothiazide: Inhibits sodium reabsorption in the distal tubules causing increased excretion of sodium, water, potassium

USES:
Hypertension not controlled by monotherapy

CONTRAINDICATIONS:
Hypersensitivity to lisinopril, hydrochlorothiazide, sulfonamide-derived drugs, or any component, angioedema related to use with an ACE inhibitor; idiopathic/hereditary angioedema; use with aliskiren in patients with diabetes mellitus; coadministration with or within 36 hr of switching to or from a neprilysin inhibitor (sacubitril); anuria

Black Box Warning: Pregnancy

Precautions: Breastfeeding, renal disease, hyperkalemia, renal artery stenosis, HF, aortic stenosis

DOSAGE AND ROUTES
Adult: PO Initial: lisinopril 10 mg/hydrochlorothiazide 12.5 mg or lisinopril 20 mg/hydrochlorothiazide 12.5 mg daily in those not controlled on monotherapy; titrate dosage after 2 to 3 wk; max lisinopril 80 mg/hydrochlorothiazide 50 mg per day
Available forms: Tablets: 10/12.5: Lisinopril 10 mg and hydrochlorothiazide 12.5 mg; 20/12.5: Lisinopril 20 mg and hydrochlorothiazide 12.5 mg; 20/25: Lisinopril 20 mg and hydrochlorothiazide 25 mg
Administer:
• Without regard to food

SIDE EFFECTS
CNS: *Vertigo,* depression, insomnia, paresthesias, *headache, fatigue,* asthenia, *dizziness*
CV: Chest pain, *hypotension,* sinus tachycardia
EENT: Blurred vision, nasal congestion
GI: Nausea, vomiting, anorexia, constipation, flatulence, GI irritation, diarrhea
GU: Sexual dysfunction, impotence
INTEG: Rash, pruritus
MISC: Muscle cramps, *hyperkalemia, hypokalemia*

RESP: Dry cough, dyspnea

PHARMACOKINETICS

Lisinopril: Onset 1 hr, peak 6-8 hr, duration 24 hr, excreted unchanged in urine, half-life 12 hr

Hydrochlorothiazide: Onset 2 hr, peak 4 hr, duration 6-12 hr, half-life 5.6-14.8 hr

INTERACTIONS

Increase: hyperkalemia—potassium salt substitutes, potassium-sparing diuretics, potassium supplements, cycloSPORINE

Increase: possible toxicity—lithium

Increase: hypotensive effect—diuretics, other antihypertensives, probenecid, phenothiazines, nitrates, acute alcohol ingestion

Increase: hypersensitivity—allopurinol

Decrease: lisinopril effects—aspirin, indomethacin, NSAIDs; dose may need adjustment

Drug/Food

- High-potassium diet (bananas, orange juice, avocados, nuts, spinach) should be avoided; hyperkalemia may occur; monitor potassium levels

Drug/Lab Test

Interference: glucose/insulin tolerance tests, LFTs, BUN, creatinine

NURSING CONSIDERATIONS

Assess:

- **Hypertension:** B/P, pulse q4hr during beginning treatment and periodically; black patients should take in combination with diuretics thereafter; note rate, rhythm, quality; apical/pedal pulse before administration; notify prescriber of any significant changes
- Baselines of renal, hepatic studies before therapy begins, periodically; LFTs, uric acid, glucose may be increased
- **Angioedema, anaphylaxis, toxic epidermal necrolysis:** facial swelling, dyspnea, tongue swelling (rare); have emergency equipment nearby; may be more common in black patients
- Electrolytes: potassium, sodium, chlorine

Black Box Warning: Pregnancy/breastfeeding: assess pregnancy, breastfeeding status before giving this product; if pregnant, do not use; do not breastfeed

Evaluate:

- Therapeutic response: decreased B/P

Teach patient/family:

- Not to discontinue product abruptly; to taper
- To rise slowly to sitting or standing position to minimize orthostatic hypotension
- To avoid increasing potassium in the diet
- To report dry cough

Black Box Warning: Pregnancy/breastfeeding: to report if pregnancy is planned or suspected; not to breastfeed

L

lithium (Rx) (nti)

(li'thee-um)

Carbolith, Lithane, Lithamax

Func. class.: Psychotropic agent—antimanic

Chem. class.: Alkali metal ion salt

Do not confuse:
lithium/lanthanum/Ultram

ACTION: May alter sodium, potassium ion transport across cell membrane in nerve, muscle cells; may balance biogenic amines of norepinephrine, serotonin in CNS areas involved in emotional responses

USES: Bipolar disorders (manic phase), prevention of bipolar manic-depressive psychosis

Unlabeled uses: Major depression (augmented use)

CONTRAINDICATIONS: Pregnancy, breastfeeding, children <12 yr, hepatic disease, brain trauma, organic brain syndrome, schizophrenia, severe cardiac/renal disease, severe dehydration

Precautions: Geriatric patients, thyroid disease, seizure disorders, diabetes mellitus, systemic infection, urinary retention, QT prolongation

Black Box Warning: Lithium level >1.5 mmol/L

DOSAGE AND ROUTES—NTI

Bipolar disorder (mania)

• **Adult: PO** 300 mg tid, maintenance 300 mg tid or qid; **EXT REL** 900 mg q12hr; dose should be individualized to maintain blood levels at 1-1.5 mEq/L or 0.6-1.2 mEq/L (maintenance)

• **Geriatric: PO** 300 mg bid, increase q7days by 300 mg to desired dose

• **Child: PO** 15-20 mg/kg/day in 3-4 divided doses; increase as needed; do not exceed adult doses; maintain blood levels at 0.4-0.5 mEq/L

Depression (unlabeled use)

Adult PO: PO 600 mg tid or 10 mL oral solution tid

Renal dose

• **Adult: PO** CCr 10-50 mL/min give 50%-75% of normal dose, CCr <10 mL/min give 25%-50% of normal dose

Available forms: Caps 150, 300, 600 mg; tabs 300 mg; ext rel tabs 300, 450 mg; oral solution 300 mg/5 mL (8 mEq/5 mL)

Administer:

• Do not break, crush, chew caps, ext rel tabs

• Reduced dose to geriatric patients

• With meals to avoid GI upset

• Adequate fluids (2-3 L/day) to prevent dehydration during initial treatment, 1-2 L/day during maintenance

SIDE EFFECTS

CNS: *Headache, drowsiness, dizziness,* tremors, twitching, ataxia, seizure, slurred speech, restlessness, confusion, stupor, memory loss, clonic movements, fatigue

CV: *Hypotension,* ECG changes, dysrhythmias, circulatory collapse, edema, Brugada syndrome, QT prolongation

EENT: Tinnitus, blurred vision

ENDO: Hyponatremia, goiter, hyperglycemia, hypo/hyperthyroidism

GI: *Dry mouth, anorexia, nausea, vomiting, diarrhea,* incontinence, abdominal pain, metallic taste

GU: Polyuria, glycosuria, proteinuria, albuminuria, urinary incontinence, polydipsia

HEMA: Leukocytosis

INTEG: Drying of hair, alopecia, rash, pruritus, hyperkeratosis, acneiform lesions, folliculitis

MS: Muscle weakness

PHARMACOKINETICS

PO: Onset rapid, peak ½-3 hr, half-life 18-36 hr depending on age, crosses blood-brain barrier, 80% of filtered lithium reabsorbed by renal tubules, excreted in urine, crosses placenta, enters breast milk, well absorbed by oral method

INTERACTIONS

Increase: hypothyroid effects—antithyroid agents, calcium iodide, potassium iodide, iodinated glycerol

Increase: effects of neuromuscular blocking agents

Increase: renal clearance—sodium bicarbonate, acetaZOLAMIDE, mannitol, aminophylline

Increase: lithium level—ACE inhibitors

Increase: QT interval—antiarrhythmics, other QT prolongation products

Increase: masking of lithium toxicity—β-blockers used for lithium tremor

Increase: toxicity—indomethacin, diuretics, NSAIDs

Increase: lithium effect/toxicity—carBAMazepine, FLUoxetine, methyldopa, thiazide diuretics, probenecid; monitor drug levels

Decrease: lithium effects—calcium channel blockers

Drug/Herb

• Avoid use with kava, St. John's wort, valerian

Decrease: lithium levels—black/green tea, guarana

Drug/Food

• Significant changes in sodium intake will alter lithium excretion

Decrease: lithium levels—caffeine; adjust dose as needed

Drug/Lab Test

Increase: potassium excretion, urine glucose, blood glucose, protein, BUN

Decrease: VMA, T_3, T_4, ^{131}I

NURSING CONSIDERATIONS

Assess:

• **Mental status:** manic symptoms; mood; behavior before, during treatment

Black Box Warning: Lithium toxicity: diarrhea, vomiting, tremor, twitching, poor coordination, lassitude; **major toxicity,** coarse tremors, severe thirst, tinnitus, dilute urine; serum lithium levels week initially, then q2mo (therapeutic level: 0.5-1.5 mEq/L); toxic level >1.5 mcg/L; the drug has a narrow therapeutic index (NTI), measure level before AM dose

• Weight daily; check for, report edema in legs, ankles, wrists

• **Sodium intake:** decreased sodium intake with decreased fluid intake may lead to lithium retention; increased sodium, fluids may decrease lithium retention

• Skin turgor at least daily

• Urine for albuminuria, glycosuria, uric acid during beginning treatment, q2mo thereafter; specific gravity, any level <1.005 may indicate diabetes insipidus and should be reported to prescriber

• **Thyroid tests (TSH, T4)** baseline and q6mo to 1 yr, hypo/hyperthyroidism may occur

• Neurologic status: LOC, gait, motor reflexes, hand tremors

• ECG in those >50 yr with CV disease; cardiology consult is recommended in those with risk factor; QT prolongation may occur

• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: decrease in excitement, manic phase

Teach patient/family:

• **About the symptoms of minor toxicity:** vomiting, diarrhea, poor coordination, fine motor tremors, weakness, lassitude; major toxicity: coarse tremors, severe thirst, tinnitus, diluted urine; to seek medical care immediately

• To monitor urine specific gravity, emphasize need for follow-up care to determine lithium levels; to monitor lithium levels to ensure effective levels and treatment

• Not to operate machinery until lithium levels are stable

• To use emergency ID with diagnosis, product used

• That beneficial effects may take 1-3 wk

• About products that interact with lithium (provide list); about need for adequate, stable intake of salt and fluids; not to use OTC products unless approved by prescriber

• **Pregnancy/breastfeeding:** that contraception is necessary because lithium may harm fetus; not to breastfeed

TREATMENT OF OVERDOSE:

Induce emesis or lavage, maintain airway, respiratory function; dialysis for severe intoxication

L

lixisenatide (Rx)

(lix′i-sen′a-tide)

Adlyxin

Func. class.: Antidiabetic agent

Chem. class.: GLP-1 receptor agonist

ACTION: An incretin mimetic; a glucagon-like peptide-1 (GLP-1) receptor agonist; binds and activates the GLP-1 receptor. GLP-1 is an important, gut-derived, glucose homeostasis regulator that is released after the oral ingestion of carbohydrates or fats

USES: Treatment of type 2 diabetes mellitus in combination with diet and exercise

CONTRAINDICATIONS: Angioedema

Precautions: Alcoholism, breastfeeding, children, cholelithiasis, diabetic ketoacidosis, gastroparesis, hypoglycemia, pancreatitis, pregnancy, renal failure, renal impairment, risk of serious hypersensitivity reactions or anaphylaxis, type 1

diabetes mellitus

DOSAGE AND ROUTES

• **Adult: SUBCUT** Initially, 10 mcg/day within 1 hr before the morning meal. If a dose is missed, give within 1 hr before the next meal. Continue 10 mcg/day × 14 days; on day 15, increase the dose to the maintenance dose of 20 mcg/day, max 20 mcg/day

Renal dose

• **Adult:** eGFR 60 to 89 mL/min/1.73 m^2: no dosage adjustment needed; eGFR 30 to 59 mL/min/1.73 m^2: no change; monitor closely for adverse reactions; eGFR < 15 mL/min/1.73 m^2: do not use

Available forms: Solution for injection 10 mcg, 20 mcg prefilled pen starter pack, maintenance pack

Administer:

SUBCUT route

• May be used as monotherapy or with other antidiabetic medications. Dose adjustment of metformin or a thiazolidinedione is not usually required. A reduction in the dose of a sulfonylurea may be needed to reduce the risk of hypoglycemia

• Give subcut injection only. Do not give IV/IM

• Visually inspect for particulate matter and discoloration before use; do not use if unusually viscous, cloudy, discolored, or if particles are present

• Available as a prefilled pen. Each pen must be activated before the first use

• Administer daily within 1 hr before the first meal of the day, preferably the same meal each day. If a dose is missed, give within 1 hr before the next meal

• Inject subcut into the thigh, abdomen, or upper arm

• Rotate sites with each injection to prevent lipodystrophy

• **Storage:** Protect pen from light and keep in its original packaging; discard pen 14 days after its first use

SIDE EFFECTS

GI: Nausea, vomiting, diarrhea, constipation, abdominal pain, dyspepsia, pancreatitis (rare)

CNS: Dizziness, headache

MISC: Antibody formation, hypoglycemia, injection site reactions, hypotension; anaphylactoid reaction, bronchospasm, renal failure, laryngeal edema

PHARMACOKINETICS

Eliminated through glomerular filtration and proteolytic degradation, terminal half-life 1-3 hr; peak 1-3.5 hr; elimination prolonged in renal disease, with mild (CCr 60 to 89 mL/min), moderate (CCr 30 to 59 mL/min), and severe renal impairment (CCr 15 to 29 mL/min) was increased by approximately 34%, 69%, and 124%, respectively; use with caution in renal disease

INTERACTIONS

Increase: hypoglycemia—antidiabetes, sulfonylureas

Decrease: effect of hormonal contraceptives, oral antiinfectives, atorvastatin, to be taken 1 hr before

NURSING CONSIDERATIONS

Assess:

• **Diabetes:** fasting blood glucose, A1c level during treatment to determine diabetic control

• **Pancreatitis:** severe abdominal pain with or without nausea and vomiting, product should be discontinued immediately

• **Renal disease:** monitor BUN, creatinine in mild renal disease; do not use in severe renal disease

• Hypoglycemia/hyperglycemia: reaction can occur soon after meals; for severe hypoglycemia, give IV $D_{50}W$, IV dextrose solution

Evaluate:

• Therapeutic response: decreasing polydipsia, polyuria, polyphagia, clear sensorium, improving A1c, weight

Teach patient/family:

• How to prepare and use the pen; include a practice injection

• About the signs and symptoms of hypoglycemia/hyperglycemia and what to do about each; to have emergency glucagon kit available at all times, to carry glucose source (sugar, candy)

• That product must be taken on a continuing basis; not to discontinue without prescriber's approval
• That diabetes is a lifelong condition; that product will not cure condition; to carry emergency ID with condition, products taken, prescriber's phone number and name
• To continue weight control, dietary restrictions, exercise, hygiene
• That regular lab testing and A1c will be necessary
• **Pancreatitis:** to seek medical care immediately if severe abdominal pain occurs with or without nausea, vomiting
• **Pregnancy:** to notify prescriber if pregnant or planning to become pregnant; if taking oral contraceptives, to take at least 1 hr before this product

Iodoxamide ophthalmic

See Appendix B

Iofexidine (Rx)

(loe-FEX-i-deen)

Lucemyra

Func. class.: Opioid withdrawal agent
Chem. class.: Central alpha-2 agonist

ACTION: A central alpha-2 agonist that binds to adrenergic receptors, resulting in a reduction in the release of norepinephrine and a decrease in sympathetic tone

USES: For the mitigation of opioid withdrawal symptoms to facilitate abrupt opioid discontinuation in adults

CONTRAINDICATIONS: Hypersensitivity

Precautions: Abrupt discontinuation, acute MI, alcoholism, bradycardia, breastfeeding, cardiac dysrhythmias, CV disease, children, coadministration with other CNS depressants, coronary artery disease, dehydration, diabetes mellitus, dialysis, driving or operating machinery, electrolyte imbalance, ethanol ingestion, females, geriatric patients, heart failure, hepatic disease, hypertension, hypocalcemia, hypomagnesemia, hypotension, infertility, long QT syndrome, malnutrition, poor metabolizers, pregnancy, renal disease, syncope, thyroid disease

DOSAGE AND ROUTES

• **Adult: PO** Initially, 0.54 mg (3 × 0.18-mg tablets) 4× daily during peak withdrawal symptoms (first 5-7 days after last use of opioid), with dosing based on opiate withdrawal symptoms and tolerability; may use up to 14 days. Space dosing 5-6 hr apart; max 0.72 mg (4 tabs) as a single dose; max 2.88 mg (16 tabs) per day. To discontinue, gradually taper dose over 2-4 days to reduce drug withdrawal symptoms (reduce by 1 tab per dose every 1-2 days)

Available forms: Tabs 0.18 mg

Administer:

• May administer orally without regard to meals

PHARMACOKINETICS

Protein binding 55%, 30% of dose is converted to inactive metabolites during first-pass metabolism by CYP2D6, CYP1A2, and CYP2C19, excretion kidney 15%-20%, half-life 17-22 hr after repeated dosing, peak 3-5 hr

INTERACTIONS

• **Increase:** QT prolongation—type IA, IC, III antidysrhythmics, antihistamines, antidepressants; monitor ECG if used concurrently
• **Increase:** CNS effects and sedation—other CNS depressants; if used concurrently, monitor for increased sedation
• **Increase:** hypotension—antihypertensives; avoid concurrent use if possible
• **Increase:** hypotension, bradycardia—CYP2D6 inhibitors

NURSING CONSIDERATIONS

Assess:

• **QT prolongation:** Monitor ECG in heart failure, bradyarrhythmias, liver or kidney

impairment, or during concurrent use of other medications that lead to QT prolongation

• **Electrolyte imbalances** (hypokalemia, hypomagnesemia) should be corrected before use; monitor electrolytes for changes

• **Somnolence and sedation** may cause impairment of cognitive and motor skills; may be increased when coadministered with other CNS depressants (benzodiazepines, ethanol, and barbiturates)

• **Abrupt discontinuation:** monitor B/P during tapering; a significant increase in B/P may occur with abrupt discontinuation. May also cause diarrhea, insomnia, anxiety, chills, hyperhidrosis, and extremity pain

• **Hepatic disease:** may reduce drug clearance. Dosage reductions are recommended based on degree of hepatic impairment

• **Renal impairment:** may reduce drug clearance. Dosage reductions may be needed based on degree of renal impairment, including renal failure (end-stage renal disease, patients on dialysis); may be used without regard to timing of dialysis

• **Geriatric patients:** caution is recommended when administering to patients over age 65. Dose adjustments may be needed

• **Fertility:** infertility has been noted in some animal studies

• **Pregnancy/breastfeeding:** safety not established. Consider the benefits of breastfeeding, the risk of potential infant drug exposure, and the risk of an untreated or inadequately treated condition

Teach patient/family

• About self-monitoring for hypotension, bradycardia, and related symptoms; that moving from a supine to upright position may increase the risk for hypotension or orthostatic effects

• To stay hydrated; to recognize symptoms of hypotension; if hypotension occurs, to sit or lie down; to carefully rise from a sitting or lying position

• To withhold doses when experiencing hypotension or bradycardia and to contact health care provider for guidance on dose adjustments

• To use caution or avoid performing activities that require mental alertness, such as driving or operating machinery, until effect of product is known

• Not to discontinue without consulting health care provider, taper

• To inform health care provider of other medications being taken, including ethanol ingestion

• That patients who complete opioid discontinuation are at an increased risk of fatal overdose should they resume opioid use

lomitapide (Rx)

(loe-mi′ta-pide)

Juxtapid

Func. class.: Antilipemic

Chem. class.: Microsomal triglyceride transfer protein (MTP) inhibitor

ACTION: Directly binds to and inhibits MTP, which is located in the lumen of the endoplasmic reticulum. MTP inhibition prevents the assembly of apo-B–containing lipoproteins in enterocytes and hepatocytes resulting in reduced production of chylomicrons and VLDL and subsequently reduces plasma LDL-C concentrations

USES: Homozygous familial hypercholesterolemia

CONTRAINDICATIONS Hypersensitivity, pregnancy, breastfeeding

Black Box Warning: Hepatotoxicity, requires an experienced clinician

Precautions: Contraception requirements, dialysis, ethanol ingestion, hepatic disease, lactase deficiency, malabsorption syndrome, pancreatic insufficiency, renal impairment, requires an experienced clinician

DOSAGE AND ROUTES

Adult: PO Initial: 5 mg daily; after ≥2 wk, may increase to 10 mg daily; then ≥4-wk intervals, may increase to 20 mg daily, then to 40 mg daily, max 60 mg/day
Available forms: Capsule 5 mg, 10 mg, 20 mg, 30 mg, 40 mg, 60 mg
Administer:
• Give with water only
• Give ≥2 hr after the evening meal to lessen GI adverse effects
• Avoid grapefruit and grapefruit juice
• Swallow capsules whole (do not open, crush, chew)
• To take supplements of vitamin E 400 IU, linoleic acid 200 mg, ALA 210 mg, EPA 110 mg, DHA 80 mg; take ≥2 hr of product
• Store at 20°C to 25°C (68°F to 77°F); excursions permitted between 15°C and 30°C (59°F and 86°F). Protect from moisture

SIDE EFFECTS

CV: Chest pain, angina pectoris, palpitations
CNS: Fatigue, dizziness, headache
GI: Diarrhea, nausea, dyspepsia, vomiting, abdominal pain, weight loss, abdominal distention, constipation, flatulence, gastroenteritis, liver steatosis, increased LFTs, GERD, tenesmus, bowel urgency, hepatotoxicity
MS: Back pain
RESP: Nasopharyngitis, nasal congestion
MISC: Fever, infection

PHARMACOKINETICS

Onset and duration unknown, peak 6 hr; half-life 40 hr
Interactions
Increase: lomitapide effect—CYP3A4 inhibitors
Increase: myopathy—lovastatin, simvastatin, decrease dose of statin
Increase: substrate level—P-gp substrates, decrease dose of substrate
Increase: hepatotoxicity—acetaminophen, monitor LFTs
Increase: bleeding risk—warfarin, monitor INR
Decrease: lomitapide effect—bile acid sequestrants
Drug/Herb
Increase: lomitapide effect—Ginkgo biloba
Drug/Food
Do not use with grapefruit juice

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Available only through the Juxtapid REMS program at www.Juxtapid.com

Black Box Warning: Hepatotoxicity: Monitor LFTs baseline and periodically, if 3 × ULN, discontinue; contraindicated in **moderate or severe hepatic impairment** (based on Child-Pugh category B or C) or **active hepatic disease**

• Monitor serum alkaline phosphatase, serum bilirubin, serum cholesterol profile baseline and periodically
• **Dialysis:** Do not exceed a dose of lomitapide 40 mg PO
• **Pregnancy/breastfeeding:** Do not use in pregnancy, rule out before starting treatment, if pregnancy occurs, discontinue immediately and enroll in Global Lomitapide Pregnancy Exposure Registry 1-877-902-4099, do not breastfeed
Evaluate:
• Therapeutic response: Reduction in LDL cholesterol
Teach patient/family:
• To notify provider of chest pain, change in heartbeat, flulike symptoms, severe/persistent nausea/vomiting/abdominal pain/diarrhea, dry skin/mouth/eyes, increased thirst, dizziness, confusion
• To notify provider of dark urine, fatigue, lack of appetite, light-colored stools, yellow skin/eyes

• To continue with a low-fat diet and to take product ≥2 hr after evening meal to prevent GI upset
• To not consume more than 1 alcoholic drink per day
• Allergic reaction: Rash, itching; red, swollen, blistered, peeling skin; wheezing; tightness in the chest or throat; trouble breathing, swallowing, talking; swelling of the mouth, face, lips, tongue, throat
• Not to double dose if missed, take at next scheduled time
• **Pregnancy/breastfeeding:** To notify provider if pregnancy is planned or suspected, if using hormonal contraceptives or if breastfeeding. Additional contraceptive measures are required

⚠ HIGH ALERT

lomustine (Rx)

(loe-mus′teen)

Gleostine

Func. class.: Antineoplastic agent, alkylating agent (Nitrosourea)

USES: Treatment of primary and metastatic brain tumors after appropriate surgical and/or radiotherapeutic treatment (in combination with other chemotherapy agents) of Hodgkin lymphoma that has progressed following initial chemotherapy

CONTRAINDICATIONS Hypersensitivity to lomustine or any component

Black Box Warning: Severe leukopenia and/or thrombocytopenia, potential for overdose/poisoning

DOSAGE AND ROUTES

Adult/child: PO: 130 mg/m^2 as a single dose q6wk; reduce dose to 100 mg/m^2 as a single dose q6wk in patients with compromised bone marrow function

Available forms: Capsules 5, 10, 40, 100 mg

lonapegsomatropin-tcgd (Rx)

(loe-na-peg-soe-ma-TROE-pin -tcgd)

Skytrofa

Func. class.: Human growth hormone

USES: Pediatric growth hormone deficiency

DOSAGE AND ROUTES

• **Child ≥1 yr and ≥11 kg: SUBCUT** usually 0.24 mg per kg of body weight injected weekly

Available forms: Injection 3 mg, 3.6 mg, 4.3 mg, 5.2 mg, 6.3 mg, 7.6 mg, 9.1 mg, 11 mg, 13.3 mg

loncastuximab tesirine-lpyl (Rx)

Zynlonta

Func. class.: Antineoplastic-alkylating agent

USES: Relapsed or refractory large B-cell lymphoma

DOSAGE AND ROUTES

• **Adult: IV** 0.15 mg/kg over 30 min on day 1 of each cycle (q3wk) × 2 cycles, then 0.075 mg/kg over 30 min q3wk for subsequent cycles

Available forms: Lyophilized powder for injection; for IV use 10 mgl

loperamide (OTC, Rx)

(loe-per′a-mide)

Diamode, Imodium, Imodium A-D

Func. class.: Antidiarrheal

Chem. class.: Piperidine derivative

Do not confuse:
Loperamide/furosemide

ACTION: Direct action on intestinal muscles to decrease GI peristalsis; reduces volume, increases bulk; electrolytes not lost

USES: Diarrhea (cause undetermined), travelers' diarrhea, chronic diarrhea, to decrease amount of ileostomy discharge

CONTRAINDICATIONS: Hypersensitivity, CDAD, constipation, dysentery, GI bleeding/obstruction/perforation, ileus, vomiting

Black Box Warning: Children, cardiac arrest, torsade de pointes

Precautions: Pregnancy, breastfeeding, children <2 yr, hepatic disease, dehydration, gastroenteritis, toxic megacolon, geriatric patients, severe ulcerative colitis

DOSAGE AND ROUTES

- **Adult: PO** 4 mg, then 2 mg after each loose stool, max 16 mg/day
- **Child 9-11 yr: PO** 2 mg, then 1 mg after each loose stool, max 6 mg/24 hr
- **Child 6-8 yr: PO** 2 mg, then 0.1 mg/kg after each loose stool, max 4 mg/day
- **Child 2-5 yr: PO** 1 mg, then 0.1 mg/kg after each loose stool, max 4 mg/24 hr

Available forms: Caps 2 mg; oral solution 1 mg/5 mL; tabs 2 mg

Administer:

- Do not break, crush, or chew caps
- For 48 hr only
- Do not mix oral sol with other sol

SIDE EFFECTS

CNS: Dizziness, drowsiness, fatigue

GI: *Nausea, dry mouth, vomiting, constipation,* abdominal pain, anorexia, toxic megacolon, bacterial enterocolitis, flatulence

INTEG: Rash

MISC: Hyperglycemia

SYST: Anaphylaxis, angioedema, toxic epidermal necrolysis

PHARMACOKINETICS

PO: Duration 24 hr, protein binding 97%, half-life 9-14 hr, metabolized in liver, excreted in feces as unchanged product, small amount in urine

INTERACTIONS

Increase: CNS depression—alcohol, antihistamines, analgesics, opioids, sedative/hypnotics

Drug/Herb

Increase: CNS depression—chamomile, hops, kava, valerian

NURSING CONSIDERATIONS

Assess:

- **Stools:** volume, color, characteristics, frequency; bowel pattern before product; rebound constipation
- Electrolytes (potassium, sodium, chlorine) if receiving long-term therapy
- Response after 48 hr; if no response, product should be discontinued
- Abdominal distention, toxic megacolon in those with ulcerative colitis
- Dehydration, CNS change in children, hepatic disease
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; breastfeeding is not recommended

Evaluate:

- Therapeutic response: decreased diarrhea (48 hr); decreased chronic diarrhea (10 days)

Teach patient/family:

- To avoid OTC products unless directed by prescriber
- That ileostomy patient may take product for extended time
- Not to operate machinery if drowsiness occurs
- To use hard candy, sips of water for dry mouth
- To notify health care professional if diarrhea continues over 48 hr or 10 days if distention, fever, or abdominal pain occurs

lopinavir/ritonavir (Rx)

(low-pin′ah-veer/ri-toe′na-veer)

Kaletra

Func. class.: Antiretroviral

Chem. class.: Protease inhibitor

Do not confuse:
Kaletra/Keppra

ACTION: Inhibits human immunodeficiency virus (HIV-1) protease and prevents maturation of the infectious virus

USES: HIV-1 in combination with or without other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity to this product or polyoxyethylated castor oil (oral solution), CYP3A4 metabolized products

Precautions: Pregnancy, breastfeeding, hepatic disease, pancreatitis, diabetes, hemophilia, AV block, hypercholesterolemia, immune reconstitution syndrome, neonates, cardiomyopathy, congenital long-QT prolongation, hypokalemia, elderly patients, Graves' disease, polymyositis, Guillain-Barré syndrome, children, HBV/HCV coinfection

DOSAGE AND ROUTES

HIV-1 infection, treatment without efavirenz, nelfinavir, or nevirapine
Adult: PO Twice-daily dosing: Therapy-naive or therapy-experienced: Lopinavir 400 mg/ritonavir 100 mg bid; **once-daily dosing: Therapy-naive or experienced patients with <3 lopinavir resistance-associated substitutions:** Lopinavir 800 mg/ritonavir 200 mg daily; once-daily dosing is not recommended in those receiving efavirenz, fosamprenavir, nevirapine, nelfinavir, carbamazepine, phenobarbital, or phenytoin.

Pregnant women (with no lopinavir resistance–associated amino acid substitutions): PO Lopinavir 400 mg/ritonavir 100 mg bid; once-daily dosing is not recommended. Tablets are recommended; avoid use of the oral solution

Child >6 mo/adolescents:
PO (solutions) 230 mg/57.5 mg per m^2/dose bid

HIV-1 infection with combination therapy with efavirenz, nelfinavir, or nevirapine. Adult: PO Twice-daily dosing: Therapy-naive and therapy-experienced patients: Solution: Lopinavir 520 mg/ritonavir 130 mg (6.5 mL) bid; Tablet: Lopinavir 500 mg/ritonavir 125 mg bid; once-daily dosing: not recommended

Children >6 mo/adolescents: PO (solution) 300 mg/75 mg per m^2/dose bid

HIV-1 infection not receiving concomitant efavirenz, nelfinavir, or nevirapine

Available forms: Oral solution 400 mg lopinavir/100 mg ritonavir/5 mL; tablets 100 mg lopinavir/25 mg ritonavir, 200 mg lopinavir/50 mg ritonavir

Administer:
PO route

- **TAB:** take without regard to food; swallow whole; do not crush, break, chew
- **ORAL SOL:** shake well, use calibrated measuring device
- Drug resistance testing should be done before beginning therapy in antiretroviral-naive patients and before changing therapy for treatment failure

SIDE EFFECTS

CNS: Paresthesia, headache, seizures, fever, dizziness, insomnia, asthenia, intracranial bleeding, encephalopathy

CV: QT, PR interval prolongation, deep vein thrombosis

EENT: Blurred vision, otitis media, tinnitus

GI: Diarrhea, buccal mucosa ulceration, abdominal pain, nausea, taste perversion, dry mouth, vomiting, anorexia
INTEG: Rash
MISC: Asthenia, angioedema, anaphylaxis, Stevens-Johnson syndrome, increased lipids, lipodystrophy
MS: Pain, rhabdomyolysis, myalgias

PHARMACOKINETICS

Well absorbed, 98% protein binding, hepatic metabolism, peak 4 hr, terminal half-life 6 hr

INTERACTIONS

Increase: toxicity—amiodarone, avanafil, azole antifungals, benzodiazepines, buPROPion, cloZAPine, desipramine, dihydroergotamine, encainide, ergotamine, flecainide, HMG-CoA reductase inhibitors, interleukins, meperidine, midazolam, pimozide, piroxicam, propafenone, quiNIDine, ranolazine, rivaroxaban, saquinavir, triazolam, zolpidem
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine, CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide, levomethadyl, CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)
Increase: ritonavir levels—fluconazole
Increase: level of both products—clarithromycin, ddI
Increase: levels of bosentan
Decrease: ritonavir levels—rifamycins, nevirapine, barbiturates, phenytoin, budesonide, predniSONE
Decrease: levels of anticoagulants, atovaquone, divalproex, ethinyl estradiol, lamoTRIgine, phenytoin, sulfamethoxazole, theophylline, voriconazole, zidovudine

Drug/Lab Test

Increase: AST, ALT, CPK, cholesterol, GGT, triglycerides, uric acid, glucose
Decrease: Hct, HB, RBC, neutrophils, WBC

Drug/Herb

Decrease: ritonavir levels—St. John's wort; avoid concurrent use
• Avoid use with red yeast rice, evening primrose oil

NURSING CONSIDERATIONS

Assess:

• **HIV:** viral load, CD4 at baseline, throughout therapy; blood glucose, plasma HIV RNA, serum cholesterol/lipid profile; resistance testing before starting therapy and after treatment failure
• Signs of infection, anemia
• Hepatic studies: ALT, AST baseline and periodically
• Bowel pattern before, during treatment; if severe abdominal pain with bleeding occurs, discontinue product; monitor hydration
• Skin eruptions; rash
• **Rhabdomyolysis:** muscle pain, increased CPK, weakness, swelling of affected muscles, tea-colored dark urine; if these occur and if confirmed by CPK, product should be discontinued
• **QT prolongation:** ECG for QT prolongation, ejection fraction; assess for chest pain, palpitations, dyspnea
• **Serious skin disorders:** Stevens-Johnson syndrome, angioedema, anaphylaxis
• **Pregnancy/breastfeeding:** all pregnant women who experience adverse reactions should have provider report the reactions to Antiretroviral Pregnancy Registry, 800-258-4263; avoid breastfeeding

Evaluate:

• Therapeutic response: improvement in HIV symptoms; improving viral load, CD4+ T cells

Teach patient/family:

• To take as prescribed; if dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose
• That product is not a cure for HIV; that opportunistic infections can continue to be acquired
• That redistribution of body fat or accumulation of body fat may occur

L

• That others can continue to contract HIV from patient
• To avoid OTC, prescription medications, herbs, supplements unless approved by prescriber; not to use St. John's wort because it decreases product's effect; that taking this product with ED drugs may increase adverse reactions
• That regular follow-up exams and blood work will be required
• To report a change in heart rhythm or abnormal heartbeats
• **Pregnancy/breastfeeding:** to use a nonhormonal contraceptive, to notify provider if pregnancy is planned or suspected, avoid breastfeeding

loratadine (OTC)

(lor-a'ti-deen)

Alavert, Childrens Loratadine, Claritin Allergy Childrens, Claritin Childrens, Claritin Reditabs, Claritin, Clear-Atandine, Dimetapp, Triaminic AllerChews

Func. class.: Antihistamine, 2nd generation

Chem. class.: Selective histamine (H_1)-receptor antagonist

Do not confuse:
loratadine/lovastatin/LORazepam/losartan

ACTION: Binds to peripheral histamine receptors, thereby providing antihistamine action without sedation

USES: Seasonal rhinitis, chronic idiopathic urticaria for those ≥2 yr

CONTRAINDICATIONS: Hypersensitivity, acute asthma attacks, lower respiratory tract disease
Precautions: Pregnancy, breastfeeding, increased intraocular pressure, bronchial asthma, hepatic/renal disease

DOSAGE AND ROUTES

• **Adult and child ≥6 yr: PO** 10 mg/day
• **Child 2-5 yr: PO** 5 mg/day

Renal/hepatic dose
• **Adult: PO** CCr <30 mL/min or hepatic disease, 10 mg every other day
• **Child 2-5 yr: PO** GFR <50 mL/min; 5 mg every other day

Available forms: Tabs 10 mg; rapid-disintegrating tabs 10 mg; orally disintegrating tabs 10 mg; syr 1 mg/mL; susp 5 mg/mL, ext rel tab 10 mg

Administer:
• **Rapid-disintegrating tabs** by placing on tongue, to be swallowed after disintegrated with/without water
• Use within 6 mo of opening pouch and immediately after opening blister pack
• On empty stomach daily

Ext Rel Tab
• Do not break, crush, or chew

SIDE EFFECTS

CNS: Sedation (more common with increased doses), headache, fatigue, restlessness
EENT: Dry mouth

PHARMACOKINETICS

Onset 1-3 hr, peak 8-12 hr, duration 24 hr, metabolized in liver to active metabolites, excreted in urine, active metabolite desloratadine half-life 20 hr

INTERACTIONS

Increase: CNS depressant effects—alcohol, antidepressants, other antihistamines, sedative/hypnotics, MAOIs
Increase: loratadine level—cimetidine, ketoconazole, macrolides (clarithromycin, erythromycin)

Drug/Herb
Increase: CNS depression—chamomile, kava, valerian

Drug/Lab Test
False negative: skin allergy tests (discontinue antihistamine 3 days before testing)

NURSING CONSIDERATIONS

Assess:

- **Allergy:** hives, rash, rhinitis; monitor respiratory status
- **Beers:** avoid in older men; may decrease urinary flow and cause urinary retention
- **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding

Evaluate:

- Therapeutic response: absence of running or congested nose, other allergy symptoms

Teach patient/family:

- To avoid driving, other hazardous activities if drowsiness occurs
- To avoid use of other CNS depressants

⚠ HIGH ALERT

loratadine/pseudoephedrine (OTC)

(lor-at′a-deen/soo-doe-e-fedrin)

Claritin-D, Claritin-D 24 hour

Func. class.: Alpha/beta agonist, decongestant, histamine H1 antagonist

USES: Temporary relief of sinus and nasal congestion; runny nose; sneezing; itching of nose or throat and itchy, watery eyes due to common cold, hay fever (allergic rhinitis), or other upper respiratory allergies or sinusitis

CONTRAINDICATIONS Hypersensitivity to loratadine, pseudoephedrine, or any component; within 14 days of MAOI therapy; severe hypertension, coronary heart disease

DOSAGE AND ROUTES

Adult/child ≥12 yr PO: loratadine 5 mg/pseudoephedrine 120 mg per tablet: 1 tablet q12hr (max: 2 tablets/day); loratadine 10 mg/pseudoephedrine 240 mg per tablet: 1 tablet daily (max: 1 tablet/day)

Available forms: Tabs ext rel 5/120, 10/240 mg

⚠ HIGH ALERT

LORazepam (Rx)

(lor-a′ze-pam)

Ativan

Func. class.: Sedative, hypnotic; antianxiety

Chem. class.: Benzodiazepine, short acting

Controlled Substance Schedule IV

Do not confuse:

LORazepam/ALPRAZolam/clonazePAM

ACTION: Potentiates the actions of GABA, especially in the limbic system and the reticular formation

USES: Anxiety, irritability with psychiatric or organic disorders, preoperatively; insomnia; adjunct for endoscopic procedures, status epilepticus, insomnia

Unlabeled uses: Antiemetic before chemotherapy, rectal use, alcohol withdrawal, seizure prophylaxis, agitation, insomnia, sedation maintenance

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity to benzodiazepines, benzyl alcohol; closed-angle glaucoma, psychosis, history of drug abuse, COPD, sleep apnea

Precautions: Children <12 yr, geriatric patients, debilitated patients, renal/hepatic disease, addiction, suicidal ideation, abrupt discontinuation

Black Box Warning: Coadministration with other CNS depressants, abrupt discontinuation, substance abuse

DOSAGE AND ROUTES

Anxiety

- **Adult/adolescent ≥12 yr: PO** 2-3 mg/day in divided doses, max 10 mg/day
- **Geriatric: PO** 1-2 mg/day in divided doses or 0.5-1 mg at bedtime
- **Child <11 yr (unlabeled): PO** 0.025-0.05 mg/kg/dose (max q4hr)

Preoperatively for sedation

• **Adult: IM** 50 mcg/kg 2 hr before surgery; **IV** 44 mcg/kg 15-20 min before surgery, max 2 mg 15-20 min before surgery

• **Child ≥12 yr: IV** 0.05 mg/kg, max 4 mg

Status epilepticus

• **Adult: IM/IV** 4 mg, may repeat after 10-15 min

• **Neonate: IV** 0.05 mg/kg

• **Child: IV** 0.1 mg/kg up to 4 mg/dose; **RECT**(unlabeled) 0.05-0.1 mg × 2; wait 7 min before giving 2nd dose

Insomnia

• **Adult: PO** 2-4 mg at bedtime; only minimally effective after 2 wk continuous therapy

• **Geriatric: PO** 0.5-1 mg initially

Sedation in mechanically ventilated patients (unlabeled)

• **Adult/adolescent: INTERMITTENT IV** 0.044 mg/kg q2-4hr, prn, max 4-mg single dose

• **Adult/adolescent: IV INFUSION** 0.5-8 mg/hr, titrate, use loading dose of 2-4 mg

Alcohol withdrawal (unlabeled)

• **Adult: PO** 2 mg q6hr × 4 doses, then 1 mg q6hr for 8 doses

Available forms: Tabs 0.5, 1, 2 mg; inj 2, 4 mg/mL; oral sol 2 mg/mL

Administer:

PO route

• With food or milk for GI symptoms; crushed if patient is unable to swallow medication whole

• Sugarless gum, hard candy, frequent sips of water for dry mouth

• Give largest dose before bedtime if giving in divided doses

• **Oral solution:** use calibrated dropper; add to food/drink; consume immediately

IM route

• Deep into large muscle mass

• Use this route when IV is not feasible

Direct IV route

• Prepare immediately before use; short stability time

• IV after diluting in equal vol sterile water, 5% dextrose, or 0.9% NaCl for inj; give through Y-tube or 3-way stopcock; give at ≤2 mg/1 min; do not give rapidly

• To reduce amount of benzyl alcohol to a neonate, dilute with preservative-free sterile water injection (0.4 mg/mL) for IV use

Y-site compatibilities: Acetaminophen, acyclovir, albumin, allopurinol, amifostine, amikacin, amoxicillin, amoxicillin/clavulanate, amphotericin B cholesteryl, amsacrine, atenolol, atracurium, bivalirudin, bleomycin, bumetanide, butorphanol, calcium chloride/gluconate, CARBOplatin, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, ceftobiprole, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, cladribine, clindamycin, cloNIDine, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, diltiazem, DOBUTamine, DOCEtaxel, DOPamine, doripenem, DOXOrubicin, DOXOrubicin liposomal, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, eptifibatide, erythromycin, esmolol, etomidate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fosphenytoin, furosemide, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, ifosfamide, inamrinone, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, lidocaine, linezolid, magnesium sulfate, mannitol, mechlorethamine, melphalan, meropenem, metaraminol, methadone, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, micafungin, midazolam, milrinone, minocycline, mitoXANtrone, morphine, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, PENTobarbital, PHENobarbital, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride, propofol, ranitidine,

remifentanil, tacrolimus, teniposide, theophylline, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, TPN, trastuzumab, trimethobenzamide, trimethoprim-sulfamethoxazole, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, zidovudine

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, headache, anxiety, tremors, stimulation, fatigue, depression, insomnia, hallucinations, weakness, unsteadiness
CV: *Orthostatic hypotension,* ECG changes, tachycardia, hypotension, apnea, cardiac arrest (IV, rapid)
EENT: *Blurred vision,* tinnitus, mydriasis
GI: Constipation, dry mouth, nausea, vomiting, anorexia, diarrhea
INTEG: Rash, dermatitis, itching
MISC: Acidosis

PHARMACOKINETICS

Metabolized by liver; excreted by kidneys; crosses placenta, excreted in breast milk; half-life 42 hr (neonates), 10.5 hr (older child), 12 hr (adult), 91% protein bound
PO: Onset 1 hr, peak 2 hr, duration 12-24 hr
IM: Onset 15-30 min, peak 1-1½ hr, duration 6-8 hr
IV: Onset 5 min, peak 1-1½ hr, duration 6-8 hr

INTERACTIONS

Black Box Warning: Increase: LORazepam effects—CNS depressants, opioids, alcohol, disulfiram

Increase: delirium, sedation—cloZAPine
Increase: LORazepam effect of probenecid, valproate reduce dose by 50%
Decrease: LORazepam effects—oral contraceptives; change dose as needed
Drug/Herb
Increase: CNS depression—chamomile, kava, valerian
Drug/Lab Test
Increase: AST, ALT

NURSING CONSIDERATIONS

Assess:
• **Anxiety:** decrease in anxiety; mental status: mood, sensorium, affect, sleeping pattern, drowsiness, dizziness, suicidal tendencies

Black Box Warning: Coadministration with other CNS depressants (especially opioids) should be avoided; if used together, use lower dose

• Renal/hepatic/blood status if receiving high-dose therapy
• **Physical dependency, withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness, tremors, seizures; after long-term, excessive use
• **Beers:** avoid in older adults; may increase cognitive impairment, delirium
• **Pregnancy/breastfeeding:** use only if clearly needed; neonatal withdrawal syndrome may occur; do not breastfeed unless benefits outweigh risk; excreted in breast milk

Evaluate:
• Therapeutic response: decreased anxiety, restlessness, insomnia

Teach patient/family:
• That product may be taken with food
• Not to take more than prescribed amount; may be habit forming
• To avoid OTC preparations (cough, cold, hay fever) unless approved by prescriber
• To avoid driving, activities that require alertness since drowsiness may occur

Black Box Warning: To avoid alcohol, other psychotropic medications, opioids unless directed by prescriber; to notify prescriber immediately of trouble breathing, dizziness, coma, or if no response

• Not to discontinue medication abruptly after long-term use, taper
• To rise slowly because fainting may occur, especially among geriatric patients
• That drowsiness may worsen at beginning of treatment
• To report suicidal ideation

• **Pregnancy/breastfeeding:** not to use in pregnancy or breastfeeding; to use contraception while using this product

TREATMENT OF OVERDOSE:
Lavage, VS, supportive care, flumazenil

⚠ HIGH ALERT

lorlatinib (Rx)
(lor-la′ti-nib)
Lorbrena
Func. class.: Antineoplastic

USES:
Metastatic ALK-positive non–small-cell lung cancer (NSCLC) with disease progression on either alectinib or ceritinib as the first ALK inhibitor for metastatic disease, or disease progression on crizotinib and at least one other ALK inhibitor for metastatic disease

CONTRAINDICATIONS:
Hypersensitivity

DOSAGE AND ROUTES
• **Adult: PO** 100 mg daily until disease progression or unacceptable toxicity
Available forms: Tabs 25, 100 mg

losartan (Rx)
(lo-zar′tan)
Cozaar
Func. class.: Antihypertensive
Chem. class.: Angiotensin II receptor (type AT_1) antagonist

Do not confuse:
losartan/valsartan
Cozaar/Zocor

ACTION:
Blocks the vasoconstrictor and aldosterone-secreting effects of angiotensin II; selectively blocks the binding of angiotensin II to the AT_1 receptor found in tissues

USES:
Hypertension, alone or in combination; nephropathy in type 2 diabetes; proteinuria; stroke prophylaxis for hypertensive patients with left ventricular hypertrophy
Unlabeled uses: Heart failure

CONTRAINDICATIONS:
Hypersensitivity

Black Box Warning: Pregnancy

Precautions: breastfeeding, children, geriatric patients, hypersensitivity to ACE inhibitors, hepatic disease, angioedema, renal artery stenosis, African descent, hyperkalemia, hypotension

DOSAGE AND ROUTES
Hypertension
• **Adult: PO** 50 mg/day alone or 25 mg/day in combination with diuretic; maintenance 25-100 mg/day
• **Child ≥6 yr: PO** 0.7 mg/kg/day, max 50 mg/day
Hypertension with left ventricular hypertrophy to reduce stroke
• **Adult: PO** 50 mg/day; add hydrochlorothiazide 12.5 mg/day and/or increase losartan to 100 mg/day, then increase hydrochlorothiazide to 25 mg/day
Nephropathy in type 2 diabetic patients/proteinuria
• **Adult: PO** 50 mg/day, may increase to 100 mg/day
Heart failure (unlabeled)
• **Adult: PO** 25-50 mg/day initially, then titrate to max 50-150 mg/day maintenance
Hepatic dose/volume depletion
• **Adult: PO** 25 mg/day as starting dose
• **Child: PO** Don't use in eGFR <30 mL/min/1.73 m^2
Available forms: Tabs 25, 50, 100 mg
Administer:
• Without regard to meals
• If product is compounded into suspension, store in refrigerator and shake well before use
• May use alone or in combination

SIDE EFFECTS

CNS: *Dizziness, insomnia,* anxiety, confusion, abnormal dreams, migraine, tremor, vertigo, headache, malaise, depression, fatigue
CV: Angina pectoris, 2nd-degree AV block, cerebrovascular accident, *hypotension,* MI, dysrhythmias
EENT: Blurred vision, burning eyes, conjunctivitis
GI: *Diarrhea, dyspepsia,* anorexia, constipation, dry mouth, flatulence, gastritis, vomiting
GU: Impotence, nocturia, urinary frequency, UTI, renal failure
HEMA: Anemia, thrombocytopenia
INTEG: Alopecia, dermatitis, dry skin, flushing, photosensitivity, rash, pruritus, sweating, angioedema
META: Gout, hyperkalemia, hypoglycemia
MS: Cramps, myalgia, pain, stiffness
RESP: *Cough, upper respiratory infection,* congestion, dyspnea, bronchitis
MISC: Diabetic vascular disease

PHARMACOKINETICS

Peak 1 hr, extensively metabolized, half-life 2 hr, metabolite 6-9 hr, excreted in urine/feces, protein binding 98.7%

INTERACTIONS

Increase: lithium toxicity—lithium; monitor lithium level
Increase: antihypertensive effect—garlic
Increase: hyperkalemia—potassium-sparing diuretics, potassium supplements, ACE inhibitors
Decrease: antihypertensive effect—NSAIDs

Drug/Herb

Decrease: antihypertensive effects—ma huang, black licorice

Drug/Lab Test

Increase: AST, ALT

NURSING CONSIDERATIONS

Assess:
• B/P with position changes, pulse before and periodically during treatment; note rate, rhythm, quality; black patients should use combination therapy for better control of B/P
• Baselines of renal, hepatic, electrolyte studies before therapy begins and periodically thereafter
• Skin turgor, dryness of mucous membranes for hydration status
• Angioedema: facial swelling, dyspnea, wheezing; may occur rapidly; tongue swelling (rare)
• **HF:** jugular venous distention; edema in feet/legs, weight daily
• **Blood dyscrasias:** thrombocytopenia, anemia (rare)

Black Box Warning: Pregnancy/breast-feeding: assess for pregnancy before starting treatment; do not use in pregnancy; do not breastfeed

Evaluate:
• Therapeutic response: decreased B/P, slowing diabetic neuropathy

Teach patient/family:
• To avoid sunlight or to wear sunscreen if in sunlight; that photosensitivity may occur
• To comply with dosage schedule, even if feeling better; not to discontinue abruptly; not to share with others
• To notify prescriber of mouth sores, fever, swelling of hands or feet, irregular heartbeat, chest pain
• That excessive perspiration, dehydration, vomiting, diarrhea may lead to fall in B/P; to consult prescriber if these occur
• That product may cause dizziness, fainting, light-headedness; to avoid hazardous activities until reaction is known
• To rise slowly to sitting or standing position to minimize orthostatic hypotension

Black Box Warning: Pregnancy/breastfeeding: to use contraception while taking this product; not to breastfeed

• To avoid salt substitutes, alcohol, OTC products unless approved by prescriber

losartan/hydrochlorothiazide (Rx)

(loe-SAR-tan/hye-droe-klor-oh-THYE-a-zide)

Hyzaar

Func. class.: Angiotensin II receptor blocker, antihypertensive, diuretic, thiazide

USES: Hypertension

CONTRAINDICATIONS Hypersensitivity to losartan, hydrochlorothiazide, sulfonamide-derived drugs, or any component; use with aliskiren in diabetes mellitus; anuria

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Adult: PO Losartan 50 mg/hydrochlorothiazide 12.5 mg or losartan 100 mg/hydrochlorothiazide 12.5 mg or losartan 100 mg/hydrochlorothiazide 25 mg once daily; adjust dose base on blood pressure response. Max losartan 100 mg/hydrochlorothiazide 25 mg per day

Available forms: Tabs 50 mg/12.5 mg, 100 mg/12.5 mg, 100 mg/25 mg

loteprednol ophthalmic

See Appendix B

lovastatin (Rx)

(loh-vah-stat′in)

Altoprev, Mevacor

Func. class.: Antilipemic

Chem. class.: HMG-CoA reductase inhibitor

Do not confuse:
Mevacor/Benicor

ACTION: Inhibits HMG-CoA reductase enzyme, which reduces cholesterol synthesis

USES: As an adjunct for primary hypercholesterolemia (types IIa, IIb), atherosclerosis; heterozygous familial hypercholesterolemia (adolescents)

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, active hepatic disease

Precautions: Children, past hepatic disease, alcoholism, severe acute infections, trauma, hypotension, uncontrolled seizure disorders, severe metabolic disorders, electrolyte imbalances, visual disorder

DOSAGE AND ROUTES

To prevent/treat CAD, hyperlipidemia

• **Adult: PO** 20 mg/day with evening meal; may increase to 20-80 mg/day in single or divided doses at 4-wk intervals, max 80 mg/day; **EXT REL** 20-60 mg/day at bedtime, max 60 mg/day

Heterozygous familial hypercholesterolemia

• **Adolescent 10-17 yr: PO** 10-40 mg with evening meal

Primary prevention of CV disease

• **Adult 40-75 yr with type 1 or 2 diabetes: PO** 40 mg immediate release daily

Secondary prevention of CV disease

• **Adult >75 yr (not candidate for high-intensity use): PO** 40 mg immediate release daily

Renal dose

• **Adult: PO** CCr <30 mg/min, max 20 mg/day unless titrated

Available forms: Tabs 10, 20, 40 mg; ext rel tab 20, 40, 60 mg

Administer:

• In evening with meal; if dose is increased, take with breakfast and evening meal (immediate release); use at bedtime (extended release)
• Altroprev is not equivalent to Mevacor
• Do not crush, chew ext rel tab
• Store in cool environment in airtight, light-resistant container

SIDE EFFECTS

CNS: *Dizziness, headache, tremor,* insomnia, paresthesia
EENT: *Blurred vision,* lens opacities
GI: Flatus, nausea, constipation, diarrhea, dyspepsia, abdominal pain, heartburn, hepatic dysfunction, vomiting, acid regurgitation, dry mouth, dysgeusia
HEMA: Thrombocytopenia, hemolytic anemia, leukopenia
INTEG: *Rash, pruritus,* photosensitivity
MS: *Muscle cramps, myalgia,* myositis, rhabdomyolysis; leg, shoulder, or localized pain

PHARMACOKINETICS

PO: Peak 2 hr; peak response 4-6 wk, ext rel peak 14 hr; metabolized in liver (metabolites); highly protein bound; excreted in urine 10%, feces 83%; crosses blood-brain barrier, placenta; excreted in breast milk; half-life 1 hr

INTERACTIONS

Increase: myalgia, myositis, rhabdomyolysis—azole antifungals, clarithromycin, clofibrate, cycloSPORINE, danazol, diltiazem, erythromycin, gemfibrozil, niacin, protease inhibitors, quinupristin-dalfopristin, telithromycin, verapamil; avoid concurrent use
Increase: bleeding—warfarin
Increase: lovastatin effects—diltiazem
Decrease: effects of lovastatin—bile acid sequestrants, exenatide, bosentan
Decrease: lovastatin metabolism, avoid combining with >40 mg/day amiodarone

Drug/Herb
Decrease: effect—pectin, St. John's wort
Increase: adverse reactions—red yeast rice

Drug/Food
• Possible toxicity: grapefruit juice
Increase: levels of lovastatin with food; must be taken with food
Decrease: absorption—oat bran

Drug/Lab Test
Increase: CK, LFTs
Interference: T_3, T_4, T_7, TSH

NURSING CONSIDERATIONS

Assess:
• **Diet:** obtain diet history including fat, cholesterol in diet
• Fasting cholesterol, LDL, HDL, triglycerides periodically during treatment
• Hepatic studies at initiation, 6 wk, 12 wk after initiation or change in dose, periodically thereafter; AST, ALT, LFTs may increase
• Renal function in patients with compromised renal system: BUN, creatinine, I&O ratio
• Pregnancy/breastfeeding: not to be used in pregnancy, breastfeeding

Evaluate:
• Therapeutic response: decreased triglycerides, sLDL, total cholesterol; increased HDL; slowing CAD

Teach patient/family:
• That blood work, ophthalmic exam will be necessary during treatment
• To report blurred vision, severe GI symptoms, dizziness, headache, muscle pain, weakness
• To use sunscreen or to stay out of the sun to prevent photosensitivity
• That previously prescribed regimen will continue: low-cholesterol diet, exercise program, smoking cessation
• That product should be taken with food; not to crush, chew ext rel product; to take immediate-release product in the AM, PM if used bid; to take ext rel product at bedtime
• Not to use with grapefruit juice, large amounts of alcohol
• To protect product from light and moisture

• **Pregnancy/breastfeeding:** to report suspected pregnancy; not to breastfeed

loxapine (Rx)

(lox'a-peen)
Adasuve, Loxapac, Xylac
Func. class.: Antipsychotic, neuroleptic
Chem. class.: Dibenzoxazepine

USES: Schizophrenia, bipolar disorder
Unlabeled uses: Anxiety

CONTRAINDICATIONS: *Hypersensitivity, coma*

Black Box Warning: Acute bronchospasm, asthma, COPD, emphysema, dementia, requires a specialized care setting

DOSAGE AND ROUTES

• **Adult: PO** 10 mg bid-qid initially, may be rapidly increased depending on severity of condition, maintenance 60-100 mg/day; inhalation powder 10 mg as a single dose in 24 hr; max 250 mg/day
• **Geriatric: PO** 5-10 mg daily-bid, increase q4-7days by 5-10 mg, max 250 mg/day

Available forms: Powder for inhalation 10 mg; capsule 5, 10, 25, 50 mg

lubiprostone (Rx)

(loo-bi-pros′tone)
Amitiza
Func. class.: GI agent, miscellaneous

USES: Chronic idiopathic constipation, IBS with constipation, opioid-induced constipation

CONTRAINDICATIONS

Hypersensitivity, known or suspected mechanical GI obstruction

DOSAGE AND ROUTES

Chronic idiopathic constipation
Adult: PO 24 mcg bid
IBS with constipation
Adult: Females ≥18 yr: **PO** 8 mcg bid
Opioid-induced constipation
Adult: PO 24 mcg bid
Available forms: Capsules 8, 24 mcg

luliconazole topical

See Appendix B

lumacaftor/ivacaftor (Rx)

(loo-ma-kaf′tor/eye-va-kaf′tor)
Orkambi
Func. class.: Cystic fibrosis agent

USES: Cystic fibrosis

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult/child ≥12 yr: PO Lumacaftor 400 mg/ivacaftor 250 mg q12h
Child ≥2 yr to 5 yr: PO: Weighing <14 kg: Lumacaftor 100 mg/ivacaftor 125-mg granule packet: 1 packet q12h; **weighing ≥14 kg:** Lumacaftor 150 mg/ivacaftor 188-mg granule **packet:** 1 packet q12h
Child ≥6 yr to 11 yr: PO: Lumacaftor 100 mg/ivacaftor 125-mg tablets: 2 tablets q12h (lumacaftor 200 mg/ivacaftor 250 mg per dose)
Available forms: Tabs 100 mg/125 mg, 200 mg/125 mg; granules 100 mg/125 mg, 150 mg/188 mg

lumateperone (Rx)

(Luma-tep′-erone)
Caplyta
Func. class.: Antipsychotic

USES: Schizophrenia, bipolar depression

CONTRAINDICATIONS

Hypersensitivity

Black Box Warning: Dementia-related psychosis children, suicidal ideation

DOSAGE AND ROUTES

• **Adult: PO** 42 mg/day
Available forms: Capsules 42 mg

lumasiran (Rx)

(loo′ma-sir′an)
Oxlumo
Func. class.: Metabolic disorder agent

USES: Primary hyperoxaluria type 1

CONTRAINDICATIONS:

Hypersensitivity, breastfeeding, pregnancy

DOSAGE AND ROUTES

Adults: SUBCUT 3 mg/kg/dose monthly × 3 doses, then 3 mg/kg/dose q3mo
Child/adolescent ≥20 kg: SUBCUT 3 mg/kg/dose monthly × 3 doses, then 3 mg/kg/dose q3mo
Infant/child 10-19 kg: SUBCUT 6 mg/kg/dose monthly × 3 doses, then 6 mg/kg/dose q3mo
Infant/child <10 kg: SUBCUT 6 mg/kg/dose monthly × 3 doses, then 3 mg/kg/dose monthly
Neonates: SUBCUT 6 mg/kg/dose monthly × 3 doses, then 3 mg/kg/dose monthly

lurasidone (Rx)

(loo-ras′i-done)

Latuda

Func. class.: Atypical antipsychotic
Chem. class.: Dopamine-serotonin receptor antagonist derivative

ACTION: May modulate central DOPaminergic and serotonergic activity; high affinity for DOPamine-D2 receptors, serotonin 5-HT2A receptors; partial agonist at serotonin 5-HT1A receptor

USES: Schizophrenia, depression associated with bipolar disorder I

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, geriatric patients, abrupt discontinuation, ambient temperature increase, breast cancer, cardiac disease, dehydration, diabetes, ketoacidosis, driving, operating machinery, dysphagia, heart failure, hematologic/hepatic/renal disease, hypotension, hypovolemia, MI, infertility, obesity, Parkinson's disease, seizures, strenuous exercise, stroke, substance abuse, syncope, tardive dyskinesia

Black Box Warning: Dementia: antipsychotics (e.g., lurasidone) not approved for treatment of dementia-related psychosis in geriatric patients; may increase risk of death in this population, children, suicidal ideation

DOSAGE AND ROUTES

Schizophrenia
• **Adult: PO** 40 mg/day, range 40-160 mg/day; for those receiving CYP3A4 inhibitors max 80 mg/day, do not use with strong CYP3A4 inducers/inhibitors
• **Child 13-17 yr: PO** 40 mg daily, may increase to max 80 mg daily
Bipolar Disorder I
• **Adult: PO** 20 mg daily, max 120 mg/day
• Child 10-17 PO 20 mg daily, max 80 mg daily
Hepatic/renal dose
• **Adult: PO** CCr <50 mL/min, hepatic disease CTP A start dose 20 mg/day, max 80 mg/day; hepatic disease CTP B start dose 20 mg/day, max 40 mg/day
Available forms: Tabs 20, 40, 80, 120 mg
Administer:
• Give with meal of ≥350 calories

SIDE EFFECTS

CNS: Agitation, akathisia, anxiety, dizziness, drowsiness, fatigue, hyperthermia, insomnia, dystonic reactions, pseudoparkinsonism, restlessness, seizures, suicidal ideation, syncope, tardive dyskinesia, vertigo
CV: Angina, AV block, bradycardia, hypertension, orthostatic hypotension, sinus tachycardia, stroke
EENT: Blurred vision
ENDO: Diabetes mellitus, ketoacidosis, hyperglycemia, hyperprolactinemia
GI: Abdominal pain, diarrhea, dyspepsia, nausea, vomiting, gastritis, weight gain/loss
GU: Amenorrhea, breast enlargement, dysmenorrhea, impotence, dysuria, renal failure
HEMA: Agranulocytosis, anemia, leukopenia, neutropenia
INTEG: Pruritus, rash
MS: Back pain, dysarthria; rhabdomyolysis (rare)
SYST: Angioedema

PHARMACOKINETICS

99% protein binding; excreted 80% in feces, 9% in urine; elimination half-life

18 hr; 9%-19% absorbed; peak 1-3 hr, steady-state 7 days

INTERACTIONS

- Do not use with metoclopramide

Increase: hypertensive risk—antihypertensive

Increase: lurasidone effect—strong CYP3A4 inhibitors; do not use concurrently

Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs

Increase: sedation, respiratory depression—other CNS depressants, alcohol, opioids; avoid using together

Decrease: lurasidone effect—CYP3A4 inducers (carbamazapine, rifampin); do not use concurrently

Drug/Herb

Decrease: product effect—St. John's wort; do not use together

Drug/Food

- Do not use with grapefruit, grapefruit juice

NURSING CONSIDERATIONS

Assess:

- **Schizophrenia:** hallucinations, delusions, agitation, social withdrawal; monitor orientation, behavior, mood before and periodically during therapy
- **Temperature regulation:** avoid strenuous activities, excessive heat, dehydration, concomitant anticholinergic medications; risk of hyperthermia
- **Coadministration with other CNS depressants (opioids):** if given together, assess for excessive sedation, slow breathing; avoid concurrent use
- AIMS assessment, thyroid function tests, LFTs, lipid panel, electrolytes
- **EPS:** restlessness, difficulty speaking, loss of balance, pill rolling, masklike face, shuffling gait, rigidity, tremors, muscle spasms; monitor before and periodically during therapy; report tardive dyskinesia immediately

Black Box Warning: Dementia: this product is not approved for geriatric patients with dementia-related psychosis

Black Box Warning: Suicidal ideation/children: avoid use in children; there may be increased risk of suicide in young adults (<24 yr) and children; assess for worsening depression, suicidal thoughts/behaviors; product should be dispensed in small quantities

- Weight gain, hyperglycemia, metabolic changes in diabetes
- **Beers:** avoid in older adults except for schizophrenia, bipolar disorder, or short-term use as an antiemetic for chemotherapy; increased risk of stroke, cognitive decline
- **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding; excretion is unknown

Evaluate:

- Therapeutic response: decreasing hallucinations, delusions, agitation, social withdrawal

Teach patient/family:

- About reason for treatment, expected results; not to use grapefruit juice, alcohol
- That lab work will be needed regularly
- To avoid hazardous activities until response is known
- To avoid OTC products unless approved by prescriber; serious reactions may occur
- To report fast heartbeat, extra beats, trouble breathing, sweating, stiffness, thirst, urinating more than usual
- To report EPS symptoms, blood dyscrasias: sore throat, fever, unusual bleeding/bruising

Black Box Warning: Suicidal ideation/children: to be aware of and report immediately any worsening depression, suicidal thoughts/behaviors, hostility, irritability

lurbinectedin (Rx)

(loor′bin-ek′te-din)

Zepzelca

Func. class.: Antineoplastic, alkylating agent

USES: Treatment of metastatic small cell lung cancer with disease progression after platinum-type chemotherapy

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

Small cell lung cancer, metastatic

Adult: IV: 3.2 mg/m^2 q21days until disease progression/unacceptable toxicity

luspatercept-aamt (Rx)

(lus-pat′er-sept)

Reblozyl

Func. class.: Hematopoietic

USES: Anemia in beta thalassemia

DOSAGE AND ROUTES

Anemia in beta thalassemia that requires regular RBC transfusions:

- **Adults: SUBCUT** 1 mg/kg q3wk

Available forms: Injection 25-, 75-mg single-use vials

lusutrombopag (Rx)

(lew-soo-trom′bow-pag)

Mulpleta

Func. class.: Antihemorrhagic

USES: Thrombocytopenia in chronic hepatic disease in patients who are scheduled to undergo a procedure

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

- **Adult: PO** 3 mg daily × 7 days beginning 8 to 14 days before a scheduled procedure. Schedule the procedure for 2 to 8 days after the last dose

Available forms: Tabs 3 mg

lymphocyte immune globulin (Rx)

Atgam

Func. class.: Immune globulin

USES: Treatment of moderate-to-severe aplastic anemia in those not considered suitable for bone marrow transplantation

CONTRAINDICATIONS: Hypersensitivity to this product or any other equine gamma globulin preparation

Black Box Warning: Anaphylaxis

DOSAGE AND ROUTES

Adult/child: IV: 10 to 20 mg/kg daily for 8 to 14 days, may administer every other day for 7 more doses for a total of 21 doses in 28 days

Available forms: Inj 50 mg/5 mL ampule

mafenide topical
See Appendix B

MAGNESIUM SALTS

magnesium chloride (Rx)
(12% mg, 9.8 Eq mg/g)
Chloromag, Slo-mag
magnesium citrate (OTC)
(16.2% mg, 4.4 mEq mg/g)
Citrate of magnesia, Citroma, Citromag ✱
magnesium gluconate (OTC)
(5.4% mg, 4.4 mEq mg/g)
Magtrate, Magonate
magnesium oxide (OTC)
(60.3% mg, 49.6 mEq mg/g)
Mag-Ox 400, Uro-Mag
magnesium hydroxide (OTC)
(41.7% mg, 34.3 mEq mg/g)
Dulcolax magnesium tablets, MOM, Phillips' Milk of Magnesia

⚠ HIGH ALERT

magnesium sulfate (Rx)
(9.9% mg, 8.1 mEq mg/g)
Func. class.: Electrolyte; anticonvulsant; saline laxative, antacid

ACTION: Increases osmotic pressure, draws fluid into colon, neutralizes HCl

USES: Constipation, dyspepsia; bowel preparation before surgery or exam; anticonvulsant for preeclampsia, eclampsia (magnesium sulfate); electrolyte; cardiac glycoside–induced arrhythmias, nutritional supplement

CONTRAINDICATIONS: Hypersensitivity, abdominal pain, nausea/vomiting, obstruction, acute surgical abdomen, rectal bleeding, heart block, myocardial damage
Precautions: Pregnancy (magnesium sulfate), renal/cardiac disease

DOSAGE AND ROUTES

Laxative
• **Adult: PO** (milk of magnesia) 15-60 mL at bedtime
• **Adult/child >12 yr: PO** (magnesium sulfate) 15 g in 8 oz water; **PO** (concentrated milk of magnesia) 5-30 mL; **PO** (magnesium citrate) 5-10 oz at bedtime
• **Child 2-6 yr: PO** (milk of magnesia) 5-15 mL/day

Prevention of magnesium deficiency (mg of magnesium)
• **Adult/child ≥10 yr: PO** (male) 350-400 mg/day; (female) 280-300 mg/day; (breastfeeding) 335-350 mg/day; (pregnancy) 320 mg/day
• **Child 8-10 yr: PO** 170 mg/day
• **Child 4-7 yr: PO** 120 mg/day

Magnesium sulfate deficiency (mg of magnesium)
• **Adult: PO** 200-400 mg in divided doses tid-qid; **IM** 1 g q6hr × 4 doses; **IV** 5 g (severe)
• **Child 6-12 yr: PO** 3-6 mg/kg/day in divided doses tid-qid

Preeclampsia/eclampsia (magnesium sulfate)
• **Adult: IM/IV** 4-5 g IV infusion; with 5 g **IM** in each gluteus, then 5 g q4hr or 4 g **IV INFUSION,** then 1-3 g/hr **CONT INFUSION,** max 30-40 g/24 hr or 20 g/48 hr in severe renal disease

Available forms: Chloride: sus rel tabs 535 mg (64 mg Mg); enteric tabs 833 mg (100 mg Mg); **citrate:** oral sol 240-, 296-, 300-mL bottles (77 mEq/100 mL); **gluconate:** tabs 500 mg; liquid 54 mg/5 mL; **oxide:** tabs 400 mg; caps 140 mg; **hydroxide:** liq 400 mg/5 mL; concentration liq 800 mg/5 mL; chew tabs 300, 600

mg; **sulfate:** 500 mg/mL; premixed infusion 1 g/100 mL, 2 g/100 mL, 4 g/50 mL, 4 g/100 mL, 20 g/500 mL, 40 g/1000 mL

Administer:

PO route

- With 8 oz water
- Refrigerate magnesium citrate before giving
- Shake susp before using as antacid at least 2 hr after meals
- Tablets should be chewed thoroughly before patient swallows; give 4 oz of water afterward
- **Laxative:** give on empty stomach with full glass of liquid, do not give at bedtime

IM route (magnesium sulfate)

- Give deeply in gluteal site

IV route (magnesium sulfate)

- Only when calcium gluconate is available for magnesium toxicity

Direct IV route

- Dilute 50% sol to ≤20%, give at ≤150 mg/min

Continuous IV INFUSION route

- May dilute to 20% sol, infuse over 3 hr
- IV at less than 125 mg/kg/hr; circulatory collapse may occur; use INFUSION pump

Y-site compatibilities: Acyclovir, aldesleukin, alemtuzumab, alfentanil, amifostine, amikacin, aminocaproic acid, argatroban, arsenic trioxide, ascorbic acid injection, asparaginase, atenolol, atosiban, atracurium, atropine, azithromycin, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium gluconate, cangrelor, CARBOplatin, carmustine, caspofungin, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cephapirin, chloramphenicol, chlorproMAZINE, cimetidine, cisatracurium, CISplatin, clindamycin, cloNIDine, codeine, cyanocobalamin, cyclophosphamide, cytarabine, DACTINomycin, DAPTOmycin, DAUNOrubicin liposome, DAUNOrubicin, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, dimenhyDRINATE, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium chloride, DOXOrubicin liposomal, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epoetin alfa, eptifibatide, ertapenem, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid (as sodium salt), foscarnet, gallium, gatifloxacin, gemcitabine, gemtuzumab, gentamicin, glycopyrrolate, granisetron, heparin, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, insulin (regular), irinotecan, isoproterenol, kanamycin, ketamine, ketorolac, labetalol, lactated Ringer's injection, lepirudin, leucovorin, lidocaine, linezolid, LORazepam, mannitol, mechlorethamine, mesna, metaraminol, methotrexate, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, micafungin, midazolam, milrinone, minocycline, mitoMYcin, mitoXANTRONE, mivacurium, morphine, moxifloxacin, multiple vitamins injection, mycophenolate mofetil, nafcillin, nalbuphine, nesiritide, netilmicin, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, piperacillin, piperacillin tazobactam, polymyxin B, potassium acetate/chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, Ringer's injection, riTUXimab, rocuronium, sargramostim, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, telavancin, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, TNA (3-in-1), tobramycin, tolazoline, topotecan, TPN (2-in-1), trastuzumab, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, vitamin B complex with C, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: Muscle weakness, flushing, sweating, confusion, sedation, depressed reflexes, flaccid paralysis, hypothermia
CV: Hypotension, heart block, circulatory collapse, vasodilation
GI: *Nausea, vomiting, anorexia, cramps,* diarrhea
HEMA: Prolonged bleeding time
META: Electrolyte, fluid imbalances
RESP: Respiratory depression/paralysis

PHARMACOKINETICS

PO: Onset 1-2 hr
IM: Onset 1 hr, duration 4 hr
IV: Duration ½ hr
Excreted by kidney, effective anticonvulsant serum levels 2.5-7.5 mEq/L

INTERACTIONS

Increase: effect of neuromuscular blockers
Increase: hypotension—antihypertensives, calcium channel blockers
Decrease: absorption of tetracyclines, fluoroquinolones, nitrofurantoin
Decrease: effect of digoxin

NURSING CONSIDERATIONS

Assess:
• **Laxative:** cause of constipation; lack of fluids, bulk, exercise; cramping, rectal bleeding, nausea, vomiting; product should be discontinued
• **Eclampsia:** seizure precautions, B/P, ECG (magnesium sulfate); magnesium toxicity: thirst, confusion, decrease in reflexes; I&O ratio; check for decrease in urinary output
• **Pregnancy/breastfeeding:** use only if clearly needed (chloride), contraindicated in labor, toxemia during 2 hr prior to delivery, appears in breast milk
Evaluate:
• Therapeutic response: decreased constipation, absence of seizures (eclampsia), normal serum calcium levels
Teach patient/family:
• Not to use laxatives for long-term therapy because bowel tone will be lost
• That chilling improves taste of magnesium citrate
• To shake suspension well
• Not to give at bedtime as a laxative, may interfere with sleep; that milk of magnesia is usually given at bedtime
• To give citrus fruit after administering to counteract unpleasant taste
• About reason for product, expected results

mannitol (Rx)

(man'i-tole)
Osmitrol, Resectisol
Func. class.: Diuretic, osmotic; GU irrigant
Chem. class.: Hexahydric alcohol

ACTION: Acts by increasing osmolarity of glomerular filtrate, which inhibits reabsorption of water and electrolytes and increases urinary output

USES: Edema; promotion of systemic diuresis in cerebral edema; decrease in intraocular/intracranial pressure; improved renal function in acute renal failure, chemical poisoning, urinary bladder irrigation, kidney transplant

CONTRAINDICATIONS: Active intracranial bleeding, hypersensitivity, anuria, severe pulmonary congestion, edema, severe dehydration, progressive heart/renal failure, acute MI, aneurysm, stroke
Precautions: Pregnancy, breastfeeding, geriatric patients, dehydration, severe renal disease, HF, electrolyte imbalances

Black Box Warning: Acute bronchospasm (inhalation test kit), asthma

DOSAGE AND ROUTES

Test dose: Administer a test dose to patients with marked oliguria or suspected inadequate renal function to establish renal response before therapy is initiated.

A response is considered adequate if at least 30-50 mL of urine per hour is excreted over the next 2-3 hr
If an adequate response is not attained, a second test dose may be given
If a satisfactory response is not obtained after the second test dose, reevaluate patient, and mannitol should not be used
Rate of administration: Test dose in adults and children >12 yr: Infuse over a period of 3-5 min to produce urine flow of ≥30-50 mL/hr
Treatment of oliguria in adults: Infuse over 90 min to several hours
Cerebral or ocular edema in children >12 yr: Usually infuse over 30-60 min
Reduction of intracranial or IOP in adults: Usually infuse over 30-60 min
Edema and ascites in adults and children >12 yr: Has been infused over 2-6 hr
Transurethral irrigation: Sorbitol-mannitol irrigation solution is for urologic irrigation only; do *not* use for injection
Administer only by transurethral instillation using appropriate and disposable urologic instrumentation
Placing the flexible irrigation container >60 cm above the operating table may increase intravascular absorption of irrigation solution

Oliguric acute renal failure
Test dose: Children >12 yr: IV 0.2 g/kg or 6 g/m^2 as a single dose
Therapeutic purposes: Children >12 yr: IV 2 g/kg or 60 g/m^2
Cerebral or ocular edema: Children >12 yr: IV 2 g/kg or 60 g/m^2 administered as a 15% or 20% solution
Urinary excretion of toxins: Children >12 yr: IV 2 g/kg or 60 g/m^2 administered as a 5% or 10% solution as needed
Edema and ascites: Children >12 yr: IV 2 g/kg or 60 g/m^2 administered as a 15% or 20% solution
General dosage: Adult/child ≥12 yr: IV 20-100 g 25% solution q24h
Test dose: Adult: IV 0.2 g/kg or 12.5 g infused as a 15% or 20% solution (usually 100 or 75 mL of a 15% or 20% solution, respectively)
Oliguric acute renal failure—prevention: Adult: IV 50-100 g as a 5%, 10%, or 15% solution. Usually, a concentrated solution is given and then followed by a 5% or 10% solution
Treatment of oliguria: Adult: IV 100 g infused as a 15% or 20% solution
Management of nephrotoxicity associated with amphotericin B: Adult: IV 12.5 g given immediately prior to and after each dose of amphotericin B
Reduction of intracranial pressure (ICP): Adult: IV 0.25 g/kg given q6-8h or 1.5-2 g/kg infused as a 15%, 20%, or 25% solution
Reduction of intraocular pressure (IOP): Adult: IV 1.5-2 g/kg infused as a 15%, 20%, or 25% solution
Urinary excretion of toxins: Adult: IV Maintain a urinary output of >100 mL/hr, but preferably 500 mL/hr, and a positive fluid balance of 1-2 L; initially, 25 g, followed by infusion of a solution at a rate that will maintain a urinary output of ≥100 mL/hr
Transurethral prostatic resection
Urogenital irrigation Administer a sufficient volume of sorbitol-mannitol irrigation solution; volume determined at the discretion of clinician
Hyperuricemia (unlabeled): Adult: IV 50 g/m^2 per 24 hr
Available forms: Inj 5%, 10%, 15%, 20%, 25%; GU irrigation: 5%; inhalation capsule challenge kit
Administer:
Intermittent/continuous IV route
- Precipitate may occur with PVC
- Change IV set q24hr
- May warm solution to dissolve crystals
- In 15%-25% sol with filter; rapid infusion may worsen HF; warm in hot water, shake to dissolve, use in-line filter 0.2-0.5 micron; do not give as direct injection; to redissolve, run bottle under hot water and shake vigorously; cool to body temperature before using

• Run at 30-50 mL/hr in oliguria; 30-60 min in ICP; increased over 30 min in intraocular pressure; 60-90 min after surgery
• Give 20 mEq NaCL/L of product solution if blood is given concurrently
• Assess site for pain, redness, inflammation often during infusion

SIDE EFFECTS

CNS: *Dizziness, headache,* confusion
CV: Edema, thrombophlebitis, hypo/hypertension, tachycardia, angina-like chest pains, fever, chills, HF, circulatory overload
ELECT: Fluid, electrolyte imbalances, electrolyte loss, dehydration, hypo/hyperkalemia
GI: *Nausea, vomiting,* dry mouth
GU: Marked diuresis, urinary retention, thirst
INTEG: Injection-site reaction

PHARMACOKINETICS

IV: Onset 1-3 hr for diuresis, ½-1 hr for intraocular pressure, 15 min for cerebrospinal fluid; duration 4-8 hr for intraocular pressure, 3-8 hr for cerebrospinal fluid; excreted in urine; half-life 100 min

INTERACTIONS

Increase: elimination of mannitol—lithium; monitor lithium level
Increase: excretion of imipramine
Increase: hypokalemia—cardiac glycosides
Increase or Decrease: sodium, potassium, magnesium
Drug/Lab Test
Interference: inorganic phosphorus, ethylene glycol

NURSING CONSIDERATIONS

Assess:
• Monitor I&O, B/P, pulse hourly; report decreasing urine output; monitor weight, **electrolytes:** potassium, sodium, chloride daily; BUN, serum creatinine daily, blood pH, PAP, CVP, ABGs, CBC
• Use urinary catheter in those who are comatose; I&O must be precise
• **Metabolic acidosis:** drowsiness, restlessness
• **Hypokalemia:** postural hypotension, malaise, fatigue, tachycardia, leg cramps, weakness, or hyperkalemia
• Rashes, temperature daily
• **CNS toxicity:** Confusion, lethargy, coma; risk factors: hyponatremia, impaired renal function, hyperosmolarity, high mannitol level
• **Fluid shift/dehydration:** Hydration including skin turgor, thirst, dry mucous membranes; provide adequate fluids, mouth care frequently; assess for HF, fluid electrolyte shifts, circulatory overload, (dyspnea, respiratory congestion, dry mouth)
• Blurred vision, pain in eyes before, during treatment **(increased intraocular pressure);** neurologic checks, intracranial pressure during treatment **(increased intracranial pressure)**
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding, unknown if excreted in breast milk

Black Box Warning: Bronchospasm/asthma (inhalation test kit): test for bronchial hyperresponsiveness should not be performed in any person with asthma or baseline pulmonary function test FEV1 <1-1.5 liters or <70% of predicted values

• **Beers:** use with caution in older adults; may cause or exacerbate SIADH

Evaluate:
• Therapeutic response: improvement in edema of feet, legs, sacral area daily if medication being used with HF; decreased intraocular pressure, prevention of hypokalemia, increased excretion of toxic substances; decreased ICP

Teach patient/family:
• To rise slowly from lying or sitting position

• About the reason for, method of treatment
• To report signs of electrolyte imbalance, confusion, pain at injection site, hearing loss, blurred vision

TREATMENT OF OVERDOSE: Discontinue infusion; correct fluid, electrolyte imbalances; hemodialysis; monitor hydration, CV status, renal function including output/serum creatinine

⚠ HIGH ALERT

maraviroc (Rx)

(mah-rav′er-rock)

Celsentri 🍁, Selzentry

Func. class.: Antiretroviral

Chem. class.: Fusion inhibitor, CCR5-receptor antagonist

ACTION: Interferes with entry into HIV-1 by inhibiting the fusion of the virus and the cell membrane

USES: CCR5-tropic HIV in combination with other antiretroviral agents for treating experienced patients

CONTRAINDICATIONS: Hypersensitivity, dialysis, renal impairment

Precautions: Pregnancy, Asian patients, breastfeeding, renal/hepatic/cardiac disease, electrolyte imbalance, dehydration, immune reconstitution syndrome, infection, MI, orthostatic hypotension, children, geriatric patients, Graves' disease, Guillain-Barré syndrome, polymyositis, fever, serious rash

Black Box Warning: Hepatotoxicity

DOSAGE AND ROUTES

Those not taking CYP3A inhibitors/inducers:

Adult/adolescent: PO 300 mg bid

Those taking CYP3A4 inhibitors with/without a CYP3A inducer

• **Adult/adolescent ≥16 yr: PO** 150 mg bid

Those taking CYP3A4 inducers without a strong CYP3A inhibitor

• **Adult/adolescent ≥16 yr: PO** 600 mg bid

Available forms: Tabs 25, 75, 150, 300 mg; oral solution 20 mg/mL

Administer:

• May give without regard to meals, with 8 oz water; swallow whole; do not crush, chew, break
• Do not double missed dose, take next dose as soon as remembered
• Store at room temperature

SIDE EFFECTS

CV: MI, cardiac ischemia, orthostatic hypotension

CNS: Dizziness, depression, viral meningitis, disturbances in consciousness, peripheral neuropathy, paresthesia, dysesthesia, fever

EENT: Gingival hyperplasia, visual changes

GI: Diarrhea, constipation, dyspepsia, CDAD, hepatotoxicity

INTEG: Rash, urticaria, pruritus, folliculitis

MS: Joint pain, leg pain, muscle cramps

RESP: Cough, upper respiratory tract infection, sinusitis, bronchitis, pneumonia, bronchospasm, obstruction, dyspnea

SYST: Herpes virus, lipodystrophy, malignancy

PHARMACOKINETICS

Metabolized by P450 system; CYP3A metabolism; excreted 20% urine, 76% feces; protein binding 76%; terminal half-life 14-18 hr

INTERACTIONS

Increase: maraviroc levels—CYP3A inhibitors (amiodarone, aprepitant, chloramphenicol, clarithromycin, conivaptan, cycloSPORINE, dalfopristin, danazol, diltiaZEM, erythromycin, estradiol, fluconazole, fluvoxaMINE, imatinib, isoniazid, itraconazole, ketoconazole, miconazole, nefazodone, niCARdipine, propoxyphene, RU-486, tamoxifen, telithromycin, troleandomycin, verapamil, voriconazole, zafirlukast); reduce dose

Decrease: maraviroc levels—CYP3A4 inducers (efavirenz, aminoglutethimide, barbiturates, bexarotene, bosentan, carBAMazepine, dexamethasone, griseofulvin, modafinil, nafcillin, OXcarbazepine, phenytoin, fosphenytoin, rifabutin, rifAMPin, rifapentine, topiramate, tipranavir); increase dose

Drug/Herb

• Decreased maraviroc effect: St. John's wort

Drug/Food

• High-fat meal decreases absorption 33%

Drug/Lab Test

Increase: AST, ALT, bilirubin, amylase, lipase, CK

Decrease: ANC

NURSING CONSIDERATIONS

Assess:

• **HIV:** CD4, T-cell count, plasma HIV RNA, CCR5-tropic HIV-1; assess for changes in symptoms, other infections during treatment

• Severe renal disease (ESRD CCr <30 mL/min): for those taking CYP3A inhibitors/inducers and with severe renal disease, drug is contraindicated

• Bowel pattern before, during treatment

• **Allergies:** skin eruptions, rash, urticaria, itching; discontinue product

Black Box Warning: Hepatotoxicity: dark urine, vomiting, abdominal pain; yellowing of skin, eyes; hepatomegaly; discontinue product, monitor LFTs

• **Serious skin rash (Stevens-Johnson syndrome, toxic epidermal necrolysis, DRESS):** assess for serious rash; if symptoms develop, discontinue product immediately, provide supportive treatment

• **Pregnancy/breastfeeding:** provide during pregnancy in those who are HIV positive; avoid breastfeeding to reduce risk of HIV transmission; register pregnant patient with Antiretroviral Pregnancy Registry, 1-800-258-4263

Evaluate:

• Therapeutic response: improvement in CD4, viral load, T-cell count

Teach patient/family:

• To take as prescribed; if dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose; that product does not cure condition, should not be shared with others

• Not to stop product without approval of prescriber

• That product does not cure infection, just controls symptoms and does not prevent infecting others

• To report sore throat, fever, fatigue (may indicate superinfection); yellow skin/eyes, abdominal pain, vomiting, dark urine, nausea (hepatitis); itching, SOB (allergic reaction)

• That product must be taken in equal intervals around the clock to maintain blood levels for duration of therapy

• To avoid all OTC products unless approved by prescriber

• To avoid driving, other hazardous activities until reaction is known; that dizziness may occur

• To make position changes slowly to prevent postural hypotension

• To notify prescriber if pregnancy is planned or suspected; not to breastfeed

mebendazole (Rx)

(me-ben′da-zole)

Emverm, Vermox

Func. class.: Anthelmintic

USES: Broad spectrum to anthelmintic activity, including Ancylostoma duodenale (hookworm), Ascaris lumbricoides (roundworm), Enterobius vermicularis (pinworm), Necator americanus (hookworm), Trichuris trichiura (large tapeworm)

DOSAGE AND ROUTES

Trichuriasis (whipworm infection) or ascariasis (roundworm infection) or mixed infections with these parasites

• **Adults/child 2-17 yr: PO** 500 mg as a single dose or 100 mg bid ×3 days. If not cured 3 wk after treatment, a second course of therapy is recommended

Enterobiasis (pinworm infection):

• **Adults/child 2-17 yr: PO** 100 mg in a single dose; repeat dose in 2 wk

Hookworm infection: Adults/child 2-17 yr: PO 500 mg as a single dose or 100 mg bid ×3 days. If not cured 3 wk after treatment, a second course of therapy is recommended

Available forms: Chewable tablets 100 mg

maribavir (Rx)

Increlex

Func. class.: Antiviral-kinase inhibitor

USES: Posttransplant CMV infection/disease

DOSAGE AND ROUTES

• **Adult/child: SUBCUT** ≥12 yr and older, ≥35 kg: 400 mg (2 tablets) bid

Available forms: Tabs 200 mg

mecasermin (Rx)

Increlex

Func. class.: Biologic response modifier; insulin-like growth factor

USES: Growth failure in children with severe primary insulin-like growth factor-1 (IGF-1) deficiency (primary IGFD) or with growth hormone (GH) gene deletion who have developed neutralizing antibodies to GH

CONTRAINDICATIONS: Hypersensitivity, benzyl alcohol, closed epiphyses, active/suspected neoplasia, IV use

DOSAGE AND ROUTES

• **Child ≥2 yr: SUBCUT** 0.04-0.08 mg/kg (40-80 mcg/kg) bid; if well tolerated for 1 wk, may increase by 0.04 mg/kg/dose, max 0.12 mg/kg bid

meclizine (OTC, Rx)

(mek'li-zeen)

Antivert, Bonamine ✱, Dramamine Less Drowsy, Dramamine-N

Func. class.: Antiemetic, antihistamine, anticholinergic

Chem. class.: H_1-receptor antagonist, piperazine derivative

Do not confuse:
Antivert/Axert

ACTION: Suppresses vestibular end-organ receptors and inhibits activation of cholinergic pathways

USES: Vertigo, motion sickness

CONTRAINDICATIONS: Hypersensitivity to cyclizines

Precautions: Pregnancy, breastfeeding, children, geriatric patients, closed-angle glaucoma, prostatic hypertrophy, hepatic/renal disease, urinary retention, GI obstruction, contact lenses

DOSAGE AND ROUTES

Vertigo

• **Adult/adolescent: PO** 25-100 mg/day in divided doses

Motion sickness

• **Adult/adolescent: PO** 25-50 mg 1 hr before traveling, repeat dose q24hr prn

Available forms: Tablets 12.5, 25, 50 mg; chewable tablets 25 mg; ODT 25 mg

Administer:

PO route

• May give without regard to food
• **Chew tab:** give without regard to water or may be swallowed whole with water
• Lowest possible dose for geriatric patients; anticholinergic effects

SIDE EFFECTS

CNS: *Drowsiness,* fatigue
EENT: Blurred vision
GI: Dry mouth

PHARMACOKINETICS

PO: Onset 1 hr, duration 8-24 hr, half-life 6 hr

INTERACTIONS

Increase: sedation—CYP2D6, inhibitors
Increase: anticholinergic effects—other antihistamines, atropine, antidepressants, phenothiazines
Increase: effect of alcohol, opioids, other CNS depressants
Drug/Lab Test
False negative: allergy skin testing (allergen extracts)

NURSING CONSIDERATIONS

Assess:
- **Vertigo/motion sickness:** nausea, vomiting after 1 hr; assess vertigo periodically
- **Signs of toxicity:** CNS depression, constipation; consider other causes of symptoms; may mask symptoms of other diseases, such as brain tumor, intestinal obstruction
- For urinary disease obstruction, decreased urinary output; may exacerbate symptoms; monitor urinary output
- Observe for drowsiness, dizziness, level of consciousness
- **Pregnancy/breastfeeding:** use only if needed; occasional doses should not pose a risk in breastfeeding
- **Beers:** use caution in older adults; higher risk of anticholinergic effects

Evaluate:
- Therapeutic response: absence of dizziness, vomiting

Teach patient/family:
- That a false-negative result may occur with skin testing for allergies; that these procedures should not be scheduled for ≤4 days after discontinuing use
- To avoid hazardous activities, activities requiring alertness because dizziness may occur; to request assistance with ambulation
- To avoid alcohol, other depressants; not to breastfeed; to report severe side effects
- To use sugarless gum, frequent sips of water for dry mouth
- **Motion sickness prophylaxis:** to take ≥1 hr before event that may cause motion sickness

medroxyPROGESTERone (Rx)

(me-drox′ee-proe-jess′te-rone)

Depo-Provera, Depo-SubQ Provera 104, Medroxy, Meprogest, Proclin, Provera

Func. class.: Antineoplastic, hormone, contraceptive

Chem. class.: Progesterone derivative

Do not confuse:
medroxyPROGESTERone/methylPREDNISolone
Provera/Proscar/Prozac

ACTION: Inhibits secretion of pituitary gonadotropins, which prevents follicular maturation and ovulation; antineoplastic action against endometrial cancer

USES: Uterine bleeding (abnormal); secondary amenorrhea; prevention of endometrial changes associated with estrogen replacement therapy (ERT); contraceptive

CONTRAINDICATIONS: Pregnancy, hypersensitivity, reproductive cancer, genital bleeding (abnormal, undiagnosed), missed abortion, stroke, cerebrovascular disease, cervical cancer, hepatic disease, uterine/vaginal cancer

Black Box Warning: Breast cancer, MI, stroke, thromboembolic disease, thrombophlebitis

Precautions: Breastfeeding, hypertension, asthma, blood dyscrasias, gallbladder disease, HF, diabetes mellitus, bone disease, depression, migraine headache, seizure disorders, renal/hepatic disease, family history of cancer of breast or

reproductive tract, bone mineral density loss, ocular disorders, AIDS/HIV, alcoholism, children, hyperlipidemia, cardiac disease

Black Box Warning: Dementia, osteoporosis

DOSAGE AND ROUTES

Secondary amenorrhea

• **Adult: PO** 5-10 mg/day × 5-10 days, start during any time of menstrual cycle

Uterine bleeding

• **Adult: PO** 5-10 mg/day × 5-10 days starting on 16th or 21st day of menstrual cycle

With ERT

• **Adult: PO** 5-10 mg daily × 10-14 or more days/mo (sequential estrogen); 2.5-5 mg daily (continuous estrogen)

Contraceptive

• **Adult (women): IM** (contraceptive inj) 150 mg (Depo-Provera) q13wk; **SUBCUT** (depot SUBCUT; Depo-SubQ Provera 104 inj) 104 mg 12-14 wk, give first dose during the first 5 days of menstrual period, only within the first 5 days postpartum (no breastfeeding), only at 6th postpartum wk (breastfeeding)

Endometriosis pain

• **Adult: SUBCUT** 104 mg q12-14wk; begin on day 5 of normal menses; avoid use >2 yr

Hot flashes/symptoms of menopause (unlabeled)

• **Adult (female): PO** 20 mg/day; **IM** 150 mg monthly

Available forms: Tabs 2.5, 5, 10 mg; inj susp, 104 mg/0.65 mL; 150, 400 mg/mL

Administer:

• Store in dark area

PO route

• Give without regard to food

• Take missed dose as soon as possible unless close to next dose

IM route

• Visually inspect for particulate matter or discoloration before use

Depo-Provera contraceptive injection suspension

• IM only, *never* IV; use only 150 mg/mL vial

• Instruct patient on risks and warnings associated with hormonal contraceptives (see Patient Information)

• The possibility of pregnancy should be excluded before giving the first dose of medroxyPROGESTERone or whenever >14 wk has passed since the last dose

• Do not dilute

• Shake vigorously immediately before administration

• Inject deeply into the gluteal or deltoid muscle; aspirate before injection to avoid injection into a blood vessel

Depo-Provera sterile aqueous suspension, preserved

• IM only, *never* IV

• Instruct patient on risks and warnings associated with progestin use (see Patient Information)

• Shake vigorously immediately before use

• When multidose vials are used, take special care to prevent contamination

• Inject deeply into the gluteal or deltoid muscle; aspirate before injection

SUBCUT route

Depo-SubQ Provera 104 contraceptive injection suspension only

• For subcut only, *never* give IM or IV

• Instruct patient on risks and warnings associated with hormonal contraceptives (see Patient Information)

• Shake vigorously for at least 1 min before use

• Inject the entire contents of the prefilled syringe subcut into the anterior thigh or abdomen, avoiding bony areas and the umbilicus; press lightly on the injection site with a clean cotton pad for a few seconds; do not rub the area

SIDE EFFECTS

CNS: Dizziness, *headache,* migraines, depression, fatigue, nervousness

CV: Thrombophlebitis, edema, thromboembolism, stroke, PE, MI

GI: *Nausea, increased weight, abdominal pain*

GU: *Amenorrhea*, cervical erosion, breakthrough bleeding, dysmenorrhea, vaginal candidiasis, breast changes, vaginitis
INTEG: Acne, hirsutism, alopecia, injection-site reaction
META: Hyperglycemia
MS: Decreased bone density
SYST: Angioedema, anaphylaxis, breast cancer

PHARMACOKINETICS

PO: Duration 3-5 days; **IM** duration 3-4 mo; excreted in urine and feces, breast milk; metabolized in liver, half-life 14.5 hr

INTERACTIONS

Decrease: medroxyPROGESTERone action—strong CYP3A4 inducers (carBAMazepine, phenytoin, rifAMPin, rifabutin, PHENobarbital); avoid concurrent use
Increase: medroxyPROGESTERone level—strong CYP3A4 inhibitors (clarithromycin, ketoconazole, itraconazole, atazanavir, indinavir, ritonavir, voriconazole), avoid using together
Increase or Decrease: medroxyPROGESTERone levels—NNRTIs, protease inhibitors; may diminish progestin level; to provide contraception use nonhormonal method
Decrease: bone mineral density—anticoagulants, corticosteroids
Decrease: contraception—carBAMazepine, phenytoin, rifAMPin, rifabutin; avoid concurrent use, or use additional nonhormonal method of contraception

Drug/Lab Test

Increase: LFTs, HDL, triglycerides, coagulation tests
Decrease: GTT

Drug/Herb

Decreased levels—St. John's wort; avoid concurrent use

NURSING CONSIDERATIONS

Assess:

- **Menstrual history:** duration of menses, bleeding, spotting, age at menarche, regularity; start on any day in those with amenorrhea, or on day 16 or 21 in dysfunctional bleeding
- Pelvic exam, Pap smear, pregnancy test before treatment, periodically
- **Severe allergic reaction, angioedema;** have EPINEPHrine and resuscitative equipment available
- Weight daily; notify prescriber of weekly weight gain >5 lb; bone mineral density
- B/P at beginning of treatment and periodically
- Hepatic studies: ALT, AST, bilirubin baseline and periodically during long-term therapy; triglycerides, caution if preexisting elevation, product may exacerbate levels
- Mental status: affect, mood, behavioral changes, depression

Black Box Warning: This product should not be given to those with breast cancer, MI, stroke, thromboembolic disorders; assess for these conditions before using

- **Bone mineral density loss:** those taking anticoagulants, corticosteroids with Depo-Provera or Depo-SubQ Provera are at greater risk

Black Box Warning: Use of product shown to increase dementia in women ≥65 yr old; use may increase osteoporosis in long-term treatment; those who smoke also at greater risk; adequate calcium and vit D should be taken

- Ectopic pregnancy: severe abdominal pain may indicate ectopic pregnancy if patient is pregnant

Evaluate:

- Therapeutic response: decreased abnormal uterine bleeding, absence of amenorrhea

Teach patient/family:

- To take with food if nausea occurs
- To have complete physical exam, including reproductive exam, yearly
- To avoid sunlight or to use sunscreen; photosensitivity can occur
- To report breast lumps, vaginal bleeding, edema, jaundice, dark urine, clay-colored stools, dyspnea, headache, blurred vision, abdominal pain, sudden change in speech/coordination, numbness or stiffness in legs, chest pain; males to report impotence, gynecomastia immediately
- That product doesn't protect against sexually transmitted diseases, including HIV

• That injection (subcut) must be given q3mo for contraception; missing dose may lead to pregnancy

Black Box Warning: Long-term use decreases bone density; exercise, calcium, vitamin D, supplements can help lessen osteoporosis

• Review package insert with patient; patient must understand all possible adverse reactions

• **Pregnancy/breastfeeding:** not to use in pregnancy; to report suspected pregnancy; that fertility returns 6-12 mo after discontinuing; not to breastfeed

mefloquine (Rx)

Func. class.: Antimalarial

USES:

Malaria

DOSAGE AND ROUTES

Malaria:

• **Adults: PO** 1250-mg single dose or 750 mg then 500 mg at 6-12 hours after initial dose

• **Infants, children, and adolescents 6 mo to 17 yr: PO** 20-25 mg/kg/dose (max: 1250 mg/dose) single dose or 15 mg/kg/dose (max: 750 mg/dose) then 10 mg/kg/dose (max: 500 mg/dose) at 6-12 hours after initial dose

Available forms: Tablet 25 mg

⚠ HIGH ALERT

megestrol (Rx)

(me-jess'trole)

Megace

Func. class.: Antineoplastic hormone

Chem. class.: Progestin

ACTION:

Affects endometrium with antiluteinizing effect; thought to bring about cell death, stimulates appetite by unknown action

USES:

Breast, endometrial cancer; cachexia, anorexia, weight loss with AIDS

Unlabeled uses: Hot flashes, endometriosis

CONTRAINDICATIONS:

Pregnancy, hypersensitivity, breastfeeding

Precautions: Diabetes, thrombosis, adrenal insufficiency

DOSAGE AND ROUTES

Endometrial carcinoma (palliative)

• **Adult: PO** 40-320 mg/day in divided doses

Anorexia, cachexia, severe weight loss in AIDS

• **Adult: PO** (oral suspension) 400-800 mg daily; 625 mg (5-mL concentrated oral suspension) daily

Breast carcinoma (palliative)

• **Adult: PO** 40 mg qid or 160 mg/day (tablets)

Hot flashes (unlabeled)

• **Adult: PO** 20 mg daily

Available forms: Tabs 20, 40, 160 mg; oral susp 40, 125 mg/mL

Administer:

• Oral susp for AIDS patients; shake well

• Without regard to food

• Store in tight container at room temperature

SIDE EFFECTS

CNS: Mood swings, insomnia, fever, lethargy, depression

CV: Thrombophlebitis, thromboembolism, hypertension

ENDO: Adrenal insufficiency

GI: Nausea, vomiting, *diarrhea,* abdominal cramps, *weight gain*, flatus, indigestion

GU: Gynecomastia, fluid retention, vaginal bleeding, discharge, *impotence,* decreased libido, menstruation disorders

INTEG: Alopecia, *rash,* pruritus

MISC: Tumor flare, leukopenia

PHARMACOKINETICS

PO: Half-life 13-105 hr; metabolized in liver; excreted in feces, urine, breast milk; food increases bioavailability of oral sol

INTERACTIONS

• **Increase:** serious arrhythmias—dofetilide; avoid using concurrently
• **Decrease:** megestrol effect—antidiabetics; may need to increase megestrol dose
• **Decrease:** effect of indinavir; may need to increase indinavir dose

Drug/Lab Test

Increase: glucose

NURSING CONSIDERATIONS

Assess:

• PSA levels in men (prostate cancer); blood glucose, LFTs, serum calcium, weight
• **Psychosocial:** effects of alopecia on body image; feelings about body changes
• Frequency of stools, characteristics: cramping, acidosis, signs of dehydration (poor skin turgor, decreased urine output, dry skin, restlessness, weakness), rapid respirations
• Anorexia, nausea, vomiting, constipation, weakness, loss of muscle tone
• **Thrombophlebitis:** unilateral increase in leg girth; edema; warm, red skin; pain in extremity; notify prescriber immediately
• **HPA axis suppression:** in chronic users, do not discontinue abruptly; wear medical ID; monitor for hypotension during stress, trauma, acute illness
• **Beers:** avoid in older adults as an appetite stimulant; minimal effect on weight; increased risk of thrombotic events
• **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding

Evaluate:

• Therapeutic response: decreased tumor size, spread of malignancy; weight gain in AIDS patients; resolved dysfunctional uterine bleeding

Teach patient/family:

• To report vaginal bleeding
• That gynecomastia, alopecia can occur; reversible after discontinuing treatment
• To recognize signs of fluid retention, thromboemboli; to report these immediately
• To monitor blood glucose if diabetic
• That products may be taken without food
• **Pregnancy/breastfeeding:** that nonhormonal contraception should be used during and for 4 mo after treatment

meloxicam (Rx)

(mel-oks′i-kam)

Anjeso, Mobic, Mobicox, Qmiiz ODT, Vivlodex

Func. class.: Antirheumatic, NSAIDs

USES:

IV: Pain: Moderate to severe pain in adults, alone or in combination with nonsteroidal antiinflammatory drug analgesics: **PO** Osteoarthritis, RA (ODT tablet and suspension only)

CONTRAINDICATIONS

Hypersensitivity to meloxicam or any component; history of asthma, urticaria, other allergic-type reactions after taking aspirin or other nonsteroidal antiinflammatory drugs; CABG; phenylketonuria (orally disintegrating tablet only); moderate to severe renal disease who are at risk for renal failure due to volume depletion (injection only)

Black Box Warning: CABG, GI bleeding/perforation, thromboembolism

DOSAGE AND ROUTES

Capsules and ODT are not interchangeable

Osteoarthritis

Adult: Capsule: PO Initial: 5 mg daily; may increase to max 10 mg daily

Osteoarthritis, rheumatoid arthritis

Adult: ODT/tablet/suspension: PO Initial: 7.5 mg once daily; may increase to max 15 mg daily

Pain, moderate to severe

Adult: IV: 30 mg once daily. Use for the shortest duration consistent with individual patient treatment goals; may be used as monotherapy or in combination with nonsteroidal antiinflammatory drug analgesics

Juvenile idiopathic arthritis (JIA)
Child ≥2 yr/adolescent: Oral suspension, tablets: 0.125 mg/kg daily; max 7.5 mg/day; ODT:
Child/adolescent ≥60 kg: 7.5 mg daily
Available forms: Tabs 7.5, 15 mg; suspension 7.5 mg/5 mL; solution for injection 30 mg/mL; ODT tablets 7.5, 15 mg; capsules 5, 10 mg

⚠ HIGH ALERT

melphalan (Rx)

(mel′fa-lan)

Alkeran, Evomela

Func. class.: Antineoplastic, alkylating agent

Chem. class.: Nitrogen mustard

Do not confuse:
melphalan/Myleran/Leukeran

ACTION: Responsible for cross-linking DNA strands, thereby leading to cell death; activity is not cell-cycle–phase specific

USES: Multiple myeloma, advanced ovarian cancer

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity
Precautions: Children, radiation therapy, infections, renal disease

Black Box Warning: Bone marrow depression, secondary malignancy, radiation therapy, bleeding, infection, risk of serious hypersensitivity reaction; requires an experienced clinician

DOSAGE AND ROUTES

Multiple myeloma (palliative)
- **Adult: PO** 6 mg daily × 2-3 wk, adjust to blood counts weekly then stop for ≤4 wk or until WBC/platelets begin to rise, maintenance 2 mg/day; **IV infusion** 16 mg/m^2 over 15-20 min q2wk × 4 doses, then q4wk, adjust to blood counts

Multiple myeloma conditioning treatment before stem cell transplantation (Evomela only)
- **Adult: IV INFUSION** 100 mg/m^2/day over 30 min for 2 days before stem cell transplant (day 3, day 2; day 0 [transplant])

Epithelial ovarian carcinoma
- **Adult: PO** 0.2 mg/kg/day × 5 days q4-5wk; repeat q4-5wk depending on blood counts

Available forms: Tabs 2 mg, powder for inj 50 mg

Administer:
- Antiemetic 30-60 min before product to prevent vomiting

PO route
- Give on empty stomach
- Protect from light; store refrigerated

Intermittent IV INF route
- Use gloves during administration; if skin exposure occurs, wash immediately with soap and water, use cytotoxic handling procedures

Evomela
Reconstitution:
- Add 8.6 mL of 0.9% NaCl injection to the vial for a final vial concentration of 5 mg/mL
- Negative pressure should be present in the vial; discard any vial that does not have a vacuum present during reconstitution
- Storage after reconstitution: Store at room temperature for up to 1 hr or refrigerated up to 24 hr

IV infusion:
- Dilute the appropriate dose with 0.9% NaCl to a final concentration not to exceed 0.45 mg/mL
- The diluted solution may be stored at room temperature for up to 4 hr (in addition to 1 hr after reconstitution)
- Give over 30 min when used as conditioning treatment before stem cell transplant or IV over 15-20 min when used as palliative treatment in multiple myeloma
- Infuse into an injection port or by injecting slowly into a fast-running IV infusion via a central venous line to avoid extravasation

Alkeran/generic melphalan Reconstitution:
- Using a 20-gauge or larger needle, rapidly inject 10 mL of the supplied diluent into a 50-mg vial for a final concentration of 5 mg/mL
- Immediately shake the vial until clear and all material is dissolved
- Dilute the reconstituted vial immediately; the solution is unstable
- Do not refrigerate the reconstituted vial; a precipitate will form

IV infusion:
- Dilute the dose in 0.9% NaCl to a final concentration max 0.45 mg/mL
- Give over 15-20 min; and complete the infusion within 60 min from vial reconstitution
- The diluted solution is unstable; about 1% of the labeled dose hydrolyzes every 10 min after dilution with sodium chloride
- Infuse through a central line to avoid extravasation

Y-site compatibilities: Acyclovir, amikacin, aminophylline, ampicillin, aztreonam, bleomycin, bumetanide, buprenorphine, butorphanol, calcium gluconate, CARBOplatin, carmustine, ceFAZolin, cefepime, cefoperazone, cefotaxime, cefoTEtan, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cimetidine, CISplatin, clindamycin, cyclophosphamide, cytarabine, dacarbazine, DACTINomycin, DAUNOrubicin, dexamethasone, diphenhydrAMINE, DOXOrubicin, doxycycline, droperidol, enalaprilat, etoposide, famotidine, floxuridine, fluconazole, fludarabine, fluorouracil, furosemide, gallium, ganciclovir, gentamicin, granisetron, haloperidol, heparin, hydrocortisone, hydrocortisone sodium phosphate, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, LORazepam, mannitol, mechlorethamine, meperidine, mesna, methotrexate, methylPREDNISolone, metoclopramide, metroNIDAZOLE, miconazole, minocycline, mitoMYcin, mitoXANTRONE, morphine, nalbuphine, netilmicin, ondansetron, pentostatin, piperacillin, plicamycin, potassium chloride, prochlorperazine, promethazine, raNITIdine, sodium bicarbonate, streptozocin, teniposide, thiotepa, ticarcillin, ticarcillin/clavulanate, tobramycin, trimethoprim-sulfamethoxazole, vancomycin, vinBLAStine, vinCRIStine, vinorelbine, zidovudine

SIDE EFFECTS

GI: *Nausea, vomiting, stomatitis, diarrhea,* hepatotoxicity, *abdominal pain, anorexia, constipation*
GU: *Amenorrhea,* infertility
HEMA: Thrombocytopenia, neutropenia, leukopenia, anemia
INTEG: Pruritus, necrosis, extravasation, alopecia, rash
RESP: Dyspnea, pneumonitis, bronchospasm
SYST: Anaphylaxis, allergic reactions, secondary malignancies, edema
CNS: *Fatigue, fever,* dizziness
META: *Hypokalemia, hypophosphatemia*
ENDO: Menstrual irregularities

PHARMACOKINETICS

Metabolized in liver, excreted in urine, half-life 2 hr, protein binding ≤30%

INTERACTIONS (IV MELPHALAN)

Increase: toxicity—antineoplastics, radiation
Increase: bleeding risk—NSAIDs, anticoagulants, salicylates, thrombolytics, platelet inhibitors; avoid concurrent use
Decrease: antibody response—live virus vaccines; bring up-to-date before use or postpone 3 mo after conclusion of treatment
Increase: uric acid, HIAA

Drug/Lab Test
Decrease: HB, RBC, WBC, platelets
False-positive: Direct Coombs' test

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Bone marrow depression: full nadir 2-3 wk; CBC, differential, platelet count weekly; notify prescriber, withhold product if WBC is <3000/mm^3 or platelet count is <100,000/mm^3; recovery usually occurs in 6 wk; IV product causes more myelosuppression

• Renal studies: BUN, serum uric acid before, during therapy
• I&O ratio; report fall in urine output to 30 mL/hr

Black Box Warning: Infection: fever, cough, temperature, chills, sore throat; notify prescriber

Black Box Warning: Secondary malignancy: acute leukemia, myeloproliferative syndrome may occur due to chromosome damage; risk is increased when using long-term treatment

Black Box Warning: Requires an experienced clinician: product should be used only by clinician knowledgeable in use of chemotherapy

• **Hepatotoxicity:** hepatic studies before, during therapy (bilirubin, AST, ALT, LDH) as needed; jaundiced skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea

Black Box Warning: Bleeding: hematuria, guaiac, bruising or petechiae, mucosa or orifices often, no rectal temperature, IM injections if possible

• Buccal cavity q8hr for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia
• Local irritation, pain, burning, discoloration at inj site

Black Box Warning: Severe allergic reaction: rash, pruritus, urticaria, purpuric skin lesions, itching, flushing; assess allergy to chlorambucil; cross-sensitivity may occur in 2% of patients; avoid

• **Hyperuricemia:** Increased uric acid, joint pain, especially in extremities, provide fluids to 2L/day, may use with anti-gout medications such as allopurinol
• Increase fluid intake to 2-3 L/day to prevent urate deposits, calculi formation
• Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-tid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss

Black Box Warning: Pregnancy/breastfeeding: Do not use during pregnancy or breastfeeding

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy
Teach patient/family:
• That usually sterility, amenorrhea occur; reversible after discontinuing treatment
• To avoid foods with citric acid, hot temperature, or rough texture
• To report any bleeding, white spots, or ulcerations in mouth to prescriber; to examine mouth daily

Black Box Warning: To report signs of infection: fever, sore throat, flulike symptoms

• To report signs of anemia: fatigue, headache, faintness, SOB, irritability, nausea/vomiting, dehydration, decreased urine output
• To avoid use of aspirin products, NSAIDs, alcohol
• **Hepatotoxicity:** to report immediately yellowing of skin or eyes, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea
• **Pregnancy/breastfeeding:** to report suspected pregnancy; to use contraception during treatment

memantine (Rx)

(me-man´teen)

Ebixa ✱, Namenda, Namenda XR

Func. class.: Anti-Alzheimer's agent

Chem. class.: N-methyl-D-aspartate receptor antagonist

Do not confuse:
memantine/methadone

ACTION: Antagonist action of CNS NMDA receptors that may contribute to the symptoms of Alzheimer's disease

USES: Moderate to severe dementia in Alzheimer's disease

CONTRAINDICATIONS: Children, hypersensitivity

Precautions: Pregnancy, breastfeeding, renal disease, GU conditions that raise urine pH, seizures, severe hepatic disease, renal failure

DOSAGE AND ROUTES

• **Adult: PO** 5 mg/day, may increase dose in 5-mg increments ≥1-wk intervals over a 3-wk period; recommended target dose is 10 mg bid at wk 4; ext rel 7 mg daily, increased by 7 mg ≥1 wk up to target dose of 28 mg daily

Renal dose

• **Adult: PO** CCr 5-29 mL/min, a target of 5 mg bid **immediate release** or 14 mg/day **extended release**

Available forms: Tabs 5, 10 mg; tab (Namenda Titration Pak) 5, 10 mg; oral sol 2 mg/mL (10 mg/5 mL); cap ext rel 7, 14, 21, 28 mg

Administer:

• Can be taken without regard to meals

• Twice a day if dose >5 mg

• Dosage adjusted to response no more than q1wk

• **Ext rel caps:** do not crush, chew, divide; swallow whole or open and sprinkle on applesauce

• When switching from immediate-release product, begin the ext rel the day after the last dose of immediate-release product. Those on 10 mg bid should be switched to ext rel 28 mg daily

• **Oral sol:** Use device provided; remove dosing syringe, green cap, plastic tube from plastic; attach tube to green cap; open cap by pushing down on cap, turning counterclockwise; remove unscrewed cap; remove seal from bottle, discard; insert plastic tube fully into bottle, screw green cap tightly onto bottle by turning cap clockwise; keeping bottle upright on table, remove lid; with plunger fully depressed, insert tip of syringe into cap; while holding syringe, gently pull up on plunger; remove syringe; invert syringe, slowly press plunger to level that removes large air bubbles; keep plunger in inverted position; few small air bubbles may be present

SIDE EFFECTS

CNS: *Dizziness, confusion,* headache, stroke

CV: Hypertension, HF

GI: Vomiting, *constipation*

HEMA: Anemia

INTEG: Rash

MISC: Back pain, fatigue, flulike symptoms

PHARMACOKINETICS

Rapidly absorbed PO, 44% protein binding, very little metabolism, 57%-82% excreted unchanged in urine, half-life 60-80 hr; peak 3-7 hr (tabs), 9-12 hr (caps)

INTERACTIONS

Increase/decrease: both products: hydroCHLOROthiazide, triamterene, cimetidine, quiNIDine, raNITIdine, nicotine; monitor for effect

Increase: effect—levodopa, some ergots

Decrease: clearance of memantine—products that make urine alkaline (sodium bicarbonate, carbonic anhydrase inhibitors); monitor for effect

• **Use cautiously with amantadine, dextromethorphan, ketamine; reaction unknown**

Drug/Food

Increase: product level—foods that cause urine alkalinity (fruits, vegetables, nuts, dairy)

Drug/Lab Test

Increase: alkaline phosphatase

Decrease: Hct, HB

NURSING CONSIDERATIONS

Assess:

• **Alzheimer's dementia:** affect, mood, behavioral changes; hallucinations, confusion, attention, orientation, memory; monitor serum creatinine

• Provide assistance with ambulation during beginning therapy; dizziness may occur
• **Adverse reactions:** patient may be unable to verbalize reactions

Evaluate:
• Therapeutic response: decrease in confusion, improved mood, maintenance of function, even with no improvement in symptoms

Teach patient/family:
• To report side effects: restlessness, psychosis, visual hallucinations, stupor, LOC; may indicate overdose
• To use product exactly as prescribed; to avoid alcohol, nicotine
• To use oral sol dispenser provided
• To avoid OTC, herbal products unless approved by prescriber
• That product doesn't cure Alzheimer's disease but controls symptoms
• Not to smoke or use alcohol
• Not to crush, chew ext rel caps, may be opened and sprinkled on applesauce; do not mix oral sol with other liquids
• That product may cause dizziness

⚠ HIGH ALERT

meperidine (Rx)

(me-per'i-deen)

Demerol

Func. class.: Opioid analgesic

Chem. class.: Phenylpiperidine derivative

Controlled Substance Schedule II

Do not confuse:
meperidine/HYDROmorphone/meprobamate/morphine
Demerol/Dilaudid

ACTION: Depresses pain impulse transmission at the spinal cord level by interacting with opioid receptors

USES: Moderate to severe pain preoperatively, postoperatively, general anesthesia maintenance, sedation induction

Unlabeled uses: Obstetric/regional analgesic, acute severe headache/migraine, shaking chills induced by IV amphotericin B or postoperative shivering

CONTRAINDICATIONS: Hypersensitivity, GI obstruction, ileus

Black Box Warning: MAOI therapy, respiratory depression

Precautions: Pregnancy, breastfeeding, children, geriatric patients, addictive personality, increased intracranial pressure, renal/hepatic disease, seizure disorder, abrupt discontinuation, chronic pain, cardiac disease, adrenal insufficiency, alcoholism, angina, anticoagulant therapy, asthma, atrial flutter, biliary tract disease, bladder obstruction, cardiac dysrhythmias, COPD, CNS depression, coagulopathy, constipation, cor pulmonale, dehydration, diarrhea, driving, epidural use, geriatric patients, GI obstruction, head trauma, heart failure, hypotension, hypothyroidism, ileus, IBS, IM/intrathecal/IV use, labor, myxedema, thrombocytopenia

Black Box Warning: Coadministration with other CNS depressants, accidental exposure, neonatal opioid withdrawal syndrome, potential for overdose or poisoning, substance abuse

DOSAGE AND ROUTES

Severe pain
• **Adult: PO/SUBCUT/IM** 50-150 mg q3-4hr prn; **IV CONT INF** 15-35 mg/hr
• **Child: PO/SUBCUT/IM** 1-1.8 mg/kg q3-4hr prn, max single dose 150 mg; IV **CONT INF** 0.5-1 mg/kg loading dose then 0.3 mg/kg/hr

PCA
• **Adult: IV** 10 mg, range 1-5 mg increments, lock out interval 6-10 min

Labor analgesia
• **Adult: SUBCUT/IM** 50-100 mg given when contractions regularly spaced, repeat q1-3hr prn

Preoperative analgesia

• **Adult: IM/SUBCUT** 50-100 mg 30-90 min before surgery

• **Child: IM/SUBCUT** 1-2.2 mg/kg 30-90 min before surgery, max 100 mg

Coadministration with other CNS depressants

• **Adult: PO/IM/SUBCUT/IV** Reduce dose by 25%-50%

Renal dose

• **Adult: PO/IM/SUBCUT/IV** CCr 10-50 mL/min give 75% of dose; CCr <10 mL/min give 50% of dose

Available forms: Inj 10, 25, 50, 75, 100 mg/mL; tabs 50, 100 mg; oral sol 50 mg/5 mL

Administer:

• Doses given regularly before pain returns are more effective

PO route

• May give with food or milk to decrease GI irritation

• Store in light-resistant container at room temperature

• Do not use in severe respiratory insufficiency

• **Oral solution:** dilute in 4 oz water; less effective than IM

IM/SUBCUT route

• Patient should remain recumbent for 1 hr after IM/SUBCUT route

• With antiemetic for nausea, vomiting

• When pain beginning to return; determine dosage interval by patient response

• In gradually decreasing dose after long-term use; withdrawal symptoms may occur

• Inject IM into large muscle mass; IM preferred route for multiple inj

PCA route

• Refer to package insert for instructions and agency protocol

• Have emergency equipment and opiate/antagonist nearby

Direct IV route

• Dilute to concentration of ≤10 mg/mL with sterile water for inj or NS

• Inject slowly ≤25 mg/min over at least 5 min, rapid administration may cause respiratory depression, hypotension, circulatory collapse

• Have emergency equipment and opiate antagonist on hand

Intermittent IV INFUSION route

• Dilute to concentration of 1 mg/mL

• Infuse using infusion pump over 15-30 min, titrate

Continuous intrathecal INFUSION route

• Use controlled infusion device; implantable controlled microinfusion device used for highly concentrated infusion; monitor for several days after implantation

• Filling of infusion reservoir should be done only by those fully qualified

• To prevent pain, depletion of reservoir should be avoided

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache, sedation, euphoria,* increased intracranial pressure, seizures, serotonin syndrome

CV: Palpitations, bradycardia, hypotension, change in B/P, tachycardia (IV)

EENT: Tinnitus, blurred vision, miosis, diplopia, depressed corneal reflex

GI: Nausea, vomiting, anorexia, constipation, cramps, biliary spasm, paralytic ileus

GU: Urinary retention, dysuria

INTEG: Rash, urticaria, bruising, flushing, diaphoresis, pruritus

RESP: Respiratory depression

SYST: Anaphylaxis

PHARMACOKINETICS

Metabolized by liver (to active/inactive metabolites), excreted by kidneys; crosses placenta, excreted in breast milk; half-life 3-4 hr; toxic by-product accumulation can result from regular use or renal disease; protein binding 65%-75%

PO: Onset 15 min, peak 1.5 hr, duration 2-4 hr, absorption 50%

SUBCUT/IM: Onset 10 min, peak 30-60 min, duration 2-4 hr, well absorbed

IV: Onset immediate, peak 5-7 min, duration 2 hr

INTERACTIONS

Black Box Warning: May cause fatal reaction: MAOIs, procarbazine within 14 days

Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs, serotonin-receptor agonists, tricyclics, 5-HT3 receptor antagonists
Increase: effects, severe respiratory depression with other CNS depressants, alcohol, opioids, sedative/hypnotics, antipsychotics, skeletal muscle relaxants
Increase: adverse reactions—protease inhibitor antiretrovirals
Increase: opioid toxicity—CYP3A4 inhibitors (fluconazole, ketoconazole, itraconazole, clarithromycin, nefazodone, verampamil), avoid using together
Decrease: meperidine effect—phenytoin, nalbuphine, pentazocine
Increase: sedation—kava, hawthorn, lavender, valerian

Drug/Herb
Increase: CNS depression, serotonin syndrome—St. John's wort, avoid using together

Drug/Lab Test
Increase: amylase, lipase

NURSING CONSIDERATIONS

Assess:
• **Pain:** location, type, character; give product before pain becomes extreme; reassess after 60 min (IM, SUBCUT, PO) and 5-10 min (IV)
• B/P, pulse, respirations baseline and during use
• Renal function prior to initiating therapy; poor renal function can lead to accumulation of toxic metabolite and seizures; monitor BUN, serum creatinine
• I&O ratio; check for decreasing output; may indicate urinary retention

Black Box Warning: Opioids/benzodiazepines: use only if alternative products cannot be used; excessive sedation and death may occur; if used, monitor closely

• **Abrupt discontinuation:** withdraw slowly; if stopped abruptly, assess for withdrawal
• **Sex hormone changes:** assess for libido, changes in menstrual cycle, erectile dysfunction, infertility; if androgen deficiency is suspected, lab tests should be done
• **Adrenal insufficiency:** assess for anorexia, nausea, vomiting, decreased B/P, weakness; if suspected, confirm with cortisol, sodium, potassium levels; if present, do not abruptly discontinue meperidine, but gradually withdraw

Black Box Warning: Serotonin syndrome when given with SSRIs, SNRIs, and serotonin receptor agonists: monitor for hyperthermia, hypertension, rigidity, delirium, coma; do not use within 14 days of MAOIs

• **Bowel function:** for constipation; increase fluids, bulk in diet; give stimulant laxatives if needed
• **CNS changes:** dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reactions with chronic or high-dose use; risk of toxicity increases with >600 mg/day

Black Box Warning: P450 3A4 inhibitors: avoid concomitant use as increased plasma concentrations of meperidine may occur, resulting in serious effects, respiratory depression, or death

• Allergic reactions: rash, urticaria

Black Box Warning: Respiratory dysfunction: depression, character, rate, rhythm; notify prescriber if respirations are <12/min

• CNS stimulation with chronic or high doses
• **Children:** monitor for restlessness; changes in respirations may occur more frequently than in adults
• **Beers:** avoid in older adults, especially those with chronic disease; may cause neurotoxicity; monitor for delirium frequently

Black Box Warning: Pregnancy/breastfeeding: Avoid prolonged use during pregnancy, risk of neonatal opioid withdrawal syndrome; notify prescriber of intended or suspected pregnancy; do not breastfeed

Evaluate:
• Therapeutic response: decrease in pain
Teach patient/family:
• To report any symptoms of CNS changes, allergic reactions
• That physical dependency may result from extended use; use should be short-term only
• That drowsiness, dizziness may occur
• That withdrawal symptoms may occur: nausea, vomiting, cramps, fever, faintness, anorexia
• To make position changes slowly; orthostatic hypotension can occur
• To avoid OTC medications, alcohol, herbals unless directed by prescriber
• Not to be used long term
• That nausea may be decreased by lying down

Black Box Warning: Serotonin syndrome: to report symptoms immediately

TREATMENT OF OVERDOSE:
Naloxone (Narcan) 0.2-0.8 mg IV, caution in physically dependent patients, O_2, IV fluids, vasopressors

mepolizumab (Rx)
(me-poe-liz-ue-mab)
Nucala
Func. class.: Miscellaneous respiratory agent

USES:
Asthma: Add-on maintenance treatment of severe asthma in adults and pediatric patients ≥6 yr of age with an eosinophilic phenotype

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Asthma
Adult/child ≥12 yr: SUBCUT: 100 mg q4wk
Eosinophilic granulomatosis with polyangiitis
Adult: SUBCUT: 300 mg q4wk, given in 3 separate injections
Hypereosinophilic syndrome
Adult: SUBCUT: 300 mg q4wk
Available forms: Powder for SUBCUT injection 100 mg; solution for injection 40 mg/0.4 mL, 100 mg/mL autoinjector, prefilled syringe

⚠ HIGH ALERT

mercaptopurine (6-MP) (Rx)
(mer-kap-toe-pyoor′een)
Purinethol, Purixan
Func. class.: Antineoplastic-antimetabolite
Chem. class.: Purine analog

Do not confuse:
purinethol/propylthiouracil

ACTION:
Inhibits purine metabolism at multiple sites, which inhibits DNA and RNA synthesis; specific for S phase of cell cycle

USES:
Acute lymphocytic leukemia in combination
Unlabeled uses: Crohn's disease, ulcerative colitis

CONTRAINDICATIONS:
Pregnancy, breastfeeding, patients with prior product resistance, hypersensitivity
Precautions: Renal/hepatic disease, tumor lysis syndrome, dental disease, herpes, radiation therapy, leukopenia, thrombocytopenia, anemia, requires an experienced clinician, secondary malignancy, infection, hypocalcemia, hyperuricemia, hyperphosphatemia, hyperkalemia

DOSAGE AND ROUTES
Acute lymphocytic leukemia
• **Adult/child: PO** 1.5-2.5 mg/kg/day in combination with other agents; start mercaptopurine therapy after a complete hematologic remission

Renal dose

• **Adult: PO** CCr <50 mL/min, give dose q48hr; if used with allopurinol, reduce usual dose by at least 25%

Crohn's disease (unlabeled)

Adult/child ≥3 yr PO 0.75-1.5 mg/kg/day

Ulcerative colitis (unlabeled)

Adult PO 1.5 mg/kg/day

Child ≥3 yr PO 1-1.5 mg/kg/day

Available forms: Tabs 50 mg; oral susp 20 mg/mL

Administer:

• Store in tightly closed container in cool environment

• Give product after evening meal, before bedtime, on an empty stomach; risk of relapse is lower with evening dose

• Use cytotoxic handling procedures

• **Suspension:** Shake well; wash syringe with warm, soapy water; rinse; move plunger up and down several times; use only after dry; after opening, use within 6 wk

SIDE EFFECTS

GI: *Nausea, vomiting, anorexia, diarrhea, stomatitis,* hepatotoxicity (high doses), jaundice, gastritis, pancreatitis

GU: Hyperuricemia

HEMA: Thrombocytopenia, leukopenia, myelosuppression, anemia

INTEG: *Rash,* dry skin, urticaria, alopecia

PHARMACOKINETICS

Incompletely absorbed when taken orally, metabolized in liver, excreted in urine, peak 1-2 hr, terminal half-life 47 min (adult), 21 min (child)

INTERACTIONS

Increase: effects of mercaptopurine—allopurinol; avoid use or decrease dose by at least 25%

Increase: effects—radiation or other antineoplastics, immunosuppressants

Increase: bone marrow suppresion—azaTHIOprine, sulfamethoxazole-trimethoprim; avoid concurrent use or monitor blood counts

Increase: anticoagulant action—anticoagulants, NSAIDs, thrombolytics, platelet inhibitors, salicylates; monitor PT, INR

Decrease: antibodies—live virus vaccines; bring vaccinations up-to-date before use

Decrease: TPMT, rapid bone marrow suppression—balsalazide, olsalazine, mesalamine, sulfaSALAzine; use cautiously

Drug/Lab Test

Increase: alk phos, bilirubin, uric acid

Decrease: platelets, WBC, RBC

NURSING CONSIDERATIONS

Assess:

• **Bone marrow suppression:** CBC, differential, platelet count weekly during induction and monthly during maintenance; withhold product at first sign of abnormally large decrease in blood counts unless bone marrow aplasia is the goal

• **Thiopurine methyltransferase (TPMT) deficiency:** individuals are prone to rapid bone marrow suppression; dosage reduction may be required in homozygous TPMT–deficient persons

• **Tumor lysis syndrome:** monitor for increased potassium, uric acid, phosphate; decreased urine output, calcium

• Renal studies: BUN, serum uric acid, urine CCr, electrolytes before, during therapy

• I&O ratio; report fall in urine output to <30 mL/hr; increase fluids to 3 L/day unless contraindicated

• Monitor temperature; fever may indicate beginning infection; no rectal temperature

• **Hepatotoxicity:** hepatic studies before, during therapy: bilirubin, alk phos, AST, ALT weekly during beginning therapy; hepatic encephalopathy, toxic hepatitis, ascites can be fatal; monitor for jaundice, dark urine, clay-colored stools, abdominal pain; reversible after completion of treatment

• **Bleeding:** hematuria, guaiac, bruising, petechiae, mucosa, or orifices; avoid IM inj if platelets are <100,000/mm^3; blood transfusions may be needed

• **Stomatitis:** buccal cavity for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia

• Increase fluid intake to 2-3 L/day to prevent urate deposits, calculi formation, unless contraindicated

• Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-tid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss
• **Pregnancy/breastfeeding:** identify whether pregnancy is planned or suspected, or if breastfeeding; do not use in pregnancy or for 6 mo after last dose or breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: decreased size of tumor, spread of malignancy

Teach patient/family:
• To avoid foods with citric acid, hot temperature, or rough texture for stomatitis; to report stomatitis: any bleeding, white spots, ulcerations in mouth; to examine mouth daily, report symptoms
• To drink 10-12 8-oz glasses of fluid/day
• To notify prescriber of fever, chills, sore throat, nausea, vomiting, anorexia, diarrhea, bleeding, bruising, all of which may indicate blood dyscrasias/infection
• To report signs of infection: fever, sore throat, flulike symptoms
• To report signs of anemia: fatigue, headache, faintness, SOB, irritability
• To report bleeding; to avoid use of razors, commercial mouthwash
• To avoid use of aspirin products, NSAIDs
• To take entire dose at one time; how to safely handle and dispose of product
• **Pregnancy/breastfeeding:** that contraceptive measures are recommended during therapy and for 6 mo after last dose, not to breastfeed

meropenem (Rx)

(mer-oh-pen′em)

Merrem

Func. class.: Antiinfective—miscellaneous

Chem. class.: Carbapenem

ACTION: Bactericidal; interferes with cell-wall replication of susceptible organisms

USES: *Acinetobacter* sp., *Aeromonas hydrophila, Bacteroides distasonis, Bacteroides fragilis, Bacteroides ovatus, Bacteroides thetaiotaomicron, Bacteroides uniformis, Bacteroides ureolyticus, Bacteroides vulgatus, Campylobacter jejuni, Citrobacter diversus, Citrobacter freundii, Clostridium difficile, Clostridium perfringens, Enterobacter cloacae, Enterococcus faecalis, Escherichia coli, Eubacterium lentum, Fusobacterium* sp., *Haemophilus influenzae* (beta-lactamase negative), *Haemophilus influenzae* (beta-lactamase positive), *Hafnia alvei, Klebsiella oxytoca, Klebsiella pneumoniae, Moraxella catarrhalis, Morganella morganii, Neisseria meningitidis, Pasteurella multocida, Peptostreptococcus* sp., *Porphyromonas asaccharolytica, Prevotella bivia, Prevotella intermedia, Prevotella melaninogenica, Propionibacterium acnes, Proteus mirabilis, Proteus vulgaris, Pseudomonas aeruginosa, Salmonella* sp., *Serratia marcescens, Shigella* sp., *Staphylococcus aureus* (MSSA), *Staphylococcus epidermidis, Streptococcus agalactiae* (group B streptococci), *Streptococcus pneumoniae, Streptococcus pyogenes* (group A beta-hemolytic streptococci), viridans streptococci, *Yersinia enterocolitica;* appendicitis, bacteremia, intraabdominal infections, meningitis, peritonitis, skin/skin structure infections

CONTRAINDICATIONS: Hypersensitivity to this product, carbapenems, hypersensitivity to cephalosporins, penicillins

Precautions: Pregnancy, breastfeeding, geriatric patients, renal disease, seizure disorder, gram-negative infection, hypersensitivity to pneumonia

DOSAGE AND ROUTES

Intraabdominal infections (complicated appendicitis, peritonitis)
• **Adult IV** 1-2 g q8h × 3-7 days

• **Infant child/adolescent: IV** 20 mg/kg q8hr × 3-7 days

Complicated skin and skin structure infections

• **Adult/adolescents/child >50 kg: IV** 500 mg q8hr over 15-30 min, 1 g q8hr for *Pseudomonas aeruginosa*

• **Infants ≥3 mo/children/adolescents ≤50 kg: IV** 10 mg/kg q8hr over 15-30 min; 20 mg/kg q8hr for *Pseudomonas aeruginosa,* max 1 g q8hr for *Pseudomonas aeruginosa*

Meningitis

• **Adult/child/adolescent >50 g: IV** 2 g q8hr

• **Infant/child/adolescent ≤50 kg: IV** 40 mg/kg q8hr, max 2 g q8hr

Renal disease

• **Adult: IV** CCr 26-50 mL/min, give dose q12hr; CCr 10-25 mL/min, give ½ dose q12hr; CCr <10 mL/min, give ½ dose q24hr

Available forms: Powder for inj 500 mg, 1 g

Administer:

• After C&S is taken

• If dose is missed, give as soon as remembered, readjust subsequent doses

• Monitor injection site periodically for redness, inflammation, phlebitis

Direct IV route (bolus)

• Reconstitute 500-mg or 1-g vials with 10, 20 mL of sterile water for inj, respectively; shake to dissolve; let stand until clear (average concentration 50 mg/mL); reconstituted sol may be stored for 3 hr at room temperature or for 13 hr refrigerated; inject up to 1 g in 5-20 mL over 3-5 min

Intermittent IV INFUSION route

• Vials may be directly reconstituted **and diluted** with compatible infusion fluid (NS, D_5W) to 2.5-50 mg/mL; vials with NS can be stored 2 hr at room temperature or for ≤18 hr refrigerated, D_5W solutions may be stored for up to 1 hr at room temperature or ≤15 hr refrigerated; infuse over 15-30 min

SIDE EFFECTS

CNS: Seizures, dizziness, *headache*

CV: Hypotension, tachycardia

ENDO: Hypoglycemia

GI: Diarrhea, nausea, vomiting, CDAD; thrush (child), hepatitis, glossitis, jaundice

INTEG: *Rash,* urticaria, *pruritus,* pain at inj site, phlebitis, erythema at inj site, DRESS

RESP: Apnea, pneumonia

SYST: Anaphylaxis, Stevens-Johnson syndrome, angioedema

PHARMACOKINETICS

IV: Onset immediate, peak dose dependent, half-life 1 hr, excreted unchanged in urine (70%), duration 8 hr

INTERACTIONS

Increase: meropenem plasma levels—probenecid; avoid concurrent use

Decrease: effect of valproic acid; monitor for seizures

Drug/Lab Test

Increase: AST, ALT, LDH, BUN, alk phos, bilirubin, creatinine

Increase or decrease: INR, platelets, PT, PTT

False positive: direct Coombs' test, urine glucose

NURSING CONSIDERATIONS

Assess:

• C&S before starting treatment, may give before results are received

• Sensitivity to carbapenem antibiotics, penicillins, cephalosporins before starting this product

• Renal disease: lower dose may be required; monitor serum creatinine/BUN before, during therapy; monitor weight, fluid balance

• **CDAD:** bowel pattern daily; if severe diarrhea, fever, abdominal pain, fatigue occurs, product should be discontinued

• **Infection:** temperature, sputum, characteristics of wound, WBC, stool; vital signs before, during, and after treatment

• **Allergic reactions, anaphylaxis:** rash, laryngeal edema, wheezing, urticaria, pruritus; may occur immediately or several days after therapy begins; identify if there has been hypersensitivity to penicillins, cephalosporins, beta-lactams;

cross-sensitivity may occur; have emergency equipment nearby
• **DRESS:** Rash, fever, swelling of face, lymphadenopathy, may lead to other organ systems
• **Seizures:** may occur in those with brain lesions, seizure disorder, bacterial meningitis, or renal disease; stop product, notify prescriber if seizures occur, seizure threshold is lowered
• **Overgrowth of infection:** perineal itching, fever, malaise, redness, pain, swelling, drainage, rash, diarrhea; change in cough, sputum
• **Pregnancy/breastfeeding:** use only if clearly needed; no well-controlled studies; use cautiously in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: negative C&S; absence of symptoms and signs of infection

Teach patient/family:
• **CDAD:** to report severe diarrhea
• To avoid driving or other hazardous activities until response is known, dizziness may occur
• To discuss all OTC, Rx, herbals, supplements with prescriber
• To report sore throat, bruising, bleeding, joint pain; may indicate blood dyscrasias (rare)
• **To report overgrowth of infection:** black, furry tongue; vaginal itching; foul-smelling stools; seizures
• To avoid breastfeeding; product is excreted in breast milk

TREATMENT OF ANAPHYLAXIS: EPINEPHrine, antihistamines; resuscitate if necessary

meropenem/vaborbactam (Rx)

(mer-oh-pen′em/va-bor-bak′tam)

Vabomere

Func. class.: Antiinfective—miscellaneous

Chem. class.: Carbapenem

ACTION: Bactericidal; interferes with cell-wall replication of susceptible organisms

USES: For the treatment of complicated urinary tract infections caused by *Citrobacter freundii, Citrobacter koseri, Enterobacter aerogenes, Enterobacter cloacae, Escherichia coli, Klebsiella oxytoca, Klebsiella pneumoniae, Morganella morganii, Proteus mirabilis, Providencia* sp., *Pseudomonas aeruginosa, Serratia marcescens*

CONTRAINDICATIONS: Hypersensitivity to this product, carbapenems

Precautions: Pregnancy, breastfeeding, geriatric patients, renal disease, seizure disorder, gram-negative infection, pneumonia; hypersensitivity to cephalosporins, penicillins

DOSAGE AND ROUTES

Complicated urinary tract infection (UTI), including pyelonephritis
• **Adult: IV** 4 g (2 g meropenem and 2 g vaborbactam) q8hr for up to 14 days

Renal dose
• **Adult: IV** eGFR ≥50 mL/min/1.73 m^2: no change; eGFR 30-49 mL/min/1.73 m^2: 2 g (1 g meropenem and 1 g vaborbactam) q8hr; eGFR 15-29 mL/min/1.73 m^2: 2 g (1 g meropenem and 1 g vaborbactam) q12hr; eGFR <15 mL/min/1.73 m^2: 1 g (0.5 g meropenem and 0.5 g vaborbactam) q12hr

Intermittent hemodialysis
• Meropenem and vaborbactam are removed by hemodialysis; give drug after hemodialysis

Available forms: Powder for inj 2 g

Administer:

IV route
• Visually inspect for particulate matter and discoloration before use
• **Reconstitution:** Constitute the appropriate number of vials as needed for the dose
• 2 vials are used for 4-g dose (2 g meropenem and 2 g vaborbactam)
• 1 vial is used for 2-g (1 g meropenem and 1 g vaborbactam) or 1-g (0.5 g meropenem and 0.5 g vaborbactam) doses

- **Withdraw** 20 mL of 0.9% sodium chloride injection from an infusion bag, and constitute each vial
- For 4-g (2 g meropenem and 2 g vaborbactam) dose/250 to 1000 mL
- For 2-g (1 g meropenem and 1 g vaborbactam) dose/125 to 500 mL
- For 1-g (0.5 g meropenem and 0.5 g vaborbactam) dose/70 to 250 mL
- Mix gently to dissolve
- The constituted solution is concentrations of 0.05 g/mL meropenem /0.05 g/mL vaborbactam; the final volume is 21.3 mL
- Further dilute before use; do not use by direct injection
- **Dilution:** withdraw the full or partial constituted vial contents from each vial and add back into the 0.9% sodium chloride injection infusion bag
- The final concentration of meropenem and vaborbactam will be between 2 and 8 mg/mL
- **Storage:** complete infusion within 4 hr if stored at room temperature or 22 hr if refrigerated at 2°C-8°C (36°F-46°F)

Intermittent IV Infusion:

- Give over 3 hr

SIDE EFFECTS

GI: Diarrhea, nausea, vomiting, CDAD, hepatitis, glossitis, jaundice
RESP: Dyspnea, hyperventilation, cough, sputum
SYST: Anaphylaxis, Stevens-Johnson syndrome, angioedema
INTEG: Rash, urticaria, pruritus, pain at inj site, phlebitis, erythema at inj site
CNS: Seizures, dizziness, weakness, headache, insomnia, agitation, confusion, drowsiness
CV: Hypotension, tachycardia
ENDO: Hypoglycemia

PHARMACOKINETICS

Protein binding 2% for meropenem, 33% for vaborbactam; excreted by kidneys; half-life 1.22 hr meropenem, 1.68 hr vaborbactam; meropenem is a substrate of OAT1 and OAT3 transporters; use after hemodialysis

INTERACTIONS

Increase: effect of—valproic acid

Drug/Lab Tests

Increase: AST, ALT, LDH, BUN, alk phos, bilirubin, creatinine
Decrease: prothrombin time
False positive: direct Coombs test

NURSING CONSIDERATIONS

Assess:

- Obtain culture and sensitivity before first dose; product can be given while waiting for results
- **Infusion site reactions:** assess for redness, inflammation, pain, and phlebitis at infusion site
- Sensitivity to carbapenem antibiotics, penicillins, cephalosporins
- Renal disease: lower dose may be required; monitor serum creatinine/BUN, sodium, before, during therapy
- **CDAD:** bowel pattern daily; if severe diarrhea, abdominal pain, fatigue occurs, product should be discontinued
- **Infection:** temperature, sputum, characteristics of wound before, during, and after treatment
- **Allergic reactions, anaphylaxis:** rash, laryngeal edema, wheezing, urticaria, pruritus; may occur immediately or several days after therapy begins; identify whether there has been hypersensitivity to penicillins, cephalosporins, beta-lactams; cross-sensitivity may occur
- **Seizures:** may occur in those with brain lesions, seizure disorder, bacterial meningitis, or renal disease; stop product, notify prescriber if seizures occur
- **Overgrowth of infection:** perineal itching, fever, malaise, redness, pain, swelling, drainage, rash, diarrhea, change in cough, sputum

Evaluate:

- Therapeutic response: negative C&S; absence of symptoms and signs of infection

Teach patient/family:

- **CDAD:** to report severe diarrhea
- To report sore throat, bruising, bleeding, joint pain; may indicate blood dyscrasias (rare)
- To report overgrowth of infection: black furry tongue, vaginal itching, foul-smelling stools

mesalamine, 5-ASA (Rx)

(me-sal'a-meen)

Apriso, Asacol, Ascol DR, Asacol HD, Canasa, Delzicol, Lialda, Mezavant, Pentasa, Rowasa, Salofalk, SfRowasa

Func. class.: GI antiinflammatory

Chem. class.: 5-Aminosalicylic acid

Do not confuse:
Asacol/Os-Cal

ACTION: May diminish inflammation by blocking cyclooxygenase, inhibiting prostaglandin production in colon; local action only

USES: Mild to moderate active distal ulcerative colitis, proctitis, proctosigmoiditis

CONTRAINDICATIONS: Hypersensitivity to this product or salicylates, 5-aminosalicylates

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, sulfite sensitivity, pyloric stenosis, GI obstruction

DOSAGE AND ROUTES

Treatment of ulcerative colitis

• **Adult: RECT** 60 mL (4 g) at bedtime, retained for 8 hr × 3-6 wk; **DEL REL TAB (Lialda)** 2.4-4.8 g/day × 8 wk; **DEL REL TAB (Asacol HD)** 1.6 g × 6 wk; **DEL REL TAB (Asacol)** 800 mg tid × 6 wk; **CONTROLLED REL CAP (Pentasa)** 1 g qid up to 8 wk; **RECT SUPP** 500 mg bid retained for 1-3 hr × 3-6 wk until remission, may increase tid if needed; **DEL REL CAP (Delzicol)** 800 mg tid × 6 wk

• **Child ≥5 yr and 54-90 kg: PO Delzicol** 27-44 mg/kg/day in divided doses × 6 wk, max 2.4 g/day

• **Child ≥5 yr and 33-53 kg: PO Delzicol** 37-61 mg/kg/day in 2 divided doses × 6 wk, max 2 g/day

• **Child ≥5 yr and 17-32 kg PO: Delzicol** 36-71 mg/kg/day in 2 divided doses × 6 wk, max 1.2 g/day

Maintenance of remission

• **Adult: DEL REL TAB (Asacol)** 800 mg bid or 400 mg qid; **DEL REL TAB (Apriso)** 1500 mg (4 caps) each AM; **DEL REL TAB (Lialda)** 2.4 g (2 tabs) daily with meal; **DEL REL TAB (Delzicol)** 800 mg bid; **Pentasa** **Adult** 1000-mg capsules qid (4 g) × 8 wk

Treatment of ulcerative proctosigmoiditis/proctitis

• **Adult:** Rectal Rowasa 4 g enema (60 mL) at bedtime retained for 8 hr × 3-6 wk

Available forms: Rectal susp 4 g/60 mL (Rowasa); ext rel tab 500 mg; ext rel cap 250, 500 mg (Pentasa); 0.375 g (Apriso); del rel tab 400 mg (Asacol), 800 mg (Asacol HD); del rel tab (Lialda) 1.2 g; rectal supp 1000 mg (Canasa); del rel cap (Delzicol) 400 mg; enema suspension 4 g/60 mL (SfRowasa)

Administer:

PO route

• Swallow tabs whole; do not break, crush, or chew tabs; give with a full glass of water

• **Lialda:** take with meal

• **Apriso caps:** take without regard to meals in AM

• **Delzicol caps:** give ≥1 hr before a meal or 2 hr after a meal

Rectal suspension

• Product should be given at bedtime, retained until morning (8 hr); empty bowel before insertion, shake well

Rectal suppository

• Moisten before insertion; suppository should be retained for 1-3 hr

SIDE EFFECTS

CNS: *Headache, fever, dizziness,* insomnia, asthenia, weakness, fatigue

CV: Chest pain, palpitations, pericarditis

EENT: Pharyngitis, rhinitis

GI: *Cramps, gas, nausea, diarrhea,* rectal pain, constipation, vomiting, pancreatitis

GU: Nephrotoxicity, interstitial nephritis

INTEG: *Rash, itching,* acne, Stevens-Johnson syndrome, hair loss

SYST: Anaphylaxis, acute intolerance syndrome, angioedema, DRESS

PHARMACOKINETICS

RECT: Primarily excreted in feces unchanged but some in urine as metabolite; half-life 1 hr, metabolite half-life 12 hr PO, ½-1½ hr rectal

INTERACTIONS

Increase: action, adverse reactions of azaTHIOprine, mercaptopurine
Decrease: mesalamine absorption—lactulose, antacids
Decrease: effect of—warfarin
Drug/Lab Test
Increase: AST, ALT, alk phos, LDH, GGTP, amylase, lipase, BUN, serum creatinine

NURSING CONSIDERATIONS

Assess:
- **Allergy to salicylates, sulfonamides, sulfites:** if allergic reactions occur, discontinue product
- Renal studies: BUN, creatinine before, periodically during treatment; renal toxicity may occur; increase fluids to maintain urine at ≥1200 mL/day to prevent crystalluria
- **Bowel disorders:** cramps, gas, nausea, diarrhea, rectal pain; if severe, product should be discontinued
- **Pregnancy/breastfeeding:** avoid in pregnancy; excreted in breast milk, avoid use

Evaluate:
- Therapeutic response: absence of pain, bleeding from GI tract, decrease in number of diarrhea stools

Teach patient/family:
- To report immediately trouble breathing, rash, hives
- To use rectal dose at bedtime, teach how to use
- That follow-up exams and blood work will be needed, including possible proctoscopy or sigmoidoscopy
- Not to drive or engage in other hazardous activities until response is known, dizziness may occur
- That usual initial course of therapy is 3-6 wk; to notify prescriber if symptoms do not improve after 2 mo of treatment; to continue to take even if feeling better; not to miss doses; if a dose is missed, to take when remembered, if almost time for next dose, skip it; do not double doses
- To shake bottle well (rectal susp)
- About method of rectal administration
- To inform prescriber of GI symptoms
- To report abdominal cramping, pain, diarrhea with blood, headache, fever, rash, chest pain, bruising, bleeding, mouth sores; product should be discontinued

mesna (Rx)

(mes′na)

Mesnex, Uromitexan

Func. class.: Antidote, chemoprotective agent

USES: Prevention of ifosfamide-induced hemorrhagic cystitis

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Prevention of ifosfamide-induced hemorrhagic cystitis. Adult standard-dose ifosfamide: **IV:** Each mesna dose is equal to 20% of the daily ifosfamide dose given for 3 doses: With the ifosfamide dose (hour 0), hour 4, and at hour 8 after the ifosfamide dose (total daily mesna dose is 60% of the daily ifosfamide dose); PO mesna (following IV mesna; for ifosfamide doses ≤2 g/m²/day): Mesna dose (IV) is equal to 20% of the daily ifosfamide dose at hour 0, followed by 2 mesna doses (orally), each equal to 40% of the daily ifosfamide dose given 2 and 6 hr after the ifosfamide dose (total daily mesna dose is 100% of the daily ifosfamide dose)
Adult: Short infusion standard-dose ifosfamide (<2.5 g/m²/day):
IV: Total mesna dose is equal to 60% of the ifosfamide dose, in 3 divided doses (each mesna dose as 20% of daily ifosfamide dose), given 15 min before the ifosfamide dose and 4 and 8 hr after each dose of ifosfamide

Adult: Continuous infusion standard-dose ifosfamide (<2.5 g/m^2/day):
IV: Mesna dose (as a bolus) is equal to 20% of the daily ifosfamide dose, followed by a continuous infusion of mesna at 40% of the daily ifosfamide dose; continue mesna infusion for 12 to 24 hr after completion of ifosfamide infusion
Prevention of cyclophosphamide-induced hemorrhagic cystitis Adults <40 yr of age: **IV:** Cycles 1, 2, 3, and 6 (cyclophosphamide-containing regimen): 2.1 g/m^2/day continuous infusion (mesna dose is equivalent to the daily cyclophosphamide dose) for 2 days with cyclophosphamide infusion during cycles 1, 2, 3, and 6

⚠ HIGH ALERT

metFORMIN (Rx)

(met-for'min)

Glucophage, Glucophage XR, Glumetza, Glycon 🍁, Riomet, Riomet ER

Func. class.: Antidiabetic, oral
Chem. class.: Biguanide

Do not confuse:
metformin/metroNIDAZOLE

ACTION: Inhibits hepatic glucose production and increases sensitivity of peripheral tissue to insulin

USES: Type 2 diabetes mellitus

CONTRAINDICATIONS: Diabetic ketoacidosis, metabolic acidosis, renal failure, radiographic contrast use

Black Box Warning: Lactic acidosis

Precautions: Pregnancy, breastfeeding, geriatric patients, previous hypersensitivity, thyroid disease, HF, type 1 diabetes mellitus, hepatic disease, alcoholism, cardiopulmonary disease, acidemia, acute MI, cardiogenic shock, renal disease, heart failure

DOSAGE AND ROUTES

Type 2 diabetes mellitus

• **Adult: PO** 500 mg bid or 850 mg/day, **max 250 mg/day; EXT REL** (Glucophage XR) 500 mg daily with evening meal, may increase by 500 mg per wk, max 2000 mg/day; (Glumetza) 1000 mg daily with food, preferably with PM meal, may increase by 500 mg per wk, max 2000 mg daily; **extended-release suspension (Riomet ER) 500 mg daily with every meal**

Renal dose

• **Adult: PO** eGFR 30-45 mL/min/1.73 m^2, avoid use; if eGFR >45 mL/min/1.73 m^2 then falls <45 mL/min/1.73 m^2, assess benefits/risks of treatment; discontinue if eGFR falls <30 mL/min/1.73 m^2

Available forms: Tabs 500, 850, 1000 mg; ext rel tab 500, 750, 1000 mg; oral sol 500 mg/5 mL; extended-release suspension 500 mg/5 mL

Administer:

PO route

• Conversion from other oral hypoglycemic agents; change may be made without gradual dosage change; monitor serum glucose, urine ketones tid during conversion
• Store in tight container in cool environment
• Monitor eGFR at least annually
• Do not use in dialysis
• **Immediate rel product:** bid given with meals to decrease GI upset and provide the best absorption; immediate rel tabs crushed, mixed with meal, fluids for patients with difficulty swallowing
• **Ext rel product** may also be taken as single dose; titrate slowly to therapeutic response, side effect tolerance
• Ext rel tabs: do not chew, break, crush; may be given with evening meal
• **Oral solution:** use calibrated spoon, oral syringe or container to measure; give with meals
• **Oral extended-release suspension:** shake well, use dosing cup, give with evening meal

SIDE EFFECTS

ENDO: Lactic acidosis, hypoglycemia
GI: *Nausea, vomiting, diarrhea,* heartburn, anorexia, metallic taste

PHARMACOKINETICS

Excreted by kidneys unchanged 35%-50%, half-life 6 hr, peak 2-3 hr (immediate release); 7 hr (ext release); 2½ hr (solution)

INTERACTIONS

- Do not give with radiologic contrast media; may cause renal failure
- Do not use with dofetilide; may cause lactic acidosis

Increase: digoxin levels—digoxin; monitor digoxin level
Increase: metFORMIN level—cimetidine, digoxin, morphine, procainamide, quiNIDine, raNITIdine, triamterene, vancomycin; monitor blood glucose
Increase: hyperglycemia—calcium channel blockers, corticosteroids, estrogens, oral contraceptives, phenothiazines, sympathomimetics, diuretics, phenytoin, β-blockers; monitor blood glucose

Drug/Herb

Increase: hyperglycemia—glucosamine
Increase: hypoglycemia—chromium, coenzyme Q10, garlic, green tea, horse chestnut

Drug/Lab Test

Decrease: vit B_{12}

NURSING CONSIDERATIONS

Assess:

- **Hypoglycemic reactions** (sweating, weakness, dizziness, anxiety, tremors, hunger); hyperglycemic reactions soon after meals; these occur rarely with product, may occur when product combined with sulfonylureas
- CBC (baseline, q3mo) during treatment; check LFTs periodically, AST, LDH, renal studies: BUN, creatinine during treatment; glucose, A1c; folic acid, vit B_{12} q1-2yr
- **Surgery:** product should be discontinued temporarily for surgical procedures when patient is NPO or if contrast medium is used; resume when patient is eating

Black Box Warning: Lactic acidosis: malaise, myalgia, abdominal distress; risk increases with age, poor renal function; monitor electrolytes, lactate, pyruvate, blood pH, ketones, glucose; suspect in any diabetic patient with metabolic acidosis, with ketoacidosis; immediately stop product if hypoxemia or significant renal dysfunction occurs; do not use in those >80 yr unless CCr is normal; alcohol use may increase lactic acidosis risk

- **Renal status:** obtain BUN, creatinine before use; if elevated, a dose reduction is required
- **Pregnancy/breastfeeding:** avoid use in pregnancy, do not use in breastfeeding; if an antidiabetic is needed during pregnancy, use insulin

Evaluate:

- Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait; blood glucose, A1c at normal level

Teach patient/family:

Black Box Warning: Lactic acidosis: hyperventilation, fatigue, malaise, chills, myalgia, somnolence; to notify prescriber immediately, stop product; not to use in excessive alcohol intake that is chronic

- To regularly self-monitor blood glucose with blood-glucose meter
- About signs, symptoms of hypoglycemia/hyperglycemia; what to do about each (rare)
- That product must be continued on daily basis; about consequences of discontinuing product abruptly; to take as prescribed; not to double doses
- To avoid OTC medications, alcohol unless approved by prescriber
- That diabetes is a lifelong illness; that product is not a cure, only controls symptoms
- To carry emergency ID and glucagon emergency kit
- That Glucophage XR tab may appear in stool
- To report adverse reactions; if GI upset occurs, it usually decreases over time

• To take with meals; not to break, crush, chew ext rel product
• **Pregnancy:** that PCOS patients with insulin resistance may be at risk of conception; to use adequate contraception if pregnancy is not desired

⚠ HIGH ALERT

methadone (Rx) REMS

(meth´a-done)

Dolophine, Metadol, Methadose

Func. class.: Opioid analgesic

Chem. class.: Synthetic diphenylheptane derivative

Controlled Substance Schedule II

Do not confuse:
methadone/methylphenidate /morphine

ACTION: Depresses pain impulse transmission at the spinal cord level by interacting with opioid receptors; produces CNS depression

USES: Severe pain, opioid withdrawal
Unlabeled uses: Neonatal abstinence syndrome

CONTRAINDICATIONS: Hypersensitivity, asthma, ileus

Black Box Warning: Respiratory depression

Precautions: Breastfeeding, children <18 yr, geriatric patients, addictive personality, increased intracranial pressure, MI (acute), severe heart disease, respiratory depression, pulmonary/renal/hepatic disease, respiratory insufficiency, torsades de pointes, COPD, seizures

Black Box Warning: QT prolongation, pain, substance abuse, potential for overdose, poisoning, accidental exposure, coadministration with other CNS depressants, IV use, pregnancy, requires an experienced clinician

DOSAGE AND ROUTES

Severe pain
• **Adult: PO** 2.5 mg q8-12hr in opioid-naive, titrate; **IV/IM/SUBCUT** 2.5-10 mg q8-12hr in opioid-naive

Opioid withdrawal
• **Adult including pregnant woman: PO** 20-30 mg initially unless low opioid tolerance expected; additional 5-10 mg q2-4hr as needed after initial dose; if symptoms continue, may give for ≤5 days

Analgesic
• **Adult/child <50 kg: PO** 0.1 mg/kg/dose q4hr × 2-3 doses, then q6-8hr prn, max 10 mg q6-8hr; **≥50 kg IM/IV/SUBCUT** 10 mg q6-8hr, max 10 mg/dose

Narcotic dependency
• **Adult/child <50 kg: PO** 0.05-0.1 mg/kg/dose q6hr, increase by 0.05 mg/kg/dose until withdrawal, if controlled after 1-2 days lengthen dosing interval to q12-24hr, taper by 0.05 mg/kg/day; **≥50 kg IM/IV SUBCUT** 15-40 mg daily, decrease dose q1-2days

Available forms: Inj 10 mg/mL; tabs 5, 10 mg; oral sol 5, 10 mg/5 mL; 10 mg/mL (concentrate); dispersible tabs 40 mg

Administer:
PO route
• When using during a methadone maintenance program, use only PO according to NATA guidelines
• PO is half as potent as parenteral

IM route
• Rotating inj sites, give deep in large muscle mass (IM)
• Protect from light

IV route
• Used as PCA
• Protect from light

SUBCUT route
• Pain and induration may occur at site

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache, sedation,* euphoria, seizures

CV: Bradycardia, change in B/P, hypotension, torsades de pointes, QT prolongation
EENT: Blurred vision, miosis, diplopia
ENDO: adrenal insufficiency
MISC: Dependence, tolerance
GI: *Nausea, vomiting, anorexia, constipation*
GU: Urinary retention
INTEG: *Rash,* flushing, diaphoresis
RESP: Respiratory depression

PHARMACOKINETICS

Metabolized by liver; excreted by kidneys; crosses placenta; excreted in breast milk; half-life 15-23 hr, extended interval with continued dosing; 90% bound to plasma proteins
PO: Onset 30-60 min, peak 1-1.5 hr, duration 6-8 hr, cumulative 22-48 hr; PO half as active as INJ
SUBCUT/IM: Onset 10-20 min, peak 1½-2 hr, duration 4-6 hr, cumulative 22-48 hr

INTERACTIONS

- **Unpredictable reactions:** MAOIs; do not use together
- Do not use within 2 wk of selegiline

Increase: serotonin syndrome—linezolid, methylene blue, mirtazapine, tramadol, trazadone, SSRIs, SNRIs, MAOIs, tricyclics, 5-HT3 receptor antagonists
Increase: fatal reaction: benzodiazapines
Increase: effects with other CNS depressants—alcohol, opiates, sedative/hypnotics, antipsychotics, skeletal muscle relaxants
Increase: toxicity—CYP2C9 inhibitors, CYP2C19 inhibitors, CYP2D6 inhibitors, CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)
Increase: QT prolongation—class IA antiarrhythmics (disopyramide, procainamide, quiNIDine), class III antiarrhythmics (amiodarone, dofetilide, ibutilide, sotalol), astemizole, arsenic trioxide, cisapride, chloroquine, clarithromycin, levomethadyl, pentamidine, some phenothiazines, pimozide, terfenadine
Decrease: analgesia—rifAMPin, phenytoin, nalbuphine
Decrease: methadone effect—CYP2C9 inducers, CYP2C19 inducers CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifAMPin); withdrawal symptoms may occur

Drug/Food

- Avoid use with grapefruit juice

Drug/Herb

- Avoid use with St. John's wort; withdrawal may result

Increase: CNS depression—chamomile, hops, kava, valerian
Drug/Lab Test
Increase: amylase, lipase

NURSING CONSIDERATIONS

Assess:

- **Pain:** type, location, intensity, grimacing before, 1½-2 hr after administration; use pain scoring; monitor for cumulative reactions; use during entire 24-hr period for severe pain
- I&O ratio; check for decreasing output; may indicate urinary retention
- CNS changes: dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
- Allergic reactions: rash, urticaria

Black Box Warning: Respiratory dysfunction: respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min; avoid use with other CNS depressants (benzodiazepines)

Black Box Warning: QT prolongation: may be dose related or use with other products that increase QT; titrate doses carefully, may be fatal

Black Box Warning: Accidental exposure: make sure product is not accessible to children, pets

Black Box Warning: Overdose, poisoning: advise persons involved in correct use

Black Box Warning: Substance abuse: may occur but has less psychologic dependence than other opiate agonists

• **Opioid detoxification:** goal in detoxification is only prevention of withdrawal symptoms, not to provide analgesia or pain relief

Black Box Warning: B/P, pulse, ECG; hypotension, palpitations may occur

• Bowel changes, bulk, fluids, laxatives should be used for constipation
• **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function
• **Pregnancy/breastfeeding:** do not use in pregnancy, neonatal opioid withdrawal syndrome may result; do not use in breastfeeding, serious sedation of the infant may occur, with respiratory depression

Evaluate:
• Therapeutic response: decrease in pain, successful opioid withdrawal

Teach patient/family:
• To report any symptoms of CNS changes, allergic reactions, extreme sedation, trouble breathing
• That physical dependency may result from extended use
• **That withdrawal symptoms may occur:** nausea, vomiting, cramps, fever, faintness, anorexia
• To maintain proper hydration; to avoid alcohol use
• To avoid use with other products without approval of prescriber; many drug interactions
• To use correctly, exactly as directed; not to increase unless directed by prescriber
• That drowsiness, dizziness may occur; not to perform hazardous tasks until effect is known; to ask for assistance when getting out of bed
• That regular ECGs will be needed
• To change positions slowly to minimize orthostatic hypotension
• To advise all providers of product taken
• **Pregnancy/breastfeeding:** not to use in pregnancy, breastfeeding

TREATMENT OF OVERDOSE:
Naloxone (Narcan) 0.2-0.8 mg IV, O_2, IV fluids, vasopressors

methimazole (Rx)
(meth-im´a-zole)
Tapazole
Func. class.: Thyroid hormone antagonist (antithyroid)
Chem. class.: Thioamide

Do not confuse:
methimazole/metoprolol/minoxidil

ACTION:
Inhibits synthesis of thyroid hormones by decreasing iodine use in manufacture of thyroglobulin and iodothyronine; does not affect circulatory T_4, T_3

USES:
Hyperthyroidism, preparation for thyroidectomy
Unlabeled uses: Thyroid storm

CONTRAINDICATIONS:
Pregnancy, breastfeeding, hypersensitivity
Precautions: Infection, bone marrow suppression, hepatic disease, bleeding disorders

DOSAGE AND ROUTES
Hyperthyroidism
• **Adult: PO** 15 mg/day (mild hyperthyroidism); 30-40 mg/day (moderate to severe); 60 mg/day (severe); maintenance 5-15 mg/day; may be divided
• **Child: PO** 0.4 mg/kg/day in divided doses q8hr; continue until euthyroid; maintenance dose 0.2 mg/kg/day in divided doses q8hr, max 30 mg/24 hr; may be divided

Thyroid storm (unlabeled)
Adult: PO 60-80 mg/day
Available forms: Tabs 5, 10 mg
Administer:
• With meals to decrease GI upset
• At same time each day to maintain product level
• Lowest dose that relieves symptoms; discontinue before RAIU

SIDE EFFECTS

CNS: *Drowsiness, headache, vertigo, fever,* paresthesias, neuritis
ENDO: *Enlarged thyroid*
GI: *Nausea, diarrhea, vomiting,* jaundice, hepatitis, loss of taste
GU: Nephritis
HEMA: Agranulocytosis, leukopenia, thrombocytopenia, hypothrombinemia, lymphadenopathy, bleeding, vasculitis
INTEG: *Rash, urticaria, pruritus, alopecia, hyperpigmentation,* lupuslike syndrome
MS: Myalgia, arthralgia, nocturnal muscle cramps

PHARMACOKINETICS

Onset rapid; peak 1-2 hr; half-life 4-6 hr; excreted in urine, breast milk; crosses placenta

INTERACTIONS

Increase: bone marrow depression—radiation, antineoplastic agents
Increase: response to digoxin; monitor digoxin level, reduce dose if needed
Decrease: effectiveness—amiodarone, potassium iodide; methIMAzole dose may need to be increased
Decrease: anticoagulant effect—warfarin; monitor PT, INR
Drug/Lab Test
Increase: PT, AST, ALT, alk phos

NURSING CONSIDERATIONS

Assess:
• **Hyperthyroidism:** palpitations, nervousness, loss of hair, insomnia, heat intolerance, weight loss, diarrhea; product adjustment may be needed
• **Hypothyroidism:** constipation, dry skin, weakness, fatigue, headache, intolerance to cold, weight gain; adjustment may be needed; check for edema: puffy hands, feet, periorbits; these indicate hypothyroidism
• Pulse, B/P, temperature
• Weight daily; same clothing, scale, time of day; weight increase or decrease is a sign of need to adjust product dose
• Monitor lab work: T_3, T_4, which are increased; serum TSH, which is decreased; free thyroxine index, which is increased if dosage too low; discontinue product 3-4 wk before RAIU
• **Blood dyscrasias:** CBC; monitor leukopenia, thrombocytopenia, agranulocytosis; if these occur, product should be discontinued and other treatment initiated; may occur at doses >40 mg/day
• **Hypersensitivity:** rash, enlarged cervical lymph nodes; product may have to be discontinued
• **Hypoprothrombinemia:** bleeding, petechiae, ecchymosis
• **Clinical response:** after 3 wk should include increased weight; decreased T_4, pulse
• **Bone marrow suppression:** sore throat, fever, fatigue
• **Pregnancy/breastfeeding:** may cause fetal harm; do not use in pregnancy; avoid use in breastfeeding
Evaluate:
• Therapeutic response: weight gain, decreased pulse, decreased T_4, B/P
Teach patient/family:
• Not to breastfeed
• To take pulse daily
• To report redness, swelling, sore throat, mouth lesions, fever, which indicate blood dyscrasias
• To keep graph of weight, pulse, mood
• To avoid OTC products, seafood that contain iodine, other iodine products
• Not to discontinue product abruptly because thyroid crisis may occur; stress patient response
• That response may take several months if thyroid is large
• **Symptoms and signs of overdose:** periorbital edema, cold intolerance, mental depression

- **Symptoms of inadequate dose:** tachycardia, diarrhea, fever, irritability
- To take medication as prescribed; not to skip or double dose
- To report yellowing of skin/eyes, dark urine, anorexia, right upper abdominal pain; may indicate hepatic dysfunction

⚠ HIGH ALERT

methotrexate (Rx)

(meth-oh-trex′ate)

Metoject, Otrexup, Rasuvo, Rheumatrex, Trexall, Xatmep

Func. class.: Antineoplastic-antimetabolite (vesicant)

Chem. class.: Folic acid antagonist

Do not confuse:
methotrexate/metolazone/MTX patch/mitoxantrone

ACTION: Inhibits an enzyme that reduces folic acid, which is needed for nucleic acid synthesis in all cells; specific to S phase of cell cycle; immunosuppressive

USES: Acute lymphocytic leukemia; in combination for breast, lung, head, neck carcinoma; lymphoma, sarcoma, gestational choriocarcinoma, hydatidiform mole, psoriasis, RA, mycosis fungoides, osteosarcoma
Unlabeled uses: Active Crohn's disease, metastatic bladder cancer in combination, SLE, psoriatic arthritis

CONTRAINDICATIONS: Hypersensitivity, leukopenia (<3500/mm^3), thrombocytopenia (<100,000/mm^3), anemia; psoriatic patients with severe renal disease, alcoholism, AIDS, hepatic disease

Black Box Warning: Pregnancy, bone marrow suppression

Precautions: Breastfeeding, children, exfoliative dermatitis

Black Box Warning: Renal disease, ascites, diarrhea, infection, intrathecal administration, lymphoma, pleural effusion, pulmonary toxicity, radiation therapy, stomatitis, tumor lysis syndrome, gastroenteritis, GI bleeding/perforation, hepatotoxicity, intrauterine fetal death, nephrotoxicity, requires an experienced clinician

DOSAGE AND ROUTES

Breast cancer (except Otrexup, Rasuvo)
- **Adult: IV** 40 mg/m^2 on day 1, 8 of every 21-28 days with other antineoplastics

Acute lymphocytic leukemia (except Otrexup, Rasuvo)
- **Adult/child: IM/IV** 3.3 mg/m^2/day × 4-6 wk or until remission, with prednisone 60 mg/m^2/day, then 30 mg/m^2 **PO/IM** weekly in 2 divided doses or 2.5 mg/kg **IV** × q2wk; **IT adult:** 12 mg/m^2
- **Child ≥3 yr:** 12 mg; **2 yr,** 10 mg; **1 yr,** 8 mg; **<1 yr,** 6 mg

Choriocarcinoma /hydatidiform mole (except Otrexup, Rasuvo)
- **Adult/child: PO/IM** 15-30 mg/day × 5 days, then off 1 wk; may repeat, max 5 courses

Meningeal leukemia (except Otrexup, Rasuvo)
- **Adult: Intrathecally** ≤12 mg/m^2 q2-5days until CSF is normal, then 1 additional dose, max 15 mg
- **Child ≥3 yr:** Intrathecally 12 mg q2-5days
- **Child 2-3 yr:** 10 mg q2-5days
- **Child 1-2 yr:** 8 mg q2-5days

Osteosarcoma (except Otrexup, Rasuvo)
- **Adult/child: IV** 12 g/m^2 given over 4 hr, then leucovorin rescue

Cutaneous T-cell lymphoma/ Mycosis fungoides (except Otrexup, Rasuvo)
- **Adult: PO** 5-50 mg weekly or 15-37.5 mg twice weekly; **IV/IM** 50 mg weekly or 15-37.5 mg twice weekly

Psoriasis

• **Adult: PO/IM/IV** 10-25 mg/wk or 2.5 mg **PO** q12hr × 3 doses/wk, may increase to 25 mg/wk, max 30 mg/wk

Epidermal head/neck cancer (except Otrexup, Rasuvo)

• **Adult/child: IV** 40 mg/m^2 on days 1 and 15, q21days alone or in combination with bleomycin, CISplatin

• **Adult: PO** 25-50 mg/m^2 q7days

• **Child: PO** 7.5-30 mg/m^2 q7-14days

Rheumatoid arthritis

• **Adult: PO** 7.5 mg/wk or in divided doses of 2.5 mg q12hr × 3 doses once a wk; max 20 mg/wk

Polyarticular-course juvenile RA

• **Child: PO/IM** 10 mg/m^2/wk

Burkitt's lymphoma (stages I, II) (except Otrexup, Rasuvo)

• **Adult/adolescent/child: IV** 10-25 mg/day × 4-8 days; give in combination for stage III

Renal dose

• **Adult: PO/IM/IV** CCr 46-60 mL/min, give 65% of standard dose; CCr 31-45 mL/min, give 50% of standard dose; CCr ≤30 mL/min, not recommended

Active Crohn's disease (unlabeled)

• **Adult: IM** 25 mg/wk; **SUBCUT** 15 mg/kg/wk × 16 wk

Available forms: Tabs 2.5, 5, 7.5, 10, 15 mg; inj 25 mg/mL (2, 4, 8, 10, 20, 40 mL single-use vials); 25 mg/mL (2-, 10-mL vials with benzyl alcohol); lyophilized powder: 2.5 mg/mL, 25 mg/mL in 1000-mg preservative-free vials; oral solution 2.5 mg/mL

Single-use autoinjector: 7.5 mg/0.15 mL, 7.5 mg/0.4 mL, 10 mg/0.2 mL, 10 mg/0.4 mL, 12.5 mg/0.25 mL, 15 mg/0.3 mL, 15 mg/0.4 mL, 17.5 mg/0.35 mL, 20 mg/0.4 mL, 22.5 mg/0.46 mL, 25 mg/0.4 mL, 25 mg/0.5 mL, 27.5 mg/0.55 mL, 30 mg/0.6 mL

Administer:

Intrathecal route

Black Box Warning: Use preservative-free sol, reconstitute with NS; dose should be drawn into 5- to 10-mL syringe after LP, vol of CSF should be withdrawn equal to vol of methotrexate; allow CSF to flow into syringe and mix, inject over 15-30 sec with bevel of needle upward

• Use safe handling procedures for chemotherapeutic agents

PO route

• This route is preferred for low-dose therapy

• Methotrexate absorption is dose-dependent; absorption of single doses more than 40 mg/m^2 is significantly less than that of lower doses

• Weekly therapy with Rheumatrex Dose Packs is not intended for doses more than 15 mg PO/wk

• **Oral liquid formulations:** Mistaken daily use of the recommended dose has led to fatal toxicity

• Measure using a calibrated oral measuring device

• **Storage:** store at room temperature (68°F-77°F) for up to 60 days

Injectable route

• Visually inspect parenteral products for particulate matter and discoloration before use

• The preserved solutions contain benzyl alcohol and should not be used for intrathecal, intermediate-, or high-dose therapy

• **Reconstitution of lyophilized powders:** reconstitute each vial with sterile, preservative-free solution (D_5W, 0.9% NaCl injection). Reconstitute the 25-mg vial to a concentration ≤25 mg/mL. The 1-g vial should be reconstituted with 19.4 mL to a concentration of 50 mg/mL; prepare immediately before use. Discard unused portions

Intravenous route

• **Direct IV injection:** inject as a slow push via Y-site or 3-way stopcock into a free-flowing IV infusion

• **Intermittent/continuous IV infusion:** further dilute in D_5W, D_5/0.8% NaCl, 0.9% NaCl injection before infusion, check vein patency by flushing with 5 to 10 mL of 5% dextrose injection or 0.9% sodium chloride injection; infuse at prescribed rate. Following infusion, flush IV tubing

IV infusion of intermediate- or high-dose methotrexate (500 mg/m^2 over <4 hr or more than 1 g/m^2 over >4 hr)

• Before use, the following laboratory parameters should be confirmed: WBC >1,500/mm^3, neutrophil count >200/mm^3, platelet count >75,000/mm^3, serum bilirubin <1.2 mg/dL, normal serum creatinine, and SGPT <450 U. Creatinine clearance should be >60 mL/min. If serum creatinine has increased by 50% or more compared to a prior value, creatinine clearance should be measured and documented as more than 60 mL/min even if the serum creatinine is still within normal limits
• Give 1 L/m^2 of IV fluids over 6 hr before initiation of the methotrexate infusion; continue hydration at 125 mL/m^2/hr during the methotrexate infusion and for 2 days after the infusion has been completed
• Alkalinize the urine using sodium bicarbonate to maintain the urine pH more than 7 during the methotrexate infusion and leucovorin therapy
• Repeat serum creatinine and methotrexate serum level determinations 24 hr after starting methotrexate and at least daily until the methotrexate level is below 5×10^{-8} mol/L (0.05 micro-M)

IM route

• Inject deeply into a large muscle
• Aspirate before injection

Subcut route

• Otrexup and Rasuvo are methotrexate formulations for subcutaneous use only
• Both Otrexup and Rasuvo are single-use auto-injectors. Otrexup is available in 5-mg increments for doses between 10 and 25 mg; Rasuvo is available in 2.5-mg increments for doses between 7.5 and 30 mg. Neither formulation should have lumps or particles floating in it
• Administer Otrexup and Rasuvo in the abdomen or thigh; do NOT administer within 2 inches of the navel, on the arms, on any other areas of the body, or on skin that is tender, bruised, red, scaly, hard, or has scars or stretch marks
• If self-injection is deemed appropriate, patients or caregivers should practice injections using a training device with guidance from a health care professional

Use of Otrexup auto-injector

• Immediately before use, twist cap to remove; flip the safety clip
• Place needle end of Otrexup against thigh or stomach (abdomen) at a 90-degree angle and firmly push until you hear a click; hold for 3 sec before removing

Use of Rasuvo auto-injector:

• Pull the yellow cap straight off. Do not twist
• Position the uncapped end of the auto-injector at a 90-degree angle to the skin. Without pressing the button, push firmly onto the skin until the stop point is felt, which will unlock the yellow injection button
• Press the yellow injection button until a click is heard. Hold Rasuvo against the skin until all medication is injected. This can take up to 5 sec
• Visually inspect the transparent control zone to ensure there is no liquid left in the syringe

Intrathecal administration

• Use preservative-free solutions. The preserved solutions contain benzyl alcohol and should NOT be used for intrathecal therapy
• Reconstitute the preservative-free powder for injection with preservative-free 0.9% sodium chloride injection. The desired dose should be drawn into a 5- to 10-mL syringe
• After lumbar puncture is complete, withdraw an amount of CSF equivalent to the volume of methotrexate injection to be administered. If puncture was traumatic, wait 2 days before attempting to administer methotrexate intrathecally
• Allow CSF (approximately 10% of estimated CSF total volume) to flow into the syringe and mix with the product
• Inject intrathecally over 15 to 30 sec with the bevel of the needle directed upward

SIDE EFFECTS

CNS: Dizziness, seizures, leukoencephalopathy, headache, confusion, encephalopathy, hemiparesis, malaise, fatigue, chills, fever; arachnoiditis (intrathecal)
EENT: Blurred vision, optic neuropathy
GI: *Nausea, vomiting, anorexia, diarrhea, ulcerative stomatitis,* hepatotoxicity, cramps, ulcer, gastritis, GI hemorrhage, abdominal pain, hematemesis, hepatic fibrosis, acute toxicity
GU: Urinary retention, renal failure, menstrual irregularities, defective spermatogenesis, hematuria, azotemia, uric acid nephropathy
HEMA: Leukopenia, thrombocytopenia, myelosuppression, anemia
INTEG: *Rash, alopecia,* dry skin, urticaria, photosensitivity, folliculitis, vasculitis, petechiae, ecchymosis, acne, alopecia, severe fatal skin reaction
RESP: Methotrexate-induced lung disease
SYST: Sudden death, *Pneumocystis jiroveci,* tumor lysis syndrome, secondary malignancy

PHARMACOKINETICS

Not metabolized; excreted in urine (unchanged); crosses placenta, blood-brain barrier; 50% plasma protein bound; terminal half-life 10-12 hr
PO: Readily absorbed
PO/IM/IV: Onset, duration unknown
IT: Onset, peak, duration unknown

INTERACTIONS

Do not use with proton pump inhibitors
Increase: toxicity—salicylates, sulfa products, other antineoplastics, radiation, alcohol, probenecid, NSAIDs, phenylbutazone, theophylline, penicillins
Increase: hypoprothrombinemia—oral anticoagulants
Increase: hepatitis—acitretin; avoid concurrent use
Decrease: effect of oral digoxin, vaccines, phenytoin, fosphenytoin
Decrease: antibody response—live virus vaccines
Decrease: effect of methotrexate—folic acid supplements, asparaginase

NURSING CONSIDERATIONS

Assess:

- Make sure product is taken weekly in RA, JRA

Black Box Warning: Infection: those with active infections should be treated for infection before product use; monitor temperature, fever may indicate beginning of infection; more common during neutropenia

- **Rheumatoid arthritis:** ROM, pain, joint swelling before, during treatment
- **Psoriasis:** skin lesions before, during treatment
- Make sure drug–drug interacting products are discontinued before therapy, and do not resume until methotrexate level is safe
- **Bone marrow suppression:** CBC, differential, platelet count weekly; avoid use until WBC is >1500/mm^3 or platelet count is >75,000/mm^3, neutrophils >200/mm^3; notify prescriber; WBC, platelet nadirs occur on day 7

Black Box Warning: Nephrotoxicity: avoid use in renal failure; BUN, serum uric acid, urine CCr, electrolytes before, during therapy; I&O ratio; report fall in urine output to <30 mL/hr

- Monitor vital signs during use; report changes if significant
- Monitor for stomatitis, diarrhea, abdominal cramping or pain; if severe, product may need to be discontinued
- **Anemia:** extreme fatigue, increased heart rate, dyspnea, headache, dizziness, pale skin
- **Gout:** joint warmth, pain, edema, increased uric acid level; use of allopurinol and alkalinization of urine will decrease uric acid
- **Bleeding:** bleeding time, coagulation time during treatment; bleeding: hematu-

ria, guaiac, bruising, petechiae, hematemesis, assess in mucosa or orifices; avoid IM injections, rectal temperature when platelets are low

Black Box Warning: Pulmonary toxicity: may start with dry, nonproductive cough; those with ascites or pleural effusion at greater risk for toxicity; fluid should be removed before treatment; monitor plasma methotrexate levels

Black Box Warning: Tumor lysis syndrome: hyperkalemia, hyperphosphatemia, hyperuricemia, hypocalcemia, decreased urine output; use aggressive hydration, allopurinol to correct severe electrolyte imbalances, renal toxicity

Black Box Warning: Hepatotoxicity: jaundiced skin and sclera, dark urine, clay-colored stools, pruritus, abdominal pain, fever, diarrhea, hepatic studies before and during therapy: bilirubin, alk phos, AST, ALT; liver biopsy should be done before start of therapy (psoriasis)

• Monitor methotrexate levels; adjust leucovorin dose based on level
• Buccal cavity for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia

Black Box Warning: Serious skin reaction: Stevens-Johnson syndrome, exfoliative dermatitis, skin necrosis, erythema multiforme may occur within days of receiving product by any route; product should be discontinued

• **Stroke-like encephalopathy:** common in high-dose therapy; assess for confusion, hemiparesis, seizures, coma; usually transient
• Increased fluid intake to 2-3 L/day to prevent urate deposits, calculi formation unless contraindicated
• Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-tid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss
• **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy; decreased joint inflammation, pain in RA

Teach patient/family:

Black Box Warning: To report any complaints, side effects to nurse or prescriber: black tarry stools, chills, fever, sore throat, bleeding, bruising, cough, shortness of breath, dark or bloody urine, seizures, rash

• That hair may be lost during treatment; that wig or hairpiece may make patient feel better; that new hair may be different in color, texture (alopecia rare)
• To avoid foods with citric acid, hot temperature, or rough texture if stomatitis is present
• To report stomatitis and any bleeding, white spots, ulcerations in mouth to prescriber; to examine mouth daily; to report symptoms to nurse; to use good oral hygiene

Black Box Warning: Pregnancy: that contraceptive measures are recommended during therapy and for at least 8 wk after cessation of therapy for women and men; to discontinue breastfeeding; that toxicity to infant may occur

• To drink 10-12 glasses of fluid/day
• To avoid alcohol, salicylates, live vaccines
• To avoid use of razors, commercial mouthwash; to use soft-bristle toothbrush
• To use sunblock to prevent burns
• To use good dental care to prevent overgrowth of infection in the mouth
• How to use this product with leucovorin rescue

• To continue leucovorin until told it is safe to stop
• To report CNS symptoms, vision changes
• To report fever, other symptoms of infection
• To report decreased urine output
• To avoid crowds, persons with known infections
• To advise all health care providers that methotrexate is being taken; not to use Rx, OTC medications, herbs, or supplements unless approved by prescriber
• **Subcut route:** Teach patient self-injection technique and use and disposal of equipment

⚠ HIGH ALERT

methyldopa/methyldopate (Rx)

(meth-ill-doe'pa)
Func. class.: Antihypertensive
Chem. class.: Centrally acting α-adrenergic inhibitor

Do not confuse:
methyldopa/L-dopa/levodopa

ACTION: Stimulates central inhibitory α-adrenergic receptors or acts as false transmitter, resulting in reduction of arterial pressure

USES: Hypertension, hypertensive crisis

CONTRAINDICATIONS: Active hepatic disease, hypersensitivity, MAOI therapy
Precautions: Pregnancy, geriatric patients, cardiac disease, autoimmune disease, depression, dialysis, hemolytic anemia, Parkinson's disease, pheochromocytoma, sulfite hypersensitivity

DOSAGE AND ROUTES

Hypertension/hypertensive crisis
• **Adult: PO** 250-500 mg bid or tid, then adjusted q2days as needed, 0.5-2 g/day in 2-4 divided doses (maintenance), max 3 g/day; **IV** 250-500 mg in 100 mL D_5W q6hr, run over 30-60 min, max 1 g q6hr; switch to oral as soon as possible
• **Child: PO** 10 mg/kg/day in 2-4 divided doses, max 65 mg/kg or 3 g/day, whichever is less; **IV** 20-40 mg/kg/day in 4 divided doses, max 65 mg/kg or 3 g, whichever is less

Renal dose
• **Adult: PO** CCr 10-50 mL/min dose q8-12hr; CCr <10 mL/min dose q12-24hr

Available forms: Methyldopa: tabs 125 ✱, 250, 500 mg; **methyldopate:** inj 50 mg/mL

Administer:
PO route
• Increase in dose should be done in the evening to minimize drowsiness
• Product should not be withdrawn abruptly

Intermittent IV INFUSION route
• After diluting with 100 mL D_5W; infuse over ½-1 hr

Y-site compatibilities: Alemtuzumab, alfentanil, amikacin, aminophylline, anidulafungin, ascorbic acid, atenolol, atracurium, atropine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, caspofungin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, chlorproMAZINE, cimetidine, clindamycin, cyanocobalamin, cycloSPORINE, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diltiaZEM, diphenhydrAMINE, DOCEtaxel, DOPamine, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epoetin alfa, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, insulin (regular), irinotecan, isoproterenol, labetalol, lidocaine, linezolid, LORazepam,

magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methoxamine, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, mezlocillin, miconazole, midazolam, milrinone, minocycline, mitoXANTRONE, morphine, moxalactam, multiple vitamins, mycophenolate mofetil, nafcillin, nalbuphine, naloxone, netilmicin, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentazocine, phentolamine, phenylephrine, phytonadione, piperacillin, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxine, quiNIDine, raNITIdine, ritodrine, sodium bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinorelbine, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: *Drowsiness, weakness, dizziness, sedation, headache,* depression, psychosis, paresthesias, parkinsonism, Bell's palsy, nightmares, drug fever
CV: Bradycardia, myocarditis, orthostatic hypotension, angina, edema, weight gain, HF, paradoxic pressor response (IV)
EENT: Nasal congestion
ENDO: Breast enlargement, gynecomastia, amenorrhea
GI: Nausea, vomiting, diarrhea, constipation, hepatic dysfunction, sore or "black" tongue, pancreatitis, colitis, flatulence
GU: Impotence, failure to ejaculate
HEMA: Leukopenia, thrombocytopenia, hemolytic anemia, granulocytopenia, positive Coombs' test
INTEG: Rash, toxic epidermal necrolysis, lupuslike syndrome

PHARMACOKINETICS

PO: Onset 4-6 hr, duration 24-48 hr
IV: Onset 4-6 hr, duration 10-16 hr
Metabolized by liver, excreted in urine, half-life 2 hr

INTERACTIONS

• **Lithium toxicity:** lithium
Increase: pressor effect—sympathomimetic amines, MAOIs; do not use concurrently with MAOIs
Increase: hypotension, CNS toxicity—levodopa
Increase: hypotension—diuretics, other antihypertensives
Increase: psychosis—haloperidol
Increase: CNS depression—alcohol, antihistamines, antidepressants, analgesics, sedative/hypnotics
Increase: B/P—phenothiazines, β-blockers, amphetamines, NSAIDs, tricyclics, barbiturates
Increase: hypoglycemia—TOLBUTamide
Decrease: methyldopa absorption—iron

Drug/Lab Test
Increase: creatinine, LFTs
Decrease: platelets, WBC, HB/HcT
Interference: urinary uric acid, serum creatinine, AST
False increase: urinary catecholamines

NURSING CONSIDERATIONS

Assess:
• Blood studies: neutrophils, decreased platelets, CBC
• **Hemolytic anemia:** direct Coombs' test before, after 6, 12 mo of therapy; a positive test may indicate hemolytic anemia; usually reverses within weeks to months after discontinuing treatment; monitor HB/Hct and RBC; do not start therapy in those with hemolytic anemia
• Baselines of renal, hepatic studies before therapy begins
• **Drug-induced hepatitis/drug fever:** usually subsides within 3 mo of discontinuing therapy
• **Hypertension:** B/P when beginning treatment, periodically thereafter; report significant changes

- **Allergic reaction:** rash, fever, pruritus, urticaria; product should be discontinued if antihistamines fail to help
- CNS symptoms, especially in geriatric patients; depression, change in mental status
- **HF:** edema, dyspnea, wet crackles, B/P
- Renal symptoms: polyuria, oliguria, urinary frequency; I&O ratio, weight; report weight gain >5 lb
- **Product tolerance:** may occur within 3 mo of starting treatment; a dosage change and other products may be needed
- **Beers:** avoid in older adults; high risk of CNS effects; may cause bradycardia and orthostatic hypotension
- **Pregnancy/breastfeeding:** use cautiously in pregnancy, breastfeeding; has been used for pregnancy-induced hypertension

Evaluate:

- Therapeutic response: decrease in B/P

Teach patient/family:

- To avoid hazardous activities
- Not to discontinue product abruptly because withdrawal symptoms may occur: anxiety, increased B/P, headache, insomnia, increased pulse, tremors, nausea, sweating
- To rise slowly to sitting or standing position to minimize orthostatic hypotension
- To notify prescriber of mouth sores, sore throat, fever, swelling of hands or feet, irregular heartbeat, chest pain, signs of angioedema
- That excessive perspiration, dehydration, vomiting, diarrhea may lead to fall in B/P; to consult prescriber
- That dizziness, fainting, light-headedness may occur during first few days of therapy
- Not to use OTC (cough, cold, allergy) products unless directed by prescriber; that compliance is necessary; not to skip or stop product unless directed by prescriber
- That product may cause skin rash

TREATMENT OF OVERDOSE:

Gastric evacuation, sympathomimetics may be indicated; if severe, hemodialysis

methyldopa/hydrochlorothiazide (Rx)

Func. class.: Centrally acting alpha agonist/thiazide diuretic

USES: Hypertension

DOSAGE AND ROUTES

Black Box Warning: Not indicated for initial treatment

Hypertension:

- **Adults: PO** 1 tablet (hydrochlorothiazide 15 mg/methyldopa 250 mg) bid-tid or 1 tablet (hydrochlorothiazide 25 mg/methyldopa 250 mg) bid

Available forms: Tabs hydrochlorothiazide 15 mg/methyldopa 250 mg; hydrochlorothiazide 25 mg/methyldopa 250 mg

methylergonovine (Rx)

(meth-ill-er-goe-noe'veen)

Methergine

Func. class.: Oxytocic

Chem. class.: Ergot alkaloid

M

ACTION: Stimulates uterine, vascular, and smooth muscle, thereby causing contractions; decreases bleeding; arterial vasoconstriction

USES: Prevention, treatment of hemorrhage postpartum or postabortion, uterine contractions

CONTRAINDICATIONS: Pregnancy (other than obstetric delivery/abortion), hypertension, preeclampsia, eclampsia, elective induction of labor, hypersensitivity to ergot preparations

Precautions: Severe renal/hepatic disease, jaundice, diabetes mellitus, seizure disorders, sepsis, CAD, last stage of labor

DOSAGE AND ROUTES

- **Adult: PO** 0.2 mg tid-qid × ≤7 days; **IM/IV** 0.2 mg after delivery of shoulder, placenta, or puerperium, then q2-4hr × 1-5 doses

Available forms: Inj 0.2 mg/mL; tabs 0.2 mg

Administer:

PO route

- Do not exceed dosage limits
- Store tabs at room temperature
- Give with water
- **Only during 4th stage of labor; not to be used to augment labor**

IM route

- Protect from light
- IM in deep muscle mass; rotate inj sites for additional doses, aspirate

Direct IV route

- Undiluted through Y-tube or 3-way stopcock; give ≤0.2 mg/min or diluted in 5 mL 0.9% NaCl given through Y-site
- With crash cart available on unit; IV route used only in emergencies
- Refrigerated storage of ampules; protect from light; give only if solution is clear, colorless

SIDE EFFECTS

CNS: *Headache, dizziness,* **seizures, hallucinations; stroke (IV)**
CV: **Hypotension,** chest pain, palpitation, **hypertension, dysrhythmias, CVA (IV)**
EENT: Tinnitus
GI: *Nausea, vomiting*
GU: Cramping
INTEG: Sweating, rash, allergic reactions
MS: Leg cramps
RESP: Dyspnea

PHARMACOKINETICS

Metabolized in liver, excreted in urine
PO: Onset 5-15 min, duration 3 hr
IM: Onset 2-5 min, duration 3 hr
IV: Onset immediate, duration 45 min-3 hr

INTERACTIONS

Increase: vasoconstriction—DOPamine, ergots, anesthetics (regional), vasopressors, nicotine
Increase: ergot toxicity—CYP3A4 inhibitors; do not use together

NURSING CONSIDERATIONS

Assess:

- B/P, pulse, character and amount of vaginal bleeding; watch for indications of hemorrhage
- Uterine relaxation; observe for severe cramping
- **Ergot toxicity:** **tinnitus, hypertension, palpitations, chest pain, nausea, vomiting, weakness; cold, numb extremities**
- **Pregnancy/breastfeeding:** do not use in pregnancy except following obstetric delivery or abortion to reduce postpartum hemorrhagic risk; may breastfeed 1 wk postpartum

Evaluate:

- Therapeutic response: absence of postpartum hemorrhage

Teach patient/family:

- **To report increased blood loss, severe abdominal cramps, fever, or foul-smelling lochia**

methylnaltrexone (Rx)

(meth-il-nal-trex′one)

Relistor

Func. class.: GI agent
Chem. class.: Opioid antagonist

ACTION: Peripheral μ-opioid receptor antagonist that reduces constipation associated with opiate agonists

USES: Treatment of opioid-induced constipation in patients with advanced illness who are receiving palliative care when response to laxative therapy has been insufficient; treatment of opioid-induced constipation in chronic noncancer pain

CONTRAINDICATIONS: Hypersensitivity, GI obstruction, IV route, eclampsia, elective induction of labor, hypertension, preeclampsia, pregnancy
Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, diarrhea, driving, operating machinery, neoplastic disease, Crohn's disease, peptic ulcer, ulcerative colitis

DOSAGE AND ROUTES

Opiate-agonist–induced constipation

- **Adult >114 kg: SUBCUT** 0.15 mg/kg every other day prn, max 0.15 mg/kg/24 hours
- **Adult 62-114 kg: SUBCUT** 12 mg every other day prn, max 12 mg/24 hr
- **Adult 38-<62 kg: SUBCUT** 8 mg every other day prn, max 8 mg/24 hr
- **Adult <38 kg: SUBCUT** 0.15 mg/kg every other day prn, max 0.15 mg/kg/24 hr

Renal dose

- **Adult: SUBCUT** CCr <60 mL/min, reduce normal adult dose by 50%; **PO** 150 mg/day

Available forms: Sol for inj 12 mg/0.6 mL (single-use vials), 8 mg/0.4 mL (prefilled syringes); tab 150 mg

Administer:

PO route

- Take on empty stomach at least 30 min before first meal of the day

SUBCUT route

Do not give IV; IV dosing for urinary retention investigational

- Store at 59°F-86°F (15°C-30°C); do not freeze
- Store away from light
- Inspect sol before use; should be clear, colorless to pale yellow aqueous sol; do not use if particulate matter or discoloration is present
- Withdraw needed amount of sol into sterile syringe; syringe may be kept at room temperature for ≤24 hr; immediately discard any unused portion in vial; no preservatives are present
- Administer into upper arm, abdomen, or thigh ≤1×/24 hr; rotate inj sites; do not inject in same spot each time; do not inject into areas where skin is tender, bruised, red, or hard; avoid areas with scars or stretch marks
- If using with retractable needle, slowly push down on plunger past resistance point until the syringe is empty and click is heard

PO route

- Give with water on empty stomach 30 min before morning meal

SIDE EFFECTS

CNS: Dizziness

GI: Nausea, vomiting, diarrhea, flatulence, abdominal pain, GI perforation

PHARMACOKINETICS

Half-life 8 hr, protein binding 11%-15.3%; dose adjustment is required for patients with CCr <60 mL/min

SUBCUT: Peak 30 min

NURSING CONSIDERATIONS

Assess:

- Serum creatinine, BUN, baseline and periodically
- **Opioid-induced constipation:** stool characteristics, bowel sounds during treatment
- **Pain:** monitor characteristics of pain; this product does not affect analgesics
- **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function
- **Pregnancy/breastfeeding:** avoid use in pregnancy, withdrawal in fetus may occur; do not breastfeed

Evaluate:

- Therapeutic response: decreasing constipation

Teach patient/family:

- That, after 30 min, to remain near toilet facilities because bowel relaxation occurs; not to use more than 1 dose in 24 hr
- To notify prescriber of abdominal pain, continuous or severe diarrhea, nausea, vomiting
- **Pregnancy/breastfeeding:** to avoid use in pregnancy unless absolutely necessary; to avoid in breastfeeding
- To notify prescriber before taking all other OTC, prescription, or herbal products
- Not to drive or perform other hazardous activities until response is known; dizziness may occur
- To continue other products for constipation unless directed by prescriber not to
- **Opioid withdrawal:** to report severe diarrhea, abdominal pain, chills

methylphenidate (Rx)

(meth-ill-fen'i-date)

Adhansia XR, Aptensio XR, Biphentin, Concerta, Cotempla XR-ODT, Daytrana, Foquest, Jornay PM, Quillivant XR, Ritalin, Ritalin LA, Ritalin SR, QuilliChew ER, Relexxii

Func. class.: Cerebral stimulant

Chem. class.: Piperidine derivative

Controlled Substance Schedule II

Do not confuse:
methylphenidate/methadone
Ritalin/ritodrine/Ritalin LA

ACTION: Increases release of norepinephrine, DOPamine in cerebral cortex to reticular activating system; exact action not known

USES: Attention deficit disorder (ADD), attention-deficit/hyperactivity disorder (ADHD); narcolepsy (except Concerta, Metadate CD, Ritalin LA)
Unlabeled uses: Depression refractory to other therapies

CONTRAINDICATIONS: Hypersensitivity, anxiety, history of Gilles de la Tourette's syndrome; glaucoma, hereditary fructose intolerance
Precautions: Pregnancy, breastfeeding, hypertension, depression, seizures, abrupt discontinuation, acute MI, aortic stenosis, arteriosclerosis, bipolar disorder, cardiac dysrhythmias, cardiomyopathy, chemical leukoderma, child depression, dysphagia, esophageal stricture, growth inhibition, heart failure, hepatic disease, hypertension, hyperthyroidism, ileus, mania, peripheral vascular disease, PKU, psychosis, Raynaud's disease, schizophrenia, stroke, suicidal ideation, visual disturbances

Black Box Warning: Substance abuse, alcoholism

DOSAGE AND ROUTES

Attention-deficit/hyperactivity disorder (ADHD) initial treatment, not currently on methylphenidate

Regular release: Ritalin

- **Adult: PO** 20-30 mg/day, range 10-60 mg/day in 2-3 divided doses, 30-45 min before meals
- **Child ≥6 yr: PO** 5 mg bid initially, increase 5-10 mg/day weekly, usual dose 0.3-2 mg/kg/day, max 60 mg/day

Extended-release once-daily tabs: Concerta

- **Adult: PO** 18-36 mg/day initially, then adjust by 18 mg/wk, max 72 mg/day
- **Adolescent: PO** 18 mg/day initially, then adjust by 18 mg/wk, max 72 mg/day
- **Child ≥6 yr: PO** 18 mg/day initially, then adjust by 18 mg/wk, max 54 mg/day

Extended-release once-daily capsules: Ritalin LA

- **Adult/adolescent/child ≥6 yr: PO** 10-20 mg daily in AM initially, adjust by 10 mg/wk, max 60 mg/day

Extended release once-daily PM capsule:

- **Child >6 yr and adolescents: PO** 20 mg in evening; may increase weekly by 20 mg, max 100 mg/day

Transdermal: Daytrana

- **Adolescent/child ≥6 yr: TD** wk 1: 10 mg/day (9-hr patch); wk 2: 15 mg/day (9-hr patch); wk 3: 20 mg/day (9-hr patch); wk 4: 30 mg/day (9-hr patch)

Conversion to once-daily treatment from other forms for ADHD

Extended-release once-daily capsules: Ritalin LA

- **Adult/adolescent/child ≥6 yr: PO** give no more than total daily dose of other forms, may adjust by 10 mg/wk, max 60 mg/day

Extended-release once-daily tablets: Concerta

- **Adult/adolescent/child ≥6 yr (currently on 10-15 mg/day): PO** 18 mg every AM

initially, adjust by 18 mg/wk, max 72 mg/day (adult); max 72 mg/day, 2 mg/kg/day (adolescent); 54 mg/day (child)

• **Adult/adolescent/child ≥6 yr (currently receiving 20-30 mg/day): PO** 36 mg every AM, adjust by 18 mg/wk, max 72 mg/day (adult); 72 mg/day, 2 mg/kg/day (adolescent); 54 mg/day (child)

• **Adult/adolescent/child ≥6 yr (currently receiving 30-45 mg/day): PO** 54 mg every AM, adjust by 18 mg/wk, max 72 mg/day (adult); 72 mg/day, 2 mg/kg/day (adolescent); 54 mg/day (child)

• **Adult/adolescent/child ≥6 yr (currently receiving 40-60 mg/day): PO** 72 mg every AM, 72 mg/day

Extended-release once-daily suspension: Quillivant XR

• **Adolescent/child ≥6 yr: PO** give 20 mg in AM, increase in 10-20 mg increments weekly

Narcolepsy

Immediate release: Ritalin

• **Adult: PO** 20-30 mg/day, range 10-60 mg/day in 2-3 divided doses

• **Child ≥6 yr: PO** 5 mg bid, may increase by 5-10 mg/wk, max 60 mg/day

Available forms: Tabs 5, 10, 20 mg; ext rel tabs 10, 20 mg; ext rel tabs (Concerta) 18, 27, 36, 54 mg; ext rel caps 10, 20, 30, 40 mg; ext rel chewable tabs (QuillChew ER) 20, 30, 40 mg; oral sol 5 mg/5 mL, 10 mg/5 mL; chew tabs (Methylin) 2.5, 5, 10 mg; transdermal patch 12.5 cm^2 (10 mg), 18.75 cm^2 (15 mg), 25 cm^2 (20 mg), 37.5 cm^2 (30 mg); ext rel oral susp 300 mg/60 mL, 600 mg/120 mL, 750 mg/150 mL, 900 mg/180 mL; capsule (Journay PM) 20 mg

Administer:

PO route

• **Chewable tablets:** give with at least 8 oz of fluid to avoid choking

• **Immediate-release dosage forms (Ritalin,** give 30-45 min before meal; twice-daily dosages may be used in AM and noon

• **Ext-rel tablets:** may be given without regard to meals. Give whole; do not cut, crush, or chew. Give the last dose of the day several hours before bedtime. Ext-rel tablets may be used when the determined 8-hr dose of immediate-release methylphenidate tablets equals the 8-hr dosage of the ext-rel tablets

• **Once-daily ext-rel tablets (Concerta):** may be given without regard to meals. Give whole; do not cut, crush, or chew; portion of this tablet may appear intact in the stool

• **Once-daily ext-rel capsules (Ritalin LA, Aptensio XR):** may be given without regard to meals; establish a routine pattern with regard to meals. Give with an adequate amount of fluid. Do not cut, crush, or chew. If swallowing is difficult, capsule may be opened and the contents sprinkled on 1 tablespoon of applesauce and swallowed immediately. The capsule contents (beads) should not be crushed or chewed. Instruct patient to drink fluids (water, milk, or juice) after taking sprinkles with applesauce

• **Once-daily ext-rel chewable tablets (QuilliChew ER):** give daily in the AM with or without food. The tablet may be broken in half for 10-mg and 15-mg doses

• **Immediate-release oral solution (Methylin):** measure dose with oral syringe or calibrated measuring device. Give 30-45 min before meals in divided doses 2 to 3 times/day. Twice-daily dosages may be administered in AM and around noon. Give last dose of day before 6 PM

• **Once-daily ext-rel oral suspension (Quillivant XR):** vigorously shake before use; measure dose with calibrated oral dosing dispenser provided. Give in AM without regard to meals

• **Reconstitution of once-daily ext-rel oral suspension (Quillivant XR):** review manufacturer's instructions; before reconstitution, tap bottle to loosen powder. Add specified amount of water to bottle, fully insert the bottle adapter into the bottle neck, replace the cap, and vigorously shake for at least 10 sec. Store reconstituted suspension at 77°F; dispense in original packaging (bottle in container). Reconstituted suspension is stable for 4 mo from date of reconstitution

Topical route

• **Daytrana transdermal system:** apply patch 2 hr before effect is needed
• Do not cut or trim patch
• Apply patch immediately after opening. Do not use if pouch seal is broken. Do not touch adhesive side of patch during application to avoid absorption. Wash hands immediately if adhesive side of patch is touched. Discard patch if difficulty is encountered in separating patch from the release liner, or if tearing or other damage occurs. Discard patch if adhesive containing medication has transferred to the liner during removal of patch from the liner
• Place on a dry, clean area of the hip, and hold in place for 30 sec with palm of hand. Do not apply to oily, damaged, or irritated skin. Do not apply topical preparations to the application site immediately before patch application. Avoid waistline area where patch could be rubbed by clothing
• Application sites should be alternated from one hip to the next each day
• Adherence of patch may be affected by showering, bathing, or swimming
• Avoid exposing the application site to hair dryers, heating pads, electric blankets, heated water beds, or other direct external heat sources
• Do not apply or reapply the patch with dressings, tape, or adhesives. If the patch is not fully adhered to the skin during application or wear time, discard patch according to disposal instructions, and apply a new patch
• Total daily wear time should not exceed 9 hr, regardless of patch replacement
• Patches should be peeled off slowly. Patch removal may be aided by applying an oil-based product (petroleum jelly, mineral oil, olive oil) to the patch edges
• **For disposal,** instruct patient and/or caregiver to fold used patch so that the adhesive side of the patch adheres to itself, and then flush it down the toilet or dispose of in an appropriate lidded container

SIDE EFFECTS

CNS: *Hyperactivity, insomnia, restlessness, talkativeness,* dizziness, drowsiness, toxic psychosis, headache, akathisia, dyskinesia, masking or worsening of Tourette's syndrome, **seizures,** hallucinations, **malignant neuroleptic syndrome,** aggression; **cerebral vasculitis, hemorrhage, stroke (rare)**
CV: *Palpitations, tachycardia,* B/P changes, angina, **dysrhythmias, sudden death**
ENDO: Growth retardation
GI: Nausea, anorexia, dry mouth, weight loss, abdominal pain
HEMA: **Leukopenia, anemia, thrombocytopenic purpura**
INTEG: **Exfoliative dermatitis,** urticaria, rash, erythema multiforme, **hypersensitivity reactions; patch: permanent loss of skin color, anaphylaxis, angioedema**
MISC: Fever, arthralgia, scalp hair loss, **rhabdomyolysis**

PHARMACOKINETICS

PO: Varies with formulation, metabolized by liver, excreted by kidneys, half-life 3-4 hr

INTERACTIONS

Increase: **hypertensive crisis—MAOIs or within 14 days of MAOIs, vasopressors**
Increase: effects of tricyclics, SSRIs, anticonvulsants, SNRIs, CNS stimulants; monitor for adverse reactions
Decrease: effect of antihypertensives
Drug/Herb
Increase: CNS stimulation—cola nut, guarana, horsetail, yerba maté, yohimbe
Drug/Food
Increase: stimulation—caffeine

NURSING CONSIDERATIONS

Assess:
• **ADHD:** attention span, decreased hyperactivity, impulsivity, socialization

Black Box Warning: Substance abuse: there is a high potential for abuse; use caution in those with history of substance abuse

• VS, B/P; may reverse antihypertensives; check patients with cardiac disease more often for increased B/P
• CBC with differential, platelets, LFTs, urinalysis; in diabetes: blood glucose, urine glucose; insulin changes may have to be made because eating will decrease
• Height, growth rate q3mo in children; growth rate may be decreased, but normal growth will resume when product is discontinued
• Mental status: mood, sensorium, affect, stimulation, insomnia, aggressiveness; may produce euphoria, rebound depression after product wears off
• **Withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness; usually not associated with drug holidays
• Appetite, sleep, speech patterns
• **Narcolepsy:** identify frequency, length of narcoleptic episodes
• Skin pigmentation when using TD product; may cause loss of pigmentation around site
• **Beers:** avoid use in older adults; CNS stimulant effects
• **Pregnancy/breastfeeding:** use only if benefit outweighs risk to fetus; no well-controlled studies; cautious use in breastfeeding

Evaluate:
• Therapeutic response: decreased hyperactivity (ADHD); increased ability to stay awake (narcolepsy)

Teach patient/family:
• To decrease caffeine consumption (coffee, tea, cola, chocolate); may increase irritability, stimulation; not to use guarana, yerba maté, cola nut
• To avoid OTC preparations unless approved by prescriber
• To always use dosing dispenser provided for oral suspension dose
• To taper off product over several weeks because depression, increased sleeping, lethargy will occur
• To avoid driving, hazardous activities if dizziness, blurred vision occur
• To avoid alcohol
• To get needed rest; patients will feel more tired at end of day
• That shell of Concerta tab may appear in stools
• To take regular tab at least 6 hr before sleep, 10 hr for ext rel; to use dosing syringe, not household teaspoon, to measure liquid
• **Seizures:** that those with seizure disorders may have lower seizure threshold
• **Transdermal:** to use in AM; after tray is opened, to use within 2 mo; not to store patches without protective covering; to notify prescriber if skin irritation or rash occurs; that if patch comes off, to use a new one on a different skin site; to tell child not to remove or share with others
• **Sus rel:** not to chew tabs

TREATMENT OF OVERDOSE: Administer fluids; hemodialysis or peritoneal dialysis; antihypertensive for increased B/P; administer short-acting barbiturate before lavage

M

methylPREDNISolone (Rx)

(meth-il-pred-niss′oh-lone)

DEPO-Medrol, Medrol, SOLU-Medrol

Func. class.: Corticosteroid, synthetic
Chem. class.: Glucocorticoid, intermediate acting

Do not confuse:
methylPREDNISolone/predniSONE/medroxyPROGESTERone/methylTESTOSTERone

ACTION: Decreases inflammation by suppression of migration of polymorphonuclear leukocytes, fibroblasts; reversal of increased capillary permeability and lysosomal stabilization

USES: Severe inflammation, shock, adrenal insufficiency, collagen disorders, management of acute spinal cord injury, multiple sclerosis, acute lymphocytic

leukemia, anaphylaxis, angioedema, asthma, Crohn's disease, eczema, gouty arthritis

CONTRAINDICATIONS: Hypersensitivity, intrathecal use, neonates

Precautions: Pregnancy, breastfeeding, diabetes mellitus, glaucoma, osteoporosis, seizure disorders, ulcerative colitis, HF, myasthenia gravis, renal disease, esophagitis, peptic ulcer, tartrazine, benzyl alcohol, corticosteroid hypersensitivity, viral infection, TB, traumatic brain injury, Cushing syndrome, measles, varicella, fungal infections

DOSAGE AND ROUTES

Adrenal insufficiency/inflammation

• **Adult: PO** 4-48 mg in 4 divided doses; **IM** 10-120 mg (acetate); **IM/IV** 10-40 mg (succinate); **INTRAARTICULAR** 4-80 mg (acetate)

• **Child: IV** 0.5-1.7 mg/kg in 3-4 divided doses (succinate)

Multiple sclerosis

• **Adult: PO** 200 mg/day × 1 wk, then 80 mg every other day × 30 days

Most uses

• **Adult: IM/IV** 40-250 mg q4-6hr

Acute spinal cord injury (succinate)

• **Adult/child: IV** 30 mg/kg over 15 min, then continuous infusion after 45 min, 5.4 mg/kg/hr × 23 hr

***Pneumocystitis jirovecii* pneumona (AIDS) (Succinate)**

• **Adult: IV** 30 mg bid × 5 days, then 30 mg daily × 5 days, then 15 mg daily × 10 days

Available forms: Tabs 2, 4, 8, 16, 32 mg; inj 20, 40, 80 mg/mL acetate; inj 40, 125, 500, 1000, 2000 mg/vial succinate

Administer:

• Titrated dose; use lowest effective dose

PO route

• With food or milk to decrease GI symptoms (PO)

• Once-a-day dose should be given in AM to coincide with body's normal cortisol secretion

IM route

• IM inj deep in large muscle mass; rotate sites; avoid deltoid; use 21-G needle; after shaking suspension (parenteral); inj-site reaction may occur (induration, pain at site, atrophy)

• In one dose in AM to prevent adrenal suppression; avoid SUBCUT administration; may damage tissue

IV route

• Use only methylprednisolone sodium succinate; never use acetate product

Direct IV route

• After diluting with diluent provided; agitate slowly; give ≤500 mg/≥1 min directly over 3-15 min; doses ≥2 mg/kg or 250 mg should be given by intermittent IV infusion unless potential benefits outweigh risks

Intermittent/continuous INFUSION route

• Dilute further in D_5W, NS, D_5NS; haze may form; give over 15-60 min; large dose (≥500 mg) should be given over 30-60 min

Y-site compatibilities: Acetaminophen, acyclovir, amifostine, amphotericin B cholesteryl, amrinone, aztreonam, cefepime, CISplatin, cladribine, cyclophosphamide, cytarabine, DOPamine, DOXOrubicin, enalaprilat, famotidine, fludarabine, granisetron, heparin, melphalan, meperidine, methotrexate, metroNIDAZOLE, midazolam, morphine, piperacillin/tazobactam, remifentanil, sodium bicarbonate, tacrolimus, teniposide, theophylline, thiotepa

SIDE EFFECTS

CNS: Depression, flushing, sweating, headache, mood changes

CV: Hypertension, circulatory collapse, thrombophlebitis, embolism, tachycardia

EENT: Fungal infections, increased intraocular pressure, blurred vision, cataracts

GI: Diarrhea, nausea, abdominal distention, GI hemorrhage, increased appetite, pancreatitis

HEMA: Thrombocytopenia

INTEG: Acne, poor wound healing, ecchymosis, petechiae

MS: Fractures, osteoporosis, weakness

MISC: Hypernatremia

PHARMACOKINETICS

Half-life >3½ hr (plasma), 18-36 hr (tissue); crosses placenta, enters breast milk in small amounts; metabolized in liver; excreted by kidneys (unchanged)
PO: Peak 1-2 hr, duration 1½ days, well absorbed
IM: Peak 4-8 days, duration 1-4 wk, well absorbed
Intraarticular: Peak 1 wk

INTERACTIONS

Increase: side effects—amphotericin B, diuretics
Increase: GI bleeding—salicylates, NSAIDs; assess for GI bleeding
Increase: methylPREDNISolone action—oral contraceptives, estrogens
Increase: adrenal suppression—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole); dose may need to be decreased
Decrease: methylPREDNISolone effect—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifAMPin); dose may need to be increased
Decrease: effects of antidiabetics, vaccines, somatrem

Drug/Herb

- Avoid use with St. John's wort

Drug/Food

- Do not use with grapefruit/grapefruit juice; level of methylPREDNISolone will be increased

Drug/Lab Test

Increase: cholesterol, blood glucose
Decrease: calcium, potassium, T_4, T_3, thyroid ^{131}I uptake test, urine 17-OHCS, 17-KS
False negative: skin allergy tests

NURSING CONSIDERATIONS

Assess:

- **Potassium depletion:** parethesias, fatigue, nausea, vomiting, depression, polyuria, dysrhythmias, weakness
- Edema, hypertension, cardiac symptoms
- Mental status: affect, mood, behavioral changes, aggression
- Monitor potassium, blood glucose, urine glucose while receiving long-term therapy; hypokalemia and hyperglycemia
- Assess joint mobility, pain, edema if product given intraarticularly
- B/P q4hr, pulse; notify prescriber of chest pain, crackles
- I&O ratio; be alert for decreasing urinary output, increasing edema; weight daily; notify prescriber of weekly gain >5 lb
- **Adrenal insufficiency:** weight loss, nausea, vomiting, confusion, anxiety, hypotension, weakness; plasma cortisol levels during long-term therapy (normal level: 138-635 nmol/L SI units when drawn at 8 AM)
- Growth in children receiving long-term treatment
- **Infection:** increased temperature, WBC, even after withdrawal of product; product masks infection
- **Beers:** avoid in older adults with delirium or at high risk for delirium; assess for confusion, delirium frequently
- **Pregnancy/breastfeeding:** use only if benefits outweigh risk to fetus, no well-controlled studies; do not breastfeed, excreted in breast milk

Evaluate:

- Therapeutic response: ease of respirations, decreased inflammation; decreased symptoms of adrenal insufficiency

Teach patient/family:

- To increase intake of potassium, calcium, protein
- To carry emergency ID as corticosteroid user, with product used and prescriber's information
- To notify prescriber if therapeutic response decreases; that dosage adjustment may be needed
- Not to discontinue abruptly because adrenal crisis can result
- To take PO with food, milk to decrease GI symptoms
- To avoid OTC products: salicylates, alcohol in cough products, cold preparations unless directed by prescriber; to

avoid vaccinations because immunosuppression occurs
• **Adrenal insufficiency:** nausea, anorexia, fatigue, dizziness, dyspnea, weakness, joint pain
• **Cushingoid symptoms:** buffalo hump, moon face, rapid weight gain, excess sweating, when to notify prescriber
• **Infection:** to avoid persons with known infections; corticosteroids can mask symptoms of infection

methyltestosterone (Rx)

(meth-il-tes-tos'te-rone)

Methitest

Func. class.: Androgen

USES: Breast cancer, metastatic (females); advancing inoperable metastatic (skeletal) mammary cancer who are 1-5 yr postmenopausal; delayed puberty (males)

CONTRAINDICATIONS

Hypersensitivity, men with breast cancer/prostate cancer; pregnancy

DOSAGE AND ROUTES

Breast cancer, metastatic (females)
Adult PO: 50-200 mg daily
Delayed puberty (males)
Adolescent PO: 10-50 mg daily; for 4-6 mo
Available forms: Capsules 10 mg; tablets 10 mg

metipranolol ophthalmic

See Appendix B

metoclopramide (Rx)

(met-oh-kloe-pra'mide)

Gimoti, Maxeran, Metonia, Reglan

Func. class.: Cholinergic, antiemetic, GI stimulant

Chem. class.: Central dopamine receptor antagonist

Do not confuse:
metoclopramide/metOLazone

ACTION: Enhances response to acetylcholine of tissue in upper GI tract, which causes the contraction of gastric muscle; relaxes pyloric, duodenal segments; increases peristalsis without stimulating secretions; blocks DOPamine in chemoreceptor trigger zone of CNS

USES: Prevention of nausea, vomiting induced by chemotherapy, radiation, delayed gastric emptying, gastroesophageal reflux

CONTRAINDICATIONS:

Hypersensitivity to this product, procaine, or procainamide; seizure disorder, pheochromocytoma, GI obstruction, hemorrhage/perforation, child <1 yr
Precautions: Pregnancy, breastfeeding, Parkinson's disease, breast cancer (prolactin dependent), abrupt discontinuation, cardiac disease, children, depression, diabetes mellitus, G6PD deficiency, geriatrics, heart failure, hypertension, infertility, malignant hyperthermia, methemoglobinemia, procainamide/paraben hypersensitivity, renal impairment

Black Box Warning: Tardive dyskinesia

DOSAGE AND ROUTES

Nausea/vomiting (chemotherapy)
• **Adult: IV** 1-2 mg/kg 30 min before administration of chemotherapy, then q2hr × 2 doses, then q3hr × 3 doses
• **Child (unlabeled): IV** 1-2 mg/kg/dose
Facilitate small-bowel intubation for radiologic exams
• **Adult and child >14 yr: IV** 10 mg over 1-2 min
• **Child <6 yr: IV** 0.1 mg/kg
• **Child 6-14 yr: IV** 2.5-5 mg
Diabetic gastroparesis
• **Adult: PO** 10 mg 30 min before meals, at bedtime × 2-8 wk; **Nasal Spray: Adult <65 yr:** 1 spray (15 mg) in 1 nostril, 30 min before meals and bedtime × 2-8 wk (max 4 sprays/day; >65 yr not recommended
• **Geriatric: PO** 5 mg 30 min before meals, at bedtime, increase to 10 mg if needed

Gastroesophageal reflux

- **Adult: PO** 10-15 mg qid 30 min before meals and at bedtime
- **Child: PO** 0.4-0.8 mg/kg/day in 4 divided doses

Renal dose

- **Adult: PO** CCr <60 mL/min, 5 mg qid, max 20 mg/day, or CCr 10-15 mL/min give 75% of normal dose; CCr <10 mL/min give 50% of normal dose

Available forms: Tabs 5, 10 mg; syr 1 mg/mL ✱, solution for inj 5 mg/mL, 10 mg/2 mL; oral sol 5 mg/5 mL, 10 mg/10 mL; orally disintegrating tab 5, 10 mg; nasal spray 15 mg/actuation

Administer:

- Total daily dose, max 0.5 mg/kg except in platinum-based chemotherapy

PO route

- ½-1 hr before meals and at bedtime for better absorption
- Gum, hard candy, frequent rinsing of mouth for dry oral cavity
- **Oral disintegrating:** place on tongue, allow to dissolve, swallow; remove from blister immediately before use; give ≥30 min before meals and at bedtime; do not use if tablet breaks

Nasal Spray

- Prime before first use, use 10 sprays
- Lean head slightly forward to use, close other nostril with finger, press firmly, while inhaling, wipe tip when done

IM route

- Give for postoperative nausea, vomiting before end of surgery

Direct IV route

- DiphenhydrAMINE IV or benztropine IM for EPS
- Undiluted if dose ≤10 mg; give by slow injection over 2 min

Intermittent IV INFUSION route

- **10-mL and 30-mL vials (50 mg and 150 mg, respectively, in 5 mg/mL) are used for IV infusion with dilution:** Dilute calculated amount in ≥50 mL D_5W, NaCl, given over ≥15 min
- Max 5 mg/min infusion route
- Infusions are stable at room temperature for 24 hr
- Discard unused portions

Y-site compatibilities: Acetaminophen, alfentanil, amifostine, amikacin, aminophylline, ascorbic acid, atracurium, atropine, azaTHIOprine, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, cladribine, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doripenem, doxapram, DOXOrubicin hydrochloride, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, epoetin alfa, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, folic acid, foscarnet, gallium nitrate, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, imipenem/cilastatin, indomethacin, insulin, isoproterenol, ketorolac, labetalol, leucovorin, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, metaraminol, methadone, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoprolol, metroNIDAZOLE, miconazole, midazolam, milrinone, minocycline, mitoMYcin, morphine, moxalactam, multiple vitamins, nafcillin, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pantoprazole, papaverine, PEMEtrexed, penicillin G, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine,

promethazine, propranolol, protamine, pyridoxine, quinupristin/dalfopristin, raNITIdine, remifentanil, riTUXimab, rocuronium, sargramostim, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, topotecan, trastuzumab, trimethaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine

SIDE EFFECTS

CNS: *Sedation, fatigue, restlessness, headache, sleeplessness, dystonia,* dizziness, drowsiness, suicidal ideation, seizures, EPS, neuroleptic malignant syndrome; tardive dyskinesia (>3 mo, high doses)
CV: Hypotension, supraventricular tachycardia
GI: Dry mouth, constipation, nausea, anorexia, vomiting, diarrhea
GU: Decreased libido, prolactin secretion, amenorrhea, galactorrhea
HEMA: Neutropenia, leukopenia, agranulocytosis
INTEG: Urticaria, rash

PHARMACOKINETICS

Metabolized by liver, excreted in urine, half-life 2½-6 hr
PO: Onset ½-1 hr, duration 1-2 hr
IM: Onset 10-15 min, duration 1-2 hr
IV: Onset 1-3 min, duration 1-2 hr

INTERACTIONS

• Avoid use with MAOIs; may increase hypertension
Increase: sedation—alcohol, other CNS depressants; avoid concurrent use
Increase: risk for EPS—haloperidol, phenothiazines; assess for EPS
Decrease: action—anticholinergics, opiates; avoid using together or assess carefully
Drug/Lab Test
Increase: prolactin, aldosterone, thyrotropin

NURSING CONSIDERATIONS

Assess:

Black Box Warning: EPS, tardive dyskinesia; more likely to occur in treatment >3 mo, geriatric patients and may be irreversible; assess for involuntary movements often; avoid using phenothiazines, haloperidol

• **Neuroleptic malignant syndrome:** hyperthermia, change in B/P, pulse, tachycardia, sweating, rigidity, altered consciousness (rare)
• Mental status: depression, anxiety, irritability
• GI complaints: nausea, vomiting, anorexia, constipation; assess bowel sounds
• **Pregnancy/breastfeeding:** use only if clearly needed; no studies in pregnancy; do not breastfeed, appears in breast milk
• **Beers:** avoid in older adults unless for gastroparesis; can cause extrapyramidal effects; monitor for EPS frequently

Evaluate:

• Therapeutic response: absence of nausea, vomiting, anorexia, fullness; decreased GERD

Teach patient/family:

• To avoid driving, other hazardous activities until stabilized on product
• To avoid alcohol, other CNS depressants that will enhance sedating properties of this product

Black Box Warning: Symptoms of EPS, tardive dyskinesia; to report to prescriber

• How to use oral disintegrating product

metolazone (Rx)

(me-tole′a-zone)
Zaroxolyn
Func. class.: Diuretic, antihypertensive
Chem. class.: Thiazide-like quinazoline derivative

Do not confuse:
metolazone/methotrexate/methadone/metoclopramide

ACTION: Acts on distal tubule by increasing excretion of water, sodium, chloride, potassium, magnesium, bicarbonate; decreases GFR

USES: Edema, hypertension, heart failure, nephrotic syndrome

CONTRAINDICATIONS: Hypersensitivity to thiazides, sulfonamides; anuria, hepatic coma, hepatic encephalopathy
Precautions: Pregnancy, breastfeeding, geriatric patients, hypokalemia, renal/hepatic disease, gout, COPD, lupus erythematosus, diabetes mellitus, hypotension, history of pancreatitis; electrolyte imbalance

DOSAGE AND ROUTES

Edema in heart failure/renal disease
- **Adult: PO** 5-20 mg/day; max 20 mg/day

Hypertension
- **Adult: PO** 2.5-5 mg/day
- **Child: PO** 0.2-0.4 mg/kg/day in divided doses q12-24hr

Available forms: Tabs 2.5, 5, 10 mg
Administer:
- In AM to avoid interference with sleep if using product as diuretic
- Potassium replacement if potassium <3 mg/dL
- With food if nausea occurs; absorption may be decreased slightly

SIDE EFFECTS

CNS: Drowsiness, lethargy
CV: *Orthostatic hypotension,* palpitations, hypotension, chest pain, volume depletion
ELECT: *Hypokalemia,* hypercalcemia, hyponatremia, hyperuricemia, hypomagnesemia, hypophosphatemia, hypovolemia
GI: *Nausea, vomiting, anorexia,* constipation, diarrhea, cramps, pancreatitis, GI irritation, dry mouth, jaundice, hepatitis
GU: *Urinary frequency,* polyuria, uremia, glucosuria, nocturia, impotence, *hyperuricemia*
HEMA: Aplastic anemia, hemolytic anemia, leukopenia, agranulocytosis, neutropenia
EENT: Blurred vision
INTEG: *Rash,* urticaria, purpura, photosensitivity, fever, dry skin, toxic epidermal necrolysis, Stevens-Johnson syndrome
ENDO: *Hyperglycemia,* increased creatinine, BUN
MS: Muscle cramps, joint pain, swelling

PHARMACOKINETICS

Protein binding 33%, peak 8 hr, duration 12-24 hr, excreted unchanged by kidneys, crosses placenta, enters breast milk, half-life 14 hr

INTERACTIONS

Increase: hyperglycemia—antidiabetics
Increase: hypokalemia—mezlocillin, piperacillin, amphotericin B, glucocorticoids, digoxin, stimulant laxatives
Increase: hypotension—alcohol (large amounts), nitrates, antihypertensives, barbiturates, opioids
Increase: toxicity—lithium
Increase: metOLazone effects—loop diuretics
Decrease: action of metOLazone, increase renal failure risk—NSAIDs, salicylates
Drug/Food
Increase: severe hypokalemia—licorice
Drug/Herb
Decrease: antihypertensive effect—ephedra (ma huang)
Increase: antihypertensive effect—hawthorn
Drug/Lab Test
Increase: calcium, cholesterol, glucose, triglycerides
Decrease: potassium, sodium, chloride, magnesium, WBC, Hb
Interference: parathyroid function tests

NURSING CONSIDERATIONS

Assess:
- **Weight, I&O daily** to determine fluid loss; effect of product may be decreased if used daily

• **HF:** improvement in edema of feet, legs, sacral area daily if product being used
• **Hypertension:** B/P lying, standing; postural hypotension may occur
• **Electrolytes:** potassium, magnesium, sodium, chloride; include BUN, blood glucose, CBC, serum creatinine, blood pH, ABGs, uric acid, calcium
• **Hypokalemia:** postural hypotension, malaise, fatigue, tachycardia, leg cramps, weakness
• Rashes, temperature daily
• Confusion, especially among geriatric patients; take safety precautions if needed
• **Hepatic encephalopathy:** do not use in hepatic coma or precoma; fluctuations in electrolytes can occur rapidly and precipitate hepatic coma; use caution in patients with impaired hepatic function
• **Pregnancy/breastfeeding:** use in pregnancy only if needed, no well-controlled studies; do not breastfeed, appears in breast milk
• **Beers:** use with older adults may exacerbate or cause SIADH; monitor sodium level frequently

Evaluate:
• Therapeutic response: decreased edema, B/P

Teach patient/family:
• To rise slowly from lying or sitting position
• To notify prescriber of muscle weakness, cramps, nausea, dizziness
• That product may be taken with food or milk
• To use sunscreen, protective clothing for photosensitivity
• That blood glucose may be increased in diabetics
• To take early in day to avoid nocturia, to take at same time of day, not to skip or double doses, that skipped dose should be taken when remembered if not close to next dose
• To avoid alcohol
• To avoid sodium foods; to increase potassium foods in diet
• Not to stop product abruptly

TREATMENT OF OVERDOSE:
Lavage if taken orally; monitor electrolytes; administer dextrose in saline; monitor hydration, CV, renal status

⚠ HIGH ALERT

metoprolol (Rx)
(meh-toe′proe-lole)

Kapspargo Sprinkle, Lopressor, Toprol 🍁, Toprol-XL

Func. class.: Antihypertensive, antianginal

Chem. class.: β_1-Blocker

Do not confuse:
Lopressor/Lyrica
Toprol-XL/Topamax

ACTION:
Lowers B/P by β-blocking effects; reduces elevated renin plasma levels; blocks β_2-adrenergic receptors in bronchial, vascular smooth muscle only at high doses; negative chronotropic effect

USES:
Mild to moderate hypertension, acute MI to reduce cardiovascular mortality, angina pectoris, NYHA class II, III heart failure, cardiomyopathy

CONTRAINDICATIONS:
Hypersensitivity to β-blockers, cardiogenic shock, heart block (2nd, 3rd degree), sinus bradycardia, sick sinus syndrome
Precautions: Pregnancy, breastfeeding, geriatric patients, major surgery, diabetes mellitus, thyroid/renal/hepatic disease, COPD, CAD, nonallergic bronchospasm, bronchial asthma, CVA, children, depression, vasospastic angina, pheochromocytoma

Black Box Warning: Abrupt discontinuation

DOSAGE AND ROUTES
Angina
• **Adult: PO** 100 mg/day as a single dose or in 2 divided doses, increase weekly prn or 100 mg **EXTENDED RELEASE** daily, max 400 mg/day extended release

Hypertension

• **Adult: PO** 50 mg bid or 100 mg/day; may give up to 100-450 mg in divided doses; **EXT REL** 25-100 mg daily, titrate at weekly intervals; max 400 mg/day

• **Geriatric: PO** 25 mg/day initially, increase weekly as needed

• **Child and adolescent 6-16 yr: PO Regular release** 1-2 mg/kg divided bid; **PO EXT REL** 1 mg/kg up to 50 mg daily

Myocardial infarction

• **Adult: IV BOL** (early treatment) 5 mg q2min × 3, then 50 mg **PO** 15 min after last dose and q6hr × 48 hr; (late treatment) **PO** maintenance 50-100 mg bid for 1-3 yr

Available forms: Tabs 25, 50, 100 mg; inj 1 mg/mL; ext rel tab (succinate) (XL) 25, 50, 100, 200 mg; ext rel tabs, tartrate: 100 mg, sprinkle 25, 50, 100, 200 mg

Administer:

PO route

• Take apical pulse before giving; if <50 bpm, hold and notify prescriber

• Do not break, crush, or chew ext rel tabs

• Regular release tab after meals, at bedtime; tab may be crushed or swallowed whole; take at same time each day

Sprinkle Capsule: May be swallowed whole or opened and sprinkled on a small amount of soft food

• Store in dry area at room temperature; do not freeze

Direct IV route

• IV, undiluted, give 1 mg/mL over 1 min × 3 doses at 2- to 5-min intervals; start **PO** 15 min after last IV dose

• Check dose with another person to prevent errors that could be fatal

Y-site compatibilities: Abciximab, acyclovir, alemtuzumab, alfentanil, alteplase, amikacin, aminophylline, amiodarone, amphotericin B liposome, anidulafungin, argatroban, ascorbic acid, atracurium, atropine, azaTHIOprine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, ceftRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, epoetin alfa, eptifibatide, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, imipenem/cilastatin, indomethacin, insulin, isoproterenol, ketorolac, labetalol, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metroNIDAZOLE, midazolam, milrinone, mitoXANTRONE, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pancuronium, papaverine, PEMEtrexed, penicillin G, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, raNITIdine, rocuronium, sodium bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole

SIDE EFFECTS

CNS: *Insomnia, dizziness,* mental changes, hallucinations, depression,

anxiety, headaches, nightmares, confusion, fatigue, weakness
CV: *Hypotension,* bradycardia, HF, *palpitations,* dysrhythmias, cardiac arrest, AV block, pulmonary/peripheral edema, chest pain
EENT: Blurred vision
GI: *Nausea, vomiting,* colitis, cramps, *diarrhea,* constipation, flatulence, dry mouth, *hiccups*
GU: Impotence, urinary frequency
HEMA: Agranulocytosis, eosinophilia, thrombocytopenia, purpura
INTEG: Rash, purpura, alopecia, dry skin, urticaria, pruritus
RESP: Bronchospasm, dyspnea, wheezing
ENDO: Hyper/hypoglycemia

PHARMACOKINETICS

Half-life 3-7 hr, metabolized in liver (metabolites) by CYP2D6 Dna some may be poor metabolizers, excreted in urine; crosses placenta, enters breast milk
PO: Peak 2-4 hr, duration 13-19 hr
PO-ER: Peak 6-12 hr, duration 24 hr
IV: Onset immediate, peak 20 min, duration 6-8 hr

INTERACTIONS

Increase: hypoglycemic digoxin, diltiazem, bradycardia effects—verapamil, insulin, oral antidiabetics
Increase: metoprolol level—cimetidine
Increase: effects of benzodiazepines
Decrease: antihypertensive effect—salicylates, NSAIDs
Decrease: metoprolol level—barbiturates
Decrease: effects of—xanthines
Decrease: effects of each—dopamine, theophylline
Drug/Food
Increase: absorption with food
Drug/Lab Test
Increase: blood glucose, BUN, potassium, ANA titer, serum lipoprotein, triglycerides, uric acid, alk phos, LDH, AST, ALT

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Abrupt withdrawal: may cause MI, ventricular dysrhythmias, myocardial ischemia; taper dose over 7-14 days

- **Hypertension/angina:** ECG directly when giving IV during initial treatment
- I&O, weight daily; check for heart failure (weight gain, jugular venous distention, crackles, edema, dyspnea)
- Monitor B/P during initial treatment, periodically thereafter; pulse; note rate, rhythm, quality; apical/radial pulse before administration; notify prescriber of any significant changes or pulse <50 bpm; atropine 0.25-0.5 mg IV may be given for heart rate <40 bpm
- Baselines of renal, hepatic studies before therapy begins
- **Pregnancy/breastfeeding:** use only if clearly needed, no well-controlled studies, excreted in breast milk in small quantities; American Academy of Pediatrics considers this product to be compatible with breastfeeding

Evaluate:

- Therapeutic response: decreased B/P after 1-2 wk, decreased anginal pain

Teach patient/family:

- To take immediately after meals; to take medication at bedtime to prevent effect of orthostatic hypotension

Black Box Warning: Not to discontinue product abruptly; to taper over 2 wk; may cause angina

- Not to use OTC products containing α-adrenergic stimulants (nasal decongestants, OTC cold preparations) unless directed by prescriber; to avoid alcohol, smoking, sodium intake
- To report bradycardia, dizziness, confusion, depression, fever, sore throat, SOB, decreased vision to prescriber
- To take pulse, B/P at home; when to notify prescriber
- To comply with weight control, dietary adjustments, modified exercise program
- To carry emergency ID to identify product, allergies, prescriber

• To monitor blood glucose closely if diabetic, hypo/hyperglycemia
• To avoid hazardous activities if dizziness is present
• To report symptoms of heart failure: difficult breathing, especially on exertion or when lying down; night cough; swelling of extremities
• To rise slowly to decrease orthostatic hypertension
• To report Raynaud's symptoms
• That product may increase sensitivity to cold

TREATMENT OF OVERDOSE: Lavage, IV atropine for bradycardia, IV theophylline for bronchospasm, digoxin, O_2, diuretic for cardiac failure, hemodialysis, administer vasopressor

metoprolol/hydrochlorothiazide (Rx)

Dutoprol, Lopressor
Func. class.: β-blocker/thiazide diuretic

USES: Hypertension

DOSAGE AND ROUTES

Black Box Warning: Abrupt discontinuation

Hypertension in those who do not respond to monotherapy:
• **Adults (regular release): PO** 100-200 mg of metoprolol with 25-50 mg of hydrochlorothiazide, given in 1-2 divided doses; **(extended-release)** 25 mg to 200 mg metoprolol with 12.5 mg to 25 mg hydrochlorothiazide daily
Available forms: Tabs 25 mg/12.5 mg, 50 mg/12.5 mg, 100 mg/12.5 mg metoprolol/hydrochlorothiazide

metreleptin (Rx)

(met′-re-lep′-tin)
Myalept
Func. class.: Hormone replacement-leptin receptor agonist

USES: Complications caused by leptin deficiency in patients with congenital or acquired generalized lipodystrophy

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Secondary malignancy, antimetreleptin antibodies

DOSAGE AND ROUTES

• **Adult/adolescent/child >40 kg: SUBCUT** 2.5 mg/day (0.5 mL) initially, may increase or decrease dose by 1.25-2.5 mg/day (0.25-0.5 mL) as needed, max 10 mg/day (2 mL/day). **Females:** 5 mg/day (1 mL) initially; may increase or decrease dose by 1.25-2.5 mg/day (0.25-0.5 mL) as needed, max 10 mg/day (2 mL/day)
• **Adult/adolescent/child/neonate ≤40 kg: SUBCUT** 0.06 mg/kg/day (0.012 mL/kg) initially. Increase or decrease dose by 0.02 mg/kg/day (0.004 mL/kg) as needed, max 0.13 mg/kg/day (0.026 mL/kg/day). Give daily at the same time every day
Available forms: Powder for injection 11.3 mg

metroNIDAZOLE (Rx)

(me-troe-ni′da-zole)
Flagyl, Flagyl ER Flagyl IV, Flagyl IV RTU, Floruzone ER, Novo-Nidazol
Func. class.: Antiinfective—miscellaneous
Chem. class.: Nitroimidazole derivative

Do not confuse:
metroNIDAZOLE/metFORMIN

ACTION: Direct-acting amebicide/trichomonacide binds and disrupts DNA structure, thereby inhibiting bacterial nucleic acid synthesis

USES: Intestinal amebiasis, amebic abscess, trichomoniasis, refractory trichomoniasis, bacterial anaerobic infections, giardiasis, septicemia, endocarditis; bone, joint, lower respiratory tract infections; rosacea

Unlabeled uses: Giardiasis

CONTRAINDICATIONS:

Pregnancy 1st trimester, breastfeeding, hypersensitivity to this product

Precautions: Pregnancy, geriatric patients, *Candida* infections, heart failure, fungal infection, dental disease, bone marrow suppression, hematologic disease, GI/renal/hepatic disease, contracted visual or color fields, blood dyscrasias, CNS disorders

Black Box Warning: New primary malignancy

DOSAGE AND ROUTES

Trichomoniasis

- **Adult: PO** 500 mg bid × 7 days or 2 g as single dose; do not repeat treatment for 4-6 wk
- **Child ≥45 kg (unlabeled): PO** 2 g once
- **Child <45 kg (unlabeled): PO** 15 mg/kg/day in 3 divided doses × 7-10 days
- **Infant (unlabeled): PO** 15 mg/kg/day divided in 3 doses × 7 days

Amebic hepatic abscess

- **Adult: PO** 750 mg tid × 7-10 days
- **Child: PO** 35-50 mg/kg/day in 3 divided doses × 7-10 days

Intestinal amebiasis

- **Adult: PO** 750 mg tid × 7-10 days
- **Child: PO** 35-50 mg/kg/day in 3 divided doses × 7-10 days, then oral iodoquinol

Anaerobic bacterial infections

- **Adult: IV INFUSION** 15 mg/kg over 1 hr, then 7.5 mg/kg **IV** or **PO** q6hr, not to exceed 4 g/day; 1st maintenance dose should be administered 6 hr after loading dose

Bacterial vaginosis (nonpregnant)

- **Adult: PO** regular rel 500 mg bid or 250 mg tid × 7 days; ext rel 750 mg/day × 7 days

Giardiasis (unlabeled)

- **Adult: PO** 250-500 mg tid or 500 mg bid × 5-7 days

Available forms: Tabs 250, 500 mg; ext rel tab (ER) 750 mg; caps 375 mg; injection solution 5 mg/mL

Administer:

- Store in light-resistant container; do not refrigerate

PO route

- Do not break, crush, or chew ext rel product, give on empty stomach
- PO with or after meals to avoid GI symptoms, metallic taste; crush tabs if needed

IV route

Intermittent INFUSION (vial 5 mg/mL)

- **Premixed infusion bags:** prediluted, ready to use infusion over 30-60 min
- **Lyophilized vials:** dilute 500 mg with 4.4 mL sterile water, 0.9% NaCl; must be diluted further with ≤8 mg/mL with 0.9% NaCl, D_5W, or LR; must neutralize with 5 mEq $NaCO_3$/500 mg; CO_2 gas will be generated and may require venting; run over 30-60 min; primary IV must be discontinued; may be given as cont infusion; do not use aluminum products; IV may require venting
- Do not use aluminum needles or other equipment to prepare product

Incompatible: aztreonam, some cephalosporins, penicillin G, sodium lactate 5% wlv, dextrose 10% wlv injection and others

SIDE EFFECTS

CNS: *Headache, dizziness,* confusion, irritability, restlessness, ataxia, depression, fatigue, drowsiness, insomnia, paresthesia, peripheral neuropathy, seizures, incoordination, depression, encephalopathy, aseptic meningitis (IV)

CV: Flattening of T waves

EENT: Blurred vision, sore throat, retinal edema, dry mouth, metallic taste, furry tongue, glossitis, stomatitis, photophobia, optic neuritis

GI: *Nausea, vomiting, diarrhea,* epigastric distress, *anorexia,* constipation, *abdominal cramps,* CDAD, xerostomia, metallic taste, abdominal pain, pancreatitis

HEMA: Leukopenia, bone marrow supression, aplasia, thrombocytopenia

GU: Genital candida infection

INTEG: Rash, pruritus, urticaria, flushing, Stevens-Johnson syndrome, phlebitis at injection site, toxic epidermal necrolysis

PHARMACOKINETICS

Crosses placenta, enters breast milk, metabolized by liver 30%-60%, excreted in urine (60%-80%), half-life 6-8 hr

PO: Peak 2 hr, absorbed 80%-85%
IV: Onset immediate, peak end of infusion

INTERACTIONS

- Do not use with aprenavir
- Avoid use with zalcitabine, disulfiram, bortezomib, norfloxacin

Decrease: metroNIDAZOLE level—cholestyramine
Increase: disulfiram reaction—alcohol, oral ritonavir, any product with alcohol
Increase: busulfan toxicity—busulfan; avoid concurrent use
Increase: metroNIDAZOLE level, toxicity—cimetidine
Increase: lithium, CYP3A4 substrates
Increase: action of warfarin, phenytoin, lithium, fosphenytoin
Increase: leukopenia—azaTHIOprine, fluorouracil

Drug/Lab Test
Altered: AST, ALT, LDH, glucose
Decrease: WBC, neutrophils
False decrease: triglycerides

NURSING CONSIDERATIONS

Assess:
- **Infection:** WBC, wound symptoms, fever, skin or vaginal secretions; start treatment after C&S is obtained, waiting for results is not needed; for opportunistic fungal infections; superinfection: fever, monilial growth, fatigue, malaise
- Stools during entire treatment; should be clear at end of therapy; stools should be free of parasites for 1 yr before patient considered cured (amebiasis)
- Vision by ophthalmic exam during, after therapy; vision problems often occur
- **Allergic reaction:** fever, rash, itching, chills; product should be discontinued if these occur, if fever, facial swelling, blisters occur, discontinue immediately
- **Renal, reproductive dysfunction:** dysuria, polyuria, impotence, dyspareunia, decreased libido, I&O; weight daily

Black Box Warning: New primary malignancy: use only when indicated; avoid unnecessary use

- **Giardiasis:** stool samples before starting to confirm diagnosis, then 3-4 week after treatment
- **Pregnancy/breastfeeding:** not to be used in breastfeeding or 1st trimester of pregnancy

Evaluate:
- Therapeutic response: decreased symptoms of infection

Teach patient/family:
- That urine may turn dark reddish brown; that product may cause metallic taste; that both are normal
- About proper hygiene after bowel movement; handwashing technique
- To notify provider about numbness or tingling of extremities
- To avoid hazardous activities because dizziness can occur
- About need for compliance with dosage schedule, duration of treatment; to take extended-release tabs 1 hr before or 2 hr after meals; to take PO with meals to prevent GI upset
- To discuss all OTC, Rx, herbals, supplements taken with provider
- To notify provider immediately of rash, fever, facial swelling, blisters
- To use condoms if treatment for trichomoniasis or cross-contamination may occur; to notify prescriber if pregnant or planning to become pregnant; that treatment of both partners is necessary for trichomoniasis
- To use frequent sips of water, sugarless gum, candy for dry mouth
- Not to drink alcohol or use preparations containing alcohol during use or for 48 hr after use of product; disulfiram-like reaction can occur
- To notify if pregnancy is planned or suspected, or if breastfeeding; risk to fetus second/third trimester in trichomoniasis

metroNIDAZOLE (topical, vaginal) (Rx)

(met-roe-ni′da-zole)

MetroCream, MetroGel, MetroGel Vaginal, MetroLotion, Noritate, Nuvessa, Rosasol, Rosadan, Vandazole

Func. class.: Antiprotozoal, antibacterial

Chem. class.: Nitroimidazole

ACTION: Antibacterial and antiprotozoal activity may result from interacting with DNA

USES: Acne rosacea, bacterial vaginosis

CONTRAINDICATIONS: Hypersensitivity to this product or nitroimidazoles, parabens

Precautions: Hepatic disease, blood dyscrasias; CNS conditions (vaginal), children, pregnancy

DOSAGE AND ROUTES

Acne rosacea

- **Adult: TOP** apply to affected areas bid (0.75%) or daily (1%); adjust therapy based on response

Bacterial vaginosis

- **Adult: VAG** 1 applicatorful daily × 5 days

Available forms: Topical cream 0.75%, 1%; gel 0.75%, 1%; lotion 0.75%; vaginal gel 0.75%

Administer:

Topical route

- Topical skin products are not for intravaginal therapy and are for external use only; do not use skin products near the eyes, nose, or mouth
- Wash hands before and after use; wash affected area and gently pat dry
- **Cream/gel/lotion:** Apply a thin film to the cleansed affected area; massage gently into affected areas

Intravaginal route

- Only use dosage formulations specified for intravaginal use; intravaginal dosage forms are not for topical therapy; do not ingest
- Avoid vaginal intercourse during treatment
- **Cream:** Use applicator(s) supplied by the manufacturer

SIDE EFFECTS

GU: Vaginitis, cervicitis

GI: Nausea, vomiting, cramping

INTEG: Redness, burning, dermatitis, rash, pruritus

INTERACTIONS

- Possible lithium toxicity (vaginal gel)

NURSING CONSIDERATIONS

Assess:

- **Allergic reaction:** assess for hypersensitivity; product may need to be discontinued
- **Infection:** assess for number of lesions and severity of acne rosacea, itching in vaginosis
- **Pregnancy/breastfeeding:** not to be used in breastfeeding, systemic absorption; use in pregnancy only if clearly needed, no adequate studies

Evaluate:

- Decreased severity of acne rosacea, infection in vaginosis

Teach patient/family:

- That topical skin products are not for intravaginal therapy and are for external use only; not to use skin products near the eyes, nose, or mouth
- To wash hands before and after use; to wash affected area and gently pat dry
- **Cream/gel/lotion:** to apply a thin film to the cleansed affected area and massage gently into affected areas
- **Intravaginal route:** to use only dosage formulations specified for intravaginal use; not to ingest intravaginal dosage forms because these are not for topical therapy; to avoid vaginal intercourse during treatment
- **Cream:** to use applicator(s) supplied by the manufacturer

micafungin (Rx)

(my-ca-fun′gin)

Mycamine

Func. class.: Antifungal, systemic

Chem. class.: Echinocandin

ACTION: Inhibits an essential component of fungal cell walls; causes direct damage to fungal cell wall

USES: Treatment of esophageal candidiasis; prophylaxis for *Candida* infections in patients undergoing hematopoietic stem-cell transplantation (HSCT); susceptible *Candida* sp.: *C. albicans, C. glabrata, C. krusei, C. parapsilosis, C. tropicalis*

CONTRAINDICATIONS: Hypersensitivity to this product or other echinocandins

Precautions: Pregnancy, breastfeeding, children, geriatric patients, severe hepatic disease, renal impairment, hemolytic anemia

DOSAGE AND ROUTES

Esophageal candidiasis

- **Adult: IV INFUSION** 150 mg/day given over 1 hr × 15 days
- **Child ≥4 mo, >30 kg: IV INFUSION** 2.5 mg/kg/day, max 150 mg/day
- **Child ≥4 mo, ≤30 kg: IV INFUSION** 3 mg/kg/day

Candidemia/acute disseminated candidiasis, abscess/peritonitis

- **Adult: IV** 100 mg/day over 1 hr × 15 days
- **Child ≥4 mo and >30 kg: IV** 2 mg/kg/day, max 100 mg/day; **≥4 mo and ≤30 kg:** 2 mg/kg/day

Prophylaxis for *Candida* infections in hemapoietic stem-cell transplant patients

- **Adult: IV INFUSION** 50 mg/day given over 1 hr
- **Adolescent/child/infant ≥4 mo: IV INFUSION** 1 mg/kg/day, max 50 mg/day

Administer:

Available forms: Powder for inj 50 mg, in single-dose vials 50-, 100-mg vial

IV route

Intermittent IV infusion

- Visually inspect for particulate matter and discoloration prior to use
- ***Reconstitution:*** Reconstitute each 50-mg vial or 100-mg vial with 5 mL of either 0.9% sodium chloride injection (without bacteriostatic agent) or 5% dextrose injection for a resultant concentration of 10 mg/mL or 20 mg/mL, respectively
- Gently dissolve by swirling the vial. In order to minimize excessive foaming, do not vigorously shake the vial
- ***Storage:*** Reconstituted product may be stored in the original vial protected from light for up to 24 hr at room temperature (77°F [25°C])
- ***Dilution***
- Adults: Transfer the needed amount of reconstituted micafungin to an IV bag containing 100 mL of 0.9% sodium chloride injection or 5% dextrose injection
- Pediatrics: Withdraw the calculated volume of reconstituted micafungin and add to an IV bag or syringe containing 0.9% sodium chloride injection or 5% dextrose injection (final concentration 0.5-4 mg/mL); label infusion bags or syringes containing micafungin concentrations more than 1.5 mg/mL for administration through a central catheter only
- Discard partially used vials; micafungin is preservative-free.
- *Storage:* The final diluted solution may be stored protected from light for up to 24 hr at room temperature (77°F [25°C])
- To minimize the risk of infusion-related reactions, infuse solutions with concentrations more than 1.5 mg/mL via a central catheter
- If an existing IV line will be used, flush the line with 0.9% sodium chloride injection prior to and after infusion
- ***Run*** as a slow IV infusion over 1 hr. If administered more rapidly, more frequent histamine-mediated reactions may occur. Do not give as a bolus

• Do not mix or coinfuse micafungin with other medications. Micafungin has been shown to precipitate when mixed directly with several commonly used medications
• Protect diluted micafungin from light; not necessary to cover the drip chamber or the tubing during use

SIDE EFFECTS

GI: Abdominal pain, *nausea, anorexia, vomiting, diarrhea, hyperbilirubinemia,* hepatitis
GU: Renal failure
HEMA: Hemolytic anemia
INTEG: *Rash, pruritus, inj-site pain*
MISC: Allergic reactions

PHARMACOKINETICS

Metabolized in liver; excreted in feces, urine; terminal half-life 14-17.2 hr; protein binding 99%

INTERACTIONS

Increase: plasma concentrations—CYP3A4 substrates (aripiprazole, dofetilide, pimozide); itraconazole, sirolimus, NIFEdipine; may need dosage reduction
Drug/Lab Test
Increase: ALT/AST, alk phos, bilirubin, potassium, sodium, LDH, BUN, creatinine
Decrease: blood glucose platelets, HB, WBCs

NURSING CONSIDERATIONS

Assess:
• **Infection,** clearing of cultures during treatment; obtain culture at baseline and during treatment; product may be started as soon as culture is taken (esophageal candidiasis); monitor cultures during HSCT for prevention of *Candida* infections
• CBC (RBC, Hct, HB), differential, platelet count baseline, periodically; notify prescriber of results
• Renal studies: BUN, urine CCr, electrolytes before and during therapy
• Hepatic studies before and during treatment: bilirubin, AST, ALT, alk phos as needed
• **Bleeding:** hematuria, heme-positive stools, bruising, petechiae, mucosa or orifices; blood dyscrasias can occur
• **For hypersensitivity:** rash, pruritus, facial swelling, phlebitis
• For hemolytic anemia
• **GI symptoms:** frequency of stools, cramping; if severe diarrhea occurs, electrolytes may need to be given
• **Pregnancy/breastfeeding:** use cautiously in breastfeeding; use in pregnancy if benefit outweighs risk to fetus, no adequate studies
Evaluate:
• Therapeutic response: prevention of *Candida* infection with HSCT or decreased symptoms of *Candida* infection, negative culture
Teach patient/family:
• To avoid breastfeeding while taking this product, to notify prescriber if pregnancy is planned or suspected
• To report bleeding, facial swelling, wheezing, difficulty breathing, itching, rash, hives, increasing warmth, flushing
• To report signs of infection: increased temperature, sore throat, flulike symptoms: nausea, vomiting, clay-colored stools, anorexia, yellowing skin/eyes, dark urine, hepatotoxicity may occur

miconazole (Rx)
(mi-kon′a-zole)
Oravig
miconazole nitrate (OTC)
Baza, Desenex, Fungoid, Lotrimin AF, Micaderm, Micatin, Micozole, Monistat-1, Monistat-3, Monistat-7, M-Zole 3, Vagistat-3, Zeasorb-AF
Func. class.: Antifungal
Chem. class.: Imidazole

Do not confuse:
miconazole/clotrimazole/metroNIDAZOLE

ACTION: Antifungal activity results from disruption of cell membrane permeability

USES: Treatment of topical fungal infection, vulvovaginal candidiasis; athlete's foot (tinea pedis), jock itch (tinea cruris), and ringworm (tinea corporis)

CONTRAINDICATIONS: Hypersensitivity to this product or imidazoles; pregnancy first trimester (vaginal)
Precautions: Breastfeeding, children

DOSAGE AND ROUTES

Oropharyngeal candidiasis (thrush)
• **Adult/adolescent ≥16 yr: BUCCAL** apply 1 tab (50 mg) to upper gum region, just above incisor daily × 14 days

Tinea corporis, cruris, pedis; cutaneous candidiasis
• **Adult/child >2 yr: TOP** apply bid × 2-4 wk

Tinea versicolor
• **Adult/child >2 yr: TOP** use bid × 2 wk, apply sparingly every day

Vulvovaginal candidiasis
• **Adult/child ≥12 yr: VAG** 1 applicatorful of Monistat-7 (100 mg) or 1 supp (100 mg) at bedtime × 7 days, repeat if needed, or Monistat-3 (200 mg) × 3 days or a 1200 mg supp × 1 day

Available forms: Topical cream, ointment, solution, lotion, powder, aerosol, powder 2%; aerosol spray 2%; vag cream 2, 4%; vag supp 100, 200, 1200 mg; buccal tab 50 mg

Administer:

Transmucosal use (adhesive buccal tablet)
• Place the rounded surface of the tab against the upper gum just above the incisor tooth, hold in place with slight pressure over the upper lip for 30 sec to assure adhesion
• The tab will gradually dissolve
• Administration of subsequent tab should be made to alternate sides of the mouth
• Before applying the next tab, clear away any remaining tab material
• Do not crush, chew, or swallow; food and drink can be taken normally; avoid chewing gum
• If tab does not adhere or falls off within the first 6 hr, the same tab should be repositioned; if the tab still does not adhere, a new tab should be used
• If the tab falls off or is swallowed after it was in place for 6 hr or more, a new tab should not be applied until the next regularly scheduled dose

Topical route
• Topical skin products are not for intravaginal therapy and are for external use only; do not use skin products near the eyes, nose, or mouth
• Wash hands before and after use; wash affected area and gently pat dry
• **Cream/ointment/lotion/solution:** apply a thin film to the cleansed affected area; massage gently into affected areas
• **Solution formulations:** apply a thin film to the cleansed affected area; massage gently into affected areas; if using a solution-soaked pledget, patient may use more than 1 pledget per application as needed
• **Intravaginal route:** only use dosage formulations specified for intravaginal use
• **Suppository:** unwrap, use applicator(s) supplied by the manufacturer
• **Cream:** use applicator(s) supplied by the manufacturer

SIDE EFFECTS

CNS: Headache
GI: Diarrhea, nausea
GU: Pruritus, irritation, vaginal burning
INTEG: Burning, dermatitis, rash

DRUG INTERACTIONS

Increase: anticoagulant effect—(buccal) monitor PT, INR
Decrease: effect (vaginal)—progesterone
Drug/Lab
Decrease: WBC, RBC (buccal)

NURSING CONSIDERATIONS

Assess:
• **Allergic reaction:** assess for hypersensitivity; product may need to be discontinued
• **Infection:** assess for severity of infection

• **Pregnancy/breastfeeding:** use cautiously in breastfeeding; use PO form in pregnancy only if benefits outweigh risk to fetus, no adequate studies

Evaluate:

• Decreasing severity of infection

Teach patient/family:

Topical route

• That topical skin products are not for intravaginal therapy and are for external use only; not to use skin products near the eyes, nose, or mouth

• To wash hands before and after use; wash affected area and gently pat dry

• **Cream/ointment/lotion/solution:** to apply a thin film to the cleansed affected area and massage gently into affected areas

• **Solution formulations:** to shake well before use, apply a thin film to the cleansed affected area, and massage gently into affected areas

Intravaginal route

• To only use dosage formulations specified for intravaginal use; not to ingest intravaginal dosage forms; not to use tampons, douches, spermicides; not to engage in sexual activity; product may damage condoms, diaphragms, cervical caps

• **Suppository:** to unwrap vaginal ovule (suppository) before inserting; to use applicator(s) supplied by the manufacturer

• **Cream:** to use applicator(s) supplied by the manufacturer

⚠ HIGH ALERT

midazolam (Rx)

(mid'ay-zoe-lam)

Nayzilam (nasal spray)

Func. class.: Anxiolytic

Chem. class.: Benzodiazepine, short-acting

Controlled Substance Schedule IV

ACTION: Depresses subcortical levels in CNS; may act on limbic system, reticular formation; may potentiate γ-aminobutyric acid (GABA) by binding to specific benzodiazepine receptors

USES: Preoperative sedation, general anesthesia induction, sedation for diagnostic endoscopic procedures, intubation, anxiety

Unlabeled uses: Acute agitation, cocaine, methamphetamine intoxication, palliative/end-of-life sedation, rapid sequence intubation, status epilepticus

CONTRAINDICATIONS: Pregnancy, hypersensitivity to benzodiazepines, acute closed-angle glaucoma, epidural/intrathecal use

Precautions: Breastfeeding, children, geriatric patients, COPD, HF, chronic renal failure, chills, debilitated patients, hepatic disease, shock, coma, alcohol intoxication, status asthmaticus

Black Box Warning: Neonates (contains benzyl alcohol), IV administration, respiratory depression/insufficiency, specialized care setting, experienced clinician, coadministration with other CNS depressants, abrupt discontinuation, hypotension

DOSAGE AND ROUTES

• Use lean body weight for obese patient

Preoperative sedation/amnesia induction

• **Adult/child ≥12 yr: IM** 0.07-0.08 mg/kg ½-1 hr before general anesthesia

• **Child 6 yr-12 yr: IV** 0.025-0.05 mg/kg; total dose of 0.4 mg/kg may be necessary

• **Child 6 mo-5 yr: IV** 0.05-0.1 mg/kg; total dose of 0.6 mg/kg may be necessary

Induction of general anesthesia

• **Adult >55 yr:** (ASA I/II) **IV** 150-300 mcg/kg over 30 sec; (ASA III) **IV** limit dose to 250 mcg/kg (nonpremedicated) or 150 mcg/kg (premedicated)

• **Adult <55 yr: IV** 200-350 mcg/kg over 20-30 sec; if patient has not received premedication, may repeat by giving 20% of original dose; if patient has received premedication, reduce dose by 50 mcg/kg

• **Child:** no safe and effective dose established; however, doses of 50-200 mcg/kg **IV** have been used

Continuous infusion for mechanical ventilation (critical care)

• **Adult: IV** 0.01-0.05 mg/kg over several min; repeat at 10- to 15-min intervals until adequate sedation, then 0.02-0.10 mg/kg/hr maintenance; adjust as needed

• **Child: IV** 0.05-0.2 mg/kg over 2-3 min then 0.06-0.12 mg/kg/hr by cont infusion; adjust as needed

• **Neonate: IV** 0.03 mg/kg/hr, titrate using lowest dose

Status epilepticus (unlabeled)

• **Child and infant >2 mo: IV** 0.15 mg/kg then **CONT IV** 1 mcg/kg/min, titrate upward q5min until seizures controlled

Available forms: Inj 1, 5 mg/mL (preservative free); injection 1 mg/mL, 5 mg/mL; syr 2 mg/mL; nasal spray 5 mg

Administer:

• Store at room temperature; protect from light

PO route (syrup)

• **Press-in-bottle adaptor (PIBA)** Remove cap of press-in bottle adapter, push adapter into neck of bottle; close with cap; remove cap, insert tip of dispenser, insert into adapter; turn upside-down, withdraw correct dose; place in mouth

IM route

• IM deep into large muscle mass

IV route

• May be given diluted or undiluted 1 mg/mL or 5 mg/mL (undiluted) or 0.03-3 mL (diluted)

• After diluting with D_5W or 0.9% NaCl, give over 2-5 min (conscious sedation) or over 30 sec (anesthesia induction)

Continuous IV infusion route

• Dilute in 0.9% NaCl or D_5W to 0.5-1 mg/mL, dose is calculated on patient's weight and use

Black Box Warning: Do not use rapid injection in neonates

Y-site compatibilities: Abciximab, acetaminophen, alemtuzumab, alfentanil, amikacin, amiodarone, anidulafungin, argatroban, atracurium, atropine, aztreonam, benzotropine, calcium gluconate, ceFAZolin, cefotaxime, cefOXitine, ceftriaxone, cimetidine, ciprofloxacin, CISplatin, clindamycin, cloNIDine, cyanocobalamin, cycloSPORINE, DACTINomycin, digoxin, diltiaZEM, diphenhydrAMINE, DOCEtaxel, DOPamine, doxycycline, enalaprilat, EPINEPHrine, erythromycin, esmolol, etomidate, etoposide, famotidine, fentaNYL, fluconazole, folic acid, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hetastarch, HYDROmorphone, hydrOXYzine, inamrinone, isoproterenol, labetalol, lactated Ringer's, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium, mannitol, meperidine, methadone, methyldopa, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, milrinone, morphine, nalbuphine, naloxone, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, oxytocin, PACLitaxel, palonosetron, pancuronium, papaverine, phytonadione, piperacillin, potassium chloride, propranolol, protamine, pyridoxine, raNITIdine, remifentanil, sodium nitroprusside, succinylcholine, SUFentanil, teniposide, theophylline, thiotepa, ticarcillin, tobramycin, vancomycin, vasopressin, vecuronium, verapamil, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: Retrograde amnesia, headache, paresthesia, chills, paradoxic reactions

CV: Hypotension, PVCs, nodal rhythm, cardiac arrest

EENT: Nystagmus, blurred vision

GI: *Nausea, vomiting,* hiccups

INTEG: Urticaria; pain, swelling, pruritus at inj site; rash

RESP: Coughing, apnea, respiratory depression

PHARMACOKINETICS

Protein binding 97%; half-life 1-5 hr, metabolized in liver; by CYP3A4 to

metabolites excreted in urine; crosses placenta, blood-brain barrier
PO: Onset 10-30 min
IM: Onset 15 min, peak ½-1 hr, duration 2-3 hr
IV: Onset 1.5-5 min, onset of anesthesia 1½-2½ min, duration 2 hr

INTERACTIONS

Increase: hypotension—antihypertensives, opiates, alcohol, nitrates
Increase: extended half-life—CYP3A4 inhibitors (cimetidine, erythromycin, raNITIdine), adjust dose if needed
Increase: respiratory depression—other CNS depressants, alcohol, barbiturates, opiate analgesics, verapamil, ritonavir, indinavir, fluvoxaMINE, protease inhibitors
Decrease: midazolam metabolism—CYP3A4 inducers (azole antifungals, theophylline), adjust dose if needed
Drug/Herb
Increase: sedation—kava, valerian
Decrease: midazolam effect—St. John's wort
Drug/Food
Increase: (PO) midazolam effect—grapefruit juice, do not use together

NURSING CONSIDERATIONS

Assess:
• B/P, pulse, respirations during IV; emergency equipment should be nearby
• Inj site for redness, pain, swelling

Black Box Warning: Should be used only in a specialized care setting by those trained in use

Black Box Warning: Respiratory depression/insufficiency: apnea, respiratory depression may be increased in geriatric patients

• Assistance with ambulation until drowsy period ends
• Immediate availability of resuscitation equipment, O_2 to support airway; do not give by rapid bolus
• **Beers:** avoid in older adults with delirium or at high risk for delirium; assess frequently for confusion, delirium; degree of amnesia in geriatric patients may be increased
• **Pregnancy/breastfeeding:** do not use in pregnancy; avoid use in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: induction of sedation, general anesthesia
Teach patient/family:
• That amnesia occurs; that events may not be remembered; to give with instructions
• To avoid driving, other hazardous activities until effects are known
• Reason for product, expected results

TREATMENT OF OVERDOSE:

Flumazenil, O_2

⚠ HIGH ALERT

midostaurin (Rx)

(mye-doe-staw′-rin)

Rydapt

Func. class.: Antineoplastic

USES: Newly diagnosed FLT3 mutation–positive AML in combination with standard cytarabine and DAUNOrubicin induction and consolidation therapy and for the treatment of aggressive systemic mastocytosis, systemic mastocytosis with associated hematologic neoplasm, or mast cell leukemia

DOSAGE AND ROUTES

Newly diagnosed FLT3 mutation–positive AML
• **Adult: PO** 50 mg bid on days 8 to 21 of each cycle of induction therapy with cytarabine and DAUNOrubicin; additionally, give midostaurin 50 mg bid on days 8 to 21 of each cycle of consolidation with high-dose cytarabine therapy
Aggressive systemic mastocytosis, systemic mastocytosis
• **Adult: PO** 100 mg bid until disease progression
Available forms: Capsule 25 mg

migalastat (Rx)

(mi-gal′a-stat)

Galafold

Func. class.: Metabolic agent

Chem. class.: Pharmacological chaperone

ACTION: Stabilizes mutant variants of alpha-galactosidase to increase enzyme trafficking to lysosomes, binds to the active site of the alpha-galactosidase A (alpha-Gal A) protein (encoded by the galactosidase alpha gene, GLA), which is deficient in Fabry disease

USES Treatment of a confirmed diagnosis of Fabry disease and an amenable galactosidase alpha gene (GLA) variant

CONTRAINDICATIONS

Hypersensitivity, severe renal disease, child

DOSAGE AND ROUTES

Adult: PO 123 mg every other day

Available forms: Capsules 123 mg

Administer:

- Give every other day at the same time of day
- Do not administer on 2 consecutive days
- Give on an empty stomach; do not consume food ≥2 hr before or 2 hr after dose
- Swallow capsule whole; do not cut, crush, or chew
- Store at room temperature in original container and protect from moisture

SIDE EFFECTS

CNS: Headache, fever

GI: Nausea, vomiting, abdominal pain, diarrhea

EENT: Nasopharynigitis

GU: UTI

MS: Back pain

RES: Cough, epistaxis

PHARMACOKINETICS

Onset and duration unknown, peak 3 hr

INTERACTIONS

None known

NURSING CONSIDERATIONS

Assess:

- Assess for nausea, vomiting, diarrhea, fever, headache, UTI
- Assess for pain in hands, red spots, hearing loss, inability to sweat baseline and periodically

Evaluate:

- Therapeutic response: Decreasing symptoms of Fabry disease (less pain in hands/red spots/hearing loss)

Teach patient/family:

- To report adverse reactions to provider
- How to take the product, every other day

miglitol (Rx)

(mig′lih-tol)

Glyset

Func. class.: Oral hypoglycemic

Chem. class.: α-Glucosidase inhibitor

ACTION: Delays digestion and absorption of ingested carbohydrates, which results in a smaller rise in blood glucose after meals; does not increase insulin production

USES: Type 2 diabetes mellitus

Unlabeled uses: Type 1 diabetes mellitus

CONTRAINDICATIONS: Hypersensitivity, diabetic ketoacidosis, cirrhosis, inflammatory bowel disease, colonic ulceration, partial intestinal obstruction, chronic intestinal disease, ileus

Precautions: Pregnancy, breastfeeding, children, diarrhea, hiatal hernia, hypoglycemia, renal disease, type 1 diabetes, vomiting

DOSAGE AND ROUTES

- **Adult: PO** 25 mg tid initially, with 1st bite of meal; maintenance dose may be increased to 50 mg tid; may be increased to 100 mg tid if needed with dosage adjustment at 4- to 8-wk intervals

Available forms: Tabs 25, 50, 100 mg
Administer:
• Tid with first bite of each meal
• Store in tight container at room temperature

SIDE EFFECTS

GI: *Abdominal pain, diarrhea, flatulence,* hepatotoxicity
INTEG: Rash

PHARMACOKINETICS

Peak 2-3 hr, not metabolized, excreted in urine as unchanged product, half-life 2 hr

INTERACTIONS

Increase: hypoglycemia risk—insulin, other antidiabetics
Decrease: levels of digoxin, propranolol, raNITIdine; adjust dose as needed
Decrease: miglitol levels—digestive enzymes, intestinal adsorbents; do not use together
Drug/Food
Increase: diarrhea—carbohydrates

NURSING CONSIDERATIONS

Assess:
• **Hypo/hyperglycemia;** even though product does not cause hypoglycemia, if patient receiving sulfonylureas or insulin, hypoglycemia may be additive (rare)
• Blood glucose levels, hemoglobin, A1c, LFTs; if hypoglycemia occurs with monotherapy, treat with glucose
• Identify medical regimen prescribed—diet, exercise, lab work
• Monitor blood glucose testing more often in stress, trauma, surgery
• **Pregnancy/breastfeeding:** use of insulin during pregnancy is recommended, don't use this product unless clearly needed; excreted in breast milk, avoid use
Evaluate:
• Therapeutic response: decreased signs, symptoms of diabetes mellitus (polyuria, polydipsia, polyphagia; clear sensorium, absence of dizziness; stable gait); improved blood glucose, A1c
Teach patient/family:
• About the symptoms of hypo/hyperglycemia; what to do about each; that during periods of stress, infection, or surgery, insulin may be required
• To carry oral glucose or glucagon to treat low glucose, do not use simple sugar in fruit juices, candy, table sugar
• How to use a glucose monitor and when to monitor; how to identify low blood glucose levels
• That medication must be taken as prescribed, tid with first bite of each meal; about consequences of discontinuing medication abruptly
• To avoid OTC medications unless approved by health care provider
• That diabetes is lifelong; that product is not a cure; to continue with medical regimen of diet, exercise, lab work
• To carry ID for emergency purposes
• About GI side effects that are common during several weeks of treatment, that they improve with continued treatment

⚠ HIGH ALERT

milrinone (Rx)

(mill'rih-nohn)
Func. class.: Inotropic/vasodilator agent
Chem. class.: Bipyridine phosphodiesterase inhibitor

ACTION: Positive inotropic agent; increases contractility of cardiac muscle with vasodilator properties; reduces preload and afterload by direct relaxation on vascular smooth muscle

USES: Short-term management of advanced heart failure that has not responded to other medication
Unlabeled uses: Adolescents, children, infants

CONTRAINDICATIONS: Hypersensitivity to this product, severe aortic disease, severe pulmonic valvular disease, acute MI

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal/hepatic disease, atrial flutter/fibrillation

DOSAGE AND ROUTES

Short-term treatment of acutely decompensated heart failure

- **Adult: IV BOL** 50 mcg/kg given over 10 min (loading dose); start infusion of 0.375-0.75 mcg/kg/min, titrate based on response
- **Adolescent/child/infant (unlabeled): IV** 50 mcg/kg over 10-60 min, then 0.5-0.75 mcg/kg/min continuous infusion

Renal dose

- **Adult: IV** CCr 41-50 mL/min, 0.43 mcg/kg/min, titrate up; CCr 31-40 mL/min, 0.38 mcg/kg/min, titrate up; CCr 21-30 mL/min, 0.33 mcg/kg/min, titrate up; CCr 11-20 mL/min, 0.28 mcg/kg/min; CCr 6-10 mL/min, 0.23 mcg/kg/min; CCr ≤5 mL/min, 0.20 mcg/kg/min; max for all doses 0.75 mcg/kg/min

Available forms: Inj 1 mg/mL; premixed inj 200 mcg/mL in D_5W

Administer:

- Potassium supplements if ordered for potassium levels <3 mg/dL

Direct IV route

- Give IV loading dose undiluted over 10 min, use infusion device

Continuous IV route

- Dilute 20-mg vial with 80, 113, 180 mL of 0.45% NaCl, 0.9% NaCl, or D_5W to a concentration of 200, 150, 100 mcg/mL, respectively
- Titrate rate based on hemodynamic and clinical response, use infusion device
- Diluted solution must be kept at room temperature and used within 24 hr
- Precipitation will form when furosemide is injected into line with milrinone

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B liposome, ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, atenolol, atracurium, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diltiaZEM, DOBUTamine, DOCEtaxel, DOPamine, doripenem, doxacurium, DOXOrubicin, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, eptifibatide, ertapenem, erythromycin, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, gallium, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, levoFLOXacin, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, methohexital, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, micafungin, midazolam, mitoXANTRONE, morphine, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride/phosphates, prochlorperazine, promethazine, propofol, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphates, streptozocin, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, torsemide, vancomycin, vasopressin,

M

vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Headache
CV: Dysrhythmias, hypotension, chest pain, *PVCs, palpitations, angina*
HEMA: Thrombocytopenia
MISC: Inj site reactions

PHARMACOKINETICS

IV: Onset 2-5 min, peak 10 min, duration variable; half-life 2.3 hr; metabolized in liver; excreted in urine as product (83%), metabolites (12%)

INTERACTIONS

Increase: effects of antihypertensives, diuretics

NURSING CONSIDERATIONS

Assess:

- Monitor ECG continuously during IV; ventricular dysrhythmia can occur, PEWP, CVP index often during infusion; B/P, pulse q5min during infusion; if B/P drops 30 mm Hg, stop infusion, call prescriber
- Electrolytes: potassium, sodium, chloride, calcium, correct as needed; renal studies: BUN, creatinine; blood studies: platelet count
- ALT, AST, bilirubin daily
- I&O ratio, weight daily; diuresis should increase with continuing therapy
- **Pregnancy/breastfeeding:** use in pregnancy if benefit outweighs risk to fetus; no well-controlled studies; cautious use in breastfeeding, not known if excreted in breast milk

Evaluate:

- Therapeutic response: increased cardiac output, decreased PCWP, adequate CVP; decreased dyspnea, fatigue, edema, ECG

Teach patient/family:

- To report angina, palpitations immediately during infusion
- To report headache, which can be treated with analgesics

TREATMENT OF OVERDOSE:

Discontinue product, support circulation

miltefosine (Rx)

(mil′-te-foe′-seen)
Impavido
Func. class.: Antiprotozoal/antileishmanial

USES: Treatment of visceral leishmaniasis caused by *L. donovani,* mucosal leishmaniasis caused by *L. braziliensis,* and cutaneous leishmaniasis caused by *L. braziliensis, L. guyanensis,* and *L. panamensis*

CONTRAINDICATIONS: Hypersensitivity, pregnancy

DOSAGE AND ROUTES

- **Adult/adolescent/child ≥12 yr and ≥45 kg: PO** 50 mg tid × 28 days
- **Adult/adolescent/child ≥12 yr and 30-44 kg: PO** 50 mg bid × 28 days; HIV guidelines suggest 100 mg daily × 4 wk in adults and adolescents regardless of weight

Available forms: capsule 50 mg

minocycline (Rx)

(min-oh-sye′kleen)
Arestin, Minocin, Solodyn, Ximino
Func. class.: Broad-spectrum antiinfective
Chem. class.: Tetracycline

Do not confuse:
Dynacin/Dynacire

ACTION: Inhibits protein synthesis, phosphorylation in microorganisms by binding to ribosomal subunits, reversibly binding to ribosomal subunits; bacteriostatic

USES: *Acinetobacter* sp., *Actinomyces israelii, Actinomyces* sp., *Bacillus*

anthracis, Bartonella bacilliformis, Bordetella pertussis, Borrelia burgdorferi, Borrelia recurrentis, Brucella sp., *Burkholderia mallei, Burkholderia pseudomallei, Campylobacter fetus, Chlamydia trachomatis, Chlamydophila psittaci, Clostridium perfringens, Clostridium* sp., *Clostridium tetani, Coxiella burnetii, Eikenella corrodens, Entamoeba* sp., *Enterobacter aerogenes, Escherichia coli, Francisella tularensis, Fusobacterium fusiforme, Fusobacterium nucleatum, Haemophilus ducreyi, Haemophilus influenzae (beta-lactamase negative), Haemophilus influenzae (beta-lactamase positive), Klebsiella granulomatis, Klebsiella* sp., *Legionella pneumophila, Leptospira* sp., *Leptotrichia buccalis, Listeria monocytogenes, Mycobacterium marinum, Mycoplasma hominis, Mycoplasma pneumoniae, Neisseria gonorrhoeae, Neisseria meningitidis, Nocardia* sp., *Pasteurella multocida, Porphyromonas gingivalis, Prevotella intermedia, Propionibacterium acnes, Propionibacterium propionicum, Rickettsia akari, Rickettsia prowazekii, Rickettsia rickettsii, Rickettsia tsutsugamushi, Shigella sp., Spirillum minus, Staphylococcus aureus* (MRSA), *Staphylococcus aureus* (MSSA), *Streptobacillus moniliformis, Streptococcus pneumoniae, Treponema pallidum, Treponema pertenue, Ureaplasma urealyticum, Vibrio cholerae, Vibrio parahaemolyticus, Yersinia enterocolitica, Yersinia pestis*

CONTRAINDICATIONS:

Pregnancy, children <8 yr, hypersensitivity to tetracyclines

Precautions: Hepatic disease, breastfeeding

DOSAGE AND ROUTES

Most infections

- **Adult: PO/IV** 200 mg, then 100 mg q12hr, max 400 mg/24 hr **IV; SUBGINGIVAL** inserted into periodontal pocket
- **Child/adolescents 9-17 yr: PO/IV** 4 mg/kg, then 4 mg/kg/day **PO** in divided doses q12hr

Rickettsial infections

- **Adult: PO/IV** 200 mg, then 100 mg q12hr
- **Child ≥9 yr/adolescent: PO/IV** 4 mg/kg, then 2 mg/kg q12hr, max adult dose

Gonorrhea (allergic to penicillin)

- **Adult: PO** 200 mg, then 100 mg q12hr × ≥4 days

Syphilis (allergic to penicillin)

- **Adult: PO** 200 mg, then 100 mg q12hr × 10-15 days

Meningococcal carrier state

- **Adult: PO** 100 mg q12hr × 5 days
- **Child ≥9 yr: PO** 4 mg/kg/dose initially (max 200 mg), then 2 mg/kg dose q12hr × 5 days, max 100 mg/dose

Uncomplicated gonococcal urethritis in men

- **Adult: PO** 100 mg q12hr × 5 days

Acne vulgaris (Solodyn only)

- **Adult/adolescent/child ≥12 yr: PO ext rel** 1 mg/kg/day × 12 wk or those weighing 126-136 kg—135 mg/day; 111-125 kg—115 mg/day; 97-110 kg—105 mg/day; 85-96 kg—90 mg/day; 72-84 kg—80 mg/day; 60-71 kg—65 mg/day; 50-59 kg—55 mg/day; 45-49 kg—45 mg/day

Acne vulgaris (all except Solodyn)

- **Adult/adolescent/child ≥12 yr: PO ext rel** 1 mg/kg/day × 12 wk or those weighing 91-136 kg—135 mg/day; 60-90 kg—90 mg/day; 45-59 kg—45 mg/day

Available forms: Caps 50, 75, 100 mg; powder for inj 100 mg; caps, pellet filled 50, 100 mg; tabs 50, 75, 100 mg; ext rel tabs 45, 55, 65, 80, 90, 105, 115, 135 mg

Administer:

- After C&S obtained before first dose; begin treatment as soon as drawn
- Store in airtight, light-resistant container at room temperature; do not expose to light
- **Fanconi's syndrome:** do not use outdated products; may cause nephrotoxicity

PO route

- With full glass of water; with food for GI symptoms
- Use pellet-filled caps/tabs 1 hr before or 2 hr after a meal
- Use extended-release tabs at same time each day, without regard to food

• Swallow caps, extended-release tabs whole; do not crush, chew
• 2 hr before or after laxative or ferrous products; 3 hr after antacid

IV route

• After reconstituting 100 mg/5 mL sterile water for inj; further dilute in 100-1000 mL of NaCl, dextrose sol; give over 1-6 hr, do not give rapidly or 250-1000 mL with Ringer's or LR, do not admix
• Change to PO dose as soon as possible to reduce thrombophlebitis risk

Y-site compatibilities: Alfentanil, amikacin, atracurium, benztropine, buprenorphine, butorphanol, calcium chloride, CARBOplatin, caspofungin, cefonicid, chlorproMAZINE, cimetidine, cisatracurium, codeine, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, dexmedetomidine, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, doxacurium, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, eptifibatide, etoposide, fenoldopam, fentaNYL, filgrastim, fludarabine, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hetastarch, IDArubicin, ifosfamide, inamrinone, isoproterenol, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, melphalan, metaraminol, methotrexate, methyldopa, metoclopramide, metoprolol, midazolam, mitoXANTRONE, nalbuphine, naloxone, perphenazine, potassium chloride, remifentanil, sargramostim, teniposide, vinorelbine, vit B/C

SIDE EFFECTS

CNS: *Dizziness,* fever, light-headedness, vertigo, seizures, increased intracranial pressure, headache
CV: Pericarditis, thrombophlebitis
EENT: Permanent discoloration of teeth, oral candidiasis, tinnitus
GI: *Nausea, vomiting, diarrhea,* anorexia, hepatotoxicity, CDAD
GU: Renal failure
HEMA: Eosinophilia, neutropenia, thrombocytopenia, hemolytic anemia, pancytopenia
RESP: Bronchospasm, cough, dyspnea
INTEG: *Rash, urticaria, photosensitivity, increased pigmentation,* exfoliative dermatitis, pruritus, blue-gray color of skin, mucous membranes
MS: Myalgia, arthritis; bone growth retardation (<8 yr)
SYST: Angioedema, Stevens-Johnson syndrome, DRESS

PHARMACOKINETICS

PO: Peak 1-4 hr, half-life 11-22 hr; excreted in urine, feces, breast milk; crosses placenta

INTERACTIONS

Increase: effect of warfarin, digoxin, insulin, oral anticoagulants, theophylline, neuromuscular blockers
Increase: chance of pseudomotor cerebri—retinoids; do not use concurrently
Decrease: effect of hormonal contraceptives, use another form of contraception
Decrease: effect of live virus vaccines, bring up to date before use
Decrease: minocycline absorption, give 2 hr before or 3 hr after iron products; laxatives (calcium, aluminum, magnesium) antidiarrhea
Decrease: effect of penicillins, avoid using together

Drug/Lab Test

False negative: urine glucose with Clinistix or Tes-Tape
Increase: BUN, FTs, eosinophils
Decrease: HB, platlets, neutrophils

NURSING CONSIDERATIONS

Assess:

• **CDAD:** diarrhea, abdominal cramps, fever; may start up to 2 mo after treatment ends; if diarrhea occurs, evaluate
• I&O ratio
• Age and tooth development
• Blood tests: PT, CBC, AST, ALT, BUN, creatinine
• Signs of anemia: Hct, HB, fatigue
• **Serious allergic reactions (anaphylaxis, Stevens-Johnson syndrome, DRESS):** assess for rash, fever, fatigue, fluid-filled blisters, abnormal LFTs; product should be discontinued immediately

• Nausea, vomiting, diarrhea; administer antiemetic, antacids as ordered
• **Overgrowth of infection:** fever, malaise, redness, pain, swelling, drainage, perineal itching, diarrhea; changes in cough or sputum; black, furry tongue in long-term therapy
• Beers: Avoid in older adults, may exacerbate syncope, monitor frequently
• **Pregnancy/breastfeeding:** do not use in pregnancy, can cause fetal harm; if pregnancy occurs, stop immediately; do not breastfeed, excreted in breast milk

Evaluate:
• Therapeutic response: decreased temperature, absence of lesions, negative C&S

Teach patient/family:
• To avoid sunlight, wear protective clothing; that sunscreen does not seem to decrease photosensitivity
• That all prescribed medication must be taken to prevent superinfection; not to use outdated product because Fanconi's syndrome may occur
• To report diarrhea that can occur several months after discontinuing product
• To avoid taking antacids, iron, cimetidine; to use 2 hr before, 6 hr after this product, absorption may be decreased; to take with a full glass of water; to take with food; not to take at bedtime, esophageal irritation may occur
• That teeth discoloration, joint or muscle pain may occur
• To use backup contraception; effectiveness may be decreased
• Not to use during pregnancy, breastfeeding; not to use for acne if trying to conceive
• To avoid driving, other hazardous activities until reaction is known
• To swallow extended-release product whole, do not crush, chew, split; not to increase, double doses, take at same time of day

minoxidil (Rx, OTC)

(mi-nox'i-dill)

Hair Regrowth Treatment Men, Minoxidil for Men, Rogaine Mens Extra Strength, Rogaine Mens, Rogaine Womens (topical)

Func. class.: Antihypertensive
Chem. class.: Vasodilator, peripheral

ACTION: Directly relaxes arteriolar smooth muscle, causing vasodilation; reduces peripheral vascular resistance, decreases B/P

USES: Severe hypertension unresponsive to other therapy (use with diuretic and β-blocker); topically to treat alopecia

CONTRAINDICATIONS: Dissecting aortic aneurysm, hypersensitivity, pheochromocytoma
Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, CVD, acute MI

Black Box Warning: CAD, HF, cardiac disease, cardiac tamponade, edema, hypotension, orthostatic hypotension, pericardial effusion

DOSAGE AND ROUTES

Severe hypertension
• **Adult: PO** 5 mg/day in 1-2 divided doses; max 100 mg/day; usual range 10-40 mg/day divided in 1-2 doses
• **Geriatric: PO** 2.5 mg/day, may be increased gradually
Child 12-17 yr: PO 5 mg daily, may increase to 10, 20, then 40 mg/day single or divided doses q3day
• **Child 1-11 yr: PO** (initial) 0.1-0.2 mg/kg/day; (effective range) 0.25-1 mg/kg/day; (max) 50 mg/day

Alopecia
• **Adult: TOP** 1 mL bid, rub into scalp daily, max 2 mL/day

Renal dose

• **Adult: PO** CCr 10-15 mL/min extend interval to q24hr; CCr <10 mL/min not recommended

Available forms: Tabs 2.5, 10 mg; topical 2%, 5% sol; topical foam 5%

Administer:

• Store protected from light and heat

PO route

• Without regard to meals

• With β-blocker and/or diuretic for hypertension

Topical route

• 1 mL no matter how much balding has occurred; increasing dosage does not speed growth

SIDE EFFECTS

Systemic

CNS: Headache, fatigue

CV: *Severe rebound hypertension on withdrawal in children,* tachycardia, angina, increased T wave, HF, pulmonary edema, pericardial effusion, edema, sodium, water retention, *hypotension*

GI: Nausea, vomiting

GU: Breast tenderness

HEMA: Hct, HB; erythrocyte count may decrease initially, leukopenia

INTEG: Pruritus, Stevens-Johnson syndrome, rash, hirsutism, contact dermatitis

PHARMACOKINETICS

PO: Onset 30 min, peak 2-3 hr, duration 48-120 hr; half-life 4.2 hr; metabolized in liver; metabolites excreted in urine, feces; protein binding minimal

INTERACTIONS

Increase: hypotension—antihypertensives, MAOIs

Decrease: antihypertensive effect—NSAIDs, salicylates, estrogens

Drug/Herb

Increase: antihypertensive effect—hawthorn

Drug/Lab Test

Increase: renal studies

Decrease: HB/Hct/RBC

NURSING CONSIDERATIONS

Assess:

• Monitor closely; usually given with β-blocker to prevent tachycardia and increased myocardial workload; usually given with diuretic to prevent serious fluid accumulation; patient should be hospitalized during beginning treatment

• Nausea, edema in feet, legs daily

• Skin turgor, dryness of mucous membranes for hydration status

• Crackles, dyspnea, orthopnea

• Electrolytes: potassium, sodium, chloride, CO_2

• Renal studies: catecholamines, BUN, creatinine

• Hepatic studies: AST, ALT, alk phos

• B/P, pulse

• Weight daily, I&O

Black Box Warning: Cardiac disease: may cause reflex increase in heart rate and decrease in B/P

• **Beers:** avoid use in older adults; may exacerbate syncope; monitor frequently for syncope

• **Pregnancy/breastfeeding:** use only if benefits outweigh risk to fetus; do not use in breastfeeding

Evaluate:

• Therapeutic response: decreased B/P, increased hair growth

Teach patient/family:

• That body hair will increase but is reversible after discontinuing treatment

• Not to discontinue product abruptly

• To report pitting edema, dizziness, weight gain >5 lb, SOB, bruising or bleeding, heart rate >20 beats/min over normal, severe indigestion, dizziness, light-headedness, panting, new or aggravated symptoms of angina

• To take product exactly as prescribed because serious side effects may occur

Topical:

• That for topical use, treatment must continue for the long term, or new hair will be lost

• Not to use except on scalp; use on clean, dry scalp before styling aids; wash hands after each use

TREATMENT OF OVERDOSE:

(PO) Administer normal saline IV, vasopressors

mirabegron (Rx)

(mir'a-beg'ron)

Myrbetriq

Func. class.: Bladder antispasmodic

Chem. class.: β_3-Adrenergic receptor agonist

ACTION:

Relaxes smooth muscles in urinary tract, increase bladder capacity

USES:

Overactive bladder (urinary frequency, urgency), urinary incontinence

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, kidney/liver disease, bladder obstruction, dialysis, hypertension

DOSAGE AND ROUTES

Overactive bladder

• **Adult: PO** 25 mg/day, may increase to 50 mg/day if needed, may be given with solifenacin

Hepatic/renal dose

• **Adult: PO** Child-Pugh B or CCr 15-29 mL/min, max 25 mg/day; Child-Pugh C or CCr <15 mL/min, not recommended

Available forms: Tabs ext rel 25, 50 mg

Administer:

• Give whole; take with liquids; do not crush, chew, or break ext rel product; use without regard to meals

• Missed dose should not be taken; take at next selected time

SIDE EFFECTS

CNS: Fatigue, *dizziness, headache*

CV: *Hypertension,* tachycardia

EENT: Xerophthalmia, blurred vision

GI: Anorexia, abdominal pain, constipation, diarrhea, nausea, vomiting

GU: Urinary retention, frequency, UTI, bladder discomfort

INTEG: Stevens-Johnson syndrome, rash, pruritis

MS: Arthralgia, back pain

PHARMACOKINETICS

71% protein binding, excretion 25% unchanged in urine, half-life 50 hr, peak 3.5 hr

INTERACTIONS

Increase: effect of CYP2D6 substrates

Increase: effect of digoxin, warfarin, desipramine

Increase: mirabegron effect—CYP3A4 inhibitors

Increase: urinary retention risk—antimuscarinic agents (atropine, scopolamine)

Drug/Lab Test

Increase: LFTs, digoxin, INR, LDH

NURSING CONSIDERATIONS

Assess:

• **Urinary patterns:** distention, nocturia, frequency, urgency, incontinence

• **Angioedema (rare):** swelling of face, lips, tongue, dyspnea; discontinue immediately, have emergency equipment nearby

• LFTs at baseline, periodically

• Monitor B/P, pulse often

• **Pregnancy/breastfeeding:** use only if benefits outweigh risks to fetus; no well-controlled studies, discontinue product, not known if excreted in breast milk

Evaluate:

• Decreasing dysuria, frequency, nocturia, incontinence

Teach patient/family:

• **Hypertension:** to report fast heartbeat; monitor B/P, P at home

• **Angioedema (rare):** to report immediately swelling of face, lips, tongue

• To avoid hazardous activities; dizziness can occur; may take up to 8 wk for full effect

• Not to drink liquids before bedtime

• About the importance of bladder maintenance

• Not to breastfeed; to report if pregnancy is planned or suspected

• Not to crush, chew, split; to take without regard to food, not to skip, double doses, if missed take at regularly scheduled next day, provide "Patient Information Materials"
• To discuss all OTC, Rx, herbals, supplements with provider

mirtazapine (Rx)

(mer-ta´za-peen)

Remeron, Remeron SolTab

Func. class.: Antidepressant
Chem. class.: Tetracyclic

ACTION: Blocks reuptake of norepinephrine and serotonin into nerve endings, thereby increasing action of norepinephrine and serotonin in nerve cells; antagonist of central α_2-receptors; blocks histamine receptors

USES: Depression; dysthymic disorder; bipolar disorder: depressed, agitated depression
Unlabeled uses: Panic disorder, PTSD, generalized anxiety disorder (GAD)

CONTRAINDICATIONS: Hypersensitivity to tricyclics, recovery phase of MI, agranulocytosis, jaundice, MAOIs
Precautions: Pregnancy, geriatric patients, suicidal patients, severe depression, increased intraocular pressure, closed-angle glaucoma, urinary retention, cardiac/renal/hepatic disease, hypo/hyperthyroidism, electroshock therapy, elective surgery, seizure disorder, bone marrow suppression, thrombocytopenia

Black Box Warning: Suicidal ideation, children

DOSAGE AND ROUTES

Major depressive disorder

• **Adult: PO** 15 mg/day at bedtime, maintenance to continue for 6 mo, titrate up to 45 mg/day at intervals ≥1 wk; **ORALLY DISINTEGRATING** tabs: open blister pack, place tab on tongue, allow to disintegrate, swallow
• **Geriatric: PO** 7.5 mg at bedtime, increase by 7.5 mg q1-2wk to desired dose, max 45 mg/day

Available forms: Tabs 7.5, 15, 30, 45 mg; orally disintegrating tab (SolTab) 15, 30, 45 mg

Administer:

• Increased fluids, bulk in diet for constipation, especially for geriatric patients
• Without regard to meals
• Dosage at bedtime if oversedation occurs during day; may take entire dose at bedtime; geriatric patients may not tolerate once-daily dosing
• Gum, hard candy, or frequent sips of water for dry mouth
• Store in tight container at room temperature; do not freeze
• **Orally disintegrating tab:** no water needed; allow to dissolve on tongue, do not split; contains phenylalanine

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, nightmares, abnormal dreams, neuroleptic malignant syndrome, suicidal thoughts
CV: *Orthostatic hypotension, ECG changes,* tachycardia, twitching
EENT: *Blurred vision,* tinnitus, mydriasis
GI: *Dry mouth,* nausea, vomiting, increased appetite, cramps, epigastric distress, constipation, weight gain
GU: Urinary frequency
HEMA: Agranulocytosis, thrombocytopenia, eosinophilia, leukopenia
META: Hyponatremia, hypercholesterolemia
INTEG: Rash, urticaria, sweating, pruritus, photosensitivity
MS: Back pain, myalgia
RESP: Cough, dyspnea
SYST: Flulike symptoms, serotonin syndrome

PHARMACOKINETICS

PO: Peak 2 hr, metabolized by CYP1A2, 2D6, 3A4 in liver; excreted in urine, feces; crosses placenta; half-life 20-40 hr, protein binding 85%

INTERACTIONS

Increase: hyperpyretic crisis, seizures, hypertensive episode—MAOIs; avoid within 14 days

Increase: CNS depression—alcohol, barbiturates, benzodiazepines, other CNS depressants

Increase: serotonin syndrome, risk—SSRIs, buspropion, SNRIs, serotonin-receptor agonists, fentanyl, triptans, tricyclics, linezolid, methylene blue; monitor for symptoms

Decrease: effects of cloNIDine, indirect-acting sympathomimetics (ePHEDrine)

Drug/Herb

- **Serotonin syndrome:** St. John's wort; monitor for symptoms

Increase: CNS depression—kava

Drug/Lab Test

Increase: cholesterol, triglycerides

NURSING CONSIDERATIONS

Assess:

- B/P (lying, standing), pulse often; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; vital signs more frequently in patients with CV disease
- **Seizures:** in those with seizure disorder, may be increased, provide seizure precautions
- **Neuroleptic malignant syndrome:** fever, dyspnea, sweating, change in B/P, discontinue immediately
- Blood studies: ECG, lipid profile, blood glucose, LFTs, serum creatinine/BUN if patient is receiving long-term therapy
- Weight weekly; appetite may increase with product

Black Box Warning: Mental status: mood, sensorium, affect, suicidal tendencies (especially among adolescents, young adults), increase in psychiatric symptoms: depression, panic; product should be discontinued in those who exhibit worsening depression, emergent suicidality; EPS primarily in geriatric patients: rigidity, dystonia, akathisia

- **Serotonin syndrome:** hyperthermia, hypertension, myoclonus, rigidity, delirium, coma (if using other serotonergic products)
- Alcohol consumption; if alcohol consumed, hold dose until morning
- Assistance with ambulation during beginning therapy because drowsiness, dizziness occurs
- **Pregnancy/breastfeeding:** use only if clearly needed; excreted in breast milk, discontinue product or breastfeeding

Evaluate:

- Therapeutic response: decreased depression

Teach patient/family:

- That therapeutic effects may take 2-3 wk; to take at bedtime; that there is decreased sedation with increased doses; not to discontinue abruptly
- To use caution when driving, performing other activities requiring alertness because of drowsiness, dizziness, blurred vision
- To avoid alcohol, other CNS depressants without prescriber approval
- **Infection:** to report flulike symptoms, other signs of infection
- **Serotonin syndrome:** to report immediately symptoms that include fever, delirium, rigidity; may occur in combination with other products
- About how to take orally disintegrating tabs; dissolve on tongue, swallow
- Not to crush, break, chew ODT product
- To notify prescriber immediately if pregnancy is suspected, or if breastfeeding
- Not to use within 14 days of MAOIs
- That follow-up exams will be needed

Black Box Warning: To notify prescriber immediately of suicidal thoughts, behavior

TREATMENT OF OVERDOSE:

ECG monitoring, lavage; administer anticonvulsant, IV fluids

misoprostol (Rx)

(mye-soe-prost′ole)

Cytotec

Func. class.: Gastric mucosa protectant, antiulcer

Chem. class.: Prostaglandin E_1 analog

Do not confuse:
miSOPROStol/metoprolol/mifepristone

USES: Prevention of NSAID-induced gastric ulcers

Unlabeled uses: Pregnancy termination, postpartum hemorrhage, cervical ripening/labor induction (vaginal), active duodenal/gastric ulcer

CONTRAINDICATIONS: Hypersensitivity to this product or prostaglandins

Black Box Warning: Pregnancy, females

DOSAGE AND ROUTES

NSAID-induced gastroduodenal ulcers and treatment of duodenal ulcers caused by peptic ulcer disease

- **Adult: PO** 200 mcg qid with food for duration of NSAID therapy, with last dose given at bedtime; if 200 mcg is not tolerated, 100 mcg may be given

Active duodenal/gastric ulcer (unlabeled)

- **Adult: PO** 100-200 mcg qid with meals at bedtime × 4-8 wk

Pregnancy termination before 70th day (unlabeled)

- **Adult: INTRAVAGINALLY** 800 mcg 5-7 days after methotrexate IM

Cervical ripening induction for term pregnancy (unlabeled)

- **Adult: INTRAVAGINALLY** 25 mcg q3-6hr

⚠ HIGH ALERT

mitoMYcin (Rx)

(mye-toe-mye′sin)

Jelmyto

Func. class.: Antineoplastic, antibiotic

Do not confuse:
mitoMYcin/mitoXANTRONE

ACTION: Inhibits DNA synthesis, primarily; derived from *Streptomyces caespitosus;* appears to cause cross-linking of DNA; vesicant

USES: Pancreatic, stomach, colorectal, bladder cancer

Unlabeled uses: Palliative treatment of anal, bladder, head, neck, colon, biliary, cervical, lung malignancies

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, as single agent, coagulation disorders, thrombocytopenia

Precautions: Accidental exposure, acute bronchospasm, anemia, children, dental disease/work, extravasation, females, infection, radiation therapy, surgery, vaccines, renal/respiratory disease, leukopenia

Black Box Warning: Bone marrow suppression, hemolytic uremic syndrome, requires an experienced clinician and specialized care setting

DOSAGE AND ROUTES

Disseminated adenocarcinoma of stomach/pancreas in combination

- **Adult: IV** 20 mg/m^2 q6-8wk

Upper Tract Urothelial Cancer

Adult: Instill Jelmyto 4 mg per mL via ureteral catheter or a nephrostomy tube, with total instillation volume based on pyelography, max 15 mL (60 mg of mitomycin). Instill weekly × 6 wk, those with a complete response after 3 mo may be used monthly for a max of 11 additional doses

Available forms: Inj 5, 20, 40 mg/vial; powder for pyelocalyceal solution

Administer:

- **Cytotoxic:** use safe handling and disposal procedures
- **Vesicant:** check for extravasation; do not give IM/subcut, may result in extreme tissue damage

Direct IV route
- Use port or central line if possible
- Antiemetic 30-60 min before product to prevent vomiting
- IV after reconstituting 5 mg/10 mL, 20 mg/40 mL, 40 mg/80 mL (0.5 mg/mL) sterile water for inj; shake, allow to stand, protect from light, give slow IV push or infuse over 15-30 min; color of reconstituted sol is gray
- Avoid excessive heat; store unreconstituted product at room temperature

Y-site compatibilities: Amifostine, amphotericin B lipid complex, amphotericin B liposome, anidulafungin, argatroban, atenolol, bivalirudin, bleomycin, caspofungin, CISplatin, cyclophosphamide, DACTINomycin, dolasetron, DOXOrubicin, droperidol, epiRUBicin, ertapenem, fluorouracil, furosemide, granisetron, heparin, leucovorin, melphalan, methotrexate, metoclopramide, nesiritide, octreotide, ondansetron, oxaliplatin, PACLitaxel, palonosetron, PEMEtrexed, riTUXimab, teniposide, thiotepa, tigecycline, tirofiban, trastuzumab, vinBLAStine, vinCRIStine, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: Fever, headache, confusion, drowsiness, syncope, fatigue
CV: Edema
EENT: Blurred vision
GI: *Nausea, vomiting, anorexia, stomatitis,* hepatotoxicity, diarrhea
GU: Urinary retention, renal failure, infertility
HEMA: Thrombocytopenia, leukopenia, anemia
INTEG: *Rash,* alopecia, extravasation, nail discoloration
MISC: Hemolytic uremic syndrome
RESP: Fibrosis, pulmonary infiltrate

PHARMACOKINETICS

Half-life 1 hr, metabolized in liver, 10% excreted in urine (unchanged)

INTERACTIONS

Increase: toxicity—other antineoplastics, radiation
Increase: bleeding risk—NSAIDs, anticoagulants
- Avoid use with vaccines

Drug/Lab Test
Increase: BUN, creatinine
Decrease: platelets, WBCs

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Bone marrow suppression: monitor CBC, differential, platelet count weekly; withhold product if WBC is <4000/mm^3, serum creatinine >1.7 mg/dL, or platelet count is <100,000/mm^3, nadir of leukopenia, thrombocytopenia is 4-8 wk, recovering within 10 wk; notify prescriber; bleeding: hematuria, guaiac, bruising, petechiae, mucosa, or orifices, avoid IM injections when platelets are low

Black Box Warning: Fatal hemolytic uremic syndrome: assess for hypertension, thrombocytopenia, microangiopathic hemolytic anemia; occurs in those receiving long-term therapy; most cases are caused by doses ≥60 mg; transfusion may worsen syndrome

- **Nephrotoxicity:** Renal studies: BUN, uric acid, urine CCr, before, during therapy; adjust dose based on renal function; I&O ratio; report fall in urine output to <30 mL/hr
- Monitor temperature; fever may indicate beginning infection
- **Hepatotoxicity:** hepatic studies before, during therapy: bilirubin, AST, ALT, alk phos as needed or monthly; check for jaundiced skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea
- **Pulmonary fibrosis:** bronchospasm, dyspnea, crackles, unproductive cough; chest pain, tachypnea, fatigue, increased pulse, pallor, lethargy; pulmonary function tests; chest x-ray before, during therapy; chest x-ray should be obtained q2wk during treatment
- Effects of alopecia on body image; discuss feelings about body changes

• Buccal cavity q8hr for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia
• Local irritation, pain, burning at inj site
• GI symptoms: frequency of stools, cramping
• Adequate fluids (2-3 L/day) unless contraindicated
• Rinsing of mouth tid-qid with water; brushing of teeth with baking soda bid-tid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss
• **Cardiac toxicity (rare):** HF may be treated with diuretics, cardiac glycosides; most with this condition received doxorubicin
• **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:
• That hair may be lost during treatment; that wig or hairpiece may make patient feel better; that new hair may be different in color, texture
• To avoid foods with citric acid, hot temperature, or rough texture
• To report any bleeding, white spots, ulcerations in mouth; to examine mouth daily
• To report sign of IV site reaction: redness, inflammation, burning, pain
• To avoid crowds, persons with infections if granulocyte count is low
• **Infection:** to report fever, flulike symptoms, sore throat
• To immediately report urine retention, absence of urine, dyspnea, bleeding, jaundice, signs of pulmonary toxicity
• **Pregnancy/breastfeeding:** to report if pregnancy is planned or suspected; not to breastfeed

⚠ HIGH ALERT

mitoXANTRONE (Rx)

(mye-toe-zan′trone)
Func. class.: Antineoplastic, antiinfective, immunomodulator
Chem. class.: Synthetic anthraquinone

Do not confuse:
mitoXANTRONE/mitoMYcin/mitotane/MTX patch

ACTION: DNA reactive agent; cytocidal effect on both proliferating and nonproliferating cells; topoisomerase II inhibitor (vesicant)

USES: Acute myelogenous leukemia (adult), relapsed leukemia; used with steroids to treat bone pain (advanced prostate cancer), multiple sclerosis (MS)

CONTRAINDICATIONS: Pregnancy, hypersensitivity
Precautions: Breastfeeding, children; myelosuppression, renal/cardiac/hepatic disease; gout

Black Box Warning: Bone marrow suppression, cardiotoxicity, SUBCUT/IM/intraarterial/intrathecal, requires an experienced clinician, new primary malignancy

DOSAGE AND ROUTES

Acute myelogenous leukemia/induction
• **Adult: IV INFUSION** 12 mg/m^2/day on days 1-3 and 100 mg/m^2 cytarabine × 7 days as continuous 24-hr infusion may use 2nd induction

Consolidation
• **Adult: IV** 12 mg/m^2 given as short 5- to 15-min infusion for 2 days with cytarabine × 5 days, use 6 wk after induction, and another course after 4 wk

Advanced prostate cancer
• **Adult: IV** 12-14 mg/m^2 as single dose or short infusion q21days

Multiple sclerosis, relapsing
• **Adult: IV INFUSION** 12 mg/m^2 as 5- to 15-min infusion q3mo, cumulative lifetime dose 140 mg/m^2

Available forms: Solution for inj 2 mg/mL

Administer:
• Antiemetic 30-60 min before product to prevent vomiting

• **Cytotoxic:** use precautions for handling, preparing, and disposal of this product; use goggles, gloves, gown during preparation and administration; rinse accidentally exposed skin with warm water
• Undiluted solution may be stored for 7 days (room temperature), 14 days (refrigerated); do not freeze

Direct IV route

• IV after **diluting** with ≥50 mL NS or D_5W; discard unused portion immediately; do not mix in same infusion with heparin; **give** over 3-5 min into running IV of D_5W or NS; check for extravasation; do not give IM, SUBCUT, or intraarterially

Intermittent IV INFUSION route

• May be diluted further in D_5W, NS (0.02-0.5 mg/mL), run over 15-30 min

Continuous IV INFUSION route

• Give over 24 hr

Y-site compatibilities: Acyclovir, alemtuzumab, alfentanil, allopurinol, amikacin, aminocaproic acid, aminophylline, amiodarone, anidulafungin, argatroban, arsenic trioxide, atracurium, bivalirudin, bleomycin, bretylium, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, CARBOplatin, carmustine, caspofungin, cefoTEtan, ceftizoxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, cladribine, codeine, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, DAUNOrubicin citrate liposome, dexmedetomidine, dexrazoxane, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, hydrALAZINE, hydrocortisone sodium succinate, HYDROmorphone, hydrOXYzine, ifosfamide, imipenem-cilastatin, inamrinone, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, melphalan, meperidine, meropenem, mesna, metaraminol, methohexital, methotrexate, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mivacurium, morphine sulfate, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, palonosetron, pamidronate, pancuronium, pentamidine, pentazocine, PENTObarbital, PHENObarbital, phentolamine, phenylephrine, polymyxin B, potassium acetate, potassium chloride, procainamide, prochlorperazine, promethazine hydrochloride, propranolol, quiNIDine gluconate, quinupristin-dalfopristin, raNITIdine, remifentanil, riTUXimab, rocuronium, sargramostim, sodium acetate, sodium bicarbonate, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiopental, thiotepa, tigecycline, tirofiban, tobramycin, tolazoline, trastuzumab, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Headache, seizures, fatigue
CV: Cardiotoxicity, dysrhythmias, HF
EENT: Conjunctivitis, blue/green sclera, blurred vision
GI: *Nausea, vomiting, diarrhea, anorexia, stomatitis,* hepatotoxicity, abdominal pain, constipation
GU: Amenorrhea, menstrual disorders, blue-green urine, renal failure
HEMA: Thrombocytopenia, leukopenia, myelosuppression, anemia, secondary leukemia
INTEG: *Rash, necrosis at inj site,* dermatitis, thrombophlebitis at inj site, alopecia
MISC: Fever, hyperuricemia, infections
RESP: Cough, dyspnea
SYST: Tumor lysis syndrome, sepsis

PHARMACOKINETICS

Protein binding 78%; excreted via renal, hepatobiliary systems; half-life 23-215 hr

INTERACTIONS

Increase: bone marrow depression toxicity—radiation, other antineoplastics
Increase: adverse reactions—live virus vaccines, trastuzumab
Increase: oral mucositis—palifermin, do not use within 24 hr of mitoxantrone
Increase: immunosuppression—tofacitinib, avoid using together
Increase: infection risk—natalizumab
Increase: bleeding risk—NSAIDs, anticoagulants
Increase: mitoXANTRONE, effects of—cyclosporine
Decrease: digoxin, hydration level—monitor levels, adjust dose

Drug/Lab Test

Increase: LFTs, uric acid, bilirubin
Decrease: HcT/HB, platelets, WBC, calcium, sodium, granulocytes

NURSING CONSIDERATIONS

Assess:

- **Black Box Warning: Bone marrow depression:** CBC, differential, platelet count weekly; withhold product if WBC is <1500/mm^3; leukopenia, neutropenia, thrombocytopenia are expected, leukocyte nadir 10-14 days, recovers in 2-3 wk

Black Box Warning: Extravasation: avoid extravasation; not traditionally considered a vesicant; serious skin necrosis requiring debridement, skin graft has occurred; if extravasation occurs, stop product, place ice packs on area

- **Hepatotoxicity:** hepatic studies before, during therapy: bilirubin, AST, ALT, alk phos prn or monthly; dose reduction needed with hepatic disease; jaundiced skin and sclera, dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea
- Renal studies: BUN, serum uric acid, urine CCr, electrolytes before, during therapy
- Bleeding, hematuria, guaiac, bruising or petechiae, mucosa or orifices q8hr

Black Box Warning: Cardiotoxicity: ECG, ECHO, chest x-ray, MUGA, RAI angiography; assess ejection fraction before and during treatment; cardiotoxicity may develop during treatment or months to years after treatment; use vigilant cardiac monitoring in MS; risk is greater in cumulative dose >140 mg/m^2

Black Box Warning: Secondary acute myelogenous leukemia (AML) can develop after taking this product

Black Box Warning: Multiple sclerosis: obtain MUGA, LVEF baselines; repeat LVEF if symptoms of HF occur or if cumulative dose is >100 mg/m^2; do not administer to patients who have received lifetime dose of ≥140 mg/m^2 or if LVEF <50% or significant LVEF or if neutrophils <1500/mm^3

- Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-qid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss
- Provide increased fluids to 2-3 L/day unless contraindicated
- Pregnancy/breastfeeding: do not use in pregnancy, breastfeeding; obtain pregnancy test for all women of childbearing age, even if birth control is used

Black Box Warning: Requires a specialized care setting with an experienced clinician: use only in a setting with emergency equipment, those trained in administration of cytotoxic products

Evaluate:

- Therapeutic response: decreased tumor size, spread of malignancy, prevention of relapse in MS

Teach patient/family:

- To immediately report bleeding, dyspnea, possible infections, seizure, jaundice, fever, cough, or dyspnea

• To avoid hot foods or those with citric acid, rough texture
• To report any bleeding, white spots, ulcerations in mouth; to examine mouth daily
• To avoid crowds, persons with infections
• To provide package insert and review with patient
• To report immediately yellow eyes, skin, clay-colored stools, dark urine, diarrhea
• That follow-up exams and blood work will be needed
• That sclera, urine may turn blue or green; that hair loss may occur
• To notify prescriber if pregnancy is suspected or planned; to use effective contraception

mobocertinib (Rx)

(moe-boe-SER-ti-nib)

Exkivity

Func. class.: Antineoplastic, kinase inhibitor

USES: Epidermal growth factor receptor (EGFR) exon 20 insertion mutation–positive metastatic non–small cell lung cancer

DOSAGE AND ROUTES

• **Adult: PO** 160 mg daily until disease progression or unacceptable toxicity

Available forms: Tabs 40 mg

modafinil (Rx)

(mo-daf'i-nil)

Alertec, Provigil

Func. class.: CNS stimulant

Chem. class.: Racemic compound

Controlled Substance Schedule IV

ACTION: Similar action as that of sympathomimetics; does not alter release of DOPamine, norepinephrine

USES: Narcolepsy, shift-work sleep disturbance, obstructive sleep apnea
Unlabeled uses: ADHD, fatigue in MS, Parkinson's disease

CONTRAINDICATIONS: Hypersensitivity, ischemic heart disease, left ventricular hypertrophy, chest pain, dysrhythmias
Precautions: Pregnancy, breastfeeding, child <16 yr, geriatric patients, unstable angina, history of MI, severe hepatic disease

DOSAGE AND ROUTES

To improve wakefulness with daytime sleepiness

• **Adult/adolescent ≥17 yr: PO** 200 mg daily

Hepatic dose (severe hepatic disease)

• **Adult: PO** 100 mg daily

Available forms: Tabs 100, 200 mg
Administer:
• Give 1 hr before start of shift work or in AM for those with narcolepsy or sleep apnea
• Store at room temperature
• Give without regard to food

SIDE EFFECTS

CNS: *Headache,* anxiety, cataplexy, depression, dizziness, insomnia, amnesia, confusion, ataxia, tremors, paresthesia, dyskinesia, suicidal ideation
CV: Dysrhythmias, hypo/hypertension, chest pain, vasodilation
EENT: Change in vision, *rhinitis,* pharyngitis, epistaxis
GI: Nausea, vomiting, changes in LFTs, anorexia, diarrhea, thirst, mouth ulcers
GU: Ejaculation disorder, urinary retention, albuminuria
HEMA: Eosinophilia
INTEG: Rash, dry skin, herpes simplex, Stevens-Johnson syndrome
MISC: Infection, hyperglycemia, neck pain
RESP: *Dyspnea,* lung changes

PHARMACOKINETICS

Absorbed rapidly, 60% protein binding, metabolized by the liver (90%), half-life 15 hr, peak 2-4 hr

INTERACTIONS

Increase: altered levels of CYP3A4 inhibitors (azole antibiotics, some SSRIs); reaction difficult to predict; monitor for reaction
Increase: levels of CYP2C19 substrates (diazePAM, phenytoin, some tricyclics), adjust dose if needed
Decrease: effects of—cycloSPORINE, hormonal contraceptives, theophylline, estrogens
Delayed effect modafinil by 1 hr: methylphenidate
Altered: levels of CYP3A4 inducers (carBAMazepine, phenytoin, rifAMPin, cycloSPORINE, theophylline)
Drug/Herb
Increase: stimulation—cola nut, guarana, yerba maté, coffee, tea
Drug/Lab Test
Increase: LFTs, glucose, eosinophils

NURSING CONSIDERATIONS

Assess:
- Narcolepsy, shift work, history of sleep apnea
- **Stevens-Johnson syndrome:** rash, fever, fatigue, blisters; discontinue immediately if these occur; provide supportive therapy
- Depression, suicidal ideation
- Monitor B/P in those with hypertension
- **Pregnancy/breastfeeding:** pregnant patients should enroll in the pregnancy registry, 1-866-404-4106; use only when benefits outweigh risk to the fetus; avoid use in breastfeeding
- **Beers:** avoid in older adults; CNS stimulant effects

Evaluate:
- Ability to stay awake

Teach patient/family:
- To take only as directed; that product may be taken with/without food
- To use other form of contraception during and for ≥30 days after discontinuing medication if using hormonal birth control; to notify prescriber if pregnancy is planned or suspected or if breastfeeding
- To notify prescriber of allergic reaction, tremors, confusion, trouble breathing
- To avoid all OTC medications unless approved by prescriber; not to use alcohol
- To avoid hazardous activities until drug effect is known

moexipril (Rx)

(moe-ex´ih-prill)
Func. class.: Antihypertensive
Chem. class.: Angiotensin-converting enzyme inhibitor

USES: Hypertension, alone or in combination with thiazide diuretics

CONTRAINDICATIONS: Breastfeeding, children, hypersensitivity, heart block, bilateral renal stenosis, history of angioedema

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

- **Adult: PO** 7.5 mg 1 hr before meals initially; may be increased or divided depending on B/P response; maintenance dosage 7.5-30 mg/day in 1-2 divided doses 1 hr before meals

Renal dose
- **Adult: PO** CCr <40 mL/min, 3.75 mg/day; titrate to desired dose; max 15 mg/day

Available forms: Tablet 7.5, 15 mg

mogamulizumab-kpkc (Rx)

(moh-gam´-yoo-lih´-zoo-mab)
Poteligeo
Func. class.: Antineoplastic

USES: Cutaneous T-cell lymphoma (CTCL) (mycosis fungoides or Sézary syndrome) in those who have received at least 1 prior systemic therapy

CONTRAINDICATIONS: Hypersensitivity, pregnancy

DOSAGE AND ROUTES

• **Adult: IV** 1 mg/kg on days 1, 8, 15, and 22 in cycle 1, then 1 mg/kg on days 1 and 15 in subsequent cycles until disease progression; therapy cycles are repeated q28days

Available forms: Solution for injection 20 mg/5 mL

mometasone (Rx)

(moe-met'a-sone)

Asmanex, Asmanex HFA, Propel, Sinuva

Func. class.: Antiinflammatory

Chem. class.: Corticosteroid

ACTION: May depress the formation, release, and activity of endogenous chemical mediators of inflammation (kinins, histamine, liposomal enzymes, prostaglandins)

USES: Inhalation: Maintenance treatment of asthma as prophylactic therapy in those ≥4 yr of age; allergic rhinitis, nasal congestion

DOSAGE AND ROUTES

Asthma

Adult/child ≥12 yr: Oral inhalation: **Asmanex HFA:** Metered-dose inhaler: *Patients with no prior treatment with inhaled corticosteroid:* Mometasone 100 mcg: Initial: 200 mcg twice daily; max 400 mcg twice daily (800 mcg/day); those *who previously received oral corticosteroids:* Mometasone 200 mcg: Initial: 400 mcg twice daily; max 400 mcg twice daily (800 mcg/day); **Asmanex Twisthaler:** Dry powder inhaler: *Those who previously received bronchodilators alone:* Initial: 220 mcg once daily in the evening; max 440 mcg/day; *those who previously received inhaled corticosteroids:* Initial: 220 mcg once daily in the evening; maximum dose: 440 mcg/day; *those who previously received oral corticosteroids:* Initial: 440 mcg twice daily; max 880 mcg/day

Allergic rhinitis (seasonal and perennial)

Adult: Intranasal: 2 sprays (100 mcg) in each nostril once daily (total daily dose: 200 mcg)

Nasal congestion associated with seasonal rhinitis

Adult/child ≥12 yr: Intranasal: 2 sprays (100 mcg) in each nostril once daily (total daily dose: 200 mcg)

Nasal polyps

Adult: Intranasal: 2 sprays (100 mcg) in each nostril twice daily (total daily dose: 400 mcg); 2 sprays (100 mcg) in each nostril once daily may be effective in some patients

Seasonal allergic rhinitis (prophylaxis)

Adult/child ≥12 yr: Intranasal: 2 sprays (100 mcg) in each nostril once daily (total daily dose: 200 mcg); treatment should begin 2-4 wk before the anticipated start of pollen season

Available forms: Inhalation aerosol 100 mcg, 200 mcg/actuation; inhalation powder 110 mcg, 220 mcg/actuation, cream 0.1%, lotion 0.1%, ointment 0.1%, nasal spray 50 mcg/spray

Administer:

Nasal route:

• Spray: For intranasal administration only

• Prime pump (press 10 times or until fine spray appears) before first use

• If 7 or more days have elapsed since last use, reprime pump with 2 sprays or until a fine mist appears

• Shake before using. Blow nose

• Insert applicator into nostril, tilt head slightly forward keeping bottle upright, and close off the other nostril. Breathe in through nose

• While inhaling, press pump, exhale through mouth

• After each use, wipe tip with a tissue and replace cap

• Avoid spraying directly into nasal septum, eyes, mouth, face

• Discard after 120 medicated sprays have been used, even if not completely empty

SIDE EFFECTS

CNS: Headache, fatigue, depression
GI: Oral candidiasis, abdominal pain, dyspepsia, nausea, vomiting, anorexia, gastroenteritis
MS: MS pain, arthralgia
RESP: Sinusitis, allergic rhinitis, URI, pharyngitis
GU: Dysmenorrhea, UTI

PHARMACOKINETICS

Nasal: Onset, peak, duration unknown
Inhalation: Onset, duration unknown, peak 1-2½ hr

INTERACTIONS

Increase: adverse reactions—CYP3A4 inhibitors, use cautiously

NURSING CONSIDERATIONS

Assess:

• **Asthma:** Monitor signs, symptoms of asthma, not to be used for acute asthma attacks, wean from corticosteroids (systemic)

• **Cushing symptoms:** Assess for excess sweating, excessive hairiness, excessive hunger, fatigue, flushing, high blood pressure, osteoporosis, abnormal pad of fat between the shoulder blades, acne, darkening of the skin, stretch marks, or thinning, muscle weakness or loss of muscle, anxiety, depression, easy bruising, hair loss, headache, infertility, insomnia, irritability, pot belly, round face from gradual swelling, swelling in extremities, or weight gain

Evaluate:

• Therapeutic response: Decrease symptoms of asthma or seasonal/perennial rhinitis

Teach patient/family:

• Teach patient how to use inhalation or nasal spray

• If only using once/day use before bedtime

• Not to be used for acute asthma attack

mometasone/ formoterol (Rx)

(moe-met′sone/formoh′te-rol)

Dulera

Func. class.: Corticosteroid, inhalant/ beta$_2$ agonist, long-acting

USES: Asthma

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult/child ≥12 yr: INH 2 INH of mometasone furoate 100 mcg/formoterol fumarate 5 mcg/ inhalation or mometasone furoate 200 mcg/formoterol fumarate 5 mcg/ INH bid, if no response after 2 wks, may increase to mometasone furoate 200 cg/formoterol fumarate 5 mcg/INH bid; max, 2 INH bid of mometasone furoate 200 mcg/formoterol fumarate 5 mcg (800 mcg/20 mcg/day)
Available forms: 50, 100, 200 mcg/5 mcg actuation

montelukast (Rx)

(mon-teh-loo′kast)

Singulair

Func. class.: Bronchodilator
Chem. class.: Leukotriene receptor antagonist, cysteinyl

Do not confuse:
Singulair/SINEquan

ACTION: Inhibits leukotriene (LTD_4) formation; leukotrienes exert their effects by increasing neutrophil, eosinophil migration; aggregation of neutrophils, monocytes; smooth muscle contraction, capillary permeability; these actions further lead to bronchoconstriction, inflammation, edema

USES: Chronic asthma in adults and children, seasonal allergic rhinitis, bronchospasm prophylaxis

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Pregnancy, breastfeeding, children <6 yr, acute attacks of asthma, alcohol consumption, severe hepatic disease, corticosteroid withdrawal, phenylketonuria, suicidal ideation, depression

Black Box Warning: Neurologic/psychiatric events

DOSAGE AND ROUTES

Asthma, seasonal/perennial allergic rhinitis

- **Adult/child ≥15 yr: PO** 10 mg/day in PM
- **Child 6-14 yr: PO** 5-mg chew tab/day in PM
- **Child 2-5 yr: PO** (chew tab/granules) 4 mg/day

Asthma

Child 1-5 yr mo: PO 1 packet (4 mg) granules taken in PM

Exercise-induced bronchoconstriction prevention

- **Adult/child ≥14 yr: PO** 10 mg 2 hr before exercise; do not take another dose within 24 hr
- **Child 6 yr–<14 yr: PO** 5 mg once given 2 hr before exercise, max 1 dose/24 hr

Available forms: Tabs 10 mg; chew tabs 4, 5 mg; oral granules 4 mg/packet

Administer:

PO route

- In PM daily for all uses except exercise-induced bronchoconstriction; then take 2 hr before exercise
- Granules directly in mouth or mixed with spoonful of soft food (carrots, applesauce, ice cream, rice)
- Do not open granules packet until ready to use; mix whole dose; give within 15 min

SIDE EFFECTS

CNS: *Dizziness, fatigue, headache,* behavior changes, hallucinations, seizures, agitation, anxiety, depression, fever, drowsiness, suicidal ideation, memory impairment, hostility, somnambulism

GI: *Abdominal pain,* dyspepsia, nausea, vomiting, diarrhea, pancreatitis

HEMA: Thrombocytopenia

INTEG: Rash, pruritus, erythema

MS: Asthenia, myalgia, muscle cramps

RESP: *Influenza, cough,* nasal congestion

SYST: Churg-Strauss syndrome, Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS

Rapidly absorbed; peak 3-4 hr, chew tab (5 mg) 2-2.5 hr; half-life 2.7-5.5 hr, extended in hepatic disease; protein binding 99%; metabolized by liver; excreted via bile

INTERACTIONS

Increase: adverse reactions of CYP2C8 substrates

Decrease: montelukast levels—barbiturates, rifabutin, rifapentine, carBAMazepine, fosphenytoin, phenytoin, rifAMPin

Drug/Herb

Increase: stimulation—black, green tea, guarana

Drug/Lab Test

Increase: ALT, AST

NURSING CONSIDERATIONS

Assess:

- **Respiratory symptoms:** wheezing, decrease in asthma exacerbations, rhinitis, urticaria
- **Churg-Strauss syndrome (rare):** assess adult patients carefully for symptoms: eosinophilia, vasculitic rash, worsening pulmonary symptoms, cardiac complications, neuropathy
- For behavioral changes, suicidal ideation, other neuropsychiatric reactions
- **Severe hepatic disease:** use cautiously
- **Stevens-Johnson syndrome:** rash, fever, blisters, fatigue, muscle/joint aches; if these occur, discontinue, provide supportive therapy
- **Pregnancy/breastfeeding:** use in pregnancy only if clearly needed, no well-controlled studies; use cautiously in breastfeeding, unknown if excreted in breast milk

Evaluate:
- Therapeutic response: ability to breathe more easily

Teach patient/family:
- To check OTC medications, stimulation; to avoid alcohol
- To avoid hazardous activities; dizziness may occur
- If aspirin sensitivity is known, not to take NSAIDs while taking this product
- To report mood, behavioral changes to prescriber
- Not to use for acute asthma/acute exercise-induced bronchospasm; not effective
- To take even if no symptoms are present
- To continue to use inhaled β-agonists if exercise-induced asthma occurs
- **Granules:** to give directly in mouth or mixed in a spoonful of room temperature soft food (use only applesauce, carrots, rice, or ice cream); use within 15 min of opening packets; discard unused portions

⚠ HIGH ALERT

morphine (Rx)

(mor'feen)

Arymo ER, Astromorph PF, Doloral 🍁, Duramorph Infumorph, Kadian, M-Eslon 🍁, M-Eslon IR 🍁, Mitigo, Morphine LP Epidural 🍁, MS IR 🍁, MS Contin, MSIR 🍁, Oramorph SR, Statex 🍁

Func. class.: Opioid analgesic

Chem. class.: Alkaloid

Controlled Substance Schedule II

Do not confuse:
morphine/HYDROmorphone
MS Contin/OxyCONTIN

ACTION: Depresses pain impulse transmission at the spinal cord level by interacting with opioid receptors

USES: Moderate to severe pain
Unlabeled uses: Agitation, bone/dental pain, dyspnea in end-stage cancer or pulmonary disease, sedation induction, rapid-sequence intubation

CONTRAINDICATIONS: Hypersensitivity, addiction (opioid/alcohol), hemorrhage, bronchial asthma, increased intracranial pressure, paralytic ileus, hypovolemia, shock, MAOI therapy

Black Box Warning: Respiratory depression

Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, addictive personality, acute MI, severe heart disease, renal/hepatic disease, bowel impaction, abrupt discontinuation, seizures

Black Box Warning: Accidental exposure, epidural/intrathecal/IM/subcut administration, opioid-naïve patients, substance abuse, coadministration with other CNS depressants, ethanol ingestion, neonatal opioid withdrawal syndrome, potential for overdose or poisoning, requires a specialized care setting

DOSAGE AND ROUTES

Acute and chronic moderate pain or severe pain

PO Route IR

Adults: Initially, 10-30 mg q4hr as needed in opioid-naive patients. Titrate to pain relief. Only use the concentrated oral morphine solution (20 mg/mL) in opioid-tolerant patients

Infants, children, and adolescents 6 mo to 17 yr (unlabeled): Initially, 0.2-0.3 mg/kg/dose q3-6 hr as needed

Intermittent IV, IM, or SUBCUT

Adults: Initially, 2-10 mg/70 kg q3-4hr as needed, titrated to pain relief

Infants >6 mo and older, children, and adolescents: 0.05-0.2 mg/kg/dose q2-4hr as needed; begin at the lower end of dosage range and titrate to effect (usual max dose: 4 mg for children or 8 mg for adolescents)

Neonates (unlabeled) and infants <6 mo: Initially, 0.03-0.1 mg/kg/dose q3-4hr as needed. Titrate upward as needed for adequate pain relief

Continuous IV infusion dosage (unlabeled)

Continuous infusions should only be used in acute care settings (ICU)

Adults: Loading dose by slow IV infusion at a rate of 2 mg/min. Loading doses of 15-20 mg may be required; initial infusion rates of 2-5 mg/hr

Infants, children, and adolescents: A bolus of 0.05-0.2 mg/kg IV (or 5-10 mg for patients weighing more than 60 kg) followed by a continuous infusion. Initial infusion rates of 0.01-0.03 mg/kg/hr, but initial doses up to 0.06 mg/kg/hr may be used

Neonates: 0.01-0.02 mg/kg/hr and titrate to effect. May increase up to 0.03 mg/kg/hr

Continuous subcut infusion dosage (unlabeled)

Adults: Initial infusion rates of 2-5 mg/hr may be used, with usual rates of 2-30 mg/hr used in critically ill patients

Infants, children, and adolescents: Initial rate of 0.03 mg/kg/hr. Titrate dose to pain relief

IV dosage (patient-controlled analgesia [PCA])

Adults: Starting dose should be based on the patient's recent exposure to opioids. Titrate to patient response. Larger doses may be needed in opioid-tolerant patients. For OPIOID-NAIVE patients, start with a demand dose of 1 mg (range: 0.5-2.5 mg) and lockout interval of 6 min (range: 5-10 min), with a maximal dosing rate of 10 mg/hr. For OPIOID TOLERANT patients, start with a demand dose of 2-5 mg IV and lockout interval of 6 min (range: 5-10 min), with a maximal dosing rate of 30 mg/hr

Children >7 yr and adolescents

Demand dose: 0.01-0.025 mg/kg IV (max: 1 mg/dose)

Lockout interval: 5-10 min

Doses per hour: 5

Epidural dosage (morphine sulfate injection, but not DepoDur)

Adults: Initially, inject 5 mg epidurally in the lumbar region and assess the patient in 1 hr; if pain relief is not adequate, give incremental doses of 1-2 mg, with sufficient time between injections to appropriately assess for efficacy. Max: 10 mg per 24 hr. For continuous epidural infusion, initiate at 2-4 mg per 24 hr, with additional doses of 1-2 mg given if pain relief is not achieved

Intrathecal dosage (morphine sulfate injection, but not DepoDur)

Adults: 0.2-1 mg in the lumbar area as a single dose or to establish dosage for continuous intrathecal infusion

Rectal dosage

Adults: 10-20 mg q4hr, as needed

PO [extended-release tablets (Arymo ER, MS Contin) or capsules (Kadian)] in opioid nontolerant adult patients

Adults: 15 mg q8hr or q12hr **(Arymo ER, Morphabond, or MS Contin)** or 30 mg q24hr (Avinza) for use as the first opioid analgesic. Do not use Kadian capsules as a first opioid analgesic; initiate with an IR and then convert patients to Kadian. For opioid nontolerant patients, initiate with 15 mg q12hr (MS Contin), 15 mg q8hr or q12hr (Arymo ER or Morphabond), or 30 mg q24hr (Avinza or Kadian). With the exception of Avinza, adjust the dose every 1-2 days based upon the total daily morphine requirements (ER dose plus breakthrough doses). Adjust the dose of Avinza q3-4days in increments of 30 mg or less

PO dosage [ER tablets (Arymo ER, MS Contin) or capsules (Kadian)] in adult patients receiving other opioid agonist therapy

Adults: Discontinue all other around-the-clock opioids. To convert from other morphine formulations, calculate the morphine 24-hr oral requirement; the 24-hr oral dose is 3 times the 24-hr parenteral requirement. Initiate dosing, using the 24-hr oral requirement (round down to the

closest available tablet/capsule strength), for: **Arymo ER, MS Contin** at one-half of the requirement every 12 hr or one-third q8hr; Avinza at the total requirement once q24hr; and Kadian at one-half q12hr or the total once q24hr. Initiate dosing for: **Arymo ER, or MS Contin** at 15 mg q8hr or q12hr; and **Kadian** at 30 mg q24hr

Available forms: IR tablets 15, 30 mg; ER tablets (Arymo ER) 15, 30, 60 mg; ER tablets (MS Contin) 15, 30, 60, 100, 200 mg; ER tablets 15, 30, 60, 100 mg; ER capsules (Kadian) 10, 20, 30, 40, 50, 60, 70, 80, 100, 130, 150, 200 mg; ER capsules 30, 45, 60, 75, 90, 120 mg; oral solution 1 mg/mL ✱, 2 mg/mL, 4 mg/mL, 5 mg/mL ✱, 20 mg/mL; rectal suppositories 5, 10, 20, 30 mg; solution for injection (IM, IV, SUBCUT) 1 mg/mL, 2 mg/mL, 4 mg/mL, 5 mg/mL, 8 mg/mL, 10 mg/mL, 15 mg/mL, 25 mg/mL, 50 mg/mL; solution for epidural, IV (no preservative) 0.5 mg/mL, 1 mg/mL; solution for IT or epidural, continuous microinfusion device; no preservative 10 mg/mL, 25 mg/mL; solution for IV (PCA device) 1 mg/mL, 2 mg/mL, 3 mg/mL, 5 mg/mL

Administer:

PO route

- Give with food or milk to minimize GI effects
- Begin with immediate-release products and titrate to correct dose and convert to a sustained-release product
- **Immediate-release cap:** may swallow whole, or cap may be opened and contents sprinkled on cool food (pudding or applesauce) or added to juice; give immediately or delivered via gastric or NG tube by either adding to or following with liquid
- **Extended-release and controlled-release tabs:** swallow whole; do not crush, break, dissolve, or chew
- The use of MS Contin 100-mg or 200-mg tabs should be limited to opioid-tolerant patients requiring oral doses equivalent to ≥200 mg/day; use of the 100-mg or 200-mg tablet is only recommended for patients who have already been titrated to a stable analgesic regimen using lower strengths of MS Contin or other opioids
- **Sustained-release caps:** swallow; do not chew, crush, or dissolve; caps may be opened and contents sprinkled on applesauce (at room temperature or cooler) immediately before ingestion; do not chew, crush, or dissolve the pellets/beads inside the cap; the applesauce should be swallowed without chewing; if the pellets/beads are chewed, an immediate release of a potentially fatal morphine dose may be delivered; rinse mouth
- **Kadian caps:** may be given through a 16-F gastrostomy tube; flush with water, and sprinkle the cap contents into 10 mL of water; using a funnel and a swirling motion, pour the pellets and water into the tube; rinse the beaker with 10 mL of water, and pour the water into the funnel; repeat until no pellets remain in the beaker; ***do not* administer Kadian through a nasogastric tube**
- Kadian 100 mg, 130 mg, 150 mg, or 200 mg caps are given only to opioid-tolerant patients

Oral liquid

- Check dose before use because many concentrations of oral solution are available; may be diluted in fruit juice; protect from light

Injectable administration

- Visually inspect for particulate matter, discoloration before use; do not use if a precipitate is present after shaking; do not use the Duramorph solution if a precipitate is present or if the color is darker than pale yellow

SUBCUT route

- Inject, taking care not to inject intradermally
- **Continuous SC infusion:** morphine is not approved by the FDA for subcut use; dilute to an appropriate concentration in D_5W; give using a portable, controlled,

subcut device; adjust rate based on patient response and tolerance; max subcut rate is 2 mL/hour/site

Intrathecal/epidural route

- Morphine sulfate injection is not interchangeable with morphine sulfate extended-release liposome injection (DepoDur); DepoDur is only for epidural administration
- Do not use Infumorph (10 mg/mL or 25 mg/mL) for single-dose neuraxial injection because lower doses can be more reliably administered with Duramorph (0.5 mg/mL or 1 mg/mL)

Rectal route

- Moisten the suppository with water before insertion; if suppository is too soft, chill in the refrigerator for 30 min or run cold water over it before removing the wrapper

IV route

- Before use, an opiate antagonist and emergency facilities should be available
- Do not use the highly concentrated morphine injections (i.e., 10-25 mg/mL) for IV, IM, or SC administration of single doses; these injection solutions are intended for use via continuous, controlled microinfusion devices
- **Direct IV route:** dilute dose with ≥5 mL of sterile water for injection or NS injection; inject 2.5-15 mg directly into a vein or into the tubing of a freely flowing IV solution over 4-5 min; do not give rapidly
- **Continuous IV infusion:** dilute in 5% dextrose; use a controlled-infusion device; adjust dosage and rate based on patient response
- **Patient-controlled analgesia (PCA):** a compatible patient-controlled infusion device must be used; dilute solutions to a concentration of 1 or 10 mg/mL for ease in calculations and programming of PCA pumps; adjust dosage and rate based on patient response; consult the patient-controlled infusion device manual for directions on rate of infusion

Y-site compatibilities: Acetaminophen, aldesleukin, allopurinol, amifostine, amikacin, aminophylline, amiodarone, amsacrine, atenolol, atracurium, aztreonam, bumetanide, calcium chloride, cefamandole, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, chloramphenicol, cisatracurium, cladribine, clindamycin, cyclophosphamide, cytarabine, dexamethasone, digoxin, diltiaZEM, DOBUTamine, DOPamine, doxycycline, enalaprilat, EPINEPHrine, erythromycin, esmolol, etomidate, famotidine, fentaNYL, filgrastim, fluconazole, fludarabine, foscarnet, gentamicin, granisetron, heparin, hydrocortisone, HYDROmorphone, kanamycin, labetalol, lidocaine, LORazepam, magnesium sulfate, melphalan, meropenem, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, nafcillin, niCARdipine, nitroglycerin, norepinephrine, ondansetron, oxacillin, oxytocin, PACLitaxel, pancuronium, penicillin G potassium, piperacillin, piperacillin/tazobactam, potassium chloride, propranolol, raNITIdine, remifentanil, sodium bicarbonate, teniposide, thiotepa, ticarcillin, ticarcillin/clavulanate, tigecycline, tobramycin, vancomycin, vecuronium, vinorelbine, vit B/C, warfarin, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Drowsiness, dizziness, confusion, headache, sedation, euphoria, insomnia, seizures

CV: Palpitations, bradycardia, change in B/P, shock, cardiac arrest, chest pain, hypo/hypertension, edema, tachycardia

EENT: Blurred vision, miosis, diplopia

ENDO: Gynecomastia

GI: Nausea, vomiting, anorexia, constipation, cramps, biliary tract pressure

GU: Urinary retention, impotence, gonadal suppression

HEMA: Thrombocytopenia

INTEG: Rash, urticaria, bruising, flushing, diaphoresis, pruritus

RESP: Respiratory depression, respiratory arrest, apnea

PHARMACOKINETICS

PO: Onset variable, peak 60 min, duration 4-5 hr
IM: Onset ½ hr, peak 30-60 min, duration 4-5 hr
SUBCUT: Onset 15-20 min, peak 50-90 min, duration 4-5 hr
IV: Peak 20 min, duration 4-5 hr
RECT: Peak ½-1 hr, duration 3-7 hr
Intrathecal: Onset rapid, duration ≤24 hr
Metabolized by liver, crosses placenta; excreted in urine, breast milk; half-life IM 3-4 hr; Kadian 11-13 hr

INTERACTIONS

- **Unpredictable reaction, avoid use: MAOIs**
- **Greater risk of cross-sensitivity with organic and semiorganic opioids**

Increase: serotonin syndrome risk—SSRIs, SNRIs, tricyclics, MAOIs, amoxapine, dolasetron, palonosetron, antimigraine agents, linezolid, lithium, methylene blue, traZODone; monitor for serotonin syndrome
Increase: effects with other CNS depressants—alcohol, opiates, sedative/hypnotics, antipsychotics, skeletal muscle relaxants, general anesthetics, benzodiazepine; avoid using together; increased respiratory depression
Decrease: morphine effect—butorphanol, nalbuphine, pentazocine; consider using another product; withdrawal symptoms may occur
Decrease: morphine action—rifAMPin

Drug/Herb
Increase: CNS depression—chamomile, hops, kava, St. John's wort, valerian

Drug/Lab Test
Increase: amylase, lipase

NURSING CONSIDERATIONS

Assess:
- **Pain:** location, intensity, type, character; check for pain relief 20 min following IV, 1 hr following PO/IM/Subcut; titrate to relieve pain; give dose before pain becomes severe
- **Bowel status;** constipation common, use stimulant laxative if needed; provide increased bulk, fluids in diet
- I&O ratio; check for decreasing output; may indicate urinary retention; monitor serum sodium
- B/P, pulse, respirations (character, depth, rate)
- CNS changes: dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
- **Abrupt discontinuation:** gradually taper to prevent withdrawal symptoms; decrease by 50% q1-2days; avoid use of narcotic antagonists
- Allergic reactions: rash, urticaria

Black Box Warning: Accidental exposure: if Duramorph or Infumorph gets on skin, remove contaminated clothing, rinse affected area with water

Black Box Warning: Requires a specialized care setting: patient should be observed for ≥24 hr; have emergency equipment nearby

Black Box Warning: Respiratory dysfunction: depression, character, rate, rhythm; notify prescriber if respirations are <12/min; accidental overdose has occurred with high-potency oral sols

- Gradual withdrawal after long-term use

Black Box Warning: Pregnancy/breastfeeding: use only if benefits outweigh risk to fetus; longer use can result in neonatal opioid withdrawal syndrome; do not breastfeed

Evaluate:
- Therapeutic response: decrease in pain intensity

Teach patient/family:

Black Box Warning: To keep out of the reach of children, pets

Black Box Warning: To notify health care professional if pregnancy is planned or suspected

- To avoid driving, hazardous activities until response is known
- To turn, cough, and deep breathe if on bed rest
- To report constipation, as other products will need to be used
- To change position slowly; orthostatic hypotension may occur
- To report any symptoms of CNS changes, allergic reactions
- That physical dependency may result from long-term use
- To avoid use of alcohol, CNS depressants
- That withdrawal symptoms may occur: nausea, vomiting, cramps, fever, faintness, anorexia
- To take exactly as directed; do not crush, break, chew, or dissolve caps or tabs

TREATMENT OF OVERDOSE: Naloxone (Narcan) 0.2-0.8 mg IV (caution with opioid-tolerant individuals), O_2, IV fluids, vasopressors

⚠ HIGH ALERT

moxetumomab pasudotox-tdfk (Rx)

(mox-e-toom′oh-mab pa-soo′doe-tox)

Lumoxiti

Func. class.: Antineoplastic

USES: Relapsed or refractory hairy-cell leukemia in patients who have received at least 2 prior systemic therapies, including treatment with a purine nucleoside analog

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Capillary leak syndrome, hemolytic-uremic syndrome

DOSAGE AND ROUTES

- **Adult: IV** 0.04 mg/kg (actual body weight) over 30 min on days 1, 3, and 5 repeated q28days until disease progression or a maximum of 6 cycles

Available forms: Powder for injection 1 mg

moxifloxacin (Rx)

(mocks-ah-flox′a-sin)

Avelox

Func. class.: Antiinfective

Chem. class.: Fluoroquinolone

ACTION: Interferes with conversion of intermediate DNA fragments into high-molecular-weight DNA in bacteria; DNA gyrase inhibitor

USES: Acute bacterial sinusitis: *Streptococcus pneumoniae, Haemophilus influenzae, Moraxella catarrhalis;* acute bacterial exacerbation of chronic bronchitis: *S. pneumoniae, H. influenzae, Haemophilus parainfluenzae, Klebsiella pneumoniae, Staphylococcus aureus, M. catarrhalis;* community-acquired pneumonia: *S. pneumoniae, H. influenzae, Mycoplasma pneumoniae, Chlamydia pneumoniae, M. catarrhalis;* uncomplicated skin/skin-structure infections: *S. aureus, Streptococcus pyogenes;* complicated intraabdominal infections including polymicrobial infections: *E. coli, Bacterioides fragilis, S. anginosus, S. constellatus, Enterococcus faecalis, Proteus mirabilis, Clostridium perfringens, Bacteroides thetaiotaomicron, Peptostreptococcus* sp; complicated skin, skin-structure infections caused by methicillin-susceptible bacteria: *S. aureus, E. coli, K. pneumoniae, Enterobacter cloacae;* prophylaxis and treatment of plague caused by *Yersinia pestis,* including pneumonic and septicemic plague

Unlabeled uses: Anthrax treatment/prophylaxis, gastroenteritis, MAC, nongonococcal urethritis, shigellosis, surgical infection prophylaxis, TB

CONTRAINDICATIONS: Hypersensitivity to quinolones

Precautions: Pregnancy, breastfeeding, children, hepatic/cardiac/renal/GI disease, epilepsy, uncorrected hypokalemia, prolonged QT interval; patients receiving class IA, III antidysrhythmics; seizure disorder, CDAD, diabetes mellitus

Black Box Warning: Tendon pain, rupture; tendinitis, myasthenia gravis, neurotoxicity, peripheral neuropathy, psychiatric events

DOSAGE AND ROUTES

Acute bacterial sinusitis
- **Adult: PO/IV** 400 mg q24hr × 10 days

Acute bacterial exacerbation of chronic bronchitis
- **Adult: PO/IV** 400 mg q24hr × 5 days

Community-acquired pneumonia
- **Adult: PO/IV** 400 mg q24hr × 7-14 days

Uncomplicated skin/skin-structure infections
- **Adult: PO/IV** 400 mg q24hr × 7 days

Complicated intraabdominal infections
- **Adult: IV** 400 mg/day × 7-21 days

Complicated skin, skin-structure infections
- **Adult: PO/IV** 400 mg/day × 7-21 days

Plague
- **Adult: PO/IV** 400 mg q24hr × 10-14 days

Available forms: Tabs 400 mg; inj premix 400 mg/250 mL

Administer:

PO route
- 4 hr before or 8 hr after antacids, zinc, iron, calcium, sucralfate, multivitamins
- Without regard to food
- Store at room temperature; do not refrigerate, do not use if particulate is present

IV route
- Do not use if particulate matter is present
- Give PO 4 hr before or 8 hr after antacids, sucrasulfate, multivitamins
- Do not give SUBCUT, IM
- Available as premixed sol; may be diluted at ratios from 1:10 to 10:1; do not refrigerate; give by direct infusion or through Y-type infusion set; do not add other medications to sol or infusion through same IV line at same time
- Flush line with compatible sol before and after use
- Do not admix

Solution compatibilities: 0.9% NaCl, D_5, D_{10}, LR, sterile water for inj

SIDE EFFECTS

CNS: *Headache,* dizziness, fatigue, insomnia, depression, *restlessness,* seizures, confusion, increased intracranial pressure, peripheral neuropathy, pseudotumor cerebri, fever

CV: Prolonged QT interval, dysrhythmias, torsades de pointes, tachycardia

EENT: Blurred vision, tinnitus, taste changes

GI: *Nausea, diarrhea,* increased ALT, AST, flatulence, heartburn, *vomiting,* oral candidiasis, dysphagia, CDAD, abdominal pain, dyspepsia, constipation, gastroenteritis, xerostomia

GU: Renal failure

INTEG: *Rash,* pruritus, urticaria, photosensitivity, flushing, fever, chills, injection-site reactions

MISC: Candidiasis vaginitis

MS: Tremor, arthralgia, tendinitis, tendon rupture, myalgia

SYST: Anaphylaxis, Stevens-Johnson syndrome, angioedema, toxic epidermal necrolysis

PHARMACOKINETICS

Excreted in urine as active product, metabolites; parent product excreted in urine (20%), feces (25%); half-life PO 12-16 hr, IV 8-15 hr, peak 1 hr (PO), 1-3 hr (IV)

INTERACTIONS

Increase: QT prolongation—drugs that increase QT interval; avoid using concurrently

Increase: moxifloxacin serum levels—probenecid

Increase: warfarin, cycloSPORINE effect

Increase: seizure risk—NSAIDs; monitor, adjust or use different product

Black Box Warning: Increase: tendon rupture—corticosteroids

Increase: anticoagulant level—warfarin; monitor PT/INR
Decrease: moxifloxacin absorption—magnesium antacids, aluminum hydroxide, zinc, iron, sucralfate, calcium, enteral feeding, didanosine
Drug/Lab Test
Increase: glucose, lipids, triglycerides, uric acid, LDH ALT, ionized calcium, chloride, globulin, albumin, PT, INR, WBC
Decrease: potassium, glucose, amylase, RBC, eosinophils, Hb, Hct

NURSING CONSIDERATIONS

Assess:
- CNS symptoms: headache, dizziness, fatigue, insomnia, depression, seizures
- Renal, hepatic studies: BUN, creatinine, AST, ALT, electrolytes
- I&O ratio, urine pH <5.5 is ideal
- **Allergic reactions, Stevens-Johnson syndrome, toxic epidermal necrolysis, anaphylaxis:** fever, flushing, rash, urticaria, pruritus, sore throat, fatigue, ulcers, other lesions; keep EPINEPHrine, emergency equipment nearby for anaphylaxis

Black Box Warning: Tendon pain, rupture, tendinitis; if tendon becomes inflamed, product should be discontinued; more common in Achilles tendon

- **Cardiac status:** prolonged QT or use of products that increase QT prolongation
- **CDAD:** assess for diarrhea, abdominal pain, fever, fatigue, anorexia; possible anemia, elevated WBC, low serum albumin; stop product; usually either vancomycin or IV metroNIDAZOLE given
- Increased fluids to 3 L/day to avoid crystallization in kidneys

Black Box Warning: Myasthenia gravis: assess for increased weakness when using this product; avoid using in this condition

Black Box Warning: Peripheral neuropathy: assess for pain, numbness, tingling in extremities; report

- **Pregnancy/breastfeeding:** risks to fetus are unknown; adverse events observed in some animal studies; discuss risks, benefits of treatment

Evaluate:
- Therapeutic response: decreased pain, C&S; absence of infection

Teach patient/family:

Black Box Warning: To notify prescriber of tendon pain, inflammation, or burning, tingling, weakness; stop drug

- Not to take any products containing magnesium or calcium (such as antacids), iron, or aluminum with this product or 4 hr before or 8 hr after
- That photosensitivity may occur; to avoid sunlight or use sunscreen to prevent burns
- To use frequent rinsing of mouth, sugarless candy or gum for dry mouth
- To take as prescribed; not to double or miss doses; to take without regard to meals
- To report immediately rash, diarrhea, rapid heartbeat
- If dizziness occurs, to ambulate, perform activities with assistance
- To complete full course of product therapy
- To contact prescriber if abnormal heart rhythm or seizures occur

M

moxifloxacin (ophthalmic) (Rx)

(mocks-ih-floks´a-sin)

Vigamox, Moxeza

Func. class.: Ophthalmic antiinfective
Chem. class.: Fluoroquinolone

Do not confuse:
moxifloxacin/ciprofloxacin/gatifloxacin/levoFLOXacin

ACTION: Inhibits DNA gyrase, thereby decreasing bacterial replication

USES: Bacterial conjunctivitis (aerobic gram-positive/negative organisms), *Chlamydia trachomatis*

CONTRAINDICATIONS:
Hypersensitivity to this product or fluoroquinolones
Precautions: Pregnancy, breastfeeding

DOSAGE AND ROUTES
Bacterial conjunctivitis
• **Adult/adolescent/child ≥1 yr: ophthalmic SOL** 1 drop in affected eye(s) bid (Moxeza) or tid (Vigamox) × 7 days
Available forms: Ophthalmic solution 0.5%
Administer:
Ophthalmic route
• Commercially available ophthalmic solutions are not for injection subconjunctivally or into the anterior chamber of the eye
• Apply topically to the eye, taking care to avoid contamination
• Do not touch the tip of the dropper to the eye, fingertips, or other surface
• Apply pressure to lacrimal sac for 1 min after instillation
• Avoid wearing contact lenses during treatment

SIDE EFFECTS
EENT: Hypersensitivity, pruritus, blurred vision, tearing

PHARMACOKINETICS
Half-life 13 hr

NURSING CONSIDERATIONS
Assess:
• **Allergic reaction:** assess for hypersensitivity; discontinue product
Evaluate:
• Decreased ophthalmic infection
Teach patient/family:
Ophthalmic route
• To apply topically to the eye, taking care to avoid contamination
• That product is for ophthalmic use only
• Not to touch the tip of the dropper to the eye, fingertips, or other surface
• To apply pressure to lacrimal sac for 1 min after installation
• To avoid wearing contact lenses during treatment

mupirocin (topical, nasal) (Rx)
(myoo-pihr′oh-sin)
Bactroban 🍁, Centany, Centany AT
Func. class.: Topical antiinfective

ACTION:
Antibacterial activity results from inhibition of protein synthesis; bacteriostatic at low concentration, bactericidal at high concentration

USES:
Impetigo, skin lesions *(Staphylococcus aureus/Streptococcus pyogenes);* nasal: methicillin-resistant *S. aureus*

CONTRAINDICATIONS:
Hypersensitivity to this product
Precautions: Open wounds, burns, severe kidney disease, children, pregnancy, breastfeeding

DOSAGE AND ROUTES
Impetigo
• **Adult/child: TOP** apply to affected area tid × 1-2 wk
Skin lesions
• **Adult/child: TOP** apply to affected area tid × 10 days
Methicillin-resistant *S. aureus* in the nose
• **Adult/child ≥12 yr: NASAL** divide ointment in single use tube in half; use in each nostril bid × 5 days
Available forms: Topical cream, ointment 2%; intranasal ointment 2%
Administer:
Topical route
• Do not use skin products near the eyes, nose, or mouth
• Wash hands before and after use; wash affected area and gently pat dry
• May cover treated areas with gauze dressing
Cream/ointment
• Apply a thin film to the cleansed affected area; massage gently into affected areas; do not use near eyes, mouth
• **Nasal:** Close nostrils by squeezing and releasing and gently massaging over 1 min

SIDE EFFECTS

CNS: Headache
EENT: Burning, pharyngitis, rhinitis (nasal)
GI: Taste change, nausea
INTEG: Burning, rash, pruritus

INTERACTIONS

Decrease: Effect of other nasal products

NURSING CONSIDERATIONS

Assess:
- **Allergic reaction:** assess for hypersensitivity; product may need to be discontinued
- **Infection:** assess for number of lesions, severity in impetigo, other skin disorders

Evaluate:
- Decreased lesions in impetigo, other skin disorders

Teach patient/family:

Topical route
- Not to use skin products near the eyes, nose, or mouth
- To wash hands before and after use and to wash affected area and gently pat dry
- **Cream/ointment:** to apply a thin film to the cleansed affected area; to cover treated areas with gauze dressing if desired
- **Nasal:** to close nostrils by squeezing and releasing and gently massaging over 1 min

mycophenolate mofetil (Rx)

(mye-koe-phen′oh-late)

CellCept

mycophenolate acid

Myfortic

Func. class.: Immunosuppressant

ACTION: Inhibits inflammatory responses that are mediated by the immune system

USES: Prophylaxis for organ rejection in allogenic cardiac, hepatic, renal transplants
Unlabeled uses: Nephrotic syndrome

CONTRAINDICATIONS: Hypersensitivity to this product or mycophenolic acid

Black Box Warning: Pregnancy

Precautions: Breastfeeding, lymphomas, neutropenia, renal disease, accidental exposure, anemia

Black Box Warning: Infection, neoplastic disease; requires an experienced clinician and a specialized care setting

DOSAGE AND ROUTES

For kidney transplant rejection prophylaxis with or without antithymocyte induction
- **Adult: IV** 1 g over at least 2 hr bid in combination with corticosteroids and cycloSPORINE; initial dose should be given within 24 hr of transplantation

Oral dosage

The delayed-release tablets (mycophenolate sodium) and the capsules, oral suspension, and tablets (mycophenolate mofetil) are not interchangeable on an mg basis
- **Adult: PO** (regular release) 1 g mycophenolate mofetil or **PO** (extended release) 720-mg mycophenolate sodium bid in combination with corticosteroids and cyclosporine
- **Child: PO** (oral suspension) 600 mg/m^2 bid, max 2 g/day. Mycophenolate mofetil capsules may be given at dose of 750 mg bid for those with a body surface area (BSA) of 1.25-1.5 m^2 or 1 g bid for those with a BSA >1.5 m^2; mycophenolate sodium delayed-release tablets 400 mg/m^2 bid, max 720 mg bid
- **Infant ≥3 mo: PO** (oral suspension) 600 mg/m^2 bid, max 2 g/day

For heart transplant rejection prophylaxis
- **Adult: IV** 1.5 g over at least 2 hr bid in combination with corticosteroids and cycloSPORINE. The first dose may be administered within 24 hr after transplantation
- **Adult: PO** (regular release) (mycophenolate mofetil) 1.5 g bid in combination

with corticosteroids and cycloSPORINE. Initial oral dose should be administered as soon as possible after transplantation

For liver transplant rejection prophylaxis

- **Adult: IV** 1 g over at least 2 hr bid in combination with corticosteroids and cycloSPORINE; the first dose may be administered within 24 hr after transplantation
- **Adult: PO** (mycophenolate mofetil) 1.5 g bid in combination with corticosteroids and cycloSPORINE; give initial dose as soon as possible after transplantation

Available forms: Caps 250 mg; tabs 500 mg; inj (powder) 500 mg/20-mL vial; powder for oral susp 200 mg/mL: delayed rel tab (Myfortic) 180, 360 mg

Administer:

- May be given in combination with corticosteroids, cycloSPORINE
- **Cytotoxic:** Use safe handling procedures; avoid inhalation or direct contact with skin, mucous membranes; teratogenic in animals; wash skin if product comes in contact with skin

PO route

- Do not break, crush, or chew tabs; do not open caps
- Give at same time each day
- **Oral susp:** tap closed bottle several times to loosen powder; use 94 mL of water in graduated cylinder; add ½ total amount of water for reconstitution and shake the closed bottle; add remaining water and shake again; remove child-resistant cap; push adapter into neck of bottle; close tightly, may give by NG tube ≥8 French catheter
- Give alone for better absorption

Intermittent IV INFUSION route

- Reconstitute each vial with 14 mL D_5W; shake gently; further dilute to 6 mg/mL; dilute 1 g/140 mL D_5W, 1.5 g/210 mL D_5W; give by slow IV infusion ≥2 hr; never give by bolus or rapid IV inj
- Do not give with other medications or sol, do not use if particulates are present

Y-site compatibilities: Alemtuzumab, alfentanil, amikacin, anidulafungin, argatroban, bivalirudin, caspofungin, cefepime, DAPTOmycin, DOPamine, norepinephrine, octreotide, oxytocin, tacrolimus, tigecycline, tirofiban, vancomycin, zoledronic acid

SIDE EFFECTS

CNS: *Tremor, dizziness, insomnia, headache, fever,* anxiety, pain, progressive multifocal leukoencephalopathy, asthenia, paresthesia

CV: *Hypertension, chest pain,* hypotension, edema

GI: *Diarrhea, constipation, nausea, vomiting,* stomatitis, GI bleeding, abdominal pain, anorexia, dyspepsia

GU: *UTI, hematuria,* renal tubular necrosis, polyomavirus-associated nephropathy

HEMA: Leukopenia, thrombocytopenia, anemia, pancytopenia, pure red cell aplasia, neutropenia

INTEG: *Rash*

META: *Peripheral edema, hypercholesterolemia, hypophosphatemia, edema, hyperkalemia, hypokalemia, hyperglycemia,* hypocalcemia, hypomagnesemia

MS: Arthralgia, muscle wasting, back pain, weakness

RESP: *Dyspnea, respiratory infection, increased cough, pharyngitis, bronchitis, pneumonia,* plural effusion, pulmonary fibrosis

SYST: Lymphoma, *nonmelanoma skin carcinoma,* sepsis

PHARMACOKINETICS

Rapidly and completely absorbed; metabolized to active metabolite (MPA); excreted in urine, feces; protein binding (MPA) 97%; half-life (MPA) 17.9 hr

INTERACTIONS

Increase: bone marrow suppression—azaTHIOprine; do not use concurrently

Increase: bleeding risk—anticoagulants, NSAIDs, thrombolytics, salicylates

Increase: toxicity—acyclovir, ganciclovir, valACYclovir; monitor if used together

Increase: effects of both products—phenytoin, theophylline

Increase: mycophenolate levels—probenecid, immunosuppressives, salicylates; monitor for adverse reactions

Decrease: mycophenolate levels—antacids (magnesium, aluminum), cholestyramine, cycloSPORINE, rifamycin; separate dosing times by several hours
Decrease: protein binding of phenytoin, theophylline
Decrease: effect of live attenuated vaccines, oral contraceptives

Drug/Herb
Interference with immunosuppression: astragalus, cat's claw, echinacea, melatonin

Drug/Food
Decrease: absorption if taken with food

Drug/Lab Test
Increase: serum creatinine, BUN, cholesterol, potassium, WBC

NURSING CONSIDERATIONS

Assess:
- **Progressive multifocal leukoencephalopathy:** may be fatal; ataxia, confusion, apathy, hemiparesis, visual problems, weakness; side effects should be reported to FDA
- **Pure red cell aplasia (PRCA):** occurs when used in combination with other immunosuppressants; assess for fatigue, pulmonary tachycardia; may cause graft rejection
- Blood studies: CBC during treatment monthly, may monitor mycophenolate levels in those at high risk for organ rejection
- Hepatic studies: alk phos, AST, ALT, bilirubin
- Renal studies: BUN, CCr, electrolytes

Black Box Warning: Pregnancy/breastfeeding: pregnancy test within 1 wk before initiation of treatment; confirm negative pregnancy test; if patient becomes pregnant, enroll in Mycophenolate Pregnancy Registry 1-800-617-8191; do not breastfeed during treatment and for 6 wk after final dose

Black Box Warning: Requires a specialized setting and experienced clinician: should be used by those experienced in the use of immunosuppressive therapy in a facility equipped for transplants

Evaluate:
- Therapeutic response: absence of graft rejection

Teach patient/family:
- About the need for repeated lab tests and follow-up exams

Black Box Warning: Pregnancy/breastfeeding: to use 2 forms of contraception before, during, and for 6 wk after therapy; not to breastfeed during and for 6 wk after final dose; that pregnancy test is required the week before start of therapy and 8-10 days later

- To take at same time each day; not to crush, chew caps, or ext rel tab; swallow whole, take on empty stomach

Black Box Warning: Infection: to report fever, chills, sore throat, fatigue; serious infections may occur; avoid crowds, persons with known infections

Black Box Warning: Neoplastic disease: lymphoma and other neoplastic diseases may occur, particularly skin cancer; limit UV exposure by wearing protective clothing, sunscreen

⚠ HIGH ALERT

nadolol (Rx)

(nay-doe'lole)

Corgard

Func. class.: Antihypertensive, antianginal

Chem. class.: β-Adrenergic receptor blocker

ACTION: Long-acting, nonselective β-adrenergic receptor blocking agent, blocks β_1 in the heart and β_2 in the lungs, uterus, and circulatory system; mechanism is similar to that of propranolol

USES: Chronic stable angina pectoris, mild to moderate hypertension

CONTRAINDICATIONS: Hypersensitivity to this product, cardiac failure, cardiogenic shock, 2nd-/3rd-degree heart block, bronchospastic disease, sinus bradycardia, HF, COPD, asthma

Precautions: Pregnancy, breastfeeding, diabetes mellitus, renal disease, hyperthyroidism, peripheral vascular disease, myasthenia gravis, major surgery, nonallergic bronchospasm

Black Box Warning: Abrupt discontinuation, ischemic heart disease may be more severe

DOSAGE AND ROUTES

Angina pectoris

- **Adult: PO** 40 mg/day, increase by 40-80 mg q 3-7days; **maintenance** 40-240 mg/day

Hypertension

- **Adult PO** 40 mg daily, increase by 40-80 mg until therapeutic response; maintenance, 40-320 mg/day

Renal dose

- **Adult: PO** CCr 31-50 mL/min, give q24-36hr; CCr 10-30 mL/min, give q24-48hr; CCr <10 mL/min, give q40-60hr

Available forms: Tabs 20, 40, 80, 160 mg

Administer:

- With 8 oz water, check apical pulse before use; if <60 bpm, withhold; notify prescriber
- Give without regard to food
- Tabs may be crushed and mixed with food

Black Box Warning: Taper over 1-2 wk to discontinue product; do not stop abruptly, may worsen angina pectoris

SIDE EFFECTS

CNS: Depression, *dizziness, fatigue,* drowsiness

CV: *Bradycardia, hypotension,* HF, palpitations, chest pain, peripheral ischemia, flushing, edema, vasodilation

PHARMACOKINETICS

PO: Onset variable, peak 3-4 hr, duration 17-24 hr; half-life 20-24 hr; not metabolized; excreted in urine 70% (unchanged), bile, breast milk; protein binding 30%

INTERACTIONS

Increase: orthostatic hypertension—MAOIs; monitor B/P

Increase: peripheral ischemia—ergots, avoid if possible

Increase: bradycardia—digoxin; monitor for bradycardia

Increase: hypotension, bradycardia—cloNIDine, EPINEPHrine

Increase: lack of stability of dose in diabetes—antidiabetics, insulin, dose may need to be changed

Increase: hypotensive effects—amphetamines, methylphenidate, other antihypertensives, antipsychotics (2nd generation), barbiturates, calcium channel blockers, PDE5 inhibitors, prostacyclin analogues, other hypotensive agents, phenothiazines, general anesthetics, monitor B/P, consider stopping nadolol before surgery

Decrease: β-blocking effect—thyroid hormones

Decrease: antihypertensive effect—NSAIDs, monitor B/P

Drug/Herb
Increase: orthostatic hypertension—dong quai, garlic, ginseng, yohimbe; avoid concurrent use

NURSING CONSIDERATIONS

Assess:
- **Hypertension:** check that prescriptions have been filled; Pulse, respirations during beginning therapy and periodically thereafter
- Monitor for orthostatic hypotension
- **Angina:** monitor frequency of angina, alleviating factors; duration, time started, activity being performed, character
- Headache, light-headedness, decreased B/P; may indicate a need for decreased dosage
- **HF:** daily weight, report gain of 2-3 lb/wk or unexpected weight gain
- **Dyspnea:** shortness of breath, wheezing, allergic rhinitis
- I&O ratio, serum creatinine/BUN

Black Box Warning: Abrupt discontinuation: can result in MI, myocardial ischemia, ventricular dysrhythmias, severe hypertension; withdraw slowly by tapering over 1-2 wk; if symptoms return, restart

- **Pregnancy/breastfeeding:** use only if benefits outweigh risk to fetus; discontinue product or breastfeeding, excreted in breast milk

Evaluate:
- Therapeutic response: decreased B/P, heart rate, symptoms of angina

Teach patient/family:
- That product may mask signs of hypoglycemia or alter blood glucose in patients with diabetes
- To avoid OTC products unless prescriber approves; to take as prescribed, at same time each day, do not double; to take missed dose as soon as remembered if less than 8 hr before next dose
- To avoid hazardous activities if dizziness occurs
- **Hypertension:** to comply with complete medical regimen; to report weight gain of >5 lb, swelling, unusual bruising, bleeding
- To rise slowly to prevent orthostatic hypotension
- About how and when to check B/P, pulse; to hold dose, contact prescriber if pulse ≤60 bpm, systolic B/P <90 mm Hg

Black Box Warning: Not to discontinue abruptly; may cause life-threatening cardiac changes

nadolol/bendroflumethiazide (Rx)

Nay′doe-lol/ben-droe-floo-me-thye′a-zide

Corzide

Func. class.: Antihypertensive, beta-blocker, nonselective; thiazide diuretic

USES: Hypertension

Black Box Warning: Do not discontinue abruptly

DOSAGE AND ROUTES

Adult: PO nadolol 40 mg/bendroflumethiazide 5 mg daily, may increase to nadolol 80 mg/bendroflumethiazide 5 mg daily as needed

Renal Dose
- **Adult PO** CCr 31-50 mL/min give dose q24-36hr; CCr 10-30 mL/min give dose q24-48hr; CCr <10 mL/min give dose q40-60hr

Available forms: Tabs nadolol 40 mg/bendroflumethiazide 5 mg; nadolol/80 mg/bendroflumethiazide 5 mg

nafarelin (Rx)

Nah-far′eh-lin

Synarel

Func. class.: Gonadotropin-releasing hormone analogue

USES: Central precocious puberty, endometriosis

CONTRAINDICATIONS

Hypersensitivity to gonadotropin-releasing hormone (GnRH), GnRH-agonist analogs, or any component; undiagnosed abnormal

vaginal bleeding; pregnant women or those who may become pregnant; breastfeeding

DOSAGE AND ROUTES

Endometriosis: Adult female:

Intranasal: 1 spray (200 mcg) into 1 nostril each morning and 1 spray (200 mcg) into the other nostril each evening starting between days 2 and 4 of menstrual cycle (total: 2 sprays [400 mcg] daily). If regular menstruation persists after 2 mo of therapy, may increase dose to 2 sprays (400 mcg; 1 spray in each nostril) in the morning and evening (total: 4 sprays [800 mcg] daily), max 6 mo

Central precocious puberty

Child males (≤9 yr)/females (≤8 yr):

Intranasal: 2 sprays (400 mcg) into each nostril in the morning and 2 sprays (400 mcg) into each nostril in the evening

Available forms: Nasal spray 2 mg/mL/200 mcg/spray

nafcillin (Rx)

(naf-sill′in)

Func. class.: Antibiotic, broad-spectrum

Chem. class.: Penicillinase-resistant penicillin

ACTION: Bacteriocidal, interferes with cell-wall replication of susceptible organisms

USES: Effective for gram-positive cocci *(Staphylococcus aureus, Streptococcus viridans, Streptococcus pneumoniae),* infections caused by penicillinase-producing *Staphylococcus*

CONTRAINDICATIONS: Hypersensitivity to penicillins

Precautions: Pregnancy, breastfeeding, neonates; hypersensitivity to cephalosporins or carbapenems; GI disease, asthma, electrolyte imbalances, hepatic/renal disease, CDAD

DOSAGE AND ROUTES

- **Adult: IV** 1-2 g q4hr for severe infections
- **Child and infant >1 mo: IV** 100-200 mg/kg/day in divided doses, max 12 g/day
- **Neonate** 25 mg/kg/dose q6h × 14 days

Available forms: inj 1 g/vial, 2 g/vial, 10 g/vial premixed or Add Vantage Vials

Administer:

- Product after C&S has been drawn, begin therapy while waiting for results
- Check for allergy to penicillins, cephalosporins

IM route

- Reconstitute vials: add 1.7, 3.4, or 6.4 mL sterile water for inj, 0.9% NaCl, bacteriostatic water for inj to vials with 500 mg, 1 g, 2 g of nafcillin, respectively (250 mg/mL)
- After reconstitution, inject in deep muscle mass
- Use sterile water for injection or 0.9% NaCl to prevent using benzyl alcohol (neonate)

IV route

- Reconstitute vials: add 1.7, 3.4, or 6.4 mL sterile water for inj, 0.9% NaCl, bacteriostatic water for inj to vials with 500 mg, 1 g, 2 g of nafcillin, respectively (250 mg/mL)

Intermittent IV route

- Vials, further dilute reconstituted sol to 10-40 mg/mL infuse ≥ 30-60 mins
- Change IV site q48hr to prevent irritation, check for extravasation often

Y-site compatibilities: Acyclovir, alfentanil, amikacin, aminophylline, amphotericin B lipid complex (Abelcet), anidulafungin, argatroban, ascorbic acid injection, atenolol, atracurium, atropine, aztreonam, benztropine, bivalirudin, bleomycin, bretylium, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, carmustine, cefamandole, ceFAZolin, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, DACTINomycin, DAPTOmycin, DAUNOrubicin liposome, dexamethasone, digoxin, DOBUTamine, DOCEtaxel, DOPamine, DOXOrubicin liposomal, enalaprilat, EPHEDrine, EPINEPHrine, epoetin

alfa, erythromycin, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, foscarnet, furosemide, gallium, ganciclovir, gatifloxacin, gemtuzumab, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, imipenem-cilastatin, indomethacin, isoproterenol, ketorolac, lactated Ringer's, lepirudin, leucovorin, lidocaine, linezolid injection, LORazepam, magnesium sulfate, mannitol, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, milrinone, morphine, multiple vitamins injection, naloxone, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel (solvent/surfactant), pamidronate, pancuronium, pantoprazole, PEMEtrexed, penicillin G potassium/sodium, PENTobarbital, perphenazine, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin, polymyxin B, potassium acetate/chloride, procainamide, prochlorperazine, propofol, propranolol, ranitidine, Ringer's injection, sodium bicarbonate, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, TNA (3-in-1), tobramycin, tolazoline, TPN (2-in-1), urokinase, vasopressin, vinBLAStine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Neurotoxicity, seizures
GI: *Nausea, vomiting, diarrhea,* CDAD
GU: Proteinuria, glomerulonephritis, interstitial nephritis
HEMA: Neutropenia, thrombocytopenia, leukopenia, agranulocytosis, anemia
INTEG: Tissue necrosis, extravasation at inj site, rash, pruritus, exfoliative dermatitis
SYST: Anaphylaxis, serum sickness, Stevens-Johnson syndrome

PHARMACOKINETICS

Half-life 30-60 min; metabolized by liver; excreted in bile, urine; 70%-90% protein bound; peak rapid (IV) peak 30-60 min (IM)

INTERACTIONS

Increase: nafcillin concentrations—probenecid, used to increase nafcillin action
Decrease: effect of cycloSPORINE—warfarin, monitor closely
Decrease: nafcillin effect—tetracyclines, aminoglycosides
Decrease: effect of live virus vaccines, do not use together
Decrease: effects of CYP3A4 substrates, bedaquiline, clarithromycin, cloZAPine, fentaNYL, lurasidone, zolpidem, monitor closely
Decrease: effect of hormonal contraceptives, use additional contraceptives

Drug/Lab Test
Increase: LFTs
Decrease: HB/HcT, neutrophils
False positive: urine glucose, urine protein, Coombs test

NURSING CONSIDERATIONS

Assess:
Infection: signs, symptoms of infection, including characteristics of wounds, sputum, urine, stool, WBC >10,000/mm^3, earache, fever, obtain information baseline, during treatment
• I&O ratio; report hematuria, oliguria; high doses are nephrotoxic
• **CDAD:** diarrhea, abdominal pain, fever, fatigue, anorexia; possible anemia, elevated WBC, low serum albumin; stop product; usually either vancomycin or IV metroNIDAZOLE given
• **Renal studies:** urinalysis, BUN, creatinine; abnormal urinalysis may indicate nephrotoxicity
• C&S before product therapy; product may be given as soon as culture is taken
• **Allergies before initiation of treatment;** monitor for anaphylaxis, dyspnea, rash, laryngeal edema; stop product; keep emergency equipment nearby; skin eruptions after administration of penicillin to 1 wk after discontinuing product
• **IV site:** for redness, swelling, pain at site
• **Pregnancy/breastfeeding:** use only if clearly needed; use caution in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: absence of signs/symptoms of infection
Teach patient/family:
• To report vaginal itching; loose, foul-smelling stools; furry tongue; sore throat; fever; fatigue (may indicate superinfection); CNS reactions; CDAD (diarrhea, fever, abdominal pain, fatigue)
• To wear or carry emergency ID if allergic to penicillins

TREATMENT OF ANAPHYLAXIS: Withdraw product; maintain airway; administer EPINEPHrine, aminophylline, O_2, IV corticosteroids

⚠ HIGH ALERT

nalbuphine (Rx)

(nal′byoo-feen)
Nubain
Func. class.: Opioid analgesic
Chem. class.: Synthetic opioid agonist, antagonist

Do not confuse:
nalbuphine/naloxone

ACTION: Depresses pain impulse transmission by interacting with opioid receptors

USES: Moderate to severe pain, supplement to anesthesia, sedation prior to surgery

CONTRAINDICATIONS: Hypersensitivity to this product or parabens, addiction (opiate)
Precautions: Pregnancy, breastfeeding, addictive personality, increased intracranial pressure, MI (acute), severe heart disease, respiratory depression, renal/hepatic disease, bowel impaction, abrupt discontinuation

Black Box Warning: Coadministration with other CNS depressants, respiratory depression

DOSAGE AND ROUTES

Analgesic (nonopioid tolerant)
• **Adult: SUBCUT/IM/IV** 10 mg q3-6hr prn (based on 70-kg body weight), max 160 mg/day; max 20 mg/dose if opiate naïve
• **Child: SUBCUT/IM/IV** 0.1-0.15 mg/kg q3-6hr, max 20 mg/dose, 160 mg/day
Balanced anesthesia adjunct
• **Adult: IV** 0.3-3 mg/kg given over 10-15 min; may give 0.25-0.5 mg/kg as needed for maintenance
Available forms: solution for inj 10, 20 mg/mL
Administer:
• With antiemetic if nausea, vomiting occur
• When pain beginning to return; determine dosage interval by response
• Store in light-resistant area at room temperature
IM route
• IM deep in large muscle mass, rotate inj sites, protect from light
Direct IV route
• Undiluted ≤10 mg over 2-3 min into free-flowing IV line of D_5W, NS, or LR
SUBCUT route
• Rotate injection sites, protect from light

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache, sedation*
CV: Bradycardia, change in B/P
EENT: Blurred vision
GI: *Nausea, vomiting, constipation,* xerostomia, bitter taste
INTEG: Diaphoresis, pruritus
RESP: Respiratory depression

PHARMACOKINETICS

IV: Onset rapid, peak 2-3 min, duration 3-6 hr; **IM/SUBCUT:** Onset up to 15 min, peak 10-15 min, duration 3-6 hr metabolized by liver, excreted by kidneys, half-life 5 hr

INTERACTIONS

Black Box Warning: Increase: effects with other CNS depressants—alcohol, opiates, sedative/hypnotics, antipsychotics, skeletal muscle relaxants, avoid using together

Increase: severe reactions—MAOIs; decrease dose to 25%

Black Box Warning: Increase: serotonin syndrome risk SSRIs, SNRIs, TCAs, some antiemetics, antimigraine agents, MAOIs, monitor for serotonin syndrome

Drug/Herb
Increase: CNS depression—kava, valerian, hops, chamomile
Increase: serotonin syndrome risk St. John's wort, monitor closely

NURSING CONSIDERATIONS

Assess:
• **Pain:** type, location, intensity before and 30 min after administration; titrate upward with 25%-50% until 50% of pain reduced; need for pain medication by pain sedation scoring, can repeat if initial dose is not adequately effective, not for long-term use
• Bowel status; constipation is common; may need laxative or stool softener

Black Box Warning: Withdrawal reactions in opiate-dependent individuals: PE, vascular occlusion; abscesses, ulcerations, nausea, vomiting, seizures

• **CNS changes:** dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
• Allergic reactions: rash, urticaria
• Monitor for serotonin syndrome in those taking serotonergic drugs
• Monitor for adrenal insufficiency (rare): nausea, vomiting, weakness, hypotension, dizziness; if confirmed, treat with corticosteroids and slowly withdraw opiates

Black Box Warning: Avoid coadministration with other CNS depressants: coadministration increases the risk for respiratory depression, low B/P, and death

Black Box Warning: Respiratory dysfunction: respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min, respiratory depression may be fatal

• **Pregnancy/breastfeeding:** use only if clearly needed, labor use can result in fatal bradycardia, monitor closely; if used in long-term pregnancy, neonatal withdrawal syndrome may occur; cautious use in breastfeeding

Evaluate:
• Therapeutic response: decrease in pain without respiratory depression

Teach patient/family:
• That physical dependency may result from long-term use
• **That withdrawal symptoms may occur:** nausea, vomiting, cramps, fever, faintness, anorexia, profuse sweating, twitching; without treatment symptoms resolve in 5-14 days, chronic abstinence syndrome may last 2-6 mo
• To report all OTC/Rx/herbals/supplements taken
• To increase bulk water in diet, or add stool softeners for constipation
• That naloxone may be used in overdose
• To report troubled, slowed breathing; symptoms of serotonin syndrome; allergic reactions

Black Box Warning: To avoid use with CNS depressants, alcohol, benzodiazepines, and notify prescriber of unresponsiveness, trouble breathing

• To avoid driving, operating machinery if drowsiness occurs, to have help with activities to prevent falls at home if dizzy, drowsy
• To use sugarless gum or candy and good oral hygiene for dry mouth

TREATMENT OF OVERDOSE:

Naloxone (Narcan) 0.2-0.8 mg IV, O_2, IV fluids, vasopressors

naloxegol (Rx)

(Nal-ox´ee-gol)
Movantik
Func. class.: Antidote, opioid antagonist

USES: Treatment of opioid-induced constipation with chronic noncancer

pain, including patients with chronic pain related to prior cancer or its treatment who do not require frequent (weekly) opioid dosage escalation

DOSAGE AND ROUTES

Adult: PO 25 mg daily, 1 hr before or 2 hr after morning meal if not tolerated, reduce to 12.5 mg daily; moderate CYP3A4 inhibitor use: 12.5 mg daily

Renal dose

- **Adult: PO** CCr <60 mL/min 12.5 mg daily, may increase to 25 mg daily if needed

Available forms: Tablet 12.5 mg

naloxone (Rx)

(nal-oks'one)

Evzio, Kloxxedo, Narcan, Zimhi

Func. class.: Opioid antagonist, antidote

Chem. class.: Thebaine derivative

Do not confuse:

naloxone/naltrexone/nalbuphine/Naloxegol

ACTION: Competes with opioids at opiate receptor sites

USES: Respiratory depression induced by opioids, opiate agonist overdose

Unlabeled uses: Pruritus (opiate induced)

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, neonates, CV disease, opioid dependency, seizure disorder, drug dependency, hepatic disease

DOSAGE AND ROUTES

- Duration of some opioids may exceed duration of naloxone, additional doses may be needed

Opioid-induced respiratory/CNS depression (known or suspected opiate agonist overdose)

- **Adult: IV/SUBCUT/IM** 0.4-2 mg, repeat q2-3min if needed, max 10 mg; **IV INFUSION** loading dose 0.005 mg/kg, then 0.0025 mg/kg/hr; **IM/SUBCUT (Zimhi autoinjector only)** 5 mg, may repeat q2-3min if needed
- **Child/adolescent 5-17 yr or ≥20 kg: IV** 2 mg, may repeat
- **Child/infant <5 yr or ≤20 kg: IV** 0.01 mg/kg slowly followed by 0.1 mg/kg if needed, may give IM/SUBCUT if IV not possible
- **Neonates: IM/IV/SUBCUT** 0.01 mg/kg, repeat q2-3min until adequate response
- **Adult/adolescent/child: NASAL** 1 spray, may repeat q2-3min if needed

Postoperative opioid-induced respiratory depression

- **Adult: IV** 0.1-0.2 mg q2-3min prn
- **Infant/child/adolescent: IV** 0.005-0.01 mg/kg q2-3min prn

Available forms: Inj 0.4 mg/mL, 1 mg/mL; 1 mg/mL; auto injector 2 mg/0.4 mL, 5/0.5 mL; nasal spray 4 mg/0.1 mL; 8 mg (equal to 7.2 naloxone)/0.1mL unit dose device; solution for injection (Zimhi 5 mg/5 mL)

Administer:

- Only with resuscitative equipment, O_2 nearby
- Store in dark area at room temperature
- Double-check dose; those taking opioids >1 wk are sensitive to this product
- Solution should be clear

Direct IV route

- Undiluted (suspected opioid overdose) or diluted with sterile water for inj; give ≤0.4 mg over 15 sec

Continuous IV INFUSION route

- Dilute 2 mg/500 mL 0.9% NaCl or D_5W (4 mcg/mL); titrate to response
- Do not admix with bisulfite, sulfites

IM route with standard syringe

- Inject deeply into a large muscle mass; aspirate
- Use prepared solution within 24 hr

IM route with autoinjector (Evzio)

- Remove red safety guard; Evzio must be used immediately or disposed of properly. Give quickly into the anterolateral aspect of the thigh, through clothing if necessary. Press firmly and hold in place 5 sec

• Upon activation, the needle is automatically inserted, delivers the injection, and then retracts fully
• After initial injection, seek immediate medical attention. Keep patient under continued surveillance because the duration of action of most opioids is longer than that of naloxone. Repeat doses q2-3min as needed
• Do NOT attempt to reuse Evzio; each device contains a single dose of naloxone

Subcut

• Inject undiluted solution, taking care not to inject intradermally

Nasal route

• Give as quickly as possible if a patient is unresponsive and an opioid overdose is suspected
• Place the patient in the supine position. Assure that the device nozzle is inserted into one of the patient's nostrils and provide support to the back of the neck to allow the head to tilt back. Do NOT prime or test the device before administration
• Press firmly on the device plunger
• Turn the patient on his or her side (recovery position) and seek immediate medical assistance after the first dose of naloxone
• Do NOT attempt to reuse the naloxone nasal spray device; each device contains a single dose
• Using a new nasal spray device, readminister naloxone q2-3min if the patient does not respond or responds and then relapses into respiratory depression
• Administer the nasal spray in alternate nostrils with each dose

Y-site compatibilities: Acyclovir, alfentanil, amikacin, aminocaproic acid, aminophylline, anidulafungin, ascorbic acid, atenolol, atracurium, atropine, azaTHIOprine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, cephapirin, chloramphenicol, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, inamrinone, indomethacin, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, LORazepam, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, mezlocillin, miconazole, midazolam, milrinone, minocycline, mitoXANtrone, morphine, moxalactam, multiple vitamins, mycophenolate, nafcillin, nalbuphine, nesiritide, netilmicin, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, ranitidine, ritodrine, rocuronium, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, zoledronic acid

SIDE EFFECTS

CV: Rapid pulse, ventricular tachycardia, fibrillation, hypo/hypertension
GI: Nausea, vomiting
CNS: Headache, seizures
MS: Pain
INTEG: Injection site reactions
MISC: Withdrawal symptoms in those dependent
EENT: Nasal dryness

PHARMACOKINETICS

Well absorbed IM, SUBCUT; metabolized by liver, crosses placenta; excreted in urine, breast milk; half-life 30-81 min
IM/SUBCUT: Onset 2-5 min, peak 5-15 min, duration 45-60 min
IV: Onset 1 min, peak 5 min, duration 45 min
Nasal: Peak 20 min

INTERACTIONS

Increase: seizure risk—traMADol overdose
Decrease: effect of opioid analgesics

NURSING CONSIDERATIONS

Assess:
- **Withdrawal:** cramping, hypertension, anxiety, vomiting; signs of withdrawal in drug-dependent individuals may occur ≤2 hr after administration; severity depends on length of time opioids were taken, naloxone dose
- **Respiratory dysfunction:** respiratory depression, character, rate, rhythm; if respirations are <10/min, administer naloxone; probably due to opioid overdose; monitor LOC, ECG, B/P
- Vital signs q3-5min
- Arterial blood gases, including PO_2, PCO_2
- Cardiac status: tachycardia, hypertension, monitor ECG
- **Pain:** duration, intensity, location before and after administration; analgesia will be decreased; may be used for respiratory depression
- **Acute opioid reversal:** patients may become very agitated and violent after use
- **Pregnancy/breastfeeding:** use only if clearly needed, cautious use in breastfeeding

Evaluate:
- Therapeutic response: reversal of respiratory depression; LOC—alert

Teach patient/family:
- When patient is lucid, about the reasons for, expected results of product; for nasal administration, teach family, caregivers correct use, use of autoinjector

naltrexone (Rx)

(nal-trex′one)
ReVia, Vivitrol
Func. class.: Opioid antagonist, antidote
Chem. class.: Thebaine derivative

Do not confuse:
naltrexone/naloxone/naloxegol

ACTION: Competes with opioids at opioid-receptor sites

USES: Blockage of opioid analgesics; used for treatment of opiate addiction, alcoholism, opiate agonist overdose

CONTRAINDICATIONS: Hypersensitivity, opioid dependence
Precautions: Pregnancy, breastfeeding, children, renal disease, depression, suicidal ideation, coagulopathy, respiratory depression, IV use, hepatic impairment

DOSAGE AND ROUTES

Treatment should not be attempted until the patient has remained opioid free for 7-10 days
Narcan challenge (to identify opioid-free state)
- Should not be performed in a patient showing clinical signs of opioid withdrawal or urine positive for opioids
- Positive signs: nausea, vomiting, dysphoria, yawning, sweating, tearing, rhinorrhea, stuffy nose, craving for opioids, poor appetite, abdominal cramps, uneasiness, poor ability to focus, mental lapses, muscle aches or cramps, pupillary dilation, piloerection, fever, changes

in B/P, pulse, or temperature; anxiety, depression, irritability, backache, bone or joint pains, tremors, sensations of skin crawling

• If signs or symptoms of withdrawal appear, the test is positive and no additional Narcan (naloxone hydrochloride injection) should be administered

• **Adult: IV** 0.5 mL (0.2 mg) Narcan (naloxone injection) (0.4 mg/mL); observe for 20 min for withdrawal; if no evidence of withdrawal, give another 1.5 mL (0.6 mg) of Narcan and observe for an additional 20 min

• **Adult: SUBCUT** 2 mL (0.8 mg) Narcan (naloxone hydrochloride injection) (0.4 mg/mL); observe patient for 20 min for signs or symptoms of withdrawal

Treatment of opioid dependence

• Treatment should not be started until opioid free for 7-10 days.

• Negative Narcan challenge; negative urine test

• **Adult: PO** 25 mg naltrexone; if no withdrawal symptoms in 1 hr, then 25 mg naltrexone; if no withdrawal symptoms, then 50 mg naltrexone daily, or 100 mg q2days or 150 mg q3days; IM 380 mg q 4 wks

Treatment of alcoholism (within a comprehensive psychosocial program)

• **Adult: PO** 50 mg naltrexone daily × 12 wk; IM 380 mg q 4 wks

Available forms: Tabs 50 mg; inj 380 mg kit

Administer:

PO route

• Give with food or after meals, to prevent nausea, vomiting

• Store in tight container

IM route

• Do not give until opioid-free for 7-10 days to prevent opioid withdrawal (relapse only)

• Allow to come to room temperature

• IM deep in gluteal, alternate inj sites; use supplied needle to prevent inj-site reaction; aspirate before inj

• Do not use IV or SUBCUT

• Store refrigerated up to 1 wk, do not freeze

SIDE EFFECTS

CNS: *Stimulation, drowsiness,* dizziness, confusion, seizures, headache, flushing, hallucinations, nervousness, irritability, suicidal ideation, syncope, anxiety

CV: Rapid pulse, pulmonary edema, hypertension, DVT

EENT: Tinnitus, hearing loss, blurred vision

GI: *Nausea, vomiting, diarrhea, heartburn,* hepatotoxicity, constipation, abdominal pain

GU: Delayed ejaculation, impotence

INTEG: *Rash,* urticaria, bruising, oily skin, acne, pruritus, inj-site reactions

MISC: Increased thirst, chills, fever

MS: Joint and muscle pain

RESP: Wheezing, hyperpnea, nasal congestion, rhinorrhea, sneezing, sore throat, pneumonia

PHARMACOKINETICS

Metabolized by liver, excreted by kidneys; crosses placenta, excreted in breast milk; half-life 4 hr; IM half-life 5-10 days; extensive first-pass metabolism; protein binding 21%-28%

PO: Onset 15-30 min, peak 1 hr

IM: Peak 2-3 days, duration >1 month

INTERACTIONS

Increase: Lethargy—phenothiazines

Increase: Bleeding risk—anticoagulants

Increase: Hepatotoxicity—disulfiram

NURSING CONSIDERATIONS

Assess:

• **Hepatic status:** LFTs, jaundice, hepatitis, hepatic failure, discontinue if hepatitis is diagnosed

• ABGs including PO_2, PCO_2, LFTs, VS q3-5min

• Signs of withdrawal in drug-dependent individuals; use naltrexone challenge to test opioid dependence; must be free of opioids for 7-10 days before using this product, or withdrawal symptoms can occur

• **Respiratory dysfunction:** respiratory depression, character, rate, rhythm; if respirations <10/min, respiratory stimulant should be administered

• Mental status: depression, suicidal ideation
• **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function
• **Pregnancy/breastfeeding:** use only if clearly needed; use cautiously in breastfeeding

Evaluate:
• Therapeutic response: blocking opiate ingestion; successful nicotine, alcohol withdrawal

Teach patient/family:
• That patient must be drug-free to start treatment
• That using opioid while taking this product could prove fatal because high dose is needed to overcome this antagonist; not to self-dose with OTC products unless approved by prescriber
• To carry emergency ID stating product used
• That, if surgery is needed, all involved should be aware of this product
• To use caution while driving or performing other hazardous tasks until effect is known
• That suicidal thoughts/behaviors may occur; to report these immediately

naphazoline (ophthalmic)

(na-faz′oh-leen)

Abalon 🍁, Clear Eyes, Clear Eyes Redness Relief, Naphcon Forte 🍁, Opti Tears 🍁, Red eye, Refresh Redness Relief 🍁

Func. class.: Ophthalmic vasoconstrictor

Chem. class.: Sympathomimetic

USES: Ocular congestion, irritation, itching of the eye

DOSAGE AND ROUTES

• **Adult: OPHTH** instill 1-2 drops in affected eye in the conjunctival sac every 3-4 hr, up to qid

Available forms: ophthalmic solution 0.012%, 0.03%, 0.1%

naproxen (Rx, OTC)

Aleve, Anaprox 🍁, Anaprox DS 🍁, EC-Naprosyn, Maxidol 🍁, Mediproxen, Naprelan, Naprosyn

Func. class.: Nonsteroidal antiinflammatory, nonopioid analgesic

Chem. class.: Propionic acid derivative

ACTION: Inhibits COX-1, COX-2 by blocking arachidonate; synthesis analgesic, antiinflammatory, antipyretic

USES: Osteoarthritis; rheumatoid, gouty arthritis; primary dysmenorrhea; ankylosing spondylitis, bursitis, tendinitis, myalgia, dental pain, juvenile rheumatoid arthritis

CONTRAINDICATIONS: Pregnancy third trimester; hypersensitivity to NSAIDs, salicylates; perioperative pain in CABG surgery; MI; stroke

Precautions: Breastfeeding, children <2 yr, geriatric patients, bleeding disorders, GI disorders, cardiac disorders, hypersensitivity to other antiinflammatory agents, CCr <30 mL/min, asthma, renal failure, hepatic disease; corticosteroid, anticoagulant therapy

Black Box Warning: GI bleeding, thromboembolism

DOSAGE AND ROUTES

200 mg base = 220 mg naproxen sodium

Ankylosing spondylitis, osteoarthritis, RA:
• **Adult: PO** 500-1000 mg daily in 2 divided doses; may increase to 1500 mg/day for limited period (<6 mo); **ext rel** 750-1000 mg once daily; may increase to 1500 mg daily for a limited time

Child >2 yr: PO 10 mg/kg/day in 2 divided doses

Acute gout

• **Adult:** 750 mg once, then 250 mg q8h until attack has subsided

Pain (mild to moderate), dysmenorrhea, acute tendinopathy, bursitis:

• **Adult: PO** 500 mg, then 250 mg q6-8hr; max: 1250 mg/day; **ext rel** 1000-1500 mg daily

Available forms: Naproxen: tabs 250, 375, 500 mg; del rel tabs (EC-Naprosyn, Naprosyn-E) 250 ✱, 375, 500, 750 mg; oral susp 125 mg/5 mL; **naproxen sodium:** tabs 220, 275, 550 mg tab; capsules 200, 220 mg ✱; ext rel tabs (CR) 375, 500, 750 mg

Administer:

• Store at room temperature

• With food to decrease GI symptoms; take on empty stomach to facilitate absorption; give with full glass of liquid

• Do not crush, break, or chew ext rel tabs

• OTC for ≤10 days unless approved by prescriber

• Adequately hydrate in those taking angiotensin receptor blockers/angiotensin-converting enzyme inhibitors

• **Oral susp:** shake well; use measuring cup provided or other calibrated device

SIDE EFFECTS

CNS: Dizziness, drowsiness, fatigue, tremors, confusion, insomnia, anxiety, depression

CV: Tachycardia, peripheral edema, palpitations, dysrhythmias, MI, stroke

EENT: Tinnitus, hearing loss, blurred vision

GI: Nausea, anorexia, vomiting, diarrhea, jaundice, hepatitis, constipation, flatulence, cramps, peptic ulcer, GI perforation, bleeding

GU: Nephrotoxicity: dysuria, hematuria, oliguria, azotemia

HEMA: Blood dyscrasias, prolonged bleeding time

INTEG: Purpura, rash, pruritus, sweating

SYST: Anaphylaxis, Stevens-Johnson syndrome

PHARMACOKINETICS

PO: Peak 2-4 hr, half-life 12-17 hr; metabolized in liver; excreted in urine (metabolites), breast milk; 99% protein binding

INTERACTIONS

• Avoid use with adefovir, cidofovir, nephrotoxicity is increased

Increase: renal impairment—ACE inhibitors, angiotensin II antagonists

Increase: toxicity risk—methotrexate, lithium, antineoplastics, probenecid, radiation treatment

Black Box Warning: Increase: bleeding risk—oral anticoagulants, thrombolytic agents, eptifibatide, tirofiban, clopidogrel, ticlopidine, plicamycin, SSRIs, SNRIs, tricyclics

Increase: GI side effects risk—aspirin, corticosteroids, alcohol, NSAIDs

Decrease: effect of antihypertensives, loop/thiazide diuretics

Decrease: absorption of naproxen—antacids, sucralfate, cholestyramine

Drug/Herb

• Bleeding risk: feverfew, garlic, ginger, ginkgo, ginseng *(Panax)*

Drug/Lab Test

Increase: BUN, alk phos, LFTs, potassium, glucose, cholesterol

Decrease: potassium, sodium

False increase: 5-HIAA, 17KS

NURSING CONSIDERATIONS

Assess:

• **Pain:** frequency, characteristics, intensity; relief before and 1-2 hr after product

• **Arthritis:** range of motion, pain, swelling before and 1-2 hr after use

• **Fever:** before, 1 hr after use

• **Cardiac status:** CV thrombotic events, MI, stroke; may be fatal; not to be used with CABG

Black Box Warning: GI status: ulceration, bleeding, perforation; may be fatal; obtain stool guaiac

• Asthma, aspirin hypersensitivity or nasal polyps; increased risk of hypersensitivity

• **Renal, hepatic blood studies:** BUN, creatinine, AST, ALT, HB, LDH, blood glucose, Hct, WBC, platelets, CCr before treatment, periodically thereafter during long-term therapy
• Monitor B/P baseline and periodically
• **Beers:** avoid chronic use in older adults unless other alternatives are unavailable; increased GI bleeding risk, peptic ulcer disease
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid in ≥30 wk gestation; avoid use in breastfeeding

Evaluate:
• Therapeutic response: decreased pain, stiffness, swelling in joints; ability to move more easily

Teach patient/family:
• To report ringing, roaring in ears
• To avoid driving, other hazardous activities if dizziness or drowsiness occurs
• To report change in urine pattern, weight increase, edema (face, lower extremities), pain increase in joints, fever, blood in urine (indicates nephrotoxicity); black stools, flulike symptoms, signs of MI, stroke
• That therapeutic effects may take up to 1 mo in arthritis

Black Box Warning: To avoid aspirin, alcohol, steroids, or other OTC medications without prescriber approval; increased risk of GI bleeding

• To take with food or milk to prevent GI upset
• To report use to all health care providers
• To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding

naproxen/esomeprazole (Rx)

(na-proks′en/es-oh-me′pray-zol)

Vimovo

Func. class.: NSAID/proton pump inhibitor

USES: Reduction of the risk of NSAID-associated gastric ulcers in those who require an NSAID for the relief of signs and symptoms of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis in adults; juvenile idiopathic arthritis ≥12 yr and >38 kg

Black Box Warning: CABG surgery

DOSAGE AND ROUTES

Osteoarthritis, rheumatoid arthritis, ankylosing spondylitis.
Adult: PO 1 tablet bid

Juvenile idiopathic arthritis
Child/adolescents ≥12 yr; weight ≥38 kg to <50 kg: PO 1 tablet bid

Available forms: Tabs 375 mg naproxen/20 mg esomeprazole, 500 mg naproxen/20 mg esomeprazole

naratriptan (Rx)

(nair′ah-trip-tan)

Amerge

Func. class.: Antimigraine agent
Chem. class.: 5-HT_1 receptor agonist

ACTION: Binds selectively to the vascular 5-HT_1 B/D receptor subtype; exerts antimigraine effect; causes vasoconstriction in cranial arteries

USES: Acute treatment of migraine with/without aura

CONTRAINDICATIONS: Hypersensitivity, angina pectoris, history of MI, documented silent ischemia, ischemic heart disease, concurrent ergotamine-containing preparations, uncontrolled hypertension, CV syndromes, hemiplegic or basilar migraines, severe renal disease (CCr <15 mL/min); severe hepatic disease (Child-Pugh grade C)

Precautions: Pregnancy, breastfeeding, children, geriatric patients, postmenopausal women, men >40 yr, CAD risk, hypercholesterolemia, obesity, diabetes, impaired renal/hepatic function, peripheral vascular disease overuse

DOSAGE AND ROUTES

• **Adult: PO** 1 or 2.5 mg with fluids; if headache returns, repeat 1× after 4 hr; max 5 mg/24 hr

Hepatic/renal dose

• **Adult: PO** CCr 15-39 mL/min or mild to moderate hepatic disease max 2.5 mg/24 hr

Available forms: Tabs 1, 2.5 mg

Administer:

• With fluids as soon as symptoms appear; may take another dose after 4 hr; do not take >5 mg during any 24-hr period

• Swallow whole; use without regard to food

• Use for >4 headaches/30 days has not been established

SIDE EFFECTS

CNS: Dizziness, sedation, fatigue

CV: Increased B/P, palpitations, tachydysrhythmias, PR, QTc prolongation, ST/T wave changes, PVCs, atrial flutter/fibrillation, coronary vasospasm

EENT: EENT infections, photophobia

GI: *Nausea, vomiting*

MISC: Temperature change sensations; tightness, pressure sensations

MS: *Weakness, neck stiffness,* myalgia

PHARMACOKINETICS

Onset 2-3 hr; peak 2-3 hr; 28%-31% protein binding; half-life 6 hr; metabolized in liver (metabolite); excreted in urine, feces; may be excreted in breast milk

INTERACTIONS

Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs (FLUoxetine, fluvoxaMINE, PARoxetine, sertraline), SNRIs, serotonin receptor agonists, sibutramine, tramadol

Increase: QT prolongation—antidysrhythmics, some phenothiazines, dolasetron, mefloquine, ziprasidone; monitor QT closely in cardiac patients

Increase: vasospastic effects—ergot, ergot derivatives, other 5-HT_1 agonists

Increase: adverse reactions risk—MAOIs; do not use together

Drug/Herb

• **Serotonin syndrome:** SAM-e, St. John's wort

NURSING CONSIDERATIONS

Assess:

• **Migraine symptoms:** aura, duration, effect on lifestyle, aggravating/alleviating factors

• **Serotonin syndrome, neuroleptic malignant syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist if needed; at least 2 wk should elapse between discontinuation of serotonergic agents and start of product

• **Cardiac status:** ECG, increased B/P, dysrhythmias, monitor for PR, QT prolongation, ST-T wave changes, PVCs in those with cardiac disease

• Stress level, activity, recreation, coping mechanisms

• Neurologic status: LOC, blurred vision, nausea, vomiting, tingling in extremities preceding headache

• Quiet, calm environment with decreased stimulation (noise, bright light, excessive talking)

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding

Evaluate:

• Therapeutic response: decrease in frequency, severity of headache

Teach patient/family:

• To report pain, tightness in chest, neck, throat, or jaw; to notify prescriber immediately if sudden, severe abdominal pain occurs

• Not to use if another 5-HT_1 agonist or ergot preparation has been used during past 24 hr; to avoid using >2 days/wk because rebound headache may occur

• To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding

• To discuss all OTC, Rx, herbals, supplements with health care professional

• To take as soon as headache is starting, only use to treat, not prevent, migraine

• That drowsiness, dizziness may occur, not to drive or perform other hazardous tasks until response is known

natalizumab (Rx)

(na-ta-liz′u-mab)

Tysabri

Func. class.: Biologic response modifier, immunoglobulins, monoclonal antibody

ACTION: Biologic-response-modifying properties mediated through specific receptors on cells; may be secondary to blockade of the interaction of inflammatory cells with vascular endothelial cells

USES: Ambulatory patients with relapsing/remitting MS who have not responded to other treatment; those with moderate to severe Crohn's disease

CONTRAINDICATIONS: Hypersensitivity, immunocompromised individuals (HIV, AIDS, leukemia, lymphoma, transplants), PML, murine (mouse) protein allergy

Black Box Warning: Progressive multifocal leukoencephalopathy

Precautions: Pregnancy, breastfeeding, geriatric patients, chronic progressive MS, depression, mental disorders, diabetes, TB, active infections, hepatotoxicity

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 300 mg; give over 1 hr q4wk

Available forms: Single-use vial, 300 mg/100 mL

Administer:

• Acetaminophen for fever, headache

Intermittent IV INFUSION route

• Use only clear, colorless solution, without particulates

• Withdraw 15 mL from the vial inj concentration into 100 mL 0.9% NaCl; do not use other diluents; mix completely; do not shake; infuse immediately or refrigerate for ≤8 hr; flush with 0.9% NaCl before, after infusion; do not admix or use in same line with other agents

• Withhold product at first sign of PML

• Prescribers must be registered in the TOUCH Prescribing Program (1-800-456-2255)

• Store sol in refrigerator; do not freeze or shake; protect from light

SIDE EFFECTS

CNS: *Headache, fatigue,* rigors, syncope, tremors, *depression,* progressive multifocal leukoencephalopathy (PML), suicidal ideation, anxiety

CV: Chest discomfort, hypo/hypertension, tachycardia

GI: *Abdominal discomfort,* abnormal LFT, gastroenteritis, severe hepatic injury

GU: Amenorrhea, *UTI, irregular menses,* vaginitis, urinary frequency

INTEG: *Rash,* dermatitis, pruritus, skin melanoma, infusion-related reactions

MS: *Arthralgia,* myalgia

RESP: *Lower respiratory tract infection,* dyspnea

SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

Half-life approximately 11 days

INTERACTIONS

• Do not use with vaccines

Increase: infection—immunosuppressants, antineoplastics, immunomodulators, tumor necrosis factors

NURSING CONSIDERATIONS

Assess:

• **MS symptoms;** product should be used only by patients who have not responded to other treatments and for relapsing forms of MS and Crohn's disease; restricted prescribing program; discuss risks, benefits

Black Box Warning: Progressive multifocal leukoencephalopathy (weakness, paralysis, vision loss, impaired speech, cognitive deterioration; obtain gadolinium-enhanced MRI scan of the brain, possibly cerebrospinal fluid for JC viral DNA;) incidence of PML increases with number of doses, over 2 yr immunosuppressants and anti-JC virus antibody

• **Infection:** report serious opportunistic infections to the manufacturer; those with Crohn's disease and chronic oral corticosteroids may be at greater risk of infection

• Blood, renal, hepatic studies: CBC, differential, platelet counts, BUN, creatinine, ALT, urinalysis, antibody testing
• CNS symptoms: headache, fatigue, depression, rigors, tremors
• GI status: abdominal discomfort, gastroenteritis, severe hepatic injury, abnormal LFTs
• Mental status: depression, depersonalization, suicidal thoughts, insomnia
• **Anaphylaxis:** SOB, hives; swelling, tightness in throat, chest pain; usually within 2 hr of infusion
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding

Evaluate:
• Therapeutic response: decreased symptoms of MS, Crohn's disease

Teach patient/family:
• Purpose of medication, regimen
• Provide patient or family member with written, detailed information about product (med guide)
• That female patients may experience irregular menses, amenorrhea; may worsen over several days; to notify prescriber if pregnancy is suspected; to avoid breastfeeding while taking this product; if pregnant, call the Tysabri Pregnancy Exposure Registry (1-800-456-2255)
• **To notify prescriber of possible infection:** sore throat, cough, increased temperature, infusion-site reactions
• That continuing follow-up will be needed at 3, 6 mo after first dose, then every 6 mo
• To inform all prescribers of product use

natamycin ophthalmic

See Appendix B

nateglinide (Rx)

(na-te-glye′nide)

Starlix

Func. class.: Antidiabetic-meglitinide derivatives

USES: Type 2 diabetes as an adjunct to diet and exercise

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult: PO 120 mg tid before meals
Available forms: Tabs 60, 120 mg

⚠ HIGH ALERT

necitumumab (Rx)

(ne-si-toom′oo-mab)

Portrazza

Func. class.: Antineoplastic agent, epidermal growth factor receptor (EGFR) inhibitor

USES: First-line treatment of metastatic squamous non-small cell lung cancer (NSCLC) in combination with gemcitabine and cisplatin

CONTRAINDICATIONS

Hypersensitivity, pregnancy

Black Box Warning: Cardiopulmonary arrest, hypomagnesemia

DOSAGE AND ROUTES

Non-small cell lung cancer (squamous), metastatic. Adult:
IV: 800 mg on days 1 and 8 of each 3-wk treatment cycle (in combination with gemcitabine and cisplatin); continue until disease progression or unacceptable toxicity

Available forms: 800 mg/50 mL solution for injection

nefazodone

(nef-ay′zoe-done)

Func. class.: Antidepressant, SSRI

USES: Depression

DOSAGE AND ROUTES

Black Box Warning: Suicidal thoughts, behaviors, children, young adults, hepatic failure

Adult: PO Initial: 100 mg bid or 50-100 mg/day, then gradually increase by 100-200 mg/day (in 2 divided doses) and intervals ≥1 wk to a usual dose of 150-600 mg/day in 2 divided doses.
Available forms: Tabs 50, 100, 150, 200, 250 mg

⚠ HIGH ALERT

nelarabine (Rx)

(nel-ay′re-been)
Arranon, Atriance
Func. class.: Antineoplastic, antimetabolite (purine analog)

USES: T-cell acute lymphoblastic leukemia/lymphoma

CONTRAINDICATIONS

Hypersensitivity, pregnancy

Black Box Warning: Neurotoxicity

DOSAGE AND ROUTES

T-cell acute lymphoblastic leukemia/lymphoma
Adult: IV: 1500 mg/m²/dose on days 1, 3, and 5; repeat q21days until a transplant candidate, disease progression, unacceptable toxicity
• **Child: IV** 650 mg/m²/dose × 5 days, repeat q21days
Available forms: Injection 5 mg/mL

nelfinavir (Rx)

(nell-fin′a-ver)
Viracept
Func. class.: Antiretroviral
Chem. class.: Protease inhibitor

Do not confuse:
Viracept/Viramune

ACTION: Inhibits human immunodeficiency virus (HIV-1) protease, which prevents maturation of the infectious virus

Uses: HIV-1 in combination with other antiretrovirals

CONTRAINDICATIONS:

Hypersensitivity to protease inhibitors
Precautions: Pregnancy, breastfeeding, renal/hepatic disease, hemophilia, PKU, pancreatitis, diabetes, infection, immune reconstitution syndrome

DOSAGE AND ROUTES

HIV infection
• **Adult/child >13 yr: PO** 750 mg tid or 1250 mg bid, max 2500 mg/day in combination
• **Child 2-12 yr: PO** 25-35 mg/kg tid or 45-55 mg/kg bid, max 2500 mg/day bid or 2250 mg/day tid in combination
Available forms: Tabs 250, 625 mg
Administer:
PO route
Do not mix with juice or acidic fluids
• **Tabs** may be crushed and dispersed in water or mixed with food; consume immediately, rinse and have patient consume all liquid

SIDE EFFECTS

CNS: Headache, asthenia, poor concentration, seizures, suicidal ideation
CV: Bleeding, QTc prolongation, torsades de pointes
ENDO: Hyperglycemia, hyperlipidemia
GI: *Diarrhea,* anorexia, dyspepsia, *nausea, flatulence,* hepatitis, pancreatitis
GU: Sexual dysfunction

HEMA: Anemia, leukopenia, thrombocytopenia, HB abnormalities
INTEG: *Rash,* dermatitis, anaphylaxis
MISC: Hypoglycemia, redistribution/accumulation of body fat, immune reconstitution syndrome
MS: Pain, arthralgia, myalgia, myopathy

PHARMACOKINETICS

Half-life 3½-5 hr, excreted in feces (87%), peak 2-4 hr, 98% protein binding; metabolized by CYP3A4 enzyme system; potent inhibitor of CYP3A4

INTERACTIONS

Increase: serious dysrhythmias—amiodarone, ergots, lovastatin, midazolam, pimozide, quiNIDine, simvastatin, triazolam, salmeterol

Increase: effect of—atorvastatin, azithromycin, rifabutin, indinavir, saquinavir, cycloSPORINE, tacrolimus, sirolimus, sildenafil, alfentanil, alosetron, buprenorphine, busPIRone, bortezomib, calcium channel blockers, cilostazol, disopyramide, dofetilide, DOCEtaxel, donepezil, ethosuximide, fentaNYL, galantamine, gefitinib, levomethadyl, systemic lidocaine, PACLitaxel, sibutramine, SUFentanil, vinca alkaloids, ziprasidone, zonisamide, traZODone, tricyclic antidepressants, sildenafil

Increase: nelfinavir levels—ketoconazole, indinavir, ritonavir; delavirdine, other HIV protease inhibitors

Decrease: nelfinavir levels—rifamycins, nevirapine, PHENobarbital, phenytoin, carBAMazepine

Decrease: effect of—didanosine, methadone, oral contraceptives, phenytoin

Drug/Herb

- **Decrease:** antiretroviral effect—St. John's wort; do not use concurrently

Drug/Lab Test

Increase: AST, ALT, alk phos, total bilirubin, CPK, LDH, lipids, uric acid

Decrease: WBC, platelets

NURSING CONSIDERATIONS

Assess:

- **HIV:** serum lipid profile, plasma HIV RNA, blood glucose, viral load, CD4 cell counts at baseline and throughout treatment
- Resistance testing at initiation, or with failure of treatment
- Signs of infection, anemia
- Hepatic studies: ALT, AST
- Bowel pattern before, during treatment; if severe abdominal pain with bleeding occurs, product should be discontinued; monitor hydration
- **Immune reconstitution syndrome:** occurs with combination therapy, including MAC, CMV, PCP, TB, requiring treatment
- **Anaphylaxis, hypersensitivity reaction:** wheezing, flushing; swelling of lips, tongue, throat, skin eruptions, rash, urticaria, itching
- **Pregnancy/breastfeeding:** enroll pregnant patients in Antiretroviral Pregnancy Registry; use only if potential benefit is greater than risk; do not breastfeed

Evaluate

- Therapeutic response: decreased viral load, improved CD4+ cell count, reduced opportunistic infections

Teach patient/family:

- To avoid taking with other medications unless directed by prescriber
- **Diarrhea** is most common side effect; may use loperamide to control
- That product does not cure but does manage symptoms; that product does not prevent transmission of HIV to others
- **Sexual dysfunction:** If using with sildenafil report change in vision, pain with erection, decreased B/P, do not use ≥25 mg/48 hr
- If dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose; to take with food
- To report symptoms of hyperglycemia, bleeding, abdominal pain; yellowing of skin, eyes
- **Phenylketonuria:** that powder contains phenylalanine
- To advise all providers of this product; to advise prescriber of all OTC products, prescription products, or herbal products taken
- **Pregnancy:** to use a nonhormonal form of birth control while taking this product if using contraceptives

neomycin (Rx)

(nee-oh-mye′sin)

Neo-Fradin

Func. class.: Antiinfective—aminoglycoside

USES: Severe systemic infections of CNS, respiratory, GI, urinary tract, eye, bone, skin, soft tissues; hepatic coma, preoperatively to sterilize bowel, infectious diarrhea caused by enteropathogenic *E. coli, Enterobacter* sp., *Escherichia coli,*

Klebsiella sp. May be effective for *Acinetobacter* sp., *Bacillus anthracis, Citrobacter* sp., *Haemophilus influenzae* (beta-lactamase negative), *Haemophilus influenzae* (beta-lactamase positive), *Neisseria* sp., *Proteus mirabilis, Proteus vulgaris, Providencia* sp., *Salmonella* sp., *Serratia* sp., *Shigella* sp., *Staphylococcus aureus* (MSSA), *Staphylococcus epidermidis*

CONTRAINDICATIONS: Infants, children, bowel obstruction (oral use), severe renal disease, hypersensitivity, GI disease

Precautions: Dehydration, geriatric patients, respiratory insufficiency

Black Box Warning: Hearing impairment, neuromuscular disease, renal disease

DOSAGE AND ROUTES

Hepatic encephalopathy

• **Adult: PO** 4-12 g/day in divided doses q6hr × 5-6 days

• **Child: PO** 50-100 mg/kg/day in divided doses q6hr × 5-6 days

Preoperative intestinal antisepsis

• **Adult: PO** 1 g neomycin, and 1 g erythromycin dose at 1 PM, 2 PM, 11 PM on day before morning surgery, give after saline laxative

Available forms: Oral solution 125 mg/5 mL, tablet 500

⚠ HIGH ALERT

nepafenac ophthalmic

See Appendix B

⚠ HIGH ALERT

neratinib (Rx)

(ne-ra′-ti-nib)

Nerlynx

Func. class.: Antineoplastic

Chem. class.: Tyrosine kinase inhibitors

ACTION: It is an irreversible inhibitor of the epidermal growth factor receptor (EGFR) and the human epidermal receptor type 2 (HER2) and HER4.

USES: For the extended adjuvant treatment of early-stage HER2-positive breast cancer after completion of adjuvant trastuzumab; advanced metastatic HER-2-positive breast cancer with capecitabine in those who have received ≥2 regimens

CONTRAINDICATIONS: Hypersensitivity

Precautions: Breastfeeding, contraception requirements, geriatric patients, hepatic disease, hepatotoxicity, infertility, pregnancy, pregnancy testing, reproductive risk

DOSAGE AND ROUTES

Extended adjuvant treatment of early-stage HER2-positive breast cancer after completion of adjuvant trastuzumab-based therapy

• **Adult: PO** 240 mg/day with food, × ≤1 yr

Advanced metastatic HER2-positive breast cancer with capecitabine

• **Adult: PO** 240 mg/day with food for 21 days each cycle with capecitabine 750 mg/mL bid for 14 days of a 21-day cycle

Hepatic dose

• **Adult: PO Child-Pugh C:** reduce starting dose to 80 mg/day

Available forms: Tabs 40 mg

Administer:

• With food at the same time every day

• Swallow tablets whole; do not chew, crush, or split

• If a dose is missed, do not replace the missed dose. Resume with the next scheduled daily dose

• Antidiarrheal prophylaxis is recommended during the first 2 cycles (56 days) of treatment, and should be initiated with the first dose of neratinib; loperamide should be taken as directed below, titrating to 1 to 2 bowel movements/day; additional antidiarrheal agents may be required to manage patients with loperamide-refractory diarrhea

• Weeks 1 to 2 (days 1 to 14): take loperamide 4 mg tid
• Weeks 3 to 8 (days 15 to 56): take loperamide 4 mg bid
• Weeks 9 to 52 (days 57 to 365): take loperamide 4 mg as needed (max 16 mg/day)
• Store at room temperature

SIDE EFFECTS

GI: Diarrhea, abdominal pain, anorexia, nausea, vomiting
MS: Muscle cramps
INTEG: Rash, dry skin, nail changes, fissures
GU: UTI
MISC: Infection

PHARMACOKINETICS

Protein binding >99%; half-life 7-17 hr; fecal excretion 97.1%; metabolized in the liver by CYP3A4; avoid with strong and moderate CYP3A4 inhibitors and inducers

INTERACTIONS

Decrease: neratinib effect—gastric acid–reducing agents; avoid concomitant use with proton pump inhibitors (PPI) and H_2-receptor antagonists; separate by 3 hr after antacid dosing
Increase: neratinib effect—strong or moderate CYP3A4 inhibitors; avoid concomitant use
Decrease: neratinib effect—strong or moderate CYP3A4 inducers; avoid concomitant use
Increase: CNS and CV adverse reactions—P-glycoprotein (P-gp) substrates; monitor for adverse reactions of narrow therapeutic agents that are P-gp substrates

NURSING CONSIDERATIONS

Assess

• **Hepatotoxicity:** use with caution in those with preexisting hepatic disease; a dose reduction is required for patients with severe (Child-Pugh C) hepatic disease at baseline. Monitor LFTs (total bilirubin, AST, ALT, alkaline phosphatase) baseline, monthly × 3 mo and then q3mo thereafter and as needed. Monitor LFTs (including fractionated bilirubin and prothrombin time) in those experiencing grade 3 diarrhea or any signs of hepatotoxicity (fatigue, nausea, vomiting, right upper quadrant tenderness, fever, rash, eosinophilia)
• **Geriatric patients >65 yr:** monitor geriatric patients more closely for toxicities (vomiting, diarrhea, renal failure, dehydration) during treatment
• **Infection:** may occur after completion of adjuvant trastuzumab-based therapy; assess for urinary tract infection, cellulitis and erysipelas
• **Pregnancy/breastfeeding:** avoid drug in females of reproductive potential; use contraception during treatment and for at least 1 mo after the last dose; can cause fetal harm or death; discontinue breastfeeding during treatment and for 1 mo after the final dose. Presence in breast milk unknown. Obtain a pregnancy test before starting treatment. Males with female partners of reproductive potential should avoid pregnancy and use effective contraception during treatment and ≥3 mo after last dose

Evaluate:

• Therapeutic outcome: decrease in size of cancerous tumor

Teach patient/family

• That infection may occur; to report urinary pain, hesitancy; skin redness, pain, heat; fever, shaking, chills
• **Diarrhea:** to report number of loose stools per day or change in stools to provider and complete prophylaxis with loperamide
• That follow-ups and lab work will be needed
• **Pregnancy/breastfeeding:** not to use in pregnancy, breastfeeding; to use contraception during treatment and for at least 1 mo after last dose; men with a partner who may become pregnant should use contraception during treatment and for at least 3 mo after last dose

netarsudil (Rx)

(ne-tar′soo-dil)
Rhopressa
Func. class.: Antiglaucoma agent, Rho kinase inhibitor

USES: Reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension

DOSAGE AND ROUTES

Adult: Ophthalmic: Instill 1 drop into affected eye(s) daily in the evening
Available forms: Ophthalmic solution 0.02%

netarsudil/latanoprost (Rx)

(ne-tar′soo-dil/la-ta′noe-prost)

Rocklatan

Func. class.: Antiglaucoma agent, Rho kinase inhibitor/prostaglandin F2 alpha analogue

USES: Reduction of elevated intraocular pressure (IOP) in open-angle glaucoma or ocular hypertension

DOSAGE AND ROUTES

Adult: Ophthalmic: One drop in the affected eye(s) daily in the evening
Available forms: Ophthalmic solution netarsudil 0.2 mg/mL, latanoprost 0.05 mg/mL

nevirapine (Rx)

(ne-veer′a-peen)

Viramune, Viramune XR

Func. class.: Antiretroviral
Chem. class.: Nonnucleoside reverse transcriptase inhibitor (NNRTI)

Do not confuse:
nevirapine/nelfinavir
Viramune/Viracept

ACTION: Binds directly to reverse transcriptase and blocks RNA, DNA, thus causing a disruption of the enzyme's site

USES: HIV-1 in combination with other highly active antiretroviral therapy (HAART)

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, renal disease, Hispanic patients, hepatitis

Black Box Warning: serious rash, hepatotoxicity

DOSAGE AND ROUTES

HIV infection

- **Adult/adolescent: PO** 200 mg/day × 2 wk, then 200 mg bid in combination; **EXT REL** 200 mg/day × 14 days with other antiretrovirals; if no consistent rash present, then 400 mg/day ER tab with other antiretrovirals
- **Child/adolescent ≥6 yr and BSA ≥1.17 m^2 PO** 150 mg/m^2 daily (max 200 mg/day) × 14 days, then **ext rel** 400 mg/day, max 400 mg/day
- **Child/infant/neonate ≥15 days old: PO** 150 mg/m^2/dose × 14 days, then 150 mg/m^2 bid, max 200 mg/dose

Hepatic dose

- **Adult: PO** do not use with Child-Pugh grade B or C

Available forms: Tabs 200 mg; oral susp 50 mg/5 mL; ext rel 100, 400 mg
Administer:

- Do not initiate treatment in females when CD4 counts >250 cells/mm^3 or in males when >400 cells/mm^3 unless benefits outweigh risks
- Without regard to meals
- Use in combination with at least 1 other antiretroviral
- **Ext rel:** swallow whole; do not crush, chew
- **Oral susp** should be shaken before giving, use oral syringe if possible

SIDE EFFECTS

CNS: *Paresthesia, headache, fever, peripheral neuropathy*
GI: *Diarrhea,* abdominal pain, *nausea, stomatitis,* hepatotoxicity, hepatic failure
HEMA: Neutropenia
INTEG: *Rash,* toxic epidermal necrolysis
MISC: Stevens-Johnson syndrome, anaphylaxis
MS: Pain, myalgia

PHARMACOKINETICS

Rapidly absorbed, peak 4 hr, 60% bound to plasma proteins, metabolized by liver; metabolized by hepatic P450 enzyme system, excreted 91% in urine, terminal half-life 25-30 hr, 50% removed by peritoneal dialysis; with hepatic disease and in Hispanic patients, African-American patients, slower rate of clearance

INTERACTIONS

Increase: nevirapine levels—cimetidine, macrolide antiinfectives, fluconazole, voriconazole
Increase: effect of warfarin
Decrease: effects of protease inhibitors, oral contraceptives, ketoconazole, methadone, itraconazole, boceprevir, telaprevir, clarithromycin, efavirenz, fosamprenavir, saquinavir rifamycins, anticonvulsants, clonazePAM, diazepam
Drug/Herb
Decrease: action of antiretroviral—St. John's wort; do not use concurrently
Drug/Lab Test
Increase: ALT, AST, GGT, bilirubin, HB
Decrease: neutrophil count

NURSING CONSIDERATIONS

Assess:
• **HIV:** blood studies during treatment: ALT, AST, viral load, CD4, plasma HIV RNA, renal studies; if LFTs elevated significantly, product should be withheld; glucose levels in patients with diabetes; if treatment is interrupted by >1 wk, restart at initial dose
• Resistance testing before therapy and when therapy fails
• **Signs of infection, anemia, hepatotoxicity, immune reconstitution syndrome; hepatitis B or C, liver toxicity may occur**

Black Box Warning: Hepatotoxicity: may be fatal; usually occurs within the first 18 wk of treatment, may have rash, fever; assess for anorexia, jaundice, clay-colored stools, nausea, fatigue, hepatic pain; higher risk in females with higher CD4+ counts

• Do not start therapy in females, including pregnant women, with CD4+ cell counts >250 cell/mm^3 or adult males with CD4+ >400 cells/mm^3
• **Rhabdomyolysis: pain, tenderness, weakness, edema; product should be discontinued**
• **Bowel pattern before, during treatment; if severe abdominal pain with bleeding occurs, product should be discontinued; monitor hydration**

Black Box Warning: Stevens-Johnson syndrome, toxic epidermal necrolysis: allergies before treatment, reaction to each medication; assess for skin eruptions; rash, urticaria, itching; if rash is severe or systemic symptoms occur, discontinue immediately, usually within first 6 wk of treatment

• **Hypersensitivity reaction: usually within first 18 wk of treatment; rash, fever, fatigue, muscle/joint pain, oral lesions**
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, those who are pregnant should enroll in the Antiretroviral Pregnancy Registry (1-800-258-4263), may cause infertility, do not breastfeed if HIV is present
Evaluate:
• Therapeutic response: absence of AIDS-defining symptoms, improvement in quality of life; decreased viral load, increase in CD4 count
Teach patient/family:

Black Box Warning: To stop drug and report immediately any right quadrant pain, yellowing of eyes or skin, dark urine, nausea, anorexia, muscle pain or tenderness, rash

• That follow-up exams and blood work will be needed
• That product may be taken with food, antacids
• To take as prescribed; if dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose

- That product is not a cure, does not prevent transmission; controls symptoms of HIV
- To avoid all agents unless approved by prescriber
- That body fat redistribution may occur
- To use a nonhormonal form of contraception during treatment in those using contraceptives

niacin (OTC, Rx)

(nye′a-sin)

Equaline Niacin, Niaspan, Niodan 🍁, Slo-Niacin

niacinamide (OTC, Rx)

Func. class.: Vit B_3, antihyperlipidemic

Chem. class.: Water-soluble vitamin

USES: Pellagra, hyperlipidemias (types 4, 5), peripheral vascular disease that presents a risk for pancreatitis

CONTRAINDICATIONS: Breastfeeding, hypersensitivity, peptic ulcer, hepatic disease, hemorrhage, severe hypotension, history of gouty arthritis, uncontrolled hyperglycemia

DOSAGE AND ROUTES

Niacin deficiency

- **Adult: PO** 100-500 mg/day in divided doses;
- **Child: PO** ≤300 mg/day in divided doses

Adjunct in hyperlipidemia

- **Adult: PO** 250 mg after evening meal; may increase dose at 1-4 wk intervals to 1-2 g tid, max 6 g/day; **EXT REL** 500 mg at bedtime × 4 wk, then 1000 mg at bedtime for wk 5-8; do not increase by >500 mg q4wk, max 2000 mg/day

Pellagra

- **Adult: PO** 300-500 mg/day in divided doses
- **Child: PO** 100-300 mg/day in divided doses

Peripheral vascular disease

- **Adult: PO** 250-800 mg/day in 3-5 divided doses

Available forms: Extended-release capsule 250 mg; tablet 50,100, 250, 500; extended-release tablet 250, 500, 750, 1000 mg

niCARdipine (Rx)

(nye-card′i-peen)

Cardene IV

Func. class.: Calcium channel blocker, antianginal, antihypertensive

Chem. class.: Dihydropyridine

Do not confuse:
niCARdipine/NIFEdipine/nimodipine
Cardene/Cardizem

ACTION: Inhibits calcium ion influx across cell membrane during cardiac depolarization; produces relaxation of coronary vascular smooth muscle, peripheral vascular smooth muscle; dilates coronary vascular arteries; increases myocardial oxygen delivery in patients with vasospastic angina

USES: Chronic stable angina pectoris, hypertension

CONTRAINDICATIONS: Sick sinus syndrome, 2nd-/3rd-degree heart block; hypersensitivity to this product or dihydropyridine; advanced aortic stenosis

Precautions: Pregnancy, breastfeeding, children, geriatric patients, HF, hypotension, hepatic injury, renal disease

DOSAGE AND ROUTES

Hypertension

- **Adult: PO** 20 mg tid initially; may increase after 3 days (range 20-40 mg tid) may increase to 60 mg bid or **IV** 5 mg/hr; may increase by 2.5 mg/hr q15min; max 15 mg/hr; **extended-release 30 mg bid, titrate**

Angina

- **Adult: PO** 20 mg tid; may be adjusted q3days; may use 20-40 mg tid

Renal dose

- **Adult: PO** 20 mg tid

Hepatic dose

- **Adult: PO** 20 mg bid

Available forms: Capsules 20, 30 mg; extended-rel capsule 30, 45 mg; injection 2.5 mg/mL, premixed 20 mg/200 mL, 40 mg/200 mL

Administer:

PO route

- Without regard to meals
- To start PO, give 1 hr prior to discontinuing IV nicardipine
- Avoid use with grapefruit, grapefruit juice

IV route

- To convert from PO to IV for adults: if PO 20 mg q8hr, start infusion at 0.5 mg/hr; if PO 30 mg q8hr, start infusion at 1.2 mg/hr; if PO 40 mg q8hr, start infusion at 2.2 mg/hr

Continuous IV INFUSION

- Dilute each 25 mg/240 mL of compatible sol (0.1 mg/mL), give slowly, titrate to patient response, change IV site q12hr
- Stable at room temperature for 24 hr

Solution compatibilities: D_5W, D_5/0.45% NaCl, D_5/0.9% NaCl

Y-site compatibilities: Alemtuzumab, amikacin, aminophylline, aztreonam, bivalirudin, butorphanol, calcium gluconate, CARBOplatin, caspofungin, ceFAZolin, ceftizoxime, chloramphenicol, cimetidine, CISplatin, clindamycin, cytarabine, DAPTOmycin, dexmedetomidine, diltiazem, DOBUTamine, DOCEtaxel, DOPamine, DOXOrubicin hydrochloride, enalaprilat, EPINEPHrine, epirubicin, erythromycin, esmolol, famotidine, fenoldopam, fentaNYL, gentamicin, hydrocortisone, HYDROmorphone, labetalol, lidocaine, linezolid, LORazepam, magnesium sulfate, mechlorethamine, methylPREDNISolone, metroNIDAZOLE, midazolam, milrinone, morphine, nafcillin, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, oxaliplatin, oxytocin, palonosetron, penicillin G potassium, potassium chloride/phosphate, quinupristin/dalfopristin, ranitidine, rocuronium, tacrolimus, tirofiban, tobramycin, trimethoprim/sulfamethoxazole, vancomycin, vasopressin, vecuronium, vinCRIStine, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: *Headache, dizziness,* anxiety, depression, confusion, paresthesia

CV: Edema, hypotension, palpitations, tachycardia, angina

GI: Nausea, vomiting, abdominal cramps, dry mouth

INTEG: Rash, infusion-site discomfort, Stevens-Johnson syndrome

OTHER: Myalgia (IV)

PHARMACOKINETICS

Metabolized by liver, excreted in urine 60%, feces 35%, half-life 2-5 hr

PO: Onset ½-2 hr, peak 1-2 hr, duration 8 hr

IV: Onset 1 min, peak 45 min, duration ≤8 hr

INTERACTIONS

Increase: effects of digoxin, neuromuscular blocking agents, theophylline, other antihypertensives, nitrates, alcohol, quiNIDine

Increase: hypotension—antihypertensives, neuromuscular blockers, nitrates, protease inhibitors, fentanyl

Increase: toxicity —cycloSPORINE, prazosin, carBAMazepine, quiNIDine, propranolol, cimetidine

Decrease: antihypertensive effect—NSAIDs, rifampin, protease inhibitors

Drug/Herb

Increase: effect—ginkgo, ginseng, hawthorn

Decrease: effect—ephedra, melatonin, St. John's wort, yohimbe

Drug/Food

Increase: hypotensive effect—grapefruit, grapefruit juice, avoid use

Decreased: absorption of high-fat foods

NURSING CONSIDERATIONS

Assess:

- **Anginal pain:** intensity, location, duration; alleviating, precipitating factors
- **HF:** weight gain, crackles, peripheral edema, jugular venous distention, dyspnea, I&O
- **Cardiac status:** B/P baseline and frequent intervals, pulse, respiration, ECG during long-term treatment

• Potassium, renal, hepatic studies periodically if on long-term treatment
• **Allergic reactions (Stevens-Johnson syndrome):** if rash is severe, with joint aches, mouth lesions, discontinue immediately
• **Hypertension:** decreasing B/P; assess salt in diet, smoking, exercise, weight, monitor B/P often
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding

Evaluate:
• **Therapeutic response:** decreased anginal pain, decreased B/P

Teach patient/family:
• How to take pulse and what to report
• To avoid hazardous activities until stabilized on product, dizziness is no longer a problem
• To limit caffeine consumption; to avoid alcohol products; to take without regard to food, avoid high-fat foods, to avoid grapefruit, grapefruit juice
• **Hypertension:** to comply in all areas of medical regimen: diet, exercise, stress reduction, product therapy
• To notify prescriber of irregular heartbeat, SOB, swelling of feet and hands, pronounced dizziness, constipation, nausea, hypotension, change in severity/pattern/incidence of angina
• To rise slowly from sitting or lying down to prevent orthostatic hypotension

TREATMENT OF OVERDOSE:

Defibrillation, β-agonists, IV calcium, diuretics, atropine for AV block, vasopressor for hypotension

nicotine

(nik´o-teen)

nicotine chewing gum (OTC)
Commit, Nicorette Nic-Hit ✱

nicotine mouth spray (Rx)
Nic-Hit Oromucosal Spray mist ✱, Nicorette Quick Mist ✱

nicotine nasal spray (Rx)
Nicotrol NS

nicotine transdermal (OTC, Rx)
Nicoderm ✱, Nicoderm CQ, Habitrol ✱

Func. class.: Smoking deterrent
Chem. class.: Ganglionic cholinergic agonist

ACTION:

Agonist at nicotinic receptors in peripheral, central nervous systems; acts at sympathetic ganglia, on chemoreceptors of aorta, carotid bodies; also affects adrenalin-releasing catecholamines

USES:

Deter cigarette smoking

CONTRAINDICATIONS:

Pregnancy (transdermal, inhaler); hypersensitivity, immediate post-MI recovery period, severe angina pectoris

Precautions: Pregnancy (gum); breastfeeding, vasospastic disease, dysrhythmias, diabetes mellitus, hyperthyroidism, pheochromocytoma, esophagitis, peptic ulcer, coronary/renal/hepatic disease; MRI (patch); soy hypersensitivity (mint lozenge)

DOSAGE AND ROUTES

Nicotine chewing gum
• **Adult:** chew 1 piece of gum (2 mg nicotine) whenever urge to smoke occurs; dose varies; usually 20 mg/day during first mo, max 24 pieces/day, max 3 mo

Nicotine inhaler
• **Adult: INH** 6 cartridges/day (24-64 mg) for up to 12 wk, then gradual reduction over 12 wk

Nicotine lozenge
• **Adult:** if cigarette is desired >30 min after awakening, start with 2-mg lozenge;

if <30 min after awakening, start with 4-mg lozenge, then again q1-2hr, max 20 lozenges/day or 5 lozenges/6 hr × 6 wk, then 1 lozenge q2-4hr × 2 wk, then 1 lozenge q4-8hr × 2 wk, then discontinue

Nicotine nasal spray

• **Adult:** 1 spray in each nostril 1-2×/hr, max 5×/hr or 40×/day, max 3 mo

Nicotine transdermal/inhaler system

• **Nicoderm:** 21 mg/day × 4-8 wk; 14 mg/day × 2-4 wk; 7 mg/day × 2-4 wk

• **Nicotrol:** 15 mg/day × 12 wk; 10 mg/day × 2 wk; 5 mg/day × 2 wk

• **Nicotrol inhaler:** delivers 30% of nicotine that smoker receives from an actual cigarette

Available forms: Transdermal patch (Habitrol ✱, Nicoderm, nicotine transdermal system) delivering 7, 14, 21 mg/day; (Nicoderm) 5, 10, 15 mg/day; **nicotine inhaler** 4 mg delivered; **nasal spray** 0.5 mg nicotine/actuation; **gum** 2, 4 mg/piece; **lozenge** 2 mg, 4 mg

Administer:

• **Gum:** chew gum slowly for 30 min to promote buccal absorption of product; do not chew >45 min

• Do not expose to light; gum will turn color

• Begin product withdrawal after 3 mo of use; do not exceed 6 mo

• **Transdermal patch:** 1× day to nonhairy, clean, dry area of skin on upper body or upper outer arm; rotate sites to prevent skin irritation; can remove before bed if patient has strange dreams

• **Nasal spray/inhaler:** puffing on mouthpiece delivers nicotine through mouth

• **Lozenge:** allow to dissolve slowly

SIDE EFFECTS

CNS: Dizziness, vertigo, insomnia, headache, confusion, seizures, numbness, tinnitus, strange dreams

CV: Dysrhythmias, tachycardia, palpitations, edema, flushing, hypertension

EENT: Jaw ache, irritation in buccal cavity

GI: *Nausea, vomiting, anorexia, indigestion,* diarrhea, abdominal pain, constipation, eructation, irritation

RESP: Breathing difficulty, cough, hoarseness, sneezing, wheezing, bronchial spasm

PHARMACOKINETICS

Onset 15-30 min, metabolized in liver, excreted in urine, half-life 2-3 hr, 30-120 hr (terminal)

INTERACTIONS

Increase: vasoconstriction—ergots, bromocriptine, cabergoline

Increase: effect after smoking cessation—adrenergic antagonists, β blockers

Increase: effect of—adenosine

Increase: B/P—buPROPion

Decrease: effect of—α-blockers, insulin

Decrease: nicotine clearance—cimetidine

Drug/Food

• Avoid use of gum with acidic foods (colas, coffee) and for 15 min after

NURSING CONSIDERATIONS

Assess:

• **Smoking:** number of cigarettes smoked, years used, brand; **withdrawal:** headache, cravings, restlessness, irritation, drowsiness, insomnia, sore throat, periodic increase in appetite

• **Adverse reaction:** irritation of buccal cavity, dislike of taste, jaw ache, gum should not be used if temporomandibular condition exists

• **Toxicity:** nausea, vomiting, diarrhea, headache, dizziness, dyspnea, hypertension

• **Pregnancy/breastfeeding:** whenever possible, avoid in pregnancy; cautious use in breastfeeding

Evaluate:

• Therapeutic response: decrease in urge to smoke, decreased need for gum after 3-6 mo

Teach patient/family:

• To discontinue if patient is unable to stop smoking after 4th week of therapy

• **Gum:** about all aspects of product use; give package insert to patient and explain

• That gum will not stick to dentures, dental appliances

• That gum is as toxic as cigarettes; that it is to be used only to deter smoking; to call prescriber immediately, stop use if difficulty breathing or rash occurs

- To avoid use during pregnancy
- **Transdermal patch:** that patch is as toxic as cigarettes; to be used only to deter smoking
- Not to use during pregnancy because birth defects may occur; not to breastfeed
- To keep used and unused system out of reach of children and pets
- To stop smoking immediately when beginning patch treatment
- To apply promptly after removing from protective patch because system may lose strength
- **Nasal spray:** to tilt head back; not to swallow or inhale during administration; after smoking is stopped, to use spray up to 8 wk, then discontinue over 6 wk by tapering
- **Lozenges:** to allow to dissolve; to avoid swallowing; not to chew
- **Inhalation:** to use by inhaler for 20 min by frequent puffs

NIFEdipine (Rx)

(nye-fed'i-peen)

Adalat ✱, Adalat CC, Adalat XL ✱, Afeditab CR, Procardia, Procardia XL

Func. class.: Calcium channel blocker, antianginal, antihypertensive

Chem. class.: Dihydropyridine

Do not confuse:
NIFEdipine/niCARdipine/niMODipine

ACTION: Inhibits calcium ion influx across cell membrane during cardiac depolarization; relaxes coronary vascular smooth muscle; dilates coronary arteries; increases myocardial oxygen delivery in patients with vasospastic angina; dilates peripheral arteries

USES: Chronic stable angina pectoris, variant angina, hypertension

CONTRAINDICATIONS: Hypersensitivity to this product or dihydropyridine; cardiogenic shock

Precautions: Pregnancy, breastfeeding, children, hypotension, sick sinus syndrome, 2nd-/3rd-degree heart block, hypotension <90 mm Hg systolic, hepatic injury, renal disease, acute MI, aortic stenosis, GERD, heart failure

DOSAGE AND ROUTES

Angina

- **Adult: PO** Immediate release 10 mg tid, increase in 10-mg increments q7-14days, max 180 mg/24 hr or single dose of 30 mg; **EXTENDED RELEASE** 30-60 mg/day, may increase q7-14days, max 120 mg/day

Hypertension

- **Adult: PO EXTENDED RELEASE** 30-60 mg daily, titrate upward as needed, max 90 mg/day (Adalat CC), 120 mg/day (Procardia XL)
- **Child/adolescent (unlabeled): PO EXT REL** 0.25-0.5 mg/kg/day in 1-2 divided doses, max 3 mg/kg/day or 120 mg, whichever is less

Available forms: Caps 10, 20 mg; ext rel tabs (XL) 30, 60, 90 mg; extended-release tablet 30, 60, 90 mg

Administer:

- Do not break, crush, or chew ext rel tabs, do not use immediate-release caps within 7 days of MI, coronary syndrome; do not use caps (SL) to reduce severe hypertension, may cause death
- Without regard to meals; avoid grapefruit juice
- Give ext rel (Adalat CC) on empty stomach
- Protect caps from direct light, keep in dry area, do not freeze

SIDE EFFECTS

CNS: *Headache,* fatigue, drowsiness, *dizziness,* anxiety, depression, weakness, insomnia, light-headedness, paresthesia, tinnitus, blurred vision, nervousness, tremor, *flushing*

CV: Dysrhythmias, edema, hypotension, palpitations, tachycardia

GI: Nausea, vomiting, diarrhea, gastric upset, constipation, increased LFTs, dry mouth, flatulence, gingival hyperplasia

GU: *Nocturia, polyuria*

HEMA: Bruising, bleeding, petechiae

INTEG: Rash, pruritus, flushing, hair loss, Stevens-Johnson syndrome, toxic epidermal necrolysis, exfoliative dermatitis
MISC: Sexual difficulties, cough, fever, chills

PHARMACOKINETICS

Metabolized by liver; excreted in urine 60%-80% (metabolites), feces 15%; protein binding 92%-98%, half-life 2-7 hr, well absorbed
PO: Onset 20 min, duration 6-8 hr
PO-ER: Onset 20 min, duration 24 hr

INTERACTIONS

- Contraindicated with strong CYP3A4 inducers

Increase: level of digoxin, phenytoin, cycloSPORINE, prazosin, carBAMazepine β-blockers, antihypertensives, vincristine, warfarin, diuretics
Increase: nifedipine effect—ACE inhibitors, alpha blockers, cimetidine, antiretrovirals, verapamil, CYP3A4 inhibitors azole antifungals, diltiazem
Increase: hypotension, PDE5 inhibitors, monitor B/P
Increase: NIFEdipine, toxicity—cimetidine, raNITIdine

Drug/Food
Increase: NIFEdipine level—grapefruit juice

Drug/Lab Test
Increase: CPK, LDH, AST
Positive: ANA, direct Coombs' test

NURSING CONSIDERATIONS

Assess:
- **Anginal pain:** location, intensity, duration, character, alleviating, aggravating factors
- **HF:** peripheral edema, dyspnea, weight gain >5 lb, jugular venous distention, rales; monitor I&O ratios, daily weight
- Cardiac status: B/P, pulse, respiration, ECG at baseline and periodically, in those taking antihypertensives, β-blockers, monitor B/P often
- Potassium, renal, hepatic studies periodically during treatment
- For bruising, petechiae, bleeding
- **GI obstruction:** ext rel products have been associated with rare reports of obstruction in those with strictures and no known GI disease
- **Serious skin disorders:** rash that starts suddenly, fever, cutaneous lesions that may have pustules present; discontinue product if fever present or if rash is severe
- **Beers:** avoid in older adults; potential for hypotension, myocardial ischemia
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding

Evaluate:
- Therapeutic response: decreased anginal pain, B/P, activity tolerance

Teach patient/family:
- To avoid hazardous activities until stabilized on product, dizziness is no longer a problem
- To limit caffeine consumption; to avoid alcohol products
- To avoid OTC products unless directed by prescriber; give without regard to meals, not to use with grapefruit juice
- That empty tab shells may appear in stools and are not significant
- To prevent direct light on ext rel product
- To swallow ext rel product whole
- **Hypertension:** to comply with all areas of medical regimen: diet, exercise, stress reduction, product therapy
- To change position slowly because orthostatic hypotension is common
- To notify prescriber of dyspnea, edema of extremities, nausea, vomiting, severe ataxia, severe rash; changes in pattern, frequency, severity of angina
- To increase fluid intake and fiber to prevent constipation
- To check for gingival hyperplasia and report promptly
- Not to discontinue abruptly; to gradually taper, may cause increased angina
- About fall risk for older adults

TREATMENT OF OVERDOSE:

Defibrillation, atropine for AV block, vasopressor for hypotension

⚠ HIGH ALERT

nilotinib (Rx)

(nye-loe'ti-nib)

Tasigna

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Protein-tyrosine kinase inhibitor

ACTION: Inhibits BCR-ABL tyrosine kinase created in patients with chronic myeloid leukemia (CML)

USES: Chronic phase/accelerated phase Philadelphia chromosome–positive CML that is resistant or intolerant to imatinib

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity

Black Box Warning: Hypokalemia, hypomagnesemia, QT prolongation

Precautions: Children, females, geriatric patients, active infections, anemia, cardiac disease, bone marrow suppression, cholestasis, diabetes, gelatin hypersensitivity, infertility, galactose-free diet, lactase deficiency, neutropenia, pancreatitis, thrombocytopenia, hepatic disease, alcoholism, angina, ascites, tumor lysis syndrome

DOSAGE AND ROUTES

- **Adult: PO** 300 mg q12hr, continue until disease progression (chronic phase, newly diagnosed); 400 mg q12hr, continue until disease progression or unacceptable toxicity (accelerated phase). Use with a strong CYP3A4 inducer 200-300 mg daily, depending on the indication
- **Child/adolescent: PO** 230 mg/m^2 q12hr until disease progression or unacceptable toxicity. Round the dose to the nearest 50 mg to a max single dose of 400 mg

Adjustment after discontinuation of a strong CYP3A4 inhibitor

- **Adult: PO** reduce to 400 mg bid

Use with a strong CYP3A4 inhibitor

- **Adult: PO** reduce dose to 200-300 mg/day depending on indication

QT prolongation

- QTcF >480 msec: withhold dose

Myelosuppression

- **ANC 1 × 10^9/L or platelets <50 × 10^9/L:** withhold dose

Hepatic dose

- **Adult: PO** (Child-Pugh A/B/C) newly diagnosed CML 200 mg bid, then escalation to 300 mg bid initially

Available forms: Caps 50, 150, 200 mg

Administer:

- Do not break, crush, or chew caps; if whole capsule cannot be swallowed, disperse capsule contents in 1 tsp applesauce
- On empty stomach; separate doses by 12 hr; make-up dose should not be taken if dose is missed
- Store at 59°F-86°F (15°C-30°C)

SIDE EFFECTS

CNS: Headache, dizziness, fatigue, fever, flushing, paresthesia

CV: QT prolongation, palpitations, torsades de pointes, AV block

GI: *Nausea,* hepatotoxicity, vomiting, dyspepsia, *anorexia, abdominal pain,* constipation, pancreatitis, diarrhea, xerostomia

HEMA: Neutropenia, thrombocytopenia, anemia, pancytopenia

INTEG: *Rash,* alopecia, erythema

META: Hyperamylasemia, hyperbilirubinemia, hyperglycemia, hyperkalemia, hypocalcemia, hyponatremia, hypomagnesemia

MISC: Diaphoresis, anxiety

MS: Arthralgia, myalgia, back or bone pain, muscle cramps

RESP: Cough, dyspnea

SYST: Bleeding, tumor lysis syndrome

PHARMACOKINETICS

Protein binding 98%, metabolized by CYP3A4, plasma levels 3 hr, elimination half-life 17 hr

INTERACTIONS

- Product interactions are numerous
- Do not use with phenothiazines, pimozide, ziprasidone

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide, levomethadyl; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)
Increase: hepatotoxicity—acetaminophen
Increase: concentrations—ketoconazole, itraconazole, erythromycin, clarithromycin
Increase: plasma concentrations of simvastatin, calcium channel blockers
Increase: plasma concentration of warfarin; avoid use with warfarin, use low-molecular-weight anticoagulants instead
Decrease: concentrations—dexamethasone, phenytoin, carBAMazepine, rifampin, PHENobarbital

Drug/Herb
Decrease: concentration—St. John's wort

Drug/Food
Increase: plasma concentrations—grapefruit juice

NURSING CONSIDERATIONS

Assess:
• **Tumor lysis syndrome:** maintain hydration, correct uric acid before use with this product

Black Box Warning: QT prolongation can occur; monitor ECG, left ventricular ejection fraction (LVEF) at baseline, periodically; hypertension, assess for chest pain, palpitations, dyspnea

Black Box Warning: Hepatotoxicity: monitor LFTs before treatment and monthly; if liver transaminases >5 × IULN, withhold until transaminase levels return to <2.5 × IULN

• **Myelosuppression:** Monitor CBC ×2 mo, then monthly, differential, platelet count; for bleeding: epistaxis, rectal, gingival, upper GI, genital and wound bleeding; tumor-related hemorrhage may occur rapidly
• ANC and platelets: if ANC <1 × 10^9/L and/or platelets <50 × 10^9/L, stop until ANC >1.5 × 10^9/L and platelets >75 ×10^9/L
• **Electrolytes:** calcium, potassium, magnesium, sodium; lipase, phosphate; hypokalemia, hypomagnesemia should be corrected before use
• AST/ALT/bilirubin/lipase/amylase: if increased to grade 3, withhold product; resume at 400 mg daily when levels return to grade 1 or below
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:
• Therapeutic response: decrease in progression of disease

Teach patient/family:
• **Infection:** to report immediately cough, fever, chills
• To report bleeding gums; blood in stools, urine, emesis
• About reason for treatment, expected results
• That many adverse reactions may occur
• To avoid persons with known upper respiratory tract infections; immunosuppression is common
• To watch for signs, symptoms of low potassium or magnesium
• To notify prescriber of all OTC, prescription, and herbal products used; not to receive vaccinations without prescriber's approval
• **Pregnancy/breastfeeding:** to use contraception during treatment; not to breastfeed

nimodipine (Rx)

(nye-moe'di-peen)
Nimotop, Nymalize
Func. class.: calcium channel blockers

USES: For the improvement of neurologic outcome by reducing the incidence and severity of ischemic deficits in those with subarachnoid hemorrhage

CONTRAINDICATIONS
Use with strong CYP3A4 inhibitors (clarithromycin, telithromycin, delavirdine, indinavir, nelfinavir, ritonavir, saquinavir, ketoconazole, itraconazole, voriconazole, nefazodone)

DOSAGE AND ROUTES
Subarachnoid hemorrhage
Adult: PO 60 mg q4h × 21 days, start therapy within 96 hr of the onset of subarachnoid hemorrhage
Hepatic dose
- **Adult: PO** 30 mg q4h × 21 days

Available forms: Capsules 30 mg; oral solution 3 mg/mL

nintedanib (Rx)
(nin-ted'a-nib)
Ofev
Func. class.: Interstitial lung disease agent
Chem. class.: Idiopathic pulmonary fibrosis agent

USES: idiopathic pulmonary fibrosis (IPF)

DOSAGE AND ROUTES
- **Adults PO** 150 mg q12hr

Available forms: Capsule 100, 150 mg

⚠ HIGH ALERT

niraparib (Rx)
(nye-rap'-a-rib)
Zejula
Func. class.: Antineoplastic

USES: Recurrent epithelial ovarian, fallopian tube, or primary peritoneal cancer

DOSAGE AND ROUTES
- **Adult: PO** 200 mg/day until disease progression or unacceptable toxicity. Begin therapy no later than 12 wk after last platinum-containing regimen

Available forms: Capsule 100 mg

nisoldipine (Rx)
(nye-sole'dih-peen)
Sular
Func. class.: Calcium channel blocker, antihypertensive
Chem. class.: Dihydropyridine

USES: Essential hypertension, alone or in combination with other antihypertensives, ischemic heart disease

CONTRAINDICATIONS: Hypersensitivity to this product or dihydropyridines; sick sinus syndrome; 2nd-/3rd-degree heart block; aortic stenosis

DOSAGE AND ROUTES
Hypertension
- **Adult: PO EXTENDED RELEASE** 17 mg/day initially, may increase by 8.5 mg/wk, usual dose 17-34 mg/day, max 34 mg/day
- **Geriatric/hepatic dose: PO EXTENDED RELEASE** 8.5 mg/day, increase based on patient response

Hepatic dose
- **Adult: PO EXTENDED RELEASE** 8.5 mg/day

Available forms: Tabs ext rel 8.5, 17, 20, 25.5, 30, 34, 40 mg

nitazoxanide (Rx)
(nye-ta-zox'a-nide)
Alinia
Func. class.: Antiprotozoal

USES: Treatment of diarrhea caused by Cryptosporidium parvum or Giardia lamblia

CONTRAINDICATIONS
Hypersensitivity to nitazoxanide or any component

DOSAGE AND ROUTES
Infectious diarrhea caused by C. parvum or G. lamblia

Oral suspension or tablets. Adult/child ≥12 yr: PO 500 mg q12h for 3 days
Child 4-11 yr: PO 200 mg q12h for 3 days
Child 1-3 yr: PO 100 mg q12h for 3 days
Available forms: Tabs 500 mg; oral suspension 100 mg/5 mL

nitrofurantoin (Rx)

(nye-troe-fyoor'an-toyn)
Furadantin, Macrobid, Macrodantin
Func. class.: Urinary tract antiinfective
Chem. class.: Synthetic nitrofuran derivative

ACTION: Inhibits bacterial acetyl-CoA interference with carbohydrate metabolism

USES: Urinary tract infections caused by *Escherichia coli, Klebsiella, Pseudomonas, Proteus vulgaris, Proteus morganii, Serratia, Citrobacter, Staphylococcus aureus, Staphylococcus epidermidis, Enterococcus, Salmonella, Shigella*

CONTRAINDICATIONS: Infants <1 mo, hypersensitivity, anuria, severe renal disease CCr <60 mL/min, at term pregnancy (38-42 wk), labor, delivery, cholestatic jaundice due to nitrofurantoin therapy
Precautions: Pregnancy, breastfeeding, geriatric patients, G6PD deficiency, GI disease, diabetes

DOSAGE AND ROUTES

Active UTI
- **Adult/child >12 yr: PO** 50-100 mg qid after meals or 100 mg (Macrobid) q12hr × 7 days
- **Child 1 mo-12 yr: PO** 5-7 mg/kg/day in 4 divided doses

UTI prevention
- **Adult: PO** 50-100 mg q PM
- **Child: PO** 1-2 mg/kg/day in PM or 0.5-1 mg/kg q12hr if dose not well tolerated

Available forms: oral suspension (microcrystals) 25 mg/5 mL; capsules 25, 50, 100 mg macrocrystalline

Administer:
PO route
- Give with meals
- Do not break, crush, chew, or open tabs, caps, store in original container
- Two daily doses if urine output is high or if patient has diabetes
- Oral suspension: Shake, use calibrated device to measure liquid product; may mix water, fruit juice; rinse mouth after liquid product; staining of teeth may occur, protect from light

SIDE EFFECTS

CNS: *Dizziness, headache,* drowsiness, peripheral neuropathy, chills, confusion, vertigo, polyneuropathy (high dose)
CV: Bundle chest pain
GI: *Nausea, vomiting, abdominal pain, diarrhea,* cholestatic jaundice, loss of appetite, CDAD, hepatitis, pancreatitis
HEMA: Anemia, agranulocytosis, hemolytic anemia, leukopenia, thrombocytopenia
INTEG: Pruritus, rash, urticaria, angioedema, alopecia, tooth staining, exfoliative dermatitis, Stevens-Johnson syndrome
MS: Arthralgia, myalgia, numbness, peripheral neuropathy
RESP: Cough, dyspnea, pneumonitis, pulmonary fibrosis or infiltrate
SYST:
Superinfection, SLE-like syndrome

PHARMACOKINETICS

PO: Half-life 20-60 min; crosses blood-brain barrier, placenta; enters breast milk; excreted as inactive metabolites in liver, unchanged in urine; protein binding 60%-90%

INTERACTIONS

Increase: nitrofurantoin toxicity—topical dapsone/tetracaine, prilocaine, sodium nitrate, monitor closely
Increase: levels of nitrofurantoin—probenecid, sulfinpyrazone, avoid using together
Decrease: absorption of magnesium antacid, separate by ≥1 hr
Decrease: effect of live virus vaccines, avoid using together

Drug/Lab Test

Increase: BUN, alk phos, bilirubin, creatinine, blood glucose

Decrease: WBC, platelets, HB

NURSING CONSIDERATIONS

Assess:

• **Urinary tract infection:** burning, pain on urination; fever; cloudy, foul-smelling urine; I&O ratio: C&S before treatment, after completion; serum creatinine, BUN

• Blood count during chronic therapy, LFTs, pulmonary function tests

• **CDAD:** diarrhea with mucus, abdominal pain, fever, fatigue, anorexia; may be treated with vancomycin or metroNIDAZOLE

• CNS symptoms: insomnia, vertigo, headache, drowsiness, seizures

• **Hepatotoxicity:** yellowing of skin or eyes, dark urine, clay-colored stools; monitor AST, ALT, stop drug immediately in hepatitis

• **Pulmonary fibrosis, pneumonitis:** dyspnea, tachypnea, persistent cough

• **Serious skin disorders:** fever, flushing, rash, urticaria, pruritus

• **Peripheral neuropathy:** paresthesias (more common in diabetes mellitus, electrolyte imbalances, vit B deficiency, debilitated patients)

• **Beers:** avoid in older adults; potential for pulmonary, hepatic toxicity, peripheral neuropathy

• **Pregnancy/breastfeeding:** do not use in gestation of 38-42 wk or in labor/delivery; cautious use in breastfeeding, excreted in breast milk

Evaluate:

• Therapeutic response: decreased dysuria, fever; negative C&S

Teach patient/family:

• To notify prescriber of continued symptoms of UTI, fever, myalgias, arthralgias, numbness or tingling of extremities

• To take as prescribed even if better

• To take with food or milk; to avoid alcohol

• To protect susp from freezing; shake well before taking

• That product may cause drowsiness; to seek aid with walking, other activities; not to drive or operate machinery while taking medication

• That patients with diabetes should monitor blood glucose levels

• That product may turn urine rust-yellow to brown

• **CDAD:** to report immediately symptoms of fever; diarrhea with mucus, pus, or blood

nitroglycerin IV (Rx)
extended release caps (Rx)
Nitro-Time, Nitrogard SR
topical ointment (Rx)
Nitro-Bid, Nitrol
rectal ointment
Rectiv
SL (Rx)
Gonitro, Nitrostat
SL Powder (Rx)
Gonitro
translingual spray (Rx)
Nitrolingual, NitroMist
transdermal (Rx)
Transderm, Minitran, Nitro-Dur, Trinipatch

Func. class.: Coronary vasodilator, antianginal

Chem. class.: Nitrate

ACTION: Decreases preload and afterload, which are responsible for decreasing left ventricular end-diastolic pressure, systemic vascular resistance; dilates coronary arteries, improves blood flow through coronary vasculature, dilates arterial and venous beds systemically

USES: Chronic stable angina pectoris, prophylaxis of angina pain, HF, acute MI, controlled hypotension for surgical procedures, anal fissures

CONTRAINDICATIONS: Hypersensitivity to this product or nitrites; severe anemia, increased intracranial pressure, cerebral hemorrhage,

closed-angle glaucoma, cardiac tamponade, cardiomyopathy, constrictive pericarditis

Precautions: Pregnancy, breastfeeding, children, postural hypotension, severe renal/hepatic disease, acute MI, abrupt discontinuation, hyperthyroidism

DOSAGE AND ROUTES

• **Adult: IV:** Run at 5 mcg/min, may increase by 5 mcg/min q3-5min, up to 100 mcg/min, may be used (hypertension in HF, MI, surgery); **SL** Dissolve tab under tongue when pain begins; may repeat q5min until relief occurs; take ≤3 tabs/15 min; use 1 tab prophylactically 5-10 min before activities; **TOP** 1-2 inches q8hr, increase to 4 inches q4hr as needed; **TRANS PATCH** apply a patch daily to a site free of hair; remove patch at bedtime to provide 10-12 hr nitrate-free interval to avoid tolerance

Anal fissures (Rectiv)

• **Adult: Rectal** Apply 1 inch of 0.4% ointment q12hr × 3 wk

Available forms: SL tabs 0.3, 0.4, 0.6 mg; **topical oint** 2%; **trans syst** 0.1, 0.2, 0.3, 0.4, 0.6, 0.8 mg/hr; **inj sol** 5 mg/mL **rectal ointment** 0.4% (Rectiv); SL powder 400 mcg; SL/translingual spray 400 mcg/spray

Administer:

• **Topical ointment** should be measured on papers supplied; use paper to spread on nonhairy area of chest, abdomen, thigh skin; thin layer spread over 2-3 inches; do not rub

PO route

• Swallow sus rel products whole; do not break, crush, or chew

• With 8 oz water on empty stomach (oral tablet) 1 hr before or 2 hr after meals

• **SL:** should be dissolved under tongue, or between gum and cheek, not swallowed

• **Aerosol** sprayed under tongue **(nitrolingual),** not inhaled; prime before 1st-time use or if product has not been used in >6 wk; press valve head with forefinger

Transdermal route

• Apply new TD patch daily; remove after 12-14 hr to prevent tolerance

Rectal route

• Cover finger with plastic wrap, disposable glove, or finger cot; lay finger alongside 1-inch dosing line on carton; squeeze tube until equal to 1-inch dosing line; insert covered finger gently into anal canal no further than 1st finger joint and apply to sides; wash hands thoroughly; if too painful, apply directly to outside of anus

Continuous IV INFUSION route

• Diluted in D_5, D_5W, 0.9% NaCl for infusion to 200-400 mcg/mL, depending on patient's fluid status; common dilution 50 mg/250 mL, use controlled infusion device; titrate to patient response; do not use filters

Y-site compatibilities: Acyclovir, alfentanil, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B cholesteryl, amphotericin B lipid complex, amphotericin B liposome, anidulafungin, argatroban, ascorbic acid, atenolol, atracurium, atropine, azaTHIOprine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, cephapirin, chloramphenicol, chlorproMAZINE, cimetidine, cisatracurium, CISplatin, clindamycin, cloNIDine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, dexamethasone, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, drotrecogin alfa, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, ganciclovir, gatifloxa-

N

cin, gemcitabine, gemtuzumab, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, indomethacin, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metroNIDAZOLE, mezlocillin, micafungin, miconazole, midazolam, milrinone, minocycline, mitoXANtrone, morphine, moxalactam, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, netilmicin, niCARdipine, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, ranitidine, remifentanil, ritodrine, rocuronium, sodium bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, warfarin, zoledronic acid

SIDE EFFECTS

CNS: *Headache, flushing, dizziness*
CV: *Postural hypotension,* tachycardia, collapse, syncope, palpitations
GI: Nausea, vomiting
INTEG: Pallor, sweating, rash

PHARMACOKINETICS

Metabolized by liver, excreted in urine, half-life 1-4 min

SL: Onset 1-3 min, duration 30 min
TRANSDERMAL: Onset 30 min-1 hr, duration 12-24 hr
AEROSOL: Onset 2 min, duration 30-60 min
TOPICAL OINT: Onset 30-60 min, duration 2-12 hr
IV: Onset 1-2 min, duration 3-5 min

INTERACTIONS

• **Severe hypotension, CV collapse:** alcohol
Increase: effects of β-blockers, diuretics, antihypertensives, calcium channel blockers
Increase: fatal hypotension—avanafil, sildenafil, tadalafil, vardenafil; do not use together
Increase: nitrate level—aspirin
Decrease: heparin—IV nitroglycerin

Drug/Lab Test
Increase: urine catecholamine, urine VMA
False increase: cholesterol

NURSING CONSIDERATIONS

Assess:
• **Chest pain/angina:** duration, time started, activity being performed, character
• **Hypotensive episodes:** Orthostatic B/P, pulse before and after administration
• Tolerance if taken over long period
• Headache, light-headedness, decreased B/P; may indicate a need for decreased dosage
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding

Evaluate:
• Therapeutic response: decrease, prevention of anginal pain

Teach patient/family:
• To place SL tab under tongue and wait to dissolve, or spray on or under tongue
• To keep tabs in original container; to replace q6mo because effectiveness is lost; to keep away from heat, moisture, light
• That if 3 SL tabs in 15 min do not relieve pain, to seek immediate medical attention
• To avoid alcohol

- That product may cause headache; that tolerance usually develops; to use nonopioid analgesic
- That product may be taken before stressful activity: exercise, sexual activity
- That SL may sting when product comes in contact with mucous membranes
- To avoid hazardous activities if dizziness occurs
- To comply with complete medical regimen
- To make position changes slowly to prevent fainting
- Never to use erectile dysfunction products (sildenafil, tadalafil, vardenafil); may cause severe hypotension, death

⚠ HIGH ALERT

nitroprusside (Rx)

(nye-troe-pruss′ide)

Nitropress, Nipride

Func. class.: Antihypertensive, vasodilator

ACTION: Directly relaxes arteriolar, venous smooth muscle, thereby resulting in reduction in cardiac preload and afterload

USES: Hypertensive crisis/urgency/induction; to decrease bleeding by creating hypotension during surgery; acute HF

CONTRAINDICATIONS: Hypersensitivity, hypertension (compensatory) due to aortic coarctation or AV shunting, acute HF associated with reduced peripheral vascular resistance, toxic amblyopia, hypothyroidism

Precautions: Anemia, increased intracranial pressure, pregnancy, breastfeeding, children, geriatric patients, hypovolemia, electrolyte imbalances, renal/hepatic disease, hypothyroidism

Black Box Warning: Hypotension, cyanide toxicity

DOSAGE AND ROUTES

- **Adult/child: IV INFUSION** 0.25-10 mcg/kg/min; max 10 mcg/kg/min × 10 min

Renal dose

- **Adult: IV INFUSION** CCr <60 mL/min, maintain doses <3 mcg/kg/min to reduce thiocyanate accumulation

Available forms: Inj 50 mg/2 mL

Administer:

- Antidote is sodium thiosulfate

Continuous IV INFUSION route

- **Black Box Warning:** Reconstitute 50 mg/2-3 mL of D_5W, further dilute in 250, 500, or 1000 mL of D_5W to 200, 100, 50 mcg/mL, respectively; use infusion pump only; wrap bottle with aluminum foil to protect from light; observe for color change in infusion; discard if highly discolored (blue, green, dark red); titrate to patient response

- **Black Box Warning:** Stop infusion if B/P is not lowered sufficiently within 10 min

- **Black Box Warning:** Monitor continuously

- Do not exceed max dose as cyanide may accumulate

Y-site compatibilities: Alfentanil, alprostadil, amikacin, aminocaproic acid, aminophylline, amphotericin B lipid complex, amphotericin B liposome, anidulafungin, argatroban, atenolol, atropine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, chloramphenicol, cimetidine, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diltiazem, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa,

eptifibatide, ertapenem, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gatifloxacin, gemcitabine, gemtuzumab, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, inamrinone, indomethacin, insulin (regular), isoproterenol, ketorolac, labetalol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, mezlocillin, micafungin, miconazole, midazolam, milrinone, minocycline, morphine, moxalactam, multiple vitamins injection, nafcillin, nalbuphine, naloxone, nesiritide, netilmicin, niCARdipine, nitroglycerin, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, penicillin G potassium/sodium, pentamidine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride/phosphates, procainamide, propofol, propranolol, protamine, pyridoxine, ranitidine, ritodrine, rocuronium, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, zoledronic acid

SIDE EFFECTS

CNS: *Dizziness, headache,* agitation, twitching, decreased reflexes, *restlessness*

CV: *Bradycardia,* ECG changes, tachycardia, *hypotension*

GI: Nausea, vomiting, abdominal pain

INTEG: Pain, irritation at inj site, sweating

MISC: Cyanide, thiocyanate toxicity, flushing, hypothyroidism

PHARMACOKINETICS

IV: Onset 1-2 min, duration 1-10 min, half-life 2 min; metabolized in liver, excreted in urine

INTERACTIONS

Increase: severe hypotension—ganglionic blockers, volatile liquid anesthetics, halothane, enflurane, circulatory depressants

Drug/Herb

Increase: antihypertensive effect—hawthorn

NURSING CONSIDERATIONS

Assess:

- Electrolytes: potassium, sodium, chloride, CO_2, CBC, serum glucose, serum methemoglobin if pulmonary O_2 levels are decreased; use IV 1-2 mg/kg methylene blue given over several min for methemoglobinemia, ABGs
- Renal studies: catecholamines, BUN, creatinine
- Hepatic studies: AST, ALT, alk phos

Black Box Warning: Hypotension: B/P by direct means if possible; check ECG continuously; pulse, jugular venous distention; PCWP; rebound hypertension may occur after nitroprusside is discontinued, give only with emergency equipment nearby, rapid decrease in B/P may occur; check weight, I&O daily

Black Box Warning: Thiocyanate, lactate, cyanide toxicity: obtain levels daily if infusion >3 mcg/kg/min; thiocyanate toxicity occurs at plasma levels of 50-100 mcg/mL; thiocyanate toxicity includes confusion, weakness, seizures, hyperreflexia, psychosis, tinnitus, coma

- Nausea, vomiting, diarrhea
- Edema in feet, legs daily; skin turgor, dryness of mucous membranes for hydration status
- Crackles, dyspnea, orthopnea q30min
- For decrease in bicarbonate, $PaCO_2$, blood pH, acidosis

• **Pregnancy/breastfeeding:** prolonged use may result in death of the fetus (cyanide toxicity); do not breastfeed

Evaluate:

• Therapeutic response: decreased B/P, decreasing symptoms of cardiogenic shock or cardiac pump failure

Teach patient/family:

• To report headache, dizziness, loss of hearing, blurred vision, dyspnea, faintness, pain at IV site

• About the reason for giving product and expected results

nivolumab (Rx)

(nye-vol′ue-mab)

Opdivo

Func. class.: Antineoplastic, monoclonal antibody

USES: Treatment of BRAF V600 mutation-positive unresectable/metastatic melanoma, Hodgkin's disease, non–small-cell lung cancer (NSCLC), renal cell cancer, mesothelioma

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 240 mg over 30 min q2wk OR 480 mg over 30 min q4wk, until disease progression or unacceptable toxicity

Available forms: Injection 10 mg/mL

nizatidine (Rx)

(ni-za′ti-deen)

Func. class.: H_2-receptor antagonist

Chem. class.: Substituted thiazole

USES: Benign gastric and duodenal ulceration, prevention of duodenal ulcer recurrence, symptomatic relief of gastroesophageal reflux, heartburn prevention

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

Gastric and duodenal ulcer

• **Adult: PO** 300 mg at night or 150 mg bid for 4-8 wk; maintenance 150 mg at night

Prophylaxis of duodenal ulcer

• **Adult: PO** 150 mg/day at bedtime

Gastroesophageal reflux

• **Adult and child ≥12 yr: PO** 150 mg bid × ≤12 wk, max 300 mg/day

Heartburn prevention

• **Adult: PO** 75 mg before eating bid

Renal dose

• **Adult: PO** CCr 20-50 mL/min, give 150 mg every other day; CCr <20 mL/min, give 150 mg q72hr

⚠ HIGH ALERT

norepinephrine (Rx)

(nor-ep-i-nef′rin)

Levophed

Func. class.: Adrenergic

Chem. class.: Catecholamine

Do not confuse:

norepinephrine/EPINEPHrine

ACTION: Causes increased contractility and heart rate by acting on β-receptors in heart; also acts on α-receptors, thereby causing vasoconstriction in blood vessels; B/P is elevated, coronary blood flow improves, and cardiac output increases

USES: Acute hypotension, shock

CONTRAINDICATIONS: Hypersensitivity to this product or cyclopropane/halothane anesthesia, hypovolemia, mesenteric thrombosis

Precautions: Pregnancy, breastfeeding, geriatric patients, arterial embolism, peripheral vascular disease, hypertension, hyperthyroidism, cardiac disease, ventricular fibrillation, tachydysrhythmias, pheochromocytoma, hypotension, sulfite hypersensitivity

Black Box Warning: Extravasation

N

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 0.5-1 mcg/min titrated to B/P; maintenance 2-4 mcg/min; max 30 mcg/min
• **Child: IV INFUSION** 0.1 mcg/kg/min titrated to B/P; max 2 mcg/kg/min
Available forms: Inj 1 mg/mL
Administer:
Plasma expanders for hypovolemia; correct volume depletion before starting treatment
Continuous IV INFUSION route
• Dilute with 500-1000 mL D_5W or D_5/0.9% NaCl; average dilution 4 mg/1000 mL diluent (4 mcg base/mL); give as infusion 2-3 mL/min; titrate to response; discontinue gradually
• Store reconstituted sol in refrigerator ≤24 hr, protect from light, store unopened product at room temperature, do not use discolored sol

Y-site compatibilities: Alemtuzumab, alfentanil, amikacin, amiodarone, anidulafungin, argatroban, ascorbic acid, atenolol, atracurium, atropine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, ceftobiprole, cefTRIAXone, cefuroxime, cephalothin, chloramphenicol, chlorproMAZINE, cimetidine, cisatracurium, CISplatin, clindamycin, cloNIDine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DAPTOmycin, dexamethasone, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doripenem, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, irinotecan, isoproterenol, ketorolac, labetalol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, meropenem, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, mezlocillin, micafungin, miconazole, midazolam, milrinone, minocycline, mitoXANtrone, morphine, moxalactam, multiple vitamins injection, mycophenolate, nafcillin, nalbuphine, naloxone, netilmicin, niCARdipine, nitroglycerin, nitroprusside, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, phenylephrine, phytonadione, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxine, quiNIDine, ranitidine, remifentanil, ritodrine, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, vitamin B complex with C, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: *Headache,* anxiety, dizziness, insomnia, restlessness, tremor, cerebral hemorrhage
CV: *Palpitations, tachycardia, hypertension, ectopic beats, angina*
GI: *Nausea, vomiting*
GU: Decreased urine output
INTEG: Necrosis, tissue sloughing with extravasation, gangrene
RESP: Dyspnea
SYST: Anaphylaxis

PHARMACOKINETICS

IV: Onset 1-2 min; metabolized in liver; excreted in urine (inactive metabolites); crosses placenta

INTERACTIONS

• Do not use within 2 wk of MAOIs, antihistamines, ergots, methyldopa, oxy-

tocics, tricyclics because hypertensive crisis may result
Increase: B/P—oxytocics
Increase: pressor effect—tricyclics, MAOIs
Decrease: norepinephrine action—α-blockers

NURSING CONSIDERATIONS

Assess:
• I&O ratio; notify prescriber if output <30 mL/hr
• B/P, pulse q2-3min after parenteral route, ECG during administration continuously; if B/P increases, product is decreased, CVP or PWP during infusion if possible
• Paresthesias and coldness of extremities; peripheral blood flow may decrease

Black Box Warning: Extravasation: inj site: tissue sloughing; change injection sites if blanching or vasoconstriction occurs

• Sulfite sensitivity, which may be life-threatening
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding
Evaluate:
• Therapeutic response: increased B/P with stabilization, adequate tissue perfusion
Teach patient/family:
• About the reason for product administration; to report dyspnea, dizziness, chest pain

TREATMENT OF OVERDOSE:

Administer fluids, electrolyte replacement

norethindrone (Rx)

(nor-eth-in′drone)

Activelle ✱, Aygestin, Brevicon ✱, Camila, Errin, Estalis ✱, Heather, Incassia, Jencycla, Loestrin ✱, LeLo ✱, Minestrin ✱, Nora-BE

Func. class.: Progestogen

ACTION: Inhibits the secretion of pituitary gonadotropins, which prevents follicular maturation and ovulation; stimulates growth of mammary tissue; antineoplastic action against endometrial cancer

USES: Uterine bleeding (abnormal), amenorrhea, endometriosis, contraception

CONTRAINDICATIONS: Pregnancy, breast cancer, hypersensitivity, thromboembolic disorders, reproductive cancer, genital bleeding (abnormal, undiagnosed), liver tumors, hepatic disease
Precautions: Breastfeeding, hypertension, asthma, blood dyscrasias, HF, diabetes mellitus, depression, migraine headache, seizure disorders, bone/gallbladder/renal/hepatic disease, family history of breast or reproductive tract cancer, smoking, HIV

DOSAGE AND ROUTES

Amenorrhea, abnormal uterine bleeding (Aygestin)
• **Adult: PO** 2.5-10 mg/day on days 5-25 of menstrual cycle
Endometriosis (Aygestin)
• **Adult: PO** 5 mg/day × 2 wk, then increased by 2.5 mg/day × 2 wk up to 15 mg/day, may continue for 6-9 mo
Contraception
• **Adult: PO** 0.35 mg on 1st day of menses, then 0.35 mg/day
Available forms: Tabs 5 mg; tabs 0.35 mg
Administer:
• Titrated dose; use lowest effective dose
• One dose in AM; do not interrupt between pill packs; give at roughly same time of day
• Without regard to meals
• Store in dark area

SIDE EFFECTS

CNS: *Dizziness, headache,* migraines, depression, fatigue
CV: Hypotension, thrombophlebitis, edema, thromboembolism, CVA, stroke, PE, MI
EENT: Diplopia
GI: *Nausea,* vomiting, anorexia, cramps, increased weight, cholestatic jaundice
GU: Amenorrhea, cervical erosion, breakthrough bleeding, dysmenorrhea, vaginal candidiasis, breast changes,

(gynecomastia, testicular atrophy, impotence), endometriosis, spontaneous abortion, *breast tenderness*
INTEG: Rash, urticaria, acne, hirsutism, alopecia, oily skin, seborrhea, purpura, melasma
META: Hyperglycemia

PHARMACOKINETICS
Excreted in urine, feces; metabolized in liver, half-life 5-14 hr

INTERACTIONS
Decrease: progestin effect—barbiturates, carBAMazepine, fosphenytoin, phenytoin, rifampin
Drug/Herb
Decrease: contraception—St. John's wort
Drug/Food
Increase: caffeine level—caffeine
Drug/Lab Test
Increase: LDL
Decrease: GTT, HDL, alk phos

NURSING CONSIDERATIONS
Assess:
• **Weight daily:** notify prescriber of weekly weight gain >5 lb
• B/P at beginning of treatment and periodically
• I&O ratio; be alert for decreasing urinary output, increasing edema
• **Hepatic studies:** ALT, AST, bilirubin periodically during long-term therapy
• Edema, hypertension, cardiac symptoms, jaundice, thromboembolism
• **Mental status:** affect, mood, behavioral changes, depression
• Monitor for hypercalcemia
• Monitor Pap smear
Evaluate:
• Therapeutic response: decreased abnormal uterine bleeding, absence of amenorrhea
Teach patient/family:
• About cushingoid symptoms (fatigue, weakness, increased thirst/urination, anxiety, weight gain, facial puffiness)
• To report vaginal bleeding, amenorrhea, edema, jaundice, dark urine, clay-colored stools, dyspnea, headache, blurred vision, abdominal pain, numbness or stiffness in legs, chest pain; impotence or gynecomastia (men)
• To take at same time of day; not to interrupt between pill packs
• **Pregnancy:** to report suspected pregnancy immediately; to wait ≥3 mo after stopping product to become pregnant; to use backup contraception methods for 48 hr if treatment is not begun on the first day of menstruation
• To avoid smoking; CV reactions may occur
• That product does not protect against HIV, STDs
• That product may mask onset of menopause

nortriptyline (Rx)
(nor-trip'ti-leen)
Arentyl ✱, Aventyl ✱, Pamelor
Func. class.: Antidepressant, tricyclic
Chem. class.: Dibenzocycloheptene—secondary amine

Do not confuse:
nortriptyline/amitriptyline

ACTION: Blocks reuptake of norepinephrine and serotonin into nerve endings, thereby increasing action of norepinephrine and serotonin in nerve cells

USES: Major depression
Unlabeled uses: Postherpetic neuralgia, IBS, enuresis, panic disorder, social anxiety disorder

CONTRAINDICATIONS: Hypersensitivity to tricyclics, carBAMazepine; recovery phase of MI
Precautions: Breastfeeding, suicidal patients, severe depression, increased intraocular pressure, closed-angle glaucoma, urinary retention, cardiac/hepatic disease, hyperthyroidism, electroshock therapy, elective surgery, pregnancy, seizure disorders, prostatic hypertrophy

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

• **Adult: PO** 25 mg tid or qid; may increase to 150 mg/day; may give daily dose at bedtime
• **Adolescent/elderly: PO** 30-50 mg in 1 or 2 divided doses
Available forms: Caps 10, 25, 50, 75 mg; oral sol 10 mg/5 mL
Administer:
• Store in tight, light-resistant container at room temperature
• Increased fluids, bulk in diet if constipation occurs
• Without regard to meals
• Dosage at bedtime to avoid oversedation during day; may take entire dose at bedtime; geriatric patients may not tolerate once-daily dosing
• Gum, hard candy, frequent sips of water for dry mouth
• **Oral solution:** with fruit juice, water, or milk to disguise taste

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, headache, anxiety, tremors, stimulation, weakness, insomnia, nightmares, EPS (geriatric patients), increased psychiatric symptoms, seizures
CV: *Orthostatic hypotension,* ECG changes, *tachycardia,* hypertension, palpitations, dysrhythmias
EENT: *Blurred vision,* tinnitus, mydriasis, dry eyes
ENDO: SIADH, hyponatremia, hypothyroidism
GI: *Constipation, dry mouth,* nausea, vomiting, paralytic ileus, increased appetite, cramps, epigastric distress, jaundice, hepatitis, stomatitis, weight gain
GU: *Urinary retention,* acute renal failure, sexual dysfunction
HEMA: Agranulocytosis, thrombocytopenia, eosinophilia, leukopenia
INTEG: Rash, urticaria, sweating, pruritus, photosensitivity
SYST: Serotonin syndrome

PHARMACOKINETICS

PO: Steady-state 4-19 days; metabolized by liver; excreted by kidneys; crosses placenta; excreted in breast milk; half-life 18-28 hr, protein binding 93%-95%

INTERACTIONS

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide, levomethadyl; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)
• Heavy smoking: decreased product effect
• **Hyperpyretic crisis, seizures, hypertensive episode:** MAOI
Increase: effects of direct-acting sympathomimetics (EPINEPHrine), alcohol, barbiturates, benzodiazepines, CNS depressants, products increasing QT interval, other anticholinergics
Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs, serotonin receptor agonists, linezolid; methylene blue (IV)
Decrease: effects of guanethidine, cloNIDine, indirect-acting sympathomimetics (ePHEDrine)
Drug/Herb
Increase: CNS effect—evening primrose oil, kava, valerian
Decrease: nortriptyline level—St. John's wort, SAM-e, yohimbe
Drug/Lab Test
Increase: serum bilirubin, blood glucose, alk phos
Decrease: VMA, 5-HIAA
False increase: urinary catecholamines

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Suicidal thoughts/behaviors in children/young adults: not approved for children; monitor for suicidal ideation in depression, adolescents, young adults

• Monitor for glaucoma exacerbation and paralytic ileus

• B/P (lying, standing), pulse q4hr; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; VS q4hr in patients with CV disease
• Blood studies: thyroid function tests, LFTs, serum nortriptyline level/target 50-150 mg/mL if patient is receiving long-term therapy
• Weight weekly; appetite may increase with product
• **PR, QT prolongation:** dysrhythmias in cardiac patients; assess for chest pain, palpitations, dyspnea
• EPS primarily in geriatric patients: rigidity, dystonia, akathisia, preferred tricyclic in geriatric patients
• Mental status changes: mood, sensorium, affect, suicidal tendencies, increase in psychiatric symptoms, depression, panic
• Urinary retention, constipation; constipation is more likely to occur in children
• **Withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness; do not usually occur unless product was discontinued abruptly
• Alcohol intake; if alcohol is consumed, hold dose until AM
• **Serotonin syndrome, neuroleptic malignant syndrome:** assess for increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist if needed (rare)
• Assistance with ambulation during beginning therapy because drowsiness/dizziness occurs; safety measures including side rails, primarily for geriatric patients
• **Beers:** avoid in older adults; highly anticholinergic, sedating, and may cause orthostatic hypotension
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding

Evaluate:
• Therapeutic response: decreased depression

Teach patient/family:
• That therapeutic effects may take 2-3 wk; only small quantities may be dispersed
• To use caution when driving, during other activities requiring alertness because of drowsiness, dizziness, blurred vision
• To avoid alcohol ingestion, other CNS depressants; to avoid MAOIs within 14 days
• Not to discontinue medication quickly after long-term use; may cause nausea, headache, malaise
• To wear sunscreen or large hat because photosensitivity occurs
• To immediately report urinary retention, worsening depression, suicidal thoughts/behaviors

TREATMENT OF OVERDOSE:
ECG monitoring; lavage; administer anticonvulsant

nusinersen (Rx)
(neu-si-ner'sen)
Spinraza
Func. class.: Miscellaneous CNS agent muscular dystrophy
Chem. class.: Antisense oligonucleotide

Do not confuse:
Nusinersen/Neurontin
Nucynta, Sprinraza/Spriva

USES: Spinal muscular atrophy

DOSAGE AND ROUTES
Adult/child: Intrathecal 12 mg q14days 3 doses, then 12 mg q30days after third dose; maintenance 12 mg q4mo thereafter
Available forms: Injection 12 mg/5 mL single-use vials

nystatin, systemic (Rx)
(nye-stat'in)
Nystop, Nyaderm
Func. class.: Antifungal
Chem. class.: Amphoteric polyene

ACTION: Interferes with fungal DNA replication; binds sterols in fungal cell

membrane, which increases permeability, leaking of cell nutrients

USES: *Candida* species causing oral, intestinal infections

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, systemic infection

DOSAGE AND ROUTES

Oral infection

- **Adult/adolescent/child: SUSP** 400,000-600,000 units qid; use ½ dose in each side of mouth; swish and swallow; use for at least 48 hr after symptoms resolved
- **Infant: SUSP** 200,000 units qid (100,000 units in each side of mouth)
- **Newborn and premature infant: SUSP** 100,000 units qid
- **Adult/child: TROCHES** 200,000-400,000 units qid × ≤2 wk

GI infection

- **Adult: PO** 500,000-1,000,000 units tid

Cutaneous candidiasis

- **Adult/child: Top cream/ointment** apply to affected area bid; **powder** apply to affected area bid-tid

Available forms: Tabs 500,000 units; suspension 100,000 mg/mL

Administer:

Store at room temperature for oral susp; tabs in tight, light-resistant containers at room temperature

PO route

- Oral susp dose by placing ½ in each cheek, then swallow; do not mix with food
- Topical dose after cleansing area; mouth may be swabbed; very moist lesions best treated with topical powder

SIDE EFFECTS

GI: Nausea, vomiting, anorexia, diarrhea, cramps

PHARMACOKINETICS

PO: Little absorption, excreted in feces

NURSING CONSIDERATIONS

Assess:

- **Allergic reaction:** rash, urticaria, irritated oral mucous membranes; product may have to be discontinued
- Obtain culture, histologic tests to confirm organism
- Predisposing factors: antibiotic therapy, pregnancy, diabetes mellitus, sexual partner infection (vaginal infections)
- **Pregnancy/breastfeeding:** use only if clearly needed; may breastfeed

Evaluate:

- Therapeutic response: culture negative for *Candida*

Teach patient/family:

- That long-term therapy may be needed to clear infection; to complete entire course of medication
- To avoid commercial mouthwashes for mouth infection
- To shake susp before measuring each dose, to swish and swallow
- To notify prescriber of irritation; product may have to be discontinued

nystatin topical
See Appendix B

obeticholic acid (Rx)

(oh-bet-i-koe′lik as′id)

Ocaliva

Func. class.: Farnesoid X receptor agonist

USES: Treatment of primary biliary cholangitis (PBC) in combination with ursodiol (ursodeoxycholic acid) with an inadequate response to ursodiol, or in those unable to tolerate ursodiol

DOSAGE AND ROUTES

Adult: PO Noncirrhotic or compensated Child-Pugh class A: Initial: 5 mg daily; if an adequate reduction in alkaline phosphatase and/or total bilirubin has not been achieved after 3 mo, increase to 10 mg daily, max 10 mg/day

Hepatic dose

- **Adult: PO** Child-Pugh B-C 5 mg weekly ×3 mo then increase as needed

Available forms: Tabs 5, 10 mg

⚠ HIGH ALERT

obinutuzumab (Rx)

(oh′bi-nue-tooz′ue-mab)

Gazyva

Func. class.: Antineoplastic; biologic response modifier; monoclonal antibody

ACTION: A recombinant, human monoclonal antibody that binds to the gastric B-lymphocyte–associated antibody; action is indirect, possible through T-cell–mediated anti-tumor responses

USES: Chronic lymphocytic leukemia, previously untreated in combination with chlorambucil; non-Hodgkin's lymphoma (follicular lymphoma) in relapse or refractory to rituximab-containing regimen, used in combination; previously untreated stage II bulky, III, or IV follicular lymphoma in combination, then monotherapy

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, cardiac disease, children, human antichimeric antibody (HACA), human antimurine antibody (HAMA), infection, infusion-related reactions, neutropenia, pulmonary disease, thrombocytopenia, tumor lysis syndrome, vaccination

Black Box Warning: Hepatitis B exacerbation, progressive multifocal leukoencephalopathy

DOSAGE AND ROUTES

Chronic lymphocytic leukemia (previously untreated); in combination with chlorambucil

Adult: IV: Cycle 1: 100 mg on day 1, followed by 900 mg on day 2, followed by 1000 mg weekly for 2 doses (days 8 and 15); treatment cycle is 28 days; **cycles 2 through 6:** 1000 mg on day 1 every 28 days for 5 doses

Follicular lymphoma (relapsed/refractory)

Adult: IV: Cycle 1 (in combination with bendamustine): 1000 mg weekly on days 1, 8, and 15; treatment cycle is 28 days; **cycles 2 through 6 (in combination with bendamustine):** 1000 mg on day 1 every 28 days for 5 doses; **obinutuzumab monotherapy:** 1000 mg every 2 mo for up to 2 yr

Available forms: Sol for inj 1000 mg/40 mL (25 mg/mL)

Administer:

IV intermittent INFUSION route

- Due to the risk of hypotension, consider withholding antihypertensive medications for 12 hr before, during, and for the 1st hr after use until blood pressure is stable
- Single-use vials do not contain preservatives
- Do not mix with other products
- Give antimicrobial prophylaxis to neutropenic patients throughout treatment; consider antiviral and antifungal prophylaxis as needed

• **Premedication for cycle 1, days 1 and 2:** acetaminophen 650-1000 mg, and diphenhydrAMINE 50 mg at least 30 min before infusion, dexamethasone 20 mg IV or methylPREDNISolone 80 mg IV at least 1 hr before infusion
• **Premedication for cycle 1, days 8 and 15, and cycles 2-6, day 1:** acetaminophen 650-1000 mg at least 30 min before infusion; those with any infusion-related reaction with the previous infusion should also receive diphenhydrAMINE 50 mg at least 30 min before the infusion; if the patient had a grade 3 infusion-related reaction with the previous dose or has a lymphocyte count >25 × 10^9/L, additionally administer dexamethasone 20 mg IV or methylPREDNISolone 80 mg IV at least 1 hr before infusion
• Use in a facility to adequately monitor and treat infusion reactions
• Visually inspect parenteral products for particulate matter and discoloration before use
• Prepare all doses in 0.9% NaCl; do not admix; use a final concentration of 0.4-4 mg/mL; give as an IV infusion only

Reconstitution: Cycle 1, days 1 and 2:
• Withdraw 4 mL (100 mg) from the vial and dilute into 100 mL 0.9% NaCl for use on day 1; mix by gentle inversion; do not shake, use immediately
• Withdraw the remaining 36 mL (900 mg) and dilute into 250 mL 0.9% NaCl for use on day 2; mix by gentle inversion; do not shake

Cycle 1, days 8 and 15; cycles 2-6:
• Withdraw 40 mL (1000 mg) from the vial and dilute into 250 mL 0.9% NaCl; mix by gentle inversion; do not shake
• Store following reconstitution: store at 2°C-8°C (36°F-46°F) for up to 24 hr; do not freeze; allow to come to room temperature before administration; use a dedicated line, protect from light
• **Day 1 (100-mg dose):** give at initial rate of 25 mg/hr over 4 hr; do not increase the infusion rate
• **Day 2 (900-mg dose):** give at 50 mg/hr × 30 min; if no hypersensitivity or infusion-related events occur, increase the rate by 50 mg/hr q30min to a max rate of 400 mg/hr
• **Subsequent infusions (1000-mg dose):** give at rate of 100 mg/hr for 30 min; if no hypersensitivity or infusion-related events occur, increase the infusion rate by 100 mg/hr q30min, max rate of 400 mg/hr

SIDE EFFECTS

CNS: Headache, *fever,* chills, flushing
CV: Cardiac arrest, MI, sinus tachycardia, hypertension
GI: *Constipation,* decreased appetite, diarrhea, hepatitis/hepatic failure, nausea, vomiting
HEMA: Neutropenia, thrombocytopenia, lymphopenia, leukopenia, *anemia*
META: Lower potassium/*sodium*/calcium, aluminum, higher *potassium*/uric acid
RESP: Wheezing, dyspnea, *cough*
SYST: Tumor lysis syndrome, *infection*
MISC: *Arthralgia*

PHARMACOKINETICS

Terminal half-life 29 days

INTERACTIONS

Increase: adverse reactions—abciximab, belimumab, cloZAPine, pimecrolimus; avoid concurrent use
Increase: infection—denosumab, natalizumab, live virus vaccines
Increase: hypotension—antihypertensives
Increase: thrombocytopenia—chlorambucil
Increase: hematologic toxicity—leflunomide
Increase: immunosuppression—tofacitinib; avoid concurrent use
Drug/Herb
Decrease: obinutuzumab—echinacea
Drug/Lab

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Hepatitis B: reactivation of HBV in those who are HBsAg positive, HBsAg negative, and core antibody anti-HBc positive; may result in fulminant hepatitis, hepatic failure, or death, screen high-risk patients before use, monitor carriers for active HBV infection during and for several months after therapy completion, discontinue treatment of any other antineoplastics if infection is reactivated

Black Box Warning: Progressive multifocal leukoencephalopathy (PML): notify prescriber of any new, worsening neurological signs/symptoms (ataxia, visual changes, confusion)

- **Tumor lysis syndrome:** can occur within 24 hr of 1st infusion; those with high tumor burden or lymphocyte count >25 × 10^9/L are at increased risk; monitor serum creatinine, potassium, calcium, uric acid, phosphate closely
- **Severe/life-threatening infusion reactions:** ⅔ have a reaction to 1st dose; consider withholding antihypertensives for 12 hr before, during, and for 1 hour after infusion
- **Bone marrow suppression:** CBC with differential before infusion and regularly, platelets
- **Infection:** signs of infection; provide neutropenia precautions
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:

- Therapeutic response: decreased disease progression

Teach patient/family:

- About the reason for treatment and expected results
- To avoid live virus vaccines, that vaccinations should be brought up-to-date before treatment

Black Box Warning: Hepatitis B: to report yellow skin, eyes, fatigue, dark urine; that continuing follow-up will be needed

Black Box Warning: Progressive multifocal leukoencephalopathy (PML): to report confusion, visual changes, dizziness, difficulty walking or talking

ocrelizumab (Rx)

(oc´-re-liz´-ue-mab)

Ocrevus, Mycapssa

Func. class.: Multiple sclerosis agent

USES: For the treatment of multiple sclerosis

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

Relapsing or primary progressive forms of multiple sclerosis

- **Adult: IV INFUSION** 300 mg then a second 300 mg 2 wk later; subsequent infusions of 600 mg are given q6mo

Available forms: Solution for injection 300 mg (30 mg/mL)

octreotide (Rx)

(ok-tree´oh-tide)

SandoSTATIN, SandoSTATIN LAR Depot

Func. class.: Growth hormone, antidiarrheal

Chem. class.: Synthetic analog of somatostatin

Do not confuse:
SandoSTATIN/SandIMMUNE

ACTION: A potent growth hormone similar to somatostatin

USES: **SandoSTATIN:** acromegaly, improves symptoms of carcinoid tumors, vasoactive intestinal peptide tumors (VIPomas); **LAR Depot:** long-term maintenance of acromegaly, carcinoid tumors, VIPomas

Unlabeled uses: GI fistula, variceal bleeding, diarrheal conditions, pancreatic

fistula, irritable bowel syndrome, dumping syndrome, short bowel syndrome, insulinoma, hepatorenal syndrome

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, geriatric patients, diabetes mellitus, hypothyroidism, renal disease

DOSAGE AND ROUTES

Acromegaly

• **Adult: SUBCUT** (SandoSTATIN) 50-100 mcg bid-tid, adjust q2wk based on growth hormone levels or **IM** (SandoSTATIN LAR) 20 mg q4wk × 3 mo, adjust based on growth hormone levels; **PO** 20 mg bid

VIPomas (watery diarrhea)

• **Adult: SUBCUT** (SandoSTATIN) 200-300 mcg/day in 2-4 doses for 2 wk, or **IM** (SandoSTATIN LAR) 20 mg q4wk × 2 mo, adjust dose

Flushing/diarrhea in carcinoid tumors

• **Adult: SUBCUT** (SandoSTATIN) 100-600 mcg/day in 2-4 doses for 2 wk, titrated to patient response or **IM** (SandoSTATIN LAR) 20 mg q4wk × 2 mo, adjust dose

GI fistula

• **Adult: SUBCUT** (SandoSTATIN) 50-200 mcg q8hr

Antidiarrheal in AIDS patients (unlabeled)

• **Adult: SUBCUT** (SandoSTATIN) 50 mcg q8hr prn, titrate up to 500 mcg q8hr

Dumping syndrome (unlabeled)

• **Adult: SUBCUT** (SandoSTATIN) 50-150 mcg/day

Variceal bleeding (unlabeled)

• **Adult: IV bolus** 50 mcg; then 50 mcg/hr continuous infusion

Continuous IV infusion 50 mcg/hr for 2-5 days

Available forms: Inj (SandoSTATIN) 0.05, 0.1, 0.2, 0.5, 1 mg/mL; inj powder for susp (LAR depot) 10, 20, 30 mg/5 mL; delayed-release capsule 20 mg

Administer:

• Store in refrigerator for unopened amps, vials or at room temperature for 2 wk; protect from light; do not use discolored or cloudy sol

• Do not use if discolored or if particulates are present

IM route

• Reconstitute with diluent provided; give in gluteal region, immediately after reconstitution, rotate injection sites

SUBCUT route

• Rotate inj site; use hip, thigh, abdomen

• Avoid using medication that is cold; allow to reach room temperature; do not use LAR depot, do not use if discolored or if particulates are present

IV route

• **IV direct:** give over 3 min; may give undiluted

• **Intermittent IV infusion:** dilute in 50-200 mL D_5W, 0.9% NaCl; give over 15-30 min

• Solution is stable for 24 hr, protect from light

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B colloidal, amphotericin B lipid complex, amphotericin B liposome, ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, arsenic trioxide, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium chloride/gluconate, capreomycin, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin, DAUNOrubicin liposome, dexamethasone, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, DOXOrubicin, DOXOrubicin

O

liposomal, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, gallium nitrate, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, lansoprazole, leucovorin, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methohexital, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoMYcin, mitoXANTRONE, mivacurium, morphine, moxifloxacin, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxaliplatin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, piperacillin, piperacillin-tazobactam, polymyxin B, potassium acetate/chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphates, streptozocin, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, topotecan, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: *Headache, dizziness, fatigue, weakness,* depression, anxiety, tremors, seizure, paranoia

CV: *Sinus bradycardia, conduction abnormalities,* dysrhythmias, chest pain, SOB, thrombophlebitis, ischemia, HF, hypertension, palpitations, QT prolongation

ENDO: *Hypo/hyperglycemia, ketosis, hypothyroidism,* galactorrhea, diabetes insipidus

GI: *Diarrhea, nausea, abdominal pain, vomiting, flatulence, distention, constipation,* increased LFTs, cholelithiasis, ileus

GU: UTI

HEMA: Hematoma of inj site, bruise

INTEG: Rash, urticaria, pain; inflammation at inj site

PHARMACOKINETICS

Absorbed rapidly, completely; peak ½ hr (subcut/IV), 2-3 wk (IM); half-life 1.7 hr, duration 12 hr, excreted unchanged in urine 32%, protein binding 65%

INTERACTIONS

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin); arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: effect of β-blockers, quiNIDine, rifAMPin, reduction of dose may be required

Increase: hypoglycemia: MAOIs, salicylates, SSRIs, assess for hypoglycemia

Decrease: effect of insulin, oral antidiabetics, monitor blood glucose

Decrease: effect of—bromocriptine

Decrease: effect of—cycloSPORINE, dose may need to be modified

Drug/Food

Decrease: absorption of dietary fat, vit B_{12} levels

Drug/Lab Test

Increase: glucose

Decrease: T_4, thyroid function tests, vit B_{12}, glucose

NURSING CONSIDERATIONS

Assess:

• Growth hormone antibodies, IGF-1 at 1- to 4-hr intervals for 8-12 hr after dose

(acromegaly); 5-HIAA, plasma serotonin; blood glucose, serotonin levels **(carcinoid tumors)**, plasma substance P, plasma vasoactive intestinal peptide (VIP) **(VIPoma)**
• Thyroid function tests: T_3, T_4, T_7, TSH to identify hypothyroidism
• Vital signs B/P, pulse, hydration status
• Fecal fat, serum carotene, somatomedin-C q14days, glucose; plasma serotonin levels (carcinoid tumors); plasma vasoactive intestinal peptide levels (VIPoma); serum growth hormone, serum IGF-1 baseline and periodically, diabetes to monitor blood glucose
• Chronic therapy may cause B_{12} absorption issues; monitor B_{12} and replace if necessary
• **Allergic reaction:** rash, itching, fever, nausea, wheezing
• **Cardiac status:** bradycardia, conduction abnormalities, dysrhythmias; monitor ECG for QT prolongation, low voltage, axis shifts, early repolarization, R/S transition, early wave progression
• Gallbladder disease, monitor for abdominal pain, ultrasound of gallbladder baseline, periodically
• **Ileus:** assess character of stools, bowel sounds, baseline and throughout treatment
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: relief of diarrhea in patients with AIDS; improved symptoms of carcinoid or VIP tumors; decreasing symptoms of acromegaly

Teach patient/family:
• That regular assessments are required; that diabetics need to monitor blood glucose
• About SUBCUT inj if patient or other persons will be giving inj
• That product may cause dizziness, drowsiness, weakness; to avoid hazardous activities if these occur; to report abdominal pain immediately
• That pregnancy may occur in acromegaly because fertility may be restored
• That patients with diabetes need to monitor glucose regularly

odevixibat (Rx)

(OH-de-VIX-i-bat)
Bylvay
Func. class.: Bile acid transport (IBAT) inhibitor

USES: Progressive familial intrahepatic cholestasis for the treatment of pruritus in patients 3 mo of age and older

DOSAGE AND ROUTES

• **Child: PO** Initial dose: 40 mcg/kg daily in the morning; maintenance 40-120 mcg/kg daily in the morning; max 6 mg/day

Available forms: Oral pellets, capsules 200 mcg, 400 mcg, 600 mcg, 1200 mcg

ofloxacin (Rx)

(o-flox´a-sin)
Func. class.: Antiinfective
Chem. class.: Fluoroquinolone

ACTION: Interferes with conversion of intermediate DNA fragments into high-molecular-weight DNA in bacteria; inhibits DNA gyrase

USES: Treatment of lower respiratory tract infections (pneumonia, bronchitis), genitourinary infections (prostatitis, UTIs) caused by *Escherichia coli, Klebsiella pneumoniae, Chlamydia trachomatis,* skin and skin-structure infections; otitis media, PID

Unlabeled uses: Spontaneous bacterial peritonitis

CONTRAINDICATIONS: Hypersensitivity to quinolones

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, seizure disorders, excessive sunlight, hypokalemia, colitis, QT prolongation

Black Box Warning: Tendon pain/rupture, tendinitis, myasthenia gravis, psychiatric event, peripheral neuropathy, neurotoxicity, acute bacterial exacerbations of UTIs/bronchitis

DOSAGE AND ROUTES

Cervicitis/urethritis (acute)
Adult: PO Nongonococcal (due to *Chlamydia trachomatis*): 300 mg q12hr × 7 days; 400 mg as a single dose (gonorrhea)
Chronic bronchitis (acute exacerbation), community-acquired pneumonia, skin and skin structure infections (uncomplicated)
Adult: PO 400 mg q12hr × 10 days
Pelvic inflammatory disease (acute)
Adult: PO: 400 mg q12hr × 10-14 days, use with metronidazole
Prostatitis
Adult:
PO 300 mg q12hr × 6 wk
UTI
Adult: PO **Uncomplicated:** 200 mg q12hr × 3-7 days; **complicated:** 200 mg q12hr × 10 days
Spontaneous bacterial peritonitis (unlabeled)
Adult: PO 400 mg q12h × 5-7 days
Renal dose
• **Adult: PO** CCr 20-50 mL/min, give q24hr; CCr <20 mL/min, give 50% of dose q24hr
Hepatic dose
• **Adult (Child-Pugh class C): PO** max 400 mg/day
Available forms: Tabs 200, 300, 400 mg
Administer:
PO route
• 2 hr before or 2 hr after antacids, calcium, iron, zinc products, without regard to food, maintain hydration
• Store at room temperature, protect from light

SIDE EFFECTS

CNS: *Dizziness, headache, fatigue, somnolence,* depression, insomnia, lethargy, malaise, seizures, vertigo
CV: QT prolongation, dysrhythmias, chest pain
EENT: Visual disturbances, pharyngitis
GI: *Diarrhea, nausea, vomiting,* anorexia, flatulence, heartburn, dry mouth, increased AST, ALT, abdominal pain, constipation, CDAD, abnormal taste, xerostomia
HEMA: Blood dyscrasias
INTEG: Rash, pruritus, photosensitivity
MS: Tendinitis, tendon rupture, rhabdomyolysis
SYST: Anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS

PO: Peak 1-2 hr; half-life 4-8 hr; steady-state 2 days; excreted in urine as active product, metabolites; 90%-95% bioavailability

INTERACTIONS

Black Box Warning: Increase: tendon rupture/tendinitis—corticosteroids

• May alter blood glucose levels: antidiabetics
Possible theophylline toxicity: theophylline
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine
Increase: CNS stimulation, seizures—NSAIDs
Increase: anticoagulation—warfarin
Decrease: ofloxacin—sevelamer
Decrease: absorption—antacids with aluminum, magnesium, iron products, sucralfate, zinc products; separate by 2 hr
Drug/Lab Test
Increase: INR

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Tendon rupture/tendinitis: more common in lung, heart, kidney transplants or geriatric patients; assess for pain or inflammation; product should be discontinued; steroids may increase risk

• **Blood studies:** BUN, creatinine, AST, ALT, CBC, blood glucose, INR (warfarin use); hypoglycemia is more common in diabetes in those >60 yr
• **CNS symptoms:** insomnia, vertigo, headache, agitation, confusion; **seizures,**

pseudotumor cerebri; if serious CNS reactions occur, stop drug

Black Box Warning: Myasthenia gravis: product may increase weakness; avoid use in patients with myasthenia gravis

Black Box Warning: Peripheral neuropathy: stop drug immediately if this occurs, may be more common with fluoroquinolones

Black Box Warning: CDAD: assess for diarrhea during and for a few months after discontinuing drug, if CDAD is suspected, discontinue

- For overgrowth of infection in long-term treatment
- **Anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis:** rash, flushing, urticaria, pruritus, peripheral neuropathy; may be fatal; may occur even after first dose; have emergency equipment nearby

Evaluate:
- Therapeutic response: culture negative, absence of symptoms of infection

Teach patient/family:
- To ambulate, perform activities using assistance if dizziness or light-headedness occurs
- To complete full course of therapy; to take with plenty of fluids
- That those with diabetes are more prone to hypoglycemia
- To avoid iron- or mineral-containing supplements within 2 hr before or after dose; to take without regard to meals
- **Anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis:** that allergic reactions usually occur after first dose but may occur later; to stop product; to report to prescriber rash, fever
- To report bloody diarrhea immediately
- To avoid sun exposure; photosensitivity can occur
- To avoid use with other products unless approved by prescriber
- To notify prescriber immediately if tingling, pain in extremities occurs; muscle/tendon pain, numbness in extremities

ofloxacin ophthalmic

See Appendix B

OLANZapine (Rx) REMS

(oh-lanz´a-peen)

ZyPREXA, ZyPREXA Relprevv, ZyPREXA Zydis

Func. class.: Antipsychotic (1st generation), neuroleptic

Chem. class.: Thienobenzodiazepine

Do not confuse:
OLANZapine/olsalazine
ZyPREXA/CeleXA/ZyrTEC /Zestril/Zolpidem

ACTION: May mediate antipsychotic activity by both DOPamine and serotonin type 2 (5-HT2) antagonists; may antagonize muscarinic receptors, histaminic (H_1)- and α-adrenergic receptors

USES: Schizophrenia, acute manic episodes with bipolar disorder, acute agitation

Unlabeled uses: Chemotherapy-related breakthrough nausea, vomiting

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, geriatric patients, hypertension, cardiac/renal/hepatic disease, diabetes, agranulocytosis, abrupt discontinuation, Asian patients, closed-angle glaucoma, coma, leukopenia, QT prolongation, tardive dyskinesia, torsades de pointes, suicidal ideation, stroke history, TIA

Black Box Warning: Increased mortality in elderly patients with dementia-related psychosis, postinjection delirium/sedation syndrome

DOSAGE AND ROUTES

Schizophrenia
- **Adult: PO** 5-10 mg/day initially, may increase dosage by 5 mg at ≥1 wk

intervals, max 20 mg/day; **ORALLY DISINTEGRATING** tabs: daily, open blister pack, place tab on tongue, let disintegrate, swallow; **ext rel inj** (Zyprexa Relprevv) **IM** 150-300 mg q2wk or 405 mg q4wk

- **Geriatric/debilitated: PO** 5 mg/day, may increase cautiously at 1-wk intervals, max 20 mg/day
- **Adolescent: PO** 2.5 or 5 mg/day, target 10 mg/day, max 20 mg

Acute mania or mixed episodes associated with bipolar I disorder

- **Adult: PO** 10-15 mg/day, may increase dose after >24 hr by 5 mg, max 20 mg/day
- **Adolescent: PO** 2.5 or 5 mg/day, target 10 mg/day, max 20 mg/day

Acute agitation associated with schizophrenia, bipolar I mania

- **Adult: IM** (reg rel) 10 mg once
- **Geriatric: IM** (reg rel) 2.5-5 mg once

Chemotherapy nausea/vomiting prophylaxis (unlabeled)

- **Adult:** 10 mg on day of chemotherapy, then 10 mg on day 2 ,3, 4 with dexamethasone and palonosetron day 1; **breakthrough nausea/vomiting** 10 mg daily × 3 days

Available forms: Tab 2.5, 5, 7.5, 10, 15, 20 mg; **orally disintegrating tabs** 5, 10, 15, 20 mg (ZyPREXA Zydis); **powder for inj** 10 mg; **ext rel powder for susp for inj** 210, 300, 405 mg base/vial (ZyPREXA Relprevv)

Administer:

- Decreased dose in geriatric patients

PO route

- With full glass of water, milk, food to decrease GI upset, may give without regard to food
- Store in tight, light-resistant container
- **Orally disintegrating tabs:** open blister pack; place tab on tongue until dissolved; swallow; no water needed; do not break, crush, chew
- Keep recumbent if dizziness occurs

IM route (ZyPREXA intramuscular)

- Inspect for particulate, discoloration before use; if present, do not use
- Dissolve contents of vials with 2.1 mL sterile water for inj (5 mg/mL); use immediately
- Do not use IV or subcut
- Inject slowly, deep into muscle mass
- Keep recumbent if dizziness occurs

IM route (ZyPREXA Relprevv)

Black Box Warning: Available only through restricted distribution program (Zyprexa Relprevv Patient Care Program, 877-772-9390) due to postinjection delirium/sedation syndrome; given at a facility with emergency services; continuous observation; monitor for 3 hr after injection

- Use gloves to prepare; irritating to skin
- Use deep IM gluteal inj only
- Use only diluent provided in kit; give q2-4wk using 19-G, 1.5-inch needle in kit; for obese patients, use 19-G, 2-inch or larger needle

SIDE EFFECTS

CNS: EPS (pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia), seizures, headache, neuroleptic malignant syndrome (rare), agitation, nervousness, hostility, *dizziness,* hypertonia, *tremor,* euphoria, confusion, *drowsiness,* fatigue, abnormal gait, insomnia, fever, suicidal thoughts

CV: Hypotension, tachycardia, chest pain, heart failure, sudden death (geriatric patients, IM), orthostatic hypotension, peripheral edema

ENDO: Increased prolactin levels, hypo/hyperglycemia

GI: *Dry mouth, nausea, vomiting, appetite, dyspepsia,* anorexia, *constipation,* abdominal pain, *weight gain,* jaundice, hepatitis

GU: Urinary retention, urinary frequency, enuresis, impotence, amenorrhea, gynecomastia, breast engorgement, premenstrual syndrome

HEMA: Neutropenia, agranulocytosis, leukopenia

INTEG: Rash

MISC: Peripheral edema, accidental injury, hypertonia, hyperlipidemia

MS: *Joint pain,* twitching

RESP: *Cough, pharyngitis;* fatal pneumonia (geriatric patients, IM)

PHARMACOKINETICS

Well absorbed (60%), metabolized by liver, glucuronidation/oxidation by CYP1A2 and CYP2D6; excreted in urine (57%), feces (30%); 93% bound to plasma proteins; half-life 21-54 hr, extended in geriatric patients; clearance decreased in women, increased in smokers, peak PO 6 hr, IM 15-45 min, IM ext rel 7 days

INTERACTIONS

Increase: sedation—other CNS depressants, alcohol, barbiturate anesthetics, antihistamines, sedatives/hypnotics, antidepressants

Increase: OLANZapine levels—CYP1A2 inhibitors (fluvoxaMINE)

Increase: hypotension—antihypertensives, alcohol, diazePAM

Increase: anticholinergic effects—anticholinergics

Black Box Warning: Increase: respiratory depression—opioids

Decrease: OLANZapine levels—CYP1A2 inducers: carBAMazepine, omeprazole, rifAMPin

Decrease: antiparkinson activity—levodopa, bromocriptine, other DOPamine agonists

Drug/Lab Test

Increase: LFTs, prolactin, CPK

Drug/Herb

Increase: toxicity—kava

Decrease: olanzapine effect—St. John's wort; avoid concurrent use

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Postinjection delirium/sedation syndrome (ZyPREXA Relprevv): monitor continuously for ≥3 hr after injection; patient must be accompanied when leaving: assess for sedation, coma, delirium, EPS, slurred speech, altered gait, aggression, dizziness, weakness, hypertension, seizures; before leaving, confirm that patient is alert, oriented, and free of any other symptoms

- **Mental status:** assess orientation, affect, LOC, reflexes, coordination, sleep pattern disturbances, mood, behavior, presence of hallucinations and type before initial administration, monthly; EPS, including akathisia (inability to sit still, no pattern to movements), tardive dyskinesia (bizarre movements of jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait), suicidal thoughts, behaviors
- **Renal status:** I&O ratio; palpate bladder if low urinary output occurs; urinary retention may be cause, especially in geriatric patients; urinalysis recommended before, during prolonged therapy
- Bilirubin, CBC, LFTs
- B/P sitting, standing, lying: take pulse, respirations during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; obtain baseline ECG
- Dizziness, faintness, palpitations, tachycardia on rising

Black Box Warning: Geriatric patients for serious reactions: fatal pneumonia, heart failure, stroke leading to death (IM); do not use in dementia-related psychosis

- **Neuroleptic malignant syndrome:** hyperpyrexia, muscle rigidity, increased CPK, altered mental status, acute dystonia (cheek chewing, swallowing, eyes, pill rolling), stop drug immediately
- **EPS:** May occur after long-term use
- **Hyperthermia:** Monitor for excessive heat, worse with exercising
- Constipation, urinary retention daily; increase bulk, water in diet
- Weight gain, hyperglycemia, metabolic changes in diabetic patients
- Supervised ambulation until patient stabilized on medication; do not involve patient in strenuous exercise program because fainting is possible; patient should not stand still for long periods
- **Hyperglycemia:** increased in diabetic patient, monitor FBS baseline and periodically

• **Metabolic syndrome:** large weight gain, increased B/P, FBS, cholesterol, and triglycerides, BMI
• **DRESS:** may be fatal; fever, hepatitis, cutaneous reactions, eosinophilia, nephritis, pneumonia, myocarditis, discontinue immediately
• **Beers:** avoid in older adults except for schizophrenia, bipolar disorder, or short-term use as an antiemetic during chemotherapy; increased risk of stroke
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause EPS in infant if used in 3rd trimester; those pregnant should enroll women in the National Pregnancy Registry for Atypical Antipsychotics, 1-866-961-2388; excreted in breast milk, avoid breastfeeding

Evaluate:
• Therapeutic response: decrease in emotional excitement, hallucinations, delusion, paranoia, reorganization of patterns of thought, speech

Teach patient/family:

Black Box Warning: About postinjection delirium/sedation syndrome: all symptoms, not to drive or engage in hazardous activities after injection on that day

• To use good oral hygiene; frequent rinsing of mouth; sugarless gum, hard candy, ice chips for dry mouth
• To avoid hazardous activities until product response is determined
• That orthostatic hypotension occurs often; to rise from sitting or lying position gradually
• To avoid hot tubs, hot showers, tub baths because hypotension may occur
• To avoid abrupt withdrawal of this product because EPS may result; product should be withdrawn slowly
• To avoid OTC preparations (cough, hay fever, cold) unless approved by prescriber because serious product interactions may occur; to avoid use with alcohol, CNS depressants, opioids because increased drowsiness may occur
• **Suicidal thoughts, behaviors:** report immediately suicidal thoughts/behaviors
• That in hot weather, heat stroke may occur; to take extra precautions to stay cool
• To take PO without regard to food, how to use ODT
• To notify prescriber if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE: Lavage if orally ingested; provide airway; do not induce vomiting or use EPINEPHrine

⚠ HIGH ALERT

olaparib (Rx)

(oh-lap´a-rib)

Lynparza

Func. class.: Antineoplastic-PARP

USES: Treatment of deleterious or suspected deleterious germline BRCA-mutated advanced ovarian cancer in patients who have not responded successfully to ≥3 prior courses of chemotherapy, as monotherapy, castration-resistant prostate cancer

DOSAGE AND ROUTES
• **Adult female: PO** 300 mg bid, until disease progression or unacceptable toxicity. Avoid use of concomitant strong and moderate CYP3A4 inhibitors if possible

Available forms: Tablets 100, 150 mg

⚠ HIGH ALERT

olaratumab (Rx)

(oh-lar-at´ue-mab)

Lartruvo

Func. class.: Antineoplastic, monoclonal antibody

USES: The treatment of soft-tissue sarcoma not amenable to curative treatment with radiotherapy or surgery, in combination with DOXOrubicin

CONTRAINDICATIONS: Hypersensitivity, pregnancy

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 15 mg/kg over 60 min on days 1 and 8 repeated q21days until disease progression or unacceptable toxicity in combination with doxorubicin 75 mg/m^2 **IV** on day 1 repeated q21days for up to 8 cycles

Available forms: Injection 190 mg/19 mL, 500 mg/50 mL (single use)

oliceridine (Rx)

(oh'li-ser'i-deen)

Olinvyk

Func. class.: Opioid analgesic

Controlled Substance II

ACTION: Binds to the opioid *mu* receptor to produce analgesia

USES:

Acute pain

CONTRAINDICATIONS:

Hypersensitivity, severe respiratory depression, GI obstruction, asthma

Precautions: Pregnancy, breastfeeding, abuse, neonatal opioid withdrawal syndrome, use with benzodiazepine or other CNS depressants, QT prolongation, chronic pulmonary disease, adrenal insufficiency, hypotension, GI disease, seizures

DOSAGE AND ROUTES

Acute pain

Adult IV bolus 1.5 mg; may give another 0.75 mg after 1 hr; doses may be repeated ≥1 hr and titrated based on tolerability and response; max single supplemental dose: 3 mg; max total daily dose: 27 mg

Adult: PCA: 1.5 mg (given by provider); demand dose: range: 0.35-0.5 mg; lockout interval: 6 min; supplemental dose (administered by health care provider): 0.75 mg; may be administered beginning 1 hr after the initial dose and repeated hourly as needed; may be used in addition to the demand dose if needed for adequate response

Max cumulative daily dose: 27 mg; an initial dose of oliceridine 1 mg = morphine 5 mg

Available forms: IV solution (preservative free): 1 mg/mL (1 mL); 2 mg/2 mL (2 mL); 30 mg/30 mL (30 mL)

Administer:

IV direct route

• No dilution needed

• Use the 1 mg/mL and 2 mg/2 mL single-dose vials for direct use only

• **PCA:** Withdraw directly into a PCA syringe or IV bag; no dilution needed; 30 mg/30 mL vial is for PCA only

• Store at room temperature, do not freeze, protect from light

SIDE EFFECTS

CNS: Dizziness, somnolence, sedation, headache, flushing

GI: Nausea, vomiting, constipation

INTEG: Pruritus

RESP: Respiratory depression, decreased O_2 saturation

MS: Back pain

PHARMACOKINETICS

Onset <5 min, half-life 1.3-3 hr, metabolite 44 hr, protein binding 77%

INTERACTIONS

Increase: Oliceridine effect—moderate-strong inhibitors of CYP3A4 (macrolides, azoles, protease inhibitors); moderate-strong CYP2D6 inhibitors (fluoxetine, quinidine, bupropion); benzodiazepines, other CNS depressants; monitor for respiratory depression/sedation

Increase: Serotonin effects—SSRIs, SNRIs, tricyclic antidepressants, triptans, 5-HT3 receptor antagonists, mirtazapine, trazodone, tramadol, cyclobenzaprine, metaxalone, MAOIs, linezolid, IV methylene blue; observe for serotonin symptoms

Increase: Respiratory depression—muscle relaxants; monitor for respiratory depression

Increase: Urinary retention, paralytic ileus—anticholinergics; monitor for urinary retention, paralytic ileus

Decrease: Oliceridine effect—CYP3A4 inducers (rifampin, carbamazepine,

phenytoin), mixed agonist/antagonists, partial agonist opioids; monitor for signs of opioid withdrawal
Decrease: Diuretic effect—diuretics, monitor B/P, urinary output

NURSING CONSIDERATIONS

Assess

- **Pain:** Location, intensity, type, character; check for pain relief 20 min following
- IV, to relieve pain; give dose before pain becomes severe
- **Bowel status;** constipation is common, use stimulant laxative if needed; provide increased bulk, fluids in diet
- B/P, pulse, respirations (character, depth, rate)
- CNS changes: Dizziness, drowsiness, euphoria, LOC, pupil reaction
- **Abrupt discontinuation:** Gradually taper to prevent withdrawal symptoms
- **Respiratory dysfunction:** Depression, character, rate, rhythm; notify prescriber if respirations are <12/min
- **Pregnancy/breastfeeding:** Use only if benefits outweigh risk to fetus; longer use can result in neonatal opioid withdrawal syndrome; do not breastfeed

Evaluate

- Therapeutic response: Control of pain without adverse reactions

Teach patient/family

- To report change in pain control
- To report constipation, as other products will need to be used
- To change position slowly; orthostatic hypotension may occur
- To report any symptoms of CNS changes, allergic reactions
- That physical dependency may result from long-term use
- That withdrawal symptoms may occur: nausea, vomiting, cramps, fever, faintness, anorexia
- To report serotonin syndrome

Treatment of overdose

- Naloxone (Narcan), O_2, IV fluids, vasopressors

olmesartan (Rx)

(ol-meh-sar′tan)
Benicar, Olmetec
Func. class.: Antihypertensive
Chem. class.: Angiotensin II receptor (type AT_1) antagonist

Do not confuse:
Benicar/Mevacor

ACTION: Blocks the vasoconstrictor and aldosterone-secreting effects of angiotensin II; selectively blocks the binding of angiotensin II to the AT_1 receptor found in tissues

USES: Hypertension, alone or in combination with other antihypertensives

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Pregnancy second/third trimester

Precautions: Breastfeeding, children, geriatric patients, hepatic disease, HF, renal artery stenosis, African descent, hyperkalemia

DOSAGE AND ROUTES

- **Adult: PO** single agent 20 mg/day initially in patients who are not volume depleted; may be increased to 40 mg/day if needed after 2 wk; **in volume depletion:** start with lower dose
- **Child ≥6 yr/adolescent ≤16 yr weighing ≥35 kg: PO** 20 mg/day; may increase to max 40 mg/day after 2 wk
- **Child ≥6 yr/adolescent ≤16 yr weighing 20-<35 kg: PO** 10 mg daily; may increase to max 20 mg/day after 2 wk

Available forms: Tabs 5, 20, 40 mg
Administer:

- Without regard to meals
- Compounded suspension may be made in the pharmacy; refrigerate up to 1 mo, shake well before use

SIDE EFFECTS

CNS: *Dizziness,* fatigue, *headache,* insomnia, syncope
CV: Chest pain, peripheral edema, tachycardia, *hypotension*
EENT: Sinusitis, rhinitis, pharyngitis
GI: *Diarrhea,* abdominal pain
META: Hyperkalemia
MS: Arthralgia, pain, rhabdomyolysis
RESP: *Upper respiratory infection,* bronchitis
SYST: Angioedema

PHARMACOKINETICS

Peak 1-2 hr; excreted in urine, (50% unchanged) feces; half-life 13 hr; protein binding 99%

INTERACTIONS

Increase: antihypertensive effects—other antihypertensives, diuretics
Increase: hyperkalemia—potassium supplements, potassium-sparing diuretics, ACE inhibitors
Increase: effect of lithium, antioxidants
Decrease: antihypertensive effect—NSAIDs, colesevelam, COX-2 inhibitors
Drug/Herb
Increase: antihypertensive effect—hawthorn, garlic
Decrease: antihypertensive effect—ephedra, black licorice

NURSING CONSIDERATIONS

Assess:
• **Volume depletion:** correct volume depletion before starting therapy
• **Hypertension:** B/P, pulse; note rate, rhythm, quality; electrolytes: sodium, potassium, chloride; baselines for renal, hepatic studies before therapy begins; may use antihypertensives to control B/P if needed
• **Hypotension:** place supine; may occur with hyponatremia or in those with volume depletion; more common in those taking a diuretic also
• **Heart failure:** monitor for edema, jugular vein distention, dyspnea; monitor weight daily
• ACE inhibitors should be avoided in black patients

Black Box Warning: Pregnancy/breastfeeding: product can cause fetal death when given during pregnancy; assess for pregnancy before starting therapy; do not breastfeed

Evaluate:
• Therapeutic response: decreased B/P
Teach patient/family:
• To comply with dosage schedule, not to double or skip dose, to take missed dose when remembered if not close to next dose
• To notify prescriber of mouth sores, fever, swelling of hands or feet, irregular heartbeat, chest pain, severe chronic diarrhea, severe weight loss
• That excessive perspiration, dehydration, vomiting, diarrhea may lead to fall in B/P; to consult prescriber if these occur; to maintain adequate hydration
• That product may cause dizziness, fainting, light-headedness; to avoid hazardous activities
• To rise slowly to sitting or standing position to minimize orthostatic hypotension
• To notify provider immediately of swelling of the face, lips, tongue, trouble breathing
• That follow-up exams will be needed
• To avoid all OTC medications unless approved by prescriber
• That blood glucose may increase and antidiabetic product may need dosage change
• To inform all health care providers of medication use
• To use proper technique for obtaining B/P, and discuss acceptable parameters

Black Box Warning: To notify prescriber immediately if pregnant; not to use during breastfeeding

olodaterol (Rx)

(oh-loe-da´ter-ol)
Striverdi Respimat
Func. class.: Beta$_2$-adrenergic agonist, long-acting

USES: Long-term maintenance treatment of airflow obstruction in COPD, including chronic bronchitis and/or emphysema

CONTRAINDICATIONS
Hypersensitivity; monotherapy (asthma)

DOSAGE AND ROUTES
COPD
Adult: PO Oral inhalation: 2 inhalations daily, max 2 inhalations/day

olopatadine nasal agent
See Appendix B

olopatadine ophthalmic
See Appendix B

olsalazine (Rx)
(ohl-sal´ah-zeen)
Dipentum
Func. class.: GI antiinflammatory
Chem. class.: Salicylate derivative

Do not confuse:
olsalazine/OLANZapine

ACTION: Bioconverted to 5-aminosalicylic acid, which decreases inflammation

USES: Maintenance of remission of ulcerative colitis in patients intolerant to sulfasalazine

CONTRAINDICATIONS: Hypersensitivity to this product or salicylates
Precautions: Pregnancy, breastfeeding, children <14 yr; impaired renal/hepatic function; severe allergy; bronchial asthma

DOSAGE AND ROUTES
• **Adult: PO** 500 mg bid, max 3 g/day
Available forms: Caps 250 mg
Administer:
• Total daily dose evenly spaced to minimize GI intolerance; give with food
• Store in tight, light-resistant container at room temperature

SIDE EFFECTS
CNS: Headache, hallucinations, depression, vertigo, fatigue, dizziness
GI: Nausea, vomiting, abdominal pain, diarrhea, bloating
INTEG: Rash, dermatitis, urticaria

PHARMACOKINETICS
Partially absorbed, peak 1½ hr, half-life 30-90 min (rectal), 2-15 hr (PO), excreted in urine as 5-aminosalicylic acid and metabolites, crosses placenta

INTERACTIONS
Increase: azaTHIOprine toxicity—azaTHIOprine
Increase: myelosuppression—mercaptopurine, thioguanine
Increase: bleeding risk—low-molecular-weight heparins; discontinue before using this product
Increase: Reye's syndrome development—varicella vaccine; do not use within 6 wk of olsalazine
Increase: PT, INR—warfarin
Drug/Lab Test
Increase: AST, ALT

NURSING CONSIDERATIONS
Assess:
• **Colitis:** bowel pattern, number of stools, consistency, frequency, pain, mucus, abdominal pain before treatment and periodically
• **Allergic reaction:** rash, dermatitis, urticaria, pruritus, dyspnea, bronchospasm; allergy to salicylates, sulfonamides
• BUN, creatinine in those with renal disease; LFTs (liver disease); monitor I&O, output of 1500 mL/day is needed to prevent crystals in urine
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding, excreted in breast milk
Evaluate:
• Therapeutic response: absence of fever, mucus in stools, decreased diarrhea, abdominal pain

Teach patient/family:
- To report diarrhea, rash, bleeding, bruising, fever, hallucinations, or if symptoms do not improve after 2 mo of therapy
- That product may cause dizziness; to avoid hazardous activities until reaction is known
- To take even if feeling better; to take as directed; to take missed dose when remembered, but not to double
- That lab work and exams will be needed during treatment

omadacycline (Rx)
(oh-mad´a-sye´kleen)
Nuzyra
Func. class.: Antiinfective

USES: Pneumonia, community acquired; skin/skin structure infections

DOSAGE AND ROUTES
Pneumonia, community acquired
- **Adult: IV** loading dose 200 mg as a single dose on day 1 or 100 mg bid on day 1; PO 300 mg daily × 7-14 days

Skin/skin structure infections
- **Adult: IV** loading dose 200 mg as a single dose on day 1 or 100 mg bid on day 1; **PO** 450 mg daily days 1 and 2; maintenance **IV** 100 mq day; PO 300 mg daily × 7-14 days

Available forms: Tabs 150 mg, IV solution 100 mg

omalizumab (Rx)
(oh-mah-lye-zoo´mab)
Xolair
Func. class.: Antiasthmatic
Chem. class.: Monoclonal antibody

ACTION: Recombinant DNA-derived humanized IgG murine monoclonal antibody that selectively binds to IgE to limit the release of mediators in the allergic response

USES: Moderate to severe persistent asthma, chronic idiopathic urticaria

CONTRAINDICATIONS: Hypersensitivity to hamster protein

Black Box Warning: Hypersensitivity to this product

Precautions: Pregnancy, breastfeeding, children <12 yr, acute attacks of asthma, lymphoma, nephrotic disease, bronchospasm, neoplastic disease, status asthmaticus

DOSAGE AND ROUTES
Moderate to severe asthma
- **Adult/child ≥16 yr: SUBCUT** 75-375 mg × 2-4 wk; divide inj into 2 sites if dose >150 mg; dose is adjusted based on IgE levels, significant changes in body weight

Chronic idiopathic urticaria
- **Adult/adolescent >12 yr: SUBCUT** 150-300 mg q4wk

Available forms: Powder for inj, lyophilized 202.5 mg (150 mg/1.2 mL after reconstitution); 75 mg/0.5 mL, 150 mg/mL; prefilled syringe

Administer:
SUBCUT route
- Reconstitute using 1.4 mL sterile water for inj (150 mg/1.2 mL or 125 mg/mL); gently swirl to dissolve; allow vial to stand and q5min gently swirl for 5-10 sec to dissolve; some vials may take ≥20 min; do not use if contents do not dissolve within 40 min; should be clear or slightly opalescent; use large-bore needle to withdraw medication; replace needle with small-bore needle
- Given q2-4wk; product is viscous; if >150 mg is given, divide into 2 sites; inj may take 5-10 sec to administer

SIDE EFFECTS
CV: Heart failure, cardiomyopathy, hypotension, MI, PE, thrombosis
HEMA: Serious systemic eosinophilia
INTEG: Pruritus, dermatitis, inj-site reactions, rash

MISC: Earache, dizziness, fatigue, pain, malignancies, viral infections, anaphylaxis, thrombocytopenia, headache
MS: Arthralgia, fracture, leg, arm pain
RESP: Sinusitis, upper respiratory infections, pharyngitis, pulmonary hypertension, bronchospasm

PHARMACOKINETICS

Slowly absorbed, peak 7-8 days, half-life 26 days, degradation by liver, excretion in bile

INTERACTIONS

Increase: toxicity—belimumab, loxapine (inhalation), avoid using together
• Use cautiously with live virus vaccines
Drug/Lab Test
Increase: IgE

NURSING CONSIDERATIONS

Assess:
• **Asthma:** respiratory rate, rhythm, depth; auscultate lung fields bilaterally; notify prescriber of abnormalities; monitor pulmonary function tests; serum IgE (may increase and continue for 1 yr)
• **Inj-site reactions:** inflammation, edema, redness, warmth at site; may occur within 60 min of inj; may decrease with repeated dosing

Black Box Warning: Anaphylaxis, allergic reactions: rash, urticaria, inability to breathe, edema of throat; product should be discontinued; have emergency equipment available; observe for 2 hr; reaction can occur ≤24 hr

• **Pregnancy/breastfeeding:** use only if clearly needed; pregnant patients should enroll in the EXPECT Pregnancy Registry, 1-866-496-5247; cautious use in breastfeeding, excretion unknown
Evaluate:
• Therapeutic response: ability to breathe more easily
Teach patient/family:
• That improvement will not be immediate
• Not to stop taking or decrease current asthma medications unless instructed by prescriber
• To avoid live virus vaccines while taking this product

Black Box Warning: To report signs of allergic reaction immediately, can be life-threatening

ombitasvir/paritaprevir/ritonavir/dasabuvir (Rx)

(om-bit´as-vir/par-i-ta´pre-vir/ri-toe´na-vir/da-sa´bue-vir)

Viekira Pak, Viekira XR

Func. class.: Antihepaciviral, NS3/4A protease inhibitor (anti-HCV)

USES: Treatment of adults with chronic hepatitis C virus (HCV) infection genotype 1a without cirrhosis, in combination with ribavirin, and genotype 1b without cirrhosis or with compensated cirrhosis

DOSAGE AND ROUTES

Black Box Warning: Hepatitis B exacerbation

Chronic HCV genotype 1 infection (compensated cirrhosis with or without ribavirin)
Adult: PO Immediate release (Viekira Pak): 2 tablets (ombitasvir 12.5 mg/paritaprevir 75 mg/ritonavir 50 mg per tablet) every morning × 12 wk, dasabuvir tablet: 1 tablet (dasabuvir 250 mg) bid × 12 wk; **extended release (Viekira XR):** 3 tablets (ombitasvir 8.33 mg/paritaprevir 50 mg/ritonavir 33.33 mg/dasabuvir 200 mg per tablet) daily × 12 wk
Available forms: Tablet; extended-release tablet

omega-3-fatty acids (Rx)

Lovaza, many brands available

Func. class.: Antilipemic, fatty acid

USES: To reduce triglyceride levels ≥500 mg/dL as adjunct to diet

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult: PO 2 or 4 g daily

omeprazole (OTC, Rx)

(oh-mep´ray-zole)

Losec, Olex, PriLOSEC, PriLOSEC OTC

Func. class.: Antiulcer, proton pump inhibitor

Chem. class.: Benzimidazole

Do not confuse:

PriLOSEC/Prinivil/PROzac/predniSONE/Pristiq

omeprazole/fomepizole aripiprazole

ACTION: Suppresses gastric secretion by inhibiting hydrogen/potassium ATPase enzyme system in gastric parietal cells; characterized as gastric acid pump inhibitor because it blocks the final step of acid production

USES: Gastroesophageal reflux disease (GERD), severe erosive esophagitis, poorly responsive systemic GERD, pathologic hypersecretory conditions (Zollinger-Ellison syndrome, systemic mastocytosis, multiple endocrine adenomas); treatment of active duodenal ulcers with/without antiinfectives for *Helicobacter pylori*

Unlabeled uses: Dyspepsia

CONTRAINDICATIONS: Hypersensitivity to this product or benzimidazoles

Precautions: Pregnancy; breastfeeding; children; Asian, black patients, hepatic disease

DOSAGE AND ROUTES

Active duodenal ulcers

- **Adult: PO** 20 mg/day × 4-8 wk

GERD without esophageal lesions

- **Adult: PO** (del rel cap/del rel susp) 20 mg/day × 4-8 wk
- **Child 1-16 yr, ≥20 kg: PO** 20 mg daily × 4 wk

Child 1-16 yr, 10-20 kg: PO 10 mg daily × 4 wk

Pathologic hypersecretory conditions (Zollinger-Ellison syndrome)

- **Adult: PO** 60 mg/day; may increase to 120 mg tid; daily doses >80 mg should be divided

Gastric ulcer

- **Adult: PO** 40 mg/day 4-8 wk

Heartburn (OTC)

- **Adult: PO** 1 del rel tab (20 mg)/day before AM meal with glass of water × 14 days

***H. pylori* infection, duodenal ulcer disease**

- **Adult: PO** 40 mg every AM with clarithromycin 500 mg tid × 14 days

Available forms: Del rel caps 10, 20, 40 mg; del rel tabs 20 mg; granules for oral susp 2.5, 10 mg (del rel)

Administer:

- Capsules and tablets are not bioequivalent
- Swallow caps whole; do not crush or chew; caps may be opened and sprinkled over applesauce
- Before eating, usually in the AM, separate with other medications
- **Oral susp powder:** give on empty stomach ≥1 hr before food; if there is NG or enteral feeding tube, do not feed 3 hr before or 1 hr after giving product: contents of packet should be mixed with 1-2 tbsp water; add 20 mL water for NG tube; for oral, stir well, drink, add more water, and drink

SIDE EFFECTS

CNS: *Headache, dizziness, asthenia*

GI: *Diarrhea, abdominal pain, vomiting, nausea, constipation, flatulence, acid regurgitation,* abdominal swelling, anorexia, irritable colon, esophageal candidiasis, dry mouth, hepatic failure, *Clostridium difficile*–associated diarrhea (CDAD)

INTEG: *Rash,* dry skin, urticaria, pruritus, alopecia

MISC: *Back pain,* fever, fatigue, malaise

RESP: *Upper respiratory infections, cough,* epistaxis, pneumonia

PHARMACOKINETICS

Bioavailability 30%-40%; peak ½-3½ hr; half-life ½-1 hr; protein binding 95%; eliminated in urine as metabolites and in feces; in geriatric patients, elimination

rate decreased, bioavailability increased; metabolized by CYP2C19 enzyme system; some Asian, black, and Caucasian patients are poor metabolizers

INTERACTIONS

Increase: bleeding—warfarin

Increase: serum levels of diazePAM, phenytoin, flurazepam, triazolam, cycloSPORINE, disulfiram, digoxin, benzodiazepines, methotrexate; saquinavir, tacrolimus, voriconazole

Decrease: effect of iron salts, ketoconazole, cyanocobalamin, calcium carbonate, ampicillin, indinavir, gefitinib, ampicillin, azoles, biphosphates

Drug/Herb

Decrease: omeprazole level— St. John's wort

Drug/Food

Decrease: vitamin B_{12} absorption if omeprazole is used long term

Drug/Lab Test

Increase: alk phos, AST, ALT, bilirubin, gastrin

Decrease: vitamin B_{12}, sodium, glucose

NURSING CONSIDERATIONS

Assess:

- **GI system:** bowel sounds, abdomen for pain, swelling, anorexia, blood in stools, diarrhea, emesis
- ***Clostridium difficile*–associated diarrhea (CDAD):** assess for fever, abdominal pain, bloody stool; may occur up to several weeks after conclusion of therapy; report to the prescriber immediately
- **Electrolyte imbalances:** hyponatremia; hypomagnesemia in patients using product 3 mo-1 yr; if hypomagnesemia occurs, use of magnesium supplements may be sufficient; if severe, discontinue product
- **Vitamin B_{12}:** Assess vitamin B_{12} level if on long-term treatment; dyspnea, weakness, anorexia, palpitations may occur if vitamin B_{12} is low
- **Hepatic enzymes:** AST, ALT, alkaline phosphatase during treatment; **blood studies:** CBC, differential during treatment, blood dyscrasias may occur; vitamin B_{12} in long-term treatment, serum magnesium
- **Fractures:** use over 1 yr has been associated with fractures
- **Beers:** avoid scheduled use >8 wk in patients with hypersecretory condition, esophagitis, risk of *Clostridium difficile,* and fractures
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk

Evaluate:

- Therapeutic response: absence of epigastric pain, swelling, fullness, bleeding; decreased GERD, esophagitis symptoms

Teach patient/family:

- To report severe diarrhea; black, tarry stools; abdominal cramps/pain; or continuing headache; product may have to be discontinued
- That, if diabetic, hypoglycemia may occur
- To avoid hazardous activities because dizziness may occur
- To avoid alcohol, salicylates, NSAIDs; may cause GI irritation
- To take as directed, even if feeling better; to take missed dose as soon as remembered; not to double; PriLOSEC OTC takes up to 4 days for full effect
- Not to use OTC, prescription, or herbal products without prescriber's consent
- To take as directed at lowest dose possible for shortest time needed
- To report if pregnancy is planned or suspected or if breastfeeding

ondansetron (Rx)

(on-dan-seh´tron)

Zofran ✱, Zofran ODT ✱, Zuplenz

Func. class.: Antiemetic

Chem. class.: 5-HT_3 antagonist

Do not confuse:

Zofran/Zantac

ACTION: Prevents nausea, vomiting by blocking serotonin peripherally, centrally, and in the small intestine

USES: Prevention of nausea, vomiting associated with cancer chemotherapy, radiotherapy; prevention of postoperative nausea, vomiting

CONTRAINDICATIONS: Hypersensitivity; phenylketonuric hypersensitivity (oral disintegrating tab), torsades de pointes

Precautions: Pregnancy, breastfeeding, children, geriatric patients, granisetron hypersensitivity, QT prolongation, torsades de pointes

DOSAGE AND ROUTES

Chemotherapy-induced nausea and vomiting, prevention; highly emetogenic chemotherapy:

- ***Day of chemotherapy:*** Give before chemotherapy with a neurokinin 1 (NK_1) receptor antagonist, dexamethasone, with/without olanzapine
- **Adult: IV** 8 mg or 0.15 mg/kg, max 16 mg/dose; **PO (not film)** 8 mg bid × 2 doses with the first dose given before chemotherapy; **oral soluble film:** 24 mg (three 8-mg doses given together) as a single dose
- **Infants ≥6 mo, children, and adolescents: IV** 0.15 mg/kg/dose; max dose: 16 mg/dose; give first dose 30 min before chemotherapy, then doses given 4 and 8 hr after the first dose (3 total doses)

Moderately emetogenic with carboplatin-based doses

- ***Day of chemotherapy:*** Give before chemotherapy with an NK_1 receptor antagonist and dexamethasone
- **Adult: IV** 8 mg or 0.15 mg/kg, max 16 mg/dose, as a single dose; **PO** 8 mg bid × 2 doses with the first dose given before chemotherapy

Moderately emetogenic chemotherapy with non-carboplatin-based doses

- ***Day of chemotherapy:*** Give before and with dexamethasone
- **Adult: IV** 8 mg or 0.15 mg/kg, max 16 mg/dose, as a single dose; **PO** 8 mg bid × 2 doses with the first dose given before chemotherapy
- **Children 4-11 yr: PO** 4 mg 30 min before chemotherapy; repeat 4 and 8 hours after initial dose, then 4 mg q8hr × 1-2 days after chemotherapy
- **Children ≥12 yr and adolescents: PO** 8 mg 30 min before chemotherapy; then 8 mg after initial dose, then 8 mg q12hr × 1-2 days after chemotherapy

Highly emetogic chemotherapy

Adult: PO 24 mg given 30 min prior to use of single-dose highly emetogic chemotherapy, including 50 mg/m^2 or more

Radiation therapy–associated nausea and vomiting, prevention

- **Adult: PO** 8 mg daily to bid given 1-2 hr before each fraction of radiation; give with dexamethasone

Hepatic dose

- **Adult: PO/IM/IV** max dose 8 mg/day

Available forms: Inj 2 mg/mL, 4-mg/2 mL; tabs 4, 8, 24 mg; oral sol 4 mg/5 mL; oral disintegrating tabs 4, 8 mg; oral dissolving film 4, 8 mg

Administer:

PO route

- **Regular tab:** protect from light (4-mg tab)
- **Oral disintegrating tab:** do not push through foil; gently remove; immediately place on tongue to dissolve; swallow with saliva
- **Oral dissolving film:** fold pouch along dotted line to expose tear notch; tear and remove film; place film on tongue until dissolved; swallow after dissolved; to reach desired dose, administer successive films, allowing each to dissolve before using another
- **Oral solution:** protect from light; measure in calibrated oral syringe or other calibrated device

IM route

- Visually inspect for particulate or discoloration
- May give 4 mg undiluted IM; inject deeply in large muscle mass; aspirate

Direct IV route

- Give undiluted, max 16 mg

Intermittent IV infusion

- Check for discoloration or particulate; if particulate is present, shake to dissolve
- After diluting single dose in 50 mL NS or D_5W, 0.45% NaCl or NS; give over 15 min
- Do not use IV 32 mg/dose in chemotherapy nausea/vomiting due to QT prolongation, max 16 mg/dose (adult)
- Store at room temperature for up to 48 hr after dilution

Y-site compatibilities: Aldesleukin, amifostine, amikacin, aztreonam, bleomycin, CARBOplatin, carmustine, ceFAZolin, cefmetazole, cefotaxime, cefOXitin, cefTAZidime, ceftizoxime, cefuroxime, chlorproMAZINE, cimetidine, cisatracurium, CISplatin, cladribine, clindamycin, cyclophosphamide, cytarabine, dacarbazine, DACTINomycin, DAUNOrubicin, dexamethasone, diphenhydrAMINE, DOPamine, DOXOrubicin, DOXOrubicin liposome, doxycycline, droperidol, etoposide, famotidine, filgrastim, floxuridine, fluconazole, fludarabine, gallium, gentamicin, haloperidol, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, ifosfamide, imipenem-cilastatin, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, mesna, methotrexate, metoclopramide, miconazole, mitoMYcin, mitoXANTRONE, morphine, PACLitaxel, pentostatin, piperacillin/tazobactam, potassium chloride, prochlorperazine, promethazine, raNITIdine, remifentanil, streptozocin, teniposide, thiotepa, ticarcillin, ticarcillin-clavulanate, vancomycin, vinBLAStine, vinCRIStine, vinorelbine, zidovudine

SIDE EFFECTS

CNS: *Headache, dizziness, drowsiness, fatigue*

GI: *Diarrhea, constipation,* abdominal pain, dry mouth

MISC: Rash, bronchospasm (rare), musculoskeletal pain, wound problems, shivering, fever, hypoxia, urinary retention

PHARMACOKINETICS

IV: Mean elimination half-life 3.5-4.7 hr, plasma protein binding 70%-76%, extensively metabolized in the liver, excreted 45%-60% in urine

INTERACTIONS

Increase: unconsciousness, hypotension—apomorphine, do not use together

Increase: QT prolongation—other products that prolong QT

Increase: serotonin syndrome— SSRIs, SSNRIs, MAOIs, tricyclics, monitor closely

Drug/Herb

Decrease: ondansetron effect—St. John's wort

Decrease: ondansetron effect—rifampin, carBAMazepine, phenytoin

Drug/Lab Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

- Absence of nausea, vomiting during chemotherapy
- Hypersensitivity reaction: rash, bronchospasm (rare)
- **EPS:** shuffling gait, tremors, grimacing, rigidity periodically
- **QT prolongation:** monitor ECG in those with hypokalemia, hypomagnesemia, cardiac disease or in those receiving other products that increase QT
- **Serotonin syndrome:** occurs when other products are given that increase CNS or peripheral serotonin levels; assess for agitation, confusion, dizziness, diaphoresis, flushing, tremor, seizures, nausea, vomiting, diarrhea; product should be discontinued
- **Pregnancy/breastfeeding:** identify whether pregnancy is planned or suspected; avoid use in pregnancy, cardiac malformations, oral clefts may occur if used in 1st trimester; cautious use in breastfeeding

Evaluate:

- Therapeutic response: absence of nausea, vomiting due to chemotherapy, surgery

Teach patient/family:

- To report diarrhea, constipation, rash, changes in respirations, discomfort at insertion site, serotonin symptoms, EPS symptoms
- That headache requiring analgesic is common
- Drink with whole glass of water (PO)
- **Oral disintegrating tabs:** remove strip from pouch, place on tongue, and allow to dissolve; drink water

opicapone (Rx)

(oh-pik´a-pone)

Ongentys

Func. class.: Anti-Parkinson agent, COMT inhibitor

USES: Adjunct with levodopa/carbidopa in Parkinson disease "off" episodes

CONTRAINDICATIONS:
Hypersensitivity, MAOIs, pheochromocytoma, paraganglioma

DOSAGE AND ROUTES
Adult: PO 50 mg daily at bedtime
Available forms: Capsule 25, 50 mg

oritavancin (Rx)
(or-it´a-van´sin)
Orbactiv, Kimyrsa
Func. class.: Antibiotic agents
Chem. class.: Glycopeptide

ACTION: Inhibits bacterial cell wall biosynthesis, disrupts bacterial cell membrane

USES: *Enterococcus faecalis, Enterococcus faecium, Staphylococcus aureus* (MRSA), *Staphylococcus aureus* (MSSA), *Streptococcus agalactiae* (group B streptococci), *Streptococcus anginosus, Streptococcus constellatus, Streptococcus dysgalactiae, Streptococcus intermedius, Streptococcus pyogenes* (group A β-hemolytic streptococci); treatment of acute bacterial skin and skin structure infections due to gram-positive organisms, including cellulitis/erysipelas, major cutaneous abscesses, and wound infections

CONTRAINDICATIONS:
Hypersensitivity
Precautions: Anticoagulant therapy, antimicrobial resistance, breastfeeding, colitis, diarrhea, inflammatory bowel disease, infusion reactions, pregnancy, CDAD, vancomycin hypersensitivity, viral infection

DOSAGE AND ROUTES
- **Adult: IV** 1200 mg as a single dose

Available forms: Powder for injection: 400-mg vial
Administer:
- Draw C&S prior to using
- Visually inspect for particulate matter and discoloration beforehand; the reconstituted solution is clear, colorless to pale yellow
- **Reconstitution:** Reconstitute each 400-mg vial with 40 mL sterile water for injection. Three vials are necessary for a single dose; gently swirl until dissolved
- **Dilution:** Withdraw and discard 120 mL from a 1000-mL intravenous bag of D_5W; transfer 40 mL solution from each of the 3 reconstituted vials to the D_5W IV bag (1.2 mg/mL)
- **Storage:** Refrigerate or store at room temperature. The combined storage time (from reconstitution to dilution) and 3-hour infusion time should not exceed 6 hr at room temperature or 12 hr if refrigerated

Intermittent IV INFUSION
- Infuse over 3 hr; do not infuse with other medications or electrolytes; do not use with saline-based solutions
- Avoid heparin for 5 days after use of this product; false elevated aPTT and coagulation studies may occur

SIDE EFFECTS
CNS: Dizziness, flushing, headache
CV: Sinus tachycardia, phlebitis
GI: Nausea, vomiting, diarrhea, CDAD
HEMA: Anemia, eosinophilia
MS: Myalgia, osteomyelitis
INTEG: Rash, vasculitis, pruritus, angioedema, infusion-related reaction
MISC: Wheezing, bronchospasm

PHARMACOKINETICS
85% protein binding, half-life 245 hr, excretion urine, unchanged, peak infusion's end

INTERACTIONS
Increase: toxicity—products metabolized by CYP2D6, CYP3A4
Increase: bleeding risk—warfarin; avoid concurrent use
Drug/Lab Test
Increase: LFTs, uric acid, INR, aPTT

NURSING CONSIDERATIONS
Assess:
- **Infection:** wounds, fever, sputum, urine, monitor WBC baseline and periodically report changes
- CBC and differential

• **Infusion-related reactions:** symptoms of red man syndrome (flushing, urticaria, pruritus); slow or stop infusion
• **Bowel function:** for diarrhea, bloody stools, cramping; assess for fever; report to health care professional, may be *Clostridium difficile*–associated diarrhea (CDAD), may start up to 8 wk after completion of treatment
• **Anticoagulant use:** may increase effects of warfarin; monitor closely, avoid use with heparin; heparin effects may be reduced and lab results altered
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: resolution of infection

Teach patient/family:
• Reason for product, expected result
• Used only once to resolve infection
• **Hypersensitivity reactions:** to notify prescriber of rash, facial swelling, dyspnea
• To avoid use of other prescription products, OTC products, or herbal products unless approved by prescriber
• **Bowel function:** to notify health care professional of diarrhea, bloody stools, cramping, fever; do not self-treat
• To notify prescriber if pregnancy is planned or suspected

orlistat (Rx, OTC)

(or′lih-stat)

Alli, Xenical

Func. class.: Weight-control agent
Chem. class.: Lipase inhibitor

ACTION: Inhibits the absorption of dietary fats

USES: Obesity management

DOSAGE AND ROUTES

• **Adult/children ≥12 yr: PO** (Alli) 60 mg, (Xenical) 120 mg tid with each main meal containing fat, max 360 mg/day

Available forms: Capsules 60, 120 mg

oseltamivir (Rx)

(oss-el-tam′ih-veer)

Tamiflu

Func. class.: Antiviral
Chem. class.: Neuraminidase inhibitor

Do not confuse:
Tamiflu/Thera-Flu

ACTION: Inhibits influenza virus neuraminidase with possible alteration of virus particle aggregation and release

USES: Prevention and treatment of influenza type A or B
Unlabeled uses: Avian flu (H5N1)

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, neonates, breastfeeding, infants, children, geriatric patients, renal/hepatic/pulmonary/cardiac disease, psychosis, viral infection

DOSAGE AND ROUTES

• Treatment should begin ≤2 days after onset of symptoms

Treatment of influenza
• **Adult/child >40 kg: PO** 75 mg bid × 5 days, begin treatment within 2 days of onset of symptoms
• **Child 23-40 kg and ≥1 yr: PO** 60 mg bid × 5 days
• **Child 15-23 kg and ≥1 yr: PO** 45 mg bid × 5 days
• **Child ≤15 kg and ≥1 yr: PO** 30 mg bid × 5 days
• **Neonate ≥14 days/infant: PO** 3 mg/kg/dose bid × 5 days

Prevention of influenza
• **Adult/child ≥13 yr: PO** 75 mg/day (capsule) or 12.5 mL (suspension) daily × 1 wk after exposure (vaccinated) or 2 wk (unvaccinated)
• **Child/adolescent ≤15 kg: PO** 30 mg daily; **>15 kg to 23 kg: PO** 45 mg daily; **>23 kg to 40 kg: PO** 60 mg daily; **>40 kg: PO** 75 mg daily

Renal dose
• **Adult: PO** Treatment: CCr 10-30 mL/min, 30 mg/day × 5 days; CCr 30-60 mL/min,

30 mg bid × 5 days; Prophylaxis: CCr 10-30 mL/min, 30 mg every other day; CCr 30-60 mL/min, 30 mg daily

H1N1 influenza A virus (unlabeled)

- **Adult/adolescent/child >40 kg: PO** 75 mg bid × 5 days
- **Adolescent/child 24-40 kg: PO** 60 mg bid × 5 days
- **Child >1 yr and 15-23 kg: PO** 45 mg bid × 5 days
- **Child >1 yr and ≤15 kg: PO** 30 mg bid × 5 days

Available forms: Caps 30, 45, 75 mg; powder for oral susp 6 mg/mL

Administer:

- Within 2 days of symptoms of influenza; continue for 5 days
- At least 4 hr before bedtime to prevent insomnia
- Without regard to food; give with food for GI upset
- Take with full glass of water
- Store in tight, dry container
- **Oral susp:** 6 mg/mL concentration, take care to use correct dose; loosen powder from side of bottle, add 55 mL, shake well (6 mg/mL), remove push bottle adapter into neck of bottle, close tightly to ensure sealing, use within 17 days of preparation when refrigerated or within 10 days at room temperature, write expiration date on bottle, shake well before use, use oral syringe provided but only with markings for 30, 45, 60 mg, confirm that dosing instructions are in same units as syringe provided

SIDE EFFECTS

CNS: *Headache, dizziness,* fatigue, *insomnia,* seizures, delirium, self-injury (children)

GI: *Nausea, vomiting*

INTEG: Toxic epidermal necrolysis, Stevens-Johnson syndrome, erythema multiforme

RESP: Cough

PHARMACOKINETICS

Rapidly absorbed, protein binding 3%, converted to oseltamivir carboxylate (active form), active forms half-life 1-3 hr, metabolite 6-10 hr, excreted in urine (99%)

INTERACTIONS

- **Decrease:** effect, live, attenuated influenza virus vaccine, avoid prior to use (2 days before or after 14 days)

NURSING CONSIDERATIONS

Assess:

- Bowel pattern before, during treatment
- **Influenza:** fever, fatigue, sore throat, headache, muscle soreness, aches

Evaluate:

- Therapeutic response: absence of fever, malaise, cough, dyspnea in infection

Teach patient/family:

- About all aspects of product therapy
- To avoid hazardous activities if dizziness occurs
- To take as soon as symptoms appear; to take full course even if feeling better
- To take missed dose as soon as remembered if within 2 hr of next dose
- To stop immediately; to report to prescriber skin rash, delirium, psychosis, hallucinations (child)
- That this product should not be substituted for flu shot
- That this product will not treat the common cold
- To avoid other products unless approved by prescriber

⚠ HIGH ALERT

oxaliplatin (Rx)

(ox-al-i'plat-in)

Eloxatin

Func. class.: Antineoplastic

Chem. class.: 3rd-generation platinum analog, alkylating agent

ACTION: Forms crosslinks, thereby inhibiting DNA replication and transcription; not specific to cell cycle

USES: Metastatic carcinoma of the colon or rectum in combination with 5-FU/leucovorin

CONTRAINDICATIONS: Pregnancy, breastfeeding, radiation therapy

or chemotherapy within 1 mo, thrombocytopenia, smallpox vaccination

Black Box Warning: Hypersensitivity to this product or other platinum products

Precautions: Children, geriatric patients, pneumococcus vaccination, renal disease

DOSAGE AND ROUTES

Dosage protocols may vary

Colorectal cancer

• **Adult: IV** 85 mg/m^2 concurrently via Y-site with leucovorin (500 mg/m^2 IV) over 2 hr, followed 1 hr later by fluorouracil (500 mg/m^2 IV bolus) on days 1, 15, and 29. On days 8, 22, and 36, administer leucovorin (500 mg/m^2 IV over 2 hr) without oxaliplatin, followed 1 hr later by fluorouracil (500 mg/m^2 IV bolus). Repeat every 8 wk (56 days) for a total of 3 cycles (24 wk)

Renal dose

• **Adult: IV** CCr <30 mL/min, reduce starting dose to 65 mg/m^2

Available forms: Powder for inj 50, 100-mg single-use vials (5 mg/mL); solution for inj 50 mg/10 mL, 100 mg/20 mL, 200 mg/40 mL

Administer:

Intermittent IV INFUSION route

• Use oxaliplatin first if using 5-FU also
• Do not use ice during infusion, may make reactions worse
• Premedicate with antiemetics including 5HT$_3$ blockers, with or without dexamethasone; prehydration not needed
• Do not reconstitute or dilute with sodium chloride or any chloride-containing sol; do not use aluminum equipment during any preparation or administration; will degrade platinum; do not refrigerate unopened powder or sol; do not freeze; protect from light
• Use cytotoxic handling procedures; prepare in biologic cabinet using gown, gloves, mask; do not allow product to come in contact with skin; use soap and water if contact occurs
• EPINEPHrine, antihistamines, corticosteroids for hypersensitivity reaction
• **Lyophilized powder:** reconstitute vial 50 mg/10 mL or 100 mg/20 mL sterile water for inj or D$_5$W; after reconstitution, sol may be stored for ≤24 hr in refrigerator; after dilution in 250-500 mL D$_5$W, may store ≤24 hr in refrigerator or 6 hr at room temperature; infuse over 2 hr

Y-site compatibilities: Alfentanil, amifostine, amikacin, aminocaproic acid, amiodarone, amphotericin B colloidal, amphotericin B lipid complex, amphotericin B liposome, ampicillin, ampicillin-sulbactam, anidulafungin, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin, dexamethasone, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, foscarnet, fosphenytoin, furosemide, gatifloxacin, gemcitabine, gemtuzumab, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, inamrinone, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, meperidine, meropenem, mesna, metaraminol, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoMYcin, mitoXANTRONE, mivacurium, morphine, nafcillin, nalbuphine, naloxone, nesiritide,

niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, PACLitaxel, palonosetron, pancuronium, PEMEtrexed, pentamidine, pentazocine, phenylephrine, piperacillin, polymyxin B, potassium chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, rocuronium, sodium acetate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, topotecan, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Peripheral neuropathy, fatigue, headache, dizziness, insomnia, reversible posterior leukoencephalopathy syndrome
CV: Cardiac abnormalities, thromboembolism
EENT: *Decreased visual acuity, tinnitus, hearing loss*
GI: *Severe nausea, vomiting, diarrhea, weight loss,* stomatitis, anorexia, gastroesophageal reflux, constipation, dyspepsia, mucositis, flatulence
GU: Hematuria, dysuria, creatinine
HEMA: Thrombocytopenia, leukopenia, pancytopenia, neutropenia, anemia, hemolytic uremic syndrome
INTEG: Rash, flushing, extravasation, redness, swelling, pain at inj site
META: Hypokalemia
RESP: Fibrosis, dyspnea, cough, rhinitis, URI, pharyngitis
SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

Metabolized in liver, excreted in urine; after administration, 15% of platinum in systemic circulation, 85% either in tissues or being eliminated in urine; half-life 390 hr; protein binding >90%

INTERACTIONS

• **Increase:** QT prolongation: class Ia/III antidysrhythmias, monitor ECG
Increase: bleeding risk—NSAIDs, alcohol, anticoagulants, platelet inhibitors, thrombolytics, salicylates
Increase: oxaliplatin toxicity—tannins
Increase: myelosuppression—myelosuppressive agents, radiation, taxanes, tofacitinib
Increase: nephrotoxicity—aminoglycosides, loop diuretics
Decrease: antibody response—inactivated vaccines

Drug/Lab Test

Increase: ALT, AST, bilirubin, creatinine
Decrease: potassium, neutrophils, WBC, platelets

NURSING CONSIDERATIONS

Assess:

• **Bone marrow depression:** CBC, differential, platelet count each cycle; withhold product if WBC is <4000/mm^3 or platelet count is <100,000/mm^3; notify prescriber of results
• **Renal/hepatic studies:** BUN, creatinine, serum uric acid, urine CCr before, electrolytes during therapy; dose should not be given if BUN >19 mg/dL; creatinine <1.5 mg/dL; I&O ratio; report fall in urine output of <30 mL/hr; LFTs

Black Box Warning: Anaphylaxis: wheezing, tachycardia, facial swelling, fainting, rash, dyspnea, hives; discontinue product, report to prescriber; resuscitation equipment should be nearby with epinephrine, corticosteroids

• **Pulmonary fibrosis:** cough, crackles, dyspnea, pulmonary infiltrate; discontinue immediately; death may occur
• **Reversible posterior leukoencephalopathy syndrome:** assess for headache, seizures, diarrhea, infection, abnormal vision, change in mental functioning; discontinue immediately
• Monitor temperature; may indicate beginning infection

O

• Hepatic studies before each cycle (bilirubin, AST, ALT, LDH) as needed or monthly
• **Bleeding:** hematuria, guaiac, bruising or petechiae, mucosa or orifices; obtain prescription for viscous lidocaine (Xylocaine)
• All medications PO if possible; avoid IM inj when platelets <100,000/mm^3
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding, use contraception

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:
• **To report signs of infection:** increased temperature, sore throat, flulike symptoms
• To report signs of **anemia:** fatigue, headache, faintness, SOB, irritability
• To report **bleeding;** to avoid use of razors, commercial mouthwash
• To avoid aspirin, ibuprofen, NSAIDs, alcohol; may cause GI bleeding
• To report any changes in breathing, coughing
• To report numbness, tingling in face or extremities, poor hearing, or joint pain or swelling
• Not to receive live virus vaccines during treatment
• **Dysesthesias:** to avoid contact with cold (air, ice, liquid)
• To use contraception during treatment and for 4 mo after; that product may cause infertility

⚠ HIGH ALERT

oxazepam (Rx)

(ox-ay´ze-pam)
Func. class.: Sedative/hypnotic; anxiolytic
Chem. class.: Benzodiazepine, short acting

Controlled Substance Schedule IV

ACTION

Potentiates the actions of GABA, especially in the limbic system and the reticular formation

USES

Anxiety, alcohol withdrawal
Unlabeled uses: Insomnia

CONTRAINDICATIONS

Pregnancy, breastfeeding, children <6 yr, hypersensitivity to benzodiazepines, closed-angle glaucoma, psychosis
Precautions: Geriatric patients, debilitated patients, renal/hepatic disease, depression, suicidal ideation, dementia, sleep apnea, seizure disorder

Black Box Warning: Depressants, respiratory depression

DOSAGE AND ROUTES

Anxiety
• **Adult /child ≥12 yr: PO** 10-15 mg tid-qid, max 120 mg/day
• **Geriatric: PO** 10 mg daily-bid, max 60 mg/day tid

Alcohol withdrawal
• **Adult: PO** 15-30 mg tid-qid

Severe anxiety syndrome, agitation, anxiety with depression
• **Adult/child >12 yr: PO** 15-30 mg tid-qid

Available forms: Caps 10, 15, 30 mg

Administer:
• Without regard to food
• Taper product (0.5 mg q3days) before discontinuing

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, headache, anxiety, tremors, fatigue, depression, insomnia, hallucinations, paradoxical excitement, transient amnesia
CV: *Orthostatic hypotension,* ECG changes, tachycardia, hypotension
EENT: *Blurred vision,* tinnitus, mydriasis
GI: Nausea, vomiting, anorexia, drug-induced hepatitis
HEMA: Leukopenia
INTEG: Rash, dermatitis, itching
SYST: Dependence

PHARMACOKINETICS

Peak 2-4 hr; metabolized by liver; excreted by kidneys; half-life 5-15 hr; crosses placenta, breast milk; protein binding 97%

INTERACTIONS

Black Box Warning: Increase: oxazepam effects, respiratory depression—CNS depressants, alcohol, disulfiram, opioids

Decrease: oxazepam effects—oral contraceptives, phenytoin, theophylline, valproic acid
Decrease: effects of levodopa
Drug/Herb
Increase: CNS depression—kava, melatonin, valerian
Drug/Lab Test
Increase: AST, ALT, serum bilirubin
Decrease: WBC

NURSING CONSIDERATIONS

Assess:
• CBC and LFTs periodically in longer-term therapy

Black Box Warning: Respiratory depression: not to be used in preexisting respiratory depression; use cautiously in severe pulmonary disease; monitor respirations, avoid use with opioids or other CNS depressants

• **Mental status:** mood, sensorium, affect, sleeping pattern, drowsiness, dizziness, sedation, suicidal thoughts/behaviors
• **Physical dependency, withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness, tremors, seizures (long-term use)
• **Beers:** avoid in older adults; delirium, cognitive impairment may occur
• **Pregnancy/breastfeeding:** assess for pregnancy before use; do not use in pregnancy; do not breastfeed
Evaluate:
• Therapeutic response: decreased anxiety, restlessness, insomnia
Teach patient/family:
• That product may be taken without regard to food
• That medication is not to be used for everyday stress or used >4 mo unless directed by prescriber; not to take more than prescribed dose because product may be habit forming
• To avoid OTC preparations (cough, cold, hay fever) unless approved by prescriber
• To avoid driving, activities that require alertness because drowsiness may occur
• To avoid alcohol, other psychotropic products unless directed by prescriber
• Not to discontinue product abruptly after long-term use
• To rise slowly because fainting may occur, especially among geriatric patients
• That drowsiness may worsen at beginning of treatment
• To notify prescriber if pregnancy is planned or suspected

OXcarbazepine (Rx)

(ox′kar-baz′uh-peen)

Trileptal, Oxtellar XR

Func. class.: Anticonvulsant, miscellaneous

Chem. class.: CarBAMazepine analog

O

Do not confuse:
OXcarbazepine/carBAMazepine

ACTION: May inhibit nerve impulses by limiting influx of sodium ions across cell membrane in motor cortex

USES: Partial seizures

CONTRAINDICATIONS:

Hypersensitivity
Precautions: Pregnancy, breastfeeding, children <4 yr, hypersensitivity to carBAMazepine, renal disease, fluid restriction, hyponatremia, abrupt discontinuation, suicidal ideation, positive for HLA-B 1502 allele

DOSAGE AND ROUTES

Partial seizures, adjunctive therapy
• **Adult: PO IR** 300 mg bid, may be increased by 600 mg/day in divided doses bid at weekly intervals; maintenance 1200 mg/day; **ext rel:** 600 mg daily × 1 wk, increase weekly in 600 mg/day increments to 1200-2400 mg daily

• **Child 4-16 yr: PO IR** 8-10 mg/kg/day divided bid; dose determined by weight, increase by 5 mg/kg/day q3days, max doses weight dependent
• **Child 2 to <4 yr: PO IR** 8-10 mg/kg divided in 2 doses, max 600 mg/day
• **Child 6-17 yr: PO ext rel** 8-10 mg/kg daily, max 600 mg first wk, may increase weekly by 8-10 mg/kg daily, max 600 mg

Conversion to monotherapy for partial seizures

• **Adult: PO** 300 mg bid with reduction in other anticonvulsants; increase OXcarbazepine by 600 mg/day each week over 2-4 wk; withdraw other anticonvulsants over 3-6 wk; max 2400 mg/day

Initiation of monotherapy for partial seizures

• **Adult: PO** 300 mg bid, increase by 300 mg/day q3days to 1200 mg in divided doses bid, max 2400 mg/day

Renal dose

• **Adult: PO** CCr <30 mL/min, 150 mg bid, increase slowly

Available forms: Film-coated tabs 150, 300, 600 mg; oral susp 300 mg/5 mL; ext rel tab 150, 300, 600 mg

Administer:

PO route

• Without regard to meals
• Test for HLA-B* 1502 allele in Asian/South Asian patient, if positive consider another treatment
• **Oral susp:** shake well, use calibrated oral syringe provided, use or discard within 7 days of opening
• **Ext rel:** do not crush, break, or chew
• Store at room temperature

SIDE EFFECTS

CNS: *Headache, dizziness, confusion, fatigue,* feeling abnormal, ataxia, abnormal gait, tremors, anxiety, agitation, worsening of seizures, suicidal thoughts/behaviors
CV: *Hypotension,* chest pain, edema, bradycardia, syncope
EENT: *Blurred vision, diplopia, nystagmus,* rhinitis, sinusitis
ENDO: Hypothyroidism, hot flashes
GI: *Nausea, constipation, diarrhea,* anorexia, vomiting, abdominal pain, gastritis
GU: Urinary frequency, hematuria, menses change
INTEG: Purpura, rash, acne
META: Hyponatremia
RESP: Flulike symptoms
SYST: Angioedema, anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis, drug reaction with eosinophilia and systemic symptoms (DRESS)

PHARMACOKINETICS

PO: Onset unknown; peak 4-6 hr; metabolized by liver to active metabolite; terminal half-life 7-9 hr metabolite; inhibits P450 CYP2C19, induces CYP3A4/5, 95% renal extraction

INTERACTIONS

Increase: CNS depression—alcohol
Decrease: effects—felodipine, oral contraceptive, carBAMazepine
Decrease: OXcarbazepine levels—carBAMazepine, PHENobarbital, phenytoin, valproic acid, verapamil
Decrease: effect of substrates—CYP3A4 substrates (cycloSPORINE, itraconazole, rivaroxaban)

Drug/Herb

Increase: anticonvulsant effect—ginkgo
Decrease: anticonvulsant effect—ginseng, santonica

Drug/Lab Test

Decrease: sodium

NURSING CONSIDERATIONS

Assess:

• **Description of seizures:** frequency, duration, aura
• **Hyponatremia:** headache, nausea, confusion, usually within the first 3 mo of treatment, but may occur ≤1 yr, if this product is being used with other products that decrease sodium, monitor sodium levels
• **Electrolyte:** sodium; T_4; phenytoin (when given together)

• **Serious reactions:** angioedema, anaphylaxis, Stevens-Johnson syndrome
• **CNS/mental status:** mood, sensorium, affect, behavioral changes, confusion, suicidal thoughts/behaviors; if mental status changes, notify prescriber
• **Beers:** avoid in older adults unless safer alternatives are unavailable; ataxia, impaired psychomotor function may occur
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; may cause lack of seizure control due to a metabolite of OXcarbazepine; monitor seizure control; enroll in the North American Antiepileptic Drug (NAAED) Pregnancy Registry, 888-233-2334; do not breastfeed

Evaluate:
• Therapeutic response: decreased seizure activity

Teach patient/family:
• To avoid driving, other activities that require alertness
• Not to discontinue medication quickly after long-term use; seizures may increase
• To inform prescriber if hypersensitive to carBAMazepine; multisystem hypersensitivity may occur; to report fever, other allergic symptoms
• To avoid use of alcohol while taking product
• To use alternative contraception if using hormonal method; to report if pregnancy is planned or suspected
• To report skin rashes immediately; serious skin reactions can occur
• To report suicidal thoughts/behavior immediately
• **Pregnancy/breastfeeding:** if pregnant, to enroll in North American Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; not to breastfeed, excreted in breast milk

TREATMENT OF OVERDOSE:

Give 0.9% NaCl (hypotensive state), atropine (bradycardia); use benzodiazepines, barbiturates for seizures

oxybutynin (Rx)

(ox-i-byoo´ti-nin)

Ditropan XL, Gelnique, Oxytrol

Func. class.: Anticholinergic, urinary antispasmodic

Chem. class.: Synthetic tertiary amine

Do not confuse:
Ditropan/diazePAM/Diprivan

ACTION: Relaxes smooth muscles in urinary tract by inhibiting acetylcholine at postganglionic sites

USES: Antispasmodic for neurogenic bladder, overactive bladder in females (OTC)

CONTRAINDICATIONS: Hypersensitivity, GI obstruction, urinary retention, glaucoma, severe colitis, myasthenia gravis, unstable CV disease

Precautions: Pregnancy, breastfeeding, children <12 yr, geriatric patients, suspected glaucoma, cardiac disease, dementia

DOSAGE AND ROUTES

Overactive bladder

• **Adults: PO IR** 5 mg bid-tid, max: 5 mg qid
• **Geriatric: PO IR** 2.5 mg bid-tid, max: 5 mg qid
• **Child 5-12 yr: PO IR** 5 mg bid, max: 5 mg tid
• **Adults: PO EXT REL** 5-10 mg daily, adjust weekly by 5-mg increments max: 30 mg/day
• **Child/adolescent 6-17 yr: PO EXT REL** 5 mg daily, adjust weekly by 5-mg increments, max: 20 mg/day; symptoms of detrusor overactivity associated with a neurologic condition (spina bifida)
• **Adults: TD** apply 1 patch (3.9 mg/day) twice weekly to the abdomen, hip, or buttock; rotate patch site at each application
• **Adults: TOP** Apply the contents of 1 sachet/actuation of the metered-dose pump daily; apply to the abdomen, upper arms/shoulders, or thighs; rotate sites of

application; the same site should not be used on consecutive days

Available forms: Syr 5 mg/5 mL; tabs 5 mg; ext rel tabs 5, 10, 15 mg; TD 3.9 mg/day; top gel 10% (Gelnique)

Administer:

PO route

- Do not crush, break, or chew ext rel tabs
- Without regard to meals

Topical route

- Wash hands; apply to clean, dry intact skin on abdomen, upper arms/shoulders, thighs; avoid navel, rotate sites
- Squeeze contents into palm of hand or directly on site, rub gently
- Do not bathe, exercise, swim for 1 hr after application
- Allow to dry before putting on clothing
- Do not be near flame, fire, or smoke until gel has dried
- Delivers 100 mg

Transdermal route

- Apply to clean, dry intact skin on abdomen, hip, buttock; use firm pressure; not affected by showering/bathing; rotate sites
- Delivers 3.9 mg/day

SIDE EFFECTS

CNS: *Anxiety, restlessness, dizziness, somnolence, insomnia, nervousness,* seizures, headache, *drowsiness,* confusion

CV: *Palpitations, sinus tachycardia,* hypertension, peripheral edema, QT prolongation

EENT: *Blurred vision, dry eyes,* increased intraocular tension, *dry mouth,* dry throat

GI: *Nausea, vomiting, anorexia,* abdominal pain, *constipation, dyspepsia,* diarrhea, taste perversion, GERD

GU: Dysuria, impotence, *urinary retention, hesitancy*

MISC: Hyperthermia, anaphylaxis, angioedema

PHARMACOKINETICS

Onset ½-1 hr, peak 3-6 hr, duration 6-10 hr; metabolized by liver, excreted in urine; terminal half-life 2-3 hr

INTERACTIONS

- Altered pharmacokinetic parameters: CYP3A4 inhibitors

Increase: CNS depression—benzodiazepines, sedatives, hypnotics, opioids

Increase: levels of atenolol, digoxin, nitrofurantoin

Increase: anticholinergic effects—antihistamines, amantadine, other anticholinergics

Increase or decrease: levels of phenothiazines

Decrease: levels of acetaminophen, haloperidol, levodopa

Decrease: effects of oxybutynin—CYP3A4 inducers

NURSING CONSIDERATIONS

Assess:

- **Urinary patterns:** distention, nocturia, frequency, urgency, incontinence, I&O ratios; cystometry to diagnose dysfunction, urinary tract infections should be treated
- **Allergic reactions:** rash, urticaria; if these occur, product should be discontinued; **angioedema:** swelling of face, tongue, throat
- **QT prolongation:** ECG for QT prolongation, ejection fraction; assess for chest pain, palpitations, dyspnea
- **CNS effects:** confusion, anxiety; anticholinergic effects in geriatric patients
- **Pregnancy/breastfeeding:** use only if benefit outweighs risks; cautious use in breastfeeding, excretion unknown
- **Beers:** avoid in older adults; delirium risk is increased

Evaluate:

- Absence of dysuria, frequency, nocturia, incontinence

Teach patient/family:

- To avoid hazardous activities because dizziness, blurred vision may occur
- To avoid OTC medications with alcohol, other CNS depressants
- To avoid hot weather, strenuous activity because product decreases perspiration
- About the correct application of each product form

- **Transdermal:** change patch 2×/wk; do not use same site within 7 days; dispose of and use container not accessible to pets/children
- To open patch immediately before using
- Do not use during MRI, remove
- **Topical gel**
- Rotate sites
- Apply to clean, dry skin on abdomen, upper arm/shoulders/thighs
- Gel is flammable

⚠ HIGH ALERT

oxyCODONE (Rx)

(ox-i-koe′done)

Oxaydo, OxyCONTIN, Oxy IR ✱, OxyNEO ✱ Roxicodone, Supeudol ✱, Xtampza ER

oxyCODONE/acetaminophen (Rx)

Endocet, Magnacet, Narvox, Percocet, Primlev, Roxicet, Tylox, Xartemix XR, Xolox

oxyCODONE/aspirin (Rx)

Endodan, Percodan

oxyCODONE/ibuprofen (Rx)

Combunox

Func. class.: Opiate analgesic

Chem. class.: Semisynthetic derivative

Controlled Substance Schedule II

Do not confuse:
oxyCODONE/HYDROcodone

ACTION: Inhibits ascending pain pathways in CNS, increases pain threshold, alters pain perception

USES: Moderate to severe pain
Unlabeled uses: Postherpetic neuralgic (cont rel)

CONTRAINDICATIONS: Hypersensitivity, addiction (opiate), asthma, ileus

Black Box Warning: Respiratory depression

Precautions: Pregnancy, breastfeeding, child <18 yr, addictive personality, increased intracranial pressure, MI (acute), severe heart disease, renal/hepatic disease, bowel impaction

Black Box Warning: Opioid-naïve patients, substance abuse, accidental exposure, potential for overdose/poisoning, status asthmaticus

DOSAGE AND ROUTES

OxyCODONE Severe Pain

- **Adult: PO** 10-30 mg q4hr (5-15 mg q4-6hr for opiate-naïve patients). Concentrated sol is extremely concentrated; do not use interchangeably; **CONT REL** 10 mg q12hr for opiate-naïve patients
- **Child >5 yr/adolescent: PO (unlabeled)** 0.2 mg/kg given 30 min preprocedural

OxyCODONE/acetaminophen moderate-moderately severe pain

- **Adult: PO IR** 2.5-10 mg oxyCODONE and 325 mg acetaminophen q6hr, max 60 mg oxyCODONE or 4 g acetaminophen per day

Acute pain

- **Adult: PO ext rel** 2 tabs q12hr, max acetaminophen 4 g

OxyCODONE/aspirin moderate to moderately severe pain

- **Adult: PO** 1 tab q6hr as needed, max 12 tabs/24 hr

OxyCODONE/ibuprofen moderate to severe pain

- **Adult: PO** 1 tab q6hr, max 4 tabs/24 hr, max 7 days

Available forms: OxyCODONE: *cont rel tabs* (OxyCONTIN) 10, 15, 20, 30, 40, 80, 160 mg; *immediate rel tabs* 5, 7.5, 10, 15, 20, 30 mg; *immediate rel caps* 5 mg; *oral sol* 5 mg/5 mL, 20 mg/mL; **oxyCODONE with acetaminophen:** 2.5 mg/325 mg, 5 mg/325 mg, 7.5 mg/325 mg, 7.5 mg/300 mg, 10 mg/325 mg, *oral sol* 5 mg/325 mg/5 mL; *ext rel caps* 9,

O

13.5, 18, 27, 36 mg; **oxyCODONE with aspirin:** 4.835 mg/325 mg; **oxyCODONE with ibuprofen:** 5 mg/400 mg

Administer:

- Clarify all orders; fatalities have occurred
- Regular administration is more effective than PRN; give before pain becomes severe
- Discontinue gradually after long-term use
- Store in light-resistant area at room temperature
- OxyCODONE should be titrated from the initial recommended dosage to the dosage required to relieve pain
- There is no maximum dosage of oxyCODONE; however, careful titration is required until tolerance develops to some of the side effects (drowsiness, respiratory depression)

Oral solid formulations

Immediate-release tablets route

- May be administered with food or milk to minimize GI irritation

Extended-release caps route

- **Xtampza ER brand capsules:** take with food and the same amount of food
- Capsule contents may be sprinkled onto soft foods (applesauce, pudding, yogurt, ice cream, or jam) or into a cup and then given directly into the mouth; swallow immediately and rinse mouth
- Capsule contents may be given through an NG or gastrostomy tube. Flush tube with water. Open a capsule and pour the contents directly into the tube. Do not premix capsule contents with the liquid that will be used to flush the tube. Draw up 15 mL of water into a syringe, insert the syringe into the tube, and flush the contents through the tube. Repeat flushing twice using 10 mL of water with each flush. Extended-release 36-mg capsules are for use ONLY in opioid-tolerant patients
- Monitor patients closely for respiratory depression, particularly within the first 24-72 hr after initiation or dose escalation

Controlled-release tablets route (OxyCONTIN):

- Administer whole; do not crush, chew, or break in half; taking chewed, broken, or crushed controlled-release tablets could lead to the rapid release and absorption of a potentially toxic dose of oxyCODONE
- **OxyCONTIN brand tablets:** do not presoak, lick, or otherwise wet tablet before administering dose; administer 1 tablet at a time; allow patient to swallow each tablet separately with sufficient liquid
- **OxyCODONE controlled-release (OxyCONTIN)** 60-mg and 80-mg tablets are for use only in opioid-tolerant patients
- May be administered without food

Oral liquid formulations

Oral concentrate solution route

- Is a highly concentrated sol (20 mg oxyCODONE/mL), and care should be taken in dispensing and administering this medication; the sol may be added to 30 mL of a liquid or semisolid food; if the medication is placed in liquid or food, consume immediately; do not store diluted oxyCODONE for future use

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache, sedation, euphoria,* fatigue, abnormal dreams/thoughts, hallucinations

CV: Palpitations, bradycardia, change in B/P

EENT: Tinnitus, blurred vision, miosis, diplopia

GI: *Nausea, vomiting, anorexia, constipation, cramps,* gastritis, dyspepsia, biliary spasms

GU: Increased urinary output, dysuria, urinary retention

INTEG: *Rash,* urticaria, bruising, flushing, diaphoresis, pruritus

RESP: Respiratory depression

PHARMACOKINETICS

PO: Onset 15-30 min, peak 1 hr, duration reg rel 2-6 hr, cont rel 12 hr, metabolized by liver, excreted in urine, crosses placenta, excreted in breast milk, half-life 3-5 hr, protein binding 45%

INTERACTIONS

Black Box Warning: Increase: effects with other CNS depressants—alcohol, opioids, sedative/hypnotics, antipsychotics, skeletal muscle relaxants

Increase: oxyCODONE level—CYP3A4 inhibitors
Increase: toxicity—cimetidine, MAOIs
Drug/Herb
Increase: sedative effect—kava, St. John's wort, valerian
Drug/Lab Test
Increase: amylase, lipase

NURSING CONSIDERATIONS

Assess:
- **Pain:** intensity, location, type, characteristics; need for pain medication by pain/sedation scoring; physical dependence
- I&O ratio; check for decreasing output; may indicate urinary retention
- **CNS changes:** dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
- **Allergic reactions:** rash, urticaria

Black Box Warning: Respiratory dysfunction: respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min; monitor B/P, pulse baseline and periodically

- **Bowel status:** constipation; stimulant laxative may be needed with fluids, fiber

Black Box Warning: Substance abuse: assess for substance abuse in patient/family/friends before prescribing; monitor for abuse, may crush, chew, snort, or inject ext rel product; may be fatal

Black Box Warning: Accidental exposure: dispose of properly away from pets, children

Black Box Warning: Pregnancy/breastfeeding: use only if benefits outweigh fetal risk; neonatal opioid withdrawal syndrome may occur with extended use; avoid breastfeeding, excreted in breast milk

- **Beers:** avoid in older adults; ataxia, impaired psychomotor function may occur
- Assistance with ambulation
- Safety measures: night-light, call bell within easy reach

Evaluate:
- Therapeutic response: decrease in pain without dependence

Teach patient/family:
- To report any symptoms of CNS changes, allergic reactions
- That physical dependency may result from extended use
- That withdrawal symptoms may occur after long-term use: nausea, vomiting, cramps, fever, faintness, anorexia
- To avoid CNS depressants, alcohol
- To avoid driving, operating machinery if drowsiness occurs

TREATMENT OF OVERDOSE:

Naloxone (Narcan) 0.2-0.8 mg IV, O_2, IV fluids, vasopressors, caution with patients physically dependent on opioids

oxymetazoline nasal agent

See Appendix B

oxymetazoline ophthalmic

See Appendix B

⚠ HIGH ALERT

oxyMORphone (Rx)

(ox-i-mor′fone)
Func. class.: Opiate analgesic
Chem. class.: Semisynthetic phenanthrene derivative
Controlled Substance Schedule II

Do not confuse:
oxyMORphone/oxyCODONE

ACTION: Inhibits ascending pain pathways in CNS, increases pain threshold, alters pain perception

USES: Moderate to severe pain

CONTRAINDICATIONS: Hypersensitivity, addiction (opiate), asthma, hepatic disease, ileus, intrathecal use, surgery

Black Box Warning: Respiratory depression

Precautions: Pregnancy (short-term), breastfeeding, children <18 yr, addictive personality, increased intracranial pressure, MI (acute), severe heart disease, respiratory depression, renal/hepatic disease, bowel impaction

Black Box Warning: Alcoholism, opioid-naive patients, substance abuse

DOSAGE AND ROUTES

Acute pain

• **Adult: PO IR** 5-10 mg q4-6hr prn (opioid naive)

Chronic pain

• **Adult: PO ext rel** 5 mg q12hr

Available forms: Tabs 5, 10 mg; tabs ext rel 5, 7.5, 10, 15, 20, 30, 40 mg

Administer:

• 1 hr before or 2 hr after food (PO)
• With antiemetic for nausea, vomiting
• When pain is beginning to return; determine interval by response
• Store in light-resistant area at room temperature

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache,* hallucinations, increased intracranial pressure, *sedation,* seizures, *euphoria (geriatric patients)*
CV: Palpitations, bradycardia, change in B/P, hypotension
EENT: Tinnitus, blurred vision, miosis, diplopia
GI: *Nausea, vomiting, anorexia, constipation, cramps*
GU: Dysuria, urinary retention
INTEG: *Rash,* urticaria, bruising, flushing, diaphoresis, pruritus
RESP: Respiratory depression

PHARMACOKINETICS

Metabolized by liver, excreted in urine, crosses placenta, half-life: PO: 7-9 hr, ext rel: 9-11 hr
PO: Peak 1 hr (fasting)

INTERACTIONS

Black Box Warning: Increase: effects with other CNS depressants—alcohol, opiates, sedative/hypnotics, antipsychotics, skeletal muscle relaxants

• **Increase:** unpredictable effects/reactions—MAOIs
• **Increase:** serotonin syndrome SNRIs, SSRIs, tricyclics, MAOIs

Drug/Herb

Increase: sedative effect—kava, St. John's wort, valerian

Drug/Lab Test

Increase: amylase

Drug/Herb

Increase: Serotonin syndrome—St. John's wort

NURSING CONSIDERATIONS

Assess:

• **Pain:** location, intensity, type, other characteristics before and after need for pain medication, physical dependence, give 25%-50% until pain reduction of 50% on pain rating scale, repeat dose may be given at time of peak if previous dose does not control pain and respiratory depression has not occurred
• I&O ratio for decreasing output; may indicate urinary retention
• **Bowel status:** constipation; may need stimulative laxative if use ≥3 days; increased fluids, fiber for prevention
• **CNS changes:** dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
• **Allergic reactions:** rash, urticaria

Black Box Warning: Respiratory dysfunction: respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min; dose may need to be decreased by 25%-50%; monitor B/P, pulse also

Black Box Warning: Accidental exposure: dispose of properly, away from children/pets

Black Box Warning: Overdose/poisoning: avoid alcohol ingestion, do not crush, chew, snort, or inject tabs, high abuse potential, assess for abuse

Black Box Warning: Opioid-naive patients: ext rel tabs are not to be used immediately postop (12-24 hr after surgery) in these patients

- **Abrupt discontinuation:** Taper after long-term use, assess for withdrawal: anxiety, restlessness, cramps, nausea/vomiting
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; neonatal opioid withdrawal syndrome may occur with extended use; avoid breastfeeding
- **Beers:** avoid use in older adults; ataxia, impaired psychomotor function may occur

Evaluate:
- Therapeutic response: decrease in pain

Teach patient/family:
- To report any symptoms of CNS changes, allergic reactions, serotonin syndrome
- That physical dependency may result from extended use
- That withdrawal symptoms may occur: nausea, vomiting, cramps, fever, faintness, anorexia
- Not to drive or operate machinery if drowsiness occurs
- Not to use other CNS depressants, alcohol
- To make position changes slowly to prevent orthostatic hypotension
- To notify prescriber of all OTC, Rx, herbs, supplements being taken; not to take new products unless approved by prescriber
- To notify health care professional if pregnancy is planned or suspected; avoid breastfeeding

TREATMENT OF OVERDOSE:

Naloxone (Narcan) 0.2-0.8 mg IV (caution with patients physically dependent on opioids), O_2, IV fluids, vasopressors

⚠ HIGH ALERT

oxytocin (Rx)

(ox-i-toe´sin)

Pitocin

Func. class.: Hormone

Chem. class.: Oxytocic, uterine-active agent

ACTION: Acts directly on myofibrils, thereby producing uterine contraction; stimulates milk ejection by the breast; vasoactive antidiuretic effect

USES: Stimulation, induction of labor; missed or incomplete abortion; postpartum bleeding

CONTRAINDICATIONS: Hypersensitivity, serum toxemia, cephalopelvic disproportion, fetal distress, hypertonic uterus, prolapsed umbilical cord, active genital herpes

Precautions: Cervical/uterine surgery, uterine sepsis, primipara >35 yr, 1st/2nd stage of labor

Black Box Warning: Elective induction of labor

DOSAGE AND ROUTES

Postpartum hemorrhage
- **Adult: IV** 10-40 units in 1000 mL nonhydrating diluent infused at 20-40 mU/min

Stimulation of labor
- **Adult: IV** 0.5-1 mU/min, increase by 1-2 mU q15-60min until contractions occur, then decrease dose

Incomplete abortion
- **Adult: IV INFUSION** 10 units/500 mL D_5W or 0.9% NaCl at 10-20 mU/min, max 30 units/12 hr

Available forms: Inj 10 units/mL

Administer:
- Give by IV infusion or IM, not used routinely IM
- Before use, an IV infusion of NS should be already running for use in case of adverse reactions. Magnesium sulfate

should be readily available if relaxation of the myometrium is needed
• Visually inspect parenteral product for particulate matter and discoloration before use

IV infusion route

• Administer using an infusion pump to ensure accurate dosing

Induction of labor

• Dilute 1 mL (10 units) in 1000 mL of a compatible IV infusion solution. Rotate infusion bottle for thorough mixing. The resultant infusion should contain 10 milliunits/mL

Control of postpartum uterine bleeding

• Dilute 10-40 units in a compatible IV solution or to an already infusing solution. The maximum concentration is 40 units in 1000 mL of solution

Incomplete, inevitable, or elective abortion

• Dilute 10 units in 500 mL of a compatible IV solution

IM route

• Not used routinely IM
• Inject into a large muscle mass; aspirate before injection to avoid injection into a blood vessel

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amikacin, aminocaproic acid, aminophylline, amphotericin B liposome (ambisome), anidulafungin, argatroban, ascorbic acid injection, atenolol, atracurium, atropine, azaTHIOprine, azithromycin, aztreonam, benztropine, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, capreomycin, caspofungin, cefamandole, ceFAZolin, cefepime, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorothiazide, chlorpheniramine, cimetidine, ciprofloxacin, cisatracurium, clindamycin, cloxacillin, colistimethate, cyanocobalamin, cyclophosphamide, cycloSPORINE, DAPTOmycin, dexamethasone, dexmedetomidine, digoxin, dilTIAZEM, diphenhydrAMINE, DOBUTamine, dolasetron, DOPamine, doxycycline, droperidol, edetate calcium disodium, enalaprilat, ePHEDrine, EPINEPHrine, epoetin alfa, eptifibatide, ergonovine, ertapenem, erythromycin, esmolol, famotidine, fenoldopam, fentaNYL, fluconazole, folic acid (as sodium salt), foscarnet, fosphenytoin, furosemide, gallamine, ganciclovir, gatifloxacin, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone sodium succinate, HYDROmorphone, hydrOXYzine, imipenem-cilastatin, isoproterenol, kanamycin, ketamine, ketorolac, labetalol, lactated Ringer's injection, lansoprazole, lepirudin, leucovorin, levoFLOXacin, lidocaine, lincomycin, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, mephentermine, meropenem, metaraminol, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, morphine, moxifloxacin, multiple vitamins injection, mycophenolate mofetil, nafcillin, nalbuphine, nalorphine, naloxone, nesiritide, netilmicin, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, palonosetron, pamidronate, papaverine, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin sodium, piperacillin-tazobactam, polymyxin B, potassium acetate/chloride/phosphates, procainamide, prochlorperazine, promazine, promethazine, propranolol, protamine, pyridoxine, quinupristin-dalfopristin, raNITIdine, Ringer's injection, sodium acetate/bicarbonate/phosphates, streptomycin, succinylcholine, SUFentanil, tacrolimus, theophylline, thiamine hydrochloride, ticarcillin disodium, ticarcillin disodium-clavulanate potassium, tigecycline, tirofiban hydrochloride, tobramycin sulfate, tolazoline, trimetaphan, tubocurarine, urokinase, vancomycin, vasopressin, verapamil, vitamin B complex with B, voriconazole, warfarin, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Seizures, tetanic contractions
CV: Hypo/hypertension, dysrhythmias, increased pulse, bradycardia, tachycardia, PVC
FETUS: Dysrhythmias, jaundice, hypoxia, intracranial hemorrhage
GI: Anorexia, nausea, vomiting, constipation
GU: Abruptio placentae, decreased uterine blood flow
HEMA: Increased hyperbilirubinemia
INTEG: Rash
RESP: Asphyxia
SYST: Water intoxication of mother

PHARMACOKINETICS

IM: Onset 3-7 min, duration 1 hr, half-life 12-17 min
IV: Onset 1 min, duration 30 min, half-life 12-17 min

INTERACTIONS

Increase: oxytocin effects—dinoprostone
Increase: QT prolongation—other drugs that increase QT interval
• **Increase:** hypertension—vasopressors, avoid using together
Drug/Herb
• **Increase:** hypertension—ephedra

NURSING CONSIDERATIONS

Assess:
• Assess for fetal presentation, pelvic dimensions before use
• B/P, pulse; watch for changes that may indicate hemorrhage
• Respiratory rate, rhythm, depth; notify prescriber of abnormalities
• Monitor continuously, discontinue immediately if fetal distress occurs or uterine hyperactivity occurs
• Length, intensity, duration of contraction; notify prescriber of contractions lasting >1 min or absence of contractions; turn patient on her left side; discontinue oxytocin
• **FHTs, fetal distress;** watch for acceleration, deceleration; notify prescriber if problems occur; fetal presentation, pelvic dimensions; turn patient on left side if FHT change in rate, give O_2
• **Water intoxication:** confusion, anuria, drowsiness, headache; monitor I&O

Black Box Warning: Elective induction of labor: use for induction only when medically necessary

Evaluate:
• Therapeutic response: stimulation of labor, control of postpartum bleeding
Teach patient/family:
• To report increased blood loss, abdominal cramps, fever, foul-smelling lochia, nausea, blurred vision, itching, swelling
• That contractions will be similar to menstrual cramps, gradually increasing in intensity

O

⚠ HIGH ALERT

PACLitaxel (Rx)

(pa-kli-tax′el)

PACLitaxel protein bound particle (Rx)

Abraxane

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Taxane

Do not confuse:
PACLitaxel/PARoxetine/Paxil

ACTION: Inhibits reorganization of microtubule network needed for interphase and mitotic cellular functions; causes abnormal bundles of microtubules during cell cycle and multiple esters of microtubules during mitosis

USES: **PACLitaxel:** metastatic carcinoma of the ovary, breast; AIDS-related Kaposi's sarcoma (2nd-line), non–small-cell lung cancer (1st-line), adjuvant treatment for node-positive breast cancer, prostate cancer, esophageal cancer, melanoma
PACLitaxel Protein Bound Particles: metastatic breast cancer after failure or relapse, metastatic pancreatic adenocarcinoma refractory prostate cancer, bladder cancer
Unlabeled uses: (Paclitaxel) endometrial, penile cancer

CONTRAINDICATIONS: Pregnancy; hypersensitivity to PACLitaxel or other products with polyoxyethylated castor oil, albumin

Black Box Warning: Neutropenia <1500/mm^3

Precautions: Breastfeeding, children, females, geriatric patients, cardiovascular/hepatic/renal disease, CNS disorder, bone marrow suppression, dental disease, dental work, extravasation, herpes, infection, infertility, jaundice, ocular exposure, radiation therapy, thrombocytopenia, vaccination

Black Box Warning: Anaphylaxis, bone marrow suppression, requires a specialized care setting, requires an experienced clinician

DOSAGE AND ROUTES

PACLitaxel

Ovarian carcinoma
• **Adult: IV INFUSION** 135 mg/m^2 given over 24 hr or 175 mg/m^2 over 3 hr q3wk, then CISplatin 75 mg/m^2

Breast carcinoma node positive
• **Adult: IV INFUSION** 175 mg/m^2 over 3 hr q3wk × 4 courses

AIDS-related Kaposi's sarcoma
• **Adult: IV INFUSION** 135 mg/m^2 over 3 hr q3wk or 100 mg/m^2 over 3 hr q2wk

First-line non–small-cell lung cancer
• **Adult: IV INFUSION** 135 mg/m^2/24 hr infusion with CISplatin 75 mg/m^2 × 3 wk

Hepatic dose
• **Adult:** Dose reduction for 135 mg/m^2 24-hr **IV INFUSION**—AST/ALT 2-10 × ULN, total bilirubin ≤1.5 mg/dL: give 100 mg/m^2; AST/ALT <10 × ULN, total bilirubin 1.6-7.5 mg/dL: 50 mg/m^2; AST/ALT ≥10 × ULN or total bilirubin >7.5 mg/dL: avoid use
• **Adult:** Dose reduction for 175 mg/m^2 3-hr **IV INFUSION**—AST/ALT <10 × ULN, total bilirubin 1.26-2 × ULN: give 135 mg/m^2; AST/ALT <10 × ULN, total bilirubin 2.01-5 × ULN: 90 mg/m^2; AST/ALT ≥10 × ULN or total bilirubin >5 × ULN: avoid use

PACLitaxel protein-bound particles

Metastatic pancreatic cancer
• **Adult: IV** infusion 125 mg/m^2 over 30-40 min on days 1, 8, 15 of each 28-day cycle followed by gemcitabine 1000 mg/m^2 IV over 30-40 min, on days 1, 8, 15, and 28

Available forms: Inj 6 mg/5mL, powder for inj, lyophilized 100 mg in single-use vials (Abraxane)

Administer:
• If CISplatin is given, use after taxane
• Use cytotoxic handling procedures

Black Box Warning: Confirmation that dexamethasone was given 12 hr and 6 hr before infusion begins

• Store prepared sol up to 27 hr in refrigerator

Intermittent IV INFUSION route

Black Box Warning: After premedicating with dexamethasone 20 mg PO 12 hr and 6 hr before PACLitaxel, diphenhydrAMINE 50 mg IV $^1/_2$-1 hr before PACLitaxel and cimetidine 300 mg or ranitidine 50 mg IV $^1/_2$-1 hr before PACLitaxel

• Assess for extravasation if given by regular IV, not port

PACLitaxel

Continuous IV INFUSION

• **Dilute** 30 mg vial/5 mL

• After diluting in 0.9% NaCl, D_5W, D_5 and 0.9% NaCl, D_5LR (0.3-1.2 mg/mL), chemo dispensing pin or similar devices with spikes should not be used in vials of PACLitaxel; use in-line filter ≤0.22 micron;

• Using only glass bottles, polypropylene, polyolefin bags, and administration sets; do not use PVC infusion bags or sets

PACLitaxel Protein Bound Particles

Intermittent IV INFUSION route

• No premedication for allergic reaction is needed

• **Reconstitute** vial by injecting 20 mL of 0.9% NaCl; slowly inject 20 mL of 0.9% NaCl over at least 1 min to direct sol flow on wall of vial (5 mg/mL); do not inject 0.9% NaCl directly onto lyophilized cake (foaming will occur); allow vial to sit for at least 15 min to ensure proper wetting of lyophilized cake; gently swirl or invert vial slowly for ≥2 min until completely dissolved, should look milky

• Calculate dose by dosing vol/mL = total dose (mg) ÷ 5 (mg/mL)

• Use PVC IV bag, do not use filter

• Solution is stable for 8 hr refrigerated

• Give over 30 min, monitor for extravasation and hypersensitivity

• Do not admix

SIDE EFFECTS

CNS: *Peripheral neuropathy, dizziness, headache, seizures*

CV: Bradycardia, *hypotension,* abnormal ECG, supraventricular tachycardia (SVT)

GI: *Nausea, vomiting, diarrhea, mucositis, stomatitis,* pancreatitis

HEMA: Neutropenia, leukopenia, thrombocytopenia, anemia

INTEG: *Alopecia,* tissue necrosis, generalized urticaria, *flushing*

MS: *Arthralgia, myalgia*

RESP: Pulmonary embolism, dyspnea, cough

SYST: *Hypersensitivity reactions,* anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis, angioedema

GU: Renal failure

PHARMACOKINETICS

89%-98% of product serum protein bound, metabolized in liver, excreted in bile and urine; terminal half-life 5.3-17.4 hr

INTERACTIONS

Increase: myelosuppression—other antineoplastics, radiation

Increase: DOXOrubicin levels—DOXOrubicin

Increase: bleeding risk—NSAIDs, anticoagulants, platelet inhibitors, thrombolytics

Decrease: PACLitaxel levels-CYP2C8, CYP 2C9 inducers: phenobarbitol, phenytoin

Decrease: PACLitaxel metabolism—verapampil, cyclosporine, diazePAM, teniposide, etoposide, quinidine, vinecristine, testosterone, ketoconazole, estradiol

Decrease: immune response—live virus vaccines

Drug/Lab Test

Increase: AST/ALT, alk phos, triglycerides

Decrease: neutrophils, platelets, WBC, HB

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Requires a specialized care setting such as a hospital or facility with management of complications; should be used by a clinician experienced in cytotoxic agents

Black Box Warning: Bone marrow suppression: CBC, differential, platelet count before treatment and weekly; withhold product if WBC is <1500/mm^3 or platelet count is <100,000/mm^3; notify prescriber

• **Cardiovascular status:** ECG continuously in CV conditions; monitor for hypotension, sinus bradycardia/tachycardia
• **Peripheral neuropathy:** paresthesias, numbness; during infusion, use ice packs on extremities to lessen continued neuropathy; may use acupuncture for some relief; use of ice on extremities when infusing
• **Arthralgia, myalgia:** may begin 2-3 days after infusion and continue for 4-5 days; may use analgesics
• **Nausea, vomiting:** premedicate with antiemetics; nausea and vomiting occur often
• **PACLitaxel:** CBC and differential baseline and periodically, leukocytes <1500/mm, platelets 100,000/mm^3 hold, nadir is 11 days (leukopenia) recovery 15-21 days
• **PACLitaxel Protein Bound Particles:** CBC and differential on days 1, 8, 15, hold if neutrophils <1500/mm^3 × 1 wk, reduce all doses
• Hepatic studies before, during therapy (bilirubin, AST, ALT, LDH) prn or monthly, check for jaundiced skin and sclera, dark urine, clay-colored stool, itchy skin, abdominal pain, fever, diarrhea
• VS during 1st hr of infusion, check IV site for signs of infiltration

Black Box Warning: Hypersensitivity reactions, anaphylaxis: hypotension, dyspnea, angioedema, generalized urticaria **Stevens-Johnson syndrome**; discontinue infusion immediately; keep emergency equipment available, monitor continuously during first 30-60 min, then periodically, usually occurs in first few minutes, pretreat with dexamethasone, diphenhydramine

• **Flushing:** for mild to moderate flush, may continue diphenhydrAMINE for ≤48 hr
• Effects of alopecia on body image; discuss feelings about body changes
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:
• To report signs of infection: fever, sore throat, flulike symptoms
• To report signs of anemia: fatigue, headache, faintness, SOB, irritability
• To report bleeding; to avoid use of razors, commercial mouthwash; to use soft-bristle toothbrush; to use viscous xylocaine or compounded formula for stomatitis
• To avoid use of aspirin, ibuprofen
• To avoid crowds, persons with known infections
• That hair may be lost during treatment; that a wig or hairpiece may make patient feel better; that new hair may be different in color, texture
• That pain in muscles and joints 2-5 days after infusion is common
• To notify prescriber if pregnancy is planned or suspected; do not breastfeed
• To avoid receiving vaccinations while taking product

⚠ HIGH ALERT

palbociclib (Rx)

(pal-boe-sye′klib)

Ibrance

Func. class.: Antineoplastic
Chem. class.: Signal transduction inhibitor, kinase inhibitor

ACTION: Inhibits progression of the cell cycle from G_1 into S phase, decreased proliferation of ER-positive breast cancer cell lines. When combined with antiestrogen therapy (letrozole), decreases retinoblastoma protein (Rb) phosphorylation, reducing E2F expression and signaling and increasing growth arrest

USES: Treatment of estrogen receptor (ER)–positive, HER2-negative advanced breast cancer in postmenopausal women, in combination with letrozole as initial endocrine-based therapy

CONTRAINDICATIONS

CONTRAINDICATIONS: Hypersensitivity, pregnancy, lactation
Precautions: children, fungal/viral infection, infants, infertility, neutropenia, testicular failure, thromboembolic disease

DOSAGE AND ROUTES

Hormone receptor (HR)-positive, HER2-negative advanced or metastatic breast cancer
• **Adult females: PO** 125 mg daily with food × 21 days, followed by 7 days off, repeat q28 days, given with letrozole 2.5 mg/day; give continuously through each cycle
Available forms: Caps 75, 100, 125 mg
Administer:
• Give at the same time of the day with food and letrozole, capsules should be swallowed whole; do not cut, open, chew, do not use if capsule is not intact

SIDE EFFECTS

CNS: Weakness, fever, *fatigue*
EENT: *Stomatitis, oral ulceration*, glossitis, pharyngitis, sinusitis, epistaxis
GI: Vomiting, *nausea, anorexia, diarrhea*
INTEG: Alopecia, rash
HEMA: Thrombocytopenia, *neutropenia, leukopenia,* lymphopenia, anemia
MISC: Peripheral neuropathy, infection, pulmonary embolism, thromboembolism

PHARMACOKINETICS

85% protein bound, elimination half-life was 24-34 hr, metabolized by CYP3A, peak 6-12 hr

INTERACTIONS

Avoid use with CYP3A inhibitors and inducers
Drug/Herb
• Avoid use with St. John's wort
Drug/Food
• Avoid use with grapefruit juice

NURSING CONSIDERATIONS

Assess:
• **Pulmonary embolism/thromboembolic events:** dyspnea/shortness of breath, chest pain, arm or leg swelling, sudden numbness or weakness, severe headache or confusion, or problems with vision, speech, or balance
• **Blood dyscrasias:** CBC/differential prior to and q2wk first 2 cycles, then before each cycle or if change in symptoms
• **GI status:** nausea, diarrhea, anorexia, weight loss
• **Body image:** hair loss, loss of weight
• **Pregnancy:** product can cause fetal harm; identify if the patient is pregnant or if pregnancy is planned
Evaluate: Therapeutic response: decreased progression of disease
Teach patient/family:
• That laboratory testing will be needed during treatment
• Do not take with grapefruit juice
• **Pulmonary/thromboembolic events:** to seek medical attention if dyspnea/shortness of breath, chest pain, arm or leg swelling, sudden numbness or weakness, severe headache or confusion, or problems with vision, speech, or balance develop
• To take as prescribed, not to double or skip dose, review "Patient Information Sheet"
• To notify provider of infection
• To discuss all OTC, Rx, herbals, supplements taken
• Identify if pregnancy is planned or suspected. Discuss the need for contraception due to possible fetal harm; avoid breastfeeding

paliperidone (Rx)

(pal-ee-per´i-done)
Invega, Invega Hafyera, Invega Sustenna, Invega Trinza
Func. class.: Antipsychotic, atypical, 2nd generation
Chem. class.: Benzisoxazole derivative

Do not confuse:
Invega/Iveegam

P

paliperidone/risperiDONE

ACTION: Mediated through both DOPamine type 2 (D_2) and serotonin type 2 ($5\text{-}HT_2$) antagonism

USES: Schizophrenia, schizoaffective disorder

CONTRAINDICATIONS: Breast-feeding, geriatric patients, seizure disorders, AV block, QT prolongation, torsades de pointes; hypersensitivity to this product, risperidone

Precautions: Pregnancy, children, renal/hepatic disease, obesity, Parkinson's disease, suicidal ideation, diabetes mellitus, hematological disease

Black Box Warning: Dementia-related psychosis (mortality)

DOSAGE AND ROUTES

• **Adult: PO** 6 mg/day, max 12 mg/day; **IM (Invega Sustenna)** 234 mg on day 1, then 156 mg 1 wk later; after 2nd dose, give 117 mg each mo; range 39-234 mg; **(Invega Trinza)** dose based on previous 1-mo injection dose of Invega Sustenna; if last dose of Invega Sustenna was 78 mg, give 273 mg of Invega Trinza; if last dose of Invega Sustenna was 117 mg, give 410 mg of Invega Trinza; if last dose of Invega Sustenna was 156 mg, give 546 mg of Invega Trinza; if last dose of Invega Sustenna was 234 mg, give 819 mg of Invega Trinza; give dose q3mo, adjust as needed

• **Child/adolescent ≥12 yr and ≥51 kg: PO** 3 mg daily, may increase if needed by 3 mg/day in intervals of >5 days, up to max 12 mg/day; <51 kg max 6 mg/day

Invega Hafyera (6-month extended-release injection)

Adult: Initial, only after adequate treatment with once-a month extended-release injection for at least 4 months or an every-3-month extended-release injection (PP3M) for at least one 3-month cycle, 1092 mg or 1560 mg (based upon the previous dose of PP1M or PP3M) IM into the gluteal muscle q6mo maintenance, adjust every 6 months between 1092 and 1560 mg

Renal dose

• **Adult: PO** CCr 50-79 mL/min, 3 mg/day, max 6 mg/day; **EXT REL/IM** 156 mg on day 1, 117 mg 1 wk later, then 78 mg each mo; CCr 10-49 mL/min, 1.5 mg/day, max 3 mg/day; **IM** not recommended

Available forms: Ext rel tabs 1.5, 3, 6, 9 mg; ext rel susp for inj 39 mg/0.25 mL, 78 mg/0.5 mL, 117 mg/0.75 mL, 156 mg/mL, 234 mg/1.5 mL; **Invega Trinza** extended-release suspension 273, 410, 546, 819 mg; **Invega Hafyera:** 1092 mg/3.4 mL, 1560 mg/5 mL extended release suspension

Administer:

• Avoid use with CNS depressants

PO route

• Do not break, crush, or chew ext rel tabs; use plenty of water

• Without regard for food

• Reduced dose for geriatric patients

IM route

• Use for IM only; do not use IV or subcut; inj kits contain prefilled syringe and 2 safety needles; for single use only; **shake** for 10 sec; **deltoid inj:** ≥90 kg, use 1.5-inch, 22-G needle; <90 kg, use 1-inch, 23-G needle; alternate injections between deltoid muscles; **gluteal inj:** use 1.5-inch, 22-G needle; attach needle to Luer connection in clockwise motion; pull needle sheath away using straight pull; bring syringe with attached needle upright to de-aerate, de-aerate, inject; after inj, use finger, thumb, or flat surface to activate needle protection system until click heard; use deltoid × 2 doses

SIDE EFFECTS

CNS: *EPS, pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia; drowsiness, insomnia, agitation, anxiety, headache,* seizures, neuroleptic malignant syndrome, dizziness, suicidal thoughts/behaviors

CV: Orthostatic hypotension, tachycardia; heart failure, QT prolongation, dysrhythmias, heart block

EENT: Blurred vision, cough

ENDO: Hyperinsulinemia, weight gain, hyperglycemia, dyslipidemia

GI: *Nausea,* vomiting, *anorexia, constipation,* weight gain in adolescents, xerostomia
GU: Priapism, menstrual irregularities, impotence, priapism
MS: Back pain
MISC: Angioedema, anaphylaxis
HEMA: Agranulocytosis, leukopenia, neutropenia

PHARMACOKINETICS

Peak 24 hr; elimination half-life 23 hr; excreted 80% urine, 11% feces, protein binding >74%

INTERACTIONS

Increase: sedation—other CNS depressants, alcohol, sedative/hypnotics, opiates
Increase: QT prolongation—class IA, III antidysrhythmics, azole antifungals, tricyclics (high doses), some phenothiazines, β-blockers, chloroquine, pimozide, droperidol, some antipsychotics, abarelix, alfuzosin, amoxapine, apomorphine, dasatinib, dolasetron, flecainide, halogenated anesthetics
Increase: neurotoxicity—lithium
Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs
Increase: EPS—other antipsychotics
Decrease: levels of carBAMazepine, increased dose of paliperidone may be needed
Decrease: effect of paliperidone—carBAMazepine, other CYP3A4 inducers
Decrease: levodopa effect—levodopa
Drug/Lab Test
Increase: prolactin levels

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Mental status: mood, behavior, confusion, orientation, suicidal thoughts/behaviors; dementia, especially in geriatric patients before initial administration and periodically

- **QT prolongation:** ECG for QT prolongation, ejection fraction; chest pain, palpitations, dyspnea
- AIMS assessment, blood glucose, CBC, glycosylated hemoglobin A1c (HbA1c), LFTs, neurologic function, pregnancy testing, serum creatinine/electrolytes/lipid profile/prolactin, thyroid function tests, weight
- Swallowing of PO medication; check for hoarding, giving of medication to others
- Affect, orientation, LOC, reflexes, gait, coordination, sleep pattern disturbances
- **VS:** B/P (standing, lying), pulse, respirations; often during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; watch for ECG changes
- **Hyperprolactinemia:** sexual dysfunction, decreased menstruation, breast pain
- Dizziness, faintness, palpitations, tachycardia on rising
- **EPS:** akathisia, tardive dyskinesia (bizarre movements of jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait)
- **Serotonin syndrome, neuroleptic malignant syndrome:** monitor for hyperthermia, increased CPK, altered mental status, muscle rigidity, fever, seizures; discontinue
- Constipation, urinary retention daily; if these occur, increase bulk and water in diet; monitor for weight gain, especially among adolescents
- **Safety:** Supervised ambulation until patient is stabilized on medication; do not involve patient in strenuous exercise program because fainting is possible; patient should not stand still for a long time
- Increased fluids to prevent constipation
- Sips of water, candy, gum for dry mouth
- **Beers:** avoid in older adults except for schizophrenia, bipolar disorder, or short-term use as an antiemetic in chemotherapy; increase in stroke risk
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; EPS may result; pregnant patients should enroll in the National Pregnancy Registry for Atypical Antipsychotics, 1-866-961-2388; do not breastfeed

Evaluate:

- Therapeutic response: decrease in emotional excitement, hallucinations, delusions, paranoia; reorganization of patterns of thought, speech

P

Teach patient/family:
- That orthostatic hypotension may occur; to rise gradually from sitting or lying position
- To avoid abrupt withdrawal of this product, EPS may result; that product should be withdrawn slowly
- To avoid OTC preparations (cough, hay fever, cold) unless approved by prescriber because serious product interactions may occur; to avoid alcohol because increased drowsiness may occur
- To avoid hazardous activities if drowsy or dizzy
- About compliance with product regimen; that nonabsorbable tab shell is expelled in stool
- To report impaired vision, tremors, muscle twitching
- To avoid hot tubs, hot showers, tub baths because hypotension may occur
- That heat stroke may occur in hot weather; to take extra precautions to stay cool
- To use contraception; to inform prescriber if pregnancy is planned or suspected; not to breastfeed

Black Box Warning: Suicidal thoughts/behaviors: to notify prescriber of suicidal thoughts/behaviors, other changes in behavior; identify dementia in the elderly

TREATMENT OF OVERDOSE:
Lavage if orally ingested; provide airway; *do not induce vomiting*

palivizumab (Rx)
(pah-li-VIZ-u-mab)
Synagis
Func. class.: Antiviral

USES: Prevention of serious lower respiratory tract disease caused by respiratory syncytial virus (RSV) in pediatric patients at high risk of RSV; pediatric patients with bronchopulmonary dysplasia (BPD) season; or pediatric patients with hemodynamically significant congenital heart disease (CHD)

CONTRAINDICATIONS
Hypersensitivity, child >24 mo, adolescents/adults

DOSAGE AND ROUTES
Respiratory syncytial virus (RSV), prevention.
Infant/child <24 mo: IM 15 mg/kg monthly during RSV season; first dose administered before commencement of RSV season
Available forms: Injection 50, 100 mg vials

palonosetron (Rx)
(pa-lone-o´se-tron)
Aloxi
Func. class.: Antiemetic
Chem. class.: 5-HT_3 receptor antagonist

ACTION: Prevents nausea, vomiting by blocking serotonin peripherally, centrally, and in the small intestine at the 5-HT_3 receptor

USES: Prevention of nausea, vomiting associated with cancer chemotherapy, postoperative nausea/vomiting

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, geriatric patients, hypokalemia, hypomagnesemia, patients taking diuretics

DOSAGE AND ROUTES
Prevention of chemotherapy-induced nausea/vomiting
- **Adult: IV** 0.25 mg as single dose over 30 sec ½ hr before chemotherapy

Child 1 mo to <17 yr: IV 20 mcg/kg, max 1.5 mg given 30 min before chemotherapy

Postoperative nausea/vomiting prophylaxis for ≤24 hr after surgery
- **Adult: IV** 0.075 mg given over 10 sec immediately before induction

Available forms: Inj 0.075 mg/1.5 mL, 0.25 mg/5 mL single use

Administer:
Direct IV route
- Inspect for particulate, discoloration
- Give 30 min before chemotherapy or immediately before anesthesia
- Do not admix with other products, flush IV line with 0.9% NaCL before and after use
- No dilution needed
- **Chemotherapy nausea/vomiting:** give as single dose over 30 sec
- **Postoperative nausea/vomiting:** give over 10 sec immediately before anesthesia induction

SIDE EFFECTS

CNS: *Headache, dizziness, drowsiness, fatigue, insomnia, fever, anxiety*
GI: *Diarrhea, constipation*
MISC: Serotonin syndrome
INTEG: Rash
RESP: Bronchospasm
CV: Hyperkalemia
GU: *Urinary retention*

PHARMACOKINETICS

62% protein bound; metabolized by liver; unchanged product and metabolites excreted by kidney; terminal elimination half-life 40 hr

INTERACTIONS

- **Increase: QT prolongation:** class IA antidysrhythmics (disopyramide, procainamide, quiNIDine), class III antidysrhythmics (amiodarone, dofetilide, ibutilide, sotalol), chloroquine, clarithromycin, droperidol, erythromycin, haloperidol, methadone, pentamidine, some phenothiazines, diuretics (except potassium sparing)

Increase: hypotension, severe—apomorphine
Increase: serotonin syndrome: buspirone, fentanyl, lithium, methylene blue, Tramadol, SSRIs, SNRIs, MAOIs, tricyclics, triptans
Drug/Lab
Increase: potassium

NURSING CONSIDERATIONS

Assess:
- For agents that cause QT prolongation, even if manufacturer has removed QT prolongation from warnings
- Absence of nausea, vomiting during chemotherapy
- **Hypersensitivity reaction:** rash, bronchospasm (rare)
- **CV disease:** ECG prior to use
- **Hyperkalemia:** potassium baseline and periodically
- **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:
- Therapeutic response: absence of nausea, vomiting during cancer chemotherapy, postoperatively

Teach patient/family:
- To report diarrhea, constipation, rash, changes in respirations, or discomfort at insertion site
- To avoid alcohol, barbiturates
- Use other antiemetics if nausea occurs
- Reason for product, expected results

pamidronate (Rx)

(pam-i-drone′ate)
Func. class.: Bone-resorption inhibitor, electrolyte modifier
Chem. class.: Bisphosphonate

ACTION: Inhibits bone resorption, apparently without inhibiting bone formation and mineralization; adsorbs calcium phosphate crystals in bone and may directly block the dissolution of hydroxyapatite crystals of bone

USES: Moderate to severe Paget's disease, hypercalcemia, osteolytic bone metastases in breast cancer, patients with multiple myeloma
Unlabeled uses: Osteogenesis imperfecta, hyperparathyroidism

CONTRAINDICATIONS: Pregnancy, hypersensitivity to bisphosphonates
Precautions: Children, nursing mothers, renal dysfunction, poor dentition

P

DOSAGE AND ROUTES

Hypercalcemia of malignancy

• **Adult: IV INFUSION** 60-90 mg as single dose for **moderate hypercalcemia**; 90 mg for **severe hypercalcemia** over 2-24 hr; dose should be diluted in 1000 mL 0.45% NaCl, 0.9% NaCl, or D_5W; wait 7 days before 2nd course

Osteolytic lesions

• **Adult: IV** 90 mg/500 mL of D_5W, 0.45% NaCl, or 0.9% NaCl given over 4 hr each mo (**multiple myeloma**) or over 2 hr q3-4wk (**breast carcinoma**)

Paget's disease

• **Adult: IV INFUSION** 30 mg/day given over 4 hr × 3 days

Available forms: Powder for inj 30, 90 mg/vial; inj 3, 6, 9 mg/mL

Administer:

IV route

• Use saline hydration to produce 2000 mL/24 hr of urine output
• Avoid diuretics before treatment
• After reconstituting by adding 10 mL sterile water for inj to each vial (30 mg/10 mL or 90 mg/10 mL, depending on vial used); add to 1000 mL of sterile 0.45%, 0.9% NaCl, D_5W, run over 2-24 hr **(hypercalcemia);** dilute reconstituted sol in 500 mL of 0.9% NaCl, 0.45% NaCl, or D_5W, give over 4 hr **(multiple myeloma, Paget's disease);** dilute reconstituted sol in 250 mL of 0.9% NaCl, 0.45% NaCl, or D_5W; give over 2 hr **(osteolytic bone metastases of breast cancer)**
• Do not mix with calcium-containing infusion sol such as Ringer's sol
• Monitor IV site for pain, redness
• Store infusion sol up to 24 hr at room temperature
• Reconstituted sol with sterile water may be refrigerated for ≤24 hr

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amphotericin B lipid complex, amphotericin B liposome, ampicillin, anidulafungin, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, CARBOplatin, carmustine, ceFAZolin, cefepime, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DAPTOmycin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, gallium, ganciclovir, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hetastarch 6%, hydrALAZINE, hydrocortisone, HYDROmorphone, hydrOXYzine, ifosfamide, imipenem-cilastatin, inamrinone, insulin (regular), isoproterenol, ketorolac, labetalol, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, metaraminol, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoXANTRONE, mivacurium, morphine, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxytocin, PACLitaxel, palonosetron, pancuronium, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, piperacillin, polymyxin B, potassium chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, teniposide, theophylline, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline,

topotecan, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine

SIDE EFFECTS

CNS: *Fever,* fatigue
CV: Hypertension, atrial fibrillation
EENT: Ocular pain, inflammation, vision impairment
GI: Abdominal pain, anorexia, constipation, nausea, vomiting, dyspepsia
GU: Renal failure
HEMA: Thrombocytopenia, anemia, leukopenia
INTEG: Redness, swelling, induration, pain on palpation at site of catheter insertion
META: *Hypokalemia, hypomagnesemia, hypophosphatemia, hypocalcemia,* hypothyroidism
MS: Severe bone pain, myalgia, osteonecrosis of the jaw
RESP: Coughing, dyspnea, upper respiratory tract infection
SYST: Angioedema, anaphylaxis

PHARMACOKINETICS

Rapidly cleared from circulation and taken up mainly by bones, primarily in areas of high bone turnover; eliminated primarily by kidneys; half-life 21-35 hr, terminal half-life in bone is 300 days

INTERACTIONS

None known

Drug/Lab Test

Increase: creatinine
Decrease: potassium, magnesium, phosphate, calcium, WBC, platelets

NURSING CONSIDERATIONS

Assess:

- **Hypocalcemia:** nausea, vomiting, constipation, thirst, dysrhythmias, hypocalcemia, paresthesia, twitching, laryngospasm, Chvostek's sign, Trousseau's sign; **hypercalcemia:** thirst, nausea, vomiting, dysrhythmias
- **Dehydration/hypovolemia:** should be corrected during treatment of hypercalcemia, before therapy, maintain adequate urine output
- **Labs:** Monitor WBCs, platelets, electrolytes, creatinine, BUN, HB/Hct before beginning treatment
- **Dental health:** optimal dental health should be obtained before treatment with this product; cover with antiinfectives for dental extractions
- Temperature may be elevated during the first 3 days after a dose; risk of fever increases as dose increases
- **Renal disease:** max 90-mg single dose, longer infusions >2 hr may increase risk for renal toxicity
- **Bone pain:** use analgesics
- I&O, check for fluid overload, edema, crackles, increased B/P; BUN, creatinine, electrolytes (calcium, potassium, magnesium)
- **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding; use contraception

Evaluate:

- Therapeutic response: decreased calcium levels

Teach patient/family

- To notify prescriber if pregnancy is planned or suspected; to use contraception while taking this product
- To report hypercalcemic relapse: nausea, vomiting, bone pain, thirst; unusual muscle twitching, muscle spasms; severe diarrhea, constipation
- To continue with dietary recommendations, including calcium and vit D
- To obtain analgesic from provider for bone pain
- That small, frequent meals may help if nausea, vomiting occur
- To report ocular symptoms to prescriber: blurred vision, edema, inflammation
- To maintain good oral hygiene; to get regular dental checkups
- To report dental or jaw pain to prescriber

pancrelipase (Rx)

(pan-kre-li′pase)

Cotazym Creon, Pancrease MT, Pancreaze, Pertzye, Viokase, Zenpep

Func. class.: Digestant

Chem. class.: Pancreatic enzyme—bovine/porcine

ACTION: Pancreatic enzyme needed for the breakdown of substances released from the pancreas

USES: Exocrine pancreatic secretion insufficiency, due to cystic fibrosis (digestive aid), pancreatic enzyme deficiency

CONTRAINDICATIONS: Allergy to pork, acute pancreatitis

Precautions: Pregnancy, ileus, chronic pancreatitis, Crohn's disease, diabetes mellitus, breastfeeding

DOSAGE AND ROUTES

Pancreatic insufficiency due to pancreatectomy

• **Adult/adolescent/child ≥4 yr (del rel caps) Creon Caps, Zenpep Caps, Pancreaze Caps: PO** 500 lipase units/kg/meal, titrate based on patient response, max 2500 lipase units/kg/meal

Cystic fibrosis

• **Adult/adolescent/child >4 yr: PO** 500 lipase units/kg/meal, titrate based on response

• **Child 1-3 yr: PO** 1000 lipase units/kg/meal, titrate based on patient response, max 2500 lipase units/kg/meal

• **Neonates/infants: PO** 2600 lipase units/120 mL of formula or breastfeeding **(Pancreaze)** or 3000 lipase units/120 mL of formula or breastfeeding **(Creon, Zenpep)**

Available forms: Delayed-release capsule lipase 2600, 3000, 4000, 4200, 5000, 6000, 8000, 10,000, 10,500, 12,000, 15,000, 16,000, 16,800, 20,000, 20,800, 21,000, 24,000, 25,000, 36,000, 37,000, 40,000; Tablet lipase/amylase 10, 20 mg (vioKase)

Administer:

• After antacid or cimetidine; decreased pH inactivates product

• Low-fat diet for GI symptoms

• Have patient sit up during administration; give with meals

• Do not crush, chew del rel products, caps those with spheres, microspheres, or microtablets may be opened and sprinkled on soft food

• Follow PO dose with glass of water or juice, formula or breast milk for infants

Delayed-release route

• Given with meals, snacks, or sufficient fluid

• Do not mix directly in formula

• Viokase is not interchangeable with other products

• Store in tight container at room temperature

SIDE EFFECTS

ENDO: Hypo/hyperglycemia

GI: Anorexia, nausea, vomiting, diarrhea, cramping, bloating

GU: Hyperuricuria, hyperuricemia

INTERACTIONS

Decrease: absorption—cimetidine, antacids, oral iron

Decrease: effect of acarbose, miglitol

NURSING CONSIDERATIONS

Assess:

• Appropriate height, weight development before and periodically; may be delayed

• I&O ratio; watch for increasing urinary output

• Fecal fat, nitrogen, PT during treatment

• **Diabetes mellitus:** for polyuria, polydipsia, polyphagia; monitor glucose level more frequently

• Pork sensitivity; cross-sensitivity may occur

• Adequate hydration

• **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:

• Therapeutic response: improved digestion of carbohydrates, protein, fat; absence of steatorrhea

Teach patient/family:

- To notify prescriber of allergic reactions, abdominal pain, cramping, or blood in urine
- To always take with food; not to crush, chew del rel product, caps
- To store at room temperature, away from moisture
- Not to sprinkle capsule contents onto alkaline foods

⚠ HIGH ALERT

pancuronium (Rx)

(pan-kyoo-roe′nee-um)

Func. class.: Neuromuscular blocker (nondepolarizing)

Chem. class.: Synthetic curariform

ACTION: Inhibits transmission of nerve impulses by binding with cholinergic receptor sites, antagonizing action of acetylcholine

USES: Facilitation of endotracheal intubation, skeletal muscle relaxation during mechanical ventilation, surgery, or general anesthesia

CONTRAINDICATIONS: Hypersensitivity to bromide ion

Precautions: Pregnancy, breastfeeding, children <2 yr, neuromuscular/cardiac/renal/hepatic disease, electrolyte imbalances, dehydration, previous anaphylactic reactions (other neuromuscular blockers), respiratory insufficiency

Black Box Warning: Requires an experienced clinician

DOSAGE AND ROUTES

Neuromuscular blockade during surgery

- **Adult/child/infant >1 mo: IV** 0.04-0.1 mg/kg initially or 0.05 mg/kg after initial dose of succinylcholine; maintenance 0.01 mg/kg 60-100 min after initial dose, then 0.01 mg/kg q25-60min as needed

Endotracheal intubation

Adult/adolescent/infant: IV 0.06-0.1 mg/kg/dose, onset of intubating 2-3 min

Neuromuscular blockade during mechanical ventilation

Adult: IV 0.05-0.1 mg/kg/dose as needed based on twitch response

Child/adolescent: IV 0.05-0.15 mg/kg/dose q4-6hr as needed

Available forms: Inj 1, 2 mg/mL

Administer:

Direct IV route

- May be given undiluted over 1-2 min (1 mg/mL [10-mL vial], 2 mg/mL [2-, 5-mL vial])

Intermittent IV INFUSION route

- Add 100 mg of product to 250 mL D_5W, NS, LR (0.4 mg/mL)
- Store in refrigerator; do not store in plastic; use only fresh sol
- Reassurance if communication is difficult during recovery from neuromuscular blockade
- Frequent (q2hr) instillation of artificial tears, covering of eyes to prevent drying of cornea

Y-site compatibilities: Aminophylline, ceFAZolin, cefuroxime, cimetidine, DOBUTamine, DOPamine, EPINEPHrine, esmolol, fenoldopam, fentaNYL, fluconazole, gentamicin, heparin, hydrocortisone, isoproterenol, levoFLOXacin, LORazepam, midazolam, morphine, nitroglycerin, raNITIdine, trimethoprim-sulfamethoxazole, vancomycin

SIDE EFFECTS

CNS: Prolonged neuromuscular blockade

CV: Bradycardia; tachycardia; increased, decreased B/P; ventricular extrasystoles, edema, hypertension

EENT: Increased secretions

INTEG: Rash, flushing, pruritus, urticaria, sweating, salivation

MS: Weakness to prolonged skeletal muscle relaxation
RESP: Prolonged apnea, bronchospasm, cyanosis, respiratory depression, dyspnea
SYST: Anaphylaxis

PHARMACOKINETICS

IV: Onset 3-5 min, dose dependent, peak 3-5 min; metabolized (small amounts), excreted in urine (unchanged), crosses placenta

INTERACTIONS

Increase: dysrhythmias—theophylline
Increase: neuromuscular blockade—aminoglycosides, clindamycin, enflurane, isoflurane, lincomycin, lithium, local anesthetics, opioid analgesics, polymyxin antiinfectives, quiNIDine, thiazides
Drug/Lab Test
Decrease: cholinesterase

NURSING CONSIDERATIONS

Assess:
• **Respiratory recovery:** decreased paralysis of face, diaphragm, leg, arm, rest of body; allow to recover fully before neurologic assessment
• Electrolyte imbalances (K, Mg); may lead to increased action of product
• VS (B/P, pulse, respirations, airway) until fully recovered; rate, depth, pattern of respirations, strength of hand grip
• I&O ratio; check for urinary retention, frequency, hesitancy
• **Allergic reactions, anaphylaxis:** rash, fever, respiratory distress, pruritus; product should be discontinued
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; breast milk excretion is unknown
Evaluate:
• Therapeutic response: paralysis of jaw, eyelid, head, neck, rest of body

TREATMENT OF OVERDOSE:

Neostigmine, atropine, monitor VS; may require mechanical ventilation

⚠ HIGH ALERT

panitumumab (Rx)

(pan-i-tue′moo-mab)

Vectibix

Func. class.: Antineoplastic—miscellaneous
Chem. class.: Multikinase inhibitor, signal transduction inhibitor

ACTION: Decreases growth and survival of cancer cells by competitive inhibition of EGF receptor

USES: Dx EGFR expressing metastatic colorectal cancer; not beneficial with KRAS mutations in codon 12 or 13

CONTRAINDICATIONS: Hypersensitivity, Dx RAS (KRAS and NRAS) mutant mCRC or if unknown, child <18 yr
Precautions: Pregnancy, breastfeeding, children, hepatic disease, acute bronchospasm, diarrhea, hamster protein allergy, hypomagnesemia, hypotension, pulmonary fibrosis, sepsis, Dx KRAS mutations, soft tissue toxicities, infusion-related reactions

Black Box Warning: Exfoliative dermatitis

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 6 mg/kg over 60 min every 2 wk; doses >1000 mg over 90 min
Available forms: Sol for inj 20 mg/mL (100 mg/5 mL, 400 mg/20 mL)
Administer:
Proactive skin treatment
• Skin moisturizer, sunscreen (SPF >15 UVA and UVB, topical steroid cream (1% hydrocortisone), and an oral antibiotic (doxycycline) for possible skin toxicities; patients need to apply moisturizer and sunscreen to face, hands, feet, neck, back, and chest every AM during treatment, and apply topical steroid to face, hands, feet, neck, back, and chest every PM

Intermittent IV INFUSION route

- Assess for KRAS before use
- Give in hospital or clinic setting with full resuscitation equipment
- **Only as IV infusion** using controlled IV infusion pump; do not give IV push or bolus; use low–protein binding 0.2- or 0.22-micron in-line filter; flush line with 0.9% NaCl before and after administration
- Give over 60 min through a peripheral line or indwelling catheter; infuse doses of >1000 mg over 90 min
- **Dilute** in 100 mL of 0.9% NaCl; dilute doses >1000 mg in 150 mL of 0.9% NaCl; mix by inverting; do not exceed 10 mg/mL; use within 6 hr if stored at room temperature; can be stored between 2°C and 8°C for up to 24 hr
- **Dosage adjustment for infusion/dermatologic reaction:** Grade 1 or 2: reduce infusion by 50%; Grade 3 or 4: terminate, permanently discontinue depending on severity/resistance
- Store unopened vials in refrigerator; do not shake; protect from direct sunlight; do not freeze

SIDE EFFECTS

CNS: Fatigue
CV: Peripheral edema
EENT: Ocular irritation, ocular toxicity
GI: *Nausea, diarrhea, vomiting,* anorexia, mouth ulceration, abdominal pain, constipation
HEMA: Thrombophlebitis
INTEG: *Rash,* pruritus, exfoliative dermatitis, skin fissure, angioedema, severe/fatal infusion reactions
META: Hypocalcemia, hypomagnesemia, antibody formation
RESP: Bronchospasm, cough, dyspnea, hypoxia, pulmonary fibrosis/embolism, pneumonitis, wheezing, interstitial lung disease

PHARMACOKINETICS

Bioavailability 38%-49%; elimination half-life 7.5 days; peak 3 hr; high-fat meal decreases bioavailability; plasma protein binding 99.5%; metabolized in liver; oxidative metabolism by CYP3A4, glucuronidation by UGT1A9; 77% excreted in feces

INTERACTIONS

- Do not use in combination with other antineoplastics

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Serious skin disorders: fever, sore throat, fatigue, then lesions in mouth, lips; withhold product, notify prescriber

- Serum electrolytes periodically (calcium, magnesium)
- **Infection:** increased temperature
- Assess for diarrhea

Black Box Warning: Infusion reactions: bronchospasm, fever, chills, hypotension; may require discontinuation, have emergency equipment available

- **Ocular toxicity:** ocular irritation, hyperemia
- **Pulmonary fibrosis:** dyspnea, cough, wheezing; may require discontinuation
- **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding

Evaluate:

- Therapeutic response: decrease in colon carcinoma progression

Teach patient/family:

- **To report adverse reactions immediately:** difficulty breathing, mouth sores, skin rash, ocular toxicity
- About reason for treatment, expected results, adverse reactions
- To use contraception while taking product, for 6 mo after treatment; not to breastfeed for ≥2 mo after stopping treatment; to enroll in Amgen Pregnancy Surveillance Program, 1-800-772-6436
- To avoid the sun, use sunscreen while taking product

⚠ HIGH ALERT

panobinostat (Rx)

(pan′-oh-bin′-oh-stat)

Farydak

Func. class.: Antineoplastic: biologic response modifiers

USES: Multiple myeloma in those who have received at least 2 prior therapies (including bortezomib and an immunomodulatory agent), in combination with bortezomib and dexamethasone; an orphan drug

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Cardiotoxicity, diarrhea, electrolyte imbalance

DOSAGE AND ROUTES

• **Adult: PO** 20 mg every other day × 3 times per wk (on days 1, 3, 5, 8, 10, and 12) for the first 2 wk of each 21-day cycle. Continue for up to 8 cycles; may give up to another 8 cycles (max of 16 treatment cycles) **PO** on days 1, 2, 4, 5, 8, 9, 11, and 12; cycles 9-16: 20 mg **PO** on days 1, 2, 8, and 9. Avoid concomitant use with strong CYP3A4 inducers

Available forms: Capsule 10, 15, 20 mg

pantoprazole (Rx)

(pan-toe-pray′zole)

Pantoloc, Protonix, Tecta

Func. class.: Proton pump inhibitor

Chem. class.: Benzimidazole

Do not confuse:
Protonix/Lotronex/protamine

ACTION: Suppresses gastric secretion by inhibiting hydrogen/potassium ATPase enzyme system in gastric parietal cell; characterized as gastric acid pump inhibitor because it blocks the final step of acid production

USES: Severe erosive esophagitis; maintenance of long-term pathologic hypersecretory conditions, including Zollinger-Ellison syndrome

Unlabeled uses: Duodenal/gastric ulcer, NSAID ulcer prophylaxis, *Helicobacter pylori*–associated ulcer, dyspepsia, gastroesophageal reflux disease (GERD)

CONTRAINDICATIONS: Hypersensitivity to this product or benzimidazole

Precautions: Pregnancy, breastfeeding, children, proton pump hypersensitivity

DOSAGE AND ROUTES

GERD (unlabeled)

• **Adult: PO** 40 mg/day × 8 wk, may repeat course

Erosive esophagitis

• **Adult: IV** 40 mg/day × 7-10 days; **PO** 40 mg/day × 8 wk; may repeat **PO** course.

Child ≥5 yr and >40 kg: PO 40 mg daily for up to 8 wk; **15-39 kg:** 20 mg daily for up to 8 wk

Pathologic hypersecretory conditions

• **Adult: PO** 40 mg bid; **IV** 80 mg q12hr, max 240 mg/day

Peptic ulcer/GI bleed (unlabeled)

• **Adult: IV** 80 mg bolus then 40 mg IV bid × 72 hr

Duodenal ulcer/gastric ulcer/ NSAID ulcer prophylaxis (unlabeled)

• **Adult: PO** 40 mg/day

***H. pylori*–associated ulcers (unlabeled)**

• **Adult: PO** 40 or 80 mg bid; may be used with other products

Available forms: Del rel tabs 20, 40 mg; powder for inj 40 mg/vial; del rel granules for susp 40 mg

Administer:

PO route

• Swallow del rel tabs whole; do not break, crush, or chew; take del rel tabs at same time of day

• May take with/without food

• **Suspension:** give in apple juice 30 min before a meal or sprinkled on 1 tbsp of applesauce

IV route

• Use of Protonix IV vials with spiked IV system adapters is not recommended
• Visually inspect for particulate matter and discoloration before use
• When using a Y-site, immediately stop use if a precipitation or discoloration occurs
• **Reconstitution of vial:** use 40-mg vial/10 mL NS; do not freeze
• **Two-minute slow IV infusion injection:** dilute one or two 40-mg vials with 10 mL NS per vial to 4 mg/mL; store ≤24 hr at room temperature before use; infuse slowly over ≥2 min; do not give with other IV fluids or medications; flush line with D_5W, NS, or LR before and after each dose
• **Fifteen-minute IV infusion:** dilute each 40-mg dose with 10 mL NS; the reconstituted vial should be further admixed with 100 mL (for 1 vial) or 80 mL (for 2 vials) of D_5W, NS, or LR (to 0.4 mg/mL or 0.8 mg/mL, respectively); store ≤6 hr at room temperature before further dilution; the admixed solution (0.4 mg/mL or 0.8 mg/mL) may be stored at room temperature and must be used within 24 hr from the time of initial reconstitution; infuse over 15 min at 7 mL/min; do not administer with other IV fluids or medications; flush IV line with D_5W, NS, or LR before and after each dose

Y-site compatibilities: Acyclovir, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amoxicillin-clavulanate, amphotericin B liposome, ampicillin, ampicillin-sulbactam, anidulafungin, azithromycin, bleomycin, bumetanide, calcium gluconate, CARBOplatin, carmustine, ceFAZolin, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dextrose 3.3% in sodium chloride 0.3%, digoxin, dimenhyDRINATE, DOCEtaxel, DOPamine, doripenem, doxycycline, enalaprilat, EPINEPHrine, ertapenem, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gentamicin, granisetron, heparin, hydrocortisone, HYDROmorphone, imipenem-cilastatin, inamrinone, insulin (regular), irinotecan, isoproterenol, magnesium, mannitol, mesna, methohexital, methyldopate, metoclopramide, nafcillin, nitroglycerin, nitroprusside, ofloxacin, oxytocin, PACLitaxel, pentazocine, PENTobarbital, phenylephrine, piperacillin-tazobactam, potassium chloride, procainamide, rifAMPin, sodium bicarbonate, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, teniposide, theophylline, thiopental, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, traMADol, vasopressin, zidovudine

SIDE EFFECTS

CNS: *Headache,* insomnia, asthenia, fatigue, malaise, insomnia, somnolence
GI: *Diarrhea, abdominal pain,* flatulence, pancreatitis, weight changes, CDAD
INTEG: *Rash*
META: Hyperglycemia, weight gain/loss, hyponatremia, hypomagnesemia, vitamin B_{12} deficiency
MS: Myalgia, rhabdomyolysis
SYST: Stevens-Johnson syndrome, toxic epidermal necrolysis, anaphylaxis, angioedema

PHARMACOKINETICS

Peak 2.4 hr, duration >24 hr, half-life 1.5 hr, protein binding 97%, eliminated in urine as metabolites and in feces; in geriatric patients, elimination rate decreased; some Asian patients (15%-20%) may be poor metabolizers

INTERACTIONS

Increase: pantoprazole levels—clarithromycin, diazePAM, phenytoins, flurazepam, triazolam
Increase: bleeding—warfarin
Decrease: effect of each of these drugs: protease inhibitors (atazanavir, indinavir, nelfinavir)
Decrease: absorption of these products—sucralfate, calcium carbonate, vit

B_{12}, ketoconazole, itraconazole, atazanavir, ampicillin, iron salts, separate doses
Decrease: clopidogrel effect
Drug/Herb
Decrease: effect of pantoprazole—St. John's wort

NURSING CONSIDERATIONS

Assess:
- **CDAD:** bowel sounds; abdomen for pain, swelling; anorexia; diarrhea with blood, mucus
- **Hepatic studies:** AST, ALT, alk phos during treatment
- For vit B_{12} deficiency in patients receiving long-term therapy
- **Serious skin reactions:** toxic epidermal necrolysis, Stevens-Johnson syndrome, exfoliative dermatitis: fever, sore throat, fatigue, thin ulcers; lesions in the mouth, lips
- **Electrolyte imbalances:** hyponatremia; hypomagnesemia in patients using product 3 mo to 1 year; if hypomagnesemia occurs, use of magnesium supplements may be sufficient; if severe, discontinuation of product may be required
- **Rhabdomyolysis, myalgia:** muscle pain, increased CPK; weakness, swelling of affected muscles
- **Beers:** avoid in older adults for >8 wk unless for high-risk patients; risk of *Clostridium difficile,* fractures
- **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:
- Therapeutic response: absence of epigastric pain, swelling, fullness

Teach patient/family:
- To report severe diarrhea; black, tarry stools; abdominal pain; product may have to be discontinued; do not treat diarrhea with OTC products without approval of provider (CDAD)
- That hyperglycemia may occur in diabetic patients
- To take as directed, not to skip or double dose
- To avoid alcohol, salicylates, NSAIDs; may cause GI irritation
- To continue taking even if feeling better
- To notify prescriber if pregnant or planning to become pregnant; not to breastfeed

parathyroid hormone (Rx)

(par-a-thye'roid hor'mone)

Natpara

Func. class.: Parathyroid hormone analog

USES: Adjunct to calcium and vitamin D to control hypocalcemia in those with hypoparathyroidism, who are not well controlled on calcium/Vitamin D alone

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: New primary malignancy

DOSAGE AND ROUTES

Hypoparathyroidism
- **Adult:** SUBCUT *Initial:* 50 mcg daily

Before use, serum calcium concentration should be >7.5 mg/dL and the 25-hydroxyvitamin D is adequate
Available forms: Injection 25, 50, 75, 100 mcg multidose cartridges

paricalcitol (Rx)

(pah-ri-kal'si-tole)

Zemplar

Func. class.: Vitamin D analog

USES: IV: Prevention/treatment of secondary hyperparathyroidism with chronic kidney disease on dialysis; PO: prevention/treatment with secondary hyperparathyroidism with stage 3/4 chronic kidney disease and stage 5 chronic kidney disease hemodialysis/peritoneal dialysis

CONTRAINDICATIONS
Hypersensitivity to paricalcitol or any component; vitamin D toxicity; hypercalcemia

DOSAGE AND ROUTES

Secondary hyperparathyroidism in chronic kidney disease on dialysis.

• **Adult: IV:** Initial: 0.04-0.1 mcg/kg (2.8-7 mcg) given no more frequently than every other day at any time during dialysis; adjust dose based on serum intact PTH (iPTH), as follows: iPTH above target and increased: Increase by 2-4 mcg every 2-4 wk; maximum dose: 0.24 mcg/kg/day; iPTH above target and decreased by <30%: Increase by 2-4 mcg every 2-4 weeks; maximum dose: 0.24 mcg/kg/day; iPTH above target and decreased by 30-60%: Maintain paricalcitol dose; iPTH above target, decreased dose

Available forms: Capsule 1, 2, 4 mcg; injection 2, 5 mcg/mL

PARoxetine (Rx)

(par-ox′e-teen)

Paxil, Paxil CR

PARoxetine mesylate (Rx)

Pexeva, Brisdelle

Func. class.: Antidepressant, SSRI

Chem. class.: Phenylpiperidine derivative

Do not confuse:

PARoxetine/FLUoxetine/Piroxicam/PACLitaxel

Paxil/PACLitaxel/Taxol/doxil

ACTION: Inhibits CNS neuron uptake of serotonin but not of norepinephrine or DOPamine

USES: Major depressive disorder, obsessive-compulsive disorder, panic disorder, generalized anxiety disorder, posttraumatic stress disorder, premenstrual disorders, social anxiety disorder, hot flashes, menopause

Unlabeled uses: Premature ejaculation (IR only)

CONTRAINDICATIONS: Pregnancy, hypersensitivity, MAOI use, alcohol use

Precautions: Breastfeeding, geriatric patients, seizure history; patients with history of mania, renal/hepatic disease

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

Generalized anxiety disorder

• **Adult: PO** 20 mg/day in AM, range 20-50 mg/day

Posttraumatic stress disorder (PTSD)

• **Adult: PO** 20 mg/day, range 20-50 mg/day; max 50 mg/day

Depression

• **Adult: PO** 20 mg/day in AM; after 4 wk, if no clinical improvement is noted, dose may be increased by 10 mg/day each wk to desired response, max 50 mg/day or **CONT REL** 25 mg/day, may increase by 12.5 mg/day/wk up to 62.5 mg/day

• **Geriatric: PO** 10 mg/day, increase by 10 mg to desired dose, max 40 mg/day

Obsessive-compulsive disorder

• **Adult: PO** 40 mg/day in AM, start with 20 mg/day, increase in 10-mg/day increments, max 60 mg/day

Panic disorder

• **Adult: PO** start with 10 mg/day, increase in 10-mg/day increments to 40 mg/day, max 60 mg/day or **CONT REL** 12.5 mg/day, max 75 mg/day

Premenstrual dysphoric disorders

• **Adult: CONT REL** 12.5 mg/day in AM

Menopause symptoms/hot flashes

• **Adult: PO (CONT REL)** 12.5 mg/day, may increase to 25 mg/day after 1 wk

Premature ejaculation (unlabeled)

• **Adult: PO** 20 mg/day

Renal dose

• **Adult: PO** CCr 30-60 mL/min, lower doses may be needed; CCr <30 mL/min, 10 mg/day initially, **REGULAR RELEASE:** max 40 mg/day; **CONTINUOUS RELEASE** 12.5 mg/day initially, max 50 mg/day

Hepatic dose

• **Adult: PO** 10 mg/day initially, max 40 mg (REGULAR RELEASE); 12.5 mg/day initially, max 50 mg/day (CONTINUOUS RELEASE)

P

Available forms: Tabs 10, 20, 30, 40 mg; oral susp 10 mg/5 mL; cont rel tab 12.5, 25, 37.5 mg; cap 7.5 mg

Administer:

- **Do not substitute Pexeva with Paxil, Paxil CR, or generic PARoxetine**
- Store at room temperature; do not freeze
- Increased fluids, bulk in diet for constipation, urinary retention
- With food, milk for GI symptoms
- Crushed if patient is unable to swallow medication whole (regular rel only)
- Gum, hard candy, frequent sips of water for dry mouth
- Avoid use with other CNS depressants
- **Oral susp:** shake, measure with oral syringe or calibrated measuring device
- **Cont rel tab:** do not cut, chew, crush; do not give concurrently with antacids

SIDE EFFECTS

CNS: *Headache,* nervousness, insomnia, *drowsiness, anxiety, tremors, dizziness,* fatigue, *sedation,* abnormal dreams, agitation, apathy, euphoria, hallucinations, delusions, psychosis, seizures

CV: Vasodilation, postural hypotension, palpitations, bleeding, chest pain

EENT: Visual changes

GI: *Nausea, diarrhea, dry mouth,* anorexia, dyspepsia, *constipation,* cramps, vomiting, taste changes, flatulence, decreased appetite, weight gain

GU: Dysmenorrhea, decreased libido, urinary frequency, UTI, amenorrhea, cystitis, impotence; decreased sperm quality, decreased fertility, *abnormal ejaculation (male)*

INTEG: *Sweating,* rash, photosensitivity

MS: Pain, arthritis, myalgia, myopathy

RESP: Infection, pharyngitis, nasal congestion, sinus headache, sinusitis, cough, dyspnea, yawning

SYST: Fever, abrupt withdrawal syndrome, Stevens-Johnson syndrome, neuroleptic malignant syndrome, suicidal thoughts/behaviors

PHARMACOKINETICS

PO: Peak 5.2 hr, ext rel peak 6-10 hr; metabolized in liver by CYP2D6 enzyme system, 7% may be poor metabolizers; unchanged products and metabolites excreted in feces and urine; half-life 21 hr (reg rel); 15-20 hr (cont rel); protein binding 95%

INTERACTIONS

Increase: serotonin syndrome—SSRIs, SNRIs, atypical psychotics, serotonin-receptor agonists, tricyclics, amphetamines, bupropion, cyclobenzaprine, linezolid, traMADol

Decrease: level of digoxin

- **Do not use with MAOIs, pimozide, thioridazine; potentially fatal reactions can occur**

Increase: bleeding—NSAIDs, thrombolytics, salicylates, platelet inhibitors, anticoagulants

Increase: PARoxetine plasma levels—cimetidine

Increase: agitation—L-tryptophan

Increase: side effects—highly protein-bound products

Increase: theophylline levels—theophylline

Increase: toxicity—CYP2D6 inhibitors (aprepitant, delavirdine, imatinib, nefazodone)

Decrease: PARoxetine levels—PHENobarbital and phenytoin

Drug/Herb

- SAMe
- Possible serotonin syndrome: St. John's wort, tryptophan
- **Hypertensive crisis:** ephedra

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Depression/OCD/anxiety/panic attacks: mental status: mood, sensorium, affect, suicidal tendencies (especially in child/young adult), increase in psychiatric symptoms, decreasing obsessive thoughts, compulsive behaviors, restrict amount available

- **Postural hypotension:** B/P (lying/standing), pulse q4hr; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; take vital signs q4hr for patients with CV disease

• Hepatic/renal studies: AST, ALT, bilirubin, creatinine
• Weight weekly; appetite may decrease with product, but weight gain may occur; constipation
• EPS, primarily in geriatric patients: rigidity, dystonia, akathisia
• **Renal status:** BUN, creatinine, urinary retention
• **Withdrawal symptoms:** headache, nausea, vomiting, muscle pain, weakness; not usual unless product discontinued abruptly, taper over 1-2 wk
• Alcohol intake; if alcohol is consumed, hold dose until morning
• **Serotonin, neuroleptic malignant syndrome:** hallucinations, coma, headache, agitation, shivering, sweating, tachycardia, diarrhea, tremors, hypertension, hyperthermia, rigidity, delirium, coma, myoclonus, agitation, nausea, vomiting
• **Beers:** Avoid in geriatrics, highly anticholinergic, sedating
• **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:
• Therapeutic response: decreased depression

Teach patient/family:
• That therapeutic effect may take 1-4 wk
• To use caution when driving, performing other activities requiring alertness because of drowsiness, dizziness, blurred vision
• Not to discontinue medication quickly after long-term use; may cause nausea, headache, malaise (abrupt withdrawal syndrome)

Black Box Warning: That depression, suicidal thoughts/behaviors in children/adolescents or young adults may worsen, to notify prescriber immediately

• To avoid alcohol ingestion, OTC products unless approved by prescriber
• To report bleeding, headache, nausea, anxiety, or if depression continues
• To discuss sexual side effects: impotence, possible male infertility while taking product

TREATMENT OF OVERDOSE:
Gastric lavage, airway; for seizures, give diazepam, symptomatic treatment

patiromer (Rx)
(pa-tir′oh-mer)
Veltassa
Func. class.: Antidote, potassium binder

USES:
Treatment of hyperkalemia

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
• **Adult: PO** Initial: 8.4 g daily; adjust dose at ≥1-wk intervals in increments of 8.4 g (max dose: 25.2 g/day), monitor potassium

Available forms: oral powder 8.4, 16.8, 25.2 g packets

patisiran (Rx)
(pat-i-sir′an)
Onpattro
Func. class.: Metabolic agent, anti-transthyretin small interfering ribonucleic acid (siRNA) agent

USES:
Treatment of the polyneuropathy of hereditary transthyretin-mediated amyloidosis in adults

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
At least 1 hr before use, premedicate with a corticosteroid, acetaminophen, an H_1 blocker, and an H_2 blocker to reduce the risk of infusion-related reactions (IRR)
• **Adult:** IV: Base dose on actual body weight; <100 kg: 0.3 mg/kg once q3wk; ≥100 kg: 30 mg once q3wk

Available forms: Injection 2 mg/mL in 5-mL single-dose vials

⚠ HIGH ALERT

pazopanib (Rx)

(paz-oh'pa-nib)

Votrient

Func. class.: Antineoplastic biologic response modifiers/multikinase angiogenesis inhibitor

Chem. class.: Kinase inhibitor

ACTION: Targets vascular endothelial growth factor receptors; a multikinase angiogenesis inhibitor

USES: Advanced renal cell carcinoma; soft-tissue sarcoma patients who have received prior chemotherapy

Unlabeled uses: GI stromal tumors (GISTs)

CONTRAINDICATIONS: Pregnancy, hypothyroidism, QT prolongation, MI, wound dehiscence, hypertension

Precautions: Breastfeeding, children, cardiac/renal/hepatic/dental disease, GI bleeding

Black Box Warning: Hepatic disease (fatalities)

DOSAGE AND ROUTES

• **Adult: PO** 800 mg/day without food (1 hr before, 2 hr after a meal), may decrease to 400 mg/day if not tolerated (renal cell cancer); or adjust in 200-mg increments based on toxicity (soft-tissue sarcoma); **use with strong CYP3A4 inhibitors** 400 mg daily

Hepatic dose

Adult: PO 200 mg daily (moderate hepatic disease)

Available forms: Tabs 200 mg

Administer:

• Give on an empty stomach (1 hr before or 2 hr after a meal); separate doses by ~24 hr

• Do not crush tablets may affect rate of absorption and systemic exposure; only intact, whole tablets should be used

• If a dose is missed, it should not be taken if it is <12 hr until the next dose

• Store at room temperature 77°F (25°C)

SIDE EFFECTS

CNS: Intracranial bleeding, headache

CV: Heart failure, hypertension, hypertensive crisis, chest pain, MI, QT prolongation, torsades de pointes

GI: Nausea, hepatotoxicity, vomiting, dyspepsia, GI hemorrhage, anorexia, abdominal pain, GI perforation, pancreatitis, diarrhea; hepatotoxicity (geriatric)

HEMA: Neutropenia, thrombocytopenia, bleeding

INTEG: Rash, alopecia

MISC: Fatigue, epistaxis, pyrexia, hot sweats, increased weight, flulike symptoms, hypothyroidism, hand-foot syndrome, retinal tear/detachment

PHARMACOKINETICS

Protein binding 99%, peak 2-4 hr, duration 24 hr, half-life 31 hr

INTERACTIONS

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: pazopanib concentrations—CYP3A4 inhibitors (ketoconazole, itraconazole, erythromycin, clarithromycin)

Increase: plasma concentrations of simvastatin, calcium-channel blockers, ergots

Increase: plasma concentration of warfarin; avoid use with warfarin; use low-molecular-weight anticoagulants instead

Decrease: PAZOPanib concentrations—CYP3A4 inducers (dexamethasone, phenytoin, carBAMazepine, rifampin, PHENobarbital)

Drug/Food

Increase: PAZOPanib effect—grapefruit juice; avoid use while taking product

Drug/Herb

Decrease: PAZOPanib concentration—St. John's wort

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Hepatic disease: fatal hepatotoxicity can occur; obtain LFTs baseline and at least every 2 wk × 2 mo, then monthly

- **Fatal bleeding:** from GI, respiratory, GU tracts, permanently discontinue in those with severe bleeding
- **Palmar-plantar erythrodysesthesia (hand-foot syndrome):** more common in those previously treated; reddening, swelling, numbness, desquamation on palms and soles
- **GI perforation/fistula:** discontinue if this occurs, assess for pain in epigastric area, dyspepsia, flatulence, fever, chills
- **Hypertension/hypertensive crisis:** hypertension usually occurs in the first cycle; in those with preexisting hypertension, do not start treatment until B/P is controlled; monitor B/P every wk × 6 wk, then at start of each cycle or more often if needed, temporarily or permanently discontinue for severe uncontrolled hypertension
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decrease in size, spread of tumor

Teach patient/family:

- To report adverse reactions immediately: heart attack, stroke
- About reason for treatment, expected results
- That effect on male fertility is unknown
- Not to crush or chew tabs; to take on an empty stomach 1 hr before or 2 hr after meals; to avoid grapefruit juice
- **Blood clots:** Pain in legs, chest pain, swelling in legs, arms, notify provider immediately
- **Hepatotoxicity:** To notify provider immediately of yellow skin, eyes, clay-colored stools, dark urine, monitor LFTs before and at 3, 5, 7, 9 wk, then 3 mo, 4 mo if symptoms are present

⚠ HIGH ALERT

pegaspargase (Rx)

(peg-as´par-jase)

Oncaspar

Func. class.: Antineoplastic agent, miscellaneous

USES: Treatment of acute lymphoblastic leukemia (ALL) with hypersensitivity to L-asparaginase (multiagent chemotherapy); first-line treatment of ALL (combination chemotherapy)

CONTRAINDICATIONS

Hypersensitivity, serious thrombosis with prior L-asparaginase therapy; pancreatitis; serious hemorrhagic events with prior L-asparaginase therapy; severe hepatic disease

DOSAGE AND ROUTES

Acute lymphoblastic leukemia (ALL), as first-line treatment or in patients with hypersensitivity to native asparaginase

Adult: IM, IV: ≤21 yr: 2500 units/m^2 (as part of a multiagent combination chemotherapy regimen); do not administer more frequently than every 14 days; >21 yr: 2000 units/m^2 (as part of a multiagent combination chemotherapy regimen); do not administer more frequently than every 14 days

Acute lymphoblastic leukemia (ALL)

Infant/child/adolescent: IM, IV: 2500 units/m^2/dose (combination chemotherapy); do not use more frequently than q14 days

Available forms: Injection 3750 IU/5 mL in single-use vials

⚠ HIGH ALERT

pegfilgrastim (Rx)

(peg-fill-grass´stim)

Neulasta, Neulasta Onpro Kit

pegfilgrastim apgf

Nyvepria

pegfilgrastim-bmez
Ziextenzo
pegfilgrastim-cbqv
Udenyca (biosimilar)
pegfilgrastim-jmdb
Fulphila (biosimilar)

Func. class.: Hematopoietic agent
Chem. class.: Granulocyte colony-stimulating factor

Do not confuse:
Neulasta/Lunesta/Neumega/Nuedexta

ACTION: Stimulates proliferation and differentiation of neutrophils

USES: To decrease infection in patients receiving antineoplastics that are myelosuppressive; to increase WBC count in patients with product-induced neutropenia

CONTRAINDICATIONS: Hypersensitivity to proteins of *Escherichia coli*, filgrastim
Precautions: Pregnancy, breastfeeding, children <45 kg, adolescents, myeloid malignancies, sickle cell disease, leukocytosis, splenic rupture, ARDS, allergic-type reactions, peripheral blood stem cell (PBSC) mobilization

DOSAGE AND ROUTES
• **Adult/child >45 kg: SUBCUT** 6 mg per chemotherapy cycle, give ≥24 hr after cytotoxic chemotherapy
Available forms: Sol for inj 6 mg/0.6 mL
Administer:
SUBCUT route
• Using single-use vials; after dose is withdrawn, do not reenter vial
• Do not use 6-mg fixed dose in infants, children, or others <45 kg
• Inspect sol for discoloration, particulates; if present, do not use
• Do not administer during the period 14 days before and 24 hr after cytotoxic chemotherapy
• Store in refrigerator; do not freeze; may store at room temperature up to 6 hr; avoid shaking, protect from light

SIDE EFFECTS
CNS: Fever, fatigue, headache, dizziness, insomnia, peripheral edema
GI: Splenic rupture
HEMA: Leukocytosis
INTEG: Alopecia
MISC: Chest pain, hyperuricemia, anaphylaxis, capillary leak syndrome
GU: Glomerulonephritis
MS: Skeletal pain
RESP: Respiratory distress syndrome

PHARMACOKINETICS
Half-life: 15-80 hr; 20-38 hr (children)

INTERACTIONS
• **Do not use product concomitantly, 2 wk before, or 24 hr after administration of cytotoxic chemotherapy**
Increase: release of neutrophils—lithium
Drug/Lab Test
Increase: uric acid, LDH, alk phos

NURSING CONSIDERATIONS
Assess:
• **Allergic reactions, anaphylaxis:** rash, urticaria; discontinue product, have emergency equipment nearby
• **ARDS:** dyspnea, fever, tachypnea, occasionally confusion; obtain ABGs, chest x-ray; product may need to be discontinued
• Systemic rupture: upper left quadrant abdominal pain, dizziness, confusion, drop in B/P, pallor
• Sickle cell crisis in those with sickle cell disease (may be fatal)
• Capillary leak syndrome: edema, hemoconcentration, hypotension, hypoalbuminemia, treatment in ICU may be required
• **Bone pain:** give mild analgesics
• Blood studies: CBC with differential, platelet count before treatment, 2× weekly; neutrophil counts may be increased for 2 days after therapy
• B/P, respirations, pulse before and during therapy

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; pregnant women should enroll in Amgen's Pregnancy Surveillance Program, 1-800-772-6436; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: absence of infection

Teach patient/family:

• How to perform the technique for self-administration if product to be given at home: dose, side effects, disposal of containers and needles; provide instruction sheet

• To notify prescriber immediately of allergic reaction, trouble breathing, abdominal pain

⚠ HIGH ALERT

peginterferon alfa-2a (Rx)

(peg-in-ter-feer'on)

Pegasys, Pegasys ProClick

peginterferon alfa-2b (Rx)

PegIntron, Pegintron Redipen, Sylatron

Func. class.: Immunomodulator

ACTION: Stimulates genes to modulate many biologic effects, including the inhibition of viral replication; inhibits ion cell proliferation, immunomodulation; stimulates effector proteins; decreases leukocyte, platelet counts

USES: Chronic hepatitis C infections in adults with compensated liver disease; chronic hepatitis B in adults who are HBe AG positive, HBe AG negative; HCV patients coinfected with HIV; nonresponders or relapsers with chronic hepatitis C, malignant melanoma

Unlabeled uses: Adenovirus, coronavirus, encephalomyocarditis virus, herpes simplex types 1 and 2, hepatitis D, acute hepatitis C, HIV, HPV, polio virus, rhinovirus, varicella zoster, variola, vesicular stomatitis

CONTRAINDICATIONS: Neonates, infants, sepsis; hypersensitivity to interferons, benzyl alcohol, *Escherichia coli* protein

Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, thyroid disorders, myelosuppression, renal/hepatic disease, suicidal/homicidal ideation, preexisting ophthalmologic disorders, pancreatitis, hemodialysis

Black Box Warning: Cardiac disease, depression, autoimmune disease, infection, use with ribavirin

DOSAGE AND ROUTES

Pegasys

• **Adult: SUBCUT** 180 mcg weekly × 48 wk; if poorly tolerated, reduce dose to 135 mcg weekly; in some cases, reduction to 90 mcg may be needed

Peg-Intron

(chronic hepatitis C with compensated liver disease)

• **Adult >105 kg: SUBCUT** 1.5 mcg/kg/wk plus ribavirin 600 mg in AM and 800 mg in PM plus a HCV NS3/4A protease inhibitor; **86-105 kg:** 150 mcg/0.5 mL (0.5 mL of 150 mcg vial or Redipen) per wk plus ribavirin 1200 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor; **81-85 kg:** 120 mcg/0.5 mL (0.5 mL of 120 mcg vial or Redipen) per wk plus ribavirin 1200 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor; **76-80 kg:** 120 mcg/0.5 mL (0.5 mL of 120 mcg vial or Redipen) per wk plus ribavirin 400 mg in AM and 600 mg in PM plus a HCV NS3/4A protease inhibitor; **66-75 kg:** 96 mcg/0.4 mL (0.4 mL of 120 mcg vial or Redipen) per wk plus ribavirin 400 mg in AM and 600 mg in PM plus a HCV NS3/4A protease inhibitor; **61-65 kg:** 96 mcg/0.4 mL (0.4 mL of 120 mcg vial or Redipen) per wk plus ribavirin 800 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor; **51-60 kg:** 80 mcg/0.5 mL (0.5 mL of 80 mcg vial or Redipen) per wk plus ribavirin 800 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor; **40-50 kg:** 64 mcg/0.4 mL (0.4 mL of 80 mcg

P

vial or Redipen) per wk plus ribavirin 800 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor; **<40 kg:** 50 mcg/0.5 mL (0.5 mL of 50 mcg vial or Redipen) per wk plus ribavirin 800 mg/day in 2 divided doses plus a HCV NS3/4A protease inhibitor

Malignant melanoma (Sylatron only)

• **Adult: SUBCUT** 6 mcg/kg/wk × 8 wk then 3 mcg/kg/wk × ≤5 yr, premedicate with acetaminophen 500-1000 mg 30 min before first dose, prn for subsequent doses

Available forms: Pegasys: inj 135, 180 mcg/0.5 mL; **Pegintron:** 50, 80, 120, 150 mcg/0.5 mL; **Sylatron** 200, 300, 600 mcg powder for inj

Administer:

• In evening to reduce discomfort, to allow patient to sleep through some side effects

• Continue pediatric dose in those who turn 18 yr

Interferon alfa-2a

• Use prefilled syringes; store in refrigerator

Interferon alfa-2b

SUBCUT/IM route

• Reconstitute with 1 mL of provided diluent/10-, 18-, or 50-million unit vials, swirl; sol for inj vials do not need reconstitution

SIDE EFFECTS

CNS: *Headache, insomnia, dizziness,* anxiety, hostility, lability, nervousness, depression, fatigue, poor concentration, pyrexia, suicidal ideation, homicidal ideation, relapse of drug addiction, emotional lability, mania, psychosis

CV: Ischemic CV events

ENDO: Hypothyroidism, diabetes

GI: *Abdominal pain, nausea, diarrhea, anorexia, vomiting,* dry mouth, fatal colitis, fatal pancreatitis

HEMA: Thrombocytopenia, neutropenia, anemia, lymphopenia

INTEG: *Alopecia, pruritus, rash,* dermatitis

MISC: Blurred vision, inj-site reaction, rigors

MS: *Back pain,* myalgia, arthralgia

RESP: Cough, dyspnea

PHARMACOKINETICS

Half-life 15-80 hr, large variability in other pharmacokinetics

INTERACTIONS

• Use caution when giving with theophylline, myelosuppressive agents

Increase: hepatic damage—NNRTIs, NRTIs, protein inhibitors

Drug/Lab Test

Increase: triglycerides, ALT

Decrease: HB, platelets, WBCs, neutrophils

Abnormal: thyroid function test

NURSING CONSIDERATIONS

Assess:

• **Neuropsychiatric symptoms:** severe depression with suicidal ideation; monitor q3wk then 8 wk, then q6mo

• B/P, blood glucose, ophthalmic exam, pulmonary function

• ALT, HCV viral load; patients who show no reduction in ALT, HCV unlikely to show benefit of treatment after 6 mo

• Platelet counts, heme concentration, ANC, serum creatinine concentration, albumin, bilirubin, TSH, T_4, AFP

• **Myelosuppression:** hold dose if neutrophil count is $<500 \times 10^6$/L or if platelets are $<50 \times 10^9$/L

• **Hypersensitivity:** discontinue immediately if hypersensitivity occurs

• **Infection:** vital signs, increased WBCs, fever; product may need to be discontinued

• **Colitis/pancreatitis:** may be fatal; diarrhea, fever, nausea, vomiting, severe abdominal pain; if these occur, product should be discontinued

• **Pregnancy/breastfeeding:** may cause birth defects if alfa-2b is used with ribavirin; do not use in pregnancy, contraception is needed; do not breastfeed

Evaluate:

• Therapeutic response: decreased chronic hepatitis C signs, symptoms; undetectable viral load

Teach patient/family:
• Provide patient or family member with written, detailed information about product
• Use 2 forms of effective contraception throughout treatment and for 6 mo after treatment (men and women) (combination therapy with ribavirin)
• To avoid driving, other hazardous activity if dizziness, confusion, fatigue, somnolence occur
• To use puncture-resistant container for disposal of needles/syringes if using at home
• To report suicidal/homicidal ideation, visual changes, bleeding/bruising, pulmonary symptoms

peginterferon beta-1a (Rx)

(peg-inter-feer′on bay′ta-wun-ay)

Plegridy

Func. class.: Biological response modulator, interferon

USES: Treatment of relapsing forms of multiple sclerosis, including clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Multiple sclerosis, relapsing
• **Adult: SUBCUT** Initial: 63 mcg on day 1; 94 mcg on day 15; maintenance: 125 mcg q14 days beginning on day 29
Available forms: Injection 125 mcg/0.5 mL syringe; 63, 94 mcg/0.5 mL pen injector

pegloticase (Rx)

(peg-loe′ti-kase)

Krystexxa

Func. class.: Antigout agent
Chem. class.: Pegylated, recombinant, mammalian urate oxidase enzyme

ACTION: Lowers plasma uric acid concentration by converting uric acid to allantoin, which is readily excreted by the kidneys

USES: Chronic gout in patients experiencing treatment failure

CONTRAINDICATIONS:

Black Box Warning: Hypersensitivity, G6PD deficiency

Precautions: Pregnancy, breastfeeding, children/infants/neonates, African-American patients, heart failure

Black Box Warning: Requires specialized setting, experienced clinician; serious hypersensitivity; methemoglobinemia

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 8 mg over 2 hr q2wk
Available forms: Sol for inj 8 mg/mL
Administer:
Intermittent IV INFUSION route
• **Reconstitute:** visually inspect for particulate matter, discoloration whenever sol/container permits; use aseptic technique; withdraw 8 mg (1 mL) of product/250 mL 0.9% NaCl or 0.45% NaCl; invert several times to mix, do not shake; discard remaining product in vial
• **Premedicate:** with antihistamines and corticosteroids in all patients and acetaminophen if deemed necessary to prevent anaphylaxis, infusion site reactions
• **Infusion:** if refrigerated, allow to come to room temperature; do not warm artificially; give over 120 min; do not give IV push or bolus; use infusion by gravity feed, syringe-type pump, or infusion pump; given in a specialized setting by those who can manage anaphylaxis or inj-site reactions; monitor during and for 1 hr after infusion; if reaction occurs, slow or stop infusion, may be restarted at a slower rate; do not admix
• Store diluted product in refrigerator or at room temperature for up to 4 hr; refrigerator is preferred; protect from light; do not freeze; use within 4 hr of preparation

SIDE EFFECTS

CNS: Dizziness, fatigue, fever
CV: *Chest pain,* heart failure, hypotension
GI: *Nausea,* vomiting, diarrhea, constipation
GU: Nephrolithiasis
HEMA: Anemia
INTEG: Ecchymosis, *erythema, pruritus, urticaria*
MS: Back pain, arthralgia, muscle spasm
SYST: Antibody formation, infection, anaphylaxis, infusion-related reactions
RESP: *Dyspnea,* upper respiratory infection

PHARMACOKINETICS

Remains primarily in intravascular space after administration, elimination half-life 2 wk, mean nadir uric acid concentration 24-72 hr

INTERACTIONS

Do not use with urate-lowering agents (allopurinol, probenecid, febuxostat, sulfinpyrazone)

NURSING CONSIDERATIONS

Assess:

• **Gout:** pain in big toe, feet, knees, redness, swelling, tenderness lasting a few days to weeks; intake of alcohol, purines, if patient is overweight or taking diuretics
• Obtain uric acid levels at baseline, before administration; 2 consecutive uric acid levels of >6 mg/dL may indicate therapy failure; greater chance of anaphylaxis; infection-related reactions

Black Box Warning: Specialized care setting: use only in facility where emergency equipment is available, anaphylaxis may occur

Black Box Warning: Infusion reactions: monitor for reactions for ≥1 hr after use

Black Box Warning: Assess for G6PD deficiency, methemoglobinemia

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decrease uric acid levels; relief of pain, swelling, redness in toes, feet, knees

Teach patient/family:

• About reason for infusion, expected results
• To notify prescriber during infusion of allergic reactions or redness, swelling, pain at infusion site
• That continuing follow-up exams and uric acid levels will be needed

pegvaliase-pqpz (Rx)

(peg-val'i-ase)

Palynziq

Func. class.: Phenylalanine ammonia lyase enzyme

USES: To reduce blood phenylalanine concentrations in phenylketonuria (PKU) patients who have uncontrolled blood phenylalanine concentrations >600 micromol/L on existing management

CONTRAINDICATIONS

Black Box Warning: Serious hypersensitivity or anaphylaxis

DOSAGE AND ROUTES

Phenylketonuria (PKU)

Adult: SUBCUT Induction: 2.5 mg weekly × 4 wk

Titration (after 4-wk induction): 2.5 mg twice weekly × 1 wk, then 10 mg weekly for 1 wk, then 10 mg twice weekly for 1 wk, then 10 mg 4 times/wk for 1 wk, then 10 mg day × 1 wk. Additional time may be required before each dosage escalation based on patient tolerability; maintenance: 20 mg daily × ≥ 24 wk. Individualize dose to achieve blood phenylalanine concentration ≤600 micromol/L; may increase to 40 mg daily

if a response (blood phenylalanine concentration 600 micromol/L or less) has not been achieved after using 20 mg daily × 24 wk, max 60 mg/day
Available forms: Injection 2.5, 10, 20 mg/0.5 mL single-dose syringe

⚠ HIGH ALERT

pembrolizumab (Rx)

(pem'broe-liz'ue-mab)

Keytruda

Func. class.: Antineoplastics
Chem. class.: Monoclonal antibodies

ACTION: A human monoclonal antibody that binds to the programmed death receptor-1 (PD-1) found on T-cells and blocks the interaction of PD-1 with its ligands, PD-L1 and PD-L2, on the tumor cell

USES: Unresectable or metastatic malignant melanoma in those who have disease progression after ipilimumab or in BRAF V600 mutation–positive patients who have disease progression after ipilimumab and a BRAF inhibitor, metastatic non–small-cell lung cancer with high PD-L1 expression, lacking EGFR or ALK, recurrent head and neck squamous cell carcinoma, Hodgkin lymphoma, MSI-H or dMMR colorectal cancer

CONTRAINDICATIONS: Hypersensitivity, pregnancy, breastfeeding
Precautions: Immune-mediated colitis, immune-mediated hepatitis, immune-mediated hyperthyroidism/hypothyroidism; immune-mediated nephritis, acute interstitial nephritis, and renal failure; immune-mediated pneumonitis, adrenocortical insufficiency, arthritis, exfoliative dermatitis, hemolytic anemia, hypophysitis, myasthenia syndrome, myositis, optic neuritis, pancreatitis, partial seizures after inflammatory foci identified in brain parenchyma, rhabdomyolysis, uveitis, incidence of abortion/stillbirths

DOSAGE AND ROUTES

• **Adult: IV** 200 mg over 30 min q3wk or 400 mg over 30 min q6 wk until disease progression up to 24 mo
Available forms: Powder for injection 50 mg/vial; solution for injection 25 mg/mL
Administer:
Intermittent IV INFUSION route
• Add 2.3 mL of sterile water for injection, 50-mg vial (25 mg/mL); inject sterile water along the walls of the vial and not directly on the powder
• Gently swirl and allow up to 5 min for bubbles to clear, do not shake, solution will be clear to slightly opalescent, colorless to slightly yellow
• Add the required amount of product to a bag of normal saline (0.9% sodium chloride injection) to a final diluted concentration between 1 and 10 mg/mL; mix by gentle inversion
• Discard any unused solution left in the vial
• **Storage after reconstitution and dilution:** Store at room temperature up to 4 hr or refrigerate up to 24 hr (includes reconstitution, dilution, and administration time). If refrigerated, allow the diluted solution to warm to room temperature before use, give over 30 min
• Use a sterile, nonpyrogenic, low–protein binding 0.2- to 5-micron in-line or add-on filter
• Do not use with other drugs through the same infusion line
• **Grade 2 or 3 toxicity:** Withhold and give corticosteroids; resume when the adverse event recovers to grade ≤1. Permanently discontinue if there is no recovery within 12 wk, if the corticosteroid dose cannot be reduced to ≤10 mg/day of predniSONE (or equivalent) within 12 wk, or for recurrent severe or grade 3 colitis
• **Grade 4 toxicity:** Permanently discontinue, give corticosteroids
Hepatitis:
• **Grade 2 toxicity (AST or ALT >3-5 × upper limit of normal [ULN] or total bilirubin >1.5-3 × ULN):** Withhold and give corticosteroids; resume when adverse event recovers to grade 1 or less.

P

Permanently discontinue if there is no recovery within 12 wk or if the corticosteroid dose cannot be reduced to ≤10 mg/day of predniSONE (or equivalent) within 12 wk

• **Grade 3 or 4 toxicity (AST or ALT >5 × ULN or total bilirubin >3 × ULN):** Permanently discontinue; give corticosteroids

• **Liver metastases and grade 2 elevated transaminase levels at baseline:** Permanently discontinue if AST/ALT levels increase by ≥50% over baseline and transaminase level elevations persist for at least 1 wk

SIDE EFFECTS

CNS: Seizures, myasthenia, headache, fever, insomnia, chills, dizziness, fatigue
ENDO: Hyponatremia, hypothyroidism/hyperthyroidism, hyperglycemia, hypocalcemia, immune-mediated hypophysitis
EENT: Optic neuritis
GI: Nausea, vomiting, abdominal pain, pancreatitis, colitis, diarrhea, hepatitis, constipation
GU: Interstitial nephritis, renal failure
RESP: Cough, dyspnea, immune-mediated pneumonitis
INTEG: Rash, pruritus, skin discoloration
MS: Myalgia, immune-mediated rhabdomyolysis
SYST: Exfoliative dermatitis

INTERACTIONS

None known

Drug/Lab Test

Increase: LFTs, renal function studies

NURSING CONSIDERATIONS

Assess:

• For hyperthyroidism/hypothyroidism, renal function studies baseline, periodically during therapy, CCr, BUN; monitor for nephritis

• For pneumonitis (new or worsening cough, chest pain, shortness of breath); confirm with radiographic imaging, give corticosteroids ≥ grade 2, withhold in grade 2, resume grade 0-1

• **Immune-mediated hepatitis:** liver function tests and hepatitis, jaundice, severe nausea/vomiting, easy bleeding or bruising; withhold and give corticosteroids if grade 2 hepatitis (AST or ALT >3-5 × ULN or total bilirubin >1.5-3 × ULN)

• **Pregnancy:** assess whether pregnancy is planned or suspected or if breastfeeding; do not use in pregnancy, breastfeeding

• **Immune-mediated hypophysitis:** headache, weakness, fainting, dizziness, blurred vision; use corticosteroids if >grade 2, discontinue >grade 3

• **Hyperglycemia:** may cause diabetes mellitus 1 or diabetic ketoacidosis

Evaluate:

• Therapeutic response: decreased progression of multiple myeloma

Teach patient/family:

• To notify prescriber immediately of signs of colitis, pneumonitis, hepatitis, hypophysitis

• **Hyperglycemia:** about signs and symptoms of hyperglycemia, diabetes; how to ensure tight glucose control; to report hyperglycemia immediately

• **Pregnancy:** to use highly effective contraceptive methods during and for 4 mo after treatment; to contact health care provider if pregnancy is suspected or confirmed; not to breastfeed

⚠ HIGH ALERT

PEMEtrexed (Rx)

(pem-ah-trex′ed)

Alimta

Func. class.: Antineoplastic-antimetabolite

Chem. class.: Folic acid antagonist

Do not confuse:
PEMEtrexed/PRALAtrexate

ACTION: Inhibits multiple enzymes that reduce folic acid, which is needed for cell replication

USES: Malignant pleural mesothelioma in combination with CISplatin;

non–small-cell lung cancer as single agent; nonsquamous non–small-cell lung cancer (1st-line treatment)

Unlabeled uses: Bladder, breast, colorectal, gastric, head/neck, renal cancers

CONTRAINDICATIONS:

Pregnancy, hypersensitivity, ANC <1500 cells/mm^3, CCr <45 mL/min, thrombocytopenia (<100,000/mm^3), anemia

Precautions: Breastfeeding, children, renal/hepatic disease

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 500-600 mg/m^2 given over 10 min on day 1 of 21-day cycle with CISplatin 75 mg/m^2 infused over 2 hr beginning $^1/_2$ hr after end of PEMEtrexed infusion

Renal dose

• **Adult: IV INFUSION** CCr <45 mL/min, not recommended

Available forms: Inj, single-use vials, 100, 500 mg

Administer:

• Store at 77°F, excursions permitted at 59°F to 86°F, not light sensitive, discard unused portions

• Vit B_{12} and low-dose folic acid as prophylactic measure to treat related hematologic, GI toxicity; 400-1000 mcg/day × 7 days before 1st dose and × 21 days after last dose, vit B_{12} 1 mg IM 1 wk before 1st dose and q 3 cycles (9 wk) thereafter

• Premedicate with corticosteroid (dexamethasone) given PO bid day before, day of, and day after administration of PEMEtrexed

Intermittent IV INFUSION route

• Use cytotoxic handling procedures

• Reconstitute 500-mg vial/20 mL 0.9% NaCl inj (preservative free) = 25 mg/mL, swirl until dissolved, further dilute with 100 mL 0.9% NaCl inj (preservative free), give as IV infusion over 10 min

• Use only 0.9% NaCl inj (preservative free) for reconstitution, dilution

• Do not begin a new cycle unless neutrophils (ANC) are ≥1500 cells/mm^3, platelets are ≥100,000 cells/mm^3, CCr is ≥45 mL/min

• **Platelet nadir <50,000/mm^3 regardless of the ANC:** if necessary, delay until platelet count recovery, reduce PEMEtrexed and CISplatin by 50%; if grade 3/4 toxicity occurs after 2 reductions, discontinue both products

• **ANC nadir <500/mm^3 when platelet nadir is ≥50,000/mm^3:** if necessary, delay until ANC recovery, reduce PEMEtrexed and CISplatin by 75%; if grade 3/4 toxicity occurs after 2 reductions, discontinue both products

• **CTC Grade 3/4 nonhematologic toxicity including diarrhea requiring hospitalization and excluding neurotoxicity, mucositis, and grade 3 transaminase elevations:** withhold therapy until pretherapy value or condition, reduce by 75% both products; if grade 3 or 4 toxicity occurs after 2 reductions, discontinue both products

• **CTC grade 3/4 mucositis:** withhold therapy until pretherapy condition, reduce 50% of PEMEtrexed; if grade 3 or 4 mucositis occurs after 2 dosage reductions, discontinue both products

• **CTC grade 2 neurotoxicity:** withhold therapy until pretherapy value or condition, reduce dose of CISplatin by 50%

• **CTC grade 3/4 neurotoxicity:** discontinue both products

SIDE EFFECTS

CNS: *Fatigue, fever, mood alteration, neuropathy*

CV: Thrombosis, embolism, *chest pain,* arrhythmia exacerbation

GI: *Nausea, vomiting, anorexia, diarrhea, ulcerative stomatitis, constipation, dehydration*

GU: Renal failure, creatinine elevation

HEMA: Neutropenia, leukopenia, thrombocytopenia, myelosuppression, anemia

INTEG: *Rash, desquamation*

RESP: *Dyspnea*

SYST: Infection with/without neutropenia, radiation recall reaction, toxic epidermal necrolysis, Stevens-Johnson syndrome, anaphylaxis

PHARMACOKINETICS

Not metabolized; excreted in urine (unchanged 70%-90%); not known if excreted in breast milk; half-life 3.5 hr, 81% protein binding

INTERACTIONS

Decrease: clearance of PEMEtrexed—nephrotoxic products, avoid NSAIDs for 2-8 days before use

NURSING CONSIDERATIONS

Assess:

- Previous radiation treatments; radiation recall reactions have occurred (erythema, exfoliative dermatitis, pain, burning)
- **Bone marrow depression:** CBC, differential, platelet count; monitor for nadir, recovery on days 8, 15 of the cycle; new cycle should not begin if ANC <1500 cells/mm^3, platelets <100,000 cells/mm^3, CCr <45 mL/min
- **Nephrotoxicity:** Renal studies: BUN, serum uric acid, urine CCr, electrolytes before, during therapy; I&O ratio; report fall in urine output to <30 mL/hr
- Monitor temperature; fever may indicate beginning infection; no rectal temperature
- **Neurotoxicity:** CTC grade 2: withhold until resolution to at least pretherapy value/condition, reduce CISplatin by 50%; CTC grade 3-4: immediately discontinue product and CISplatin if given in combination
- **Mucositis:** CTC 3/4: withhold until resolution to at least pretherapy value/condition, reduce dose by 50%; if grade 3/4 occurs after 2 dosage reductions, discontinue product and CISplatin
- **Bleeding:** bleeding time, coagulation time during treatment; bleeding: hematuria, guaiac, bruising or petechiae, mucosa or orifices
- Buccal cavity for dryness, sores, ulceration, white patches, oral pain, bleeding, dysphagia
- **Severe allergic reaction, toxic epidermal necrolysis:** rash, urticaria, itching, flushing
- Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-tid with soft brush or cotton-tipped applicators for stomatitis; use unwaxed dental floss
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decreased spread of malignancy

Teach patient/family:

- To report any complaints, side effects to nurse or prescriber: black, tarry stools; chills, fever, sore throat, bleeding, bruising, cough, SOB, dark or bloody urine
- To discuss with provider all OTC, Rx, herbals, supplements taken, to avoid alcohol
- To avoid foods with citric acid, hot temperature, or rough texture if stomatitis is present
- To report stomatitis: any bleeding, white spots, ulcerations in mouth to prescriber; to examine mouth daily; to report symptoms to nurse; to use good oral hygiene
- That prophylactic folic acid and B_{12} injections may be necessary 1 wk before therapy to prevent bone marrow suppression and GI symptoms
- To avoid use of razors, commercial mouthwash
- To eat foods high in folic acid; to take supplements as prescribed
- That contraceptive measures are recommended during therapy, for ≥8 wk after cessation of therapy; to discontinue breastfeeding because toxicity to infant may occur

pemigatinib (Rx)

(pem′i-ga′ti-nib)

Penazyre

Func. class: Antineoplastic, fibroblast growth factor receptor (FGFR) inhibitor

USES: Treatment of previously treated, unresectable, locally advanced/metastatic cholangiocarcinoma with an FGFR 2 fusion or other rearrangement

CONTRAINDICATIONS:

Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES

Adult: PO: 13.5 mg daily on days 1-14 of a 21-day cycle; continue until disease progression or unacceptable toxicity

penciclovir topical
See Appendix B

PENICILLINS

penicillin G benzathine (Rx)
(pen-i-sill'in)
Bicillin L-A
penicillin G procaine (Rx)
penicillin G sodium (Rx)
penicillin V potassium (Rx)
Func. class.: Broad-spectrum antiinfective
Chem. class.: Natural penicillin

ACTION: Interferes with cell-wall replication of susceptible organisms; lysis is mediated by cell-wall autolytic enzymes, results in cell death

USES: Respiratory infections, scarlet fever, erysipelas, otitis media, pneumonia, skin and soft-tissue infections, gonorrhea; effective for gram-positive cocci *(Staphylococcus, Streptococcus pyogenes, S. viridans, S. faecalis, S. bovis, S. pneumoniae)*, gram-negative cocci *(Neisseria gonorrhoeae)*, gram-positive bacilli *(Actinomyces, Bacillus anthracis, Clostridium perfringens, C. tetani, Corynebacterium diphtheriae, Listeria monocytogenes)*, gram-negative bacilli *(Escherichia coli, Proteus mirabilis, Salmonella, Shigella, Enterobacter, Streptobacillus moniliformis)*, spirochetes *(Treponema pallidum)*

CONTRAINDICATIONS: Hypersensitivity to penicillins

Precautions: Pregnancy, breastfeeding; hypersensitivity to cephalosporins, carbapenem, sulfites; severe renal disease, GI disease, asthma, CDAD, electrolyte imbalance, geriatrics, infants, neonates

Black Box Warning: Penicillin G benzathine: IV use, may be fatal

DOSAGE AND ROUTES

Penicillin G benzathine

Early syphilis
- **Adult: IM** 2.4 million units in single dose

Congenital syphilis
- **Child <2 yr: IM** 50,000 units/kg in single dose, max 2.4 million units as single inj

Prophylaxis of rheumatic fever, glomerulonephritis
- **Adult/child >27 kg: IM** 1.2 million units as single dose
- **Child ≤27 kg: IM** 600,000 units as single dose

Most infections
- **Adult/child >27 kg: IM** 1.2 million units as single dose
- **Child ≤27 kg: IM** 600,000 units as single dose

Available forms: Inj 600,000 units/mL

Penicillin G Potassium

Pneumococcal/streptococcal infections (serious)
- **Adult: IM/IV** 5-24 million units in divided doses q4-6hr
- **Child <12 yr: IV** 150,000-300,000 units/kg/day in 4-6 divided doses; max 24 million units/day

Most infections
- **Adult:** IM/IV 1-5 million units q4-6hr
- **Child:** IM/IV 8333-16,667 units/kg q4hr; 12,550-25,000 units/kg q6hr; up to 250,000 units/kg daily in divided doses, if more serious 300,000 units/kg daily
- **Infant >7 days:** IV 25,000 units/kg q8hr; meningitis up to 75,000 units/kg q6hr
- **Infant <7 days:** IV 25,000 units/kg q12hr, meningitis 100,000-150,000 units/kg daily in divided doses

P

Renal dose

• CCr <10 mL/min, give full loading dose then $^1/_2$ of loading dose q8-10hr

Available forms: Powder for inj 1, 5, 20 million units/vial; inj 1, 2, 3 million units/50 mL

Penicillin G procaine

Moderate to severe pneumococcal infections

• **Adult: IM** 600,000-1 million units as single dose or divided bid doses/day for 10 days to 2 wk

• **Child: IM** 50,000 units/kg daily × 10-14 days (congenital syphilis)

Available forms: Inj 600,000, units/mL

Penicillin V

Most infections

• **Adult/adolescent/child >12 yr: PO** 1-4 g in 3-4 divided doses

• **Child <12 yr: PO** 25-100 mg/kg/day in 3-4 divided doses, max 3 g/day

Group A beta-hemolytic streptococcal infections

• **Adult/child >12 yr: PO** 1-4 g/day in divided doses

Available forms: Tabs 250, 500 mg; powder for oral sol 125, 250 mg/5 mL

Administer:

• Store in dry, tight container; oral susp refrigerated 2 wk

Penicillin G benzathine

• No dilution needed, shake well, give slowly deep IM inj in large muscle mass; avoid intravascular inj; aspirate; do not give IV

Penicillin G

• Aspirate before use

• Penicillin G sodium or potassium can be given IM or IV, vials containing 10 or 20 million units not for IM use

Intermittent IV INFUSION route

• Vials/bulk packages: dilute according to manufacturer's directions

• Frozen bags: thaw at room temperature, do not force thaw, no reconstitution needed

• Final concentration (100,000-500,000 units/mL—adults; 50,000 units/mL—neonate/infant)

• Total daily dose divided q4-6hr and given over 1-2 hr (adult), 15 min (infant/neonate)

Penicillin G procaine

• No dilution needed; give deep IM inj; avoid intravascular inj; aspirate; do not give IV

Penicillin V

• Orally on empty stomach for best absorption

• **Oral susp:** tap bottle to loosen, add $^1/_2$ total amount of water, shake, add remaining water, shake; final concentration 125 or 250 mg/mL, store in refrigerator after reconstitution, discard after 14 days

SIDE EFFECTS

CNS: Lethargy, hallucinations, anxiety, depression, twitching, coma, seizures, hyperreflexia

GI: *Nausea, vomiting, diarrhea,* increased AST, ALT, abdominal pain, glossitis, colitis, CDAD

GU: Oliguria, proteinuria, hematuria, *vaginitis, moniliasis,* glomerulonephritis, renal tubular damage

HEMA: Anemia, increased bleeding time, bone marrow depression, granulocytopenia, hemolytic anemia

META: Hypo/hyperkalemia, alkalosis, hypernatremia

MISC: Anaphylaxis, serum sickness, Stevens-Johnson syndrome, *local pain,* tenderness and fever with IM inj

PHARMACOKINETICS

Penicillin G benzathine: IM: Very slow absorption; time to peak 12-24 hr; duration 21-28 days; excreted in urine, feces, breast milk; crosses placenta

Penicillin G: IV: Peak immediate

IM: Peak $^1/_4$-$^1/_2$ hr

PO: Peak 1 hr, duration 6 hr

Excreted in urine unchanged, excreted in breast milk, crosses placenta, half-life 30-60 min

Penicillin G procaine: IM: Peak 1-4 hr, duration 15 hr, excreted in urine

Penicillin V: PO: Peak 30-60 min, half-life 30 min, excreted in urine, breast milk

INTERACTIONS

Increase: penicillin effect—aspirin, probenecid
Increase: effect of heparin, methotrexate
Decrease: effect of oral contraceptives, typhoid vaccine
Decrease: antimicrobial effect of penicillin—tetracyclines
Drug/Lab Test
False positive: urine glucose, urine protein

NURSING CONSIDERATIONS

Assess:
• **Infection:** temperature; characteristics of sputum, wounds, urine, stools before, during, after treatment; C&S before therapy; product may be given as soon as culture is taken
• **GU status:** I&O ratio; report hematuria, oliguria because penicillin in high doses is nephrotoxic; renal tests: urinalysis, protein, blood
• **Renal disease:** any patient with compromised renal system because product is excreted slowly with poor renal system function; toxicity may occur rapidly
• Hepatic studies: AST, ALT
• Blood studies: WBC, RBC, Hct, HB, bleeding time
• **CDAD:** diarrhea, mucus, pus; bowel pattern before, during treatment
• Respiratory status: rate, character, wheezing, tightness in chest
• Allergies before initiation of treatment, reaction to each medication; because of prolonged action, allergic reaction may be prolonged and severe; watch for anaphylaxis: rash, dyspnea, pruritus, laryngeal edema; skin eruptions after administration of penicillin to 1 wk after discontinuing product
• EPINEPHrine, suction, tracheostomy set, endotracheal intubation equipment
• Scratch test to assess allergy after securing order from prescriber; usually done when penicillin is only product of choice
Evaluate:
• Therapeutic response: resolution of infection

Teach patient/family:
• To report sore throat, fever, fatigue; may indicate superinfection; CNS effects: depression, hallucinations, seizures
• To wear or carry emergency ID if allergic to penicillins
• **CDAD:** To report diarrhea with blood, pus, mucus to prevent dehydration
• To shake susp well before each dose; to store in refrigerator for up to 2 wk
• To use all medication prescribed

TREATMENT OF ANAPHYLAXIS: Withdraw product; maintain airway; administer EPINEPHrine, aminophylline, O_2, IV corticosteroids

pentamidine (Rx)

(pen-tam′i-deen)
NebuPent, Pentam 300
Func. class.: Antiprotozoal
Chem. class.: Aromatic diamide derivative

ACTION: Interferes with DNA/RNA synthesis in protozoa

USES: Treatment/prevention of *Pneumocystis jiroveci* infections
Unlabeled uses: PJP (inhalation)

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, blood dyscrasias, cardiac/renal/hepatic disease, diabetes mellitus, hypocalcemia, hypo/hypertension, anemia

DOSAGE AND ROUTES

• **Adult and child ≥4 mo: IV/IM** 4 mg/kg/day × 2-3 wk; **NEB** 300 mg via Respirgard II Jet (Nebupent) every 4 weeks; or 150 mg q2wk
Available forms: Inj, aerosol 300 mg/vial; sol for aerosol 300 mg
Administer:
• Store in refrigerator protected from light

Inhalation route

• Through nebulizer, using Respirgard II jet nebulizer; mix contents in 6 mL of sterile water; do not use low pressure (<20 psi); flow rate should be 5-7 L/min (40-50 psi) air or O_2 source over 30-45 min until chamber is empty

IM route

• **Reconstitute** 300 mg in 3 mL sterile water (100 mg/mL), give deep IM by Z-track; if painful by this route, rotate inj site

Intermittent IV INFUSION route

• Check IV site frequently (vesicant properties)

• **Reconstitute** 300 mg/3-5 mL of sterile water for inj, D_5W, withdraw dose and **further dilute** in 50-250 mL D_5W, give over 1-2 hr with patient lying down; check B/P often

Y-site compatibilities: alemtuzumab, alfentanil, aminocaproic acid, anidulafungin, argatroban, atracurium, atropine, benztropine, buprenorphine, calcium gluconate, CARBOplatin, caspofungin, chlorproMAZINE, cimetidine, CISplatin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, diltiaZEM, gatifloxacin, zidovudine

SIDE EFFECTS

CNS: Disorientation, hallucinations

CV: Severe hypotension, chest pain, ventricular tachycardia, QT prolongation, dysrrthmias

GI: *Nausea, anorexia;* metallic taste, pancreatitis

HEMA: Anemia, leukopenia, thrombocytopenia

INTEG: Sterile abscess, pain at inj site, pruritus, urticaria, *rash*, Stevens-Johnson syndrome

MISC: Night sweats, anaphylaxis

RESP: Cough, SOB, bronchospasm (with aerosol), sore throat

PHARMACOKINETICS

IV: Peak 1 hr

IM: Peak 30 min

Excreted unchanged in urine (66%); half-life 9-12 hr (IM), 6 hr (IV)

INTERACTIONS

• **Nephrotoxicity:** aminoglycosides, amphotericin B, CISplatin, NSAIDs, vancomycin

• **Fatal dysrhythmias: erythromycin IV**

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin, arsenic trioxide); CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: myelosuppression—antineoplastics, radiation

Drug/Lab Test

Decrease: WBC, platelets, HB, Hct, calcium, magnesium

Increase: BUN, creatinine, potassium, LFTs, bilirubin, alkaline phosphatase

NURSING CONSIDERATIONS

Assess:

• Blood tests, blood glucose, CBC, platelets, calcium, magnesium

• **GU:** I&O ratio; report hematuria, oliguria

• **CV:** ECG for cardiac dysrhythmias in cardiac patients; patient should be lying down when receiving product; severe hypotension may develop; monitor B/P during administration and until B/P stable

• **Hepatic studies:** AST, ALT

• **Renal studies:** urinalysis, BUN, creatinine; nephrotoxicity may occur; any patient with compromised renal system; product is excreted slowly with poor renal system function; toxicity may occur rapidly

• Signs of infection, anemia

• **GI:** Bowel pattern before, during treatment

• **Respiratory status:** rate, character, wheezing, dyspnea

• Dizziness, confusion, hallucination

• **Serious skin reactions, allergic reactions:** rash, fever, fatigue, muscle or joint aches, oral lesions, blisters; discontinue product immediately if these occur

• **Pancreatitis:** nausea, vomiting, severe abdominal pain; monitor lab values of lipase and amylase (elevated in pancreatitis); if these signs or symptoms occur, product may need to be discontinued
• Diabetic patients, hypoglycemia may occur, then hyperglycemia with prolonged therapy
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding

Evaluate:
• Therapeutic response: resolution of AIDS-related PCP

Teach patient/family:
• To report sore throat, fever, fatigue (may indicate superinfection)
• To maintain adequate fluid intake
• That IM injection is painful
• To complete entire course of medication
• **Pancreatitis:** To report to provider immediately nausea, vomiting, severe abdominal pain
• To report immediately rash, bleeding, fever, sore throat, or flulike symptoms, to avoid crowds, persons with known infections

⚠ HIGH ALERT

pentazocine/naloxone (Rx)

(pen-taz′oh-seen/nal-oks′one)
Func. class.: Analgesic, opioid partial agonist
Controlled substance schedule: IV

USES: Moderate to severe pain

CONTRAINDICATIONS:
Hypersensitivity

Black Box Warning: Addiction, abuse, misuse; opioid analgesic REMS; life-threatening respiratory depression; accidental ingestion; neonatal opioid withdrawal syndrome; use with benzodiazepines, other CNS depressants

DOSAGE AND ROUTES

Pain management
• **Adult:** PO: 1 tablet (pentazocine 50 mg/naloxone 0.5 mg) q3-4 hr; may increase to 2 tablets (pentazocine 100 mg/naloxone 1 mg) if needed, max 12 tablets (pentazocine 600 mg/naloxone 6 mg)/day; max 600 mg/6 mg/day
Available forms: Tabs 50 mg/0.5 mg

⚠ HIGH ALERT

pentoxifylline (Rx)

(pen-toks-if′i-lin)
Func. class.: Hemorrheologic agent, blood viscosity reducer

USES: Treatment of intermittent claudication from chronic occlusive arterial disease of the limbs

CONTRAINDICATIONS
Hypersensitivity to pentoxifylline, xanthines, or any component; recent cerebral/retinal hemorrhage

DOSAGE AND ROUTES

Intermittent claudication
Adult: PO 400 mg tid; benefit may take up to 4 wk to develop, take for ≥ 8 wk.
Available forms: Ext rel tabs 400 mg

peramivir (Rx)

(per-am′i-vir)
Rapivab
Func. class.: Antiviral

ACTION: Competitively binds to the active site of the influenza virus, inhibits the activity of strains of influenza A and B viruses

USES: Treatment of uncomplicated acute influenza (seasonal influenza A virus infection or seasonal influenza B virus infection)
Unlabeled uses: Treatment of H1N1 influenza A virus (swine influenza) infection

CONTRAINDICATIONS:
Serious hypersensitivity

Precautions: Breastfeeding, children, dialysis, infants, infection, pregnancy, psychosis, renal impairment

DOSAGE AND ROUTES
Influenza

• **Adult: IV** 600 mg as a single dose infused over 15-30 min, give within 48 hr of onset of influenza symptoms

Renal Dose

Adult/adolescent: CCr ≥50 mL/min, no change; CCr 30-40 mL/min, 200 mg as a single dose; CCr 10-29 mL/min, 100 mg as a single dose

Available forms: Solution for injection 200 mg/20 mL

Administer:

• For IV use only, do not give IM, visually inspect parenteral products for particulate matter and discoloration

• **Dilute** the 10 mg/mL to a max volume of 100 mL, use only 0.9% or 0.45% NaCl, 5% dextrose, or LR

• **Storage of diluted solution:** Use immediately or refrigerate up to 24 hr. Refrigerated solution should be allowed to reach room temperature before administration. Discard any unused diluted solution after 24 hr

• Give over 15-30 min, do not mix or coadminister with other IV products

SIDE EFFECTS
CNS: Delirium, psychosis, hallucinations, insomnia

GI: Constipation, diarrhea, vomiting

MISC: Rash, Stevens-Johnson syndrome, anaphylaxis

PHARMACOKINETICS
Protein binding <30%

INTERACTIONS
Avoid use with intranasal influenza vaccines, H1N1 vaccines

NURSING CONSIDERATIONS
Assess:

• Hypersensitivity reactions/Stevens-Johnson syndrome

• **Neuropsychiatric reactions:** delirium, psychosis, hallucinations

Evaluate:

• Therapeutic response: absence of developing influenza A or B

Teach patient/family:

• That product is for use only within 48 hr of symptoms

perampanel (Rx)
(per-am′pa-nel)

Fycompa

Func. class.: Anticonvulsant, AMPA glutamate receptor antagonist

Controlled Substance Schedule III

USES:
Treatment of partial-onset seizures with or without secondarily generalized seizures as adjunct or monotherapy in epilepsy (≥4); treatment of primary generalized tonic-clonic seizures as adjunct therapy in epilepsy (≥12)

CONTRAINDICATIONS:
Hypersensitivity

Black Box Warning: Serious, life-threatening psychiatric events

DOSAGE AND ROUTES
Partial-onset seizures:

Adult: Initial: 2 mg daily at bedtime; may increase by 2 mg daily ≥ weekly; maintenance 8-12 mg daily at bedtime

Available forms: Tablets 2, 4, 6, 8,10, 12 mg; oral suspension 0.5 mg/mL

perindopril (Rx)
(per-in′doe-pril)

Coversyl ✱, Coversyl Plus ✱

Func. class.: Antihypertensive, ACE inhibitor

USES:
Management of hypertension, MI prophylaxis

Unlabeled uses: HF

CONTRAINDICATIONS
Hypersensitivity

Black Box Warning: Pregnancy second/third trimester

DOSAGE AND ROUTES
Hypertension.
Adult PO: Initial: 4 mg daily; titrate dose as needed up to 16 mg daily
Available forms: Tabs 2, 4, 8 mg

permethrin (Rx,OTC)
(per-METH-rin)
Elimite, Kwellada-P, Nix
Func. class.: Pediculocide/scabicidal

USES: Treatment of head lice (*Pediculus humanus capitis*) and its nits (eggs); treatment of scabies (*Sarcoptes scabiei*) infestation

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Head lice.
Adult/child ≥2 mo: Topical: Cream rinse/lotion 1%: Before application, wash hair with conditioner-free shampoo; rinse with water and towel dry. Apply a sufficient amount of lotion or cream rinse to saturate the hair and scalp (especially behind the ears and nape of neck). Leave on hair for 10 min then rinse with warm water; remove remaining nits with nit comb, may repeat in 7 days if needed
Scabies.
Adult/child ≥ 2 mo: Topical: Cream 5%: Thoroughly massage cream (30 g for adult) from head to soles of feet; leave on for 8-14 hr before removing (shower or bath); for infants and the elderly, also apply on the hairline, neck, scalp, temple, and forehead; may repeat if living mites are observed 14 days after first treatment
Available forms: Cream 5%; lotion 1%

perphenazine (Rx)
(per-fen′a-zeen)
Func. class.: Antipsychotic, phenothiazine

USES: Schizophrenia, control of severe nausea and vomiting

CONTRAINDICATIONS
Hypersensitivity, opioids, bone marrow suppresion, CNS depression, coma

Black Box Warning: Dementia-related psychosis

DOSAGE AND ROUTES
Schizophrenia.
Adult/child ≥ 12: PO Initial: 8-16 mg/day in divided doses; titrate based on response; max 64 mg/day
Nausea/vomiting.
Adult: PO 8-16 mg/day in divided doses; max 24mg/day
Available forms: Tablet 2, 6, 8, 16 mg

perphenazine/amitriptyline (Rx)
per-fen′a-zeen/am-i-trip′ti-leen
Func. class.: Tricyclic antidepressant/phenothiazine

USES: Treatment of moderate-to-severe anxiety and/or agitation and depression; schizophrenia with depressive symptoms

CONTRAINDICATIONS
Hypersensitivity to amitriptyline, perphenazine, or any component, other phenothiazines, bone marrow depression; within 14 days of MAOIs; CNS depression (barbiturates, alcohol, opioids, analgesics, antihistamines); during the acute recovery of MI

Black Box Warning: Dementia-related psychosis, children

DOSAGE AND ROUTES

Depression/anxiety

Adult: PO 1 tablet (amitriptyline 25 mg/perphenazine 2 mg or amitriptyline 25 mg/perphenazine 4 mg) tid-qid or 1 tablet (amitriptyline 50 mg/perphenazine 4 mg) bid; max amitriptyline 200 mg/perphenazine 16 mg; maintenance: usually 1 tablet (amitriptyline 25 mg/perphenazine 2 mg or amitriptyline 25 mg/perphenazine 4 mg) bid-qid or 1 tablet (amitriptyline 50 mg/perphenazine 4 mg) bid

Schizophrenia with depressive symptoms.

Adult: PO 2 tablets (amitriptyline 25 mg/perphenazine 4 mg) tid; may give a fourth dose at bedtime; max amitriptyline 200 mg/perphenazine 16 mg; maintenance: usually 1 tablet (amitriptyline 25 mg/perphenazine 2 mg or amitriptyline 25 mg/perphenazine 4 mg) bid-qid or 1 tablet (amitriptyline 50 mg/perphenazine 4 mg) bid

Available forms: Tabs 2/10, 2/25, 4/10, 4/25, 4/50 mg

⚠ HIGH ALERT

pertuzumab (Rx)

(per-too'zoo-mab)

Perjeta

Func. class.: Antineoplastic

Chem. class.: HER-2/new antagonist

ACTION: Blocks liquid-dependent action of human epidermal growth factor-2 (HER2), inhibiting signal pathways

USES: First-line treatment of HER2-positive metastatic breast cancer with trastuzumab and DOCEtaxel

CONTRAINDICATIONS

Hypersensitivity:

Black Box Warning: Pregnancy

Precautions: Breastfeeding, children, infants, neonates, cardiac arrhythmias, MI, cardiac disease, heart failure, hypertension, infusion-related reactions

Black Box Warning: Heart failure, ventricular dysfunction

DOSAGE AND ROUTES

• **Adult: IV** 840 mg over 60 min, then after 3 wk 420 mg over 30-60 min every 3 wk; give with trastuzumab 8 mg/kg IV over 90 min, then after 3 wk 6 mg/kg over 30-90 min every 3 wk and DOCEtaxel 75 mg/m^2 IV every 3 wk; dosage may be escalated to 100 mg/m^2

Available forms: Solution for inj 420 mg/14 mL (single-use vials) (30 mg/mL)

Administer:

• Visually inspect for particulate matter and discoloration

Dilution and preparation

• **Withdraw** the calculated dose from the vial and add to a 250 mL 0.9% sodium chloride PVC or non-PVC polyolefin infusion bag; do not dilute with dextrose 5% solution

• **Dilute** in normal saline only; do not mix or dilute with other drugs or dextrose solutions

• Mix the diluted solution by gentle inversion; do not shake

IV infusion

• Administer the diluted solution immediately

• Do not administer as an IV push or bolus

• Give the first dose of 840 mg over 60 min and subsequent 420-mg doses over 30-60 min

• If the diluted solution is not used immediately, store at 2°-8°C for up to 24 hr

Delayed or missed doses

• If time since previous dose is <6 wk, give 420 mg IV (do not wait for next scheduled dose)

• If time since previous dose is ≥6 wk, give 840 mg IV over 60 min, followed 3 wk later by 420 mg IV over 30-60 min repeated every 3 wk

• If DOCEtaxel is discontinued, this product and trastuzumab may continue

SIDE EFFECTS

CNS: *Headache*, fever, *peripheral neuropathy,* chills, *fatigue*, asthenia
CV: Heart failure
EENT: Lacrimation, *stomatitis*
GI: *Nausea*, *vomiting*, diarrhea, dysgeusia, *stomatitis, constipation, anorexia*
HEMA: *Anemia*, neutropenia
MS: *Arthralgia*
RESP: Upper respiratory infection, cough
SYST: Anaphylaxis, antibody formation
INTEG: *Alopecia*

PHARMACOKINETICS

Median half-life 18 days

NURSING CONSIDERATIONS

Assess:

- **HER2 overexpression:** testing should be done to identify HER2 overexpression before using this product
- **Decreased left ventricular ejection fraction (LVEF):** can occur and is increased in those with a history of prior anthracycline use or radiotherapy to the chest; evaluate LVEF at baseline and every 3 mo; withhold therapy ×3 wk if LVEF is <40% or LVEF is 40%-45% with a 10% or greater absolute decrease from baseline; resume therapy if the LVEF is recovered to >45% or to 40%-45% with <10% absolute decrease at reassessment; if the LVEF has not improved or has declined further, consider permanently discontinuing pertuzumab and trastuzumab after a risk/benefit assessment
- **Infusion-related reactions/hypersensitivity:** assess anaphylactoid reaction, acute infusion reaction, cytokine-release syndrome 60 min after the first infusion, 30 min after other infusions; monitor for pyrexia, chills, fatigue, headache, asthenia, hypersensitivity, and vomiting; if a significant reaction occurs, slow or interrupt the infusion; permanent discontinuation may be needed in severe reactions
- **Neutropenia:** can occur, but occurs more commonly when trastuzumab is also used and in Asian patients, monitor CBC with differential baseline and periodically
- **Upper respiratory infection:** monitor for dyspnea, shortness of breath, fever

Black Box Warning: Pregnancy: determine whether pregnancy is planned or suspected; patients who become pregnant during therapy should report exposure to the Genentech Adverse Event line at 888-835-2555 and enroll in the MotHER Pregnancy Registry at 800-690-6720, women of childbearing age and men with partners of childbearing age must use contraception during and for 7 mo after last dose

Evaluate:

- Decreased size, spread of tumor

Teach patient/family:

- To notify prescriber immediately of **infection** (cough, fever, chills, sore throat); **bleeding** (gums, bruising, blood in urine/stools/sputum); to avoid persons with known infections
- To avoid all OTC, prescription, herbal, and supplement products unless approved by prescriber; not to use aspirin, NSAIDs, alcohol
- To notify prescriber of peripheral neuropathy
- That hair loss is common

Black Box Warning: Pregnancy/breastfeeding: counsel women of childbearing age and men with partners of childbearing age on the need for contraception during and for 7 mo after therapy; advise patients who suspect pregnancy to contact their health care provider immediately; discontinue breastfeeding

pexidartinib (Rx)

(pex′-i-dar′-ti-nib)

Turalio

Func. class.: Antineoplastic-orphan drug

Chem. class.: Colony stimulating factor-1 receptor (CSF-1R) inhibitor

USES: Symptomatic tenosynovial giant cell tumor

CONTRAINDICATIONS

Hypersensitivity, pregnancy, breastfeeding

Black Box Warning: Hepatotoxicity

DOSAGE AND ROUTES

• **Adults: PO** 250 mg bid, taken with low fat meal until disease progression

Available forms: Capsule 125 mg

phentermine/topiramate (Rx)

(fen´ter-meen/toe-pyre´a-mate)

Qsymia

Func. class.: Anorexiant/anticonvulsant

Controlled Substance: Schedule IV

USES: Adjunct to a reduced-calorie diet and increased physical activity, in patients with either an initial body mass index (BMI) of ≥30 kg/m^2 or an initial BMI of ≥27 kg/m^2 and at least one weight-related comorbid condition (HTN, dyslipidemia, type 2 diabetes)

CONTRAINDICATIONS

Hypersensitivity to phentermine, other sympathomimetic amines, CV (arrhythmias, HF, CAD, uncontrolled HTN); hyperthyroidism; glaucoma; agitation; use within 14 days of MAOIs; pregnancy; breastfeeding

Black Box Warning: Substance abuse

DOSAGE AND ROUTES

Weight management

Adult: PO Initial: Phentermine 3.75 mg/topiramate 23 mg daily × 14 days; increase to phentermine 7.5 mg/topiramate 46 mg daily × 12 wk then evaluate, if 3% of body weight has not been lost, discontinue use or increase dose to phentermine 11.25 mg/topiramate 69 mg daily × 14 days, then to phentermine 15 mg/topiramate 92 mg daily, evaluate weight loss after 12 wk on phentermine 15 mg/topiramate 92 mg; if 5% of body weight has not been lost at phentermine 15 mg/topiramate 92 mg gradually discontinue therapy 1 dose every other day for ≥ 1 wk

Available forms: Capsule 3.75/23, 7.5/46, 11.25/69, 15 mg/92 mg

⚠ HIGH ALERT

phentermine (Rx)

(fen´ter-meen)

Adipex-P, Lomaira

Func. class.: Anorexiant

Controlled Substance: Schedule IV

USES: Short-term adjunct in a regimen of weight reduction based on exercise, behavioral modification, and caloric restriction in the management of exogenous obesity with an initial body mass index (BMI) ≥30 kg/m^2 or ≥27 kg/m^2 in the presence of other risk factors (diabetes, hyperlipidemia, controlled hypertension)

CONTRAINDICATIONS

Hypersensitivity or idiosyncrasy to phentermine, other sympathomimetic amines, or any component; CV (arrhythmias, HF, CAD, uncontrolled HTN); hyperthyroidism; glaucoma; agitation; drug abuse; use within 14 days of MAOIs; pregnancy; breastfeeding

DOSAGE AND ROUTES

Obesity (short-term adjunct)

Adult: PO Capsule/tablet (excluding Lomaira): 15-37.5 mg/day in 1-2 divided doses; tablet (Lomaira only): 8 mg tid

Available forms: Capsule 15, 18.75, 30, 37.5 mg; tabs 8, 37.5 mg

⚠ HIGH ALERT

phentolamine (Rx)

(fen-tole´a-meen)

OraVerse

Func. class.: Antidote (extravasation), alpha$_1$ blocker

Uses: Diagnosis of pheochromocytoma via phentolamine blocking; prevention/treatment of hypertensive episodes associated with pheochromocytoma; prevention/treatment of dermal necrosis/sloughing after extravasation of norepinephrine; reversal of soft tissue anesthesia

CONTRAINDICATIONS

Hypersensitivity to phentolamine, any component; MI, coronary insufficiency, angina, CAD (excluding OraVerse)

DOSAGE AND ROUTES

Extravasation of norepinephrine, management

Adult: Local infiltration: Inject 5-10 mg (diluted in 10 mL normal saline) into extravasation area

Diagnosis of pheochromocytoma (phentolamine-blocking test)

Adult: IM, IV: 5 mg

Perioperative hypertensive episodes associated with pheochromocytoma, prevention and management

Adult: *Preoperative:* IM, IV: 5 mg 1-2 hr before surgery and repeat if needed; *intraoperative:* IV: 5 mg as needed

Available forms: Powder for injection 5 mg

phenylephrine nasal agent

See Appendix B

phenylephrine ophthalmic

See Appendix B

phenytoin (Rx) (NTI)

(fen′i-toh-in)

Dilantin, Tremytoine

Func. class.: Anticonvulsant; antidysrhythmic (IB)

Chem. class.: Hydantoin

ACTION: Inhibits spread of seizure activity in motor cortex by altering ion transport; increases AV conduction

USES: Generalized tonic-clonic seizures; status epilepticus; nonepileptic seizures associated with Reye's syndrome or after head trauma; complex partial seizures

Unlabeled uses: Digoxin toxicity; seizures, prophylaxis in head trauma, subarachnoid hemorrhage

CONTRAINDICATIONS: Pregnancy, hypersensitivity, bradycardia, SA and AV block, Stokes-Adams syndrome

Precautions: Hypersensitivity to carBAMazepine, barbituates, succinimide, Geriatric patients, renal/hepatic disease, petit mal seizures, hypotension, myocardial insufficiency, Asian patients positive for HLA-B1502, hepatic failure, acute intermittent porphyria, psychiatric condition, abrupt discontinuation, agranulocytosis, alcoholism, bone fractures

Black Box Warning: IV use

DOSAGE AND ROUTES—NTI

Seizures

- **Adult: PO** 15-20 mg/kg (ext rel) in 3-4 divided doses given q2hr or 400 mg, then 300 mg q2hr × 2 doses; maintenance 4-7 mg/kg/day; **IV** 15-20 mg/kg, max 25-50 mg/min, then 100 mg q6-8hr
- **Child: IV/PO** 5 mg/kg/day in 2-3 divided doses, maintenance 4-8 mg/kg/day in 2-3 divided doses, max 300 mg/day

Status epilepticus

- **Adult: IV** 15-20 mg/kg, max 50 mg/min
- **Child: IV** 20 mg/kg/dose

Available forms: Susp 25 mg/5 mL; chewable tabs 50 mg; inj 50 mg/mL; ext rel caps 100, 200, 300 mg; prompt rel caps 100 mg

Administer:

PO route

- Do not interchange chewable product with caps, not equivalent; only ext rel caps to be used for once-a-day dosing

• **Oral suspension:** shake well before each dose given via G tube/NG tube; dilute susp before administration; flush tube with 20 mL water after dose; hold tube feedings 1 hr before and 1 hr after dose
• Allow 7-10 days between dosage changes
• Divided PO doses with or after meals to decrease adverse effects
• Give 2 hr before or after antacid, enteral feeding

Direct IV route

Black Box Warning: Give undiluted at ≤50 mg/min (adult) 1-3 mg/kg/min (child); 0.5-1 mg/kg/min (neonates), monitor for CV reactions and respiratory depression

Intermittent IV INFUSION route

Black Box Warning: Dilute dose in NS to ≤6.7 mg/mL; complete infusion within 1 hr of preparation; use 0.22- or 0.55-micron in-line particulate final filter between IV catheter and tubing; flush IV line or catheter with NS before and after use; give at ≤50 mg/min (adult), 0.5-1 mg/kg/min (child, infant, neonate)

Additive compatibilities: Do not admix

SIDE EFFECTS

CNS: Dizziness, insomnia, paresthesias, depression, suicidal tendencies, aggression, headache, confusion, slurred speech, peripheral neuropathy
CV: Hypotension, ventricular fibrillation, bradycardia, cardiac arrest
EENT: Nystagmus, diplopia, blurred vision
ENDO: Diabetes insipidus
GI: Nausea, vomiting, constipation, anorexia, weight loss, hepatitis, jaundice, gingival hyperplasia, abdominal pain
GU: Nephritis, urine discoloration, sexual dysfunction
HEMA: Agranulocytosis, leukopenia, aplastic anemia, thrombocytopenia, megaloblastic anemia
INTEG: Rash, lupus erythematosus, Stevens-Johnson syndrome, hirsutism, toxic epidermal necrolysis
SYST: Hypocalcemia, purple glove syndrome (IV), DRESS, anaphylaxis, exacerbates myasthenia gravis

PHARMACOKINETICS

Metabolized by liver, excreted by kidneys, protein binding 90%-95%, half-life 7-42 hr, dose dependent
PO: Onset 2-24 hr, peak $1^1/_2$-$2^1/_2$ hr, duration 6-12 hr
PO-ER: Onset 2-24 hr, peak 4-12 hr, duration 12-36 hr
IV: Onset 1-2 hr, duration 12-24 hr

INTERACTIONS

• Do not use with delavirdine; decreased response, resistance
Increase: phenytoin effect—benzodiazepines, cimetidine, tricyclics, salicylates, valproate, cycloSERINE, diazePAM, chloramphenicol, disulfiram, alcohol, amiodarone, sulfonamides, FLUoxetine, gabapentin, H_2 antagonists, azole antifungals, estrogens, succinimides, phenothiazines, methylphenidate, felbamate, traZODone
Decrease: phenytoin effects—alcohol carBAMazepine, rifAMPin, calcium (high dose), folic acid
Drug/Food
Enteral tube feeding: may decrease absorption of oral product; do not use enteral feedings 2 hr before or 2 hr after dose
Drug/Lab Test
Increase: glucose, alk phos, GGT
Decrease: dexamethasone, metyraPONE test serum, PBI, urinary steroids

NURSING CONSIDERATIONS

Assess:
• **Phenytoin hypersensitivity syndrome 3-12 wk after start of treatment:** rash, temperature, lymphadenopathy; may cause hepatotoxicity, renal failure, rhabdomyolysis
• **Serious skin disorders:** for beginning rash that may lead to Stevens-Johnson syndrome or toxic epidermal necrolysis; phenytoin should not be used again; may occur more often among Asian patients with HLA-B 1502
• **Purple glove syndrome** with IV use

- **Phenytoin level:** toxic level 30-50 mcg/mL; therapeutic level 7.5-20 mcg/mL
- **Seizures:** duration, type, intensity, precipitating factors; obtain EEG periodically; monitor therapeutic level
- **Blood studies:** CBC, platelets q2wk until stabilized, then monthly × 12, then q3mo; discontinue product if neutrophils <1600/mm^3; renal function: albumin concentration; folic acid levels, LFTs
- **Mental status:** mood, sensorium, affect, memory (long, short), suicidal thoughts/behaviors
- Monitor EKG, B/P, respiratory function during IV loading dose; verify potency of IV access port before IV infusion
- Monitor EEG function and serum levels periodically
- **Renal function:** monitor for serum albumin, dosage adjustment may be needed
- **Blood dyscrasias:** fever, sore throat, bruising, rash, jaundice
- **Beers:** avoid use in older adults unless safer alternatives are unavailable; ataxia, impaired psychomotor function may occur
- **Pregnancy/breastfeeding:** pregnant women should enroll in the Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; may cause fetal malformations; use other options when possible; breastfeeding is not recommended

Evaluate:

- Therapeutic response: decrease in severity of seizures

Teach patient/family:

- That, if diabetic, blood glucose should be monitored
- That urine may turn pink
- Not to discontinue product abruptly because seizures may occur
- **Oral hygiene:** about the proper brushing of teeth using a soft toothbrush, flossing to prevent gingival hyperplasia; about the need to see dentist frequently
- To avoid hazardous activities until stabilized on product
- To carry emergency ID stating product use
- That heavy use of alcohol may diminish effect of product; to avoid OTC medications
- Not to change brands or forms once stabilized on therapy because brands may vary
- Not to use antacids within 2 hr of product
- To notify prescriber of unusual bleeding, bruising, petechiae (bleeding), clay-colored stools, abdominal pain, dark urine, yellowing of skin or eyes (hepatotoxicity); slurred speech, headache, drowsiness
- To report suicidal thoughts/behaviors immediately
- **Pregnancy/breastfeeding:** to use nonhormonal contraception; to notify prescriber if pregnancy is planned or suspected

phosphate/biphosphate (OTC)

Fleet Enema, Phospho-Soda

Func. class.: Laxative, saline

ACTION: Increases water absorption in the small intestine by osmotic action; laxative effect occurs by increased peristalsis and water retention

USES: Constipation, bowel or rectal preparation for surgery, exam

CONTRAINDICATIONS: Hypersensitivity, rectal fissures, abdominal pain, nausea, vomiting, appendicitis, acute surgical abdomen, ulcerated hemorrhoids, sodium-restricted diet, renal failure, hyperphosphatemia, hypocalcemia, hypokalemia, hypernatremia, Addison's disease, HF, ascites, bowel perforation, megacolon, imperforate anus

Black Box Warning: GI obstruction, renal failure

Precautions: Pregnancy

Black Box Warning: Colitis, geriatric hypovolemia, renal disease

DOSAGE AND ROUTES

- **Adult: PO** 20-30 mL (Phospho-Soda)
- **Child: PO** 5-15 mL (Phospho-Soda)

• **Adult/child >12 yr: RECT** 1 enema (118 mL)
• **Child 2-12 yr: RECT** $^1/_2$ enema (59 mL)
Available forms: Enema 7 g phosphate/19 g biphosphate/118 mL; oral sol 18 g phosphate/48 g biphosphate/100 mL
Administer:
• Alone for better absorption; do not take within 1-2 hr of other products

SIDE EFFECTS

CV: Dysrhythmias, cardiac arrest, hypotension, widening QRS complex
GI: *Nausea, cramps,* diarrhea
META: Electrolyte, fluid imbalances

PHARMACOKINETICS

Onset 30 min-3 hr, excreted in feces

NURSING CONSIDERATIONS

Assess:
• **Stools:** color, amount, consistency; bowel pattern, bowel sounds, flatulence, distention, fever, dietary patterns, exercise; cramping, rectal bleeding, nausea, vomiting; if these occur, product should be discontinued
• Blood, urine electrolytes if product used often
Evaluate:
• Therapeutic response: decrease in constipation
Teach patient/family:
• Not to use laxatives for long-term therapy because bowel tone will be lost
• That normal bowel movements do not always occur daily
• Not to use in presence of abdominal pain, nausea, vomiting
• To notify prescriber if constipation unrelieved or if symptoms of electrolyte imbalance occur: muscle cramps, pain, weakness, dizziness, excessive thirst
• To maintain fluid consumption

physostigmine ophthalmic

See Appendix B

phytonadione (Vitamin K_1) (Rx)

(fye-toe-na-dye′one)
Mephyton, Vitamin K
Func. class.: Vitamin K_1, fat-soluble vitamin

Do not confuse:
Mephyton/methadone

ACTION: Needed for adequate blood clotting (factors II, VII, IX, X)

USES: Vit K malabsorption, hypoprothrombinemia, prevention of hypoprothrombinemia caused by oral anticoagulants, prevention of hemorrhagic disease of the newborn

CONTRAINDICATIONS: Hypersensitivity, severe hepatic disease, last few weeks of pregnancy
Precautions: Pregnancy, neonates, hepatic disease, IV use

Black Box Warning: Risk of anaphylaxis (IV/IM)

DOSAGE AND ROUTES

Hypoprothrombinemia caused by vit K malabsorption
• **Adult: PO/IM** 2.5-25 mg, may repeat or increase to 50 mg
• **Child: PO** 2.5-5 mg
• **Infant: PO/IM** 2 mg
Prevention of hemorrhagic disease of the newborn
• **Neonate: IM** 0.5-1 mg within 1 hr after birth
Hypoprothrombinemia caused by other cause
• **Adult/child: PO/SUBCUT/IM** 2.5-10 mg, may repeat 12-48 hr

Warfarin-induced hypoprothrombinemia:
Adults with INR < 4.5 with no significant bleeding: Lower/omit warfarin dose and monitor INR more frequently; reinitiate therapy at a lower dose when therapeutic INR is reached

INR 4.5-10 with no evidence of bleeding: do not use vitamin K, omit the next 1-2 doses of warfarin, monitor the INR more frequently, reinitiate therapy at a lower dose when therapeutic INR is reached;
serious bleeding at any elevation of INR: 5-10 mg IV by slow infusion in addition to 4-factor prothrombin complex concentrate. Hold warfarin therapy
Adults with INR >10 with no significant bleeding PO 2.5-5 mg with the expectation that the INR would be reduced substantially in 24-48 hr. Hold warfarin, monitor INR more frequently
Infants, children, and adolescents (unlabeled): IV 30 mcg/kg/dose, with excessively prolonged INR (typically more than 8) with no bleeding; **significant bleeding,** immediate reversal using fresh-frozen plasma (FFP), prothrombin complex concentrates, or recombinant factor VIIa
Available forms: Tabs 5 mg; inj 10 mg/mL, 1 mg/0.5 mL
Administer:
• Store in tight, light-resistant container (PO)
IM route
• Use this route only when other routes cannot be used (deaths may occur due to allergic reactions)
Intermittent IV INFUSION route
• After diluting with ≥10 mL D5W, NS, D_5NS; give by slow infusion over 30-60 min, route/mg/min
• VS q15min, check for hypersensitivity
• INR effect in 4-6 hr
• Do not use direct or bolus

Y-site compatibilities: Alfentanil, amikacin, aminophylline, ascorbic acid, atracurium, atropine, azaTHIOprine, aztreonam, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, ceFAZolin, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, clindamycin, cyanocobalamin, cycloSPORINE, dexamethasone, digoxin, diphenhydrAMINE, DOPamine, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epoetin alfa, erythromycin, esmolol, famotidine, fentaNYL, fluconazole, folic acid, furosemide, ganciclovir, gentamicin, glycopyrrolate, heparin, hydrocortisone, imipenem/cilastatin, indomethacin, insulin, isoproterenol, ketorolac, labetalol, lidocaine, mannitol, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, oxytocin, papaverine, penicillin G potassium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, potassium chloride, procainamide, prochlorperazine, propranolol, pyridoxine, raNITIdine, sodium bicarbonate, succinylcholine, SUFentanil, theophylline, thiamine, ticarcillin/clavulanate, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, verapamil, vit B with C

SIDE EFFECTS

CNS: Headache, brain damage (large doses)
GI: Nausea, decreased LFTs
HEMA: Hemolytic anemia, hemoglobinuria, hyperbilirubinemia
INTEG: Rash, urticaria
RESP: Bronchospasm, dyspnea, feeling of chest constriction, respiratory arrest

PHARMACOKINETICS

PO: Onset 6-10 hr; peak 24-48 hr
SUBCUT: Erratic,
crosses placenta, metabolized in the liver, excreted in urine/feces

INTERACTIONS

Decrease: action of phytonadione—bile acid sequestrants, sucralfate, antiinfectives, salicylates, mineral oil
Decrease: action of warfarin—large dose of product

NURSING CONSIDERATIONS

Assess:

- **Increased bleeding risk:** emesis, stools, urine; pressure on all venipuncture sites; avoid all inj if possible
- PT, INR during treatment (2-sec deviation from control time, bleeding time, clotting time, INR); monitor for bleeding, pulse, and B/P
- **Hypersensitivity:** monitor closely
- **Pregnancy/breastfeeding:** usually not needed in pregnancy; may breastfeed

Evaluate:

- Therapeutic response: prevention of hemorrhagic disease of the newborn, resolution of hypoprothrombinemia

Teach patient/family:

- Not to take other supplements, OTC products, prescription products unless directed by prescriber
- About the necessary foods for associated diet
- To avoid IM inj; to use soft toothbrush; not to floss; to use electric razor until coagulation defect corrected
- To report symptoms of bleeding
- About the importance of frequent lab tests to monitor coagulation factors
- To notify all health care providers of use of this product
- To carry emergency ID describing condition and products used

pilocarpine ophthalmic
See Appendix B

pimecrolimus topical
See Appendix B

pimavanserin (Rx)

(pim-a-van′ser-in)

Nuplazid

Func. class.: Atypical antipsychotic

ACTION: The exact mechanism of action is unknown; may be mediated through inverse agonist and antagonist activity at serotonin 5-HT2A receptors and to a lesser extent at 5-HT2C receptors

USES: The treatment of hallucinations and delusions associated with Parkinson's disease psychosis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Alcoholism, bradycardia, breastfeeding, cardiac arrhythmias, cardiac disease, children, coronary artery disease, diabetes mellitus, females, geriatric patients, heart failure, hepatic disease, hypertension, hypocalcemia, hypokalemia, hypomagnesemia, long QT syndrome, malnutrition, myocardial infarction, pregnancy, QT prolongation, renal failure, renal impairment, stroke, thyroid disease

Black Box Warning: Dementia-related psychosis

DOSAGE AND ROUTES

- **Adult: PO** 34 mg daily

Available forms: Capsule 34 mg; tablet 10 mg

Administer:

- Give without regard to food
- Do not split, chew capsules
- Capsules may be opened and sprinkled on soft food

SIDE EFFECTS

CNS: Confusion, hallucinations, fatigue, stroke, dizziness

GI: Nausea, constipation

MISC: Peripheral edema, infection, QT prolongation

PHARMACOKINETICS

Protein binding 95%, hepatic metabolism occurs through CYP3A4 and CYP3A5 and to a lesser extent CYP2J2, CYP2D6 with a major active metabolite; peak 6 hr, plasma half-lives of drug and metabolite are 57 hr

and 200 hr, 0.55% eliminated unchanged in the urine and 1.53% was eliminated in feces after 10 days

INTERACTIONS

Increase: effects of pimavanserin—CYP3A4 inhibitors (ketoconazole, erythromycin), CYP2D6 inhibitors (quiNIDine, FLUoxetine, PARoxetine); reduce dose of pimavanserin
Increase: sedation—other CNS depressants
Increase: QT prolongation—products that cause QT prolongation
Decrease: pimavanserin effects—famotidine, valproate, CYP3A4 inducers (carbamazepine)
Decrease: pimavanserin effect—St. John's wort

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Dementia-related psychosis: at increased risk of death, avoid using

- Swallowing of medication; check for hoarding, giving product to other patients
- AIMS assessment, neurologic function, LFTs, serum electrolytes, creatinine monthly
- Constipation daily; if this occurs, increase bulk, water in diet; stool softeners, laxatives may be needed
- **QT prolongation:** avoid in those with cardiac disease or other risk factors for QT prolongation, torsades de pointes (TdP), and/or sudden death such as cardiac arrhythmias, congenital long QT syndrome, heart failure, bradycardia, myocardial infarction, hypertension, coronary artery disease, hypomagnesemia, hypokalemia, hypocalcemia, or in patients receiving medications known to prolong the QT interval. Females, elderly patients, patients with diabetes mellitus, thyroid disease, malnutrition, alcoholism, or hepatic impairment may also be at increased risk for QT prolongation
- **Stroke:** avoid antipsychotics to treat delirium- or dementia-related behavioral problems unless nonpharmacologic options have failed and the patient is a substantial threat to self or others; avoid use in those with a history of falls or fractures
- **Hyponatremia:** product can cause hyponatremia and SIADH and elderly patients are at increased risk; sodium levels should be closely monitored when starting or changing dosages of antipsychotics in older adults

Evaluate:

- Therapeutic response: decrease in hallucinations, delusions, paranoia; reorganization of patterns of thought and speech

Teach Patient/Family:

- To avoid hazardous activities until response is known, dizziness may occur
- That compliance with dose is needed
- To avoid OTC products unless approved by prescriber

pimecrolimus (Rx)

(pim-e-kroe'li-mus)

Elidel

Func. class.: Topical skin agent, immunosuppressant

USES: Short-term and noncontinuous long-term treatment of mild to moderate atopic dermatitis in nonimmunocompromised, those ≥ 2 yr who have failed to respond to other topical prescription treatments

CONTRAINDICATIONS

Hypersensitivity to pimecrolimus or any component

Black Box Warning: Neonates/Infants/children, new primary malignancy

DOSAGE AND ROUTES

Atopic dermatitis (mild to moderate)

Adult/child 2-17 yr: Topical: Apply thin layer to affected area bid
Available forms: Cream 1%

⚠ HIGH ALERT

pioglitazone (Rx)

(pie-oh-glye'ta-zone)

Actos

Func. class.: Antidiabetic, oral
Chem. class.: Thiazolidinedione

Do not confuse:
Actos/Actonel

ACTION: Specifically targets insulin resistance; an insulin sensitizer; regulates the transcription of a number of insulin-responsive genes

USES: Type 2 diabetes mellitus

CONTRAINDICATIONS: Breast-feeding, children, hypersensitivity to thiazolidinedione, diabetic ketoacidosis, diabetes mellitus, type 1, serious hepatic disease

Black Box Warning: NYHA Class III/IV heart failure

Precautions: Pregnancy, geriatric patients, geriatric patients with CV disease, renal/hepatic/thyroid disease, edema, polycystic ovary syndrome, bladder cancer, osteoporosis, pulmonary disease, secondary malignancy

DOSAGE AND ROUTES

Monotherapy

• **Adult: PO** 15 or 30 mg/day, may increase to 45 mg/day; **with strong CYP2C8,** max 15 mg/day; **with NYHA class I/II heart failure,** max 15 mg/day

Combination therapy

• **Adult: PO** 15 or 30 mg/day with a sulfonylurea, metFORMIN, or insulin; decrease sulfonylurea dose if hypoglycemia occurs; decrease insulin dose by 10%-25% if hypoglycemia occurs or if plasma glucose is <100 mg/dL, max 45 mg/day

Hepatic dose

• Do not use in active hepatic disease or if ALT >2.5 times ULN

Available forms: Tabs 15, 30, 45 mg
Administer:

• Once a day; without regard to meals
• Tabs crushed and mixed with food or fluids for patients with difficulty swallowing

SIDE EFFECTS

CNS: *Headache*
CV: MI, heart failure, death (geriatric patients)
ENDO: Hypo/hyperglycemia
MISC: *Sinusitis, upper respiratory tract infection, pharyngitis,* hepatotoxicity, edema, weight gain, anemia, macular edema; risk of bladder cancer (use >1 yr), peripheral/pulmonary edema
MS: Rhabdomyolysis, fractures (females), myalgia

PHARMACOKINETICS

Maximal reduction in FBS after 12 wk; half-life 3-7 hr, terminal 16-24 hr; protein binding >99%

INTERACTIONS

Decrease: effect of atorvastatin
Decrease: effect of oral contraceptives; use alternative contraceptive method
Decrease: pioglitazone effect—CYP2C8 inducers (ketoconazole, fluconazole, itraconazole, miconazole, voriconazole)

Drug/Herb

Increase: hypoglycemia—garlic, green tea, horse chestnut

Drug/Lab Test

Increase: CPK, LFTs, HDL, cholesterol
Decrease: glucose, Hct/HB

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Heart failure: do not use in NYHA Class III/IV; excessive/rapid weight gain >5 lb, dyspnea, edema; may need to be reduced or discontinued; monitor daily weights

• **Bladder cancer:** avoid use in a history of bladder cancer; use of pioglitazone >1 yr has shown an increase in bladder cancer
• **Hypoglycemic reactions:** sweating, weakness, dizziness, anxiety, tremors, hunger; hyperglycemic reactions soon after meals (rare); may occur more often with insulin or other antidiabetics
• **Hepatic disease:** check LFTs periodically: AST, LDH; do not start treatment in active heart disease or if ALT >2.5× upper limit of normal; if treatment has already begun, follow closely with continuing ALT levels; if ALT increases to >3× upper limit of normal, recheck ALT as soon as possible; if ALT remains >3× upper limit of normal, discontinue
• FBS, glycosylated HbA1c, plasma lipids/lipoproteins, B/P, body weight during treatment
• **Fracture:** Assess fall risk, fracture risk, diet, activity level
• CBC with differential before and during therapy; more necessary in those with anemia; Hct/HB (may be decreased in first few months of treatment)
• **Beers:** avoid use in older adults; may promote fluid retention and/or exacerbate heart failure
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; usually insulin is used in pregnancy; do not breastfeed, excretion unknown

Evaluate:
• Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait; blood glucose A1c improvement

Teach patient/family:
• To self-monitor using a blood glucose meter
• About the symptoms of hypo/hyperglycemia; what to do about each
• That product must be continued on daily basis; about the consequences of discontinuing product abruptly
• To avoid OTC medications or herbal preparations unless approved by prescriber
• That diabetes is a lifelong illness; that product is not a cure, it only controls symptoms
• **To report symptoms of hepatic dysfunction:** nausea, vomiting, abdominal pain, fatigue, anorexia, dark urine, jaundice
• To report weight gain, edema, chest pain, palpitations, dyspnea
• That lab work, eye exams will be needed periodically
• To notify prescriber if oral contraceptives are used, effect may be decreased; not to use product if breastfeeding

pioglitazone/metformin (Rx)

(pye-oh-gli′ta-zone/met-for′min)

Actoplus Met

Func. class.: Antidiabetic

USES: As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus when treatment with both pioglitazone and metformin is needed

CONTRAINDICATIONS: Hypersensitivity to pioglitazone, metformin, or any component; established NYHA class III or IV HF, severe renal disease (eGFR <30 mL/min/1.73 m^2); metabolic acidosis, diabetic ketoacidosis

P

DOSAGE AND ROUTES

Diabetes mellitus, type 2.
• **Adult: PO** *Initial:* Pioglitazone 15 mg/metformin 500 mg bid or pioglitazone 15 mg/metformin 850 mg daily

Available forms: Tabs 15/500, 15/850 mg

piperacillin/tazobactam (Rx)

(pip′er-ah-sill′in/ta-zoe-bak′tam)

, Zosyn

Func. class.: Antiinfective, broad spectrum

Chem. class.: Extended-spectrum penicillin, β-lactamase inhibitor

ACTION: Interferes with cell-wall replication of susceptible organisms; tazobactam is a β-lactamase inhibitor

that protects piperacillin from enzymatic degradation

USES:

Moderate to severe infections caused by piperacillin-resistant, piperacillin-tazobactam–susceptible, beta-lactamase–producing strains of the following: *Acinetobacter baumannii*, *Bacteroides fragilis*, *Bacteroides ovatus*, *Bacteroides thetaiotaomicron*, *Bacteroides vulgatus*, *Citrobacter koseri*, *Clostridium perfringens*, *Enterococcus faecalis*, *Escherichia coli*, *Haemophilus influenzae (beta-lactamase negative)*, *Haemophilus influenzae (beta-lactamase positive)*, *Klebsiella pneumoniae*, *Moraxella catarrhalis*, *Morganella morganii*, *Neisseria gonorrhoeae*, *Parabacteroides distasonis*, *Prevotella melaninogenica*, *Proteus mirabilis*, *Proteus vulgaris*, *Providencia rettgeri*, *Providencia stuartii*, *Pseudomonas aeruginosa*, *Salmonella enteritidis*, *Serratia marcescens*, *Staphylococcus aureus (MSSA)*, *Staphylococcus epidermidis*, *Streptococcus agalactiae (group B streptococci)*, *Streptococcus pneumoniae*, *Streptococcus pyogenes (group A beta-hemolytic streptococci)*, and *Viridans streptococci*

This drug may also be effective against the following: *Bacillus anthracis*, *Enterobacter* sp., *Fusobacterium nucleatum*, *Klebsiella oxytoca*, and *Neisseria meningitidis*

Unlabeled uses: Endocarditis, bacteremia, cystic fibrosis, febrile neutropenia, peritoneal dialysis–related peritonitis, pleural empyema, pyelonephritis, sepsis, UTI

CONTRAINDICATIONS:

Hypersensitivity to penicillins; neonates; carbapenem allergy

Precautions: Pregnancy, breastfeeding, renal insufficiency in neonates, hypersensitivity to cephalosporins, seizures, GI disease, electrolyte imbalances, biliary obstruction

DOSAGE AND ROUTES

Nosocomial pneumonia

- **Adult: IV** 4.5 g q6hr or 3.375 g q4hr with an aminoglycoside or antipseudomonal fluoroquinolone × 1-2 wk

Most infections

- **Adult: IV** 3.375 g (3 g pipercillin/0.375 g tazobactam) q6hr × 7-10 days

Renal dose

- **Adult: IV** CCr 20-40 mL/min, give 3.375 g q6hr (nosocomial pneumonia); give 2.25 g q6hr (all other indications); CCr <20 mL/min, give 2.25 g q6hr (nosocomial pneumonia); give 2.25 g q8hr (all other indications)

Available forms: Powder for inj 2 g piperacillin/0.25 g tazobactam, 3 g piperacillin/0.375 g tazobactam, 4 g piperacillin/0.5 g tazobactam, 36 g piperacillin/4.5 g tazobactam

Administer:

- Separate aminoglycoside from piperacillin to avoid inactivation
- Product after C&S is complete

Intermittent IV INFUSION route

- **Reconstitute** each 1 g of product/5 mL 0.9% NaCl for inj or sterile water for inj, dextrose 5%; shake well; **further dilute** in ≥50 mL compatible IV sol, run as int infusion over ≥30 min
- Store: Diluted solution may be stored for ≤24 hr at room temperature

Y-site compatibilities: Alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amphotericin B lipid complex, amphotericin B liposome, anidulafungin, argatroban, atenolol, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium acetate/chloride/gluconate, CARBOplatin, carmustine, cefepime, chloramphenicol, cimetidine, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexrazoxane, diazePAM, digoxin, diphenhydrAMINE, DOCEtaxel, DOPamine, doxacurium, enalaprilat, ePHEDrine, EPINEPHrine, eptifibatide, erythromycin, esmolol, etoposide, fenoldopam, fentaNYL, floxuridine, fluconazole,

fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, gallium, granisetron, heparin, hydrocortisone, HYDROmorphone, ifosfamide, isoproterenol, ketorolac, lansoprazole, lepirudin, leucovorin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, mesna, metaraminol, methotrexate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, milrinone, morphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, plicamycin, potassium chloride/phosphates, procainamide, raNITIdine, remifentanil, riTUXimab, sargramostim, sodium acetate/bicarbonate/phosphate, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, telavancin, teniposide, theophylline, thiotepa, tigecycline, tirofiban, trimethobenzamide, vasopressin, vinBLAStine, vinCRIStine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Lethargy, hallucinations, anxiety, depression, twitching, insomnia, headache, fever, dizziness, seizures, vertigo

CV: Cardiac toxicity, edema

GI: *Nausea, vomiting, diarrhea;* increased AST, ALT; abdominal pain, glossitis, CDAD, constipation, pancreatitis

GU: Oliguria, proteinuria, hematuria, *vaginitis, moniliasis,* glomerulonephritis, renal failure

HEMA: Anemia, increased bleeding time, bone marrow depression, agranulocytosis, hemolytic anemia

INTEG: Rash, pruritus, exfoliative dermatitis

META: Hypokalemia, hypernatremia

SYST: Serum sickness, anaphylaxis, Stevens-Johnson syndrome

PHARMACOKINETICS

Half-life 0.7-1.2 hr; excreted in urine, bile, breast milk; crosses placenta; 33% bound to plasma proteins

IV: Peak completion of IV

INTERACTIONS

Increase: effect of neuromuscular blockers, oral anticoagulants, methotrexate

Increase: piperacillin concentrations—aspirin, probenecid

Decrease: antimicrobial effect of piperacillin—tetracyclines, aminoglycosides IV

Drug/Lab Test

Increase: eosinophilia, neutropenia, leukopenia, serum creatinine, PTT, AST, ALT, alk phos, bilirubin, BUN, electrolytes

Decrease: Hct, HB, electrolytes

False positive: urine glucose, urine protein, Coombs' test

NURSING CONSIDERATIONS

Assess:

- **Infection:** temperature, stools, urine, sputum, wounds
- **GU status:** I&O ratio; report hematuria, oliguria because penicillin in high doses is nephrotoxic; maintain hydration unless contraindicated
- **Hepatic studies:** AST, ALT before treatment and periodically thereafter
- **Blood studies:** WBC, RBC, Hct, HB, bleeding time before treatment and periodically thereafter; serum potassium
- Renal studies: urinalysis, protein, blood, BUN, creatinine before treatment and periodically thereafter
- C&S before product therapy; product may be given as soon as culture is taken
- **CDAD:** diarrhea, bloody stools, fever, abdominal cramps; may occur ≤2 mo after treatment; bowel pattern before and during treatment
- **Skin** eruptions after administration of penicillin to 1 wk after discontinuing product
- **Respiratory status:** rate, character, wheezing, tightness in chest
- **Anaphylaxis:** wheezing, laryngeal edema, rash, itching; discontinue product, have emergency equipment nearby

P

• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding

Evaluate:

• Therapeutic response: absence of fever, purulent drainage, redness, inflammation; culture shows decreased organisms

Teach patient/family:

• That culture may be taken after completed course of medication

• To report sore throat, fever, fatigue (superinfection); CNS effects (anxiety, depression, hallucinations, seizures); pseudomembranous colitis (fever, diarrhea with blood, pus, mucus)

• To wear or carry emergency ID if allergic to penicillins

• CDAD: to notify nurse of diarrhea with blood, pus

TREATMENT OF OVERDOSE:

Withdraw product, maintain airway, administer EPINEPHrine, aminophylline, O_2, IV corticosteroids for anaphylaxis

pirfenidone (Rx)

(pir-fen′i-done)

Esbriet

Func. class.: Respiratory agent

USES:

Pulmonary fibrosis

CONTRAINDICATIONS:

Hypersensitivity

DOSAGE AND ROUTES

• **Adult: PO** 267 mg tid on days 1-7, 534 mg tid on days 8-14, and 801 mg tid from day 15 onward

Available forms: Capsule 267 mg; tabs 267, 801 mg

pitavastatin (Rx)

(pit′a-va-stat′-in)

Livalo, Zypitamag

Func. class.: Antilipidemic

Chem. class.: HMG-CoA reductase inhibitor

Do not confuse:

pitavastatin/pravastatin

ACTION:

Inhibits HMG-CoA reductase enzyme, which reduces cholesterol synthesis; high doses lead to plaque regression

USES:

As an adjunct for primary hypercholesterolemia (types Ia, Ib), dysbetalipoproteinemia, elevated triglyceride levels, prevention of CV disease by reduction of heart risk in those with mildly elevated cholesterol

Unlabeled uses: Atherosclerosis

CONTRAINDICATIONS:

Pregnancy, breastfeeding, hypersensitivity, active hepatic disease, cholestasis

Precautions: Past hepatic disease, alcoholism, severe acute infections, trauma, severe metabolic disorders, electrolyte imbalance, seizures, surgery, organ transplant, endocrine disease, females, hypotension, renal disease

DOSAGE AND ROUTES

• **Adult: PO** 2 mg/day, usual range 1-4, max 4 mg/day

Renal dose

• **Adult: PO** CCr 30-<60 mL/min, 1 mg daily, max 2 mg daily; CCr <30 mL/min on hemodialysis, 1 mg daily, max 2 mg daily; CCr <30 mL/min, not recommended

Atherosclerosis (unlabeled)

• **Adult: PO** 4 mg/day

Available forms: Calcium tablets 1, 2, 4 mg magnesium tablet 1, 2, 4 mg

Administer:

• Total daily dose any time of day without regard to meals

• Store in cool environment in tight container protected from light

SIDE EFFECTS

CNS: Headache

GI: Constipation, diarrhea

INTEG: Rash, pruritus, alopecia

MS: Arthralgia, myalgia, rhabdomyolysis

RESP: Pharyngitis

PHARMACOKINETICS

Peak 1 hr; metabolized in liver, excreted in urine, feces; half-life 12 hr; protein binding 99%; concentrations lower in healthy African Americans

INTERACTIONS

Increase: risk for possible rhabdomyolysis—azole antifungals, cycloSPORINE, erythromycin, niacin, gemfibrozil, clofibrate

Increase: levels of pitavastatin—erythromycin

Drug/Herb

Increase: pitavastatin—red yeast rice

Drug/Lab Test

Increase: bilirubin, alk phos, ALT, AST

Interference: thyroid function tests

NURSING CONSIDERATIONS

Assess:

- **Diet:** obtain diet history including fat, cholesterol in diet
- Cholesterol, triglyceride levels periodically during treatment; check lipid panel 6 wk after changing dose
- Hepatic studies baseline and when clinically indicated; if AST >3× normal, reduce or discontinue; AST, ALT, LFTs may be increased
- Renal studies in patients with compromised renal system: BUN, I&O ratio, creatinine
- **Rhabdomyolysis:** muscle pain, tenderness; obtain CPK if clinically indicated; if markedly increased, product may need to be discontinued
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decrease in cholesterol to desired level after 6 wk

Teach patient/family:

- That blood work will be necessary during treatment
- To report blurred vision, severe GI symptoms, headache, muscle pain, weakness, tenderness
- That previously prescribed regimen will continue: low-cholesterol diet, exercise program, smoking cessation
- That product may increase blood glucose level
- Not to take product if pregnant or if pregnancy is planned or suspected (notify prescriber); to avoid breastfeeding

pitolisant (Rx)

(pi-tol'i-sant)

Wakix

Func. class.: Narcolepsy agent

Chem. class.: Histamine receptor modulator

ACTION: Selective antagonist/inverse agonist of the histamine-3 (H3) receptor; activation of histaminergic neurons increases histamine release, which promotes wakefulness, attention, and memory; regulates the release of other neurotransmitters involved in wake promotion, including dopamine, noradrenaline, and acetylcholine

USES: Excessive daytime sleepiness in adults with narcolepsy

CONTRAINDICATIONS

Hypersensitivity, severe hepatic disease

PRECAUTIONS

Alcoholism, bradycardia, CAD, cardiac disease, children, breastfeeding, contraception requirement, diabetes mellitus, females, geriatrics, heart failure, hepatic disease, hypertension, hypocalcemia, hypokalemia, hypomagnesemia, long QT syndrome, MI, malnutrition, poor metabolizers, pregnancy, QT prolongation, renal disease, thyroid disease

DOSAGE AND ROUTES

- **Adults PO** Initially, 8.9 mg daily in the morning on awakening for 1 wk; then increase to 17.8 mg daily for 1 wk; after that, the dose may be adjusted based on efficacy response and tolerability; max: 35.6 mg/day; limit to 17.8 mg/day in CYP2D6 poor metabolizers; up to 8 wks may be necessary

Available forms: Tablets 4.45, 17.8 mg

Administer:
• Give each dose in the morning on patient wakening

SIDE EFFECTS
CNS: *Headache, insomnia, anxiety,* hallucinations, irritability, cataplexy
GI: *Nausea,* abdominal pain, anorexia, dry mouth
INTEG: Rash
RESP: URI
MS: MS pain
CV: Increased heart rate

PHARMACOKINETICS
Protein binding is 91%-96%, metabolized by CYP2D6 and to a lesser extent by CYP3A4; inactive metabolites are further metabolized or conjugated with glycine or glucuronic acid, excreted 90% urine (<2% unchanged), 2.3% feces; half-life 7.5-24.2 hours, absorption 90%; peak 2-5 hr; increased in hepatic/renal disease

INTERACTIONS
Increased: cardiac dysrhythmia risk—drugs that prolong the QT interval (class Ia, III antidysrhythmics); avoid using together
Increased: pitolisant effect—CYP2D6 inhibitors (buPROPion, PARoxetine, FLUoxetine); reduce dose by half
Decreased: pitoisant effect—CYP3A4 inducers (carBAMazepine, phenytoin, rifAMPin); increase dose to double
Decreased: pitolisant effect—histamine-1 receptor antagonists (diphenhydrAMINE, imipramine, clomiPRAMINE); avoid using together
Decreased: CYP3A4 substrates (midazolam, hormonal contraceptives, cycloSPORINE)—use alterative contraception

NURSING CONSIDERATIONS
Assess:
• **Narcolepsy:** assess for trouble staying awake baseline and after 1 wk, 2 wk
• **Hepatic/renal disease:** monitor LFTs, serum bilirubin, BUN, creatinine baseline and periodically
Evaluate:
• **Therapeutic response:** ability to stay awake
Teach patient/family:
• If a dose is missed, skip the missed dose and administer the next dose the following day in the morning on wakening
• Report to healthcare provider if inability to stay awake continues
• **Pregnancy/breastfeeding:** identify if pregnancy is planned to suspected; if using hormonal contraceptives, an alternative method should be used during and for 21 days after last dose; do not use in pregnancy; encourage to enroll in the WAKIX pregnancy registry if patient becomes pregnant; to enroll or obtain information from the registry, call 1-800-833-7460; present in breast milk

plasma protein fraction (Rx)
Plasmanate
Func. class.: Plasma volume expander

USES: Shock

CONTRAINDICATIONS
Cardiopulmonary bypass procedures, severe anemia, CHF, increased blood volume

DOSAGE AND ROUTES
Adult: IV: Usual minimum effective dosage: 250-500 mL (12.5-25 g of protein); varies widely based on condition
Available forms: Injection 5% (50 mg/mL) in 50-, 250-mL vials

plazomicin (Rx)
(pla-zoe-mye´sin)
Zemdri
Func. class.: Antiinfective—aminoglycoside

ACTION: Bactericidal; inhibits bacterial protein synthesis through irreversible binding to the 30S ribosomal subunit of susceptible bacteria

USES: Complicated urinary tract infection (UTI), including pyelonephritis

CONTRAINDICATIONS:

Aminoglycoside hypersensitivity, pregnancy
Precautions: Breastfeeding, colitis, diarrhea, geriatrics, GI disease, hearing impairment, myasthenia gravis, pseudomembranous colitis, renal disease

Black Box Warning: Nephrotoxicity, neuromuscular blockade, ototoxicity, pregnancy

DOSAGE AND ROUTES

• **Adult: IV** 15 mg/kg q24hr for 4-7 days
Available forms: Solution for injection 500 mg/10 mL

SIDE EFFECTS

CNS: Headache
CV: Hypo/hypertension
GI: Nausea, vomiting, diarrhea
GU: Decreased renal function, nephrotoxicity
MISC: Ototoxicity

PHARMACOKINETICS

Plasma protein binding 20%, not metabolized, excreted by kidneys

INTERACTIONS

Black Box Warning: Increase: nephrotoxicity—cephalosporins, acyclovir, vancomycin, amphotericin B, cyclosporine, loop diuretics, cidofovir

Black Box Warning: Increase: ototoxicity—IV loop diuretics

Black Box Warning: Increase: neuromuscular blockade, respiratory depression—anesthetics, nondepolarizing neuromuscular blockers

NURSING CONSIDERATIONS

Assess:

• Weight before treatment; calculation of dosage is usually based on ideal body weight but may be calculated on actual body weight
• Vital signs during infusion; watch for hypotension, change in pulse
• IV site for thrombophlebitis (pain, swelling, redness); change site if needed; apply warm compress to discontinued site

Black Box Warning: Nephrotoxicity is greater in those with impaired renal function, the elderly, and in those receiving other nephrotoxic medications; monitor creatinine clearance in all patients before starting therapy and daily; therapeutic drug monitoring (TDM) is recommended for complicated urinary tract infection patients with CCr <90 mL/min to avoid potentially toxic levels; I&O ratio, urinalysis daily for casts, protein; report sudden drop in urinary output

Black Box Warning: Ototoxicity: hearing loss, tinnitus, and/or vertigo; assess hearing baseline and throughout treatment; may be irreversible and may not become evident until after completion of therapy; usually in patients with a family history of hearing loss, with renal impairment, or in those receiving higher doses and/or longer durations of therapy than recommended

Black Box Warning: Neuromuscular blockade in those with neuromuscular disorders (myasthenia gravis) or in those receiving neuromuscular blocking agents; respiratory paralysis may occur

• **Pregnancy/breastfeeding:** can cause fetal harm when administered to a pregnant woman; do not use in pregnancy; considered compatible with breastfeeding
• For dehydration; provide adequate hydration of 1500-2000 mL/day

Teach patient/family:

Black Box Warning: Ototoxicity: to report hearing loss, ringing, roaring in ears; feeling of fullness in the head

• To report headache, dizziness, symptoms of overgrowth of infection, renal impairment, symptoms of nephrotoxicity

P

• To report redness, swelling at infusion site
• To drink plenty of fluids each day
• **Pregnancy/breastfeeding:** to notify health care provider if pregnancy is planned or suspected, or if breastfeeding

plecanatide (Rx)

(ple-kan′-a-tide)

Trulance

Func. class.: Laxative

Chem. class.: Guanylate cyclase-C agonist

ACTION: Binds to GC-C and acts locally on the luminal surface of the intestinal epithelium. Activation of GC-C results in an increase in both intracellular and extracellular concentrations of cyclic guanosine monophosphate (cGMP); this action results in increased intestinal fluid and accelerated gastrointestinal (GI) transit

USES: Chronic idiopathic constipation, IBS-C

CONTRAINDICATIONS: Hypersensitivity, GI obstruction

Black Box Warning: Child <6 yr

Precautions: Pregnancy, breastfeeding

DOSAGE AND ROUTES

• **Adult: PO** 3 mg daily

Available forms: Tabs 3 mg

Administer:

• Give without regard to food
• Swallow whole; tablets may be crushed and given with applesauce or in water, may be given orally or via NG tube

SIDE EFFECTS

CNS: Dizziness

GI: Diarrhea, flatulence, abdominal distention, abdominal tenderness, nausea

GU: UTI

RESP: Sinusitis, upper respiratory tract infection

PHARMACOKINETICS

Unknown

INTERACTIONS

Drug/Lab Test

Increase: AST/ALT

NURSING CONSIDERATIONS

Assess:

Bowel pattern: frequency, consistency, baseline and periodically; provide adequate hydration if diarrhea occurs

Evaluate:

• Therapeutic response: complete bowel movements

Teach patient/family:

• **Pregnancy/breastfeeding:** to notify health care professional if pregnancy is planned or suspected or if breastfeeding
• To notify all health care professionals of all OTC, Rx, herbals or supplements taken
• To take as directed, not to double or skip doses; that if dose is missed, to take next regularly scheduled dose when due

plerixafor (Rx)

(pler-ix′a-fore)

Mozobil

Func. class.: Biologic modifier

USES: Mobilization of hematopoietic stem cells for collection and transplantation (in combination with filgrastim) in non-Hodgkin lymphoma and multiple myeloma

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Hematopoietic stem cell mobilization (in non-Hodgkin lymphoma and multiple myeloma)

Adult: SUBCUT Give 11 hr before apheresis: ≤83 kg: 20-mg fixed dose or 0.24 mg/kg daily for up to 4 consecutive days; >83 kg: 0.24 mg/kg daily for up to 4 consecutive days; max 40 mg/day

Available forms: Injection 24 mg/1.2 mL single-use vial

pomalidomide (Rx)

(pom–a-lid′oh-mide)

Pomalyst

Func. class.: Antineoplastic, biologic response modifier, hormone

Chem. class.: TNF modifier

USES: Multiple myeloma in those who have received ≥2 treatments including lenalidomide and bortezomib and disease has progressed within 60 days of completion of the treatment or in BRAF V600 mutation-positive patients who have disease progression following ipilimumab and a BRAF inhibitor

CONTRAINDICATIONS: Breast-feeding, hypersensitivity

Black Box Warning: Pregnancy, thrombocytopenia

DOSAGE AND ROUTES

• **Adult: PO** 4 mg on days 1-21, repeat in 28-day cycles

Hepatic/renal dose

• **Adult: PO** bilirubin >2 mg/dL and AST/ALT >3 × ULN or CCr >3 mg/dL, do not use

Available forms: Capsule 1, 2, 3, 4 mg

polatuzumab vedotin-piiq (Rx)

(pol′a-tooz′ue-mab ve-doe′tin)

Polivy

Func. class.: Antineoplastic, antibody drug conjugate

USES: Treatment of relapsed/refractory diffuse large B-cell lymphoma (in combination with bendamustine and rituximab), after at least 2 prior therapies

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Diffuse large B-cell lymphoma, relapsed or refractory.

• **Adult:** IV: 1.8 mg/kg q21 days × 6 cycles (in combination with bendamustine and rituximab)

Available forms: Injection 30, 140 mg single-use vials

polyethylene glycol (PEG) (Rx)

(pol-i-eth′i-leen gly′kol 3350)

GaviLAX, Gialax, GlycoLax, HealthyLax, MiraLax

Func. class.: Laxative

USES: Constipation

CONTRAINDICATIONS

Hypersensitivity, known or suspected bowel obstruction

DOSAGE AND ROUTES

Constipation

Adult: PO 17 g (1 heaping tablespoon) dissolved in 120-240 mL (4-8 oz) of beverage, daily; do not use for >1-2 wk

Available forms: Powder for solution

posaconazole (Rx)

(poe′sa-kon′a-zole)

Noxafil, Posanol

Func. class.: Antifungal—systemic

Chem. class.: Triazole derivative

ACTION: Inhibits a portion of cell-wall synthesis; alters cell membranes and inhibits several fungal enzymes

USES: Prevention of aspergillus, candida infection, oropharyngeal candidiasis in immunocompromised patients, chemotherapy-induced neutropenia, mucocutaneous candidiasis

Unlabeled uses: Aspergillosis, cellulitis, coccidioidomycosis, endocarditis, endophthalmitis, esophageal candidiasis, febrile neutropenia, fungal keratitis, fusariosis, histoplasmosis, infectious arthritis, myocarditis, osteomyelitis, pericarditis, sinusitis, tracheobronchitis

CONTRAINDICATIONS:

Hypersensitivity to this product or other systemic antifungals or azoles; fungal meningitis, onychomycosis or dermatomycosis in cardiac dysfunction; use with ergots, sirolimus, CYP3A4 substrates

Precautions: Pregnancy, breastfeeding, children, cardiac/hepatic/renal disease

DOSAGE AND ROUTES

Tablets and oral suspension are not interchangeable for dosing

Invasive aspergillosis

Adult/adolescent: PO DELAYED RELEASE /IV 300 mg twice daily for 1 day, then 300 mg once daily × at least 6 to 12 wk

Oropharyngeal candidiasis

Adult: PO (oral suspension) 100 mg bid × 1 day, then 100 mg/day × 13 days

Available forms: Oral susp 200 mg/5 mL; del rel tab 100 mg; sol for inj 300 mg/16.7 mL

Administer:

Delayed-release tab: do not divide, chew, crush; give with food

IV route

Intermittent IV INFUSION route

- **Dilution:** bring to room temperature; transfer 16.7 mL of posaconazole to IV solution that is sufficient for final concentration of 1-2 mg/mL; use immediately
- Store divided solution up to 24 hr refrigerated
- Use 0.22-micron PES or PVDF filter; **give** slowly over 90 min through central line; if central line is unavailable, may give a single dose through a peripheral line over 30 min; do not give multiple doses by this method

PO route

Oral susp: shake well; use calibrated measuring device; take only with full meal or liquid nutritional supplements such as Ensure; rinse measuring device after each use

- Store in tight container in refrigerator; do not freeze

SIDE EFFECTS

CNS: *Headache, dizziness,* insomnia, fever, rigors, weakness, anxiety

CV: Hypo/hypertension, tachycardia, anemia, QT prolongation, torsades de pointes

GI: *Nausea, vomiting, anorexia, diarrhea,* cramps, abdominal pain, flatulence, GI bleeding, hepatotoxicity

GU: Gynecomastia, impotence, decreased libido

INTEG: *Pruritus,* fever, *rash,* toxic epidermal necrolysis

MISC: *Edema, fatigue,* malaise, hypokalemia, tinnitus, rhabdomyolysis, hypokalemia

PHARMACOKINETICS

Well absorbed, enhanced by food, protein binding 98%-99%, peak 3-5 hr, half-life 35 hr, metabolized in liver, excreted in feces (77% unchanged)

INTERACTIONS

- Do not use with lovastatin, atorvastatin
- **Increase:** QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: tinnitus, hearing loss—quiNIDine

Increase: hepatotoxicity—other hepatotoxic products

Increase: severe hypoglycemia—oral hypoglycemics

Increase: sedation—triazolam, oral midazolam

Increase: levels, toxicity—busPIRone, busulfan, calcium-channel blockers, clarithromycin, cycloSPORINE, diazePAM, digoxin, felodipine, HMG-CoA reductase inhibitors, indinavir, isradipine, midazolam, niCARdipine, NIFEdipine, niMODipine, phenytoin, quiNIDine, ritonavir, saquinavir, sirolimus, tacrolimus, vinca alkaloids, warfarin

Decrease: posaconazole level—cimetidine, phenytoin
Decrease: posaconazole action—antacids, H_2-receptor antagonists, rifamycin, didanosine
Drug/Food
• Food increases absorption

NURSING CONSIDERATIONS

Assess:
• **Infection:** type of, may begin treatment before obtaining results; temperature, WBC, sputum at baseline and periodically, breakthrough infections may occur when used with fosamprenavir
• **Fluid balance:** I&O ratio, electrolytes; correct electrolyte imbalances before starting treatment
• For allergic reaction: rash, photosensitivity, urticaria, dermatitis
• **Rhabdomyolysis:** muscle pain, increased CPK; weakness, swelling of affected muscles; if these occur and if confirmed by CPK, product should be discontinued
• **Hepatotoxicity:** nausea, vomiting, jaundice, clay-colored stools, fatigue; hepatic studies (ALT, AST, bilirubin) if patient receiving long-term therapy
• **QT prolongation:** ECG for QT prolongation, ejection fraction; assess for chest pain, palpitations, dyspnea
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause malformations; use in breastfeeding is not recommended

Evaluate:
• Therapeutic response: decreased symptoms of fungal infection, negative C&S for infecting organism

Teach patient/family:
• That long-term therapy may be needed to clear infection (1 wk-6 mo, depending on infection)
• To avoid hazardous activities if dizziness occurs
• To take 2 hr before administration of other products that increase gastric pH (antacids, H_2 blockers, omeprazole, sucralfate, anticholinergics); to notify health care provider of all medications taken (many interactions)
• About the importance of compliance with product regimen; to use alternative method of contraception
• To notify prescriber of GI symptoms, signs of hepatic dysfunction (fatigue, nausea, anorexia, vomiting, dark urine, pale stools)
• To take during or within 20 min of eating

potassium acetate (Rx)
potassium bicarbonate (Rx, OTC)
Klor-Con EF, K Effervescent, K-vescent
potassium bicarbonate and potassium chloride (Rx, OTC)
Neo-K, K-Lyte
potassium bicarbonate and potassium citrate (Rx, OTC)

⚠ HIGH ALERT

potassium chloride (Rx)
Klor-Con, K-Tab
Func. class.: Electrolyte, mineral replacement
Chem. class.: Potassium

P

ACTION: Needed for the adequate transmission of nerve impulses and cardiac contraction, renal function, intracellular ion maintenance

USES: Prevention and treatment of hypokalemia

CONTRAINDICATIONS: Renal disease (severe), severe hemolytic disease, Addison's disease, hyperkalemia, acute dehydration, extensive tissue breakdown
Precautions: Pregnancy, cardiac disease, potassium-sparing diuretic therapy, systemic acidosis

DOSAGE AND ROUTES

Hypokalemia (prevention) (bicarbonate, chloride)

• **Adult: PO** 20 mEq/day in 1-2 divided doses

• **Child: PO** 1-2 mEq/kg/day in 1-2 divided doses

Hypokalemia (treatment)

• **Adult: PO** initial 40 mmol/day, titrate to 60 mmol/day, max: 100 mmol/day

Hypokalemia, digoxin toxicity (acetate, chloride)

• **Adult:** serum potassium concentration >2.5 mEq/L: **IV** max 10 mEq/1 hr with 24-hr max dose 200 mEq, initial dose of 20-40 mEq has been recommended; **PO** 40-100 mEq/day in 2-4 divided doses

• **Child: IV** 0.25-0.5 mEq/kg/dose at 0.25-0.5 mEq/kg/hr; **PO** 2-5 mEq/day in divided doses

Available forms:

acetate: Solution for injection 4 mEq/mL; **chloride:** oral capsule, extended release 8 mEq, 10 mEq, oral solution 10%, 20%, 40%, extended-release tablet 10 mEq, 20 mEq; **citrate**: tablet, extended release 5, 10, 15 mE

Administer:

PO route

• Do not break, crush, or chew ext rel tabs, caps, or enteric products

• With or after meals; dissolve effervescent tabs, powder in 8 oz cold water or juice; do not give IM, SUBCUT

• Caps with full glass of liquid

IV route

• Through large-bore needle to decrease vein inflammation; check for extravasation; in large vein, avoid scalp vein in child (IV); never give IV bolus

Potassium acetate

Y-site compatibilities: Ciprofloxacin

Potassium chloride

• Must be diluted; concentrated potassium injections fatal

Continuous IV INFUSION route

• Concentration max 100 mcg/L for peripheral line; 200 mEq/L for central line

• Dehydrated patients should receive 1 L of potassium-free hydrating solution, then infuse 10 mEq/hr; in severe hypokalemia, rate may be 40 mEq/hr with infusion pump and ECG monitoring, draw potassium levels frequently

• Do not ever use IV push or bolus, cardiac arrest may occur

• Monitor I&O, urine should be >0.5 mL kg/hr to prevent hyperkalemia

Y-site compatibilities: Acyclovir, aldesleukin, allopurinol, amifostine, aminophylline, amiodarone, ampicillin, amrinone, atropine, aztreonam, betamethasone, calcium gluconate, cephalothin, cephapirin, chlordiazePOXIDE, chlorproMAZINE, ciprofloxacin, cladribine, cyanocobalamin, dexamethasone, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOPamine, droperidol, edrophonium, enalaprilat, EPINEPHrine, esmolol, estrogens, ethacrynate, famotidine, fentaNYL, filgrastim, fludarabine, fluorouracil, furosemide, gallium, granisetron, heparin, hydrALAZINE, IDArubicin, indomethacin, insulin (regular), isoproterenol, kanamycin, labetalol, lidocaine, LORazepam, magnesium sulfate, melphalan, meperidine, methicillin, methoxamine, methylergonovine, midazolam, minocycline, morphine, neostigmine, norepinephrine, ondansetron, oxacillin, oxytocin, PACLitaxel, penicillin G potassium, pentazocine, phytonadione, piperacillin/tazobactam, prednisoLONE, procainamide, prochlorperazine, propofol, propranolol, pyridostigmine, remifentanil, sargramostim, scopolamine, sodium bicarbonate, succinylcholine, tacrolimus, teniposide, theophylline, thiotepa, trimethaphan, trimethobenzamide, vinorelbine, warfarin, zidovudine

SIDE EFFECTS

CNS: Confusion

CV: Bradycardia, cardiac depression, dysrhythmias, arrest; peaking T waves, lowered R, depressed RST, prolonged P-R interval, widened QRS complex

GI: *Nausea, vomiting, cramps,* pain, *diarrhea,* ulceration of small bowel

GU: Oliguria

INTEG: Cold extremities, rash

PHARMACOKINETICS

PO: Excreted by kidneys and in feces; onset of action ≈30 min
IV: Immediate onset of action

INTERACTIONS

Increase: hyperkalemia—potassium phosphate IV; products containing calcium or magnesium; potassium-sparing diuretic or other potassium products; ACE inhibitors

NURSING CONSIDERATIONS

Assess:
- **Hyperkalemia:** indicates toxicity; fatigue, muscle weakness, confusion, dyspnea, palpitation; ECG for peaking T waves, lowered R, depressed RST, prolonged P-R interval, widening QRS complex, hyperkalemia; product should be reduced or discontinued, administer sodium bicarbonate (metabolic acidosis); potassium level during treatment (3.5-5 mg/dL is normal level)
- Determine hydration status, I&O ratio; watch for decreased urinary output; notify prescriber immediately
- Cardiac status: rate, rhythm, CVP, PWP, PAWP if being monitored directly, if infused rate is higher, use cardiac monitoring
- IV site for irritation; decrease rate if irritation occurs
- **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding

Evaluate:
- Therapeutic response: absence of fatigue, muscle weakness; decreased thirst, urinary output; cardiac changes

Teach patient/family:
- To add potassium-rich foods to diet: bananas, orange juice, avocados, whole grains, broccoli, carrots, prunes, cocoa after product is discontinued
- To avoid OTC products: antacids, salt substitutes, analgesics, vitamin preparations unless specifically directed by prescriber; to avoid licorice in large amounts because it may cause hypokalemia, sodium retention
- To report hyperkalemia symptoms (lethargy, confusion, diarrhea, nausea, vomiting, fainting, decreased output) or continued hypokalemia symptoms (fatigue, weakness, polyuria, polydipsia, cardiac changes)
- To dissolve powder or tablet completely in ≥120 mL water or juice
- About the importance of regular follow-up visits
- That potassium levels will need to be monitored periodically

potassium iodide (Rx)

SSKI, Lugol's

Func. class.: Thyroid hormone antagonist, antidote
Chem. class.: Iodine product

ACTION: Inhibits secretion of thyroid hormone, fosters colloid accumulation in thyroid follicles, decreases vascularity of gland

USES: Preparation for thyroidectomy, thyrotoxic crisis, neonatal thyrotoxicosis, radiation protectant, thyroid storm
Unlabeled uses: Sporotrichosis, thyroid involution induction, thyrotoxicosis, Grave's disease

CONTRAINDICATIONS: Pregnancy, pulmonary edema, pulmonary TB, bronchitis, hypersensitivity to iodine
Precautions: Breastfeeding, children

DOSAGE AND ROUTES

Hyperthyroidism/thyrotoxicosis
- **Adult/child: PO** (SSKI) 250 mg tid × 10-14 days preoperatively

Preparation for thyroidectomy
- **Adult/child: PO** 3-5 drops strong iodine sol tid or 1-5 drops SSKI in water tid after meals for 10 days before surgery

Radiation exposure (radioactive iodine)
- **Adult: PO** 130 mg/day (distribution by government/public health officials or OTC purchase)
- **Child ≥3 yr: PO** 65 mg daily
- **Child/infant >1 mo-3 yr: PO** 32 mg/day

• **Neonate: PO** 16 mg/day

Available forms: Oral sol (Lugol's solution) iodine 5%/potassium iodide 10%; oral sol (SSKI) 1 g/mL 65 mg/mL

Administer:

• Products are not interchangeable
• Strong iodine solution after diluting with water or juice to improve taste
• Through straw to prevent tooth discoloration
• With meals to decrease GI upset
• At same time each day to maintain product level
• At lowest dose that relieves symptoms; discontinue before RAIU

SIDE EFFECTS

CNS: Headache, confusion, paresthesias

CV: Tachycardia, cardiac arrest, dysrrthmias

EENT: Metallic taste, stomatitis, salivation, periorbital edema, sore teeth and gums, cold symptoms

ENDO: Hypothyroidism, hyperthyroid adenoma, hyperkalemia

GI: *Nausea, diarrhea, vomiting,* small-bowel lesions, upper gastric pain, metallic taste

INTEG: Rash, urticaria, angioneurotic edema, acne, mucosal hemorrhage, fever

MS: Myalgia, arthralgia, weakness

PHARMACOKINETICS

PO: Onset 24-48 hr, peak 10-15 days after continuous therapy, uptake by thyroid gland or excreted in urine, crosses placenta

INTERACTIONS

Increase: hypothyroidism—lithium, other antithyroid agents

Increase: hyperkalemia—angiotensin II receptor antagonist, ACE inhibitors, potassium salts, potassium-sparing diuretics

NURSING CONSIDERATIONS

Assess:

• Pulse, B/P, temperature; serum potassium
• I&O ratio; check for edema: puffy hands, feet, periorbit; indicate hypothyroidism
• Weight daily; same clothing, scale, time of day
• T_3, T_4, which is increased; serum TSH, which is decreased; free thyroxine index, which is increased if dosage is too low; discontinue product 3-4 wk before RAIU
• **Overdose:** peripheral edema, heat intolerance, diaphoresis, palpitations, dysrhythmias, severe tachycardia, fever, delirium, CNS irritability
• **Hypersensitivity:** rash; enlarged cervical lymph nodes may indicate product should be discontinued
• **Hypoprothrombinemia:** bleeding, petechiae, ecchymosis
• Clinical response: after 3 wk should include increased weight, pulse; decreased T_4
• Fluids to 3-4 L/day unless contraindicated
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: weight gain; decreased pulse, T_4, size of thyroid gland

Teach patient/family:

• To abstain from breastfeeding after delivery
• To keep graph of weight, pulse, mood
• To avoid OTC products that contain iodine
• That seafood, other iodine products may be restricted
• Not to discontinue product abruptly; that thyroid crisis may occur as part of stress response
• That response may take several mo if thyroid is large
• To discontinue product, notify prescriber of fever, rash, metallic taste, swelling of throat; burning of mouth, throat; sore gums, teeth; severe GI distress, enlargement of thyroid, cold symptoms

prabotulinumtoxin A (Rx)

Jeuveau

Dermatologic agent

USES:
Facial wrinkles or vertical lines between the eyebrows

DOSAGE AND ROUTE

Black Box Warning: Distant spread of toxin effects

Moderate-severe glabellar lines (facial wrinkles or vertical lines between the eyebrows):
• **Adults: IM** 20 units (0.5 mL) given in 5 equal aliquots of 4 units (0.1 mL) each: 2 injections in each corrugator muscle (1 inferomedial and 1 superior middle) and 1 injection in the midline of the procerus muscle. If needed, repeat doses may be given ≥3 mo
Available forms: Injection 100 units/single-dose vial

pralidoxime (Rx)
(pra-li-doks′eem)
Protopam Chloride
Func. class.: Antidote

USES: Treatment of muscle weakness and/or respiratory depression secondary to poisoning due to organophosphate anticholinesterase pesticides and terrorism nerve agents; control of overdose of anticholinesterase medications used to treat myasthenia gravis (ambenonium, neostigmine, pyridostigmine)

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Organophosphate poisoning (pesticides and nerve agents)
• **Adult/adolescents ≥17 yr: IV** 1-2 g as a 15- to 30-min infusion in 100 mL NS after reconstitution with 1000 mg/20 mL sterile water
Loading dose
Neonate/infant/child ≤16 yr: IV loading dose 20-50 mg/kg (max 2 g) infused over 15-30 min, then 10-20 mg/kg/hr continuous IV infusion
Anticholinesterase overdose (neostigmine, pyridostigmine)
• **Adult: IV** 1-2 g mg; then increments of 250 mg q5min as needed
Available forms: Powder for solution for injection 1 g

pralsetinib (Rx)
(pral′se′ti′nib)
Gavreto
Func. class.: Antineoplastic
Chem class.: RET kinase inhibitor

ACTION: Inhibits wild-type RET, oncogenic RET fusions, and RET mutations; antitumor activity occurs in cells harboring oncogenic RET fusions or mutations

USES: Treatment of non-small cell lung cancer (NSCLC), thyroid cancer

CONTRAINDICATIONS:
Hypersensitivity
Precautions:
Breastfeeding, children, chronic lung disease, contraception requirements, growth inhibition, hepatic disease, hypertension, impaired wound healing, infertility, interstitial lung disease, male-mediated teratogenicity, pneumonitis, pregnancy, renal impairment, surgery, tumor lysis syndrome

DOSAGE AND ROUTES
NSCLC/thyroid cancer
Adult: PO 400 mg daily until disease progression/unacceptable toxicity.
Available forms: Capsule 100 mg
Administer:
• On empty stomach ≥1 hr before or ≥2 hr after food
• Store at room temperature

SIDE EFFECTS
CNS: Fatigue
GI: Constipation, diarrhea, xerostomia, increased LFTs, hepatotoxicity
CV: Edema, hypertension

META: Hypocalcaemia, hyponatremia, hyper-hypophosphatemia
HEMA: Decreased HB, neutropenia, lymphocytopenia, thrombocytopenia, hemorrhage
MS: MS pain
GU: Increased serum creatinine, UTI
RESP: Cough, pneumonia, pneumonitis
MISC: Fever, sepsis

PHARMACOKINETICS

Onset unknown, peak 2-4 hr, duration unknown, half-life 22 hr, protein binding 97%

INTERACTIONS

Decrease: Pralsetinib effect—CYP3A4 inducers, depending if moderate or strong, monitor or alter dose
Increase: Pralsetinib effect—Strong CYP3A4 Inhibitors, avoid using together

NURSING CONSIDERATIONS

Assess:

- **Lung cancer:** Obtain RET gene fusion status, hepatitis B surface antigen (HBsAg), hepatitis B core antibody (anti-HBc), total Ig or IgG before starting treatment, treatment may start before results
- **Bone marrow suppression**: Monitor CBC with differential, platelets; anemia, lymphocytopenia, neutropenia, thrombocytopenia may occur
- **Bleeding/hemorrhage**: Monitor for bleeding/hemorrhage, permanently discontinue if severe
- **Hepatotoxicity:** Monitor LFTs baseline, q2wk × 3 months, then monthly; if elevated dosage modification or discontinuation may be needed, evaluate RET gene status
- **Hypertension**: Monitor B/P baseline, after 1 wk and monthly thereafter; do not use in uncontrolled hypertension
- **Interstitial lung disease/pulmonary toxicity**: Monitor for dyspnea, cough, fever, fatigue; withhold pralsetinib, evaluate for interstitial lung disease
- **Poor wound healing:** Withhold ≥5 days before elective surgery; do not use ≥2 wk after major surgery and until after adequate wound healing.
- Identify if propylene glycol is present in product used: monitor for toxicity if large amounts are present in the product (lactic acidosis, respiratory changes, seizures)
- **Pregnancy/breastfeeding**: Obtain pregnancy testing before use in females of reproductive potential, do not use in pregnancy or breastfeeding; nonhormonal contraceptive should be used during and for ≥2 wk after last dose; males should use contraception during and for ≥1 wk after last dose in those with partners of reproductive potential

Evaluate:

- Therapeutic response: decreasing tumor growth in lung cancer

Teach patient/family:

- To report immediately poor wound healing after surgery, increased trouble breathing, bloody sputum, other bleeding, cough, fever
- Take 1 hr before or 2 hr after food; do not crush, chew, open capsule; take whole
- Liver dysfunction: To report yellow skin/sclera, clay-colored stools, dark urine
- If a dose is missed, take on the same day; resume the regular dosing next day; do not take another dose if vomiting occurs
- Identify if pregnancy is planned or suspected, not to breastfeed, discuss needed contraception

pramipexole (Rx)
(pra-mi-pex′ol)
Mirapex, Mirapex ER
Func. class.: Antiparkinson agent
Chem. class.: DOPamine-receptor agonist, non-ergot

Do not confuse:
Mirapex/Miralax

ACTION: Selective agonist for D_2 receptors (presynaptic/postsynaptic sites); binding at D_3 receptor contributes to antiparkinson effects

USES: Idiopathic Parkinson's disease, restless legs syndrome

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, cardiac/renal disease, MI with dysrhythmias, affective disorders, psychosis, preexisting dyskinesias, history of falling asleep during daily activities, rapid dose reduction

DOSAGE AND ROUTES

Parkinson's disease

• **Adult: PO** 0.125 mg tid; increase gradually by 0.125 mg/dose at 5- to 7-day intervals until total daily dose of 4.5 mg/day reached; **ER** 0.375 mg daily initially, then up to 0.75 mg/day; may increase by 0.75 mg/day no more than q5-7days as needed, max 4.5 mg/day

Restless legs syndrome

• **Adult: PO** 0.125 mg 2-3 hr before bedtime, increase gradually, max 0.5 mg/day

Renal dose

• **Adult: PO** CCr 35-59 mL/min, 0.125 mg bid, may increase q5-7days to 1.5 mg bid if required; CCr 15-34 mL/min, 0.125 mg/day, increase q5-7days to 1.5 mg/day

Available forms: Tabs 0.125, 0.25, 0.5, 0.75, 1, 1.5 mg; ER tab 0.375, 0.75, 1.5, 2.25, 3.0, 3.75, 4.5 mg

Administer:

• Adjust dosage to patient response, titrate slowly, taper when discontinuing
• With meals to minimize GI symptoms
• Do not crush, chew, or break ext rel product

SIDE EFFECTS

CNS: *Agitation, insomnia,* psychosis, hallucinations, depression, dizziness, headache, confusion, amnesia, dream disorder, asthenia, dyskinesia, hypersomnolence, sudden sleep onset, impulse control disorders

CV: *Orthostatic hypotension,* edema, syncope, tachycardia, increased B/P, heart rate, heart failure

EENT: Blurred vision, retinal/vision deterioration

ENDO: Antidiuretic hormone secretion (SIADH)

GI: *Nausea, anorexia,* constipation, dysphagia, dry mouth

GU: Impotence, urinary frequency

HEMA: Hemolytic anemia, leukopenia, agranulocytosis

INTEG: Pruritus

PHARMACOKINETICS

Minimally metabolized, peak 2 hr, half-life 8 hr, 8.5-12 hr in geriatric patients

INTERACTIONS

Increase: pramipexole levels—levodopa, cimetidine, raNITIdine, diltiaZEM, triamterene, verapamil, quiNIDine

Decrease: pramipexole levels—DOPamine antagonists, phenothiazines, metoclopramide, butyrophenones

NURSING CONSIDERATIONS

Assess:

• **Parkinson's disease:** involuntary movements: bradykinesia, tremors, staggering gait, muscle rigidity, drooling
• B/P, ECG, respiration during initial treatment; hypo/hypertension should be reported
• **Mental status:** affect, mood, behavioral changes, depression; complete suicide assessment, worsening of symptoms of restless legs syndrome, impulse control disorders
• **Somnolence:** may fall asleep during activities without warning; may need to discontinue medication
• Assistance with ambulation during beginning therapy
• Testing for diabetes mellitus, acromegaly if receiving long-term therapy
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause fetal harm; do not breastfeed

Evaluate:

• Therapeutic response: movement disorder improves

Teach patient/family:

• That therapeutic effects may take several weeks to a few months
• To change positions slowly to prevent orthostatic hypotension

P

• To use product exactly as prescribed; if product is discontinued abruptly, parkinsonian crisis may occur; to avoid alcohol, OTC sleeping products
• To notify prescriber if pregnancy is planned or suspected
• To notify prescriber of impulse control disorders: shopping

⚠ HIGH ALERT

pramlintide (Rx)

(pram'lin-tide)

SymlinPen

Func. class.: Antidiabetic
Chem. class.: Synthetic human amylin analog

ACTION: Modulates and slows stomach emptying, prevents postprandial rise in plasma glucagon, decreases appetite, leads to decreased caloric intake and weight loss

USES: As an adjunct prandial to insulin therapy for uncontrolled type 1 or type 2 diabetes

CONTRAINDICATIONS: Hypersensitivity to this product or cresol; gastroparesis

Black Box Warning: Hypoglycemia unawareness

Precautions: Pregnancy, breastfeeding, osteoporosis, thyroid disease, trauma, vomiting, renal failure, fever, diarrhea

DOSAGE AND ROUTES

Type 1 diabetes

• **Adult: SUBCUT** 15 mcg before each meal (≥30 g carbohydrate), titrate up in 15-mcg increments to target dose of 60 mcg/dose; each dose titration should occur after no nausea for 3 days

Type 2 diabetes

• **Adult: SUBCUT** 60 mcg before each meal carbohydrate, titrate up to 120 mcg; **SUBCUT** with each meal after no nausea for 3-7 days

Available forms: PEN 60, 120 (1000 mcg/mL solution for injection)

Administer:

• Store at room temperature for ≤30 days; keep away from heat and sunlight; refrigerate all other supply
• Premeal insulin should be decreased by 50% when starting and adjusted to therapeutic dose to prevent hypoglycemia

SUBCUT route

• Rotate injection sites, allow solution to warm to room temperature before use
• Take immediately before mealtime or if 30 g of carbohydrates will be consumed
• Do not use if a meal is skipped
• Do not use if discolored; do not give in arm; absorption is variable

SIDE EFFECTS

CNS: *Headache,* fatigue, dizziness, confusion
EENT: Blurred vision
GI: *Nausea, vomiting, anorexia,* abdominal pain
INTEG: Inj-site reactions, diaphoresis
META: Hypoglycemia
MS: Arthralgia
RESP: *Cough,* pharyngitis
SYST: *Systemic allergy*

PHARMACOKINETICS

Bioavailability 30%-40%, not extensively bound to blood cells or albumin, 40% bound in plasma, half-life 48 min, metabolized by kidneys, peak 20 min, duration 3 hr

INTERACTIONS

• Do not use with erythromycin, metoclopramide

Increase: effect of acetaminophen
Increase: pramlintide action—antimuscarinics, α-glucosidase inhibitors, diphenoxylate, loperamide, octreotide, opiate agonist, tricyclics
Increase: hypoglycemia—ACE inhibitors, disopyramide, anabolic steroids, androgens, fibric acid derivatives, alcohol, corticosteroids, insulin
Increase: hyperglycemia—phenothiazines
Decrease: hypoglycemia—niacin, dextrothyroxine, thiazide diuretics,

triamterene, estrogens, progestins, oral contraceptives, MAOIs

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Fasting blood glucose, 2 hr postprandial (80-150 mg/dL, normal fasting level; 70-130 mg/dL, normal 2 hr level); A1c may also be drawn to identify treatment effectiveness; also monitor weight, appetite

- **Hypoglycemic reaction:** sweating; weakness; dizziness; chills; confusion; headache; nausea; rapid, weak pulse; fatigue; tachycardia; memory lapses; slurred speech; staggering gait; anxiety; tremors; hunger
- **Hyperglycemia:** acetone breath; polyuria; fatigue; polydipsia; flushed, dry skin; lethargy
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, usually insulin is used in pregnancy; avoid breastfeeding

Evaluate:

- Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait; improving blood glucose, A1c

Teach patient/family:

- That product does not cure diabetes but rather controls symptoms
- To carry emergency ID as diabetic
- To recognize hypoglycemia reaction: headache, fatigue, weakness, fast pulse
- About the dosage, route, mixing instructions, diet restrictions, disease process

Black Box Warning: To carry a glucose source (candy or lump sugar, glucose tabs) to treat hypoglycemia

- About the symptoms of ketoacidosis: nausea; thirst; polyuria; dry mouth; decreased B/P; dry, flushed skin; acetone breath; drowsiness; Kussmaul respirations
- That a plan is necessary for diet, exercise; that all food on diet should be eaten; that exercise routine should not vary
- About blood glucose testing; how to determine glucose level
- To avoid OTC products, alcohol unless directed by prescriber
- Not to operate machinery or drive until effect is known
- About how to use pen

TREATMENT OF OVERDOSE:

Glucose 25 g IV or 50 mL dextrose 50% sol or 1 mg glucagon SUBCUT

pramoxine topical

See Appendix B

prasterone (Rx)

(pras′ter-one)

Intrarosa

Func. class.: Hormone, steroid, synthetic

USES: Treatment of moderate to severe dyspareunia

CONTRAINDICATIONS

Undiagnosed abnormal genital bleeding

DOSAGE AND ROUTES

Dyspareunia. Adult females:

Intravaginal: 6.5 mg daily at bedtime

Available forms: Vaginal insert 6.5 mg

⚠ HIGH ALERT

prasugrel (Rx)

(pra′soo-grel)

Effient

Func. class.: Platelet aggregation inhibitor

Chem. class.: ADP receptor antagonist

ACTION: Inhibits ADP-induced platelet aggregation

USES: Reducing the risk of stroke, MI, vascular death, peripheral arterial disease in high-risk patients

CONTRAINDICATIONS:
Hypersensitivity, stroke, TIA, active bleeding, hepatic disease (Child-Pugh C)

Black Box Warning: Active bleeding

Precautions: Pregnancy, breastfeeding, children, geriatric patients, hepatic disease, increased bleeding risk, neutropenia, agranulocytosis, renal disease, surgery, trauma, thrombotic thrombocytopenic purpura, Asian patients, weight <60 kg, CABG, abrupt discontinuation

DOSAGE AND ROUTES
- **Adult/geriatric <75 yr and ≥60 kg: PO** 60 mg, then 10 mg daily with aspirin (75-325 mg/day)
- **Adult/geriatric <75 yr and <60 kg: PO** 60 mg, then 5 mg daily
- **Geriatric ≥75 yr:** not recommended

Available forms: Tabs 5, 10 mg

Administer:
- With food to decrease gastric symptoms
- Do not break tablets, tablet may be crushed and mixed in food, fluids
- Do not discontinue therapy abruptly

SIDE EFFECTS
CNS: Headache, dizziness, intracranial hemorrhage

CV: Edema, atrial fibrillation, bradycardia, chest pain, hypo/hypertension, angina

GI: Nausea, vomiting, diarrhea

HEMA: Epistaxis, leukopenia, thrombocytopenia, neutropenia, anaphylaxis, angioedema, anemia

INTEG: Rash, hypercholesterolemia

MISC: Fatigue, intracranial hemorrhage, secondary malignancy, angioedema anaphylaxis

MS: Back pain

PHARMACOKINETICS
Rapidly absorbed; peak 30 min; metabolized by liver (CYP3A4; CYP2B6); excreted in urine, feces; half-life 7 hr

INTERACTIONS
Increase: bleeding risk—anticoagulants, aspirin, NSAIDs, abciximab, eptifibatide, tirofiban, thrombolytics, ticlopidine, SSRIs, treprostinil, rifAMPin

NURSING CONSIDERATIONS
Assess:
- **Thrombotic/thrombocytic purpura:** fever, thrombocytopenia, neurolytic anemia
- **Hepatic studies:** AST, ALT, bilirubin, creatinine with long-term therapy
- **Blood studies:** CBC, differential, Hct, HB, PT, cholesterol with long-term therapy

Black Box Warning: Bleeding: may be fatal, decreased B/P in those who have had CABG may be the first indication; bleeding should be controlled while continuing product; may use transfusion; do not use within 1 wk of CABG; may use lower doses in those <60 kg

- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk
- **Beers:** avoid use in those age ≥75 yr; increased bleeding risk

Evaluate:
- Therapeutic response: absence of stroke, MI

Teach patient/family:
- That blood work will be necessary during treatment

Black Box Warning: To report any unusual bruising, bleeding to prescriber; that it may take longer to stop bleeding

- To take with food or just after eating to minimize GI discomfort
- To report diarrhea, skin rashes, subcutaneous bleeding, chills, fever, sore throat
- To tell all health care providers that prasugrel is being used; that product may be held before surgery

pravastatin (Rx)
(pra′va-sta-tin)

Pravachol

Func. class.: Antilipemic

Chem. class.: HMG-CoA reductase enzyme

Do not confuse:
Pravachol/Prevacid/propranolol

ACTION: Inhibits HMG-CoA reductase enzyme, which reduces cholesterol synthesis

USES: As an adjunct for primary hypercholesterolemia (types IIa, IIb, III, IV), to reduce the risk for recurrent MI, atherosclerosis, primary/secondary CV events, stroke, TIAs

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, active hepatic disease

Precautions: Past hepatic disease, alcoholism, severe acute infections, trauma, severe metabolic disorders, electrolyte imbalances, renal disease

DOSAGE AND ROUTES

- **Adult: PO** 40 mg/day at bedtime (range 10-80 mg/day); start at 10 mg/day if patient also taking immunosuppressants or has significant renal/hepatic disease
- **Adolescent 14-18 yr: PO** 40 mg/day
- **Child 8-13 yr: PO** 20 mg/day

Renal dose

- **Adult: PO** 10-20 mg daily at bedtime, increase at 4-wk intervals

Available forms: Tabs 10, 20, 40, 80 mg

Administer:

- Without regard to meals, at bedtime
- Give 4 hr after bile acid sequestrants
- Store in cool environment in tight container protected from light

SIDE EFFECTS

CNS: Headache, dizziness, fatigue, confusion

CV: Chest pain

EENT: Lens opacities

GI: Nausea, constipation, diarrhea, flatus, abdominal pain, heartburn, hepatic dysfunction, pancreatitis, hepatitis

GU: Renal failure (myoglobinuria)

INTEG: Rash, pruritus

MS: Muscle cramps, myalgia, myositis, rhabdomyolysis

RESP: *Common cold, rhinitis,* cough, URI

PHARMACOKINETICS

Peak 1-1$^1/_2$ hr; metabolized by liver; protein binding 50%; excreted in urine 20%, feces 70%, breast milk; crosses placenta; half-life 1.25-2.25 hr

INTERACTIONS

Increase: myopathy, rhabdomyolysis risk—erythromycin, niacin, cycloSPORINE, gemfibrozil, clofibrate, clarithromycin, itraconazole, protease inhibitors

Decrease: bioavailability of pravastatin—bile acid sequestrants

Drug/Herb

Increase: adverse reactions—red yeast rice

Increase: hepatotoxicity—eucalyptus

Decrease: effect—St. John's wort

Drug/Lab Test

Increase: CK, LFTs

Altered: thyroid function tests

NURSING CONSIDERATIONS

Assess:

- **Fasting lipid profile:** LDL, HDL, triglycerides, cholesterol at baseline, q12wk, then q6mo when stable; obtain diet history
- **Hepatic studies:** baseline, then when clinically indicated; LFTs may increase
- **Renal studies:** I&O in those with compromised renal system
- **Rhabdomyolysis:** muscle tenderness, pain; obtain CPK if clinically indicated; therapy should be discontinued
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decrease in LDL total cholesterol, triglycerides; increase in HDL

Teach patient/family:

- That blood work will be necessary during treatment
- To report blurred vision, severe GI symptoms, dizziness, headache, muscle pain, weakness, fever
- That regimen will continue: low-cholesterol diet, exercise program; that if taking a product like cholestyramine, to take this product at least 1 hr prior to or 4 hr after the bile acid resin
- To report suspected, planned pregnancy; not to use product during pregnancy; not to breastfeed

P

• **Hepatic disease:** to notify prescriber of lack of appetite, yellow sclera/skin, dark urine, abdominal pain, weakness

prazosin (Rx)

(pray′zoe-sin)

Minipress

Func. class.: Antihypertensive

Chem. class.: α_1-Adrenergic blocker, peripheral

Do not confuse:
prazosin/predniSONE

ACTION: Blocks α-mediated vasoconstriction of adrenergic receptors, thereby inducing peripheral vasodilation

USES: Hypertension, benign prostatic hypertrophy to decrease urine outflow obstruction
Unlabeled uses: hypertensive urgency, Raynaud's phenomenon, posttraumatic stress disorder (PTSD), BPH

CONTRAINDICATIONS: Hypersensitivity to this product or other quinazoline products, history of tamsulosin-induced angioedema
Precautions: Pregnancy, breastfeeding, children, geriatric patients, prostate cancer, ocular surgery, orthostatic hypotension, angina, priapism, syncope

DOSAGE AND ROUTES

Hypertension
• **Adult: PO** 1 mg bid or tid increasing to 20 mg/day in divided doses, if required; usual range 6-15 mg/day, max 40 mg/day
• **Child (unlabeled): PO** 5 mcg/kg q6hr; may increase slowly to 25 mcg/kg q 6 hr; max 500 mcg/kg/day or 15 mg/day
Benign prostatic hyperplasia (unlabeled)
• **Adult: PO** 2 mg bid
Posttraumatic stress disorder (unlabeled)
• **Adult: PO** 1 mg at bedtime, then titrated to max 15 mg/day
Available forms: Caps 1, 2, 5 mg

Administer:
• 1st dose at bedtime to avoid fainting
• Without regard to meals
• Store at room temperature

SIDE EFFECTS

CNS: *Dizziness, headache, drowsiness,* anxiety, depression, vertigo, *weakness,* fatigue, syncope
CV: *Palpitations, orthostatic hypotension,* tachycardia, edema, rebound hypertension
EENT: Blurred vision, epistaxis, tinnitus, dry mouth, red sclera
GI: *Nausea,* vomiting, diarrhea, constipation, abdominal pain, pancreatitis
GU: Urinary frequency, incontinence, impotence, priapism; water, sodium retention

PHARMACOKINETICS

Onset 2 hr, peak 2-4 hr, duration 6-12 hr, half-life 2-4 hr; metabolized in liver, excreted via bile, feces (>90%), urine (<10%); protein binding 97%

INTERACTIONS

Increase: hypotensive effects—β-blockers, nitroglycerin, alcohol, phosphodiesterase inhibitors (vardenafil, tadalafil, sildenafil); diuretics, other antihypertensives, MAOIs
Decrease: antihypertensive effect—NSAIDs
Increase: antihypertensive effect—hawthorn
Drug/Lab Test
Increase: urinary norepinephrine, VMA, BUN, uric acid, LFTs
Positive: ANA titer

NURSING CONSIDERATIONS

Assess:
• **Hypertension/HF:** B/P (sitting, standing) during initial treatment, periodically thereafter; pulse, jugular venous distention, orthostatic hypotension usually occurs on first dose
• BUN, uric acid if patient receiving long-term therapy
• Weight daily, I&O; edema in feet, legs daily
• **Benign prostatic hypertrophy (unlabeled):** urinary patterns, frequency,

stream, dribbling; flow before, during, and after therapy
• **Beers:** avoid use as an antihypertensive in older adults; high risk of orthostatic hypotension
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: decreased B/P

Teach patient/family:
• That fainting occasionally occurs after 1st dose; to take 1st dose at bedtime; not to drive or operate machinery for 4 hr after 1st dose; that full effect may take 4-6 wk
• To change positions slowly to prevent orthostatic hypotension
• To avoid OTC medications, alcohol unless approved by prescriber; not to crush, chew caps
• Not to discontinue abruptly

TREATMENT OF OVERDOSE:
Administer volume expanders or vasopressors, discontinue product, place patient in supine position

prednisoLONE (Rx)
(pred-niss′oh-lone)
Millipred, Orapred, Orapred ODT, Pediapred
Func. class.: Corticosteroid, synthetic
Chem. class.: Glucocorticoid, immediate acting

Do not confuse:
prednisoLONE/predniSONE

ACTION:
Decreases inflammation by the suppression of migration of polymorphonuclear leukocytes, fibroblasts; reversal to increase capillary permeability and lysosomal stabilization

USES:
Severe inflammation, immunosuppression, neoplasms, asthma

CONTRAINDICATIONS:
Hypersensitivity, fungal infections, viral infection, varicella

Precautions: Pregnancy, breastfeeding, children, diabetes mellitus, glaucoma, osteoporosis, seizure disorders, ulcerative colitis, HF, myasthenia gravis, abrupt discontinuation, children, acute MI, GI ulcers, hypertension, hepatitis, psychosis, thromboembolism, peptic ulcer disease, renal disease, Cushing syndrome

DOSAGE AND ROUTES
Most conditions
• **Adult: PO** 5-60 mg per day as a single dose or divided doses
• **Infant/child/adolescent: PO** 0.14-2 mg/kg or 4-60 mg/m^2 per day in 3-4 divided doses

Multiple sclerosis
• **Adult: PO** 200 mg/day × 7 day, then 80 mg every other day × 1 mo

Antiinflammatory
• **Adult: PO** 5-60 mg/day as a single dose or in divided doses
• **Infant/child/adolescent: PO** 0.14-2 mg/kg or 4-60 mg/m^2 per day in 3-4 divided doses

Acute asthma exacerbation
• **Adult/adolescent: PO** 40-60 mg per day as a single dose or in 2 divided doses for 3-10 days
• **Child 5-12 yr: PO** 1-2 mg/kg (up to 60 mg) per day in 2 divided doses for 3-10 days
• **Infant/child ≤4 yr: PO** 1-2 mg/kg (up to 30 mg) per day in 2 divided doses for 3-10 days

Available forms: Tabs 5 mg; oral disintegrating tab 10, 15, 30 mg; oral sol 5 mg/5 mL, 10 mg/5 mL, 15 mg/5 mL, 25 mg/5 mL; oral suspension 15 mg/mL

Administer:
• **Oral sol:** use calibrated measuring device
• **Orally disintegrating tabs:** place on tongue; allow to dissolve, swallow or swallow whole; do not cut, split

SIDE EFFECTS
CNS: *Depression,* headache, mood changes
CV: *Hypertension,* circulatory collapse, thrombophlebitis, embolism, tachycardia

EENT: Fungal infections, increased intraocular pressure, blurred vision
GI: *Diarrhea, nausea, abdominal distention,* GI hemorrhage, increased appetite, pancreatitis
INTEG: Acne, poor wound healing, ecchymosis, petechiae, sweating
MS: Fractures, osteoporosis, weakness, arthralgia, myopathy, tendon rupture
MISC: Hyperglycemia

PHARMACOKINETICS

PO: Peak 1-2 hr, duration 2 days

INTERACTIONS

Increase: tendon rupture—quinolones
Increase: side effects—alcohol, salicylates, indomethacin, amphotericin B, digitalis, cycloSPORINE, diuretics
Increase: prednisoLONE action—salicylates, estrogens, indomethacin, oral contraceptives, ketoconazole, macrolide antibiotics
Increase: prednisoLONE effect—CYP3A4 inhibitors
Increase: toxicity—azole antifungals, cycloSPORINE, NSAIDs
Decrease: prednisoLONE action—cholestyramine, colestipol, barbiturates, rifAMPin, ePHEDrine, phenytoin, theophylline
Decrease: effects of anticoagulants, anticonvulsants, antidiabetics, ambenonium, neostigmine, isoniazid, toxoids, vaccines, anticholinesterases, salicylates, somatrem
Decrease: prednisoLONE effect—CYP3A4 inducers

Drug/Lab Test

Increase: cholesterol, sodium, blood glucose, uric acid, calcium, urine glucose
Decrease: calcium, potassium, T_4, T_3, thyroid ^{131}I uptake test, urine 17-OHCS, 17-KS, PBI
False negative: skin allergy tests

NURSING CONSIDERATIONS

Assess:

- Potassium, blood glucose, urine glucose while patient receiving long-term therapy; hypokalemia, hyperglycemia
- Weight daily; notify prescriber if weekly gain of >5 lb
- B/P q4hr, pulse; notify prescriber if chest pain occurs
- I&O ratio; be alert for decreasing urinary output, increasing edema
- Plasma cortisol levels with long-term therapy; normal level: 138-635 nmol/L SI units when drawn at 8 AM
- **Infection:** increased temperature, WBC, even after withdrawal of medication; product masks infection
- **Potassium depletion:** paresthesias, fatigue, nausea, vomiting, depression, polyuria, dysrhythmias, weakness
- Edema, hypertension, cardiac symptoms
- Mental status: affect, mood, behavioral changes, aggression
- **Adrenal insufficiency:** nausea, vomiting, lethargy, restlessness, confusion, weight loss, hypotension before, during treatment baseline and periodically; HPA suppression may be precipitated by abrupt withdrawal
- **Beers:** avoid in older adults with delirium or at high risk of delirium
- **Pregnancy/breastfeeding:** not recommended in pregnancy; cautious use in breastfeeding

Evaluate:

- Therapeutic response: ease of respirations, decreased inflammation

Teach patient/family:

- That emergency ID as steroid user should be carried
- To notify prescriber if therapeutic response decreases; that dosage adjustment may be needed
- Not to discontinue abruptly; that adrenal crisis can result; to take product exactly as prescribed
- To avoid OTC products: salicylates, cough products with alcohol, cold preparations unless directed by prescriber
- About cushingoid symptoms: moon face, buffalo hump, rapid weight gain, excessive sweating, stretch marks
- **About the symptoms of adrenal insufficiency:** nausea, anorexia, fatigue, dizziness, dyspnea, weakness, joint pain

prednisoLONE ophthalmic (Rx)

See Appendix B

predniSONE (Rx)

(pred′ni-sone)

Rayos

Func. class.: Corticosteroid

Chem. class.: Intermediate-acting glucocorticoid

Do not confuse:

predniSONE/methylPREDNISolone/prednisoLONE/PriLOSEC

ACTION: Decreases inflammation by increasing capillary permeability and lysosomal stabilization, minimal mineralocorticoid activity

USES: Severe inflammation, neoplasms, multiple sclerosis, collagen disorders, dermatologic disorders, pulmonary fibrosis, asthma

Unlabeled uses: Adjunct for refractory seizures, infantile spasms, acute interstitial nephritis, amyloidosis, autoimmune hepatitis, Behçet's syndrome, Bell's palsy, carpal tunnel syndrome, Churg-Strauss syndrome, dermatomyositis, Duchenne muscular dystrophy, endophthalmitis, Lennox-Gastaut syndrome, lupus nephritis, mixed connective-tissue disease, pericarditis, pneumonia, polyarteritis nodosa, polychondritis, polymyositis, rheumatic carditis, temporal arteritis, TB, Wegener's granulomatosis

CONTRAINDICATIONS: Fungal infections, hypersensitivity

Precautions: Pregnancy, diabetes mellitus, glaucoma, osteoporosis, seizure disorders, ulcerative colitis, HF, myasthenia gravis, renal disease, esophagitis, peptic ulcer, cataracts, coagulopathy, abrupt discontinuation, children, corticosteroid hypersensitivity, Cushing syndrome, diabetes mellitus, ulcerative colitis, thromboembolism, geriatric patients, acute MI

DOSAGE AND ROUTES

Most uses

- **Adult: PO** 5-60 mg/day or divided bid-qid
- **Child: PO** 0.05-2 mg/kg/day divided 1-4×/day

Nephrotic syndrome

- **Child: PO** 2 mg/kg/day in divided doses, until urine is protein-free for 3 consecutive days, then 1-1.5 mg/kg/day every other day × 4 wk

Multiple sclerosis

- **Adult: PO** 200 mg/day × 1 wk, then 80 mg every other day × 1 mo

Asthma

- **Adult/adolescent: PO** 40-80 mg/day in 1-2 divided doses until PEF is 70% of predicted or personal best
- **Child: PO** 1 mg/kg (max 60 mg)/day in 2 divided doses until PEF is 70% of predicted or personal best

Available forms: Tabs 1, 2.5, 5, 10, 20, 50 mg; oral sol 5 mg/5 mL; del rel tab 1, 2, 5 mg

Administer:

- Regular tabs may be crushed and given with foods or fluids
- For long-term use, alternate-day therapy recommended to decrease adverse reactions; give in AM to coincide with normal cortisol secretion
- Titrated dose; use lowest effective dose
- With food or milk to decrease GI symptoms
- **Oral sol:** use calibrated measuring device
- **Del rel tab:** swallow whole; do not break, crush, chew; give once a day

SIDE EFFECTS

CNS: Depression, flushing, sweating, headache, mood changes

CV: Hypertension, thrombophlebitis, embolism, tachycardia, fluid retention

EENT: Fungal infections, increased intraocular pressure, blurred vision

GI: Diarrhea, nausea, abdominal distention, GI hemorrhage, increased appetite, pancreatitis

INTEG: Acne, poor wound healing, ecchymosis, petechiae

META: Hyperglycemia

MS: Fractures, osteoporosis, weakness
MISC: Decreased immune response

PHARMACOKINETICS

PO: Well absorbed PO, peak 1-2 hr; del rel peak 6-6½ hr; half-life 3½-4 hr, crosses placenta, enters breast milk, metabolized by liver after conversion, excreted in urine

INTERACTIONS

Increase: tendon rupture—quinolones
Increase: side effects—alcohol, salicylates, NSAIDs, amphotericin B, digoxin, cycloSPORINE, diuretics
Increase: predniSONE action—salicylates, estrogens, NSAIDs, oral contraceptives, ketoconazole, macrolide antiinfectives
Increase: predniSONE effect—CYP3A4 inhibitors
Decrease: predniSONE effect—CYP3A4 inducers
Decrease: predniSONE action—cholestyramine, colestipol, barbiturates, rifAMPin, phenytoin, theophylline
Decrease: effects of anticoagulants, anticonvulsants, antidiabetics, neostigmine, isoniazid, toxoids, vaccines, anticholinesterases, salicylates, somatrem

Drug/Herb

Decrease: predniSONE effect—ephedra (ma huang)

Drug/Lab Test

Increase: cholesterol, sodium, blood glucose, uric acid, calcium, urine glucose
Decrease: calcium, potassium, T_4, T_3, thyroid ^{131}I uptake test, urine 17-OHCS, 17-KS, PBI
False negative: skin allergy tests

NURSING CONSIDERATIONS

Assess:

- **Adrenal insufficiency:** nausea, vomiting, anorexia, confusion, hypotension, weight loss before or during treatment; HPA suppression may be precipitated by abrupt withdrawal
- Potassium, blood glucose, urine glucose while patient receiving long-term therapy; hypokalemia and hyperglycemia; plasma cortisol with long-term therapy, normal: 138-635 nmol/L SI units drawn at 8 AM
- Weight daily; notify prescriber of weekly gain of >5 lb
- B/P, pulse; notify prescriber of chest pain; monitor for crackles, dyspnea if edema is present; hypertension, cardiac symptoms
- I&O ratio; be alert for decreasing urinary output, increasing edema, rales, crackles; notify provider if present
- **Infection:** increased temperature, WBC, even after withdrawal of medication; product masks infection
- Potassium depletion: paresthesias, fatigue, nausea, vomiting, depression, polyuria, dysrhythmias, weakness
- Mental status: affect, mood, behavioral changes, aggression
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed
- **Beers:** avoid in older adults with a high risk of delirium

Evaluate:

- Therapeutic response: ease of respirations, decreased inflammation

Teach patient/family:

- That emergency ID as corticosteroid user should be carried; provide information about product being taken and condition
- To notify prescriber if therapeutic response decreases; that dosage adjustment may be needed
- To avoid vaccinations
- Not to discontinue abruptly; adrenal crisis can result
- To avoid OTC products: salicylates, cough products with alcohol, cold preparations unless directed by prescriber
- **Cushingoid symptoms:** moon face, weight gain; symptoms of adrenal insufficiency: nausea, anorexia, fatigue, dizziness, dyspnea, weakness, joint pain
- That product causes immunosuppression; to report any symptoms of infection (fever, sore throat, cough)
- To notify provider before surgery
- That continuing follow-up and blood work will be needed
- That antidiabetic agents may need adjustment in diabetic patients

• **Pregnancy:** to notify prescriber if pregnancy is planned or suspected; cleft palate, stillbirth, abortion reported

pregabalin (Rx)

(pre-gab´a-lin)

Lyrica, Lyrica CR

Func. class.: Anticonvulsant

Chem. class.: γ-Aminobutyric acid (GABA) analog

Controlled Substance Schedule V

Do not confuse:
Lyrica/Lopressor

ACTION: Binds to high-voltage–gated calcium channels in CNS tissues; this may lead to anticonvulsant action similar to the inhibitory neurotransmitter GABA; anxiolytic, analgesic, and antiepileptic properties

USES: Neuropathic pain associated with spinal cord injury/diabetic peripheral neuropathy, partial-onset seizures, postherpetic neuralgia, fibromyalgia

CONTRAINDICATIONS: Hypersensitivity to this product or gabapentin, abrupt discontinuation

Precautions: Pregnancy, breastfeeding, children <12 yr, geriatric patients, renal disease, PR interval prolongation, creatine kinase elevations, HF (class III, IV), decreased platelets, substance abuse, dependence, glaucoma, myopathy, angioedema history, suicidal behavior

DOSAGE AND ROUTES

Diabetic peripheral neuropathic pain/postherpetic neuralgia

• **Adult: PO/ORAL SOL** 50 mg tid, may increase to 300 mg/day (max) within 1 wk, adjust in patients with renal disease; **EXT REL** 165 mg/day, may increase to 330 mg/day (treatment-naive patients)

Partial-onset seizures

• **Adult: PO/ORAL SOL** 75 mg bid or 50 mg tid; may increase to 600 mg/day (max)

Fibromyalgia, spinal cord injury pain

• **Adult: PO/ORAL SOL** 75 mg bid, may increase to 150 mg bid within 1 wk and 225 mg bid after 1 wk

Renal dose

• **Adult: PO** CCr 30-60 mL/min, 75-300 mg/day in 2-3 divided doses; CCr 15-30 mL/min, 25-150 mg/day in 1-2 divided doses; CCr <15 mL/min, 25-75 mg/day as a single dose

Available forms: Caps 25, 50, 75, 100, 150, 200, 225, 300 mg; oral sol 20 mg/mL; ext rel tabs 82.5, 165, 330 mg

Administer:

• Do not crush or chew caps; caps may be opened and contents put in applesauce or dissolved in juice
• Give without regard to meals
• Gradually withdraw over 7 days; abrupt withdrawal may precipitate seizures
• **Ext rel tablets:** do not split, crush, chew; to be taken after evening meal
• **Oral sol:** should be written in mg and calculated to mL

SIDE EFFECTS

CNS: *Dizziness*, drowsiness abnormal thinking, suicidal ideation
EENT: *Dry mouth*, blurred vision, sinusitis
GI: Constipation, abdominal pain, weight gain, nausea, vomiting, increased appetite
GU: Gynecomastia
HEMA: Thrombocytopenia
MS: Back pain, rhabdomyolysis, myopathy
OTHER: Pruritus, *peripheral edema*, angioedema

PHARMACOKINETICS

Well absorbed, peak 1.5 hr; 90% recovered in urine unchanged; negligible metabolism; not bound to plasma proteins; half-life 6 hr

INTERACTIONS

Increase: weight gain/fluid retention—pioglitazone, rosiglitazone; avoid use if possible

Increase: CNS depression—anxiolytics, sedatives, hypnotics, barbiturates, general anesthetics, opiate agonists, phenothiazines, sedating H_1 blockers, thiazolidinediones, tricyclics, alcohol
Increase: angioedema—ACE inhibitors
Drug/Lab Test
Increase: creatine kinase
Decrease: platelets

NURSING CONSIDERATIONS

Assess:
- **Seizures:** aura, location, duration, activity at onset, use seizure precautions
- **Pain:** location, duration, characteristics if using for diabetic neuropathy, spinal cord injury, neuralgia
- **Renal studies:** urinalysis, BUN, urine creatinine q3mo, creatine kinase; if markedly increased, discontinue product
- **Vision:** monitor for blurred vision, nystagmus, amblyopia
- **CV/respiratory status:** monitor B/P, HR, rhythm, breathing for dyspnea, crackles, wheezing
- **Mental status:** mood, sensorium, affect, behavioral changes, suicidal thoughts/behaviors; if mental status changes, notify prescriber
- **Angioedema/hypersensitivity:** (rare) monitor for blisters, hives, rash, dyspnea, wheezing; angioedema; if these occur, discontinue; cross-hypersensitivity with this product and gabapentin may occur
- **Rhabdomyolysis and creatinine kinase elevations (rare):** monitor for muscle pain, tenderness, weakness accompanied by malaise or fever; product should be discontinued
- **Beers:** avoid in older adults unless safer alternative is unavailable; may cause ataxia, impaired psychomotor function
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause fetal toxicity; pregnant patients should enroll in the Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; do not breastfeed

Evaluate:
- Therapeutic response: decreased seizure activity; decrease in neuropathic pain

Teach patient/family:
- To carry emergency ID stating patient's name, products taken, condition, prescriber's name and phone number
- To avoid driving, other activities that require alertness because dizziness, drowsiness may occur, to obtain clearance from provider if driving is acceptable
- Not to discontinue medication quickly after long-term use; to taper over ≥1 wk; that withdrawal-precipitated seizures may occur; not to double doses if dose is missed, to take if 2 hr or more before next dose
- To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding
- To report muscle pain, tenderness, weakness when accompanied by fever, malaise, suicidal thoughts/behaviors
- To avoid alcohol, live virus vaccines

TREATMENT OF OVERDOSE:

Lavage, VS, hemodialysis

pretomanid (Rx)

(pree-toh'mah-nid)

Pretomanid*

*Both trade and generic the same name

Func. class.: Antimycobacterial
Chem. class.: Nitroimidazooxazine

ACTION:

Kills actively replicating *Mycobacterium tuberculosis* by inhibiting mycolic acid biosynthesis, thereby blocking cell wall production

USES:

Drug-resistant TB

CONTRAINDICATIONS

Hypersensitivity to this product, bedaquiline, linezolid (used in combination)

PRECAUTIONS

Breastfeeding, hepatic disease, myelosuppression, pregnancy, QT prolongation, infertility

DOSAGE AND ROUTES

- **Adult PO Pretomanid** Tablet 200 mg daily × 26 wk; **bedaquiline** 400 mg PO daily × 2 wk, then 200 mg 3 times per wk,

with at least 48 hr between doses, × 24 weeks (total of 26 wk); **linezolid** 1,200 mg PO daily × 26 wk, with adjustments to 600 mg daily and further reduction to 300 mg daily or interruption of dosing for known linezolid adverse reactions of myelosuppression, peripheral neuropathy, and optic neuropathy

Available forms: Tablets 200 mg

Administer:

- Take the combination with food, swallow whole with water
- If the combination is interrupted for safety reasons, missed doses can be made up at the end of the treatment; doses of linezolid alone missed because of linezolid adverse reactions should not be made up
- Combination may be extended beyond 26 wk if needed

SIDE EFFECTS

CNS: Peripheral neuropathy, headache, insomnia

CV: QT prolongation, hypertension

GI: Nausea, vomiting, anorexia, abdominal pain, weight loss, diarrhea, constipation, gastritis, dyspepsia

INTEG: Acne, rash, pruritus, dry skin

RESP: Lower respiratory tract infection, cough, pleuritic pain

HEMA: Thrombocytopenia, neutropenia, anemia

META: Hypoglycemia

MS: MS pain

EENT: Visual impairment, increased hyperamylasemia hemoptysis, hyperlipasemia

PHARMACOKINETICS

Protein binding 86.4%, metabolized by multiple reductive and oxidative pathways; 53% excreted in urine, 38% in feces, as metabolites; half-life 16.9-17.4 hr; CYP3A4 is responsible for 20% of the metabolism; pretomanid significantly inhibits organic anion transporter-3 (OAT3) transporter

INTERACTIONS

Decreased: pretomanid effect—strong or moderate CYP3A4 inducers (rifAMPin, efavirenz); avoid using together

Increased: effect of OAT3 substrates—monitor for adverse reactions; dosage reduction for OAT3 substrate drugs may be needed

Drug/Lab

Increased: AST/ALT, bilirubin, γ-glutamyltransferase

NURSING CONSIDERATIONS

Assess:

- **Hepatotoxicity:** assess for fatigue, anorexia, nausea, jaundice, clay-colored stools, dark urine, liver tenderness, and hepatomegaly; obtain LFTs baseline, at 2 wk, monthly; if new or worsening hepatic dysfunction occurs, test for viral hepatitis and discontinue other hepatotoxic medications; interrupt treatment with the entire regimen if ALT/AST are accompanied by total bilirubin elevation >2× ULN or ALT/AST >8× ULN or ALT/AST >5× ULN and continue >2 wk
- **Myelosuppression:** assess for anemia (may be fatal), leukopenia, thrombocytopenia, pancytopenia; monitor CBC baseline, 2 wk, monthly; decreasing or interrupting dosing may be needed in worsening myelosuppression
- **Peripheral/optic neuropathy, peripheral neuropathy:** monitor visual function; if an impairment occurs, interrupt dosing and obtain ophthalmologic testing
- **QT prolongation:** obtain an ECG baseline, and ≤2, 12, 24 wk; obtain serum potassium, calcium, and magnesium at baseline and correct if abnormal; continue to monitor if QT prolongation occurs; may occur more often in a history of torsades de pointes, congenital long QT syndrome, hypothyroidism, bradydysrhythmia, uncompensated HF or serum calcium, magnesium, or potassium levels less than lower limits of normal
- **Lactic acidosis:** assess for recurrent nausea or vomiting; if this occurs, evaluate immediately bicarbonate and lactic acid levels and possible interruption of combination

Evaluate:

Therapeutic response: TB cultures negative

Teach patient/family:
• To report fatigue, vomiting, anorexia, nausea, jaundice, clay-colored stools, dark urine, liver tenderness, and visual impairment immediately
• To swallow whole with water; that all products must be taken as a combination regimen
• **Pregnancy/breastfeeding:** to report if pregnancy is planned or suspected: not to be used in pregnancy or breastfeeding

primaquine (Rx)

(prim′a-kween)
Func. class.: Antimalarial
Chem. class.: Synthetic 8-aminoquinolone

ACTION: Unknown; thought to destroy exoerythrocytic forms by gametocidal action

USES: Malaria caused by *Plasmodium vivax;* in combination with clindamycin for *Pneumocystis jiroveci* pneumonia

CONTRAINDICATIONS: Lupus erythematosus, rheumatoid arthritis; hypersensitivity to this product or iodoquinol
Precautions: Pregnancy, breastfeeding, methemoglobin reductase deficiency, bone marrow suppression, hemolytic anemia, G6PD deficiency

DOSAGE AND ROUTES

• **Adult: PO** 15-30 mg (base)/day × 2 wk or 45 mg (base)/wk × 8 wk; 26.3-mg tab is 15-mg base
• **Child: PO** 0.5 mg/kg (0.3 mg/base/day) daily × 2 wk
Available forms: Tabs 26.3 mg (15 mg base)
Administer:
PO route
• Before or after meals at same time each day to maintain product level; take with food to decrease GI upset

SIDE EFFECTS

CNS: Headache, dizziness
CV: Hypertension, dysrhythmias
EENT: *Blurred vision, difficulty focusing*
GI: *Nausea, vomiting, anorexia,* cramps
HEMA: Agranulocytosis, granulocytopenia, leukopenia, hemolytic anemia, leukocytosis, mild anemia, methemoglobinemia
INTEG: Pruritus, skin eruptions, pallor, weakness

PHARMACOKINETICS

PO: Metabolized by liver (metabolites), half-life 3.7-9.6 hr

INTERACTIONS

• **Increase:** Toxicity: quinacrine
Decrease: effect of carBAMazepine, PHENobarbital, phenytoins, rifamycins, nafcillin
Drug/Food
Increase: primaquine effect—food
Decrease: primaquine effect—grapefruit juice
Drug/Lab Test
Increase: WBC
Decrease: WBC, RBC, HB

NURSING CONSIDERATIONS

Assess:
• **Hepatic studies weekly:** AST, ALT, bilirubin if patient receiving long-term therapy
• **Blood studies:** CBC; blood dyscrasias occur
• **Allergic reactions:** pruritus, rash, urticaria
• **Blood dyscrasias:** malaise, fever, bruising, bleeding (rare)
• **Renal status:** dark urine, hematuria, decreased output
• **Hemolytic reaction:** chills, fever, chest pain, cyanosis; product should be discontinued immediately; hemolytic anemia, G6PD deficiency may be severe in patients of Asian, Mediterranean descent
• **Pregnancy/breastfeeding:** do not use in pregnancy/breastfeeding; pregnancy testing should be completed in sexually active females of childbearing age; adequate contraception should be used while taking this product

Evaluate:
• Therapeutic response: decreased symptoms of malaria
Teach patient/family:
• To report visual problems, fever, fatigue, dark urine, bruising, bleeding; may indicate blood dyscrasias
• To complete full course of therapy; to take with food to decrease GI upset; if vomiting occurs within 30 min of taking dose, to repeat the dose

primidone (Rx)

(pri′mi-done)
Mysoline, Sertan
Func. class.: Anticonvulsant, barbiturate

USES: Management of grand mal, psychomotor, focal seizures

CONTRAINDICATIONS

Hypersensitivity to phenobarbital, porphyria

DOSAGE AND ROUTES

Seizure disorders (grand mal, psychomotor, and focal).
Adult/child≥ 8 yr: PO Days 1-3: 100-125 mg/day at bedtime; **days 4-6:** 100-125 bid; **days 7-9:** 100-125 mg tid; usual dose 750-1500 mg/day in divided doses 3-4 times/day, max 2 g/day
Children <8 yr: PO Days 1-3: 50 mg at bedtime; **days 4-6:** 50 mg bid; **days 7-9:** 100 mg bid; **maintenance (starting day 10):** 125-250 mg tid
Available forms: Tabs 50, 250 mg

probenecid (Rx)

(proe-ben′e-sid)
Func. class.: Uricosuric, antigout agent
Chem. class.: Sulfonamide derivative

ACTION: Inhibits tubular reabsorption of urates, with increased excretion of uric acids

USES: Hyperuricemia in gout, gouty arthritis, adjunct to penicillin treatment

CONTRAINDICATIONS:

Hypersensitivity, severe renal/hepatic disease, CCr <50 mg/min, history of uric acid calculus
Precautions: Pregnancy, children <2 yr, sulfonamide hypersensitivity, peptic ulcer

DOSAGE AND ROUTES

Adjunct to penicillin
• **Adult/adolescent >15 yr, >50 kg (110 lb): PO** 500 mg qid
Gout/gouty arthritis
• **Adult: PO** 250 mg bid for 1 wk, then 500 mg bid, max 2 g/day; maintenance 500 mg/day × 6 mo
Adjunct in penicillin treatment
• **Adult and adolescent >50 kg: PO** 500 mg qid
• **Child <50 kg: PO** 25 mg/kg, then 40 mg/kg in divided doses qid
Renal dose
• Avoid use if CCr <50 mL/min
Available forms: Tabs 500 mg
Administer:
• After meals or with milk if GI symptoms occur
• Increase fluid intake to 2-3 L/day to prevent urinary calculi

SIDE EFFECTS

CNS: Drowsiness, headache, flushing
CV: Bradycardia
GI: *Gastric irritation, nausea, vomiting, anorexia,* hepatic necrosis
GU: Glycosuria, thirst, frequency, nephrotic syndrome
INTEG: Rash, dermatitis, pruritus, fever
META: *Acidosis, hypokalemia, hyperchloremia,* hyperglycemia
RESP: Apnea, irregular respirations

PHARMACOKINETICS

Peak 2-4 hr, duration 8 hr, half-life 5-8 hr; metabolized by liver; excreted in urine

INTERACTIONS

Increase: effect of acyclovir, barbiturates, allopurinol, benzodiazepines, dyphylline,

zidovudine, cephalosporins, penicillins, sulfonamides
Increase: toxicity—sulfa products, dapsone, clofibrate, indomethacin, rifAMPin, naproxen, methotrexate
Decrease: action of probenecid—salicylates
Drug/Lab Test
Increase: theophylline levels

NURSING CONSIDERATIONS

Assess:
• Uric acid levels (3-7 mg/dL); mobility, joint pain, swelling, maintain fluid intake at 2-3 L/day
• Respiratory rate, rhythm, depth; notify prescriber of abnormalities
• Electrolytes; CO_2 before, during treatment
• Urine pH, output, glucose during beginning treatment, poor effect in GFR <30 mL/min
• **For CNS symptoms:** confusion, twitching, hyperreflexia, stimulation, headache; may indicate overdose
• **Beers:** avoid in older adults with creatinine clearance <30 mL/min
Evaluate:
• Therapeutic response: absence of pain, stiffness in joints
Teach patient/family:
• To avoid OTC preparations (aspirin) unless directed by prescriber; to increase water intake, avoid alcohol, caffeine

probenecid/colchicine (Rx)

(proe-ben′e-sid/kol′chi-seen)
Func. class.: Antiinflammatory agent, antigout, uricosuric

USES: Treatment of chronic gouty arthritis with frequent, recurrent acute attacks of gout

CONTRAINDICATIONS

Hypersensitivity to colchicine, probenecid, or any component; child <2 yr; aspirin usage; blood dyscrasias; uric acid kidney stones; initiation during an acute gout attack; concomitant use of a P-glycoprotein (P-gp) or strong CYP3A4 inhibitor in renal/hepatic disease

DOSAGE AND ROUTES

Gouty arthritis
Adult: PO Colchicine 0.5 mg/probenecid 0.5 g: 1 tablet daily × 1 week, then 1 tablet bid, max 4 tablets/day
Available forms: Tabs 500 mg/0.5 mg

⚠ HIGH ALERT

procainamide (Rx) NTI

(proe-kane-ah′mide)
Func. class.: Antidysrhythmic (class IA)
Chem. class.: Procaine HCl amide analog

ACTION: Depresses excitability of cardiac muscle to electrical stimulation and slows conduction velocity in atrium, bundle of His, and ventricle; increases refractory period

USES: Life-threatening ventricular dysrhythmias
Unlabeled uses: Atrial fibrillation/flutter, paroxysmal atrial tachycardia, PSVT, Wolff-Parkinson-White (WPW) syndrome

CONTRAINDICATIONS: Hypersensitivity, severe heart block, torsades de pointes

Black Box Warning: Lupus erythematosus

Precautions: Pregnancy, breastfeeding, children, renal/hepatic disease, HF, respiratory depression, cytopenia, dysrhythmia associated with digoxin toxicity, myasthenia gravis, digoxin toxicity

Black Box Warning: Bone marrow failure, cardiac arrhythmias

DOSAGE AND ROUTES—NTI

Ventricular tachycardia during CPR

- **Adult: IV** loading dose 20 mg/min; either ventricular tachycardia resolves or patient becomes hypotensive; QRS complex is widened by 50% of original width or total is 17 mg/kg (1.2 g for a 70-kg patient); may give up to 50 mg/min in urgent situations; maintenance: 1-4 mg/min **CONT IV INFUSION; IM** 50 mg/kg/day in divided doses q3-6hr
- **Child: IV** PALS 15 mg/kg over 30-60 min

Renal dose

- **Adult: IV** CCr 35-59 mL/min, give 70% maintenance dose; CCr 15-34 mL/min, give 40%-60% maintenance dose; CCr <15 mL/min, individualize dose

Available forms: Inj 100, 500 mg/mL

Administer:

IM route

- IM inj in deltoid; aspirate to avoid intravascular administration; use only when unable to use IV

Direct IV route

- Dilute each 100 mg/10 mL of 0.9% NaCl; give at max 50 mg/min

Intermittent IV INFUSION route

- Dilute 0.2-1 g/50-500 mL of D_5W (2-4 mg/mL); give over 30-60 min at max 25-50 mg/min; use infusion pump

Y-site compatibilities: Alfentanil, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B lipid complex, amphotericin B liposome, anidulafungin, ascorbic acid, atenolol, atracurium, atropine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, caspofungin, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, cefTRIAXone, cefuroxime, cephalothin, chlorproMAZINE, cimetidine, cisatracurium, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, indomethacin, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, mezlocillin, miconazole, midazolam, mitoXANTRONE, morphine, moxalactam, multivitamins, mycophenolate, nafcillin, nalbuphine, naloxone, netilmicin, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, phytonadione, piperacillin, piperacillin-tazobactam, polymyxin B, potassium chloride, prochlorperazine, promethazine, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, ritodrine, rocuronium, sodium bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, vitamin B complex/C, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: *Headache, dizziness,* confusion, psychosis, restlessness, irritability, weakness, depression

CV: *Hypotension,* heart block, cardiovascular collapse, arrest, torsades de pointes

GI: Nausea, vomiting, anorexia, diarrhea, hepatomegaly, pain, bitter taste

HEMA: SLE syndrome, agranulocytosis, thrombocytopenia, neutropenia, hemolytic anemia
INTEG: Rash, urticaria, edema, swelling (rare), pruritus, flushing, angioedema
SYST: SLE

PHARMACOKINETICS

Metabolized in liver to active metabolites, excreted unchanged by kidneys (60%), protein binding 15%
IM: Peak 10-60 min, half-life 3 hr

INTERACTIONS

Increase: effects of neuromuscular blockers
Increase: procainamide effects—cimetidine, quiNIDine, trimethoprim, β-blockers, raNITIdine
Increase: toxicity—other antidysrhythmics, thioridazine, quinolones
Drug/Lab Test
Increase: ALT, AST, alk phos, LDH, bilirubin

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Cardiac dysrhythmias: ECG continuously if using IV to determine increased PR or QRS segments; discontinue immediately; watch for increased ventricular ectopic beats, maximum need to rebolus

• Therapeutic blood levels, 4-10 mcg/mL or NAPA levels 10-20 mcg/mL

Black Box Warning: Bone marrow suppression: CBC q2wk × 3 mo; leukocyte, neutrophil, platelet counts may be decreased, treatment may need to be discontinued

• I&O ratio; electrolytes (K, Na, Cl), weight weekly, report gain of >2 lb
• **Toxicity:** confusion, drowsiness, nausea, vomiting, tachydysrhythmias, oliguria
• ANA titer; during long-term treatment, watch for lupuslike symptoms
• Respiratory status: rate, rhythm, character, lung fields; bilateral crackles may occur in HF patient; watch for respiratory depression
• **CNS effects:** dizziness, confusion, psychosis, paresthesias, seizures; product should be discontinued
• **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed

Evaluate:

• Therapeutic response: decreased dysrhythmias

Teach patient/family:

• That wax matrix may appear in stools
• Not to discontinue without provider's approval

Black Box Warning: To notify prescriber immediately if lupuslike symptoms appear (joint pain, butterfly rash, fever, chills, dyspnea)

Black Box Warning: To notify prescriber of leukopenia (sore mouth, gums, throat) or thrombocytopenia (bleeding, bruising)

• How to take pulse and when to report to prescriber
• To avoid driving, other hazardous activities until product effect is known

TREATMENT OF OVERDOSE:

O_2, artificial ventilation, ECG, administer DOPamine for circulatory depression, diazePAM or thiopental for seizures, isoproterenol

⚠ HIGH ALERT

procarbazine (Rx)

(proe-kar'ba-zeen)

Matulane

Func. class.: Antineoplastic, alkylating agent
Chem. class.: Hydrazine derivative

Do not confuse:
Matulane/Materna

ACTION: Inhibits DNA, RNA, protein synthesis; has multiple sites of action; nonvesicant

USES: Lymphoma, Hodgkin's disease, cancers resistant to other therapy

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, thrombocytopenia, bone marrow depression
Precautions: Cardiac/renal/hepatic disease, radiation therapy, seizure disorder, anemia, bipolar disorder, Parkinson's disease

Black Box Warning: Requires a specialized care setting and an experienced clinician

DOSAGE AND ROUTES

• **Adult: PO** 2-4 mg/kg/day for 1st wk; maintain dosage of 4-6 mg/kg/day until platelets, WBC fall; after recovery, 1-2 mg/kg/day, may use as single agent or in combination
• **Child: PO** 50 mg/m^2/day for 7 days, then 100 mg/m^2 until desired response, leukopenia, or thrombocytopenia occurs; 50 mg/m^2/day maintenance after bone marrow recovery
Available forms: Caps 50 mg
Administer:
• In divided doses and at bedtime to minimize nausea and vomiting
• Nonphenothiazine antiemetic 30-60 min before product and 4-10 hr after treatment to prevent vomiting

SIDE EFFECTS

CNS: Headache, dizziness, insomnia, hallucinations, confusion, coma, pain, chills, fever, sweating, paresthesias, seizures, peripheral neuropathy
EENT: Retinal hemorrhage, nystagmus, photophobia, diplopia, dry eyes
GI: *Nausea, vomiting,* anorexia, diarrhea, constipation, dry mouth, stomatitis, elevated hepatic enzymes
GU: Azoospermia, cessation of menses
HEMA: Thrombocytopenia, anemia, leukopenia, myelosuppression, bleeding tendencies, purpura, petechiae, epistaxis, hemolysis
INTEG: *Rash,* pruritus, dermatitis, alopecia, herpes, hyperpigmentation
MS: Arthralgias, myalgias
RESP: Cough, pneumonitis, hemoptysis
SYST: Secondary malignancy

PHARMACOKINETICS

Half-life 1 hr; concentrates in liver, kidney, skin; metabolized in liver, excreted in urine

INTERACTIONS

Increase: hypotension—meperidine; do not use together
Increase: neuroleptic malignant syndrome, seizures, hyperpyrexia—alcohol, MAOIs, tricyclics, sympathomimetic products, SSRIs, SNRIs
Increase: hypertension—guanethidine, levodopa, methyldopa, reserpine, caffeine
Life-threatening hypertension: sympathomimetics
Increase: bleeding risk—NSAIDs, anticoagulants, platelet inhibitors, thrombolytics
Increase: CNS depression—barbiturates, antihistamines, opioids, hypotensive agents, phenothiazines
Drug/Food
• **Hypertensive crisis:** tyramine foods

NURSING CONSIDERATIONS

Assess:
• **Bone marrow suppression:** CBC, differential, platelet count weekly; withhold product if WBC is <4000/mm^3 or platelet count is <100,000/mm^3; notify prescriber
• **Hepatic/renal disease:** can cause accumulation of drug, increased toxicity; renal studies: BUN; serum uric acid; urine CCr; electrolytes before, during therapy; I&O ratio, report fall in urine output to <30 mL/hr; hepatic studies before, during therapy: bilirubin, AST, ALT, alk phos, LDH prn or monthly
• Monitor temperature; fever may indicate beginning infection

Black Box Warning: To be used only in a specialized care setting with emergency equipment

Black Box Warning: To be given only by an experienced clinician knowledgeable in cytotoxic products

- CNS changes: confusion, paresthesias, neuropathies; product should be discontinued
- **Tyramine foods in diet; hypertensive crisis can occur**
- **Toxicity:** facial flushing, epistaxis, increased PT, thrombocytopenia; product should be discontinued
- **Bleeding:** hematuria, guaiac stools, bruising or petechiae, mucosa or orifices q8hr
- Effects of alopecia on body image; discuss feelings about body changes
- Jaundiced skin, sclera; dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea
- Buccal cavity for dryness, sores or ulceration, white patches, oral pain, bleeding, dysphagia
- GI symptoms: frequency of stools, cramping
- **Acidosis, signs of dehydration:** rapid respirations, poor skin turgor, decreased urine output, dry skin, restlessness, weakness
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decreasing malignancy

Teach patient/family:

- **To report any complaints, side effects to nurse or prescriber:** CNS changes, diarrhea, cough, SOB, fever, chills, sore throat, bleeding, bruising, vomiting blood; black, tarry stools
- That hair may be lost during treatment and wig or hairpiece may make patient feel better; that new hair may be different in color, texture
- To avoid sunlight or UV exposure; to wear sunscreen or protective clothing
- To avoid foods with citric acid, hot temperature, or rough texture
- To report any bleeding, white spots, ulcerations in mouth to prescriber; to examine mouth daily
- To avoid driving, activities requiring alertness because dizziness may occur
- **Pregnancy/breastfeeding:** to use effective contraception; to avoid breastfeeding; that product may cause infertility
- To avoid the ingestion of alcohol, caffeine, tyramine-containing foods; that cold, hay fever, and weight-reducing products may cause serious product interactions; to avoid smoking
- To avoid crowds, persons with infections if granulocytes are low
- To avoid vaccines

prochlorperazine (Rx)

(proe-klor-pair′a-zeen)

Compazine, Compro

Func. class.: Antiemetic, antipsychotic

Chem. class.: Phenothiazine, piperazine derivative

Do not confuse:

prochlorperazine/chlorproMAZINE

ACTION: Decreases DOPamine neurotransmission by increasing DOPamine turnover through the blockade of the D_2 somatodendritic autoreceptor in the mesolimbic system

USES: Nausea, vomiting, psychotic disorders

Unlabeled uses: Migraine

CONTRAINDICATIONS: Hypersensitivity to phenothiazines, coma; infants, neonates, children <2 yr or <20 lb; surgery

Precautions: Pregnancy, breastfeeding, geriatric patients, seizure, encephalopathy, glaucoma, hepatic disease, Parkinson's disease, BPH

Black Box Warning: Increased mortality in elderly patients with dementia-related psychosis

DOSAGE AND ROUTES

Postoperative nausea/vomiting

- **Adult: IM** 5-10 mg 1-2 hr before anesthesia; may repeat after 30 min; **IV**

5-10 mg 15-30 min before anesthesia; **IV INFUSION** 20 mg/L D_5W or NS 15-30 min before anesthesia, max 40 mg/day

Severe nausea/vomiting

- **Adult: PO** 5-10 mg tid-qid; **SUS REL** 15 mg/day in AM or 10 mg q12hr; **RECT** 25 mg/bid; **IM** 5-10 mg q3-4hr prn, max 40 mg/day
- **Child 18-39 kg: PO** 2.5 mg tid or 5 mg bid; **IM** 0.132 mg/kg q3-4hr prn, max 15 mg/day
- **Child 14-17 kg: PO/RECT** 2.5 mg bid-tid; **IM** 0.132 mg/kg q3-4hr prn, max 10 mg/day
- **Child 9-13 kg: PO/RECT** 2.5 mg/day-bid; **IM** 0.132 mg/kg q3-4hr prn, max 7.5 mg/day

Antipsychotic

- **Adult/child ≥12 yr: PO** 5-10 mg tid-qid; may increase q2-3days, max 150 mg/day; **IM** 10-20 mg q2-4hr up to 4 doses, then 10-20 mg q4-6hr
- **Child 2-12 yr: PO** 2.5 mg bid-tid; **IM** 0.132 mg/kg change to oral ASAP

Antianxiety

- **Adult/child ≥12 yr: PO** 5 mg tid-qid, max 20 mg/day
- **Child 2-12 yr: IM** 0.132 mg/kg change to oral ASAP

Available forms: Tabs 5, 10 mg; supp 10 ✱, 25 mg; sol for inj 5 mg/mL

Administer:

- Avoid other CNS depressants

IM route

- IM inj in large muscle mass; aspirate to avoid IV administration
- Keep patient recumbent for $^1/_2$ hr

Direct IV route

- May give diluted or undiluted; inject directly in a vein ≤5 mg/min; do not give as bolus

Intermittent IV INFUSION route

- May dilute 20 mg/L NaCl and give as infusion 15-30 min before anesthesia induction

SIDE EFFECTS

CNS: Neuroleptic malignant syndrome, *extrapyramidal reactions, tardive dyskinesia, euphoria,* depression, *drowsiness,* restlessness, tremor, dizziness, headache

CV: tachycardia, hypotension, ECG changes

EENT: Blurred vision

GI: Nausea, vomiting, anorexia, dry mouth, diarrhea, constipation, weight loss, metallic taste, cramps

HEMA: Agranulocytosis

MISC: Impotence; urine color change

RESP: Respiratory depression

PHARMACOKINETICS

Metabolized by liver; excreted in urine, breast milk; crosses placenta; 91%-99% protein binding

IM: Onset 10-20 min, duration 4-6 hr; children: 12 hr

PO: Onset 30-40 min, duration 3-4 hr

RECT: Onset 60 min, duration 3-4 hr

INTERACTIONS

Increase: anticholinergic action—anticholinergics, antiparkinson products, antidepressants

Increase: CNS depression—CNS depressants

Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs

Decrease: prochlorperazine effect—barbiturates, antacids, lithium

Drug/Herb

Increase: CNS depression—chamomile, hops, kava, St. John's wort, valerian

Increase: EPS—kava

Drug/Lab Test

Increase: LFTs, cardiac enzymes, cholesterol, blood glucose, prolactin, bilirubin, PBI, ^{131}I, alk phos, leukocytes, granulocytes, platelets

Decrease: hormones (blood and urine)

False positive: pregnancy tests, urine bilirubin

False negative: urinary steroids, 17-OHCS, pregnancy tests

NURSING CONSIDERATIONS

Assess:

- **EPS:** abnormal movement, tardive dyskinesia, akathisia
- VS, B/P; check patients with cardiac disease more often
- **Neuroleptic malignant syndrome:** seizures, hypo/hypertension, fever, tachy-

cardia, dyspnea, fatigue, muscle stiffness, loss of bladder control; notify prescriber immediately

• CBC, LFTs during course of treatment; blood dyscrasias, hepatotoxicity may occur

• **Respiratory status** before, during, after administration of emetic; check rate, rhythm, character; respiratory depression can occur rapidly among geriatric or debilitated patients

• **Beers:** avoid in older adults with a high risk of delirium

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; EPS may result; cautious use in breastfeeding, excreted in breast milk

Evaluate:

• Therapeutic response: absence of nausea, vomiting; reduced anxiety, agitation, excitability

Teach patient/family:

• To avoid hazardous activities, activities requiring alertness because dizziness may occur

• To avoid alcohol

• Not to double or skip doses

• That urine may be pink to reddish brown

• That suppositories may contain coconut/palm oil

• To report dark urine, clay-colored stools, bleeding, bruising, rash, blurred vision

• To avoid sun; wear sunscreen, protective clothing

progesterone (Rx)

(proe-jess′ter-one)

Crinone, Endometrin, Prometrium

Func. class.: Hormone, Progestogen

Chem. class.: Progesterone derivative

ACTION: Inhibits secretion of pituitary gonadotropins, which prevents follicular maturation, ovulation; stimulates growth of mammary tissue; antineoplastic action against endometrial cancer

USES: Contraception, amenorrhea, premenstrual syndrome, abnormal uterine bleeding, endometrial hyperplasia prevention, assisted reproductive technology (ART) gel

Unlabeled uses: PMS, preterm delivery prophylaxis

CONTRAINDICATIONS: Pregnancy, ectopic pregnancy; hypersensitivity to this product, peanuts, or peanut oil; thromboembolic disorders, reproductive cancer, genital bleeding (abnormal, undiagnosed), cerebral hemorrhage, PID, STDs, thrombophlebitis

Black Box Warning: Breast cancer

Precautions: Breastfeeding, hypertension, asthma, blood dyscrasias, HF, diabetes mellitus, bone disease, depression, migraine headache, seizure disorders, gallbladder/renal/hepatic disease, family history of breast/reproductive tract cancer

Black Box Warning: Cardiac disease, dementia

DOSAGE AND ROUTES

Infertility

• **Adult: VAG** 90 mg/day (micronized gel); 100 mg 2-3 times/day starting day after oocyte retrieval and for ≤10 wk total

Amenorrhea/functional uterine bleeding

• **Adult: IM** 5-10 mg/day × 6-8 doses

Endometrial hyperplasia prevention

• **Adult: PO** 200 mg/day × 14 days

Assisted reproductive therapy

• **Adult: GEL** 90 mg (8%) vaginally daily for supplementation; 90 mg (8%) vaginally bid for replacement; if pregnancy occurs, continue × 10-12 wk

Corpus luteum insufficiency (assisted reproductive technology [ART])

• **Adult: VAG INSERT** 90-100 mg bid-tid starting at oocyte retrieval and continuing up to 10-12 wk gestation

Available forms: Inj 50 mg/mL; vag gel 4%, 8%; caps 100, 200 mg; vag insert 100 mg; vag supp 25, 100, 200, 500 mg; compounding kit 25, 50, 100, 200, 400 mg; oil for IM injection 50 mg/mL

Administer:

PO route

- Do not break, crush, or chew caps
- Titrated dose; use lowest effective dose
- In 1 dose in AM
- With food or milk to decrease GI symptoms
- Start progesterone 14 days after estrogen dose if given concomitantly

Vaginal route

- Wait at least 6 hr after any vaginal treatment before using vaginal gel, use applicator provided

IM route

- Shake vial, inject deeply into large muscle, aspirate
- Check for particulate matter and discoloration before injecting

SIDE EFFECTS

CNS: *Dizziness, headache,* depression, *fatigue,* mood swings

CV: Hypotension, thrombophlebitis, edema, thromboembolism, stroke, pulmonary embolism, MI

EENT: Diplopia, retinal thrombosis

GI: *Nausea,* vomiting, anorexia, cramps, increased weight, cholestatic jaundice, *constipation,* abdominal pain

GU: Amenorrhea, cervical erosion, breakthrough bleeding, dysmenorrhea, nocturia, breast changes, *gynecomastia,* endometriosis, spontaneous abortion, breast pain, ectopic pregnancy

INTEG: Rash, urticaria, acne, hirsutism, alopecia, photosensitivity

META: Hyperglycemia

SYST: Angioedema, anaphylaxis

PHARMACOKINETICS

Excreted in urine, feces; metabolized in liver

IM/RECT/VAG: Duration 24 hr

INTERACTIONS

Increase: progesterone effect—CYP3A4 inhibitors (ketoconazole, clarithromycin, erythroycin, verapamil)

Decrease: progesterone effect—phenytoin, barbiturates

Drug/Lab Test

Increase: alk phos, nitrogen (urine), pregnanediol, amino acids, factors VII, VIII, IX, X

Decrease: GTT, HDL

NURSING CONSIDERATIONS

Assess:

- **Abnormal uterine bleeding:** vaginal bleeding; obtain pad count, patient menstrual history, breast exam, cervical cytology
- Weight daily; notify prescriber of weekly weight gain of >5 lb
- B/P at beginning of treatment and periodically
- I&O ratio; be alert for decreasing urinary output, increasing edema
- **Hepatic studies:** ALT, AST, bilirubin periodically during long-term therapy
- Edema, hypertension, cardiac symptoms, jaundice, thromboembolism
- **Mental status:** affect, mood, behavioral changes, depression
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decreased abnormal uterine bleeding, absence of amenorrhea

Teach patient/family:

- To report breast lumps, vaginal bleeding, edema, jaundice, dark urine, clay-colored stools, dyspnea, headache, blurred vision, abdominal pain, numbness or stiffness in legs, chest pain
- To avoid gel with other vaginal products; if to be used together, to separate by ≥6 hr; for vaginal route, on proper insertion technique
- To report suspected pregnancy
- To monitor blood glucose if diabetic
- To avoid activities requiring mental alertness until effects are realized; can cause dizziness

P

⚠ HIGH ALERT

promethazine (Rx)

(proe-meth'a-zeen)

Phenergan

Func. class.: Antihistamine, H_1-receptor antagonist, antiemetic

Chem. class.: Phenothiazine derivative

ACTION: Acts on blood vessels, GI, respiratory system by competing with histamine for H_1-receptor sites; decreases allergic response by blocking histamine

USES: Motion sickness, rhinitis, allergy symptoms, sedation, nausea, preoperative and postoperative sedation
Unlabeled uses: Allergic rhinitis, acute peripheral vestibular nystagmus, hyperemesis gravidarum

CONTRAINDICATIONS: Hypersensitivity, breastfeeding, agranulocytosis, bone marrow suppression, coma, jaundice, Reye's syndrome

Black Box Warning: Infants, neonates, children, intraarterial/SUBCUT administration, extravasation

Precautions: Pregnancy, cardiac/renal/hepatic disease, asthma, seizure disorder, prostatic hypertrophy, bladder obstruction, glaucoma, COPD, GI obstruction, ileus, CNS depression, diabetes, sleep apnea, urinary retention, IV use

Black Box Warning: Tissue necrosis (IV use)

DOSAGE AND ROUTES

Nausea/vomiting
- **Adult: PO/IM/IV/RECT** 12.5-25 mg; q4-6hr prn
- **Child >2 yr: PO/IM/IV/RECT** 0.25-0.5 mg/kg q4-6hr prn

Motion sickness
- **Adult: PO** 25 mg bid, give $^1/_2$-1 hr before departure, then q8-12hr prn
- **Child ≥2 yr: PO/IM/RECT** 12.5-25 mg bid, give $^1/_2$-1 hr before departure, then q8-12hr prn

Sedation
- **Adult: PO/IM** 25-50 mg at bedtime
- **Child ≥2 yr: PO/IM/RECT** 12.5-25 mg at bedtime

Sedation (preoperative/postoperative)
- **Adult: PO/IM/IV** 25-50 mg
- **Child >2 yr: PO/IM/IV** 0.5-1.1 mg/kg

Allergy/rhinitis (unlabeled)
- **Adult: PO** 12.5 mg qid or 25 mg at bedtime
- **Child ≥2 yr: PO** 6.25-12.5 mg tid or 25 mg at bedtime

Hyperemesis gravidarum (unlabeled)
- **Pregnant female: PO/RECT/IM/IV** 12.5-25 mg q4hr

Nystagmus (unlabeled)
- **Adult: PO** 12.5-25 mg q4-6hr for ≤48 hr

Available forms: Tabs 12.5, 25, 50 mg; supp 12.5, 25, 50 mg; inj 25, 50 mg/mL

Administer:
Avoid use with other CNS depressants

PO route
- With meals for GI symptoms; absorption may slightly decrease
- When used for motion sickness, 30 min-1 hr before travel

IM route
- IM inj deep in large muscle; rotate site, necrosis may occur from subcut injection, give only IM

Direct IV route

Black Box Warning: Check for extravasation: burning, pain, swelling at IV site; can cause tissue necrosis

- Do not use if precipitate is present
- Rapid administration may cause transient decrease in B/P
- After diluting each 25-50 mg/9 mL of NaCl for inj; give ≤25 mg/2 min

Y-site compatibilities: Alfentanil, amifostine, amikacin, aminocaproic acid, amsacrine, anidulafungin, ascorbic acid, atenolol, atracurium, atropine, aztreonam, benztropine, bivalirudin, bleomycin,

bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, cladribine, codeine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexmedetomidine, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin, eptifibatide, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, gemcitabine, gentamicin, glycopyrrolate, granisetron, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, insulin (regular), irinotecan, isoproterenol, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, miconazole, midazolam, milrinone, mitoXANTRONE, morphine, mycophenolate, nalbuphine, naloxone, netilmicin, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, pentazocine, phenylephrine, polymyxin B, procainamide, prochlorperazine, propranolol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, Ringer's, ritodrine, riTUXimab, rocuronium, sargramostim, sodium acetate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, tigecycline, tirofiban, TNA, tobramycin, tolazoline, trastuzumab, trimetaphan, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* poor coordination, fatigue, anxiety, euphoria, confusion, paresthesia, neuritis, EPS, neuroleptic malignant syndrome

CV: Hypo/hypertension, palpitations, tachycardia, orthostatic hypotension

EENT: Blurred vision, dilated pupils, tinnitus, nasal stuffiness; dry nose, throat, mouth; photosensitivity

GI: *Constipation,* dry mouth, nausea, vomiting, anorexia, diarrhea

GU: *Urinary retention,* dysuria, frequency

INTEG: Rash, urticaria, photosensitivity, tissue necrosis (infiltration IV site)

RESP: Increased thick secretions, wheezing, chest tightness; apnea in neonates, infants, young children

PHARMACOKINETICS

Metabolized in liver; excreted by kidneys, GI tract (inactive metabolites)

PO: Onset 20 min, duration 4-12 hr

IV: Onset 3-5 min

INTERACTIONS

Increase: CNS depression—barbiturates, opioids, hypnotics, tricyclics, alcohol

Increase: promethazine effect—MAOIs

Decrease: oral anticoagulants effect—heparin

Drug/Lab Test

Increase: glucose

False negative: skin allergy test, urine pregnancy test

False positive: urine pregnancy test

Interference: blood grouping (ABO), GTT

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Child: not to be used in children <2 yr, fatal respiratory depression may occur; use cautiously in children >2 yr, seizures, paradoxical CNS stimulation may occur

- **Antiemetic/motion sickness:** nausea, vomiting before, after dose
- I&O ratio; be alert for urinary retention, frequency, dysuria; product should be discontinued
- **Respiratory depression/sedation:** degree of sedation, respiratory risk, CNS depressants may cause increased sedation

• **EPS:** pseudoparkinsonism, dystonia, akathisia, may be worse in geriatric patients
• **Anticholinergic effects:** dry mouth, confusion, urinary retention, more common in geriatric patients
• **CBC with differential, LFTs during long-term therapy; blood dyscrasias, jaundice may occur**
• Respiratory status: rate, rhythm, increase in bronchial secretions, wheezing, chest tightness
• Cardiac status: palpitations, increased pulse, hypo/hypertension, B/P in those receiving IV doses
• **Neuroleptic malignant syndrome: fever, confusion, diaphoresis, rigid muscles, elevated CPK, encephalopathy; discontinue product, notify prescriber**
• Hard candy, gum, frequent rinsing of mouth for dryness

Evaluate:
• Therapeutic response: absence of running, congested nose; rashes; absence of motion sickness, nausea; sedation

Teach patient/family:
• That product may cause photosensitivity; to avoid prolonged exposure to sunlight
• To notify prescriber of confusion, sedation, hypotension, jaundice, fever
• To avoid driving, other hazardous activity if drowsy
• To avoid concurrent use of alcohol or other CNS depressants
• That product may reduce sweating; that there is a risk of heat stroke
• How to use frequent sips of water, gum to decrease dry mouth

⚠ HIGH ALERT

propafenone (Rx)

(pro-paff'e-nown)

Rythmol ✱, Rythmol SR

Func. class.: Antidysrhythmic (class IC)

ACTION: Slows conduction velocity; reduces membrane responsiveness; inhibits automaticity; increases ratio of effective refractory period to action potential duration; β-blocking activity

USES: Sustained ventricular tachycardia, atrial fibrillation (single dose), paroxysmal supraventricular tachycardia (PSVT) prophylaxis, supraventricular dysrhythmias
Unlabeled uses: Wolff-Parkinson-White (WPW) syndrome

CONTRAINDICATIONS: 2nd/3rd-degree AV block, right bundle branch block, cardiogenic shock, hypersensitivity, bradycardia, uncontrolled HF, sick-sinus syndrome, marked hypotension, bronchospastic disorders, electrolyte imbalance, Brugada syndrome
Precautions: Pregnancy, breastfeeding, children, geriatric patients, HF, hypo/hyperkalemia, nonallergic bronchospasm, renal/hepatic disease, hematologic disorders, myasthenia gravis, COPD

Black Box Warning: Recent MI, cardiac arrhythmias, QT prolongation, torsades de pointes

DOSAGE AND ROUTES

PSVT
• **Adult: PO** 150 mg q8hr; allow 3-4 day interval before increasing dose, max 900 mg/day

Atrial fibrillation
• **Adult: PO** 450 or 600 mg as single dose; SR 225 mg q12hr, may increase to 325 q12hr, max 425 mg q12hr

Available forms: Tabs 150, 225, 300 mg; SR cap 225, 325, 425 mg

Administer:
• Do not break, crush, or chew tabs; swallow whole
• **To hospitalized patients because heart monitoring is required**
• After hypo/hyperkalemia is corrected
• With dosage adjustment q3-4days
• Without regard to meals

SIDE EFFECTS

CNS: Headache, dizziness, abnormal dreams, syncope, confusion, seizures, insomnia, tremor, anxiety, fatigue
CV: Supraventricular dysrhythmia, ventricular dysrhythmia, bradycardia, prodysrhythmia, palpitations, AV block, intraventricular conduction delay, AV dissociation, hypotension, chest pain, asystole
EENT: Blurred vision, altered taste, tinnitus
GI: *Nausea, vomiting,* constipation, dyspepsia, cholestasis, abnormal hepatic studies, dry mouth, diarrhea, anorexia
HEMA: Leukopenia, agranulocytosis, granulocytopenia, thrombocytopenia, anemia, bruising
INTEG: Rash
RESP: Dyspnea

PHARMACOKINETICS

Peak 3-8 hr, half-life 2-10 hr, poor metabolizers 10-32 hr; metabolized in liver; excreted in urine (metabolite)

INTERACTIONS

Increase: propafenone effects—CYP1A2, CYP2D6, CYP3A4 inhibitors (protease inhibitors, quiNINE, PARoxetine, saquinavir, erythromycin, azole antifungals, sertraline, tricyclics)
Increase: QT prolongation—other class IA/IC antidysrhythmics, arsenic trioxide, chloroquine, clarithromycin, droperidol, erythromycin, haloperidol, methadone, pentamidine, chlorproMAZINE, mesoridazine, thioridazine
Increase: anticoagulation—warfarin
Increase: CNS effects—local anesthetics
Increase: digoxin level—digoxin
Increase: β-blocker effect—propranolol, metoprolol
Increase: cycloSPORINE levels—cycloSPORINE
Decrease: propafenone effect—rifAMPin, cimetidine, quiNIDine
Drug/Food
Increase: propafenone effect—grapefruit juice
Drug/Herb
Decrease: propafenone effect—St. John's wort
Drug/Lab Test
Increase: CPK, Hct, HB
Decrease: WBC, platelets

NURSING CONSIDERATIONS

Assess:
• GI status: bowel pattern, number of stools

Black Box Warning: QT/PR prolongation: ECG or Holter monitor before and during therapy

Black Box Warning: HF: dyspnea, jugular venous distention, crackles, edema in extremities, I&O ratio; check for decreasing output; daily weight

• CBC, ANA titer, LFTs
• Chest x-ray, pulmonary function test during treatment
• Lung fields; bilateral crackles, dyspnea, peripheral edema, weight gain; jugular venous distention may occur in patient with HF
• **Toxicity:** fine tremors, dizziness, hypotension, drowsiness, abnormal heart rate
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excreted in breast milk
Evaluate:
• Therapeutic response: absence of ventricular dysrhythmias; decreasing recurrence of PAF, PSVT
Teach patient/family:
• To avoid hazardous activities until response is known
• To report fever, chills, sore throat, bleeding, SOB, chest pain, palpitations, blurred vision
• To take tab with food; alterations in taste sensation may occur; not to use with grapefruit juice or St. John's wort
• To carry emergency ID identifying medication and prescriber
• To avoid abrupt discontinuation of product; to take as prescribed; not to miss, double doses

• **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE:

O_2, artificial ventilation, defibrillation ECG; administer DOPamine for circulatory depression, diazePAM or thiopental for seizures, isoproterenol

proparacaine ophthalmic

See Appendix B

⚠ HIGH ALERT

propofol (Rx)

(pro′poh-fole)

Diprivan

Func. class.: General anesthesia

Chem. class.: Phenol derivative

Do not confuse:
Diprivan/Diflucan/Ditropan

ACTION: Produces dose-dependent CNS depression by activation of GABA receptor, hypnotic

USES: Induction or maintenance of anesthesia as part of balanced anesthetic technique; sedation in mechanically ventilated patients

CONTRAINDICATIONS: Hypersensitivity to this product or soybean oil, egg, benzyl alcohol (some products)
Precautions: Pregnancy, breastfeeding, children, geriatric patients, respiratory depression, severe respiratory disorders, cardiac dysrhythmias, labor and delivery, renal disease, hyperlipidemia

DOSAGE AND ROUTES

Anesthesia

• **Adult <55 yr and ASA-PSI or II: IV** 40 mg q10sec until induction onset, maintenance 100-200 mcg/kg/min or **IV BOL** 20-50 mg prn, allow 3-5 min between adjustments

• **Child ≥3 yr: IV induction** 2.5-3.5 mg/kg over 20-30 sec when not premedicated or lightly premedicated

• **Child 2 mo-16 yr maintenance: IV** 125-300 mcg/kg/min, lower dose for ASA III or IV

Monitored anesthesia care (MAC) sedation

• **Adult <55 yr: IV** 100-150 mcg/kg infusion or 0.5 mg/kg by slow infusion; maintenance 25-75 mcg/kg/min infusion or boluses of 10-20 mg

• **Geriatric debilitated, ASA III/IV:** IV initial, use slower rates; maintenance use 20% less than adult dose

ICU sedation

• **Adult: IV** 5 mcg/kg/min over 5 min; may increase by 5-10 mcg/kg/min over 5-10 min until desired response (Diprivan or generic)

Available forms: Inj 10 mg/mL in 20-mL ampule, vials, syringes

Administer:

IV route

• Shake well before use; dilution is not necessary, but if diluted, use only D_5W to ≥2 mg/mL; give over 3-5 min, titrate to needed level of sedation; use only glass containers when mixing, not stable in plastic; use aseptic technique when transferring from original container
• Only with resuscitative equipment available; only by qualified persons trained in anesthesia
• Store in light-resistant area at room temperature, use within 6 hr of opening
• If transferred from original container to another container, complete infusion within 12 hr (Diprivan), 6 hr (generic propofol)

Y-site compatibilities: Acyclovir, alfentanil, aminophylline, ampicillin, aztreonam, bumetanide, buprenorphine, butorphanol, calcium gluconate, CARBOplatin, ceFAZolin, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, ceftizoxime, cefTRIAXone, cefuroxime, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dexamethasone, diphenhydrAMINE, DOBUTamine, DOPamine,

doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, esmolol, famotidine, fentaNYL, fluconazole, fluorouracil, furosemide, ganciclovir, glycopyrrolate, granisetron, haloperidol, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, ifosfamide, imipenem/cilastatin, inamrinone, insulin (regular), isoproterenol, ketamine, labetalol, levorphanol, lidocaine, LORazepam, magnesium sulfate, mannitol, meperidine, mezlocillin, miconazole, morphine, nafcillin, nalbuphine, naloxone, nitroglycerin, norepinephrine, ofloxacin, PACLitaxel, PENTobarbital, PHENobarbital, piperacillin, potassium chloride, prochlorperazine, propranolol, raNITIdine, scopolamine, sodium bicarbonate, sodium nitroprusside, succinylcholine, SUFentanil, thiopental ticarcillin, ticarcillin/clavulanate, vecuronium, verapamil

Solution compatibilities: if given together via Y-site: D_5W, D_5LR, LR, $D_5/0.45\%$ NaCl, $D_5/0.2\%$ NaCl

SIDE EFFECTS

CNS: Involuntary movement, headache, fever, dizziness, shivering, abnormal dreams, euphoria, fatigue

CV: *Bradycardia, hypotension,* hypertension

GI: *Nausea, vomiting, abdominal cramping,* dry mouth

GU: Urine retention, green urine, *phlebitis, hives, burning/stinging at inj site,* rash

RESP: Apnea, *cough, hiccups*

SYST: Propofol infusion syndrome

PHARMACOKINETICS

Onset 15-30 sec, rapid distribution, half-life 1-8 min, half-life 3-12 hr; 70% excreted in urine; metabolized in liver by conjugation to inactive metabolites, 95%-99% protein binding, crosses placenta, enters breast milk, crosses blood brain barrier

INTERACTIONS

- Do not use within 10 days of MAOIs

Increase: CNS depression—alcohol, opioids, sedative/hypnotics, antipsychotics, skeletal muscle relaxants, inhalational anesthetics

Drug/Herb

Increase: propofol effect—St. John's wort

NURSING CONSIDERATIONS

Assess:

- Inj site: phlebitis, burning, stinging
- **ECG** for changes: PVC, PAC, ST segment changes; monitor VS, B/P, pulse, respirations
- **Neurologic excitatory symptoms:** movement, tremors, dizziness, LOC, pupil reaction
- Avoid general anesthetic use in child <3 yr; may negatively affect the brain
- Allergic reactions: hives
- **Respiratory dysfunction:** respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min, apnea may occur ≥1 min, check airway, ventilation, determine level of sedation
- **Propofol infusion syndrome:** rhabdomyolysis, renal failure, hyperkalemia, metabolic acidosis, cardiac dysrhythmias, heart failure usually between 35 and 93 hr after infusion begun at >5 mg/kg/hr for >48 hr
- **ICU sedation:** test wake up on a daily basis to determine needed dose for sedation, do not discontinue abruptly during test
- **For lipids:** adjust enteral nutrition if receiving; monitor for signs and symptoms of pancreatitis (elevated lipids); propofol contains 1.1 Kcal/mL
- **Pregnancy/breastfeeding:** use only if clearly needed; avoid breastfeeding, excreted in breast milk

Evaluate:

- Therapeutic response: induction of anesthesia

Teach patient/family:

- That product will cause dizziness, drowsiness, sedation; to avoid hazardous activities until drug effect wears off
- That drug may cause burning sensation during administration

TREATMENT OF OVERDOSE:

Discontinue product; administer vasopressor agents or anticholinergics, artificial ventilation

⚠ HIGH ALERT

propranolol (Rx)

(proe-pran′oh-lole)

Inderal LA, Inderal XL, Hemangeol

Func. class.: Antihypertensive, antianginal, antidysrhythmic (class II)

Chem. class.: β-Adrenergic blocker

Do not confuse:
Inderal/Adderall

ACTION: Nonselective β-blocker with negative inotropic, chronotropic, dromotropic properties

USES: Chronic stable angina pectoris, hypertension, supraventricular dysrhythmias, migraine prophylaxis, pheochromocytoma, cyanotic spells related to hypertrophic subaortic stenosis, essential tremor, acute MI, vascular headache prophylaxis

Unlabeled uses: Anxiety, prevention of variceal bleeding caused by portal hypertension, akathisia induced by antipsychotics, portal hypertension, sclerodermal renal crisis, unstable angina

CONTRAINDICATIONS: Hypersensitivity to this product; cardiogenic shock, AV heart block; bronchospastic disease; sinus bradycardia; bronchospasm; asthma

Precautions: Pregnancy, breastfeeding, children, diabetes mellitus, hyperthyroidism, COPD, renal/hepatic disease, myasthenia gravis, peripheral vascular disease, hypotension, cardiac failure, Raynaud's disease, sick sinus syndrome, vasospastic angina, smoking, Wolff-Parkinson-White syndrome, thyrotoxicosis

Black Box Warning: Abrupt discontinuation

DOSAGE AND ROUTES

Dysrhythmias

• **Adult: PO** 10-30 mg tid-qid; **IV BOL** 1-3 mg give 1 mg/min; may repeat after 2 min, may repeat q4hr thereafter

• **Child: PO** 1 mg/kg/day in 2 divided doses; **IV** 0.01-0.1 mg/kg over 5 min

Hypertension

• **Adult: PO** 40 mg bid or 80 mg/day (ext rel) initially; usual dose 120-240 mg/day bid-tid or 120-160 mg/day (ext rel)

• **Child: PO** 0.5-1 mg/kg/day divided q6-12hr

Angina

• **Adult: PO** 10-20 mg bid-qid, increase at 3-7 day intervals up to 160-320 mg/day or **EXT REL** 80 mg daily

MI prophylaxis

• **Adult: PO** 180-240 mg/day tid-qid starting 5 days to 2 wk after MI

Pheochromocytoma

• **Adult: PO** 60 mg/day × 3 days preoperatively in divided doses or 30 mg/day in divided doses (inoperable tumor)

Migraine

• **Adult: PO** 80 mg/day (ext rel) or in divided doses; may increase to 160-240 mg/day in divided doses

• **Child >35 kg (unlabeled): PO** 20-40 mg tid

• **Child ≤35 kg (unlabeled): PO** 10-20 mg tid

Essential tremor

• **Adult: PO** 40 mg bid; usual dose 120 mg/day

Acute MI

• **Adult: PO** 180-320 mg/day in 3-4 divided doses; **IV** 0.1 mg/kg in 3 divided doses at 2-3 min intervals

Anxiety (unlabeled)

• **Adult: PO** 10-80 mg given 1 hr before anxiety-producing event

Scleroderma renal crisis (unlabeled)

• **Adult: PO** 40 mg bid, may increase q3-7days, max 160-480 mg/day

Esophageal varices (portal hypertension) (unlabeled)

• **Adult: PO** 40 mg bid, titrate to heart rate reduction of 25%

Available forms: Ext rel caps 60, 80, 120, 160 mg; tabs 10, 20, 40, 60, 80, 90 mg; inj 1 mg/mL; oral sol 20 mg, 40 mg/mL; oral sol (Hemangeol) 4.28 mg/mL

Administer:

PO route

• Do not break, crush, chew, or open ext rel cap
• Do not use ext rel cap for essential tremor, MI, cardiac dysrhythmias; do not use InnoPran XL in hypertropic subaortic stenosis, migraine, angina pectoris
• Ext rel caps should be taken daily; InnoPran XL should be taken at bedtime
• May mix oral sol with liquid or semisolid food; rinse container to get entire dose
• With 8 oz water with food; food enhances bioavailability
• Do not give with aluminum-containing antacid; may decrease GI absorption

Direct IV route

IV undiluted or diluted 10 mL D_5W for inj; give 0.5 mg/min (adult), over 10 min (child)

Intermittent IV INFUSION route

• May be diluted in 50 mL NaCl and run over 10-15 min

Y-site compatibilities: Acyclovir, alfentanil, alteplase, amikacin, aminocaproic acid, aminophylline, anidulafungin, ascorbic acid, atracurium, atropine, azaTHIOprine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, carmustine, caspofungin, cefamandole, ceFAZolin, cefmetazole, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cephalothin, cephapirin, chloramphenicol, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gatifloxacin, gemcitabine, gemtuzumab, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, inamrinone, irinotecan, isoproterenol, ketorolac, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium, mannitol, mechlorethamine, meperidine, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, mezlocillin, miconazole, midazolam, milrinone, minocycline, mitoXANTRONE, morphine, moxalactam, multiple vitamins, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, netilmicin, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, phytonadione, piperacillin, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, protamine, pyridoxine, quiNIDine, quinupristin-dalfopristin, raNITIdine, ritodrine, rocuronium, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, vitamin B complex/C, voriconazole, zoledronic acid

SIDE EFFECTS

CNS: Depression, hallucinations, *dizziness, fatigue,* lethargy, paresthesias, bizarre dreams, disorientation

CV: Bradycardia, hypotension, HF, palpitations, AV block, peripheral vascular insufficiency, vasodilation, cold extremities, pulmonary edema, dysrhythmias

EENT: Sore throat, laryngospasm, blurred vision, dry eyes

GI: Nausea, vomiting, diarrhea, colitis, constipation, cramps, dry mouth, hepatomegaly, gastric pain, acute pancreatitis
GU: Impotence, decreased libido, UTIs
HEMA: Agranulocytosis, thrombocytopenia
INTEG: Rash, pruritus, fever, Stevens-Johnson syndrome, toxic epidermal necrolysis
META: Hyperglycemia, hypoglycemia
MISC: Facial swelling, weight change, Raynaud's phenomenon
MS: Joint pain, arthralgia, muscle cramps, pain
RESP: Dyspnea, respiratory dysfunction, *bronchospasm,* cough

PHARMACOKINETICS

Metabolized by liver; crosses placenta, blood-brain barrier; excreted in breast milk; protein binding 90%; CYP2D6 enzyme system causes 7% of population to be poor metabolizers
PO: Onset 30 min, peak 1-1 1/2 hr, duration 12 hr, half-life 3-8 hr
PO-ER: Peak 6 hr, duration 24 hr, half-life 8-11 hr
IV: Onset 2 min, peak 1 min, duration 2-4 hr

INTERACTIONS

Increase: toxicity—phenothiazines
Increase: propranolol level—propafenone
Increase: effect of calcium channel blockers, neuromuscular blocker
Increase: negative inotropic effects—disopyramide
Increase: β-blocking effect—cimetidine
Increase: hypotension—quiNIDine, haloperidol, prazosin
Decrease: β-blocking effects—barbiturates
Decrease: propranolol levels—smoking

Drug/Herb

• Avoid use with feverfew

Increase: antihypertensive effect—hawthorn
Decrease: antihypertensive effect—ma huang

Drug/Lab Test

Increase: serum potassium, serum uric acid, ALT, AST, alk phos, LDH
Decrease: blood glucose
Interference: glaucoma testing

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Abrupt withdrawal: taper over 1-2 wk, do not discontinue abruptly; dysrhythmias, angina, myocardial ischemia, or MI may recur

• B/P, pulse, respirations during beginning therapy; notify prescriber if pulse <50 bpm or systolic B/P <90 mm Hg
• **ECG** continuously if using as antidysrhythmic IV, PCWP (pulmonary capillary wedge pressure), CVP (central venous pressure)
• Hepatic enzymes: AST, ALT, bilirubin; blood glucose (diabetes mellitus)
• Angina pain: duration, time started, activity being performed, character
• Tolerance with long-term use
• Headache, light-headedness, decreased B/P; may indicate need for decreased dosage; may aggravate symptoms of arterial insufficiency
• **Fluid overload:** weight daily; report gain of >5 lb
• I&O ratio, CCr if kidney damage is diagnosed; fatigue, weight gain, jugular distention, dyspnea, peripheral edema, crackles
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, cautious use in breastfeeding

Evaluate:

• Therapeutic response: decreased B/P, dysrhythmias

Teach patient/family:

• Not to discontinue abruptly; may precipitate life-threatening dysrhythmias, exacerbation of angina, MI; to take product at same time each day, either with or without food consistently; to decrease dosage over 2 wk
• To avoid OTC products unless approved by prescriber; to avoid alcohol
• To avoid hazardous activities if dizzy

• About the importance of compliance with complete medical regimen; to monitor blood glucose, may mask symptoms of hypoglycemia
• To make position changes slowly to prevent fainting
• That sensitivity to cold may occur
• How to take pulse, B/P; to withhold product if <50 bpm or systolic B/P <90 mm Hg

propranolol/hydrochlorothiazide (Rx)

(proe-pran′oh-lole/hye-droe-klor-oh-thye′a-zide)

Func. class.: Antihypertensive, nonselective beta-blocker, thiazide diuretic

USES: Management of hypertension

CONTRAINDICATIONS

Hypersensitivity to propranolol, hydrochlorothiazide, other beta-blockers, other sulfonamide-derived drugs, or any component; HF; cardiogenic shock; sinus bradycardia; heart block >1st-degree; asthma; anuria

Black Box Warning: Abrupt withdrawal

DOSAGE AND ROUTES

Hypertension

Adult: PO Propranolol 40 mg/hydrochlorothiazide 25 mg bid; may titrate gradually based on B/P; max propranolol 160 mg/hydrochlorothiazide 50 mg/day

Available forms: Tabs 40/25, 80/25 mg

⚠ HIGH ALERT

propylthiouracil (Rx)

(proe-pill-thye-oh-yoor′a-sill)

Prapyl-Thyracil ✱

Func. class.: Thyroid hormone antagonist (antithyroid)

Chem. class.: Thioamide

ACTION: Blocks synthesis peripherally of T_3, T_4 (triiodothyronine, thyroxine), inhibits organification of iodine

USES: Preparation for thyroidectomy, thyrotoxic crisis, hyperthyroidism, thyroid storm

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity

Precautions: Infants, bone marrow depression, fever, agranulocytosis, hepatitis, jaundice

Black Box Warning: Hepatic disease, pregnancy

DOSAGE AND ROUTES

Thyrotoxic crisis

• **Adult/child: PO** 200-400 mg q4hr for 1st 24 hr

Preparation for thyroidectomy

• **Adult: PO** 600-1200 mg/day
• **Child: PO** 10 mg/kg/day in divided doses

Hyperthyroidism

• **Adult: PO** 100 mg tid increasing to 300 mg q8hr if condition is severe; continue to euthyroid state, then 100 mg daily tid
• **Child >6 yr: PO** 50 mg/day divided q8hr, titrate based on TSH/free T_4 levels
• **Neonate (unlabeled): PO** 5-10 mg/kg/day in divided doses q8hr

Available forms: Tabs 50, 100 ✱ mg

Administer:

• With meals to decrease GI upset
• At same time each day to maintain product level
• At lowest dose that relieves symptoms

SIDE EFFECTS

CNS: *Drowsiness, headache, vertigo, fever,* paresthesias, neuritis
GI: *Nausea, diarrhea, vomiting,* jaundice, hepatitis, loss of taste, liver failure, death
GU: Nephritis
HEMA: Agranulocytosis, leukopenia, thrombocytopenia, hypothrombinemia, lymphadenopathy, bleeding, vasculitis, periarteritis

P

INTEG: *Rash, urticaria, pruritus, alopecia, hyperpigmentation,* lupuslike syndrome
MS: Myalgia, arthralgia, nocturnal muscle cramps, osteoporosis

PHARMACOKINETICS

Onset up to 3 wk, peak 6-10 wk, duration 1 wk to 1 mo, half-life 1-2 hr; excreted in urine, bile, breast milk; crosses placenta; concentration in thyroid gland

INTERACTIONS

- Bone marrow suppression: radiation, antineoplastics
- Agranulocytosis: phenothiazines

Increase: effects—potassium/sodium iodide, lithium
Decrease: anticoagulant effect—heparin, oral anticoagulants

Drug/Lab Test
Increase: PT, AST, ALT, alk phos

NURSING CONSIDERATIONS

Assess:

- **Hyperthyroidism:** weight loss, nervousness, insomnia, fever, diaphoresis, tremors; **hypothyroidism:** constipation, dry skin, weakness, headache; monitor T_3, T_4, which are increased; serum TSH, which is decreased; free thyroxine index, which is increased if dosage is too low; discontinue product 3-4 wk before RAIU
- Pulse, B/P, temperature
- I&O ratio; check for edema: puffy hands, feet, periorbits; indicates hypothyroidism
- Weight daily; same clothing, scale, time of day
- **Blood dyscrasias:** CBC with differential; leukopenia, thrombocytopenia, agranulocytosis; monitor periodically; agranulocytosis may develop in first 2 mo of treatment; discontinue treatment
- **Overdose:** peripheral edema, heat intolerance, diaphoresis, palpitations, dysrhythmias, severe tachycardia, increased temperature, delirium, CNS irritability
- **Hypersensitivity:** rash, enlarged cervical lymph nodes; product may have to be discontinued
- **Hypoprothrombinemia:** bleeding, petechiae, ecchymosis
- Clinical response: after 3 wk should include increased weight, pulse; decreased T_4
- **Bone marrow suppression:** sore throat, fever, fatigue

Black Box Warning: Hepatotoxicity: LFTs before, during treatment; jaundice, nausea, vomiting, abdominal pain, anorexia, diarrhea, fatigue

- Fluids to 3-4 L/day unless contraindicated

Black Box Warning: Pregnancy/breastfeeding: do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: weight gain, decreased pulse, decreased T_4, decreased B/P

Teach patient/family:

- To take pulse daily
- To report redness, swelling, sore throat, mouth lesions, which indicate blood dyscrasias; to report symptoms of hepatic dysfunction (yellow skin or eyes, clay-colored stools, dark urine)
- To keep graph of weight, pulse, mood
- To avoid OTC products that contain iodine
- That seafood, other iodine products may be restricted
- Not to discontinue product abruptly because thyroid crisis may occur; about stress response
- That response may take several months if thyroid is large
- About the symptoms/signs of overdose: periorbital edema, cold intolerance, mental depression
- About the symptoms of an inadequate dose: tachycardia, diarrhea, fever, irritability
- To take medication as prescribed; not to skip or double dose; that missed doses should be taken when remembered up to 1 hr before next dose
- To carry emergency ID listing condition, medication

Black Box Warning: Pregnancy: to notify prescriber immediately if pregnancy is planned or suspected; not to breastfeed

protamine (Rx)

(proe'ta-meen)

Func. class.: Heparin antagonist

Chem. class.: Low-molecular-weight protein

Do not confuse:
protamine/Protonix

ACTION: Binds heparin, thereby making it ineffective

USES: Heparin, LMWH toxicity, hemorrhage

CONTRAINDICATIONS:

Black Box Warning: Hypersensitivity

Precautions: Pregnancy, breastfeeding, fish allergy, diabetes, previous exposure to protamine, insulins, heparin rebound or bleeding

Black Box Warning: Requires a specialized care setting

DOSAGE AND ROUTES

Heparin overdose

- **Adult/child: IV** 1 mg of protamine/100 units heparin given; administer slowly over 1-3 min; max 50 mg/10 min

Enoxaparin overdose

- **Adult: IV** 1 mg protamine/1 mg enoxaparin

Dalteparin overdose

- **Adult: IV** 1 mg protamine/100 anti-Xa unit

Available forms: Inj 10 mg/mL

Administer:

- Store at 36°F-46°F (2°C-8°C)

Direct IV route

- May give diluted or undiluted
- After reconstituting 50 mg/5 mL sterile bacteriostatic water for inj; shake, give ≤20 mg over 1-3 min, do not give rapidly

Y-site compatibilities: Alfentanil, amikacin, aminophylline, ascorbic acid, atracurium, atropine, azaTHIOprine, aztreonam, benztropine, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, cefTAZidime, chlorproMAZINE, cimetidine, clindamycin, cyanocobalamin, cycloSPORINE, digoxin, diphenhydrAMINE, DOBUTamine, DOPamine, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epoetin alfa, erythromycin, esmolol, famotidine, fentaNYL, fluconazole, ganciclovir, gentamicin, glycopyrrolate, hydrOXYzine, imipenem-cilastatin, inamrinone, iohexol, iopamidol, iothalamate, isoproterenol, labetalol, lidocaine, magnesium, mannitol, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, miconazole, midazolam, minocycline, morphine, multiple vitamins, nalbuphine, naloxone, netilmicin, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxytocin, papaverine, pentazocine, phenylephrine, polymyxin B, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, pyridoxine, quiNIDine, raNITIdine, Ringer's, ritodrine, sodium bicarbonate, succinylcholine, SUFentanil, theophylline, thiamine, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, verapamil

SIDE EFFECTS

CV: Hypotension, bradycardia, circulatory collapse, capillary leak
GI: Nausea, vomiting
HEMA: Bleeding, heparin rebound (cardiac surgery)
INTEG: *Rash,* dermatitis, urticaria
RESP: Dyspnea, pulmonary edema, severe respiratory distress, bronchospasm
SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

IV: Onset 5 min, duration 2 hr, half-life unknown

NURSING CONSIDERATIONS

Assess:

- **Bleeding:** 30 min to 18 hr after dose in cardiac surgery

Black Box Warning: Hypersensitivity: urticaria, cough, wheezing, have emergency equipment nearby; allergy to fish; use with caution; men who have had vasectomies may be more prone to hypersensitivity, also high doses

P

• Blood studies (Hct, platelets, occult blood in stools)
• Coagulation tests (aPTT, ACT) 15 min after dose, then again after several hours
• VS, B/P, pulse after 30 min, then 3 hr after dose
• Skin rash, urticaria, dermatitis
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding

Evaluate:
• Therapeutic response: reversal of heparin overdose

Teach patient/family:
• Not to take if allergic to fish
• The purpose of product, expected result
• To avoid activities in which bleeding may occur—shaving, use of hard-bristle toothbrush, injections, rectal temperature—until risk for bleeding has passed

protein C concentrate (Rx)

(proe′teen cee kon′suhn-trate)

Ceprotin

Func. class.: Blood product derivative

USES: Prevention/treatment of venous thrombosis and purpura fulminans in severe congenital protein C deficiency

CONTRAINDICATIONS

None known

DOSAGE AND ROUTES

Severe congenital protein C deficiency

Adult/child: IV: Acute episode/short-term prophylaxis: Initial dose: 100-120 units/kg; subsequent 3 doses: 60-80 units/kg q6hr (adjust to maintain peak protein C activity of 100%); maintenance dose: 45-60 units/kg q6h or 12h (adjust to maintain recommended maintenance trough protein C activity levels >25%); long-term prophylaxis: maintenance dose: 45-60 units/kg q12h (recommended maintenance trough protein C activity levels >25%)

Available forms: Injection 500, 1000 IU/vial

prucalopride (Rx)

(proo-kal′oh-pride)

Motegrity, Resotran

Func. class.: GI prokinetic, serotonin 5-HT_4 receptor agonist

USES: Treatment of chronic idiopathic constipation

CONTRAINDICATIONS

Hypersensitivity to prucalopride or any component, intestinal perforation/obstruction, Crohn disease, ulcerative colitis, toxic megacolon

DOSAGE AND ROUTES

Chronic idiopathic constipation

Adult: PO 2 mg daily; used as added laxative if no bowel movement within ≥3 days

Available forms: Tabs 1, 2 mg

pseudoephedrine (OTC, Rx)

(soo-doh-eh-fed′rin)

Eltor, Sudafed, Sudafed 24 Hour, Sudogest (many products)

Func. class.: Adrenergic

Chem. class.: Substituted phenylethylamine

Controlled Substance Schedule V

Do not confuse:
Sudafed/sotalol

ACTION: Primary activity through α-effects on respiratory mucosal membranes reducing congestion, hyperemia, edema; minimal bronchodilation secondary to β-effects

USES: Nasal decongestant, adjunct for otitis media; with antihistamines

CONTRAINDICATIONS:
Hypersensitivity to sympathomimetics, closed-angle glaucoma

Precautions: Pregnancy, breastfeeding, cardiac disorders, hyperthyroidism, diabetes mellitus, prostatic hypertrophy, hypertension, child <4 yr

DOSAGE AND ROUTES
Adult and child >12 yr: PO 60 mg q6hr; **EXT REL** 120 mg q12hr or 240 mg q24hr

Geriatric: PO 30-60 mg q6hr prn

Child 6-12 yr: PO 30 mg q6hr, max 120 mg/day

Child 4-6 yr: PO 15 mg q6hr, max 60 mg/day

Available forms: Ext rel caps 120, 240 mg; oral sol 15 mg, 30 mg/5 mL; tabs 30, 60 mg; ext rel tabs 120, 240 mg

Administer:
- Avoid taking at or near bedtime; stimulation can occur
- OTC preparations require an ID for sale; tracked, Schedule V

SIDE EFFECTS
CNS: *Tremors, anxiety,* stimulation, insomnia, headache, dizziness, hallucinations, seizures (geriatric patients)

CV: Palpitations, tachycardia, hypertension, chest pain, dysrhythmias, CV collapse

EENT: Dry nose; irritation of nose and throat

GI: *Anorexia, nausea, vomiting,* dry mouth, ischemic colitis

GU: Dysuria

PHARMACOKINETICS
PO: Onset 15-30 min; duration 4-6 hr, 8-12 hr (ext rel); metabolized in liver; excreted in feces and breast milk; half-life 7 hr (adult), 3 hr (child)

INTERACTIONS
- Do not use with MAOIs or tricyclics; hypertensive crisis may occur

Increase: effect of this product—urinary alkalizers, adrenergics, β-blockers, phenothiazines, tricyclics

Decrease: effect of this product—urinary acidifiers

NURSING CONSIDERATIONS
Assess:
- **Nasal congestion**: auscultate lung sounds; check for tenacious bronchial secretions
- B/P, pulse throughout treatment
- **Beers:** avoid in older adults; CNS stimulant effects, seizures, hallucinations, excitation
- **Pregnancy/breastfeeding:** avoid in pregnancy; cautious use in breastfeeding

Evaluate:
- Therapeutic response: decreased nasal, eustachian tube, congestion

Teach patient/family:
- About the reason for product administration
- Ext rel: do not divide, crush, chew, or dissolve
- Do not use within 14 days of MAOIs
- Not to use continuously or to take more than recommended dose because rebound congestion may occur
- To notify prescriber immediately of anxiety, slow or fast heart rate, dyspnea, seizures
- To check with prescriber before using other products because product interactions may occur
- To avoid taking near bedtime because stimulation can occur
- Not to use if stimulation, restlessness, tremors occur
- That use in children may cause excessive agitation
- To notify provider if symptoms do not improve within 7 days or if having a fever

psyllium (OTC, Rx)
(sill'ee-um)

Hydrocil, Leader Fiber Laxative, Metamucil, Natural Fiber, Natural Vegetable Fiber, Reguloid, Wal-Mucil, Konsyl

Func. class.: Bulk laxative

Chem. class.: Psyllium colloid

ACTION:
Bulk-forming laxative

USES: Chronic constipation, ulcerative colitis
Unlabeled uses: Diarrhea, diverticulosis, irritable bowel syndrome, hypercholesterolemia

CONTRAINDICATIONS: Hypersensitivity, intestinal obstruction, abdominal pain, nausea, vomiting, fecal impaction
Precautions: Pregnancy

DOSAGE AND ROUTES

• **Adult: PO** 1-2 tsp in 8 oz water bid or tid, then 8 oz water or 1 premeasured packet in 8 oz water bid or tid, then 8 oz water
• **Child >6 yr: PO** 1 tsp in 4 oz water at bedtime
Available forms: Chew pieces 1.7, 3.4 g/piece; effervescent powder 3.4, 3.7 g/packet; powder 3.3, 3.4, 3.5, 4.94 g/tsp; wafers 3.4 g/wafer
Administer:
PO route
• Alone for better absorption, separate from other products by 1-2 hr
• In morning or evening (oral dose)
• Immediately after mixing with water or will congeal
• With 8 oz water or juice followed by another 8 oz of fluid

SIDE EFFECTS

GI: *Nausea, vomiting, anorexia, diarrhea,* cramps, intestinal or esophageal blockage

PHARMACOKINETICS

Onset 12-72 hr, excreted in feces, not absorbed in GI tract

INTERACTIONS

Decrease: absorption of cardiac glycosides, oral anticoagulants, salicylates
Drug/Herb
Increase: laxative effect—flax, senna

NURSING CONSIDERATIONS

Assess:
• Blood, urine electrolytes if used often
• I&O ratio to identify fluid loss
• **Constipation:** cause of constipation; fluids, bulk, exercise missing; bowel sounds, distention, usual bowel function; color, consistency, amount, cramping, rectal bleeding, nausea, vomiting; product should be discontinued
• **Pregnancy/breastfeeding:** generally considered safe in pregnancy, breastfeeding
Evaluate:
• Therapeutic response: decrease in constipation, decreased diarrhea with colitis
Teach patient/family:
• To maintain adequate fluid consumption
• That normal bowel movements do not always occur daily
• Not to use in presence of abdominal pain, nausea, vomiting
• To notify prescriber if constipation unrelieved or if symptoms of electrolyte imbalance occur: muscle cramps, pain, weakness, dizziness, excessive thirst

pyrazinamide (Rx)

(peer-a-zin'a-mide)
Func. class.: Antitububerculotic

USES:

Mycobacterium tuberculosis, drug-susceptible TB as part of combination therapy (without HIV)

DOSAGE AND ROUTES

• **Adults > 90 kg (lean body weight): PO** 15-30 mg/kg/dose once daily (max: 3 g/day) or 50-75 mg/kg/dose twice weekly.
• **Adults weighing 76 to 90 kg (lean body weight): PO** 2 g once daily or 5 days/wk, or alternatively, 3 g 3 days/wk or 4 g twice weekly.
• **Adults weighing 56 to 75 kg (lean body weight): PO** 1.5 g once daily or 5 days/wk, or alternatively, 2.5 g 3 days/wk or 3 g PO twice weekly.
• **Infants, children, and adolescents 30-40 mg/kg/dose (lean body weight) (max: 2 g/dose):** PO once daily or 5 days/wk, or alternatively, 50 mg/kg/dose (lean body weight) 3 days/wk (max: 3 g/dose) or twice weekly (max: 4 g/dose) mo intensive phase as first-line therapy

Available forms: Tabs 500 mg

pyrethrins/piperonyl (Rx, OTC)

(pi-reth′rinz/pye-per′ oh-nil)

Lice Shampoo, RID

Func. class.: Pediculicide, pyrethrin

USES: Treatment of *Pediculus humanus* infestations

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Pediculosis capitis (head lice infestation)/pediculosis corporis (body lice infestation).

Child: Topical: Apply to *dry* scalp hair or other affected areas in an amount sufficient to thoroughly wet the area, if treating head lice, first apply behind ears and to back of neck, after 10 min, add warm water to form a good lather, wash, and thoroughly rinse with water until all lather is gone, dry hair with a clean towel and comb with a fine-tooth comb to remove any remaining nits, repeat after 7-10 days

Available forms: Shampoo 0.33%/4%

pyridostigmine (Rx)

(peer-id-oh-stig′meen)

Mestinon, Mestinon SR, Mestinon Tinespan, Regonol

Func. class.: Cholinergic; anticholinesterase

Chem. class.: Tertiary amine carbamate

ACTION: Inhibits destruction of acetylcholine, which increases concentration at sites where acetylcholine is released; this facilitates the transmission of impulses across the myoneural junction

USES: Nondepolarizing muscle relaxant antagonist, myasthenia gravis, pretreatment for nerve gas exposure (military only)

CONTRAINDICATIONS:

Bradycardia; hypotension; obstruction of intestine, renal system; bromide, benzyl alcohol sensitivity; adrenal insufficiency; cholinesterase inhibitor toxicity

Precautions: Pregnancy, seizure disorders, bronchial asthma, coronary occlusion, hyperthyroidism, dysrhythmias, peptic ulcer, megacolon, poor GI motility

DOSAGE AND ROUTES

Myasthenia gravis

- **Adult: PO** 600 mg/day in 5-6 divided doses, max 1.5 g/day; **IM/IV** 2 mg; **SUS REL** 180-540 mg/day or bid at intervals of ≥6 hr
- **Child: PO** 7 mg/kg/day in 5-6 divided doses; **IM/IV** 0.05-0.15 mg/kg/dose

Nondepolarizing neuromuscular blocker antagonist

- **Adult:** 0.6-1.2 mg **IV** atropine, then 0.1-0.25 mg/kg/dose
- **Child: IV** 0.1-0.25 mg/kg/dose

Nerve gas exposure prophylaxis (military)

- **Adult: PO** 30 mg q8hr if threat of exposure to Soman gas is anticipated; start several hours before exposure and discontinue upon exposure; after product is discontinued, give antidotes (atropine, pralidoxime)

Available forms: Tabs 60 mg; ext rel tabs 180 mg; syr 60 mg/5 mL; inj 5 mg/mL

Administer:

- Only with atropine sulfate available for cholinergic crisis
- Only after all other cholinergics have been discontinued
- Increased doses for tolerance as ordered
- Larger doses after exercise or fatigue as ordered
- Do not break, crush, or chew sus rel tabs

PO route

- On empty stomach for better absorption

P

Direct IV route

• Undiluted (5 mg/mL), give through Y-tube or 3-way stopcock, give ≤0.5 mg/min (myasthenia gravis); 5 mg/min (reversal of nondepolarizing neuromuscular blockers)

Y-site compatibilities: Heparin, hydrocortisone, potassium chloride, vit B/C

SIDE EFFECTS

CNS: Dizziness, headache, sweating, weakness, seizures, incoordination, paralysis, drowsiness, LOC

CV: Tachycardia, dysrhythmias, bradycardia, AV block, hypotension, ECG changes, cardiac arrest, syncope

EENT: Miosis, blurred vision, lacrimation, visual changes

GI: *Nausea, diarrhea, vomiting, cramps, increased salivary and gastric secretions, peristalsis*

GU: Urinary frequency, incontinence, urgency

INTEG: Rash, urticaria, flushing

RESP: Respiratory depression, bronchospasm, constriction, laryngospasm, respiratory arrest

SYST: Cholinergic crisis

PHARMACOKINETICS

Metabolized in liver, excreted in urine (unchanged)

PO: Onset 20-30 min, duration 3-6 hr

PO-EXT REL: Onset 30-60 min, duration 6-12 hr

IM/IV/SUBCUT: Onset 2-15 min, duration $2^1/_2$-4 hr

INTERACTIONS

Increase: action—succinylcholine

Decrease: action—gallamine, metocurine, pancuronium, tubocurarine, atropine

Decrease: pyridostigmine action—aminoglycosides, anesthetics, procainamide, quiNIDine, mecamylamine, polymyxin, magnesium, corticosteroids, antidysrhythmics, quinolones

NURSING CONSIDERATIONS

Assess:

• **Myasthenia gravis:** fatigue, ptosis, diplopia, difficulty swallowing, SOB, hand/gait before, after product; improvement should be seen after 1 hr

• VS, respiration q8hr

• I&O ratio; check for urinary retention or incontinence

• **Toxicity:** bradycardia, hypotension, bronchospasm, headache, dizziness, seizures, respiratory depression; product should be discontinued if toxicity occurs

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding

Evaluate:

• Therapeutic response: increased muscle strength, hand grasp, improved gait, absence of labored breathing (if severe), negative inspiratory force, and vital capacity; reversal of nondepolarizing neuromuscular blockers; prevention of nerve gas toxicity

Teach patient/family:

• **Myasthenia gravis:** that product is not a cure, only relieves symptoms

• To wear emergency ID specifying myasthenia gravis, products taken

• To avoid driving, other hazardous activities until effect is known

• To report muscle weakness (cholinergic crisis or underdosage), bradycardia

• Not to drink alcohol

• To take with food to decrease gastric side effects

• That doses are highly individualized, often 5-6 times per day, and will be based on response to the product

TREATMENT OF OVERDOSE:

Discontinue product, atropine 1-4 mg IV

pyridoxine (vit B_6) (Rx, OTC)

(peer-i-dox′een)

Cataplex ✱, Pyri 500, Neuro-K

Func. class.: Vit B_6, water soluble

Do not confuse:

pyridoxine/Pyridium

ACTION: Needed for fat, protein, carbohydrate metabolism; enhances glycogen release from liver and muscle

tissue; needed as coenzyme for metabolic transformations of a variety of amino acids

USES: Vit B_6 deficiency of inborn errors of metabolism, seizures, isoniazid therapy, oral contraceptives, alcoholic polyneuritis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, Parkinson's disease; patients taking levodopa should avoid supplemental vitamins with >5 mg pyridoxine

DOSAGE AND ROUTES

RDA

- **Adult: PO** (male) 1.7-2 mg; (female) 1.4-1.6 mg
- **Child 9-13 yr: PO** 1 mg/day
- **Child 4-8 yr: PO** 0.6 mg/day
- **Child 1-3 yr: PO** 0.5 mg/day
- **Infant 7-12 mo: PO** 0.3 mg/day

Vit B_6 deficiency

- **Adult: PO** 5-25 mg/day × 3 wk
- **Child: PO** 10 mg until desired response

Pyridoxine deficiency neuritis/seizure (not drug induced)

- **Adult: PO** *without neuritis* 2.5-10 mg/day, after corrected 2-5 mg/day; *with neuritis* 100-200 mg/day × 3wk, then 2-5 mg/day
- **Child: PO** *without neuritis* 5-25 mg/day × 3wk, then 1.5-2.5 mg/day in a multivitamin; *with neuritis:* 10-50 mg/day × 3wk, then 1-2 mg/day
- **Neonate with seizures: IM/IV** 50-100 mg as single dose

Deficiency caused by isoniazid, cycloSERINE, hydrALAZINE, penicillAMINE

- **Adult: PO** 100-300 mg/day
- **Child: PO** 10-50 mg/day

Prevention of deficiency caused by isoniazid, cycloSERINE, hydrALAZINE, penicillAMINE

- **Adult: PO** 25-100 mg/day
- **Child: PO** 1-2 mg/kg/day

Available forms: Tabs 25, 50, 100, 250, 500 mg; ext rel tabs 200, 500 mg; inj 100 mg/mL; ext rel caps 200, 500 mg; capsules 250 mg

Administer:

PO route

- Do not break, crush, or chew ext rel tabs/caps

IM route

- Rotate sites; burning or stinging at site may occur
- Z-track to minimize pain

IV route

- Undiluted or added to most IV sol; give ≤50 mg/1 min if undiluted

Syringe compatibilities: Doxapram

SIDE EFFECTS

CNS: Paresthesia, flushing, warmth, lethargy (rare with normal renal function)

INTEG: Pain at inj site

PHARMACOKINETICS

PO/INJ: Half-life 2-3 wk, metabolized in liver, excreted in urine

INTERACTIONS

Decrease: effects of levodopa

Decrease: effects of pyridoxine—oral contraceptives, isoniazid, cycloSERINE, hydrALAZINE, penicillamine, chloramphenicol, immunosuppressants

NURSING CONSIDERATIONS

Assess:

- **Pyridoxine deficiency:** seizures, irritability, cheilitis, conjunctivitis, anemia, confusion, red tongue, weakness, fatigue before and during treatment; monitor pyridoxine levels
- Nutritional status: yeast, liver, legumes, bananas, green vegetables, whole grains
- Blood studies: Hct, HB
- **Malabsorption:** may require injection if abdominal resection has occurred or in malabsorption syndromes
- **Pregnancy/breastfeeding:** safe in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: absence of nausea, vomiting, anorexia, skin lesions, glossitis, stomatitis, edema, seizures, restlessness, paresthesia

Teach patient/family:

- To avoid vitamin supplements unless directed by prescriber

• To increase meat, bananas, potatoes, lima beans, whole-grain cereals in diet
• To take as directed; to continue with follow-up exams, blood work

pyrimethamine (Rx)

(peer-i-meth′a-meen)

Daraprim

Func. class.: Antimalarial

USES: Treatment of toxoplasmosis (in combination with a sulfonamide)

CONTRAINDICATIONS

Hypersensitivity to pyrimethamine or any component, megaloblastic anemia due to folate deficiency

DOSAGE AND ROUTES

Toxoplasmosis treatment.

Adult: PO 50-75 mg/day × 1-3 wk depending then reduce dose by 50% and continue for 4-5 wk; use with a sulfonamide in combination with leucovorin

Available forms: Tabs 25 mg

QUEtiapine (Rx)

(kwe-tie′a-peen)

SEROquel, SEROquel XR

Func. class.: Antipsychotic, atypical

Chem. class.: Dibenzothiazepine

DO NOT CONFUSE: Seroquel/Desyrel//Serzone/Sinequan Quetiapine/Olanzapine

ACTION: Functions as an antagonist at multiple neurotransmitter receptors in the brain, including $5HT_{1A}$, $5HT_2$, dopamine D_1, D_2, H_1, and adrenergic α_1, α_2 receptors

USES: Bipolar disorder, bipolar I disorder, depression, mania, schizophrenia

CONTRAINDICATIONS: Hypersensitivity, breastfeeding

Precautions: Pregnancy, geriatric patients, hepatic/cardiac disease, breast cancer, long-term use, seizures, QT prolongation, brain tumor, hematologic disease, torsades de pointes, cataracts, dehydration, abrupt discontinuation

Black Box Warning: Children, suicidal ideation, increased mortality in elderly patients with dementia-related psychosis

DOSAGE AND ROUTES

Bipolar mania

- **Adult: PO** 100 mg divided twice daily on day 1; 200 mg divided twice daily on day 2; 300 mg divided twice daily on day 3; 400 mg divided twice daily on day 4; with further dosage adjustments in increments of not more than 200 mg/day up to MAX 800 mg/day by day 6; usual effective dose is 400 to 800 mg/day

Schizophrenia

- **Adult: PO** (not at risk for hypotension) 25 mg bid on day 1, increase by 25-50 mg divided 2 to 3× on day 2 and day 3 to a target of 300-400 mg/day in divided doses by day 4, further dosage adjustment can be made in 25-50 mg bid increments, max 800 mg/day; **(XR)** 300 mg/day in PM, range 400-800 mg/day, max 800 mg/day
- **Adolescent 13-17 yr: PO** 25 mg bid on day 1, 50 mg bid on day 2, 100 mg bid on day 3, 150 mg bid on day 4, 200 mg bid on day 5; **ext rel** 50 mg on day 1, then 100 mg on day 2, 200 mg on day 3, 300 mg on day 4, 400 mg on day 5
- **Geriatric: PO EXT REL** 50 mg/day may increase in 50 mg/day increments

Major depression

- **Adult: PO EXT REL** 50 mg/day in PM on days 1, 2; on day 3, 4, give 150 mg in PM; 300 mg once daily thereafter
- **Geriatric, debilitated or at risk for hypotension: PO EXT REL** 50 mg on day 1 and 2, may increase by 50 mg/day based on response

Available forms: Tabs 25, 50, 100, 200, 300, 400 mg; ext rel tab 50, 150, 200, 300, 400 mg

Administer:

- Reduced dose to geriatric patients
- Avoid use of CNS depressants
- Store in tight, light-resistant container
- If there is a week or more absence of therapy, initiate at beginning dose
- **Immediate release:** without regard to meals
- **Ext rel:** without food or with light meal ≤300 calories; swallow whole; do not split, crush, chew; can switch from immediate release to extended release by giving total daily dose daily

SIDE EFFECTS

CNS: EPS, pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia; *drowsiness,* insomnia, agitation, anxiety, *headache,* seizures, neuroleptic malignant syndrome, *dizziness,* dystonia, restless legs

CV: Orthostatic hypotension, tachycardia, QT prolongation, CV disease, Parkinson's disease, cardiomyopathy, myocarditis

ENDO: SIADH, hyperglycemia

GI: *Pancreatitis, nausea, anorexia, constipation,* abdominal pain, dry mouth

HEMA: Leukopenia, agranulocytosis

INTEG: Rash, DRESS

META: Hyponatremia

MISC: Asthenia, back pain, fever, ear pain

MS: Rhabdomyolysis

RESP: Rhinitis

SYST: Stevens-Johnson syndrome, anaphylaxis

PHARMACOKINETICS

Extensively metabolized by liver, half-life ≥6 hr, peak 1½ hr, ext rel 6 hr, inhibits P450 CYP3A4 enzyme system, 83% protein binding, excretion: <1% unchanged urine

INTERACTIONS

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine, macrolides (clarithromycin)

Increase: CNS depression—alcohol, opioid analgesics, sedative/hypnotics, antihistamines

Increase: hypotension—alcohol, antihypertensives

Increase: QUEtiapine clearance, decrease QUEtiapine effect—phenytoin, thioridazine, barbiturates, glucocorticoids, carBAMazepine, rifampin

Increase: QUEtiapine action—fluconazole, itraconazole, ketoconazole (CYP3A4 inhibitors), increase CYP3A4 inhibitor after discontinuation of inhibitor

Decrease: quetiapine action—CYP3A4 inducers (carbamazepine, barbiturates, phenytoins, rifAMPin); reduce CYP3A4 inducer after discontinuation

Decrease: effect of voriconazole, consider dosage change

Decrease: effects of DOPamine agonists, levodopa, LORazepam

Drug/Lab Test

Increase: cholesterol, triglycerides, LFTs, glucose, prolactin

Decrease: thyroid tests, WBC

False positive: methadose/TCAs urine immunoassays

NURSING CONSIDERATIONS

Assess:

- **CV status:** QT prolongation, tachycardia, orthostatic B/P

Black Box Warning: Assess **mental status** before initial administration, AIMS assessment; affect, orientation, LOC, reflexes, gait, coordination, sleep pattern disturbances; suicidal thoughts/behaviors (child/young adult); dementia (geriatric patients), complete a full assessment in all new patients

Black Box Warning: Not to be used in child <10 yr (imm rel) or <18 yr (ext rel)

Black Box Warning: **Suicide:** restrict amount of product given; usually suicidal thoughts/behaviors occur early during treatment and among children/adolescents/young adults

- Baseline blood glucose, LFTs, neurologic function, ophthalmologic exam, weight, monitor glucose often in diabetes mellitus, thyroid function tests, serum electrolytes/creatinine/lipid profile/prolactin
- **B/P** standing, lying; pulse, respirations; determine q4hr during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; watch for ECG changes
- Dizziness, faintness, palpitations, tachycardia on rising
- **EPS:** including akathisia (inability to sit still, no pattern to movements), tardive dyskinesia (bizarre movements of jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait)
- **Serious rash:** assess for Stevens-Johnson syndrome, discontinue product; may cause rash, fever, joint pain, lesions
- **Pancreatitis:** assess for nausea, vomiting, severe abdominal pain
- **Metabolic syndrome:** weight gain, increased cholesterol/triglycerides, increased BMI, hypertension
- **Neuroleptic malignant syndrome:** hyperthermia, increased CPK, altered mental status, muscle rigidity, seizures, tachycardia, diaphoresis, hypo/hypertension, fatigue; notify prescriber immediately if symptoms occur
- Constipation, urinary retention daily; if these occur, increase bulk, water in diet
- Supervised ambulation until patient stabilized on medication; do not involve patient in strenuous exercise program because fainting possible; patient should not stand still for long period of time
- **DRESS:** fever, hepatitis, swelling of face, myositis, monitor eosinophils that may be elevated, discontinue

• **Hyperprolactinemia:** sexual dysfunction, menstrual changes
• **Beers:** avoid in older adults except for schizophrenia, bipolar disorder, or short-term use as an antiemetic for chemotherapy; increased risk for stroke, dementia-related psychosis
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; pregnant women taking product should enroll in the National Pregnancy Registry for Atypical Antipsychotics, 1-866-961-2388; EPS may develop in the infant; breastfeeding isn't recommended, excreted in breast milk

Evaluate:
• Therapeutic response: decrease in emotional excitement, hallucinations, delusions, paranoia; reorganization of patterns of thought, speech

Teach patient/family:
• Not to become overheated, to drink plenty of fluids
• To rise slowly to prevent orthostatic hypotension
• To take medication only as prescribed; not to crush, chew ext rel product; not to use with alcohol; to take regular tabs without regard to food or only a light meal <300 calories, ext rel without food; not to use other products unless approved by prescriber
• Not to stop abruptly
• That follow-up is necessary, including LFTs, blood glucose, neurologic, cholesterol profile, weight, to report hypoglycemic symptoms
• If drowsiness occurs, to avoid hazardous activities such as driving
• To avoid use of OTC, herbals, supplements, alcohol meds unless directed by prescriber
• To notify prescriber if pregnancy is planned, suspected; not to breastfeed
• To notify prescriber immediately of fever, difficulty breathing, fatigue, sore throat, rash, bleeding, agitation, panic attacks

Black Box Warning: Suicide: to notify prescriber of suicidal thoughts/behaviors, primarily among children/adolescents/young adults, or worsening depression, severe anxiety, panic attacks, insomnia

• To have eye exam before treatment and yearly q6mo; cataracts may occur
• To notify providers before surgery

quinapril (Rx)

(kwin′a-pril)

Accupril

Func. class.: Antihypertensive

Chem. class.: (ACE) inhibitor

Do not confuse:
Accupril/Aciphex

ACTION: Selectively suppresses renin-angiotensin-aldosterone system; inhibits ACE, prevents conversion of angiotensin I to angiotensin II; results in dilation of arterial, venous vessels

USES: Hypertension, alone or in combination with thiazide diuretics; systolic HF

CONTRAINDICATIONS: Children, hypersensitivity to ACE inhibitors, angioedema

Black Box Warning: Pregnancy

Precautions: Breastfeeding, geriatric patients, impaired renal/hepatic function, dialysis patients, hypovolemia, blood dyscrasias, bilateral renal stenosis, cough, hyperkalemia, aortic stenosis, African descent

DOSAGE AND ROUTES

Hypertension
• **Adult: PO** 10-20 mg/day initially, then 20-80 mg/day divided bid or daily **(monotherapy);** start at 5 mg/day **(with diuretics),** titrate ≥2 wk up to 80 mg/day
• **Geriatric: PO** 10 mg/day, titrate to desired response **(monotherapy);** start at 2.5 mg/day **(with diuretics)**

Heart failure
• **Adult: PO** 5 mg bid, may increase weekly until 20-40 mg/day in 2 divided doses

Renal dose

• **Adult: PO** CCr 61-89 mL/min 10 mg daily (hypertension), 5 mg bid (heart failure); CCr 30-60 mL/min, 5 mg/day initially; CCr 10-29 mL/min, 2.5 mg/day initially

Available forms: Tabs 5, 10, 20, 40 mg

Administer:

• Tabs may be crushed if necessary

• Store in airtight container at room temperature

• Do not use with high-fat meal, decreases absorption

SIDE EFFECTS

CNS: *Headache, dizziness, fatigue,* somnolence, depression, malaise, nervousness, vertigo, syncope

CV: *Hypotension,* postural hypotension, syncope, palpitations, *angina pectoris,* MI, tachycardia, vasodilation, chest pain

GI: *Nausea,* diarrhea, constipation, *vomiting,* gastritis, GI hemorrhage, dry mouth

GU: Increased BUN, creatinine; decreased libido, impotence

INTEG: Angioedema, rash, sweating, photosensitivity, pruritus

META: Hyperkalemia

MISC: Back pain, amblyopia

MS: Myalgia

RESP: *Dry cough,* pharyngitis, dyspnea

PHARMACOKINETICS

Bioavailability ≥60%, onset <1 hr, peak 1-2 hr, duration 24 hr, protein binding 97%, half-life 2 hr, metabolized by liver (active metabolite quinaprilat), metabolites excreted in urine (60%)/feces (37%)

INTERACTIONS

Increase: hyperkalemia—vasodilators, hydrALAZINE, prazosin, potassium-sparing diuretics, sympathomimetics, potassium supplements, ACE/angiotensin II receptor antagonists; aliskiren (diabetic patients)

Increase: hypotension—diuretics, other antihypertensives, ganglionic blockers, adrenergic blockers, phenothiazines, nitrates, acute alcohol ingestion

Increase: toxicity of lithium

Decrease: absorption of tetracycline, quinolone antibiotics

Decrease: hypotensive effect of quinapril—NSAIDs

Drug/Herb

Decrease: antihypertensive effect—black licorice, ma huang, yohimbe

Drug/Food

Hyperkalemia: do not use with potassium-containing salt substitutes; read label carefully

Drug/Lab Test

Increase: potassium, creatinine, BUN, LFTs

False negative: aldosterone/renin ratio

NURSING CONSIDERATIONS

Assess:

• **Hypertension:** B/P, orthostatic hypotension, syncope; monitor B/P before giving dose and after 2 hr; African-American patients are more resistant to antihypertension effect

• **Heart failure:** edema in feet, legs daily; weight daily

• **Collagen-vascular disease:** blood studies: neutrophils, decreased platelets; WBC with differential at baseline, periodically, q3mo; if neutrophils <1000/mm^3, discontinue treatment

• Renal studies: protein, BUN, creatinine; watch for increased levels; may indicate nephrotic syndrome

• Baselines of hepatic studies before therapy, periodically; increased LFTs; uric acid, glucose may be increased

• Potassium levels; hyperkalemia is rare, those with diabetes, renal disease are more at risk for hyperkalemia

• **Allergic reactions:** angioedema, rash, fever, pruritus, urticaria, swelling of eyes/face/throat/neck, SOB, difficulty breathing; product should be discontinued; angioedema is more common in African-American patients

Black Box Warning: Do not use in pregnancy, breastfeeding, stop drug if pregnancy is determined

Evaluate:
• Therapeutic response: decrease in B/P
Teach patient/family:
• Not to discontinue product abruptly
• Not to use OTC products (cough, cold, allergy); not to use salt substitutes containing potassium unless directed by prescriber, to avoid high-fat meal at same time as product
• To comply with dosage schedule, even if feeling better
• To rise slowly to sitting or standing position to minimize orthostatic hypotension, to report excessive perspiration, dehydration, vomiting, diarrhea; may lead to fall in B/P; maintain adequate hydration, assess fall risk
• To notify prescriber of mouth sores, sore throat, fever, swelling of hands/feet, irregular heartbeat, chest pain, persistent dry cough
• To report signs of infection (fever, sore throat)
• That product may cause dizziness, fainting, light-headedness; may occur during first few days of therapy
• That product may cause skin rash, impaired taste perception
• How to take B/P, normal readings for age group or individual baseline B/P and HR

Black Box Warning: Pregnancy: to report if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE: 0.9% NaCl IV infusion

quinapril/hydrochlorothiazide (Rx)

(kwin′a-pril/hye-droe-klor-oh-thye′a-zide)

Accuretic, Quinaretic

Func. class.: Antihypertensive, thiazide diuretic, ACE inhibitor

USES: Hypertension

DOSAGE AND ROUTES
Adult: PO: 1 tablet daily, adjust dose after 2-3 wk; maintenance quinapril 5-40 mg/hydrochlorothiazide 6.25-25 mg daily
Available forms: 10 mg quinapril/12.5 mg hydrochlorothiazide, 20 mg quinapril/12.5 mg hydrochlorothiazide, 20 mg quinapril/20 mg hydrochlorothiazide

⚠ HIGH ALERT

quiNIDine gluconate (Rx)

(kwin′i-deen)

quiNIDine sulfate (Rx)

Func. class.: Antidysrhythmic (Class IA)
Chem. class.: QuiNINE dextroisomer

Do not confuse:
quiNIDine/quiNINE

ACTION: Prolongs duration of action potential and effective refractory period, thus decreasing myocardial excitability; anticholinergic properties

USES: Atrial fibrillation, PAT, ventricular tachycardia, atrial flutter, Wolff-Parkinson-White syndrome; PVST

CONTRAINDICATIONS: Hypersensitivity, idiosyncratic response, digoxin toxicity, blood dyscrasias, myasthenia gravis, AV block
Precautions: Pregnancy, breastfeeding, children, geriatric patients, electrolyte imbalance, renal/hepatic disease, HF, respiratory depression, bradycardia, hypotension, syncope

Black Box Warning: Cardiac arrhythmias, MI

DOSAGE AND ROUTES

QuiNIDine gluconate

• **Adult: PO** (ext rel) 324-648 mg q8-12hr; **IM** 600 mg, then 400 mg q2hr; **IV** give 16 mg/min

QuiNIDine sulfate

PVST/WPW/atrial fibrillation/flutter

• **Adult: PO** 200-300 mg q6-8hr × 5-8 doses; may increase daily until sinus rhythm restored; max 4 g/day given only after digitalization; maintenance 200-300 mg tid-qid or **EXT REL** 300-600 mg q8-12hr

Available forms: *Gluconate:* ext rel tabs 324 mg; *sulfate:* tabs 200, 300 mg

Administer:

• AV node blocker (digoxin) before starting quinidine to avoid increased ventricular rate

• Do not break, crush, chew ext rel products

• With full glass of water or with food; GI upset occurs

• Do not use with grapefruit juice

SIDE EFFECTS

CV: Hypotension, *bradycardia,* PVCs, heart block, CV collapse, arrest, torsades de pointes, widening QRS complex, ventricular tachycardia

EENT: Cinchonism: tinnitus, blurred vision, hearing loss, mydriasis, disturbed color vision

GI: Nausea, vomiting, anorexia, abdominal pain, *diarrhea,* hepatotoxicity

HEMA: Thrombocytopenia, hemolytic anemia, agranulocytosis, hypoprothrombinemia

INTEG: Rash, urticaria, angioedema, swelling, photosensitivity, flushing with severe pruritus

RESP: Dyspnea, respiratory depression

PHARMACOKINETICS

PO: (sulfate) peak 1-6 hr, duration 6-8 hr, (sulfate ER) peak 4 hr, duration 8-12 hr; (gluconate PO) peak 3-4 hr, duration 6-8 hr, half-life 6-7 hr (prolonged in geriatric patients, cirrhosis, HF), metabolized in liver, excreted unchanged (10%-50%) by kidneys, protein bound (80%-90%)

INTERACTIONS

• Additive vagolytic effect: anticholinergic blockers

Increase: cardiac depression: other antidysrhythmics, phenothiazines, reserpine

Increase: effects of neuromuscular blockers, digoxin, warfarin, tricyclics, propranolol

Increase: QT prolongation—macrolides, quinolones, tricyclics, procainamide, antipsychotics

Increase: quiNIDine effects—cimetidine, sodium bicarbonate, carbonic anhydrase inhibitors, antacids, hydroxide suspensions, amiodarone, verapamil, NIFEdipine, protease inhibitors

Decrease: quiNIDine effects—barbiturates, phenytoin, rifampin, sucralfate, cholinergics

Drug/Herb

Increase: quiNIDine effect—hawthorn, licorice

Drug/Food

• Delayed absorption, decreased metabolism: grapefruit juice, avoid use

Drug/Lab Test

Decrease: platelets, HB, granulocytes

NURSING CONSIDERATIONS

Assess:

• Blood levels (therapeutic level 2-5 mcg/mL), CBC, LFTs

• **For cinchonism:** tinnitus, headache, nausea, dizziness, fever, vertigo, tremors; may lead to hearing loss

Black Box Warning: Cardiac toxicity: asystole, ventricular dysrhythmias, widening QRS, torsades de pointes

• CNS effects: dizziness, confusion, psychosis, paresthesias, seizures; product should be discontinued

• **Hepatotoxicity:** monitor LFTs for first 1-2 mo of treatment

• **Pregnancy/breastfeeding:** use only if clearly needed; avoid use in breastfeeding, excreted in breast milk

Evaluate:

• Therapeutic response: decreased dysrhythmias

Teach patient/family:
- That if dizziness, drowsiness occurs, to avoid driving or hazardous activities
- To use sunglasses; product may cause sensitivity to light
- To carry emergency ID stating disease, medication use
- How to take pulse; when to notify prescriber
- To avoid all products unless approved by prescriber
- Not to crush, chew ext rel product
- Not to use grapefruit juice with this product
- **QuiNIDine toxicity (cinchonism):** to report immediately visual changes, nausea, headache, ringing in the ears
- To report diarrhea, anorexia, decreased B/P

quinupristin/dalfopristin (Rx)

(kwi-nyoo′pris-tin/dal-foe′pris-tin)

Synercid

Func. class.: Antiinfective, streptogramin

USES: Treatment of complicated skin/skin structure infections caused by methicillin-susceptible *Staphylococcus aureus* or *Streptococcus pyogenes*

DOSAGE AND ROUTES

Adult/child ≥12 yr: IV: 7.5 mg/kg q12hr for ≥7 days

Available forms: Injection 500-mg vial (150 mg quinupristin/350 mg dalfopristin)

RABEprazole (Rx)

(rah-bep′rah-zole)

Aciphex, Aciphex Sprinkle, Pariet

Func. class.: Antiulcer, proton pump inhibitor

Chem. class.: Benzimidazole

Do not confuse:
Aciphex/Aricept/Accupril
RABEprazole/ARIPiprazole

ACTION: Suppresses gastric secretion by inhibiting hydrogen/potassium ATPase enzyme system in the gastric parietal cells; characterized as a gastric acid pump inhibitor because it blocks the final step of acid production

USES: Gastroesophageal reflux disease (GERD), severe erosive esophagitis, poorly responsive systemic GERD, pathologic hypersecretory conditions (Zollinger-Ellison syndrome, systemic mastocytosis, multiple endocrine adenomas); treatment of active duodenal ulcers with/without antiinfectives for *Helicobacter pylori;* daytime, nighttime heartburn
Unlabeled uses: Gastric ulcer, heartburn, *H. pylori* eradication in children

CONTRAINDICATIONS: Hypersensitivity to this product or proton pump inhibitors (PPIs)
Precautions: Pregnancy, breastfeeding, children, Asian patients, diarrhea, geriatric patients, gastric cancer, hepatic/GI disease, IBS, osteoporosis, CDAD, ulcerative colitis, vit B_{12} deficiency

DOSAGE AND ROUTES

Healing of duodenal ulcers
• **Adult: PO** 20 mg/day × ≤4 wk; to be taken after breakfast
Healing of erosive esophagitis or ulcerative GERD
• **Adult: PO** 20 mg/day × 4-8 wk; may use an additional course
• **Adolescent and child ≥12 yr: PO** 20 mg/day up to 8 wk
• **Child 1-11 yr (≥15 kg): PO** (sprinkle) 10 mg daily up to 12 wk
• **Child 1-11 yr (<15 kg): PO** 5 mg daily up to 12 wk; may increase to 10 mg daily if needed
***H. pylori* eradication**
• **Adult: PO** 20 mg bid × 7 days with amoxicillin 1 g bid × 7 days with clarithromycin 500 mg bid × 7 days
Pathologic hypersecretory conditions
• **Adult: PO** 60 mg/day; may increase to 120 mg in 2 divided doses
Gastric ulcer (unlabeled)
• **Adult: PO** 20 mg/day after AM meal × 3-6 wk
Dyspepsia/heartburn (unlabeled)
• **Adult: PO** 20 mg/day × ≤14 days
Available forms: Del rel tabs 20 mg; del rel caps 5, 10 mg
Administer:
PO route
• Do not break, crush, chew del-rel tab; after breakfast daily with full glass of water, without regard to food
• **Delayed-release capsule:** open, use on spoonful of applesauce or liquid, give dose immediately (within 15 min), ½ hr before a meal; do not crush, chew delayed-release product

SIDE EFFECTS

CNS: *Headache, dizziness*
EENT: Tinnitus, taste perversion
GI: *Diarrhea, abdominal pain, vomiting, nausea, constipation, flatulence, acid regurgitation,* abdominal swelling, anorexia, hepatitis, hepatic encephalopathy, *Clostridium difficile*–associated diarrhea
GU: UTI, proteinuria, hematuria
MS: Back pain, arthralgia, myalgia, osteoporosis, fractures
MISC: Infection, Stevens-Johnson syndrome

PHARMACOKINETICS

Eliminated in urine as metabolites and in feces, half-life 1-2 hr, metabolized by CYP2C19 enzyme system, protein binding 96.3%

INTERACTIONS

Increase: bleeding risk—warfarin, clopidogrel
Increase: serum levels of RABEprazole—benzodiazepines, phenytoin, clarithromycin, antacids, other proton pump inhibitors, H_2 blockers
Increase: levels of—digoxin, nelfinavir/omeprazole, methotrexate
Decrease: levels of RABEprazole—sucralfate, calcium carbonate, vit B_{12}
Decrease: levels of ketoconazole, itraconazole, iron salts, atazanavir/ritonavir, ampicillin, cycloSPORINE, protease inhibitors
Drug/Herb
Decrease: RABEprazole—St. John's wort
Drug/Lab Test
Decrease: magnesium

NURSING CONSIDERATIONS

Assess:
• GI system: bowel sounds, abdomen for pain, swelling, anorexia, emesis/stool for occult blood
• ***Clostridium difficile*–associated diarrhea:** may occur with most antibiotic therapy; watery diarrhea, abdominal pain, fever; may occur several weeks after treatment concludes
• **Vit B_{12}/cyanocobalamin deficiency/hypomagnesemia:** may occur several weeks after treatment concludes; use magnesium, vit B_{12}, cyanocobalamin supplement; if severe, discontinuation of product may be needed. Assess for low magnesium level: tremors, muscle soreness, spasms, anxiety, change in heart rate, palpitations
• Hepatic studies: AST, ALT, alk phos during treatment; CBC with differential periodically
• CBC with differential before, periodically during treatment; blood dyscrasias may occur (rare)
• Obtain susceptibility testing if *H. pylori* treatment is ineffective; another anti-infective may be needed
• **Osteoporosis/fractures:** may occur with prolonged use (1 yr or longer) of high dose, usually in those ≥50 yr; make sure adequate vitamin D, calcium are taken
• **Beers:** avoid scheduled use >8 wk in older adults unless for high-risk patients
Evaluate:
• Therapeutic response: absence of epigastric pain, swelling, fullness; decreased symptoms of GERD after 4-8 wk
Teach patient/family:
• CDAD to report severe diarrhea or black, tarry stools; product may have to be discontinued
• To avoid hazardous activities because dizziness, drowsiness may occur
• To avoid alcohol, salicylates, NSAIDs because they may cause GI irritation; to avoid other OTC, herbal products unless approved by prescriber
• That osteoporosis and fractures are more common in those who take the product >1 yr
• To use as directed for length of time prescribed; to take missed dose when remembered; not to double dose; to take del-rel tab whole, do not cut, break; that cap should be opened and sprinkled on food (applesauce) to take within 15 min of being sprinkled and 30 min before meal; to take the tablet form for ulcers after meal, for *H. pylori* with morning/evening meals
• To notify prescriber if pregnancy is planned, suspected

R

rabies immune globulin (Rx)

(ray'beez)
HyperRAB, HyperRAB S/D, Imogam Rabies-HT, Kedrab
Func. class.: Antibody-Immune Globulin

USES: Rabies exposure

CONTRAINDICATIONS: Hypersensitivity, Imogam Rabies-HT (do not give repeated doses)

DOSAGE AND ROUTES

Rabies, postexposure prophylaxis
Adult/child: IM 20 units/kg in a single dose, give as part of rabies vaccine regimen. If anatomically feasible, the full ra-

bies immune globulin dose should be infiltrated around and into the wound(s); remaining volume should be administered IM at a site distant from the vaccine site

radioactive iodine (sodium iodide) ^{131}I (Rx)

Func. class.: Antithyroid
Chem. class.: Radiopharmaceutical

USES: *High dose:* Thyroid cancer, hyperthyroidism
Low dose: Visualization to determine thyroid cancer, diagnostic aid for thyroid function studies

CONTRAINDICATIONS: Pregnancy, breastfeeding, age <30 yr, recent MI, large nodular goiter, vomiting/diarrhea, acute hyperthyroidism, use of thyroid products

DOSAGE AND ROUTES

Thyroid cancer
• **Adult: PO** 50-150 mCi; may repeat, depending on clinical status
Hyperthyroidism
• **Adult: PO** 4-10 mCi, depending on serum thyroxine level
Available forms: Capsule 0.75-100 mCi; oral solution 5-150 mCi/vial; concentrated oral solution 1000 mCi/mL; all are set at calibration

raloxifene (Rx)

(ral-ox'ih-feen)
Evista
Func. class.: Bone resorption inhibitor
Chem. class.: Hormone modifier, selective estrogen receptor modulator (SERM)

ACTION: Tissue-selective estrogen agonist/antagonist; agonist activity in bone and on lipid metabolism; antagonist activity on breast and uterus; reduces resorption of bone and decreases bone turnover

USES: Prevention, treatment of osteoporosis in postmenopausal women; breast cancer prophylaxis in postmenopausal women with osteoporosis or in postmenopausal women at high risk for developing the disease; invasive breast cancer risk reduction
Unlabeled uses: Uterine leiomyomata in postmenopausal women with osteoporosis or in postmenopausal women who are at high risk for developing the disease

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity

Black Box Warning: Women with active or history of venous thromboembolic events

Precautions: CV/hepatic disease, cervical/uterine cancer, elevated triglycerides, pulmonary embolism

Black Box Warning: Stroke

DOSAGE AND ROUTES

• **Adult postmenopausal women: PO** 60 mg/day, max 60 mg/day
Available forms: Tabs 60 mg
Administer:
• PO: without regard to meals, give with vit D
• Add calcium supplement if inadequate
• Do not use during immobilization or prolonged bedrest

SIDE EFFECTS

CNS: Insomnia, depression, migraines
CV: Hot flashes, peripheral edema, thromboembolism, stroke, fever, chest pain
EENT: Pharyngitis, sinusitis, laryngitis
GI: *Nausea,* vomiting, diarrhea, dyspepsia, abdominal pain, gastroenteritis
GU: Vaginitis, leukorrhea, cystitis, UTI, vaginal bleeding
INTEG: Rash, sweating
META: Weight gain, peripheral edema
MS: Arthralgia, myalgia, *leg cramps,* arthritis
RESP: Increased cough

PHARMACOKINETICS

Duration 24 hr, elimination half-life 28-32 hr; excreted in feces, breast milk; highly bound to plasma proteins

INTERACTIONS

• Administer cautiously with other highly protein-bound products, (ibuprofen, diazePAM, naproxen, systemic estrogens)
Decrease: action of anticoagulants, desiccated thyroid, levothyroxine, liotrix
Decrease: action of raloxifene—ampicillin, bile acid sequestrants
Drug/Food
Decrease: raloxifene, effect of—soy
Drug/Lab Test
Increase: triglycerides

NURSING CONSIDERATIONS

Assess:

Black Box Warning: History of stroke, TIA, thrombosis, atrial fibrillation, hypertension, smoking; venous thrombosis may occur; avoid prolonged sitting; discontinue 3 days before surgery, other immobilization; mortality is increased after stroke

• Bone density test at baseline, throughout treatment, bone-specific alk phos, osteocalcin
Pregnancy/breastfeeding: do not use in pregnancy/breastfeeding
Evaluate:
• Therapeutic response: prevention, treatment of osteoporosis in postmenopausal women; prevention of breast cancer in postmenopausal women with osteoporosis or in those who are at high risk for developing the disease
Teach patient/family:

Black Box Warning: To discontinue product 72 hr before prolonged bedrest; to avoid staying in one position for long periods, to report possible blood clots immediately, usually during first few months of therapy

• To take calcium supplements, vit D if intake is inadequate
• To increase exercise using weights
• To stop smoking; to decrease alcohol consumption
• That product does not help to control hot flashes; hot flashes may be increased, as these are a common side effect
• To report fever, acute migraine, insomnia, emotional distress; urinary tract infection, vaginal burning/itching; swelling, warmth, pain in calves; uterine bleeding, abnormal breast changes
• To notify prescriber if pregnancy is planned or suspected; not to use in pregnancy, breastfeeding
• Provide product package insert and discuss with patient

raltegravir (Rx)

(ral-teg′ra-vir)

Isentress, Isentress HD

Func. class.: Antiretroviral

Chem. class.: HIV integrase strand transfer inhibitor (ISTIs)

ACTION: Inhibits catalytic activity of HIV integrase, which is an HIV-encoded enzyme needed for replication

USES: HIV in combination with other antiretrovirals

CONTRAINDICATIONS: Breastfeeding, hypersensitivity
Precautions: Pregnancy, children, geriatric patients, hepatic disease, immune reconstitution syndrome, hepatitis, antimicrobial resistance, lactase deficiency

DOSAGE AND ROUTES

Do not interchange chewable tablets, film-coated 400-mg and high-dose 600-mg tablets

HIV with other antiretroviral agents
• **Adult: PO** (400-mg film-coated tablet) 400 mg bid. During coadministration with rifampin, recommended dosage is 800 mg bid
• **Adolescent/child ≥25 kg: PO** (400-mg film-coated tablet) 400 mg bid
• **Adolescent/child** (weight-based dosage): **PO** (chewable tablets) **≥40 kg,**

300 mg bid; **28-39 kg,** 200 mg bid; **20-27 kg,** 150 mg bid; **14-19 kg,** 100 mg bid; **11-13 kg,** 75 mg bid

• **Child: PO** (powder for suspension) **14-19 kg,** 100 mg (5 mL) bid; **11-13 kg,** 80 mg (4 mL) bid; **≥4 wk of age and 8-10 kg,** 60 mg (3 mL) bid; **≥4 wk and 6-7 kg,** 40 mg (2 mL) bid; **≥4 wk and 4-5 kg,** 30 mg (1.5 mL) bid; **≥4 wk and 3 kg,** 25 mg (1 mL) bid

High-dose regimen

• **Adult: PO** (600-mg film-coated tablet) 1200 mg (2 × 600 mg)/day. Coadministration with rifAMPin is not recommended

• **Adolescent/child ≥40 mg: PO** (600 mg film-coated tablet) 1200 mg (2 × 600 mg)/day. Coadministration with rifampin is not recommended

Available forms: Tabs 400, 600 mg; chew tabs 25, 100 mg; granules for oral suspension 100 mg/packet

Administer:

PO route

• Tablets and chew tablets are not interchangeable

• Chew tabs should be chewed or swallowed whole

• Do not break, crush, chew regular tabs

• May give without regard to meals, with 8 oz of water

• Store at room temperature

Oral suspension: Open foil, use 5 mL of water in provided measuring cup, close cup, swirl, do not turn upside down, use oral syringe to administer, use within 30 min, discard any remaining suspension

SIDE EFFECTS

CNS: *Fatigue,* fever, *dizziness, headache,* asthenia, suicidal ideation, insomnia

CV: MI

GI: *Nausea,* vomiting, diarrhea, abdominal pain, asthenia, gastritis, hepatitis

GU: Acute renal failure

HEMA: Anemia, neutropenia

INTEG: Rash, urticaria, pruritus, pain or phlebitis at IV site, unusual sweating, alopecia, Stevens-Johnson syndrome, toxic epidermal necrolysis

META: Hyperamylasemia, hyperglycemia, lipodystrophy

MS: Myopathy, rhabdomyolysis

SYST: Immune reconstitution syndrome

PHARMACOKINETICS

Max absorption 3 hr if taken on an empty stomach; half-life 9 hr; metabolized in the liver by uridine diphosphate glucuronosyltransferase (UGTA1A enzyme system); excreted in feces 51%, urine 32%

INTERACTIONS

Increase: raltegravir effect—proton pump inhibitors, H_2 blockers; UGT1A1 inhibitors (atazanavir)

Increase: rhabdomyolysis, myopathy, elevated CPK—fibric acid derivatives, HMG-CoA reductase inhibitors

Decrease: raltegravir levels—rifAMPin, efavirenz, tenofovir, tipranavir/ritonavir

Drug/Lab Test

Increase: AST, ALT, GGT, total bilirubin, alk phos, amylase/lipase, CK, serum glucose, total/HDL/LDL cholesterol

Decrease: HB, platelets, ANC

NURSING CONSIDERATIONS

Assess:

• **HIV infection:** CD4, T-cell count, plasma HIV RNA, viral load; resistance testing before therapy, at treatment failure

• **Rhabdomyolysis:** assess for muscle pain, darkening of urine, increased CPK; product should be discontinued

• Skin eruptions: rash, urticaria, itching

• **Suicidal thoughts/behaviors:** monitor for depression; more common in those with mental illness

• **Immune reconstitution syndrome,** usually during initial phase of treatment; may give antiinfective before starting; opportunistic infections or autoimmune disorders may occur

• **Stevens-Johnson syndrome:** skin eruptions: rash, urticaria, itching

• Monitor total/HDL/LDL cholesterol, blood glucose, LFTs, serum bilirubin (total and direct), baseline and periodically (all may be elevated); pregnancy test, CBC with differential, hepatitis serology, plasma hepatitis C, RNA, urinalysis, baseline and periodically

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, pregnant women taking this product should enroll in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed

Evaluate:

• Therapeutic response: improvement in CD4 counts, T-cell counts, viral load

• Decreased progression of AIDs, HIV

Teach patient/family:

• To take as prescribed; if dose missed, to take as soon as remembered up to 1 hr before next dose; not to double dose; not to share with others

• That sexual partners need to be told that patient has HIV; that product does not cure infection, just controls symptoms; that it does not prevent infecting others

• To report sore throat, fever, fatigue (may indicate immune reconstitution syndrome)

• That product must be taken in equal intervals 2×/day to maintain blood levels for duration of therapy

• To notify prescriber immediately of suicidal thoughts/behaviors

• **Pregnancy:** to notify prescriber if pregnancy is planned or suspected; not to breastfeed

• To continue with follow-up exams, blood work

• To report rash, muscle pain immediately

⚠ HIGH ALERT

ramelteon (Rx)

(rah-mel'tee-on)

Rozerem

Func. class.: Sedative/hypnotic, antianxiety

Chem. class.: Melatonin receptor agonist

Do not confuse:
Rozerem/Razadine

ACTION: Binds selectively to melatonin receptors (MT_1, MT_2); thought to be involved in circadian rhythms and in the normal sleep/wake cycle

USES: Insomnia (difficulty with sleep onset)

CONTRAINDICATIONS: Breastfeeding, children, infants, hypersensitivity

Precautions: Pregnancy, hepatic disease, alcoholism, COPD, seizure disorder, sleep apnea, suicidal ideation, angioedema, depression, sleep-related behaviors (sleepwalking), schizophrenia, bipolar disorder; alcohol intoxication, hepatic encephalopathy

DOSAGE AND ROUTES

• **Adult: PO** 8 mg within 30 min of bedtime

Hepatic dose

• Do not use with severe hepatic disease; use with caution for mild to moderate hepatic disease

Available forms: Tabs 8 mg

Administer:

• Within 30 min of bedtime for sleeplessness; on empty stomach for fast onset, do not give within 1 hr of high-fat foods

• Do not break, crush, chew tabs; swallow whole

• Store in tight container in cool environment

SIDE EFFECTS

CNS: Dizziness, somnolence, fatigue, headache, worsening insomnia, depression, complex sleep-related reactions (sleep driving, sleep eating), suicidal thoughts/behaviors

GI: Nausea, diarrhea, dysgeusia, vomiting

SYST: Severe allergic reactions, angioedema

PHARMACOKINETICS

Absorbed rapidly; peak ½-1½ hr; protein binding 82%; rapid first-pass metabolism via liver by CYP1A2; 84% excreted in urine, 4% in feces; half-life 2-5 hr metabolite

INTERACTIONS

• **Possible toxicity:** antiretroviral protease inhibitors

Increase: ramelteon effect, toxicity—alcohol; CYP1A2 inhibitors, azole

antifungals (ketoconazole, fluconazole), fluvoxaMINE, anxiolytics, sedatives, hypnotics, barbiturates, ciprofloxacin, strong CYP2C9 inhibitors, strong CYP3A4 inhibitors, opioids

Decrease: effect of ramelteon—strong CYP inducer (rifAMPin)

Drug/Food

• Prolonged absorption, sleep onset reduced: high-fat/heavy meal

Drug/Lab

Increase: protein level

Decrease: testosterone level

NURSING CONSIDERATIONS

Assess:

• **Severe hypersensitive reactions:** assess for angioedema (facial swelling); product should be discontinued

• **Sleep characteristics:** type of sleep problem: falling asleep, staying asleep; complex sleep disorders (sleep walking/driving/eating) after taking product

• Mental status: mood, sensorium, affect, memory (long, short term), suicidal ideation

• LFTs: before treatment, periodically

• **Beers:** avoid use in older adults with a high risk of delirium; delirium might be induced or worsened

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may be fetal toxic; cautious use in breastfeeding, excretion is unknown

Evaluate:

• Therapeutic response: ability to sleep at night, decreased amount of early morning awakening

Teach patient/family:

• To avoid driving, other activities requiring alertness until product stabilized; drowsiness may continue the next day

• To avoid alcohol ingestion, CNS depressants

• About alternative measures to improve sleep: reading, exercise several hr before bedtime, warm bath, warm milk, TV, self-hypnosis, deep breathing

• To report if pregnancy is planned or suspected; to avoid breastfeeding

• To take product within 30 min before going to bed

• Not to ingest a high-fat/heavy meal before taking product

• To report cessation of menses, galactorrhea (women), decreased libido, infertility, worsening of insomnia, behavioral changes, severe allergic reactions, suicidal thoughts/behaviors, if insomnia gets worse, swelling of face, tongue, trouble breathing

• Med guide should be given to patient and reviewed

ramipril (Rx)

(ra-mi′pril)

Altace

Func. class.: Antihypertensive

Chem. class.: Angiotensin-converting enzyme inhibitor (ACE)

Do not confuse:

ramipril/enalapril

Altace/alteplase

ACTION: Selectively suppresses renin-angiotensin-aldosterone system; inhibits ACE, prevents conversion of angiotensin I to angiotensin II; results in dilation of arterial, venous vessels

USES: Hypertension, alone or in combination with thiazide diuretics; HF (post-MI), reduction in risk for MI, stroke, death from CV disorders

CONTRAINDICATIONS: Breastfeeding, children, hypersensitivity to ACE inhibitors, history of ACE inhibitor–induced angioedema

Black Box Warning: Pregnancy second/third trimesters

Precautions: Geriatric patients, impaired renal/hepatic function, dialysis patients, hypovolemia, blood dyscrasias, HF, renal artery stenosis, cough, African descent, aortic stenosis

DOSAGE AND ROUTES

Hypertension

• **Adult: PO** 2.5 mg/day initially, then 2.5-20 mg/day divided bid or daily

HF post-MI

• **Adult: PO** 1.25-2.5 mg bid; may increase to 5 mg bid

Reduction in risk for MI, stroke, death

• **Adult: PO** 2.5 mg/day × 7 days, then 5 mg/day × 21 days, then may increase to 10 mg/day

Renal dose

• **Adult: PO** CCr <40 mL/min, reduce by 25%, titrate upward to max 5 mg/day

Available forms: Caps 1.25, 2.5, 5, 10 mg

Administer:

• Without regard to meals
• Swallow cap or tablet whole
• Caps can be opened, added to food; mixture is stable for 24 hr at room temperature, 48 hr refrigerated
• Store in tight container at ≤86°F (30°C)

SIDE EFFECTS

CNS: *Headache, dizziness,* anxiety, insomnia, paresthesia, *fatigue,* depression, malaise, vertigo, syncope

CV: *Hypotension,* chest pain, palpitations, angina, syncope, dysrhythmia, heart failure, MI

GI: *Nausea,* constipation, vomiting, anorexia, diarrhea, abdominal pain

GU: Proteinuria, increased BUN, creatinine, impotence

INTEG: Rash, sweating, photosensitivity, pruritus

META: *Hyperkalemia*

MS: Arthralgia, arthritis, myalgia

RESP: *Dry cough,* dyspnea

PHARMACOKINETICS

Bioavailability >50%-60%, onset 1-2 hr, peak 1-3 hr, duration 24 hr, protein binding 73%, half-life 13-17 hr, metabolized by liver (metabolites excreted in urine, feces)

INTERACTIONS

• Do not use with aliskiren in moderate-severe renal disease

Increase: hyperkalemia—potassium-sparing diuretics, potassium supplement, angiotensin II receptor agonists

Increase: hypotension—diuretics, other antihypertensives, ganglionic blockers, adrenergic blockers, nitrates, acute alcohol ingestion

Increase: toxicity—vasodilators, hydrALAZINE, prazosin, potassium-sparing diuretics, sympathomimetics, potassium supplements

Increase: serum levels of lithium

Decrease: absorption—antacids

Decrease: antihypertensive effect—indomethacin, NSAIDs, salicylates

Drug/Herb

Increase: antihypertensive effect—garlic hawthorn

Decrease: antihypertensive effect—black licorice, ephedra

Drug/Food

Increase: hyperkalemia—potassium salt substitutes; avoid use

Drug/Lab Test

Increase: LFTs, BUN, creatinine, glucose, potassium

Decrease: RBC, HB, platelets

NURSING CONSIDERATIONS

Assess:

• **Hypertension:** monitor B/P baseline and regularly, orthostatic hypotension, syncope
• **Heart failure:** edema in feet, legs daily; weight daily
• **Collagen-vascular disease (SLE, scleroderma):** neutrophils, decreased platelets; WBC with differential at baseline, periodically; if neutrophils <1 × 10^9/L, discontinue treatment
• **Renal disease:** protein, BUN, creatinine, potassium, sodium at baseline, periodically; increased levels may indicate nephrotic syndrome; renal symptoms: polyuria, oliguria, urinary frequency, dysuria
• **Serious allergic reactions:** angioedema, Stevens-Johnson syndrome, rash, fever, pruritus, urticaria; product should be discontinued if antihistamines fail to help
• Monitor electrolytes baseline and periodically; potassium may be increased

Black Box Warning: Pregnancy: identify if pregnant or if pregnancy is planned or suspected; if pregnant, discontinue product; do not use in pregnancy/breastfeeding; can cause injury or death to developing fetus

R

• For dry cough; notify prescriber as product may need to be discontinued

Evaluate:

• Therapeutic response: decrease in B/P; HF

Teach patient/family:

• Not to discontinue product abruptly; to comply with dosage schedule, even if feeling better

• Not to use OTC products (cough, cold, allergy), herbals, supplements unless directed by prescriber; not to use salt substitutes containing potassium without consulting prescriber

• To rise slowly to sitting or standing position to minimize orthostatic hypotension

• To notify prescriber of mouth sores, sore throat, fever, swelling of hands or feet, irregular heartbeat, chest pain

• To report excessive perspiration, dehydration, vomiting, diarrhea; may lead to fall in B/P; to maintain hydration

• That product may cause dizziness, fainting, light-headedness; that these may occur during first few days of therapy; to avoid hazardous activities until response is known

• That product may cause skin rash, impaired perspiration

• How to take B/P, normal readings for age group

• To report dry cough to provider

Black Box Warning: To inform prescriber if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE:

0.9% NaCl IV infusion, hemodialysis

ramucirumab (Rx)

(ra-mue-sir'ue-mab)

Cyramza

Func. class.: Antineoplastic

Chem. class.: Vascular endothelial growth factor antagonist

ACTION: Binds to vascular endothelial growth factor receptor 2 (VEGFR2; kinase insert domain-containing receptor; KDR), preventing the binding of ligands; as a result, ramucirumab inhibits ligand-induced proliferation and migration of human endothelial cells

USES: As a single agent or in combination with PACLitaxel for advanced or metastatic gastric or gastroesophageal junction adenocarcinoma with disease progression on or after fluoropyrimidine

CONTRAINDICATIONS

Hypersensitivity, pregnancy, breastfeeding

Precautions: Anticoagulant therapy, bleeding, cirrhosis, MI, contraception requirements, GI perforation, hepatic disease, human antihuman antibody (HAHA), hypertension, hypothyroidism, infusion related reactions, renal disease, stroke, surgery

DOSAGE AND ROUTES

Gastric cancer or gastroesophageal junction adenocarcinoma and Hepatocellular cancer (single agent)

• **Adults: IV infusion** 8 mg/kg over 60 min q2wk until disease progression or unacceptable toxicity; if first infusion is tolerated, all subsequent infusions may be administered over 30 min

Combination with PACLitaxel

• **Adults: IV infusion** 8 mg/kg over 60 min q2wk with PACLitaxel 80 mg/m^2 on days 1, 8, and 15 of a 28-day cycle

NSCLC

• **Adults: IV infusion** 10 mg/kg over 60 min with docetaxel (75 mg/m^2 IV) on day 1, give q21days until disease progression or unacceptable toxicity

mCRC

• **Adults IV** 8 mg/kg over 60 min on day 1 before FOLFIRI use, q2wk until disease progression or unacceptable toxicity; FOLFIRI consists of irinotecan 180 mg/m^2 IV over 90 min and folinic acid (leucovorin) 400 mg/m^2 given over 120 min on day 1, followed by fluorouracil 400 mg/m^2 IV bolus over 2-4 min on day 1, followed by fluorouracil 2400 mg/

m^2 by continuous IV infusion over 46-48 hr; if first infusion is tolerated, all subsequent infusions may be given over 30 min

Hepatic dose

• Adults IV

Mild to moderate hepatic impairment (Child-Pugh A; total bilirubin 1.1-3 times ULN and any AST, OR or total bilirubin within ULN and AST greater than ULN): no change; **severe hepatic impairment (Child-Pugh B or C):** Use only if the potential benefits outweigh the risks

Available forms: Injection 10 mg/mL single-dose vial

Administer: Intermittent IV infusion route

Intermittent IV infusion route

- Use cytotoxic handling precautions
- Premedicate with an IV histamine-1 (H1) receptor antagonist (diphenhydramine); for patients who have had a prior grade 1 or 2 infusion-related reaction, premedicate with an H1-receptor antagonist, dexamethasone (or equivalent), and acetaminophen before each infusion
- Dilute with normal saline to a final volume of 250 mL; invert to mix; do not shake; stable for 4 hr at room temperature
- Inspect for particles and discoloration before using
- Use a protein-sparing 0.22-micron filter; use separate line; flush with normal saline after use
- Do not admix with other solutions or medications
- Store vials in refrigerator; protect from light, do not freeze

SIDE EFFECTS

CNS: Headache, fatigue, RPLS
CV: Hypertension, arterial thromboembolic events, hemorrhage
EENT: Epistaxis
GI: Intestinal obstruction, diarrhea
GU: Proteinuria
HEMA: Neutropenia, anemia
RESP: Lower respiratory tract infection, cough, pleuritic pain
INTEG: Rash
MISC: Hypothyroidism, hyponatremia, IRR, antibody formation, infusion site reactions, poor wound healing

PHARMACOKINETICS

Onset 2 wk, half-life 15 days

INTERACTIONS

Drug/Lab Test
Increased: urine protein
Decreased: RBCs, serum sodium

NURSING CONSIDERATIONS

Assess

- **Bleeding/hemorrhage:** assess for GI bleeding; perforation (severe abdominal pain, nausea, vomiting, fever) may be fatal; discontinue and do not restart if this occurs
- **Poor wound healing:** assess all wounds for changes, avoid use if present
- **Hypertension:** monitor B/P frequently, at least q2wk; if hypertension occurs, withhold until controlled
- **GI status:** diarrhea, bowel sounds; obstruction/perforation has occurred
- **Infusion-related reactions:** chills, fever, chest discomfort, tachycardia, wheezing
- **CNS: RPLS:** assess for hypertension, blurred vision, impaired consciousness, seizures, headache; may be confirmed with MRI; discontinue and do not restart if confirmed
- **Cardiac status:** assess for serious cardiac events, including MI, stroke; discontinue permanently if these occur
- **Pregnancy/breastfeeding:** do not use in pregnancy; women should use adequate contraception during and for ≥3 months after last dose; if childbearing potential, do not breastfeed

Evaluate:

- **Therapeutic response:** decreased progression of cancer

Teach patient/family:

- **Bleeding:** teach patient that bleeding may occur, to contact provider for bleeding
- **Poor wound healing:** teach patient to report wound changes, to discuss with all providers use of product

R

• **Hypertension:** teach patient to monitor B/P frequently, at least q2wk; if high or if headache is present, notify provider
• **RPLS:** assess for hypertension, blurred vision, impaired consciousness, seizures, headache; may be confirmed with MRI; discontinue and do not restart if confirmed
• **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected; teach not to use in pregnancy, to use adequate contraception during and for ≥3 months after last dose; if childbearing potential, do not breastfeed; product may impair fertility

ranibizumab (Rx)

(ran-ih-biz′oo-mab)

Byooviz, Lucentis, Susvimo

Func. class.: Ophthalmic
Chem. class.: Selective vascular endothelial growth factor antagonist

ACTION: Binds to receptor-binding site of active forms of vascular endothelial growth factor A (VEGF-A), which causes angiogenesis and cell proliferation

USES: Age-related macular degeneration (neovascular) (wet), macular edema after retinal vein occlusion (RVO), diabetic macular edema

CONTRAINDICATIONS: Hypersensitivity, ocular infections
Precautions: Pregnancy, breastfeeding, children, retinal detachment, increased intraocular pressure

Black Box Warning: Endophthalmitis

DOSAGE AND ROUTES

Neovascular (wet) age-related macular degeneration (AMD)/macular degeneration/macular edema after retinal vein occlusion (RVO) (Lucentis, Byuoviz)
• **Adult: INTRAVITREAL** 0.5 mg (0.05 mL) of 10 mg/mL product monthly or 0.5 mg monthly × 4 mo, then 0.5 mg q3mo; (Susvimo) 2 mg continuously delivered via ocular implant

Diabetic macular edema (Lucentis only)
• **Adult: INTRAVITREAL** 0.3 mg of 6 mg/mL product q28day

Available forms: Sol for inj 6 mg/mL, 10 mg/mL; prefilled syringe 0.3-mg dose; 0.5 mg/0.05 mL solution for injection; 100 mg/mL solution for injection

Administer:
• By ophthalmologist via intravitreal injection using adequate anesthesia; use 19-gauge filter
• Store in refrigerator; do not freeze
• Protect from light

SIDE EFFECTS

CNS: Dizziness, headache, peripheral neuropathy
EENT: Blepharitis, cataract, conjunctival hemorrhage/hyperemia, detachment of retinal pigment epithelium, dry eye, irritation/pain in eye, visual impairment, vitreous floaters, ocular infection
GI: Constipation, nausea
MISC: Hypertension, UTI, thromboembolism, nonocular bleeding, anemia, arthralgia
RESP: Bronchitis, cough, sinusitis, URI, pulmonary embolism
INTEG: Impaired wound healing
CV: Hypertension, thromboembolism, nonocular bleeding, anemia, angina, CAD

PHARMACOKINETICS

Elimination half-life 9 days, peak 1 day

INTERACTIONS

Increase: severe inflammation—verteporfin photodynamic therapy (PDT)

NURSING CONSIDERATIONS

Assess:
• **Eye changes:** redness; sensitivity to light, vision change; increased intraocular pressure change; report infection to ophthalmologist immediately, complete procedure with anesthesia and antibiotic before use, check perfusion of optic nerve after use
• **Hypersensitivity:** monitor for inflammation
• **Infection:** UTI, URI, wound/skin

Evaluate:
• Therapeutic response: prevention of increasing macular degeneration
Teach patient/family:
• If eye becomes red, sensitive to light, painful, or if there is a change in vision, to seek immediate care from ophthalmologist
• About reason for treatment, expected results; that product is injected into the eye, an anesthetic will be used

raNITIdine (Rx, OTC)

(ra-nit'i-deen)

Pylorid ✤, Zantac, Zantac C ✤, Zantac 75, Zantac 150, Zantac 300

Func. class.: H_2-Histamine receptor antagonist

Do not confuse:
raNITIdine/amantadine/riMANTAdine
Zantac/Xanax/Zofran/ZyrTEC

ACTION: Inhibits histamine at H_2-receptor site in parietal cells, which inhibits gastric acid secretion

USES: Duodenal ulcer, Zollinger-Ellison syndrome, gastric ulcers, hypersecretory conditions, gastroesophageal reflux disease, stress ulcers, erosive esophagitis (maintenance), active duodenal ulcers with *Helicobacter pylori* in combination with clarithromycin, systemic mastocytosis, multiple endocrine adenoma syndrome, heartburn
Unlabeled uses: Angioedema, gastritis, urticaria, anaphylaxis

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, child <12 yr, renal/hepatic disease

DOSAGE AND ROUTES

GERD
• **Adult: PO** 150 mg bid
Erosive esophagitis
• **Adult/adolescent ≥17 yr: PO** 150 mg qid for up to 12 wk
• **Child ≥1 mo: PO** 5-10 mg/kg/day in 2-3 divided doses
Duodenal ulcer
• **Adult: PO** 150 mg bid or 300 mg/day after PM meal or at bedtime; maintenance 150 mg at bedtime
• **Infant/child: PO** 2-4 mg/kg bid, max 300 mg/day
Zollinger-Ellison syndrome
• **Adult: PO** 150 mg bid, may increase if needed up to 6 g/day in those with severe disease
Gastric ulcer
• **Adult: PO** 150 mg bid × 6 wk, then 150 mg at bedtime
• **Infant/child: PO** 2-4 mg/kg bid, max 300 mg/day
Renal dose
• **Adult: PO** CCr <50 mL/min, give 50% of dose or extend dosing interval
Stress gastritis prophylaxis (unlabeled)
• **Adult: IM/INT IV INFUSION** 50 mg q6-8hr or **CONT IV INFUSION** 6.25 mg/hr (150 mg/24 hr)
Severe, acute urticaria/angioedema (unlabeled)
• **Adult: INT IV INFUSION** 50 mg with H_1-blocker
Available forms: Tabs 75, 150, 300 mg; sol for inj 25 mg/mL; caps 150, 300 mg; syr 15 mg/mL

Administer:
PO route
• Antacids 1 hr before or 1 hr after raNITIdine
• Without regard to meals
• Store at room temperature
• Give daily dose at bedtime
IM route
• No dilution needed; inject in large muscle mass, aspirate
Direct IV route
• Dilute to max 2.5 mg/mL (50 mg/20 mL) using 0.9% NaCl (nonpreserved) or D_5W, give dose over ≥5 min (max 4 mg/mL)
Intermittent IV INFUSION route
• Dilute to max 0.5 mg/mL with D_5W, NS, give over 15-20 min (5-7 mL/min); premixed ready-to-use bags as 1 mg/mL (50 mg/50 mL), infusion over 15-20 min

R

Continuous 24-hr IV INFUSION route

• **Adult:** dilute 150 mg/250 mL of D_5W or NS; run over 24 hr (6.25 mg/hr or as directed); use infusion device; use within 48 hr; *Zollinger-Ellison syndrome:* dilute in D_5W, NS; max concentration 2.5 mg/mL, use infusion device

Y-site compatibilities: Acyclovir, aldesleukin, alemtuzumab, alfentanil, allopurinol, amifostine, amikacin, aminophylline, amphotericin B liposome, amsacrine, anakinra, anidulafungin, ascorbic acid, atracurium, atropine, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, ceFAZolin, cefepime, cefonicid, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, ceftRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, digoxin, diltiazem, DOBUTamine, DOCEtaxel, DOPamine, doripenem, doxacurium, doxapram, DOXOrubicin, DOXOrubicin liposome, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, folic acid, foscarnet, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, imipenem/cilastatin, inamrinone, indomethacin, isoproterenol, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, mitoXANtrone, morphine, multivitamin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pancuronium, papaverine, PEMEtrexed, penicillin G, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxine, remifentanil, riTUXimab, rocuronium, sargramostim, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiopental, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trastuzumab, trimethaphan, urokinase, vancomycin, vecuronium, vinCRIStine, vinorelbine, warfarin, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Headache, dizziness, confusion, agitation, depression; hallucination (geriatric patients)

EENT: Blurred vision

GI: Constipation, abdominal pain, diarrhea, nausea, vomiting, hepatotoxicity

INTEG: Anaphylaxis, angioedema, burning at injection site

PHARMACOKINETICS

PO: Peak 2-3 hr; duration 8-12 hr; metabolized by liver; excreted in urine (30% unchanged, PO), breast milk; half-life 2-3 hr; protein binding 15%

INTERACTIONS

Increase: effect of pramipexole, procainamide, trospium, triazolam, calcium channel blockers, memantine, saquinavir, adefovir

Increase: GI obstruction risk—NIFEdipine ext rel products

Increase: toxicity—sulfonylureas, procainamide, benzodiazepines, calcium channel blockers

Decrease: absorption of raNITIdine—antacids, anticholinergics

Decrease: warfarin clearance—warfarin

Decrease: effects of cephalosporins, iron salts, ketoconazole, itraconazole, atazanavir, delavirdine

Increase: GI obstruction risk—NIFEdipine ext rel products
Drug/Lab Test
Increase: AST, ALT, creatinine
False positive: urine protein (Multistix)

NURSING CONSIDERATIONS

Assess:
- **GI symptoms:** nausea, vomiting, diarrhea, cramps, abdominal discomfort, jaundice; report immediately
- I&O ratio, BUN, creatinine, LFTs, serum, stool guaiac before, periodically during therapy
- For vitamin B_{12} deficiency if product is taken long term, >2 yr
- **Beers:** avoid in older adults with delirium or at high risk for delirium; may induce delirium or make it worse; report confusion

Evaluate:
- Therapeutic response: decreased abdominal pain, heartburn, healing of ulcers, absence of gastroesophageal reflux

Teach patient/family:
- To avoid driving, other hazardous activities until stabilized on product
- That product must be continued for prescribed time to be effective
- Not to take maximum OTC daily dose for >2 wk
- To take once-daily dose before bedtime
- To report immediately coffee-ground emesis, black tarry stools, abdominal pain, cramping
- To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding

ranolazine (Rx)

(ruh-no'luh-zeen)

Ranexa

Func. class.: Antianginal
Chem. class.: Piperazine derivative

ACTION:

Antianginal, antiischemic; unknown, may work by inhibiting portal fatty-acid oxidation

USES:

Chronic stable angina pectoris; use in patients who have not responded to other treatment options; should be used in combination with other antianginals such as amLODIPine, β-blockers, nitrates
Unlabeled uses: Unstable angina

CONTRAINDICATIONS:

Preexisting QT prolongation, hepatic disease (Child-Pugh class A, B, C), hypersensitivity, hypokalemia, renal failure, torsades de pointes, ventricular dysrhythmia, ventricular tachycardia, hepatic cirrhosis
Precautions: Pregnancy, breastfeeding, children, geriatric patients, hypotension, renal disease, females at risk for torsades de pointes

DOSAGE AND ROUTES

Chronic angina
- **Adult: PO** 500 mg bid, increased to 1000 mg bid based on response; max 1000 mg bid; limit to 500 mg bid in those taking moderate CYP3A4 inhibitors

Available forms: Ext rel tabs 500, 1000 mg
Administer:
- **Ext rel tabs:** do not break, crush, chew tabs; take product as prescribed; do not double or skip dose
- Use in combination with H_2 blocker, metroNIDAZOLE, proton pump inhibitor, and clarithromycin for *H. pylori*
- Without regard to meals, bid; do not use with grapefruit juice or grapefruit

SIDE EFFECTS

CNS: *Headache, dizziness,* hallucinations
CV: Palpitations, QT prolongation, orthostatic hypotension
EENT: Tinnitus
GI: Nausea, vomiting, constipation, dry mouth
MISC: Peripheral edema
RESP: Dyspnea

PHARMACOKINETICS

Absorption varied; peak 2-5 hr; half-life 7 hr; extensively metabolized by the liver (CYP3A and less by CYP2D6); excreted in urine (75%), feces (25%); protein binding 62%

INTERACTIONS

Increase: ranolazine action—diltiaZEM, ketoconazole, macrolide antibiotics, dofetilide, PARoxetine, protease inhibitors, quiNIDine, sotalol, thioridazine, verapamil, ziprasidone, avoid using together
Increase: action of digoxin, simvastatin
Increase: ranolazine absorption, toxicity—antiretroviral protease inhibitors
Increase: QT prolongation and torsades de pointes—class IA/III antidysrhythmics, arsenic trioxide, chloroquine, droperidol, haloperidol, methadone, pentamidine, chlorproMAZINE, mesoridazine, thioridazine, pimozide; CYP3A4 inhibitors (ketoconazole, fluconazole, itraconazole, IV miconazole, voriconazole, diltiaZEM, verapamil)

Drug/Food

• Do not use with grapefruit, grapefruit juice

Drug/Herb

Decrease: ranolazine level—St. John's wort, don't use together

NURSING CONSIDERATIONS

Assess:

• **Angina:** characteristics of pain (intensity, location, duration, alleviating/precipitating factors)
• **QT prolongation:** ECG for QT prolongation, ejection fraction; assess for chest pain, palpitations, dyspnea; torsades de pointes may occur
• Cardiac status: B/P, pulse, respirations
• LFTs, serum creatinine/BUN (in those with CCr <60 mL/min), magnesium, potassium before treatment, periodically; if BUN and creatinine increase significantly, discontinue product
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:

• Therapeutic response: decreased anginal pain, attacks

Teach patient/family:

• To avoid hazardous activities until stabilized on product, dizziness no longer a problem
• To avoid OTC drugs, grapefruit juice, products prolonging QTc (quiNIDine, dofetilide, sotalol, erythromycin, thioridazine, ziprasidone or protease inhibitors, diltiaZEM, ketoconazole, macrolide antibiotics, verapamil) unless directed by prescriber; to notify prescriber of palpitations, fainting
• To comply with all areas of medical regimen
• To take as directed; not to skip dose, double doses
• Not to chew or crush; not to use with grapefruit juice
• To notify all health care providers of product use
• To notify prescriber of dizziness, edema, dyspnea
• For acute angina, to take other products prescribed; this product does not decrease acute attack

rasagiline (Rx)

(ra-sa´ji-leen)

Azilect

Func. class.: Antiparkinson agent
Chem. class.: MAOI, type B

Do not confuse:
Azilect/Aricept

ACTION: Inhibits MAOI type B at recommended doses; may increase DOPamine levels

USES: Idiopathic Parkinson's disease monotherapy or with levodopa

CONTRAINDICATIONS: Breastfeeding; hypersensitivity to this product, MAOIs; pheochromocytoma
Precautions: Pregnancy, children, psychiatric disorders, moderate to severe hepatic disorders

DOSAGE AND ROUTES

Parkinson disease
Monotherapy

• **Adult: PO** 1 mg/day

Adjunctive therapy

• **Adult: PO** 0.5 mg/day, may increase 1 mg/day; change of levodopa dose for adjunct therapy; reduced levodopa dose may be needed

Hepatic dose

• **Adult: PO** 0.5 mg for mild hepatic disease

Concomitant ciprofloxacin, other CYP1A2 inhibitors

• **Adult: PO** 0.5 mg; plasma concentrations of rasagiline may double

Available forms: Tabs 0.5, 1 mg

Administer:

• With meals to prevent nausea; continuing therapy usually reduces or eliminates nausea; do not give with foods/liquids containing large amounts of tyramine

• Reduce dose of carbidopa/levodopa cautiously

• Renal failure: in dialysis, increase dose slowly

SIDE EFFECTS

Monotherapy

CNS: Drowsiness, hallucinations, depression, headache, malaise, paresthesia, vertigo, syncope

CV: Angina, hypertensive crisis (ingestion of tyramine products), orthostatic hypotension

GI: *Nausea,* diarrhea, dry mouth, dyspepsia

GU: Impotence, decreased libido

HEMA: Leukopenia

INTEG: Alopecia, skin cancers

MISC: Conjunctivitis, fever, flu syndrome, neck pain, allergic reaction, alopecia

MS: Arthralgia, arthritis, dyskinesia

RESP: Rhinitis

PHARMACOKINETICS

Onset, peak, duration unknown; 35%-40% absorbed; protein binding >88%-94%; metabolized by CYP1A2 in liver; excreted by kidneys <1%, half-life 1.3 hr

INTERACTIONS

• Do not give with meperidine, other analgesics because serious reactions (including coma and death) may occur; do not give with sympathomimetics

Increase: levels of rasagiline up to 2-fold—ciprofloxacin, CYP1A2 inhibitors (atazanavir, mexiletine, taurine)

• Increased dopaminergic adverse reaction risk—levodopa, dopamine agonists

Increase: severe CNS toxicity with antidepressants (tricyclics, SSRIs, SNRIs, mirtazapine, cyclobenzaprine)

Increase: hypertensive crisis—MAOIs

Drug/Herb

• Do not give with St. John's wort, yohimbe

Drug/Food

• Do not give with foods/liquids that have large amounts of tyramine (cured meats, aged cheese)

Drug/Lab Test

Increase: LFTs

Decrease: WBCs

NURSING CONSIDERATIONS

Assess:

• **Parkinson symptoms:** tremors, ataxia, muscle weakness and rigidity at baseline, periodically; increased dyskinesia, postural hypotension if used in combination with levodopa

• Mental status: hallucinations, confusion; notify prescriber

• **Hypertensive crisis:** severe headache, blurred vision, seizures, chest pain, difficulty thinking, nausea, vomiting, signs of stroke; any unexplained severe headache should be considered to be hypertensive crisis

• **Melanoma:** periodic skin exams by a dermatologist for possible skin cancer

• Cardiac status: B/P, ECG periodically, orthostatic hypotension during 2 months of treatment during beginning treatment

• **Tyramine products:** foods, other medications may lead to hypertensive crisis (tachycardia, bradycardia, chest pain, nausea, vomiting, sweating, dilated pupils)

• Drowsiness, daytime sleepiness or falling asleep, may need to be discontinued

• **Serotonin syndrome:** agitation, coma, tachycardia, hyperreflexia, nausea, vomiting, diarrhea; may be precipitated in those taking SSRIs, SNRIs

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: improved symptoms in patients with Parkinson's disease

R

Teach patient/family:
- To change positions slowly to prevent orthostatic hypotension
- To avoid hazardous activities until stabilized on product; that dizziness can occur
- To rinse mouth frequently; to use sugarless gum to alleviate dry mouth
- To take as prescribed; not to miss dose or double doses; to take missed dose as soon as remembered if several hours before next dose
- To prevent hypertensive crisis by avoiding high-tyramine foods (>150 mg), give list to patient, to report signs/symptoms of hypertensive crisis (headache, chest pain, nausea, palpitations, racing heart)
- To avoid CNS depressants, alcohol
- To notify all providers of product use; to avoid elective surgery, other procedures involving CNS depressants
- Check skin periodically for possible skin cancer, higher evidence in Parkinson disease

⚠ HIGH ALERT

rasburicase (Rx)

(rass-burr′i-case)

Elitek, Fasturtec

Func. class.: Enzyme

Chem. class.: Recombinant urate-oxidase enzyme

ACTION: Catalyzes enzymatic oxidation of uric acid into an inactive and soluble metabolite (allantoin)

USES: To reduce uric acid levels in patients with leukemia, lymphoma, or solid tumor malignancies who are receiving chemotherapy

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: G6PD deficiency (Mediterranean, African descent), hemolytic reactions, methemoglobinemia reactions to product

Precautions: Pregnancy, breastfeeding, children <2 yr, anemia, acute bronchospasm, angina, atony, African-American and Mediterranean patients, hypotension

Black Box Warning: Anaphylaxis, interference with uric acid measurements

DOSAGE AND ROUTES

- **Adult/adolescent/infant: IV INFUSION** 0.2 mg/kg as single daily dose × 5 days

Available forms: Powder for inj 1.5, 7.5 mg/vial

Administer:

Intermittent IV INFUSION route
- Determine number of vials that are needed based on weight, concentration required
- **Reconstitute** with diluent provided, add 1 mL of diluent/each vial, swirl, withdraw amount needed, mix with NS to final volume of 50 mL, use within 24 hr, give over 30 min, **do not use filter,** use different line; if not possible, flush with ≥15 mL of saline before, after use
- Chemotherapy started 4-24 hr after 1st dose

SIDE EFFECTS

CNS: *Headache,* fever
CV: Chest pain, hypotension
GI: *Nausea, vomiting, anorexia, diarrhea, abdominal pain, constipation, dyspepsia, mucositis*
HEMA: Neutropenia with fever, hemolysis, methemoglobinemia
INTEG: *Rash*
MISC: Edema
SYST: Anaphylaxis, hemolysis, sepsis

PHARMACOKINETICS

Half-life 16-21 hr, duration up to 12 hr

INTERACTIONS

Increase: methemoglobinemia risk—local anesthetics

Drug/Lab Test

Black Box Warning: Interference: uric acid

NURSING CONSIDERATIONS

Assess:
- Blood studies: BUN, serum uric acid, urine creatinine clearance, electrolytes, CBC with differential before, during therapy

• Monitor temperature; fever may indicate beginning infection; no rectal temperatures

Black Box Warning: Anaphylaxis: dyspnea, urticaria, flushing, wheezing, swelling of lips, tongue, throat; have emergency equipment nearby

Black Box Warning: G6PD deficiency, hemolytic reactions, methemoglobinemia; these patients should not be given this product; screen patients who are at higher risk for these disorders

Black Box Warning: Altered uric acid measurements: for accurate results, collect blood in prechilled tubes with heparin, place tubes on ice, test within 4 hr

• GI symptoms: frequency of stools, cramping; if severe diarrhea occurs, fluid, electrolytes may need to be given

Evaluate:

• Therapeutic response: decreased uric acid levels in children when antineoplastics causing high uric acid levels used

Teach patient/family:

• About the reason for therapy, expected results

• **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected or if breastfeeding

ravulizumab (Rx)

(rav′-yoo-liz′-yoo-mab)

Ultomiris

Func. class.: Monoclonal antibody

USES: Atypical hemolytic uremic syndrome in adults and pediatrics, paroxysmal nocturnal hemoglobinuria

CONTRAINDICATIONS

Hypersensitivity

Black Box Warning: Meningococcal infection

DOSAGE AND ROUTES

Treat for at least 6 months

• **Adults ≥ 100 kg: IV** 3,000 mg load, then 3,600 mg q8wk starting 2 wk after loading dose

• **Adults 60 to 99 kg: IV** 2,700 mg load, then 3,300 mg q8wk starting 2 wk after loading dose

• **Adults 40 to 59 kg: IV** 2,400 mg load, then 3,000 mg q8wk starting 2 wk after loading dose

• **Adolescents ≥ 100 kg: IV** 3,000 mg load, then 3,600 mg q8wk starting 2 wk after the loading dose

• **Children and adolescents 60 to 99 kg: IV** 2,700 mg load, then 3,300 mg q8wk starting 2 wk after loading dose

• **Children and adolescents 40 to 59 kg: IV** 2,400 mg load, then 3,000 mg q8wk starting 2 wk after loading dose

• **Children and adolescents 30 to 39 kg: IV** 1,200 mg load, then 2,700 mg q8wk starting 2 wk after loading dose

• **Children 20 to 29 kg: IV** 900 mg load, then 2,100 mg q8wk starting 2 wk after the loading dose

• **Infants and children 10 to 19 kg: IV** 600 mg load, then 600 mg q4wk starting 2 wk after loading dose

• **Infants and children 5 to 9 kg: IV** 600 mg load, then 300 mg q4wk starting 2 wk after loading dose

Available forms: Injection 300 mg/30 mL single-dose vial

R

⚠ HIGH ALERT

regorafenib (Rx)

(re′goe-raf′e-nib)

Stivarga

Func. class.: Antineoplastic; multikinase inhibitor

Chem. class.: Signal transduction inhibitor (STI)

ACTION: Inhibits tyrosine kinase in patients with colorectal cancer

USES: Metastatic colorectal cancer in those who have received fluoropyrimidine,

oxaliplatin, irinotecan-based chemotherapy, an anti-VEGF therapy; and an anti-EGFR therapy if *KRAS* wild type

CONTRAINDICATIONS: Pregnancy

Precautions: Breastfeeding, children, geriatric patients, cardiac/renal/hepatic/dental disease, fistula, GI bleeding or perforation, bone marrow suppression, infection, wound dehiscence, thrombocytopenia, neutropenia, immunosuppression

Black Box Warning: Hepatic disease

DOSAGE AND ROUTES

• **Adult: PO** 160 mg/day with a low-fat breakfast × 21 days of a 28-day cycle, cycles may be repeated

Available forms: Tabs 40 mg

Administer:

• Store at 77°F (25°C)

• Give at the same time each day with a low-fat breakfast that contains less than 30% fat such as 2 slices of white toast with 1 tbsp of low-fat margarine and 1 tbsp of jelly, and 8 oz of skim milk; or 1 cup of cereal, 8 oz of skim milk, 1 slice of toast with jam, apple juice, and 1 cup of coffee or tea

• Swallow tablets whole

• If a dose is missed, take as soon as possible that day; do not take 2 doses on the same day

• **Hand-foot skin reaction:** Reduce to 120 mg (grade 2 palmar-plantar erythrodysesthesia); hold if grade 2 toxicity does not improve in ≤7 days or recurs; hold for ≥7 days in grade 3 toxicity; reduce to 80 mg for recurrent grade 2 toxicity; discontinue if 80 mg is not tolerated

• **Hypertension:** Hold in grade 2 hypertension

Other severe toxicity (except hepatotoxicity)

• Hold until toxicity resolves in grade 3 or 4 toxicity; consider the risk/benefits of continuing therapy in grade 4 toxicity, reduce dosage to 120 mg; if grade 3 or 4 toxicity recurs, hold until toxicity resolves, then reduce to 80 mg; discontinue in those who do not tolerate 80-mg dose

• **Hepatic dose:** Baseline mild (Child-Pugh class A) or moderate (Child-Pugh class B): no change; baseline severe hepatic impairment (Child-Pugh class C): use not recommended; AST/ALT elevations during therapy: For grade 3 AST/ALT level elevations, hold dose; if therapy is continued, reduce to 120 mg after levels recover; discontinue in those with AST/ALT >20 × ULN; AST/ALT >3 × ULN and bilirubin >2 × ULN; recurrence of AST/ALT >5 × ULN despite a reduction to 120 mg

SIDE EFFECTS

CNS: Headache, tremor

CV: Hypertensive crisis, MI

EENT: Blurred vision, conjunctivitis

GI: Hepatotoxicity, GI hemorrhage, diarrhea, GI perforation, xerostomia

HEMA: Neutropenia, thrombocytopenia, bleeding

INTEG: Rash, alopecia

META: Hypokalemia

MISC: Fatigue, decreased weight, hand-foot syndrome, hypothyroidism

PHARMACOKINETICS

Protein binding 99%, metabolized by CYP3A4, UGT1A0, half-life 14-58 hr

INTERACTIONS

Increase: regorafenib concentrations—CYP3A4 inhibitors (ketoconazole, itraconazole, erythromycin, clarithromycin)

Increase: plasma concentrations of simvastatin, calcium channel blockers, ergots

Increase: plasma concentration of warfarin; avoid use with warfarin; use low-molecular-weight anticoagulants instead

Decrease: regorafenib concentrations—CYP3A4 inducers (dexamethasone, phenytoin, carBAMazepine, rifAMPin, PHENobarbital)

Drug/Food

Increase: regorafenib effect—grapefruit juice; avoid use while taking product

Drug/Herb

Decrease: imatinib concentration—St. John's wort

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Hepatic disease: fatal hepatotoxicity can occur; obtain LFTs baseline and at least every 2 wk × 2 mo, then monthly

• Assess any wounds for wound healing; report wound dehiscence, stop medication, notify prescriber

• **Fatal bleeding:** from GI, respiratory, GU tracts; permanently discontinue in those with severe bleeding

• **Palmar-plantar erythrodysesthesia (hand-foot syndrome):** more common in those previously treated; reddening, swelling, numbness, desquamation on palms, soles

• **GI perforation/fistula:** discontinue if this occurs; assess for pain in epigastric area, dyspepsia, flatulence, fever, chills

• **Hypertension/hypertensive crisis:** hypertension usually occurs in the first cycle in those with preexisting hypertension; do not start treatment until B/P is controlled; monitor B/P every week × 6 wk, then at start of each cycle or more often if needed; temporarily or permanently discontinue for severe uncontrolled hypertension

• **Pregnancy/breastfeeding:** identify whether patient is pregnant or if pregnancy is planned; identify contraception type in both men and women; do not use in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: decrease in spread or size of tumor

Teach patient/family:

• To report adverse reactions immediately: bleeding, rash

• About reason for treatment, expected results

• That effect on male fertility is unknown

• To take at the same time of day with low-fat food; not to use grapefruit juice; to take missed dose on same day; not to take multiple doses on the same day; to keep original container

• To report immediately **hepatic effect** (yellowing skin, eyes, nausea, vomiting, dark urine), **increased B/P** (severe headache), **GI perforation/fistula** (dyspepsia, flatulence, fever, chills, epigastric pain)

• **Pregnancy/breastfeeding:** not to use in pregnancy; to report if pregnancy is suspected or if breastfeeding; for men and women to use contraception during and for 2 mo after termination of treatment

remdesivir (Rx)

(rem-de′si-vir)

Veklury

Func. class.: Antiviral

Chem. class.: RNA-polymerase inhibitor

ACTION: Inhibits SARS-CoV-2 RNA–dependent RNA polymerase needed for viral replication

USES: COVID-19

DOSAGE AND ROUTES

Adult/child ≥12 yr and 40 kg: IV: Patients requiring low-flow/high-flow supplemental O_2 or noninvasive ventilation: 200 mg (single dose) on day 1, then 100 mg daily × 4 days or until hospital discharge, whichever is first; may continue up to 10 days in those without improvement at day 5; may use monotherapy or with dexamethasone; **patients requiring invasive mechanical ventilation/extracorporeal membrane oxygenation:** 200 mg (single dose) on day 1, then 100 mg daily, duration varies; total duration is 5 days or hospital discharge, whichever is first; may continue up to 10 days in those without improvement at day 5

Child ≥12 yr/adolescent <40 kg: Lyophilized powder only: IV: Loading dose: 5 mg/kg/dose on day 1, then 2.5 mg/kg/dose daily; **≥40 kg: Injection solution/lyophilized powder: IV:** Loading dose: 200 mg on day 1, then 100 mg daily; **in those not requiring mechanical ventilation/extracorporeal membrane oxygenation:** Use for 5 days or until hospital discharge, whichever is first; may continue up to 10 days in those without improvement at day 5; **in those requiring mechanical**

R

ventilation/ECMO: Use for 10 days or start with a 5-day course and extend to 10 days on a case-by-case basis
Infant/child <12 yr: Lyophilized powder only 3.5 kg to <40 kg: IV: Loading dose: 5 mg/kg/dose on day 1, then 2.5 mg/kg/dose daily; **≥40 kg: IV:** Loading dose: 200 mg on day 1, then 100 mg daily; **in those not requiring mechanical ventilation/extracorporeal membrane oxygenation:** Use for 5 days or until hospital discharge, whichever is first; may continue up to 10 days in those without improvement at day 5; **in those requiring mechanical ventilation/ECMO:** Use for 10 days or start with a 5-day course and extend to 10 days on a case-by-case basis
Available forms: IV solution (preservative free) 100 mg/20 mL; IV solution reconstituted 150 mg
Administer:
Intermittent IV infusion route
• **Injection solution:** Warm to room temperature before dilution, further dilute in 250 mL NS; withdraw and discard the required volume of NS from the infusion bag (40 mL/200 mg; 20 mL/100 mg) before addition of remdesivir, transfer required volume of remdesivir to the infusion bag and invert to mix; do not shake. Discard unused portion of the injection solution vial
• **Lyophilized powder:** Reconstitute vial/19 mL SWFI; shake for 30 sec, allow to sit for 2-3 min, repeat until contents are dissolved (5 mg/mL); further dilute in 100-250 mL NS; withdraw and discard the required volume of NS from the infusion bag (40 mL/200 mg; 20 mL/100 mg) before adding remdesivir; transfer needed volume of remdesivir to the infusion bag and invert to mix. Discard unused portion
• Give over 30-120 min

CONTRAINDICATIONS:

Hypersensitivity
Precautions:
Breastfeeding, child <12 yr, dialysis, hepatic disease, infusion-related reactions, pregnancy, renal disease

Black Box Warning: Remdesivir is not an approved treatment for COVID-19 caused by SARS-CoV-2, but is investigational and is available under an FDA emergency use authorization (EUA) for the treatment of COVID-19 in hospitalized patients only

SIDE EFFECTS

GI: Diarrhea, constipation, increased LFTs, nausea
RESP: Dyspnea, hypoxia, **respiratory arrest,** wheezing
CNS: Fever, headache, delirium, **seizures,** shivering
INTEG: Anaphylaxis, angioedema, infusion-related reactions, phlebitis, rash, ecchymosis
HEMA: Anemia
CV: Atrial fibrillation, bradycardia, hypo-hypertension, **sinus tachycardia**
ENDO: Hyperbilirubinemia, hyperglycemia, hypernatremia, hypokalemia
GU: Hematuria

PHARMACOKINETICS

Protein binding 88%-93%, half-life <1 hr, metabolites up to 27 hr

INTERACTIONS

Decrease: Remdesivir effect—hydroxychloroquine, chloroquine, strong CYP3A4 inducers, avoid using together

NURSING CONSIDERATIONS

Assess:
• **COVID-19:** Confirm presence of COVID-19 before starting treatment; obtain CBC with differential, PT, and serum electrolytes before and during treatment
• **Hepatic effects:** Obtain LFTs before and during treatment; discontinue in ALT >10 × ULN; discontinue if ALT elevation with signs/symptoms of liver inflammation occur
• **Hypersensitivity:** Monitor for infusion-related reactions, anaphylaxis, angioedema, diaphoresis, dyspnea, hypo-hypertension, hypoxia, fever, rash, shivering, tachycardia, wheezing; slow infusion rate to max infusion time: 120 min; discontinue and provide treatment if severe

• **Renal disease:** Obtain BUN/creatinine baseline and during treatment; monitor for hematuria; avoid use in eGFR <30 mL/min, significant toxicity with a short duration of therapy 5-10 days is unlikely
• **CV reactions:** Monitor for atrial fibrillation, hyper-hypotension, sinus tachycardia, bradycardia
• **Pregnancy/breastfeeding:** Identify if pregnant or if breastfeeding

Evaluate:
• Therapeutic response: Resolution of COVID-19 without serious adverse reactions

Teach patient/family:
• Reason for product and expected results
• To report immediately to provider rash, itching, injection site reactions, trouble breathing, shivering, wheezing, rapid heartbeat
• Provide "fact sheet" to patient/caregiver and review
• That this product has not been approved by the FDA and has been granted for emergency use only

⚠ HIGH ALERT

remifentanil (Rx)

(rem-ih-fin'ta-nill)

Ultiva

Func. class.: Opiate agonist analgesic
Chem. class.: μ-Opioid agonist

Controlled Substance Schedule II

ACTION: Inhibits ascending pain pathways in limbic system, thalamus, midbrain, hypothalamus

USES: In combination with other products for general anesthesia to provide analgesia

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children <12 yr, geriatric patients, increased intracranial pressure, acute MI, severe heart disease, GI/renal/hepatic disease, asthma, respiratory conditions, seizure disorders, bradyarrhythmias

Black Box Warning: Potential for overdose or poisoning, substance abuse

DOSAGE AND ROUTES

• **Adult: IV induction** 0.5-1 mcg/kg/min with hypnotic or volatile agent; **maintenance with isoflurane or propofol** 0.25 mcg/kg/min (range 0.05-2 mcg/kg/min); **CONT INFUSION** 0.025-0.2 mcg/kg/min
• **Child 1-12 yr: CONT IV INFUSION** 0.25 mcg/kg/min with isoflurane
• **Full-term neonate and infant up to 2 mo: CONT IV INFUSION** 0.4 mcg/kg/min with nitrous oxide

Available forms: Powder for inj lyophilized 1, 2, 5 mg

Administer:
• Add 1 mL diluent per mg remifentanil
• Shake well; further dilute to a final concentration of 20, 25, 50, or 250 mcg/mL
• Store in light-resistant area at room temperature
• Interruption of infusion results in rapid reversal (no residual opioid effect within 5-10 min)

Direct IV route
• To be used only during maintenance of general anesthesia; inject into tubing close to venous cannula; give to nonintubated patients over 30-60 sec

Continuous IV INFUSION route
• Use infusion device, max 16 hr; do not use same tubing as blood, do not admix

Y-site compatibilities: Acyclovir, alfentanil, amikacin, aminophylline, ampicillin, ampicillin/sulbactam, aztreonam, bumetanide, buprenorphine, butorphanol, calcium gluconate, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, cimetidine, ciprofloxacin, cisatracurium, clindamycin, dexamethasone, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOPamine, doxacurium, doxycycline, droperidol, enalaprilat, EPINEPHrine, esmolol, famotidine, fentaNYL, fluconazole, furosemide, ganciclovir, gatifloxacin, gentamicin, haloperidol, heparin, hydrocortisone sodium succinate, HYDROmorphone, hydrOXYzine,

R

imipenem-cilastatin, inamrinone, isoproterenol, ketorolac, lidocaine, LORazepam, magnesium sulfate, mannitol, meperidine, methylPREDNISolone sodium succinate, metoclopramide, metroNIDAZOLE, midazolam, morphine, nalbuphine, nitroglycerin, norepinephrine, ondansetron, phenylephrine, piperacillin, potassium chloride, procainamide, prochlorperazine, promethazine, raNITIdine, SUFentanil, theophylline, thiopental, ticarcillin/clavulanate, tobramycin, vancomycin, zidovudine

Solution compatibilities: D_5W, 0.45% NaCl, LR, D_5LR, 0.9% NaCl

SIDE EFFECTS

CNS: Drowsiness, *dizziness,* confusion, *headache,* sedation, euphoria, delirium, agitation, anxiety

CV: Palpitations, *bradycardia,* change in B/P, facial flushing, syncope, asystole

EENT: Tinnitus, blurred vision, miosis, diplopia

GI: *Nausea, vomiting,* anorexia, constipation, cramps, dry mouth

GU: Urinary retention, dysuria

INTEG: Rash, urticaria, bruising, flushing, diaphoresis, pruritus

MS: Rigidity

RESP: Respiratory depression, apnea

PHARMACOKINETICS

70% protein binding, terminal half-life 3-10 min, excreted in urine; onset: 1-3 min

INTERACTIONS

Increase: respiratory depression, hypotension, profound sedation: alcohol, sedatives, hypnotics, other CNS depressants; antihistamines, phenothiazines, MAOIs

Drug/Herb

Increase: CNS depression—kava

NURSING CONSIDERATIONS

Assess:

- I&O ratio; check for decreasing output; may indicate urinary retention, especially in geriatric patients
- CNS changes; dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
- GI status: nausea, vomiting, anorexia, constipation
- Allergic reactions: rash, urticaria

Black Box Warning: Substance abuse: assess for risks of addiction, abuse, or misuse before drug initiation, and monitor those who receive opioids; assess for depression or other mental illness in the patient or family members

Black Box Warning: Potential for overdose or poisoning: there is a significant potential; proper patient selection and counseling are needed; keep out of reach of children, pets; accidental overdose and death may occur

- **Respiratory dysfunction:** respiratory depression, character, rate, rhythm; notify prescriber if respirations <12/min; CV status; bradycardia, syncope
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid use in breastfeeding, excretion unknown

Evaluate:

- Therapeutic response: maintenance of anesthesia

Teach patient/family:

- Reason for product, expected results

remimazolam (Rx)

Byfavo

Func. class.: Sedative/anesthetic

Chem class.: Benzodiazepine

Controlled Substance Schedule IV

ACTION

Binds to benzodiazepine sites in the brain

USES:

Ultra-short-acting IV sedation for procedures lasting ≤30 min

DOSAGE AND ROUTES

Adult: IV direct 5 mg over 1 min, maintenance doses of 2.5 mg over a 15-sec time period, ≥2 min before additional dose

Available forms: Lyophilized powder single use 20 mg (2.5 mg/mL)

Administration

IV direct route

- Use strict aseptic technique
- This product does not contain preservative
- Protect vials from light after removed from packaging
- Each single-patient-use vial contains 20 mg lyophilized powder for reconstitution. The product must be prepared immediately before use
- To reconstitute, add 8.2 mL Sterile 0.9% NaCl Injection, directing the stream of solution toward the wall of the vial. Swirl (do not shake) until dissolved (final concentration of 2.5 mg/mL)
- Check for particulate matter and discoloration before use. The solution should be a clear, colorless pale yellow, discard if particulate matter or discoloration is present
- If not used immediately, reconstituted solution may be stored up to 8 hr at room temperature at 20°C to 25°C (68°F to 77°F), after 8 hr, discard
- Do not admix

Solution compatibilities

- 0.9% NaCl, D5 Injection, D20 Injection, D5/0.45% NaCl, Ringer's

CONTRAINDICATIONS:

Hypersensitivity to this product, dextran 40; child <18 yr

Precautions: Pregnancy, lactation, elderly, severe hepatic disease, breastfeeding, dementia, labor, sleep apnea

Black Box Warning: Requires a specialized care setting, requires an experienced clinician, respiratory depression

PHARMACOKINETICS

Onset immediate, peak 3-3.5 min, half-life 37-53 min

SIDE EFFECTS

CV: Hypo/hypertension, bradycardia, tachycardia, hypoxia

RESP: Increased respiratory rate, respiratory depression

GI: Nausea

CNS: Fever, headache

INTERACTIONS

Increased CNS depression: Other CNS depressants (opioid analgesics, other benzodiazepines, sedatives/hypnotics)

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Continuously monitor for hypotension, airway obstruction, hypoventilation, apnea, O_2 desaturation, hypoxia, bradycardia; adverse reactions are more common in sleep apnea, the elderly, ASA-PS III/ IV patients; provide O_2 during recovery period, have flumazenil available; have emergency equipment, including resuscitative drugs, appropriate equipment for assisted ventilation available

- Continuously monitor vital signs, during sedation and through the recovery period. Titrate the dose when giving with opioids, sedative/hypnotics, other CNS depressants

Black Box Warning: Only those trained in the use of procedural sedation should give this product

Black Box Warning: CNS depressants: Increased sedation and respiratory depression may occur with opioids, other sedatives/hypnotics

- **Hypersensitivity:** Assess for hypersensitivity (rash, urticarial, pruritus), do not use in those allergic to dextran 40
- **Hepatic disease:** Titrate carefully in hepatic disease
- **Pregnancy/breastfeeding:** Avoid use in pregnancy and breastfeeding, if breastfeeding, consider pumping and discarding during treatment and for 5 hr after use

Evaluate:

- Therapeutic response: Sedation without adverse effects

Teach patient/family

- Reason for use and expected result
- **Hypersensitivity:** To notify provider if allergic to dextran 40

• **CNS depressants:** To notify provider if taking other CNS depressants, alcohol
• To notify provider of sleep apnea, respiratory conditions
• **Pregnancy/breastfeeding:** To notify provider if pregnancy is suspected or if breastfeeding

⚠ HIGH ALERT

repaglinide (Rx)

(re-pag′lih′nide)

Gluconorm

Func. class.: Antidiabetic
Chem. class.: Meglitinide

ACTION: Causes functioning β-cells in pancreas to release insulin, thereby leading to a drop in blood glucose levels; closes ATP-dependent potassium channels in the β-cell membrane; this leads to the opening of calcium channels; increased calcium influx induces insulin secretion

USES: Type 2 diabetes mellitus

CONTRAINDICATIONS: Hypersensitivity to meglitinides; diabetic ketoacidosis, type 1 diabetes
Precautions: Pregnancy, breastfeeding, children, geriatric patients, thyroid/cardiac disease, severe renal/hepatic disease, severe hypoglycemic reactions

DOSAGE AND ROUTES

• **Adult: PO** 0.5-4 mg with each meal, max 16 mg/day; adjust at weekly intervals; oral hypoglycemic–naïve patients or patients with A1c <8% should start with 0.5 mg with each meal
Renal/hepatic dose
• **Adult: PO** CCr 20-39 mL/min, 0.5 mg/day; titrate upward cautiously
Available forms: Tabs 0.5, 1, 2 mg
Administer:
• Up to 15-30 min before meals; 2, 3, or 4×/day preprandially
• Skip dose if meal skipped; add dose if meal added
• Store in tight container at room temperature
• May be added to metFORMIN for better control

SIDE EFFECTS

CNS: *Headache, weakness,* paresthesia
CV: Angina
EENT: Tinnitus, sinusitis
ENDO: Hypoglycemia
GI: Nausea, vomiting, diarrhea, constipation, dyspepsia, pancreatitis
INTEG: Rash, allergic reactions
MISC: Chest pain, UTI, allergy
MS: Back pains, arthralgia
RESP: URI, sinusitis, rhinitis, bronchitis

PHARMACOKINETICS

Completely absorbed by GI route; onset 30 min; peak 1 hr; duration <4 hr; half-life 1 hr; metabolized in liver by CYP3A4; excreted in urine, feces (metabolites); crosses placenta; 98% protein bound

INTERACTIONS

• **Do not use with gemfibrozil, isophane insulin (NPH)**
Increase: repaglinide effect—CYP3A4, OATP101, CYP2C9 inhibitors
Increase: in both—levonorgestrel/ethinyl estradiol
Increase: repaglinide metabolism—CYP3A4 inducers: rifAMPin, barbiturates, carBAMazepine
Increase: repaglinide effect—NSAIDs, salicylates, sulfonamides, chloramphenicol, MAOIs, coumarins, β-blockers, probenecid, gemfibrozil, simvastatin, fenofibrate, deferasirox
Decrease: repaglinide metabolism—CYP3A4 inhibitors: antifungals (ketoconazole, miconazole), erythromycin, macrolides
Decrease: repaglinide action—calcium channel blockers, corticosteroids, oral contraceptives, thiazide diuretics, thyroid preparations, estrogens, phenothiazines, phenytoin, rifAMPin, isoniazid, PHENobarbital, sympathomimetics
Drug/Herb
Increase: antidiabetic effect—garlic, chromium, horse chestnut
Drug/Food
Decrease: repaglinide level; give before meals

Decrease: repaglinide metabolism—grapefruit juice
Drug/Lab Test
Increase/decrease: glucose

NURSING CONSIDERATIONS

Assess:
- **Hypo/hyperglycemic reaction,** which can occur soon after meals: dizziness, weakness, headache, tremors, anxiety, tachycardia, hunger, sweating, abdominal pain, A1c, fasting, postprandial glucose during treatment
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, usually insulin is used in pregnancy; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait; blood glucose, A1c improvement

Teach family/patient:
- About technique for blood glucose monitoring; how to use blood glucose meter
- About the symptoms of hypo/hyperglycemia, what to do about each
- That product must be continued on daily basis; about the consequences of discontinuing product abruptly
- To avoid OTC medications unless ordered by prescriber; not to use alcohol
- That diabetes is a lifelong illness; that product will not cure disease
- That all food included in diet plan must be eaten to prevent hypoglycemia; that if a meal is omitted, dose should be omitted; to have glucagon emergency kit available; to take repaglinide 15-30 min before meals 2, 3, or 4×/day; to carry emergency ID

TREATMENT OF OVERDOSE:

Glucose 25 g IV via dextrose 50% solution, 50 mL or 1 mg glucagon

reslizumab (Rx)

(res-liz′ue-mab)

Cinqair

Func. class.: Respiratory antiinflammatory agent

USES:

For add-on maintenance treatment of severe asthma of eosinophilic phenotype

CONTRAINDICATIONS:

Hypersensitivity

Black Box Warning: Anaphylaxis

DOSAGE AND ROUTES

- **Adult: IV INFUSION** 3 mg/kg q4wk; discontinue the infusion immediately if a severe systemic reaction, including anaphylaxis, occurs

Available forms: Injection 100-mg/10-mL single-use vial

retapamulin (topical) (Rx)

(re-te-pam′you-lin)

Altabax

Func. class.: Topical antiinfective
Chem. class.: Pleuromutilin

ACTION:

Antibacterial activity results from inhibition of protein synthesis

USES:

For the treatment of impetigo

CONTRAINDICATIONS:

Hypersensitivity to this product

Precautions: Children

DOSAGE AND ROUTES

- **Adult/child ≥9 mo: TOP** apply to affected area bid × 5 days

Available forms: Topical ointment 1%

Administer:

Topical route
- Do not use skin products near the eyes, nose, or mouth
- Wash hands before and after use
- **Ointment:** Apply a thin film to the cleansed affected area and massage gently into affected areas

SIDE EFFECTS

INTEG: Pruritus, irritation, headache, diarrhea, nausea

NURSING CONSIDERATIONS

Assess:

- **Allergic reaction:** hypersensitivity, product may need to be discontinued
- **Infection:** number of lesions, severity of impetigo

Evaluate:

- Therapeutic response: decreased lesions, infection in impetigo

Teach patient/family:

Topical route

- Not to use skin products near the eyes, nose, or mouth
- To wash hands before and after use
- **Ointment:** to apply a thin film to the cleansed affected area

reteplase (Rx)

(re′ta-plase)

Retavase, Retavase Half-Kit

Func. class.: Thrombolytic, tissue plasminogen

USES: Acute ST-elevation MI to reduce death/HF

CONTRAINDICATIONS

Hypersensitivity, active internal bleeding; recent stroke; intracranial/intraspinal surgery, serious head trauma, neoplasm, AV malformations, aneurysm severe uncontrolled hypertension, suspected aortic dissection, brain injury

DOSAGE AND ROUTES

Acute ST-elevation MI

- **Adult: IV** 10 units over 2 min, then a second dose after 30 min

Available forms: Injection 10.4 units/vial

revefenacin (Rx)

(rev′e-fen′a-sin)

Yupelri

Func. class.: Respiratory muscarinic antagonists—long-acting

ACTION: In airways, it exhibits pharmacologic effects through inhibition of the M3 receptor at the smooth muscle, leading to bronchodilation

USES: Maintenance treatment of those with COPD

CONTRAINDICATIONS: Hypersensitivity

Precautions: Acute/paradoxical bronchospasm, acutely deteriorating COPD, acute symptoms, other anticholinergics, breastfeeding, cardiac disease, children, closed-angle glaucoma, dementia, driving or hazardous tasks, geriatric patients, hepatic disease, ocular exposure, pregnancy, prostatic hypertrophy, urinary retention/obstruction

DOSAGE AND ROUTES

- **Adult: INH** 1 175-mcg vial (3 mL) once daily, by oral inhalation only

Available forms: 175 mcg/3 mL sol for inhalation

Administer

Oral inhalation route

- Give by oral inhalation via nebulizer only; do not swallow, no dilution necessary, single-dose vials are ready-to-use
- Remove the unit-dose vial from the foil pouch only immediately before use; product should be colorless; discard if the solution is not colorless
- Do not mix with other drugs
- Give the inhalation solution via a standard jet nebulizer connected to an air compressor; give over 8 min
- Discard the vial and any residual solution after use

SIDE EFFECTS

CNS: Headache

RESP: Cough, nasopharyngitis, upper respiratory tract infection, bronchospasm

MS: Back pain

EENT: Ocular hypertension

INTEG: Angioedema, anaphylaxis

PHARMACOKINETICS

Extensively distributed to tissues, primarily metabolized via hydrolysis to a metabolite, half-life of active metabolite 22-70 hr, excreted 54% feces, 27% urine

INTERACTIONS

Increase: anticholinergic effect—other anticholinergics; avoid coadministration

Increase: revefenacin effect—OATP1B1, OATP1B3 inhibitors (rifampicin, cyclosporine); avoid coadministration

NURSING CONSIDERATIONS

Assess

- **Respiratory status:** lung sounds, pulse, B/P before and after product is given; note wheezing, shortness of breath, cough; monitor pulmonary function tests baseline and periodically
- **Pregnancy/breastfeeding:** no well-controlled studies; animal studies showed no evidence of fetal harm; anticholinergics suppress lactation

Evaluate:

- Therapeutic response: prevention or relief of the symptoms of COPD

Teach patient/family

- To contact health care provider if symptoms are not relieved or if shortness of breath continues or if bronchospasm occurs
- To notify health care provider of all OTC preparations, other medications, herbs, and supplements taken; not to start or stop products without approval of provider
- Not to swallow during nebulization
- That pulmonary function tests will be monitored periodically
- **Pregnancy/breastfeeding:** to inform health care provider if pregnancy is planned or suspected, or if breastfeeding

Rh_o(D) immune globulin standard dose IM (Rx)

HyperRHO S/D Full Dose, RhoGAM

Rh_o(D) immune globulin microdose IM (Rx)

HyperRHO S/D mini-Dose, MICRhoGAM, Mini-Gamulin R, Rho(D) immune globulin microdose (IM, IV), Rhophylac

Rh_o(D) immune globulin IV (Rx)

WinRho SDF

Func. class.: Immune globulins

ACTION: Suppresses immune response of nonsensitized Rh_o(D or D^u)-negative patients who are exposed to Rh_o(D or D^u)-positive blood

USES: Prevention of isoimmunization in Rh-negative women given Rh-positive blood after abortions, miscarriages, amniocentesis; chronic idiopathic thrombocytopenia purpura (Rhophylac)

CONTRAINDICATIONS: Previous immunization with this product, Rh_o(O)-positive/D^u-positive patient

Black Box Warning: Intravascular hemolysis

Precautions: Pregnancy

Black Box Warning: Requires a specialized setting

DOSAGE AND ROUTES

Rho (D) Immune globulin (for IM Only)

- **Adult: IM before delivery. HyperRHO S/D Full Dose, RhoGam** 1 vial standard dose (300 mcg) at 26-28 wk; **after delivery** 1 vial standard dose (300 mcg) within 72 hr of delivery

Pregnancy termination (<13 wk gestation)

- **Adult: IM HyperRho Minidose, MicroRhoGam** 1 vial microdose (50 mcg) within 72 hr of termination

Pregnancy termination (>13 wk gestation)

- **Adult: IM HyperRHO S/D Full Dose, RhoGam** 1 vial standard dose (300 mcg) within 72 hr of termination

Massive fetomaternal hemorrhage (>15 mL)

- **Adult: IM RhoGam** 20 mcg/mL of Rho(D) positive fetal RBCs

Transfusion accident

- **Adult: IM Hyper Rho Full Dose, RhoGam** (Rh+ blood given [volume] × Hct of donor blood)/15 will be the number of vial needed (standard dose), round to next whole vial

R

Rho(D) Immune Globulin IV (for IV/IM use)

• **Adult: IM/IV WinRho SDF,** 1500 IU (300 mcg) at 28 wk; **after delivery** 1 vial; **after delivery** 600 IU (120 mcg) within 72 hr of delivery

Termination of pregnancy, amniocentesis

• **Adult: IM/IV WinRho SDF** 600 IU (120 mcg) with 72 hr

Amniocentesis, chorionic villus sampling

• **Adult: IM/IV WinRho SDF (<34 wk gestation)** 1500 IU (300 mcg) repeat q12wk during pregnancy

Massive fetomaternal hemorrhage (>15 mL)/transfusion accident

• **Adult: IM WinRho SDF** 6000 IU (1200 mcg) repeat q12hr until total dose given by amount of blood loss; **IM WinRho SDF** 3000 IU (600 mcg) repeat q8hr until total dose is given by amount of blood loss

Immune thrombocytopenic purpura (ITP)

• **Adult and child: IV WinRho SDF** 250 IU (50 mcg)/kg, **if HB <10g/dL** use 25-40 mcg (125-200 IU), dosing determined by clinical response

Available forms: IM MICRhoGAM, HyperRho S/D: Minidose 50 mcg/vial; 300 mcg/vial **standard dose; IM/IV** 600 IU (120 mcg)/vial, 1500 IU (300 mcg)/vial 2500 IU (500 mcg)/vial, 5000 IU (1000 mcg)/vial, 15,000 IU (3000 mcg)/vial; prefilled syringe 1500 IU (300 mcg/2 mL)

Administer:

• Store in refrigerator

• HyperRHO S/D, MICRhoGAM, RhoGAM given by IM only; do not give IV

• Do not confuse different types

• Inspect for particulate matter; do not use if particulate matter present

• Reconstitute/dilution: no reconstitution or dilution needed for HyperRHO SD; MICRhoGAM, RhoGAM, or liquid formulation of WinRho SDF

IM route

• Use aseptic technique, observe for 20 min after administration

• Bring Rhophylac to room temperature before use

• Inject into deltoid muscle of upper arm or anterolateral portion of upper thigh; do not inject into gluteal muscle

• If dose calculated requires multiple vials or syringes, use different sites at same time

IV route

• Use aseptic technique

• WinRho SDF: remove entire contents of vial to obtain calculated dose; if partial vial required for dosage calculation, withdraw entire vial contents to ensure correct calculation; infuse correct calculated dose over 3-5 min; do not infuse with other fluids, products

• Rhophylac: bring to room temperature; infuse by slow IV; observe for 20 min

SIDE EFFECTS

CNS: Lethargy, dizziness, headache

CV: Hypo/hypertension

INTEG: Irritation at inj site, fever

MISC: Infection, ARDS, anaphylaxis, pulmonary edema, DIC

MS: Myalgia, arthralgia

HEMA: Anemia, DIC, intravascular hemolysis

INTERACTIONS

Decrease: antibody response—live virus vaccines (measles, mumps, rubella)

NURSING CONSIDERATIONS

Assess:

• Allergies, reactions to immunizations; previous immunization with product

• **Intravascular hemolysis:** back pain, chills, hemoglobinuria, renal insufficiency; usually when WinRho SDF is given in those with immune thrombocytopenia purpura

• Type, crossmatch mother and newborn's cord blood; if mother Rh_0 (D)-negative, D^u-negative and newborn Rh_0 (D)-positive, product should be given

Evaluate:

• Rh_0(D) sensitivity in transfusion error, prevention of erythroblastosis fetalis for normal vision

Teach patient/family:
• How product works; that product must be given after subsequent deliveries if subsequent babies are Rh-positive
• To report immediately: shaking, fever, chills, dark urine, swelling of hands or feet, back pain, SOB (intravascular hemolysis)

ribavirin (Rx)

(rye-ba-vye′rin)

Ibavyr, Moderiba, Rebetol, Ribasphere, Ribasphere, RibaPak, Virazole

Func. class.: Antiviral, nucleoside/nucleotides

USES: Treatment of chronic HCV infection when used in combination; RSV infection in hospitalized children

CONTRAINDICATIONS

Hypersensitivity, breastfeeding, pregnancy, sickle cell disease, thalassemia, pancreatitis, CCr 50 mL/min

Black Box Warning: Monotherapy (RCV infection)

DOSAGE AND ROUTES

Respiratory syncytial virus (RSV) infection

• **Infant/child/adolescent: INH** ribavirin 20 mg/mL solution in the drug reservoir of the SPAG-2 unit, continuous aerosol administration for 12-18 hr/day × 3-7 days

Chronic hepatitis C infection with compensated hepatic disease (Child-Pugh A) used in combination with a peginterferon alfa-2b

• **Adults >105 kg: PO (capsules/oral solution):** 600 mg AM and 800 mg PM (1400 mg/day) plus peginterferon alfa-2b; **81-105 kg:** 600 mg bid (1200 mg/day) plus peginterferon alfa-2b**; 66-80 kg** (1000 mg/day) 400 mg AM and 600 mg PM plus peginterferon alfa-2b; **<66 kg** 400 mg AM, 400 mg PM plus peginterferon-alpha-2b; duration genotype 1 48 wk; genotype 2 or 3 24 wk, any failure 48 wk

• **Adolescent >73 kg: PO (capsules)** 15 mg/kg/day or 1200 mg/day given in 2 divided doses (3 capsules in the morning and evening) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; genotype 2 or 3 is 24 wk

• **Child/adolescent 60-73 kg: PO (capsules)** 15 mg/kg/day or 1000 mg/day given in 2 divided doses (2 capsules in the morning and 3 capsules in the evening) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; genotype 2 or 3 is 24 wk

• **Child/adolescent 47-59 kg: PO (capsules)** 15 mg/kg/day or 800 mg/day given in 2 divided doses (2 capsules in the morning and evening) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; genotype 2 or 3 is 24 wk

• **Child/adolescent 3-17 yr, <47 kg: PO (oral solution)** 15 mg/kg/day given in 2 divided doses as the oral solution (in the morning and evening) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; genotype 2 or 3 is 24 wk

Chronic hepatitis C infection in compensated hepatic disease (Child-Pugh A) with interferon alfa-2b alone

• **Adults >75 kg: PO (capsules/oral solution)** 600 mg bid (in the morning and evening) plus interferon alfa-2b. For interferon-alfa-naive patients, treat for 24-48 wk; ≤75 kg: PO (capsules/oral solution) 400 mg AM and 600 mg PM plus interferon alfa-2b. For interferon-alfa-naive patients, treat for 24-48 wk

• **Adolescent >73 kg: PO** 15 mg/kg/day or 1200 mg/day in 2 divided doses (AM and PM) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; duration for genotype 2 or 3 is 24 wk

• **Child/adolescent 60-73 kg: PO** 15 mg/kg/day or 1000 mg/day given in 2 divided doses (AM and PM) plus interferon alfa-2b. Duration for genotype 1 is 48 wk. Duration for genotype 2 or 3 is 24 wk

• **Child/adolescent 47-59 kg: PO** 15 mg/kg/day or 800 mg/day given in 2 divided doses AM and PM) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; duration for genotype 2 or 3 is 24 wk

R

• **Child/adolescent 3-17 yr, <47 kg: PO** 15 mg/kg/day given in 2 divided doses (AM and PM) plus interferon alfa-2b. Duration for genotype 1 is 48 wk; duration for genotype 2 or 3 is 24 wk

Available forms: Capsules 200 mg; tablets 200 mg, 800 mg/day, 1200 mg/day, 1000 mg/day; powder for nebulizer solution 6 g

ribociclib (Rx)

(rye-boe-sye′-klib)

Kisqali

Func. class.: Antineoplastic

Chem. class.: Protein kinase inhibitors

ACTION: A cyclin-dependent kinase (CDK) 4 and 6 inhibitor. Regulates cell-cycle progression through phosphorylation of the retinoblastoma protein. The combination of ribociclib and an antiestrogen such as letrozole inhibited tumor growth more than either agent alone

USES: For the initial endocrine-based treatment of hormone receptor (HR)-positive, HER2-negative advanced or metastatic breast cancer in combination with an aromatase inhibitor in postmenopausal women

CONTRAINDICATIONS: Hypersensitivity

Precautions: Breastfeeding, contraception requirements, hepatic disease, hepatotoxicity, infertility, neutropenia, pregnancy, pregnancy testing, reproductive risk, thromboembolic disease

DOSAGE AND ROUTES

Hormone receptor (HR)-positive, HER2-negative advanced or metastatic breast cancer in combination with an aromatase inhibitor in postmenopausal women

• **Adult:** 600 mg/day on days 1 to 21, followed by 7 days of rest, in combination with letrozole (2.5 mg daily) or another aromatase inhibitor on days 1 to 28; repeat cycle q28days

Therapeutic drug monitoring

Neutropenia

• **ANC ≥1000 cells/mm^3 (grade ≤2):** no change

• **ANC 500 cells/mm^3 to 999 cells/mm^3 (grade 3):** hold. For the first occurrence of grade 3 neutropenia, resume at original dose level when the ANC returns to ≥1000 cells/mm^3 (grade ≤2); for recurrent grade 3 neutropenia, resume at next lower dose level (reduce 600 mg to 400 mg; reduce 400 mg to 200 mg). If further dose reduction below 200 mg per day is required, discontinue

• **ANC 500 cells/mm^3 to 999 cells/mm^3 (grade 3 neutropenia) with single episode of fever >38.3°C or >38°C for >1 hr and/or concurrent infection:** hold; resume at the next lower dose level when ANC returns to ≥1000 cells/mm^3 (grade 2 or less) (reduce 600 mg to 400 mg; reduce 400 mg to 200 mg). If further dose reduction below 200 mg per day is required, discontinue

QT prolongation

• **QTcF 481-500 msec and no serious arrhythmia:** hold; monitor ECG frequently. For the first occurrence, resume at the same dose when QTcF prolongation resolves to ≤480 msec; for a recurrence of QTcF >480 msec, resume at the next lower dose level (reduce 600 mg to 400 mg; reduce 400 mg to 200 mg). If further dose reduction below 200 mg/day is required, discontinue

• **QTcF >500 msec and no serious arrhythmia:** repeat ECG. If the QTcF >500 msec on at least 2 separate ECGs at the same visit, hold; monitor ECG more frequently. Resume at the next lower dose level (reduce 600 mg to 400 mg; reduce 400 mg to 200 mg) when QTcF prolongation resolves to ≤480 msec. If further dose reduction below 200 mg/day is required, discontinue

Hepatic dose

• **Adult: Mild hepatic impairment (Child-Pugh A):** no change; **moderate to severe hepatic impairment (Child-Pugh**

B or C): reduce starting dose to 400 mg/day

Renal Dose

- **Adult:** CCr<30 mL/min: use only if benefits outweigh risk

Administer:

- Take ribociclib and letrozole at the same time every day, preferably in the morning
- Swallow tablets whole; do not chew, crush, or split. Do not take if broken, cracked
- If a dose is missed, or if the patient vomits, do not replace the missed dose. Resume with the next scheduled daily dose

SIDE EFFECTS

GI: Diarrhea, abdominal pain, anorexia, nausea, vomiting, constipation, stomatitis, weight loss
CNS: Fatigue, headache, insomnia
MS: Back pain
INTEG: Rash, alopecia
HEMA: Leukemia, neutropenia, lymphopenia
MISC: Infection

PHARMACOKINETICS

Protein binding 70%; half-life 29.7-54.7 hr; fecal excretion 97.1%; extensively metabolized (CYP3A4); unchanged drug 17% and 12% in feces and urine, respectively; peak 1-4 hr

INTERACTIONS

Increase: QT prolongation—drugs known to prolong QT interval; avoid concomitant use
Increase: ribociclib effect—strong or moderate CYP3A4 inhibitors; avoid concomitant use; if cannot be avoided, reduce dose
Decrease: ribociclib effect—strong or moderate CYP3A4 inducers; avoid concomitant use

Drug/Lab Test

Increase: LFTs

Drug/Food

- Avoid use with pomegranates, pomegranate juice, grapefruit, and grapefruit juice

NURSING CONSIDERATIONS

Assess:

- **Hepatotoxicity,** grade ≥3 was 57 days. Monitor LFTs baseline, q2wk for the first 2 cycles, before the next 4 cycles, and then as needed. A dose interruption, reduction, or discontinuation of therapy may be necessary.
- **Bone marrow suppression:** onset of grade ≥2 neutropenia was 16 days. Monitor CBC baseline, q2wk for the first 2 cycles, before the next 4 cycles, and then as needed. A dose interruption, reduction, or discontinuation of therapy may be needed in those with an absolute neutrophil count (ANC) <1000 cells/mm^3
- **Long QT syndrome:** avoid use in long QT syndrome, uncontrolled or significant cardiac disease (cardiac arrhythmias, recent MI, heart failure, unstable angina, bradycardia or bradyarrhythmias), electrolyte imbalance (hypomagnesemia, hypokalemia, hypocalcemia), with products causing prolonged QT interval or that strongly inhibit CYP3A4. Females, geriatric patients, and patients with diabetes, thyroid disease, malnutrition, alcoholism, or hepatic disease may also be at increased risk for QT prolongation. Assess ECG before starting therapy; do not start product if QTcF >450 msec. Repeat ECG at day 14 of first cycle, at the beginning of second cycle, and then as needed; prolongation of the QTcF interval may require interruption of therapy, dose reduction, or discontinuation of therapy. Monitor serum electrolytes (potassium, calcium, phosphorous, and magnesium) baseline, at the beginning of the first 6 cycles, and as needed; correct electrolyte imbalances before starting product
- **Pregnancy/breastfeeding:** avoid use by females of reproductive potential during treatment and for at least 3 wk after last dose; can cause fetal harm or death; discontinue breastfeeding during treatment and for 3 wk after final dose; presence in breast milk unknown. Ob-

R

tain pregnancy test before starting treatment

Evaluate

• Therapeutic outcome: decrease in size of cancerous tumor

Teach patient/family:

• **Hepatotoxicity:** patient should report immediately yellowing of skin or eyes, dark urine

• **QT prolongation:** signs and symptoms of QT prolongation (irregular or rapid heartbeat, fainting). To notify health care provider immediately if any of these occur

• **Neutropenia:** to immediately notify health care provider if a fever occurs; usually may occur with an infection

• **Drug interactions:** to avoid pomegranates, pomegranate juice, grapefruit, and grapefruit juice; that all OTC or prescription medications, herbals, and supplements should be approved by provider

• **Alopecia:** that hair is often lost; make suggestions for wigs, scarves to make patient feel more comfortable about hair loss

• Pregnancy/breastfeeding: not to use drug in pregnancy, breastfeeding; contraception should be used during treatment and for at least 3 wk after last dose

riboflavin (vit B_2) (otc)

(rye′boh-flay-vin)

Func. class.: Vit B_2, water soluble

ACTION: Needed for respiratory reactions by catalyzing proteins

USES: Vit B_2 deficiency or polyneuritis; cheilosis adjunct with thiamine

Unlabeled uses: Migraine prophylaxis

CONTRAINDICATIONS

None known

Precautions: Pregnancy

DOSAGE AND ROUTES

Deficiency

• **Adult: PO** 5-30 mg/day

• **Child ≥12 yr: PO** 3-10 mg/day, then 0.6 mg/1000 calories ingested

RDA

• **Adult: PO** (males) 1.3 mg, (females) 1.1 mg

Available forms: Tabs 5, 10, 25, 50, 100, 250 mg

Administer:

• With food for better absorption

• Store in airtight, light-resistant container

SIDE EFFECTS

GU: Yellow discoloration of urine

PHARMACOKINETICS

Half-life 65-85 min, 60% protein bound, unused amounts excreted in urine (unchanged)

INTERACTIONS

Increase: riboflavin need—alcohol, probenecid, tricyclics, phenothiazines

Decrease: action of tetracyclines

Drug/Lab Test

• May cause false elevations of urinary catecholamines

NURSING CONSIDERATIONS

Assess:

• Nutritional status: liver, eggs, dairy products, yeast, whole grains, green vegetables

Evaluate:

• Therapeutic response: absence of headache, GI problems, cheilosis, skin lesions, depression; burning, itchy eyes; anemia

Teach patient/family:

• That urine may turn bright yellow

• About the addition of needed foods rich in riboflavin

• To avoid alcohol

rifabutin (Rx)

(riff′a-byoo-ten)

Mycobutin

Func. class.: Antimycobacterial agent

Chem. class.: Rifamycin S derivative

Do not confuse:

rifabutin/rifAMPin/rifapentine

ACTION: Inhibits DNA-dependent RNA polymerase in susceptible strains of *Escherichia coli* and *Bacillus subtilis;* mechanism of action against *Mycobacterium avium* unknown

USES: Prevention of *M. avium* complex (MAC) in patients with advanced HIV infection
Unlabeled uses: *Helicobacter pylori* that has not responded to other treatment, TB, MAC

CONTRAINDICATIONS: Hypersensitivity, active TB, WBC <1000/mm^3 or platelet count <50,000/mm^3
Precautions: Pregnancy, breastfeeding, children, hepatic disease, blood dyscrasias

DOSAGE AND ROUTES

• **Adult: PO** 300 mg/day (may take as 150 mg bid); max 600 mg/day
Renal dose
• **Adult: PO** CCr <30 mL/min, reduce by 50%
Available forms: Caps 150 mg
Administer:
• With food if GI upset occurs; better to take on empty stomach 1 hr before or 2 hr after meals; high-fat foods slow absorption; may take in 2 divided doses, may open capsule, mix with applesauce if unable to swallow whole cap
• Antiemetic if vomiting occurs
• After C&S completed; monthly to detect resistance

SIDE EFFECTS

CNS: *Headache,* fatigue, anxiety, confusion, insomnia
GI: *Nausea, vomiting, anorexia, diarrhea,* heartburn, hepatitis, discolored saliva, CDAD
GU: *Discolored urine*
HEMA: Hemolytic anemia, eosinophilia, thrombocytopenia, leukopenia
INTEG: *Rash*
MISC: Flulike symptoms, shortness of breath, chest pressure
MS: Asthenia, arthralgia, myalgia

PHARMACOKINETICS

53% absorbed, peak 2-3 hr, duration >24 hr, half-life 45 hr, metabolized in liver (active/inactive metabolites), excreted in urine primarily as metabolites

INTERACTIONS

Increase: levels of rifabutin—ritonavir
Decrease: action of amprenavir, anticoagulants, β-blockers, barbiturates, busPIRone, clofibrate, corticosteroids, cycloSPORINE, dapsone, delavirdine, disopyramide, doxycycline, efavirenz, estrogens, fluconazole, indinavir, ketoconazole, losartan, nelfinavir, nevirapine, oral contraceptives, phenytoin, quiNIDine, saquinavir, sulfonylureas, theophylline, tricyclic antidepressants, zidovudine, zolpidem
Drug/Food
• High-fat diet decreases absorption
Drug/Lab Test
Interference: folate level, vit B_{12}, BSP, gallbladder studies

NURSING CONSIDERATIONS

Assess:
• **Acute TB:** chest x-ray, sputum culture, blood culture, biopsy of lymph nodes, PPD; Do not use in MAC prophylaxis in those with active TB
• CBC for neutropenia, thrombocytopenia, eosinophilia
• **CDAD:** diarrhea, abdominal pain/cramping, fever, bloody stools; report immediately; may occur several weeks after discontinuing treatment
• Signs of anemia: Hct, HB, fatigue
• **Hepatotoxicity:** ALT, AST, bilirubin; assess weekly for decreased appetite, jaundice, dark urine, fatigue
• Renal status before, each mo: BUN, creatinine, output, specific gravity, urinalysis
Evaluate:
• Therapeutic response: not used for active TB because of risk for development of resistance to rifAMPin; culture negative
Teach patient/family:
• That patients using oral contraceptives should consider using nonhormonal methods of birth control, may decrease

R

effect; to notify prescriber if pregnancy planned, suspected
- That compliance with dosage schedule, duration necessary
- That scheduled appointments must be kept because relapse may occur
- That urine, feces, saliva, sputum, sweat, tears may be colored red-orange; that soft contact lenses may be permanently stained
- **To report flulike symptoms:** excessive fatigue, anorexia, vomiting, sore throat; unusual bleeding, yellowish discoloration of skin, eyes; myositis: muscle or bone pain; diarrhea, fever, abdominal cramping, bloody stools

rifAMPin (Rx)

(rif'am-pin)

Rifadin, Rifampicin 🍁, Rofact 🍁

Func. class.: Antitubercular

Chem. class.: Rifamycin B derivative

Do not confuse:
rifAMPin/rifabutin/rifAXIMin

ACTION: Inhibits DNA-dependent polymerase, decreases tubercle bacilli replication

USES: Pulmonary TB, meningococcal carriers (prevention)
Unlabeled uses: Endocarditis, *Haemophilus influenzae type B prophylaxis,* Hansen's disease, *Mycobacterium avium* complex (MAC), orthopedic device–related infection, pruritus, CNS infections

CONTRAINDICATIONS: Hypersensitivity to this product, rifamycins; active *Neisseria meningitidis* infection
Precautions: Pregnancy, breastfeeding, children <5 yr, hepatic disease, blood dyscrasias

DOSAGE AND ROUTES

Tuberculosis
- **Adult: PO/IV** Max 600 mg/day as single dose 1 hr before meals or 2 hr after meals or 10 mg/kg/day 5 days/wk or 2-3×/wk
- **Child >5 yr: PO/IV** 10-20 mg/kg/day as single dose 1 hr before meals or 2 hr after meals, max 600 mg/day with other antituberculars
- **6-mo regimen:** 2 mo treatment of isoniazid, rifAMPin, pyrazinamide, and possibly streptomycin or ethambutol, then rifAMPin and isoniazid 3-4 mo
- **9-mo regimen:** rifAMPin and isoniazid supplemented with pyrazinamide, streptomycin, or ethambutol

Meningococcal carriers
- **Adult: PO/IV** 600 mg bid × 2 days, max 600 mg/dose
- **Child >5 yr: PO/IV** 10-20 mg/kg × 2 days, max 600 mg/dose
- **Infant 3 mo-1 yr: PO** 5 mg/kg bid × 2 days

Prevention of *H. influenzae* type B infection (unlabeled)
- **Adult: PO** 600 mg/day × 4 days
- **Child: PO** 20 mg/kg/day × 4 days
- **Neonates: PO** 10 mg/kg/day × 4 days

MAC (unlabeled)
- **Adult: PO/IV** 600 mg/day used with ≥3 other active microbials
- **Child: PO/IV** 10-20 mg/kg/day used with ≥3 other active microbials

Endocarditis with prosthetic valves (unlabeled)
- **Adult: PO** 300 mg q8hr with gentamicin and vancomycin
- **Child: PO** 20 mg/kg/day in 2 divided doses with gentamicin and vancomycin, max 900 mg/day

Available forms: Caps 150, 300 mg; powder for inj 600 mg/vial
Administer:
- After C&S completed; monthly to detect resistance
- Do not give IM, SUBCUT

PO route
- On empty stomach, 1 hr before or 2 hr after meals with full glass of water; give with other products for TB
- Antiemetic if vomiting occurs
- Capsules may be opened, mixed with applesauce or jelly

Intermittent IV INFUSION route

• After diluting each 600 mg/10 mL of sterile water for inj (60 mg/mL), swirl, withdraw dose, and dilute in 100 mL or 500 mL of D_5W given as infusion over 3 hr; if diluted in 100 mL, give over ½ hr; do not admix with other sol or products

Y-site compatibilities: amiodarone, bumetanide, midazolam, pantoprazole, vancomycin

SIDE EFFECTS

CNS: Headache, fatigue, anxiety, drowsiness, confusion
EENT: Visual disturbances
GI: *Nausea, vomiting, anorexia, diarrhea,* CDAD, *heartburn,* sore mouth and tongue, pancreatitis, increased LFTs
GU: Hematuria, acute renal failure, hemoglobinuria
HEMA: Hemolytic anemia, eosinophilia, thrombocytopenia, leukopenia
INTEG: Rash, pruritus, urticaria
MISC: Flulike symptoms, menstrual disturbances, edema, SOB, Stevens-Johnson syndrome, toxic epidermal necrolysis, angioedema, anaphylaxis, DRESS
MS: Ataxia, weakness
MISC: Staining of teeth, contact lens; coloring of urine, sweat, tears

PHARMACOKINETICS

PO: Peak 1-4 hr, half-life 1-5 hr, metabolized in liver (active/inactive metabolites), excreted in urine as free product (30% crosses placenta) and in breast milk

INTERACTIONS

Do not use with protease inhibitors
Increase: hepatotoxicity—isoniazid, alcohol, ketoconazole, pyrazinamide
Decrease: action of acetaminophen, alcohol, anticoagulants, antidiabetics, β-blockers, barbiturates, benzodiazepines, chloramphenicol, clofibrate, corticosteroids, cycloSPORINE, dapsone, digoxin, doxycycline, haloperidol, hormones, imidazole antifungals, NIFEdipine, oral contraceptives, phenytoin, protease inhibitors, theophylline, verapamil, zidovudine
Increase: LFTs
Decrease: HB
Drug/Lab Test
Increase: alk phosphatase, ALT, AST, uric acid, bilirubin, eosinophils
Interference: folate level, vit B_{12}

NURSING CONSIDERATIONS

Assess:
• **Infection:** sputum culture, lung sounds, characteristics of sputum, susceptibility tests baseline and periodically to determine effectiveness and resistance
• Signs of anemia: Hct, HB, fatigue
• Hepatic function monthly: ALT, AST, bilirubin, decreased appetite, jaundice, dark urine, fatigue
• Renal status before, each mo: BUN, creatinine, output, specific gravity, urinalysis
• **Serious skin reactions:** fever, sore throat, fatigue, ulcers; lesions in mouth, lips, rash; can be fatal
• **CDAD:** diarrhea, fever, abdominal pain/cramping, bloody stools; product should be discontinued, prescriber notified
• **DRESS:** Rash, fever, large lymph nodes, discontinue product if these occur
• To take on an empty stomach 1 hr before or 2 hr after food
Evaluate:
• Therapeutic response: decreased symptoms of TB, culture negative
Teach patient/family:
• That compliance with dosage schedule, duration necessary
• That scheduled appointments must be kept because relapse may occur
• To avoid alcohol because hepatotoxicity may occur
• That urine, feces, saliva, sputum, sweat, tears may be colored red-orange; that soft contact lenses may be permanently stained
• **To report flulike symptoms:** excessive fatigue, anorexia, vomiting, sore throat; unusual bleeding; yellowish discoloration of skin, eyes; diarrhea with pus, mucus, blood
• To use nonhormonal form of birth control; to notify prescriber if pregnancy is planned, suspected; not to breastfeed

R

rifamycin (Rx)

(rif'a-mye'sin)

Aemcolo

Func. class.: Antibiotic

USES: Treatment of travelers' diarrhea caused by *Escherichia coli*

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult: PO 388 bid × 3 days

Available forms: Tablet del rel 194 mg

rifapentine (Rx)

(riff'ah-pen-teen)

Priftin

Func. class.: Antitubercular

Chem. class.: Rifamycin derivative

Do not confuse:

rifapentine/rifAMPin/rifabutin

ACTION: Inhibits DNA-dependent polymerase, decreases tubercle bacilli replication

USES: Pulmonary TB; must be used with at least one other antitubercular agent

CONTRAINDICATIONS: Hypersensitivity to rifamycins, porphyria

Precautions: Pregnancy, breastfeeding, children <12 yr, geriatric patients, hepatic disease, blood dyscrasias, HIV

DOSAGE AND ROUTES

Intensive phase

• **Adult/adolescent >12 yr: PO** 600 mg (four 150-mg tabs) 2×/wk with an interval of 72 hr between doses × 2 mo; must be given with at least 1 other antitubercular agent

Continuation phase

• **Adult/adolescent >12 yr: PO** 600 mg weekly × 4 mo in combination with isoniazid or other appropriate antitubercular product

Available forms: Tabs 150 mg

Administer:

• May give with food for GI upset; use other products for TB

• Antiemetic if vomiting occurs

• After C&S completed; monthly to detect resistance

SIDE EFFECTS

CNS: Headache, fatigue, anxiety, dizziness

EENT: Visual disturbances

GI: *Nausea, vomiting, anorexia, diarrhea,* bilirubinemia, hepatitis, increased ALT, AST, *heartburn,* pancreatitis, CDAD

GU: Hematuria, pyuria, proteinuria, urinary casts, urine discoloration

HEMA: Thrombocytopenia, leukopenia, neutropenia, lymphopenia, anemia, leukocytosis, purpura, hematoma

INTEG: Rash, pruritus, urticaria, acne

MISC: Increased B/P

MS: Gout, arthrosis

PHARMACOKINETICS

Peak 5-6 hr; half-life 13 hr; metabolized in liver (active/inactive metabolites); excreted in urine, feces, breast milk; protein binding 97%; steady-state 10 days; CYP450 3A4, 2C8/9 inducer

INTERACTIONS

• Do not use with protease inhibitors

Decrease: action of amitriptyline, anticoagulants, antidiabetics, barbiturates, β-blockers, chloramphenicol, clarithromycin, clofibrate, corticosteroids, cycloSPORINE, dapsone, delavirdine, diazePAM, digoxin, diltiaZEM, disopyramide, doxycycline, fentaNYL, fluconazole, haloperidol, indinavir, itraconazole, ketoconazole, methadone, mexiletine, nelfinavir, NIFEdipine, nortriptyline, oral contraceptives, phenothiazines, phenytoin, progestins, quiNIDine, quiNINE, ritonavir, saquinavir, sildenafil, tacrolimus, theophylline, thyroid preparations, tocainide, verapamil, warfarin, zidovudine

Drug/Food

Increase: absorption with food

Drug/Lab Test
Increase: LFTs, platelets
Decrease: HB, WBC
Interference: folate level, vit B_{12}

NURSING CONSIDERATIONS

Assess:
- Baselines of CBC, AST, ALT, bilirubin, platelets
- **Infection:** sputum culture, lung sounds
- Signs of anemia: Hct, HB, fatigue
- Hepatic studies monthly: ALT, AST, bilirubin; decreased appetite, jaundice, dark urine, fatigue
- Renal status monthly: BUN, creatinine, output, specific gravity, urinalysis
- **CDAD:** diarrhea, fever, abdominal pain/cramping, bloody diarrhea; discontinue if present, notify prescriber

Evaluate:
- Therapeutic response: decreased symptoms of TB, culture negative

Teach patient/family:
- That compliance with dosage schedule, duration necessary
- That scheduled appointments must be kept because relapse may occur
- That urine, feces, saliva, sputum, sweat, tears may be colored red-orange; that soft contact lenses, dentures may be permanently stained
- **To report flulike symptoms:** excessive fatigue, anorexia, vomiting, sore throat; unusual bleeding, yellowish discoloration of skin, eyes; diarrhea with pus, mucus, blood
- **Pregnancy/breastfeeding:** to use alternative method of contraception; that oral contraceptive action may be decreased; to notify prescriber if pregnancy is planned, suspected; to avoid breastfeeding

rifAXIMin (Rx)

(rif-ax'i-min)

Xifaxan, Zaxine

Func. class.: Antiinfective—miscellaneous

Chem. class.: Analog of rifAMPin

Do not confuse:
rifAXIMin/rifAMPin

ACTION: Binds to bacterial-DNA–dependent RNA polymerase, thereby inhibiting bacterial RNA synthesis

USES: Traveler's diarrhea in those ≥12 yr caused by *E. coli,* hepatic encephalopathy, irritable bowel syndrome
Unlabeled uses: Crohn's disease, CDAD, traveler's diarrhea prophylaxis

CONTRAINDICATIONS: Hypersensitivity to product, rifamycins; diarrhea with fever, systemic infections
Precautions: Pregnancy, breastfeeding, children, geriatric patients, CDAD

DOSAGE AND ROUTES

Hepatic encephalopathy
- **Adult: PO** 550 mg bid

Traveler's diarrhea
- **Adult/child ≥12 yr: PO** 200 mg tid × 3 days without regard to meals

Irritable bowel syndrome
- **Adult: PO** 550 mg tid × 14 days, may give another 2 courses if recurrence

Crohn's disease (unlabeled)
- **Adult: PO** 200 mg tid × 16 wk

CDAD (unlabeled)
- **Adult: PO** 400 mg tid × 20 days after 10 days of vancomycin PO for second/third recurrence

Available forms: Tabs 200, 550 mg
Administer:
- Without regard to food

SIDE EFFECTS

CNS: Abnormal dreams, dizziness, insomnia, *headache,* fatigue, depression
CV: Hypotension, chest pain, peripheral edema, ascites
GI: *Abdominal pain, constipation, defecation urgency, flatulence, nausea, rectal tenesmus,* vomiting, ascites, CDAD
GU: Proteinuria, polyuria, increased urinary frequency
MISC: *Pyrexia,* motion sickness, tinnitus, rash, photosensitivity, exfoliative dermatitis
MS: Arthralgia, muscle pain, myalgia
RESP: Dyspnea, cough, pharyngitis

PHARMACOKINETICS

Low systemic absorption, distribution to GI tract, half-life 1.8-4.5 hr, excreted in feces, peak 1-4 hr

INTERACTIONS

Increase: effect of—afatinib
Increase: levels—P-glycoprotein inhibitors
Drug/Lab Test
Increase: LFTs, potassium
Decrease: blood glucose, sodium

NURSING CONSIDERATIONS

Assess:
- Hepatic encephalopathy: lethargy, confusion, coma, difficulty thinking, personality changes, poor concentration, sweet breath odor, inverted sleep/wake cycles
- GI symptoms: amount, character of diarrhea; abdominal pain, nausea, vomiting, blood in stool; do not use in those with blood in stool, increased temperature with diarrhea
- Overgrowth of infection, CDAD
- **Pregnancy/breastfeeding:** do not use in 1st trimester; use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: absence of infection

Teach patient/family:
- To discontinue rifAXIMin, notify prescriber if diarrhea persists >24-48 hr, if diarrhea worsens, or if blood in stools and fever present
- To avoid hazardous activities if dizziness occurs
- To notify prescriber if pregnancy is planned, suspected
- That headache, rash, insomnia, abnormal dreams, tinnitus may occur
- To take without regard to food
- To take as directed, consume all of the product prescribed

rilpivirine (Rx)

Edurant

Func. class.: Antiretroviral
Chem. class.: Nonnucleoside transcriptase inhibitors (NNTIs)

ACTION: Inhibits HIV-1 reverse transcriptase; binds directly to a site on reverse transcriptase, causing disruption of the enzyme's active site and blocking RNA-dependent and DNA-dependent DNA polymerase

USES: HIV in combination with other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, neonates, infants, children, adolescents <18 yr, immune reconstitution syndrome, antimicrobial resistance, pancreatitis, coinfection hepatitis B or C and HIV, hepatic disease, depression, suicidal ideation, QT prolongation, torsades de pointes, hyperlipidemia, hypertriglyceridemia, hypercholesterolemia, immune reconstitution syndrome

DOSAGE AND ROUTES

Antiretroviral treatment-naive adults (HIV) in combination
- **Adult/child ≥12 yr and ≥35 kg: PO** 25 mg/day with a meal; if used with rifabutin, increase rilpivirine dose to 50 mg/day

Available forms: Tab 25 mg

Administer:
- Give with other antiretroviral agents; in antiretroviral treatment-naive adults, rilpivirine is used as an alternative to efavirenz in NNRTI-based treatment regimens; potential rilpivirine-based treatment regimens combine rilpivirine with either tenofovir plus emtricitabine or lamiVUDine; or abacavir plus emtricitabine or lamiVUDine; or zidovudine plus emtricitabine or lamiVUDine
- Give with a meal
- Store at room temperature away from heat and moisture

SIDE EFFECTS

CNS: Depressed mood, dizziness, drowsiness, suicide attempts
GI: Hepatotoxicity, nausea, vomiting, diarrhea
INTEG: Drug reaction with eosinophilia and systemic symptoms (DRESS)
MISC: Immune reconstitution syndrome

PHARMACOKINETICS:

Protein binding (99.7%) to albumin; metabolism via oxidation CYP3A; half-life 50 hr, excretion feces (85%), 25% excreted unchanged; urine (6.1%); peak 4-5 hr; increased effect 40% (food), decreased effect 50% (high protein drink)

INTERACTIONS

Increase: rilpivirine effect—CYP3A4 inhibitors (delavirdine, efavirenz, darunavir, tipranavir, atazanavir, fosamprenavir, indinavir, nelfinavir, aldesleukin IL-2, amiodarone aprepitant, basiliximab, boceprevir, bromocriptine, chloramphenicol, clarithromycin, conivaptan, danazol, dalfopristin, dasatinib, diltiaZEM, dronedarone, erythromycin, ethinyl estradiol, fluconazole, FLUoxetine, fluvoxaMINE, fosaprepitant, imatinib, isoniazid, itraconazole, ketoconazole, lanreotide, lapatinib, miconazole, nefazodone, niCARdipine, octreotide, posaconazole, quiNINE, ranolazine, rifaximin, tamoxifen, telaprevir, telithromycin, troleandomycin, verapamil, voriconazole, zafirlukast)

- **Increase:** QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, chloroquine, droperidol, haloperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin, arsenic trioxide); CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone, lopinavir, saquinavir, fluconazole, posaconazole, dasatinib, dronedarone, lapatinib, octreotide, ranolazine, citalopram, abarelix, alfuzosin, amoxapine, apomorphine, artemether, lumefantrine, asenapine, ofloxacin, ciprofloxacin, cloZAPine, cyclobenzaprine, dolasetron, eriBULin, flecainide, gatifloxacin, gemifloxacin, halogenated anesthetics, iloperidone, levoFLOXacin, maprotiline, mefloquine, moxifloxacin, nilotinib, norfloxacin, OLANZapine, ondansetron, paliperidone, palonosetron, QUEtiapine)

Increase: rilpivirine adverse reactions, fungal infections—fluconazole, voriconazole

Decrease: rilpivirine effect, treatment failure—CYP3A4 inducers (phenytoin, fosphenytoin, barbiturates, OXcarbazepine, carBAMazepine, rifabutin, rifAMPin, rifapentine, dexamethasone), efavirenz, nevirapine, ritonavir; aminoglutethimide, bexarotene, bosentan, griseofulvin, metyraPONE, modafinil, flutamide, nafcillin, pioglitazone, primidone, topiramate; proton pump inhibitors (PPIs)

Decrease: rilpivirine effect, treatment failure—H_2 receptor antagonists (cimetidine, famotidine, nizatidine, raNITIdine), give 12 hr before or 4 hr after rilpivirine

Decrease: rilpivirine effect—antacids, use >2 hr before or 4 hr after rilpivirine

Drug/Herb

Decreased effect—St. John's wort, do not use together

Drug/Food

Increase: adverse reactions—grapefruit juice

NURSING CONSIDERATIONS

Assess:

- **HIV:** Assess symptoms of HIV including opportunistic infections before and during treatment; some may be life-threatening; monitor plasma HIV RNA, CD4+, CD8+ cell counts, serum β-2 microglobulin, serum ICD+24 antigen levels; treatment failures occur more frequently in those with baseline HIV-1 RNA concentrations >100,000 copies/mL than in patients with concentrations <100,000 copies/mL; monitor serum cholesterol, lipid panel; assess for redistribution of body fat
- Antiretroviral drug resistance testing before initiation of therapy in antiretroviral treatment-naive patients
- For adults and adolescents, initiation of antiretroviral therapy is recommended in any patient with a history of an AIDS-defining infection; with a CD4 ≤500/mm^3; who is pregnant; who has HIV-associated nephropathy; or who is being treated for hepatitis B (HBV) infection. Only delay treatment for resistance testing
- **Hepatic disease:** monitor for elevated hepatic enzymes (>2.5 × ULN); grade 3 and 4 may be higher in patients coinfected with hepatitis B or C

R

• **Suicidal thoughts/actions:** assess for suicidal ideation often, report increase in depressive symptoms
• **DRESS:** may occur in 2-8 wk, skin eruptions, eosinophilia, lymphadenopathy, fever, inflammation of internal organs; if these occur, stop product, report immediately; systemic steroids are usually given
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; enroll pregnant women taking this product in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed, excretion unknown

Teach patient/family:
• That product is not a cure but controls symptoms; that continuing use is required
• That product must be taken in combination with other prescribed products; that if dose is missed, not to take if next dose is within 12 hr
• To discuss all products taken, including OTC, Rx, herbals, supplements, as there are many interactions
• To report immediately mood changes and depression
• To report hypersensitivity reactions
• That dizziness may occur, not to drive until response is known
• To immediately report if pregnancy is suspected; not to breastfeed

riluzole (Rx)

(rill'you-zole)

Rilutek, Tiglutik

Func. class.: ALS agent

Chem. class.: Benzothiazole

USES: Amyotrophic lateral sclerosis (ALS)

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

• **Adult: PO** 50 mg q12hr; take 1 hr before or 2 hr after meals

Available forms: Tabs 50 mg

rimegepant (Rx)

(ri-me'je-pant)

Nurtec ODT

Func. class.: Antimigraine agent

Chem. class.: Calcitonin gene–related peptide receptor antagonist

ACTION: Involved in transmission through second- and third-order neurons and pain modulation in the brainstem

USES: Acute treatment of migraine with or without aura, migraine, prophylaxis

CONTRAINDICATIONS:
Hypersensitivity

Precautions:
Pregnancy, breastfeeding, hepatic/renal disease

DOSAGE AND ROUTES

Migraine

Adult: PO 75 mg as a single dose; max 75 mg/24 hr

Migraine prophylaxis

Adult: PO 75 mg every other day

Available forms:
Tablet ODT 75 mg

Administer:
• Peel foil covering blister to remove table with dry hands. Do not push tablet through the foil.
• Place tablet on or under tongue, allow to dissolve
• Can be swallowed without additional fluids
• Store at 20°C to 25°C (68°F to 77°F)

SIDE EFFECTS

GI: Nausea
INTEG: Rash, hypersensitivity
RESP: Dyspnea

PHARMACOKINETICS

Onset ≤2 hr, peak 1.5 hr, duration 48 hr, half-life 11 hr, protein binding 96%

INTERACTIONS

Increase: Effect of CYP3A4 substrates
Increase: Rimegepant effect—CYP3A4 inhibitors

Decrease: Rimegepant effect—CY3A4 inducers

NURSING CONSIDERATIONS

Assess:

- **Migraine:** Baseline and periodically, presence of aura, nausea/vomiting
- Assess for hypersensitivity, rash, dyspnea; reaction may be delayed, discontinue if these occur
- Avoid use in hepatic/renal disease

Evaluate:

- **Therapeutic response:** Resolution of migraine

Teach patient/family:

- Reason for product and expected result
- Identify if pregnancy is planned or suspected

rimexolone ophthalmic

See Appendix B

riociguat (Rx)

(rye-oh-sig′ue-at)

Adempas

Func. class.: Vasodilator

USES: Treatment of persistent/recurrent chronic thromboembolic pulmonary hypertension (WHO group 4) after surgery or inoperable to improve exercise capacity; treatment of PAH (WHO group 1) to improve exercise capacity

CONTRAINDICATIONS

Hypersensitivity, use with nitrates, amyl nitrite, phosphodiesterase (PDE) inhibitors (sildenafil, tadalafil, vardenafil), nonspecific PDE inhibitors (dipyridamole, theophylline), pulmonary hypertension

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Chronic thromboembolic pulmonary hypertension/PAH

- **Adult: PO**: 1 mg tid; may start with 0.5 mg tid in those at higher risk of hypotension. If systolic BP remains >95 mm Hg and the patient has no signs or symptoms of hypotension, increase the dose by 0.5 mg tid at intervals of ≥2 wk to a max dose of 2.5 mg tid; if treatment is interrupted for ≥3 days, retitration is needed

Available forms: Tabs 0.5, 1, 1.5, 2, 2.5 mg

⚠ HIGH ALERT

ripretinib (Rx)

(rip-re′ti-nib)

Qinlock

Func. class.: Antineoplastic, tyrosine kinase inhibitor

USES: Treatment of advanced gastrointestinal stromal tumor (GIST) in those who have received ≥3 kinase inhibitors, including imatinib

CONTRAINDICATIONS:

Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES

Adult: PO 150 mg daily until disease progression or unacceptable toxicity

Available forms: Tablet 50 mg

risankizumab (Rx)

(ris′an-kiz′ue-mab)

Skyrizi

Func. class.: Systemic antipsoriasis agents

ACTION: A humanized immunoglobulin G1 (IgG1) monoclonal antibody that selectively binds to the p19 subunit of human interleukin-23 (IL-23), thereby inhibiting its interaction with the IL-23 receptor; human IL-23 is a naturally occurring cytokine involved in inflammatory and immune responses; by blocking IL-23 from binding to its receptor, prevents the release of proinflammatory cytokines and chemokines

USES: Moderate to severe plaque psoriasis, Crohn's disease, psoriatic arthritis

R

CONTRAINDICATIONS

Hypersensitivity

Precautions:

Pregnancy, breastfeeding, TB, infection, immunosuppression

DOSAGE AND ROUTES

Plaque psoriasis

• **Adult: SUBCUT** 150 mg (two 75-mg injections) at wk 0, 4, and q12wk thereafter

Crohn's disease

• **Adult: IV** 600 mg over 1 hr at wk 0, 4, 8; **maintenance: SUBCUT** 360 mg at wk 12 and q8wk thereafter

Psoriatic arthritis

• **Adult: SUBCUT** 150 mg at wk 0, 4, then 150 mg q12wk

Available forms: Prefilled syringe solution for injection 75 mg/0.83 mL 2-pack, 150 mg/mL, 360 mg/2.4 mL, 600 mg/10 mL

Administer:

Subcut route

• Keep in the original carton to protect from light until time of use

• Do not shake the carton or prefilled syringe

• Before use, allow to reach room temperature out of direct sunlight (15-30 min); do not use other methods to speed warming process

• Visually inspect parenteral products for particulate matter and discoloration; solution should be clear to slightly opalescent, colorless to slightly yellow; solution may contain a few translucent white particles

• Do not use if solution contains large particles or is cloudy or discolored; solution has been frozen; syringe has been dropped or damaged; syringe tray seal is broken or missing

• Only an individual trained in subcut drug delivery should administer the injection

• Wash and dry hands

• Select an injection site (right or left thigh, abdomen at least 2 inches from the navel) and wipe with an alcohol swab; do not inject into skin that is tender, bruised, red, hard, or affected by psoriasis; do not inject into a scar or stretch mark; administer injections at different sites at least 1 inch apart

• Remove needle cover from the 1st prefilled syringe

• With 1 hand, gently pinch cleaned injection site; use the other hand to insert needle at a 45-degree angle using a quick short movement

• Slowly push plunger until all the solution is injected

• Pull needle out of skin; release plunger and allow prefilled syringe to move up until the entire needle is covered by needle guard

• Apply cotton ball or gauze pad over injection site for 10 sec; do not rub injection site

• To obtain the full dose, repeat the injection process using 2nd prefilled syringe; select and cleanse an alternative injection site that is at least 1 inch away from first site; do not inject into the same site as the 1st syringe

• If a dose is missed, administer as soon as possible; then resume dosing at the regularly scheduled time

SIDE EFFECTS

CNS: *Headache,* fatigue, asthenia

EENT: *Sinusitis, nasal congestion, pharyngitis*

INTEG: *Inj site reaction*

MISC: Flulike symptoms, antibody development to this drug; *risk of infection* (TB, invasive fungal infections, other opportunistic infections)

PHARMACOKINETICS

Bioavailability 89%, peak 3-14 days

INTERACTIONS

Avoid use with live virus vaccines

NURSING CONSIDERATIONS

Assess:

• **Plaque psoriasis:** red, raised, inflamed patches of skin; whitish-silver scales or plaques on the red patches; dry skin that may crack and bleed; soreness around patches; itching and burning sensations around patches; thick, pitted nails; painful, swollen joints

• For inj site pain, swelling, redness—usually occur after 2 inj (4-5 days); use cold compress to relieve pain/swelling

• **Infections** (fever, flulike symptoms, dyspnea, change in urination, redness/swelling

around any wounds): stop treatment if present; some serious infections including sepsis may occur; patients with active infections should not be started on this product
• Latent TB before therapy; treat before starting this product; TB test before use
• Monitor hepatitis B serology, LFTs, plasma hepatitis CRNA, plasma HIV RNA baseline, periodically
• **Pregnancy/breastfeeding:** use only if clearly needed; no well-controlled studies; cautious use in breastfeeding, no data

Evaluate
• Therapeutic response: decreasing plaques; painful, swollen joints

Teach patient/family:
• About self-administration if appropriate: inj should be made in thigh, abdomen, upper arm; rotate sites at least 1 inch from old site; do not inject in areas that are bruised, red, hard
• To refrigerate in container that product was received in; to dispose of needles and equipment as instructed
• That if medication is not taken when due, inject dose as soon as remembered and inject next dose as scheduled
• Not to take any live virus vaccines during treatment
• To report signs of infection, allergic reaction, or TB, immediately

risdiplam (Rx)

(ris-dip'lam)

Evrysdi

Func. class.: Spinal muscular atrophy agent

USES: Treatment of spinal muscular atrophy in children ≥2 mo

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

Spinal muscular atrophy

Adult: PO 5 mg daily

Child (Less than 2 months): 0.15 mg/kg orally once daily after a meal at approximately the same time each day

Child (2 months to less than 2 years): 0.2 mg/kg orally once daily after a meal at approximately the same time each day

Child (2 years or older and less than 20 kg): 0.25 mg/kg orally once daily after a meal at approximately the same time each day

Child (2 years or older and 20 kg or greater): 5 mg orally once daily after a meal at approximately the same time each day

risedronate (Rx)

(rih-sed'roh-nate)

Actonel, Atelvia

Func. class.: Bone resorption inhibitor

Chem. class.: Bisphosphonate

Do not confuse:
Actonel/Actos

ACTION: Inhibits bone resorption, absorbs calcium phosphate crystal in bone, and may directly block dissolution of hydroxyapatite crystals of bone

USES: Paget's disease; prevention, treatment of osteoporosis in postmenopausal women; glucocorticoid-induced osteoporosis; osteoporosis in men

Unlabeled uses: Osteolytic metastases

CONTRAINDICATIONS: Hypersensitivity to bisphosphonates, inability to stand or sit upright for ≥30 min, esophageal stricture, achalasia, hypocalcemia

Precautions: Pregnancy, breastfeeding, children, renal disease, active upper GI disorders, dental disease, hyperparathyroidism, infection, vit D deficiency, coagulopathy, chemotherapy, asthma

DOSAGE AND ROUTES

Paget's disease (Actonel)

• **Adult: PO** 30 mg/day × 2 mo; patients with Paget's disease should receive calcium and vit D if dietary intake lacking; if relapse occurs, retreatment advised

Treatment/prevention of postmenopausal osteoporosis

• **Adult: PO** 5 mg/day or 35 mg/wk or 75 mg/day × 2 consecutive days monthly or 150 mg/mo

Glucocorticoid osteoporosis
- **Adult: PO** 5 mg/day

Osteoporosis in men
- **Adult: PO** 35 mg/wk

Bone metastases (unlabeled)
- **Adult: PO** 35 mg weekly

Renal dose
- **Adult: PO** CCr <30 mL/min, avoid use

Available forms: Tabs 5, 30, 150 mg; tab, weekly 35 mg

Administer:
- For 2 mo to be effective for Paget's disease
- With a full glass of water; patient should be in upright position for ½ hr; swallow whole; do not crush, break, chew; give del rel tablet in AM after breakfast, only use with food (del rel)
- Supplemental calcium and vit D for Paget's disease if instructed by prescriber
- Give daily ≥30 min before meals or give weekly
- Store in cool environment, out of direct sunlight

SIDE EFFECTS

CNS: Dizziness, headache, depression, asthenia, dizziness, insomnia, *weakness*
CV: *Chest pain,* hypertension, atrial fibrillation
GI: *Abdominal pain, diarrhea, nausea,* constipation, esophagitis
GU: UTI, renal toxicity, acute renal failure
MISC: Rash, UTI, pharyngitis, hypocalcemia, hypophosphatemia, increase PTH
MS: Osteonecrosis of the jaw, severe muscle/joint/bone pain, femoral fractures
SYST: Angioedema, flulike symptoms

PHARMACOKINETICS

Rapidly cleared from circulation, taken up mainly by bones (50%), eliminated primarily through kidneys, absorption decreased by food, terminal half-life 23 hr, delayed release 560 hr

INTERACTIONS

Increase: hypocalcemic effect—loop diuretics
Increase: GI irritation—NSAIDs, salicylates
Increase: osteonecrosis of the jaw—sunitinib
Decrease: absorption of risedronate—aluminum, calcium, iron, magnesium salts, antacids
Decrease: absorption of del rel risedronate H_2 antagonists, proton pump inhibitors, do not use together
Decrease: Proton pump inhibitors, avoid concurrent use with delayed-release tablet

Drug/Food
Decrease: bioavailability—take ½ hr before food or drinks other than water

Drug/Lab Test
Decrease: calcium, phosphorus

NURSING CONSIDERATIONS

Assess:
- **Paget's disease:** headache, bone pain, increased head circumference
- **Osteoporosis:** in men or postmenopausal women; bone density study before and periodically during treatment
- **GI adverse effects:** nausea, diarrhea, gastric reflux, dyspnea
- **CV adverse reactions:** monitor B/P, dysrrthmias, (tachycardia, bradycardia, atrial fibrillation)
- Phosphate, alkaline phosphatase, calcium; creatinine, BUN (renal disease)
- **Hypocalcemia:** paresthesia, twitching, laryngospasm, Chvostek's/Trousseau's signs
- **Serious skin reactions:** angioedema
- **Dental health:** provide antiinfectives for dental extraction; cover with antiinfectives before dental extraction
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: increased bone mass, absence of fractures

Teach patient/family:
- To sit upright for ½ hr after dose to prevent irritation
- To notify prescriber immediately if difficulty swallowing, severe heartburn, or pain in chest
- To comply with diet, vitamin/mineral supplements
- To maintain good oral hygiene
- To notify all health care providers of use

• That musculoskeletal pain may occur within a few days/mo after starting but usually resolves; use acetaminophen
• To exercise regularly; to avoid alcohol, tobacco
• To notify prescriber if pregnancy is suspected or if breastfeeding

risperiDONE (Rx)

(ris-pehr'ih-dohn)

Perseris, RisperDAL, RisperDAL Consta

Func. class.: Antipsychotic

Chem. class.: Benzisoxazole derivative

Do not confuse:
RisperDAL/reserpine

ACTION: Unknown; may be mediated through both dopamine type 2 (D_2) and serotonin type 2 ($5\text{-}HT_2$) antagonism

USES: Irritability associated with autism, bipolar disorder, mania, schizophrenia
Unlabeled uses: Acute psychosis, agitation, ADHD, dementia, psychotic depression, Tourette's syndrome

CONTRAINDICATIONS: Hypersensitivity, breastfeeding
Precautions: Pregnancy, children, geriatric patients, cardiac/renal/hepatic disease, breast cancer, Parkinson's disease, CNS depression, brain tumor, dehydration, diabetes, hematologic disease, seizure disorders, abrupt discontinuation, suicidal ideation, phenylketonuria

Black Box Warning: Increased mortality in elderly patients with dementia-related psychosis

DOSAGE AND ROUTES

• **Adult: PO** 2 mg/day as single dose or in 2 divided doses, adjust dose at intervals of ≥24 hr and 1-2 mg/day as tolerated to 4-8 mg/day; **IM** establish dosing with **PO** before **IM** 25 mg q2wk, may increase to max 50 mg q2wk
• **Adolescent: PO** 0.5 mg/day in AM or PM, adjust dose at intervals of ≥24 hr and 0.5-1 mg/day as tolerated to 3 mg/day
• **Geriatric: PO** 0.5 mg daily-bid, increase by 1 mg/wk; **IM** 25 mg q2wk

Hepatic/renal dose

• **Adult: PO** 0.5 mg bid, increase by 0.5 mg bid, increase to 1.5 mg bid at intervals ≥1 wk

Available forms: Tabs 0.25, 0.5, 1, 2, 3, 4 mg; oral sol 1 mg/mL; orally disintegrating tabs 0.25, 0.5, 1, 2, 3, 4 mg; long-acting inj kit (Risperdal Consta) 12.5, 25, 37.5, 50 mg

Administer:

• Reduced dose in geriatric patients
• Anticholinergic agent on order from prescriber, to be used for EPS
• Avoid use with CNS depressants
• Conventional tabs: give without regard to meals
• **Oral disintegrating tab:** do not open blister pack until ready to use; tear at perforation; bend; peel back foil; do not push tab through foil; remove from pack and place product on patient's tongue; tab disintegrates in seconds and can be swallowed with/without liquids, do not split or chew
• **Oral sol:** May dilute 3-4 oz of beverage, measure dose using calibrated pipette; not compatible with tea, cola; compatible with water, coffee, orange juice, low-fat milk

IM route

• Only use diluent and needle provided
• Allow to come to room temperature for 30 min
• Remove colored cap from the vial without removing the gray rubber stopper; wipe top of stopper with an alcohol wipe
• Peel back the blister pouch and remove the Vial Access Device by holding between the white Luer cap and the skirt; do not touch the spike tip at any time
• Place the vial on a hard surface and hold the base; orient the Vial Access Device vertically over the vial so that the spike tip is at the center of the vial's rubber stopper
• While holding the white collar of the syringe, insert and press the syringe tip into the blue circle of the Vial Access Device and twist clockwise

- Inject the entire contents of the syringe containing the diluent into the vial
- Shake the vial vigorously
- Invert completely and slowly withdraw the contents of the suspension from the vial into the syringe; tear the section of the vial label at the perforation and apply the detached label to the syringe
- While holding the white collar of the syringe, unscrew the syringe from the Vial Access Device, then discard both the vial and the Vial Access Device appropriately
- Select the appropriate color-coded needle provided with the kit; they are not interchangeable; do not use the needle intended for gluteal injection for deltoid injection, and vice versa
- Peel the blister pouch of the Needle-Pro safety device open halfway; grasp the transparent needle using the pouch, attach the Luer connection of the orange Needle-Pro to the syringe with an easy clockwise twisting motion
- While holding the white collar of the syringe, grasp the transparent needle sheath and seat the needle firmly on the orange Needle-Pro device with a push and a clockwise twist
- Pull the transparent needle sheath straight away from the needle
- Resuspension is necessary before administration
- Only for IM; do not give IV
- Remove air bubbles
- Inject the entire contents of the syringe into the upper outer quadrant of the gluteal or deltoid muscle; gluteal injections should be alternated between the two buttocks
- After the injection is complete, press the needle into the orange Needle-Pro safety device
- Do not store the vial after reconstitution or the suspension will settle
- Do not combine 2 different dosage strengths of RisperDAL Consta in a single administration
- The dose pack device is for single use only
- **Stability after reconstitution:** Once in suspension, the product may remain at room temperature; use within 6 hr

SIDE EFFECTS

CNS: *EPS, pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia; drowsiness, insomnia, agitation, anxiety, headache,* seizures, neuroleptic malignant syndrome, dizziness, suicidal ideation, head titubation (shaking)
CV: Orthostatic hypotension, tachycardia, heart failure, sudden death (geriatric patients), AV block
EENT: Blurred vision, tinnitus
GI: *Nausea,* vomiting, *anorexia, constipation,* jaundice, weight gain
GU: Hyperprolactinemia, gynecomastia, dysuria
HEMA: Neutropenia, granulocytopenia
MISC: Renal artery occlusion; hyperprolactinemia (child)
MS: Rhabdomyolysis
RESP: Rhinitis, sinusitis, upper respiratory infection, cough

PHARMACOKINETICS

PO: Extensively metabolized by liver to major active metabolite, Genetic warning determined by poor metabolizer or average metabolizers; plasma protein binding 90%, peak 1-2 hr, excreted 90% in urine, terminal half-life 3-24 hr

INTERACTIONS

Increase: seizures—traMADol
Increase: possible death in dementia-related psychosis: furosemide
Increase: sedation—other CNS depressants, alcohol
Increase: serotonin syndrome, neuroleptic malignant syndrome—CYP2D6 inhibitors (SSRIs, SNRIs)
Increase: EPS—other antipsychotics
Increase: risperiDONE excretion—carBAMazepine
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine, thioridazine, ziprasidone
Increase: risperiDONE levels—acetylcholinesterase inhibitors, CYP2D6 inhibitors, SSRIs, valproic acid, verapamil

Decrease: risperiDONE action—CYP2D6 inducers (carBAMazepine, barbiturates, phenytoins, rifAMPin)
Decrease: levodopa effect—levodopa
Drug/Herb
Decrease: risperiDONE effect—echinacea
Drug/Lab Test
Increase: prolactin levels, blood, glucose, lipids

NURSING CONSIDERATIONS

Assess:
- **Suicidal thoughts/behaviors:** often when depression is lessened; mental status before initial administration
- Thyroid function test, blood glucose, serum electrolytes/prolactin/lipid profile, bilirubin, creatinine, weight, pregnancy test, CBC, LFTs, AIMS assessment, baseline and periodically
- Affect, orientation, LOC, reflexes, gait, coordination, sleep pattern disturbances
- **QT prolongation:** B/P standing, lying; pulse, respirations; take these q4hr during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; watch for ECG changes
- Dizziness, faintness, palpitations, tachycardia on rising
- **EPS:** akathisia, tardive dyskinesia (bizarre movements of the jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait)
- **Serious reactions in geriatric patient:** fatal pneumonia, heart failure, sudden death, dementia
- **Neuroleptic malignant syndrome:** hyperthermia, increased CPK, altered mental status, muscle rigidity, seizures, change in B/P, fatigue, tachycardia
- Constipation, urinary retention daily; if these occur, increase bulk, water in diet
- Decreased stimuli by dimming lights, avoiding loud noises
- Supervised ambulation until patient stabilized on medication; do not involve patient in strenuous exercise program because fainting is possible; patient should not stand still for a long time
- Increased fluids to prevent constipation
- Store in tight, light-resistant container (PO); unopened vials in refrigerator, protect from light; do not freeze
- **Beers:** avoid use in older adults except for schizophrenia, bipolar disorder, or as a short-term antiemetic in chemotherapy
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; EPS may occur in neonate; enroll pregnant women in the National Pregnancy Registry for Atypical Antipsychotics, 1-866-961-2388; do not breastfeed, excreted in breast milk

Evaluate:
- Therapeutic response: decrease in emotional excitement, hallucinations, delusions, paranoia; reorganization of patterns of thought, speech

Teach patient/family:
- That orthostatic hypotension may occur; to rise from sitting or lying position gradually
- To avoid abrupt withdrawal of product because EPS may result; product should be withdrawn slowly
- To avoid OTC preparations (cough, hay fever, cold) unless approved by prescriber; that serious product interactions may occur; to avoid use of alcohol because increased drowsiness may occur
- To avoid hazardous activities if drowsy or dizzy
- To comply with product regimen
- To report impaired vision, tremors, muscle twitching
- **Heat intolerance:** That heat stroke may occur in hot weather; to take extra precautions to stay cool; to avoid hot tubs, hot showers, tub baths
- To use contraception; to inform prescriber if pregnancy is planned or suspected; not to breastfeed
- To notify provider of suicidal thoughts/behaviors

TREATMENT OF OVERDOSE:

Lavage if orally ingested; provide airway; *do not induce vomiting*

ritonavir (Rx)

(ri-toe´na-veer)

Norvir

Func. class.: Antiretroviral
Chem. class.: Protease inhibitor

Do not confuse:
ritonavir/Retrovir

ACTION: Inhibits human immunodeficiency virus (HIV-1) protease and prevents maturation of the infectious virus

USES: HIV-1 in combination with at least 2 other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Coadministration with other drugs

Precautions: Pregnancy, breastfeeding, hepatic disease, pancreatitis, diabetes, hemophilia, AV block, hypercholesterolemia, immune reconstitution syndrome, neonates, cardiomyopathy, immune reconstitution syndrome, infants 1-6 mo (overdose)

DOSAGE AND ROUTES

HIV in combination

- **Adult/adolescent >16 yr: PO** 600 mg bid; if nausea occurs, begin at ½ dose and gradually increase, max 1200 mg/day in divided doses
- **Adolescent ≤16 yr: PO** 350-400 mg/m² bid; increase by 50 mg/m² bid q2-3days, max 600 mg bid
- **Child: PO** Initial 250 mg/m² twice daily, then increase by 50 mg/m² every 2-3 days to maintenance of 350-400 mg/m² twice daily, max 600 mg twice daily.

Available forms: Oral sol 80 mg/mL; tab 100 mg; oral powder 100 mg

Administer:

Tablet

- Take with food, swallow whole; do not crush, break, chew
- When switching from cap to tab, more GI symptoms may occur, will lessen over time
- Use dosage titration to minimize side effects
- Store caps in refrigerator
- **Oral sol:** shake well, use calibrated measuring device
- Mix liquid formulation with chocolate milk or liquid nutritional supplement to improve taste
- **Oral powder:** Prepare using number of packets needed, pour and mix entire contents over soft food or mix in 4 ounces of liquid
- **Overdose:** infants, children, 43.2% alcohol, 26.57% propylene glycol oral sol, calculate total amount of alcohol, propylene glycol from all products given

SIDE EFFECTS

CNS: *Paresthesia, headache,* seizures, fever, dizziness, insomnia, asthenia, intracranial bleeding
CV: QT, PR interval prolongation
GI: *Diarrhea,* buccal mucosa ulceration, *abdominal pain, nausea, taste perversion,* dry mouth, *vomiting, anorexia,* pancreatitis, CDAD, hepatitis
INTEG: Rash
MISC: Asthenia, angioedema, anaphylaxis, Stevens-Johnson syndrome, increase lipids, lipodystrophy, toxic epidermal necrolysis, immune reconstitution syndrome
MS: Pain, rhabdomyolysis, myalgia
HEMA: Leukopenia, thrombocytopenia

PHARMACOKINETICS

Well absorbed, 98% protein binding, hepatic metabolism, peak 2-4 hr, terminal half-life 3-5 hr

INTERACTIONS

Black Box Warning: Increase: toxicity—amiodarone, astemizole, azole antifungals, benzodiazepines, buPROPion, ClSapride, cloZAPine, desipramine, dihydroergotamine, encainide, ergotamine, flecainide, HMG-CoA reductase inhibitors, interleukins, meperidine, midazolam, pimozide, piroxicam, propafenone, propoxyphene, quiNIDine, ranolazine, saquinavir, terfenadine, triazolam, zolpidem; CYP2D6 inhibitors

Black Box Warning: Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine, CYP3A4 inhibitors (amiodarone, clarithromycin, dasatinib, erythromycin, telithromycin, troleandomycin), arsenic trioxide, CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: ritonavir levels—fluconazole
Increase: level of both products—clarithromycin, ddI
Increase: levels of—bosentan
Decrease: ritonavir levels—rifamycins, nevirapine, barbiturates, phenytoin
Decrease: levels of anticoagulants, atovaquone, divalproex, ethinyl estradiol, lamoTRIgine, phenytoin, sulfamethoxazole, theophylline, voriconazole, zidovudine

Drug/Herb

Decrease: ritonavir levels—St. John's wort; avoid concurrent use
- Avoid use with red yeast rice

Drug/Lab Test

Increase: AST, ALT, K, CK, cholesterol, GGT, triglycerides, uric acid
Decrease: Hct, HB, RBC, neutrophils, WBC

NURSING CONSIDERATIONS

Assess:

- **HIV:** viral load, CD4 at baseline, throughout therapy; blood glucose, plasma HIV RNA, serum cholesterol/lipid profile; resistance testing before starting therapy and after treatment failure
- **Immune reconstitution syndrome:** may occur with combination therapy; may develop inflammatory response with opportunistic infection (MAC, Graves' disease, Guillain-Barré syndrome, TB, PCP); may occur during initial treatment or months after
- Signs of infection, anemia
- Hepatic studies: ALT, AST in those with hepatic disease, monitor q3mo
- Bowel pattern before, during treatment; if severe abdominal pain with bleeding occurs, discontinue product; monitor hydration
- Skin eruptions; rash
- **Rhabdomyolysis:** muscle pain, increased CPK, weakness, swelling of affected muscles, dark urine; if these occur and if confirmed by CPK, product should be discontinued
- **QT prolongation:** ECG for QT prolongation, ejection fraction; assess for chest pain, palpitations, dyspnea
- **Serious skin disorders:** Stevens-Johnson syndrome, angioedema, anaphylaxis, toxic epidermal necrolysis
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; enroll pregnant women in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed

Evaluate:

- Therapeutic response: improvement in HIV symptoms; improving viral load, CD4+ T cells

Teach patient/family:

- To take as prescribed; if dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose
- That product not a cure for HIV; that opportunistic infections may continue to be acquired
- That redistribution of body fat or accumulation of body fat may occur
- That others may continue to contract HIV from patient

Black Box Warning: To avoid OTC, prescription medications, herbs, supplements unless approved by prescriber; not to use St. John's wort because it decreases product's effect

- That regular follow-up exams and blood work will be required

R

⚠ HIGH ALERT

riTUXimab (Rx)

(rih-tuks´ih-mab)

Rituxan, Rituxan SC ✱

rituximab-abbs (Rx)

Truxima

rituximab-pvvr (Rx)

Ruxience

Func. class.: Antineoplastic—miscellaneous; DMARDs
Chem. class.: Murine/human monoclonal antibody

ACTION: Directed against the CD20 antigen that is found on malignant B

lymphocytes; CD20 regulates a portion of cell-cycle initiation/differentiation

USES: Non-Hodgkin's lymphoma (CD20+, B-cell), bulky disease (tumors >10 cm), rheumatoid arthritis, Wegener's granulomatosis, microscopic polyangiitis
Unlabeled uses: Antibody-mediated rejection in cardiac transplantation autoimmune hemolytic anemia, Burkitt lymphoma, graft-versus-host disease, Hodgkin lymphoma, lupus nephritis

CONTRAINDICATIONS: Hypersensitivity, murine proteins
Precautions: Pregnancy, breastfeeding, children, geriatric patients, pulmonary/cardiac/renal conditions

Black Box Warning: Exfoliative dermatitis, infusion-related reactions, progressive multifocal leukoencephalopathy, hepatitis B exacerbation

DOSAGE AND ROUTES

non-Hodgkin's lymphoma (NHL)
• **Adult: IV** 375 mg/m^2/wk × 4 doses, may re-treat with 4 more doses of 375 mg/m^2/wk
CLL
• **Adult: IV** 375 mg/m^2 on cycle 1; cycle 2 through 6 500 mg/m^2, treatment cycles are q28days; given with cyclophosphamide and fludarabine
GPA/MPA
• **Adult: IV** 375 mg/m^2 weekly × 4 wk give methylPREDNISolone 100 mg/day 1-3 days, then predniSONE
Rheumatoid arthritis
• **Adult: IV** infusion 1000 mg days 1, 15; then q24wk give methylPREDNISolone 100 mg or similar product 30 min before infusion to decrease reactions
Available forms: Inj 10 mg/mL (100 mg/10 mL, 500 mg/50 mL)
Administer:
Intermittent IV INFUSION route
• Hold antihypertensives 12 hr before administration
• After diluting to final concentration of 1-4 mg/mL; use 0.9% NaCl, D_5W, gently invert bag to mix; do not mix with other products; give 50 mg/hr initially; if no reaction, increase rate by 50 mg/hr to max 400 mg/hr
• Monitor closely during infusion, severe reactions usually occur within 30-120 min
• Store vials at 36°F-40°F; protect vials from direct sunlight; infusion sol is stable at 36°F-46°F × 24 hr and at room temperature for another 12 hr

SIDE EFFECTS

CNS: Life-threatening brain infection (progressive multifocal leukoencephalopathy)
CV: Cardiac dysrhythmias, heart failure, hypertension, MI, supraventricular tachycardia, angina
GI: *Nausea, vomiting, anorexia,* GI obstruction/perforation
GU: Renal failure
HEMA: Leukopenia, neutropenia, thrombocytopenia, anemia
INTEG: *Irritation at site, rash,* fatal mucocutaneous infections (rare)
MISC: *Fever,* chills, asthenia, *headache,* angioedema, hypotension, myalgia, bronchospasm, ARDs
SYST: Toxic epidermal necrolysis, tumor lysis syndrome, Stevens-Johnson syndrome, exfoliative dermatitis
META: Hyperkalemia, hypocalcemia, hyperphosphatemia

PHARMACOKINETICS

Half-life varies, binds to CD20 sites or lymphoma cells

INTERACTIONS

Increase: hypotension—antihypertensives, separate by 12 hr
Increase: nephrotoxicity—CISplatin, avoid concurrent use; if used, monitor renal status
Increase: bleeding—anticoagulant
• Avoid with vaccines, toxoids

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Fatal infusion reaction: hypoxia, pulmonary infiltrates, ARDS, MI, ventricular fibrillation, cardiogenic shock; most fatal reactions occur with 1st infusion; potentially fatal

Black Box Warning: Severe mucocutaneous reactions: Stevens-Johnson syndrome, lichenoid dermatitis, toxic epidermal lysis; occur 1-13 wk after product given, discontinue treatment immediately

Black Box Warning: Tumor lysis syndrome: acute renal failure requiring hemodialysis, hyperkalemia, hypocalcemia, hyperuricemia, hyperphosphatemia; allopurinol and adequate hydration may be needed

Black Box Warning: Multifocal leukoencephalopathy: confusion, dizziness, lethargy, hemiparesis; monitor periodically

- **Bone marrow suppression:** CBC, differential, platelet count weekly; withhold product if WBC is <3500/mm^3 or platelet count <100,000/mm^3; notify prescriber of results; product should be discontinued
- **Labs:** CBC with differential, hepatitis B serology, pregnancy test if applicable, ECG, serum creatinine/BUN, electrolytes, uric acid; correct electrolyte imbalances before use; hyperkalemia, hypocalcemia, hyperphosphatemia often occur
- GI symptoms: frequency of stools, abdominal pain, perforation/obstruction may occur
- **Infection:** fever, increased temperature, flulike symptoms in those with Wegener's granulomatosis and microscopic polyangiitis in those using DMARDs

Black Box Warning: Hepatitis B exacerbation: fulminant hepatitis, hepatic failure, death may occur during or following treatment; screen all patients for HBV infection (HBV/HBsAg and anti-HB$_c$ titers) before use; monitor those with current or prior HBV for signs of hepatitis or for HBV reactivation for several months after therapy; if reactivation occurs, discontinue product

- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; contraception should be used during and for 12 mo after last dose; enroll pregnant women in the Mother To Baby Autoimmune Diseases in Pregnancy Study, 1-877-311-8972 (patients with RA); do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: prevention of increasing cancer progression

Teach patient/family:
- That scheduled appointment must be kept, as relapse may occur
- To avoid use with vaccines, toxoids
- To use contraception during and for 12 mo after therapy, not to breastfeed
- To report to prescriber possible infection (cough, fever, chills, sore throat), renal issues (painful urination, back/side pain), bleeding (gums, stools, urine, bruising, emesis, fatigue)
- To avoid OTC products, alcohol
- To avoid crowds, those with known infections
- To maintain fluid intake

⚠ HIGH ALERT

rivaroxaban (Rx)

Xarelto

Func. class.: Anticoagulant
Chem. class.: Factor Xa inhibitor

R

ACTION: A novel oral anticoagulant that selectively and potently inhibits coagulation factor Xa

USES: For deep venous thrombosis (DVT) prophylaxis/treatment, pulmonary embolism (PE), in patients undergoing knee or hip replacement surgery; for stroke prophylaxis and systemic embolism prophylaxis in patients with nonvalvular atrial fibrillation

CONTRAINDICATIONS
Severe hypersensitivity

Black Box Warning: Active bleeding

Precautions: Pregnancy, breastfeeding, neonates, infants, children, adolescents, geriatric patients, moderate or severe hepatic disease (Child-Pugh Class B or C),

hepatic disease associated with coagulopathy, creatinine clearance <30 mL/min for use as DVT prophylaxis and <15 mL/min for stroke and systemic embolism prophylaxis in nonvalvular atrial fibrillation, dental procedures, aneurysm, diabetes retinopathy, diverticulitis, endocarditis, GI bleeding, hypertension, obstetric delivery, peptic ulcer disease, stroke, surgery

Black Box Warning: Abrupt discontinuation, epidermal/spinal anesthesia

Patients, especially those with dental disease, should be instructed in proper oral hygiene, including caution in use of regular toothbrushes, dental floss, toothpicks

DOSAGE AND ROUTES

DVT prophylaxis (knee or hip replacement)

• **Adult: PO** 10 mg/day × 12 days after knee replacement surgery or × 35 days after hip replacement; administer the initial dose ≥6-10 hr after surgery once hemostasis has been established

DVT/PE treatment/reduction of risk

• **Adult: PO** 15 mg bid with food × 21 days, then 20 mg daily for a total of 6 mo, may continue after 6 mo to reduce risk

Stroke prophylaxis and systemic embolism prophylaxis (with nonvalvular atrial fibrillation)

• **Adult: PO** 20 mg/day with evening meal (CrCl >50 mL/min)

Converting from warfarin to rivaroxaban

• Discontinue warfarin and start rivaroxaban when INR is <3

Converting from another anticoagulant other than warfarin to rivaroxaban

• Start rivaroxaban 0-2 hr before the next scheduled evening administration of anticoagulant (omit that dose of anticoagulant); for continuous infusion of unfractionated heparin, stop the infusion and initiate rivaroxaban simultaneously

Converting from rivaroxaban to another anticoagulant with rapid onset (not warfarin)

• Discontinue rivaroxaban and give the first dose of the other anticoagulant (oral or parenteral) at the time that the next dose of rivaroxaban would have been administered

Hepatic dose

• **Adult: PO** Child-Pugh class B or C: avoid use

Renal dose

• **Adult: PO** (nonvalvular atrial fibrillation) CCr 15-50 mL/min 15 mg daily; CCr <15 mL/min avoid use; (treatment/prophylaxis of DVT/pulmonary embolism) CCr <30 mL/min avoid use

Available forms: Tabs 2.5, 10, 15, 20 mg; granules for oral suspension 1 mg/mL; tablet starter pack 15-20 mg

Administer:

• **For DVT prophylaxis:** give daily without regard to food; give initial dose ≥6-10 hr after surgery when hemostasis has been established

• **For stroke/systemic embolism prophylaxis:** give daily with evening meal

• If dose is not given at correct time, give as soon as possible on the same day

• 15-, 20-mg tabs should be taken with food; for those unable to swallow whole, tabs may be crushed, mixed with applesauce; immediately following administration, instruct to eat; crushed tabs are stable in applesauce for up to 4 hr

• 10-mg tab can be taken without regard to food; all doses ≥15 mg should be given with food

Nasogastric (NG) tube or gastric feeding tube:

• Confirm gastric placement of tube

• Crush 15- or 20-mg tab, suspend in 50 mL of water, and administer via NG or gastric feeding tube

• Enteral feeding should immediately follow administration of a crushed dose

• Crushed tabs are stable in water for up to 4 hr

Missed doses

• Patients receiving 15 mg BID should take their missed dose immediately to ensure intake of 30 mg per day; two 15-mg tabs may be taken at once followed by the regular 15 mg BID dose the next day

• For patients receiving once-daily dosing, take the missed dose as soon as it is remembered

• Store at room temperature

SIDE EFFECTS

GI: Increased hepatic enzymes, hyperbilirubinemia, jaundice, nausea, cholestasis, cytolytic hepatitis
HEMA: Bleeding, intracranial bleeding, epidural hematoma, GI bleeding, retinal hemorrhage, adrenal bleeding, retroperitoneal hemorrhage, cerebral hemorrhage, subdural hematoma, epidural hematoma, hemiparesis, thrombocytopenia
INTEG: Pruritus, blister, hypersensitivity, anaphylactic reaction, anaphylactic shock
SYST: Stevens-Johnson syndrome

PHARMACOKINETICS

Bioavailability 80%-100%, protein binding (92%-95%) albumin, excreted in urine 66% (36% unchanged, 30% metabolites), 28% in feces (7% unchanged, 21% metabolites), unchanged drug excreted in urine (via active tubular secretion, glomerular filtration); terminal elimination half-life 5-9 hr, peak 2-4 hr; increased effect in hepatic/renal disease, Japanese patients, increased terminal half-life in geriatric patients

INTERACTIONS

Increase: rivaroxaban effect, possible bleeding—ketoconazole itraconazole, ritonavir, lopinavir/ritonavir; conivaptan, clarithromycin, erythromycin, salicylates, NSAIDs, other anticoagulants, thrombolytics, platelet inhibitors, niCARdipine, fluconazole
Decrease: rivaroxaban effect—carBAMazepine, phenytoin, rifAMPin
Increase: rivaroxaban effect in renal impairment—telithromycin, darunavir, miFEPRIStone, nelfinavir, pantoprazole, posaconazole, saquinavir, tamoxifen, lapatinib, azithromycin, diltiaZEM, verapamil, quiNIDine, ranolazine, dronedarone, amiodarone, felodipine
Drug/Herb
Decrease: rivaroxaban effect—St. John's wort
Drug/Food
Increase: rivaroxaban effect in renal disease—grapefruit juice

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Bleeding: monitor for bleeding, including bleeding during dental procedures (easy bruising, blood in urine, stools, emesis, sputum, epistaxis); there is no specific antidote

Black Box Warning: Abrupt discontinuation: avoid abrupt discontinuation unless an alternative anticoagulant in those with atrial fibrillation; discontinuing puts patients at an increased risk of thrombotic events; if product must be discontinued for reasons other than pathologic bleeding, consider administering another anticoagulant

Black Box Warning: Epidural/spinal anesthesia: epidural or spinal hematomas that result in long-term or permanent paralysis may occur in patients who have received anticoagulants and are receiving neuraxial anesthesia or undergoing spinal puncture; epidural catheter should not be removed <18 hr after the last dose of rivaroxaban; do not administer the next rivaroxaban dose <6 hr after the catheter removal; delay rivaroxaban administration for 24 hr if traumatic puncture occurs; monitor for neuro changes

- **Hepatic/renal disease:** increase in effect of product in hepatic disease (Child-Pugh class B or C), hepatic disease with coagulopathy; renal failure/severe renal impairment (creatinine clearance <30 mL/min in DVT prophylaxis and <15 mL/min for stroke or systemic embolism prophylaxis in nonvalvular atrial fibrillation); product should be discontinued in acute renal failure; reduce dose in those with atrial fibrillation and CrCl 15-50 mL/min; monitor renal function periodically (creatinine clearance, BUN)
- **Beers:** avoid use in older adults with CCr <30 mL/min; reduce dose in CCr 30-50 mL/min
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not

breastfeed, excretion unknown; pregnancy-related hemorrhage may occur

Evaluate:

• Prevention of DVT, stroke, and systemic embolism

Teach patient/family:

• To report if pregnancy is planned or suspected; not to breastfeed

Black Box Warning: To report bleeding (bruising, blood in urine, stools, sputum, emesis, heavy menstrual flow); use soft toothbrush, electric shaver

• To inform all health care providers of use; to report to prescriber all products used; to take all medication for the duration, exactly as prescribed to prevent clots; to notify prescriber if unable to take so that a different anticoagulant may be used

Black Box Warning: To avoid abrupt discontinuation without another blood thinner

• To report numbness of extremities, weakness, tingling, contact prescriber immediately (neuraxial anesthesia, spinal puncture)

rivastigmine (Rx)

(riv-as-tig'mine)

Exelon, Exelon Patch

Func. class.: Anti-Alzheimer agent

Chem. class.: Cholinesterase inhibitor

ACTION: Potent, selective inhibitor of brain acetylcholinesterase (AChE) and butyrylcholinesterase (BChE)

USES: Mild to severe Alzheimer's dementia, mild to moderate Parkinson's disease dementia (PDD)

Unlabeled uses: Vascular dementia, dementia with Lewy bodies, Pick's disease

CONTRAINDICATIONS: Hypersensitivity to this product, other carbamates

Precautions: Pregnancy, breastfeeding, children, respiratory/cardiac/renal/hepatic disease, seizure disorder, peptic ulcer, urinary obstruction, asthma, increased intracranial pressure, surgery, GI bleeding, jaundice

DOSAGE AND ROUTES

Dementia of Alzheimer's type

• **Adult: PO** 1.5 mg bid with food; after ≥4 wk, may increase to 3 mg bid; may increase to 4.5 mg bid and thereafter 6 mg bid, max 12 mg/day; **TRANSDERMAL** apply 4.6 mg/24 hr/day, after ≥4 wk may increase to 9.5 mg/24 hr/day; max 13.3 mg/24 hr

Parkinson's disease dementia

• **Adult: PO** 1.5 mg bid, after 4 wk may increase to 3 mg bid; TD 4.6 mg/24-hr patch daily, after 4 wk, may increase to 9.5 mg/ 24 hr

Available forms: Caps 1.5, 3, 4.5, 6 mg; transdermal patch 4.6, 9.5, 13.3 mg/24 hr

Administer:

• With meals; take with morning and evening meal even though absorption may be decreased

• If adverse reactions cause intolerance, discontinue treatment for several doses; restart at same or next lower dosage level

• If treatment is interrupted for more than several days, treatment should be initiated with lowest daily dose and titrated as indicated previously

Transdermal route

• Once a day to hairless, clean, dry skin, not in an area that clothing will rub; rotate sites daily; do not apply to same site more than once q14days; remove liner; apply firmly; may be used during bathing, swimming; avoid excess sunlight or external heat such as saunas; each 5-cm^2 patch contains 9 mg base, rate of 4.6 mg/24 hr, each 10-cm^2 patch 18 mg base, rate of 9.5 mg/24 hr

SIDE EFFECTS

CV: QT prolongation, AV block, cardiac arrest, angina, MI, palpitations, bradycardia

CNS: *Tremors, confusion, insomnia,* psychosis, hallucination, depression, dizziness, headache, anxiety, somnolence, fatigue, syncope, EPS, exacerbation of Parkinson's disease
GI: *Nausea, vomiting, anorexia, abdominal distress, flatulence,* diarrhea, constipation, dyspepsia, colitis, eructation, fecal incontinence, GI bleeding/obstruction, GERD, gastritis, pancreatitis
MISC: Urinary tract infection, asthenia, increased sweating, hypertension, flulike symptoms, weight change

PHARMACOKINETICS

Rapidly and completely absorbed; peak 1 hr, metabolized to decarbamylated metabolite; half-life 1.5 hr; excreted via kidneys (metabolites); clearance lowered in geriatric patients, hepatic disease and increased with nicotine use; 40% protein binding

INTERACTIONS

Increase: synergistic effect—cholinergic agonists, other cholinesterase inhibitors
Increase: metabolism—nicotine
Increase: GI effects—NSAIDs
Decrease: rivastigmine effect—anticholinergics, sedating H_1 blockers, tricyclics, phenothiazines

NURSING CONSIDERATIONS

Assess:
- Hepatic studies: AST, ALT, alk phos, LDH, bilirubin, CBC
- **Severe GI effects:** nausea, vomiting, anorexia, weight loss, diarrhea, GI bleeding
- **CV status:** B/P, heart rate, respiration during initial treatment; hypo/hypertension should be reported
- **Cognitive/mental status:** affect, mood, behavioral changes, depression, insomnia; complete suicide assessment
- **Gout/mobility:** Assistance with ambulation during beginning therapy; dizziness may occur
- **Skin:** assess for hypersensitivity-related dermatitis
- **TD:** overdoses have occurred and may be fatal
- **Beers:** avoid use in older adults; increased risk of orthostatic hypotension or bradycardia
- **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: improved mood/cognition

Teach patient/family:
- How to apply **transdermal** product, to fold in half and throw away, not to get in eyes, to wash hands after application; not to use heating pad, sauna, tanning bed
- To notify prescriber of severe GI effects
- That product may cause dizziness, anorexia, weight loss
- That effect may take weeks or months; not to discontinue abruptly
- To notify prescriber if pregnancy is planned or suspected
- To give with food in AM, PM if using oral tablet
- To notify prescriber of history of low heart rate, sick sinus syndrome, risk of bradycardia
- How to take B/P, pulse at home
- To report nausea, vomiting, diarrhea
- To inform prescriber of all products taken

rizatriptan (Rx)

(rye-zah-trip′tan)

Maxalt, Maxalt-MLT

Func. class.: Migraine agent

Chem. class.: 5-HT_{1D} receptor agonist, abortive agent-triptan

R

ACTION: Binds selectively to the vascular $5\text{-HT}_{1B/1D}$ receptor subtype; exerts antimigraine effect; causes vasoconstriction of the cranial arteries

USES: Acute treatment of migraine

CONTRAINDICATIONS: Angina pectoris, history of MI, documented silent ischemia, Prinzmetal's angina, ischemic heart disease, concurrent ergotamine-containing preparations, uncontrolled hypertension, hypersensitivity, basilar or hemiplegic migraine

Precautions: Pregnancy, breastfeeding, children, geriatric patients, postmenopausal women, men >40 yr, risk factors for CAD, hypercholesterolemia, obesity, diabetes, impaired renal/hepatic function

DOSAGE AND ROUTES

Acute migraine

• **Adult: PO** 5-10 mg single dose, redosing separated by ≥2 hr, max 30 mg/24 hr

Acute migraine in those using propranolol

• **Adult: PO** 5 mg daily, max 10 mg/day given in 2 doses separated by ≥2 hr

Available forms: Tabs (Maxalt) 5, 10 mg; orally disintegrating tabs (Maxalt-MLT) 5, 10 mg

Administer:

• **Orally disintegrating tab:** do not open blister until use; peel blister open with dry hands; place tab on patient's tongue, where it will dissolve, and have patient swallow with saliva (contains phenylalanine)

• Not to be used for more than 3-4 times per month

SIDE EFFECTS

CNS: *Dizziness, drowsiness, headache, fatigue,* warm/cold sensations, flushing

CV: MI, ventricular fibrillation, ventricular tachycardia, coronary artery vasospasm, palpitations, hypertension, peripheral vascular ischemia, ECG changes

ENDO: Hot flashes, mild increase in growth hormone

GI: *Nausea,* dry mouth, diarrhea, abdominal pain, ischemic colitis

RESP: Chest tightness, pressure, dyspnea

PHARMACOKINETICS

Onset of pain relief 10 min-2 hr; peak 1-1½ hr; duration 14-16 hr; 14% plasma protein binding; metabolized in liver (metabolite); excreted in urine (82%), feces (12%); half-life 2-3 hr

INTERACTIONS

Weakness, hyperreflexia, incoordination: SSRIs

Increase: levels of sibutramine

Increase: rizatriptan action—cimetidine, oral contraceptives, MAOIs, nonselective MAOI (type A and B), isocarboxazid, pargyline, phenelzine, propranolol, tranylcypromine

Increase: vasospastic effects—ergot, ergot derivatives, other 5-HT receptor agonists

Drug/Herb

Serotonin syndrome: St. John's wort

NURSING CONSIDERATIONS

Assess:

• **Migraine symptoms:** visual disturbances, aura, intensity, nausea, vomiting, photophobia

• Stress level, activity, recreation, coping mechanisms

• Neurologic status: LOC, blurring vision, nausea, vomiting, tingling in extremities preceding headache

• **Ingestion of tyramine foods** (pickled products, beer, wine, aged cheese), food additives, preservatives, colorings, artificial sweeteners, chocolate, caffeine, which may precipitate these types of headaches

• Renal status: urine output

• Quiet, calm environment with decreased stimulation: noise, bright light, excessive talking

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; enroll in the registry, 1-800-986-8999; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decrease in frequency, severity of headache

Teach patient/family:

• **About use of orally disintegrating tab:** instruct patient not to open blister until use, to peel blister open with dry hands, to place tab on tongue, where it will dissolve, and to swallow with saliva (contains phenylalanine)

• To report any side effects to prescriber

• To use alternative contraception while taking product if oral contraceptives are being used

• That product does not prevent or reduce number of migraines; if 1st dose does not relieve pain, do not use more, notify prescriber; to avoid use in acute headache, use of agent >10 days a month due to the risk of medication overuse headaches

roflumilast (Rx)

Daliresp, Daxas

Func. class.: Respiratory antiinflammatory agent

Chem. class.: Phosphodiesterase-4 (PDE4) inhibitor

ACTION: Roflumilast (and the active metabolite roflumilast N-oxide) selectively inhibit phosphodiesterase-4 (PDE4); not a bronchodilator; decreases inflammatory activity, PDE4 inhibition may affect migration and actions of proinflammatory cells

USES: Add-on treatment to bronchodilator use; for the prevention of COPD exacerbations in patients with severe COPD associated with chronic bronchitis and a history of exacerbations

CONTRAINDICATIONS: Moderate to severe hepatic disease (Child-Pugh B or C)

Precautions: Pregnancy, breastfeeding, neonates, infants, children, adolescents, acute bronchospasm, anxiety, insomnia, depression, suicidal ideation or behavior

DOSAGE AND ROUTES

COPD exacerbation

- **Adult: PO** 250 mcg/day × 4 wk, then increase to 500 mcg/day

Available forms: Tabs 250, 500 mcg

Administer:

PO route

- Give without regard to meals
- Store at room temperature

SIDE EFFECTS

CNS: Insomnia, anxiety, depression, headache, dizziness, tremors, suicidal ideation

EENT: Rhinitis, sinusitis

GI: *Weight loss, diarrhea, nausea,* anorexia, abdominal pain, dyspepsia, gastritis, vomiting

GU: Urinary tract infection

MS: Back pain, muscle cramps/spasm

SYST: Infections, influenza

PHARMACOKINETICS

80% bioavailability; protein binding 99% (roflumilast); 97% (N-oxide metabolite); extensively metabolized (liver); metabolism by CYP3A4 and CYP1A2 produces active metabolite N-oxide; half-life parent drug 17 hr, metabolite 30; 70% excreted in urine; parent drug peak 1 hr (range, 0.5-2 hr), metabolite peak 8 hr (range, 4-13 hr)

INTERACTIONS

Increase: roflumilast effect—CYP3A4/CYP1A2 inhibitors (enoxacin, cimetidine, delavirdine, indinavir, isoniazid, itraconazole, dalfopristin, quinupristin, tipranavir)

Increase: roflumilast effect—oral contraceptives (gestodene and ethinyl estradiol)

Decrease: roflumilast effect—CYP3A4 inducers (rifAMPin, barbiturates, carBAMazepine, phenytoin, erythromycin, ketoconazole, fluvoxaMINE, alcohol, etravirine, ritonavir, bexarotene, rifabutin, OXcarbazepine, nevirapine, modafinil, metyraPONE, PHENobarbital, bosentan, dexamethasone)

Altered effect of: fosamprenavir

Drug/Herb

Decrease: roflumilast effect—St. John's wort

NURSING CONSIDERATIONS

Assess:

- Lung sounds and respiratory function baseline and periodically thereafter
- Behavioral changes including mood, depression, suicidal thoughts/behaviors
- Liver function tests baseline and periodically thereafter; if increases in liver function studies occur, product should be discontinued
- **CV status:** rate, rhythm, chest pain, dyspnea, palpitations, supraventricular dysrrthmias are common
- **GI symptoms:** Weight; weight loss is common, diarrhea
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excreted in breast milk

Evaluate:

- Decreasing exacerbations in COPD

R

Teach patient/family:
- To take product as directed; not to skip or double doses; to take missed doses as soon as remembered unless almost time for next dose
- Not to use OTC or other products without prescriber approval; not to discontinue other respiratory products unless approved by prescriber
- Not to be used for acute bronchospasm but may be continued during acute asthma attacks
- **Suicidal thoughts/behaviors:** to notify prescriber of worsening depression or suicidal thoughts/behaviors

rolapitant (Rx)
(roe-la′pi-tant)
Varubi
Func. class.: Antiemetic

USES: Prevention of delayed nausea and vomiting associated with emetogenic cancer chemotherapy, including but not limited to highly emetogenic chemotherapy (in combination with other antiemetic agents)

CONTRAINDICATIONS
Hypersensitivity, use with CYP2D6 substrates (thioridazine, pimozide); child <2 yr

DOSAGE AND ROUTES
Chemotherapy-induced nausea and vomiting (prevention)
- **Adult: PO** 180 mg give within 2 hr before chemotherapy on day 1 only (in combination with dexamethasone given on days 1, 2, 3, and 4 and a 5-HT_3 receptor antagonist given on day 1)

Available forms: Emulsion for injection 165.5/92.5 mL; tablet 90 mg

⚠ HIGH ALERT

romidepsin (Rx)
(roe-mi-dep′sin)
Istodax
Func. class.: Antineoplastics

USES: Treatment of cutaneous T-cell lymphoma (CTC)L or treatment of peripheral T-cell lymphoma (PTCL) in those who have received at least one prior therapy

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Adult: IV 14 mg/m^2 on days 1, 8, and 15 of a 28-day cycle; repeat cycle as long as beneficial

Available forms: Powder for injection 10-mg vials; solution for injection 27.5 mg/5.5 mL

romiPLOStim (Rx)
(roe-mi-ploe′stim)
Nplate
Func. class.: Hematopoietin
Chem. class.: Thrombopoietin receptor agonist

USES: Chronic idiopathic thrombocytopenic purpura in patients who have had an insufficient response to corticosteroids, immunoglobulins, or splenectomy; hematopoietic syndrome of acute radiation syndrome

CONTRAINDICATIONS:
Hypersensitivity to this product or mannitol

DOSAGE AND ROUTES
Thrombocytopenia in chronic idiopathic thrombocytopenic purpura (ITP)
- **Adult: SUBCUT** 1 mcg/kg/wk (based on actual body weight); increase the weekly dosage by 1 mcg/kg until platelet count ≥50,000/mm^3; 10 mcg/kg/wk max

Available forms: Injection 125-, 250-, 500-mcg single-use vials

romosozumab-aqqg (Rx)
(roe′moe-soz′ue-mab)
Evenity
Func. class.: Osteoporosis agent, sclerostin inhibitor

USES: Treatment of osteoporosis in postmenopausal females at high risk for fracture or those who have failed or are intolerant to other available osteoporosis therapy

CONTRAINDICATIONS

Hypersensitivity, uncorrected hypocalcemia

Black Box Warning: MI, stroke

DOSAGE AND ROUTES

Osteoporosis in postmenopausal women at high risk for fracture

Adult female SUBCUT 210 mg monthly × 12 mo

Available forms: Injection 105 mg/1.17 mL, 210 mg/ 2.34 mL single-use prefilled syringe

ropeginterferon alfa-2b (Rx)

(ro-peg-in-ter-feer′on alfa)

Besremi

Func. class.: Immunostimulating agent

ACTION:

Binds to interferon alfa receptor (IFNAR) in the bone marrow

USES:

Polycythemia vera

CONTRAINDICATIONS

Hypersensitivity to interferon, severe psychiatric disorders, severe depression, suicidal ideation/attempt, hepatic disease Child-Pugh B or C, active serious/untreated autoimmune disease, immunosuppressed transplant patients

Precautions: Endocrine/CV/pulmonary/ophthalmologic toxicity, pancreatitis, colitis, hyperlipidemia

DOSAGE AND ROUTES

• **Adult: SUBCUT** 100 mcg q2wk, increase by 50 mcg q2wk to a max 500 mcg until hematocrit <45%, platelets <400 × 10^9 cells/L, leukocytes <10 × 10^9 cells/L, continue for at least 1 yr at the dosage that achieves hematologic stability, then the dosing interval may be extended to q4wk **(not receiving a hydroxyurea); SUBCUT** 50 mcg q2wk with hydroxyurea, gradually taper hydroxyurea by reducing the total biweekly dose by 20%-40% q2wk during weeks 3-12; discontinue hydroxyurea by week 13; increase ropeginterferon alfa-2b dose by 50 mcg q2wk to a max dose of 500 mcg until hematocrit <45%, platelets <400 × 10^9 cells/L, leukocytes <10 × 10^9 cells/L; continue for at least 1 yr at the dosage that achieves hematologic stability, then the dosing interval may be extended to q4wk **(with hydroxyurea)**

Available forms: Solution for injection 500 mcg/mL prefilled syringe

Administer

SUBCUT route:

• Visually inspect for particulate matter/discoloration before use

• Allow the refrigerated product to warm to room temperature for 15-30 min; keep the syringe in the carton, attach the covered needle, move air bubbles to the top

• Discard some of the medication to achieve the prescribed dose; push the syringe plunger to align the top of the gray stopper to the correct syringe dose line/numbered markings

• Use the lower stomach/abdomen (at least 2 inches away from the belly button) or the top of thighs as injection sites; rotate sites; do not inject into skin that is irritated, red, bruised, infected, or scarred

• Do not recap the needle; dispose of the used prefilled syringe with the needle still attached into a sharps disposal container

• Store in a refrigerator at 36°F-46°F (2°C-8°C) in the original carton to protect from light, do not freeze

INTERACTIONS

Increased: myelosuppression—myelosuppressive agents, monitor for increased myelosuppression

Increased: CNS toxicity—narcotics, opioids, hypnotic sedatives, avoid use

Increased: adverse reactions—CYP 450 substrates (NTI), dose adjustment may be needed

PHARMACOKINETICS

Half-life 7 days, onset, peak, duration unknown

NURSING CONSIDERATIONS

Assess:

- Assess for history of severe psychiatric disorders, in particular severe depression, suicidal ideation, or suicide attempt; monitor closely for symptoms, change in mood, and need for treatment
- Assess for hypersensitivity reactions; if occurs, stop treatment and manage as needed
- Identify hepatic impairment (Child-Pugh B or C), monitor LFTs and hepatic function baseline and during treatment; reduce dose or discontinue depending on severity
- Monitor blood counts baseline, q2wk during titration, ≥q3-6mo during maintenance
- **Pancreatitis:** Assess for signs/symptoms of pancreatitis, including nausea/vomiting, right upper abdominal pain, may need to be discontinued
- **Pulmonary toxicity:** Discontinue if pulmonary infiltrates or pulmonary function impairment occurs
- Ophthalmologic toxicity: Advise patients to have eye examinations before and during treatment. Evaluate eye symptoms promptly and discontinue if needed

Teach patient/family:

- **Dental and periodontal toxicity:** Advise patients to use good oral hygiene and to have regular dental exams
- **Driving/operating machinery:** Advise patients to avoid driving or using machinery if they experience dizziness, hallucinations
- **Depression/suicide:** Inform patients, caregivers, family that suicidal ideation/behavior, new onset/worsening depression may occur. Advise them to be aware of any unusual changes in mood or behavior, new onset or worsening of depression, or the emergence of suicidal thoughts or behavior. Instruct them to report signs or symptoms of depression to their health care provider right away, to discontinue product immediately, and seek immediate medical attention if suicidal ideation or attempts occur
- To notify the health care provider of signs/symptoms of diabetes or thyroid dysfunction, CV adverse reactions, weakness, fever, bruising, nosebleeds, itching, alopecia or rash, trouble breathing, severe diarrhea
- **Hyperlipidemia:** Advise patients that product may increase blood triglycerides and that they will need blood testing to monitor for this toxicity
- **Hepatotoxicity:** Advise patients to report signs or symptoms of hepatic toxicity to their health care provider: yellowing of skin, eyes, abdominal pain, clay-colored stools
- **Renal toxicity:** Advise patients to report signs or symptoms of kidney disease, change in urinary patterns
- **Pregnancy/breastfeeding:** Advise women to use an effective method of contraception and not to breastfeed during and ≥8 wk after the final dose
- Teach patient, caregiver storage, preparation, and administration techniques

rOPINIRole (Rx)

(roh-pin′ih-role)

Requip, Requip XL

Func. class.: Antiparkinson agent

Chem. class.: DOPamine-receptor agonist, nonergot

Do not confuse:
rOPINIRole/risperiDONE

ACTION: Selective agonist for D_2 receptors (presynaptic/postsynaptic sites); binding at D_3 receptor contributes to antiparkinson effects

USES: Parkinson's disease, restless legs syndrome (RLS)

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, dysrhythmias, affective disorder, psychosis, cardiac/renal/hepatic disease

DOSAGE AND ROUTES

Parkinson's disease

• **Adult: PO (regular release)** 0.25 mg tid × 1 wk; gradually titrate at weekly intervals: **Week 2,** 0.5 mg tid; **Week 3,** 0.75 mg tid; **Week 4,** 1 mg tid; **After week 4,** may increase by 1.5 mg/day each week, max 9 mg/day total dosage, and then by 3 mg/day each week, max 24 mg/day

• **PO (ext rel)** 2 mg/day × 1-2 wk, may increase by mg/day at intervals ≥1 wk based upon response; max 24 mg/day; if significant interruption of therapy occurs, retitration may be necessary

Restless legs syndrome

• **Adult: PO (reg rel)** 0.25 mg daily 1-3 hr before bedtime; days 3-7, may increase to 0.5 mg daily; at the beginning of week 2 (day 8), the dosage may be increased to 1 mg daily × 1 wk; weeks 3-6, dosage may be titrated up by 0.5 mg each week (from 1.5-3 mg over the 5-wk period) as needed to achieve desired effect

Available forms: Tabs 0.25, 0.5, 1, 2, 3, 4, 5 mg; ext rel tab 2, 4, 6, 8, 12 mg

Administer:

• Product until NPO before surgery

• Adjust dosage to patient response; taper when discontinuing

• With meals to reduce nausea

• **Extended release:** do not chew, crush, or divide

• Testing for diabetes mellitus, acromegaly if patient receiving long-term therapy

SIDE EFFECTS

CNS: *Agitation, insomnia,* psychosis, hallucination, dystonia, depression, dizziness, somnolence, sleep attacks, impulse control disorders

CV: *Orthostatic hypotension,* tachycardia, hypo/hypertension, syncope, palpitations

EENT: Blurred vision

GI: *Nausea, vomiting, anorexia, dry mouth,* constipation, dyspepsia, flatulence

GU: Impotence, urinary frequency

HEMA: Hemolytic anemia, leukopenia, agranulocytosis

INTEG: Rash, sweating

RESP: Pharyngitis, rhinitis, sinusitis, bronchitis, dyspnea

PHARMACOKINETICS

Peak 1-2 hr, half-life 6 hr, extensively metabolized by liver by P450 CYP1A2 enzyme system, protein binding 40%

INTERACTIONS

Increase: rOPINIRole effect—cimetidine, ciprofloxacin, diltiaZEM, enoxacin, erythromycin, fluvoxaMINE, mexiletine, norfloxacin, tacrine, digoxin, theophylline, L-dopa

Decrease: rOPINIRole effects—butyrophenones, metoclopramide, phenothiazines, thioxanthenes

NURSING CONSIDERATIONS

Assess:

• **Parkinsonism:** akinesia, tremors, staggering gait, muscle rigidity, drooling

• B/P, respirations during initial treatment; hypo/hypertension should be reported

• **Sleep attacks:** drowsiness, falling asleep without warning even during hazardous activities

• Mental status: affect, mood, behavioral changes, depression; complete suicide assessment; worsening of symptoms in restless legs syndrome

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: improvement in movement disorder

Teach patient/family:

• To notify prescriber if pregnancy is planned or suspected, or if breastfeeding

• To take with food to prevent nausea

• To report hallucinations, confusion (usually in geriatric patients)

• That therapeutic effects may take several weeks to a few months

• To change positions slowly to prevent orthostatic hypotension
• To report any suspicious skin lesions; that dermatologic or skin examinations should be performed regularly due to risk of melanoma in Parkinson's patients
• To use product exactly as prescribed; that if product is discontinued abruptly, parkinsonian crisis may occur; that product will be titrated weekly
• That drowsiness, sleep attacks may occur; to avoid driving, other hazardous activities until response known
• To avoid alcohol, CNS depressants, cough and cold products
• To notify prescriber if unusual urges occur

⚠ HIGH ALERT

rosiglitazone (Rx)

(ros-ih-glit′ah-zone)

Avandia

Func. class.: Antidiabetic, oral

Chem. class.: Thiazolidinedione

Do not confuse:
rosiglitazone/pioglitazone
Avandia/Prandia

ACTION: Improves insulin resistance by hepatic glucose metabolism, insulin receptor kinase activity, insulin receptor phosphorylation

USES: Type 2 diabetes mellitus, alone or in combination with sulfonylureas, metformin, insulin

CONTRAINDICATIONS: Breastfeeding, children, hypersensitivity to thiazolidinediones, diabetic ketoacidosis, jaundice

Black Box Warning: NYHA III, IV acute heart failure, heart failure

Precautions: Pregnancy, geriatric patients, thyroid disease, renal/hepatic disease, MI, heart failure class I, II NYHA

DOSAGE AND ROUTES

• **Adult: PO** 4 mg/day or in 2 divided doses, may increase to 8 mg/day or in 2 divided doses after 12 wk; may be added to metFORMIN, sulfonylurea for adult dose

Available forms: Tabs 2, 4, 8 mg

Administer:
• Conversion from other oral hypoglycemic agents if needed; change may be made without gradual dosage change; monitor blood glucose during conversion
• Store in tight container in cool environment

PO route
• Once or in 2 divided doses, without regard to food
• Tabs crushed and mixed with food or fluids for patients with difficulty swallowing

SIDE EFFECTS

CNS: Fatigue, *headache*
CV: MI, HF, death (geriatric patients), edema
ENDO: Hypo/hyperglycemia
GI: Weight gain, hepatotoxicity, increase total LDL, HDL cholesterol; decrease free fatty acids, diarrhea
MISC: Accidental injury, URI, sinusitis, anemia, back pain, diarrhea, edema, bone fractures (female), pulmonary/macular/peripheral edema
SYST: Anaphylaxis, Stevens-Johnson syndrome

PHARMACOKINETICS

Maximal reductions in fasting blood sugar after 6-12 wk; protein binding 99.8%; excreted in urine, feces; elimination half-life 3-4 hr; may be excreted in breast milk

INTERACTIONS

Increase: hypoglycemia—gemfibrozil, fluvoxaMINE, ketoconazole, trimethoprim; monitor glucose
• Avoid concurrent use with insulin, nitrates
• May increase or decrease level: CYP2C5 inducer/inhibitors

Drug/Herb
Increase: antidiabetic effect—garlic, horse chestnut

Drug/Lab Test
Increase: ALT, HDL, LDL, total cholesterol, blood glucose
Decrease: HB/Hct

NURSING CONSIDERATIONS

Assess:

Black Box Warning: HF/MI: dyspnea, crackles, edema, weight gain ≥5 lb, jugular venous distention; may need to change dose or discontinue product; do not use in acute coronary syndrome, NYHA Class III/IV heart failure

- **Hypoglycemic reactions** (sweating, weakness, dizziness, anxiety, tremors, hunger), hyperglycemic reactions soon after meals
- **Systemic reactions:** anaphylaxis, Stevens-Johnson syndrome
- **Hepatotoxicity:** LFTs periodically, AST, ALT (if ALT >2.5 × ULN, do not use product)
- **Diabetes:** Fasting blood sugar, A1c, plasma lipids/lipoproteins, B/P, body weight during treatment
- To use product provider/patient must be enrolled in the Avandia-Rosiglitazone Medicines Access Program
- **Beers:** avoid in older adults; may promote fluid retention or exacerbate heart failure
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, usually insulin is used in pregnancy; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait; blood glucose, A1c improvement

Teach patient/family:
- To monitor blood glucose; that periodic liver function tests mandatory; to report edema, weight gain
- About the symptoms of hypo/hyperglycemia, what to do about each; that these symptoms are more likely to occur in those using insulin
- That product must be continued on daily basis; about the consequences of discontinuing the product abruptly
- To avoid OTC medications, herbal preparations, nitrates, or insulin unless approved by prescriber
- That diabetes is lifelong; that product is not a cure, only controls symptoms
- That all food included in diet plan must be eaten to prevent hypoglycemia
- To carry emergency ID and glucagon emergency kit
- To report symptoms of hepatic dysfunction (nausea, vomiting, abdominal pain, fatigue, anorexia, dark urine, jaundice) immediately; to report macular edema (change in vision)
- That 2 wk is needed to see reduction in blood glucose level and 2-3 mo needed to see full effect of product
- To notify prescriber if oral contraceptives are used
- That a medication guide should be dispensed with each prescription/refill
- Not to use if breastfeeding; may be secreted in breast milk

rosuvastatin (Rx)

(roe-soo′va-sta-tin)

Crestor, Ezallor Sprinkle

Func. class.: Antilipemic

Chem. class.: HMG-CoA reductase inhibitor

R

ACTION: Inhibits HMG-CoA reductase enzyme, which reduces cholesterol synthesis

USES: As an adjunct for primary hypercholesterolemia (types IIa, IIb) and mixed dyslipidemia, elevated serum triglycerides, homozygous/heterozygous familial hypercholesterolemia (FH), slowing of atherosclerosis, CV disease prophylaxis, MI, stroke prophylaxis (normal LDL)

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, active hepatic disease
Precautions: Children <10 yr, geriatric patients, past hepatic disease, alcoholism,

severe acute infections, trauma, hypotension, uncontrolled seizure disorders, severe metabolic disorders, electrolyte imbalances, severe renal impairment, hypothyroidism, Asian patients

DOSAGE AND ROUTES

Hypercholesterolemia, hyperlipoproteinemia, and/or hypertriglyceridemia

• **Adult: PO** 10 mg/day as usual starting dose; 5 mg/day in those requiring less aggressive LDL cholesterol reductions, in patients with CrCl <30 mL/min, or in patients at higher risk for myopathy; range 5-40 mg/day

For slowing the progression of atherosclerosis

• **Adult: PO** 10 mg/day as usual starting dose; initially 5 mg/day in those requiring less aggressive LDL cholesterol reductions, in patients with CCr <30 mL/min, or in patients at higher risk for myopathy; range 5-40 mg/day

Primary prevention of cardiovascular disease

• **Adult: PO** 10-20 mg/day as usual starting dose; range 5-40 mg/day

Renal dose

• **Adult: PO** CCr <30 mL/min, initially, 5 mg/day in those not receiving dialysis; **max** 10 mg/day

Available forms

Sprinkle capsule 5, 10, 20, 40 mg; tablet 40 mg

Administer

• May be taken at any time of day, with/without food

• Store in cool environment in airtight, light-resistant container

SIDE EFFECTS

CNS: *Headache, dizziness,* insomnia, paresthesia, confusion

GI: *Nausea, constipation, abdominal pain, flatus, diarrhea, dyspepsia, heartburn,* kidney failure, liver dysfunction, vomiting

HEMA: Thrombocytopenia, hemolytic anemia, leukopenia

INTEG: *Rash, pruritus*

MS: *Asthenia, muscle cramps, arthritis, arthralgia, myalgia,* myositis, rhabdomyolysis; leg, shoulder, or localized pain

PHARMACOKINETICS

Peak 3-5 hr, minimal live metabolism (about 10%), 88% protein bound, excreted primarily in feces (90%), crosses placenta, half-life 19 hr, not dialyzable

INTERACTIONS

Increase: Toxicity—cyclosporine, do not use together

• Do not exceed 20 mg/day when used with clopidogrel, eltrombopag, dronedarone, itraconazole

Increase: hepatotoxicity—alcohol

Increase: myalgia, myositis, rhabdomyolysis—cycloSPORINE, gemfibrozil, niacin, clofibrate, azole antifungals, antiretroviral protease inhibitors, fibric acid derivatives

Increase: bleeding risk—warfarin

Drug/Lab Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

• Diet; obtain diet history including fat, cholesterol in diet

• Fasting cholesterol, LDL, HDL, triglycerides at baseline and q4-6wk, then periodically

• Liver function: LFTs at baseline, then if clinically indicated; AST, ALT, LFTs may increase

• Renal function in patients with compromised renal system: BUN, creatinine, I&O ratio

• **Rhabdomyolysis:** muscle pain, tenderness, obtain CPK; if these occur, product may need to be discontinued; for patients with Asian ancestry: increased blood levels, rhabdomyolysis

• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: decreased LDL, cholesterol, triglycerides, increased HDL, slowing CAD

Teach patient/family:
- To report suspected pregnancy; to use contraception while taking product; not to breastfeed
- To report weakness, muscle tenderness, pain, fever, liver injury (jaundice, anorexia, abdominal pain)
- That blood work and follow-up exams will be necessary during treatment
- To report severe GI symptoms, dizziness, headache, muscle pain, weakness
- That previously prescribed regimen will continue: low-cholesterol diet, exercise program, smoking cessation

⚠ HIGH ALERT

rucaparib (Rx)

(roo-kap′a-rib)

Rubraca

Func. class.: Antineoplastic

Chem. class.: Poly (ADP-ribose) polymerase (PARP) inhibitor

ACTION: Inhibits poly (ADP-ribose) polymerase (PARP) enzymes; inhibition of PARP enzyme activity results in increased PARP-DNA complexes, causing DNA damage, apoptosis, and cell death

USES: BRCA mutation–positive (germline and/or somatic), prostate cancer in patients who have received 2 or more prior chemotherapy regimens, as monotherapy, BRCA 1/2 castration-resistant prostate cancer (mCRPc)

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Breastfeeding, contraceptive requirements, leukemia, myelodysplastic syndrome (MDS), pregnancy, pregnancy testing, reproductive risk

DOSAGE AND ROUTES

BRCA mutation–positive

- **Adult: PO** 600 mg bid; continue until disease progression or severe toxicity

Available forms: Tabs 200 mg, 250 mg, 300 mg

SIDE EFFECTS

CNS: Fatigue, dizziness, fever, asthenia

GI: Nausea, vomiting, constipation, anorexia, abdominal pain, diarrhea, dysgeusia

HEMA: Anemia, thrombocytopenia, neutropenia, febrile neutropenia, myelodysplastic syndrome (MDS)/acute myeloid leukemia

INTEG: Pruritus, rash, photosensitivity, hand-foot syndrome

RESP: Dyspnea

PHARMACOKINETICS

70% protein binding, peak 1.9 hr, half-life 17-19 hr, metabolized by CYP2D6 (major) and CYP3A4, CYP1A2 (minor)

INTERACTIONS

None known

Drug/Lab:

Increase: AST, ALT, cholesterol

Decrease: ANC, Hb, platelets

NURSING CONSIDERATIONS

Assess:

- **Myelodysplastic syndrome (MDS)/acute myeloid leukemia (AML):** monitor for signs and symptoms of MDS/AML; monitor CBC baseline and monthly; do not start until prior hematologic toxicity resolves to grade ≤1. For prolonged hematologic toxicity (>4 wk), hold therapy or reduce dose and check a CBC weekly until recovery; discontinue if a diagnosis of MDS or AML occurs
- **Pregnancy/breastfeeding:** assess use of effective contraception during treatment and for 6 mo after last dose; pregnancy testing should be done before use; can cause fetal harm or death; do not breastfeed during treatment and for 2 wk after the final dose, obtain pregnancy test in those of reproductive potential
- Monitor AST/ALT, cholesterol, creatinine; all may be elevated

Evaluate:

- Therapeutic response: decrease in growth, spread of ovarian cancer

Teach patient/family:
- To notify prescriber of all OTC, Rx, and herbal products taken; not to start new products without prescriber approval
- **Myelodysplastic syndrome (MDS)/acute myeloid leukemia (AML):** to report weakness, fatigue, bruising, bleeding, trouble breathing, blood in urine, stool, emesis; that continuing blood work will be needed
- **Photosensitivity:** to wear protective clothing, sunscreen or to stay out of sun to prevent burns
- **Pregnancy/breastfeeding:** that product can cause fetal harm or death; that pregnancy testing should be done before use; to use effective contraception during treatment and for 6 mo after final dose; not to breastfeed during treatment or for 2 wk after final dose

rufinamide (Rx)
(roo-fin´a-mide)
Banzel
Func. class.: Anticonvulsant
Chem. class.: Triazole derivative

USES: Lennox-Gastaut syndrome
Unlabeled uses: Partial seizures

CONTRAINDICATIONS: Hypersensitivity, familial short QT syndrome

DOSAGE AND ROUTES
Lennox-Gastaut syndrome
- **Adult: PO** 400-800 mg/day divided bid; increase by 400-800 mg/day q2days to 3200 mg/day
- **Child 1 to <17 yr: PO** 10 mg/kg/day divided equally bid; increase by 10 mg/kg/day every other day to 45 mg/kg/day or 3200 mg/day, whichever is less

Available forms: Suspension 40 mg/mL; tabs 200, 400 mg

⚠ HIGH ALERT

ruxolitinib (Rx)
(rux-oh-li´ti-nib)
Jakafi
Func. class.: Antineoplastic agent, Janus-associated kinase inhibitor

USES: Treatment of steroid-refractory acute graft-versus-host disease (GVHD); treatment of intermediate or high-risk myelofibrosis including primary myelofibrosis, post-polycythemia vera myelofibrosis, and post-essential thrombocythemia myelofibrosis; treatment of polycythemia vera in those with an inadequate response/hydroxyurea

CONTRAINDICATIONS
Hypersensitivity

Black Box Warning: Fungal infection, lymphoma, MI, new primary malignancy

DOSAGE AND ROUTES
Graft-versus-host disease (acute; treatment), steroid-refractory
- **Adult: PO** 5 mg bid may increase to 10 mg bid after ≥3 days of treatment (if ANC and platelets are not decreased by ≥50% compared to baseline)

Myelofibrosis
- **Adult: PO** Initial dose (based on platelet count, titrate dose thereafter based on efficacy and safety): Platelets >200,000/mm^3: 20 mg bid; platelets 100,000-200,000/mm^3: 15 mg bid; platelets 50,000 to <100,000/mm^3 5 mg bid

Available forms: Tablet 5,10,15, 20, 25 mg; topical cream 1.5%

sacituzumab govitecan-hziy (Rx)

(sak′i-tooz′ue-mab goe′vi-tee′kan)

Trodelvy

Func. class.: Antineoplastic, anti-Trop-2

USES: Treatment of metastatic triple-negative breast cancer who have received ≥2 other therapies

CONTRAINDICATIONS: Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES

• **Adult: IV:** 10 mg/kg on days 1 and 8 of a 21-day cycle; continue until disease progression or unacceptable toxicity

Available forms: Powder for injection 180 mg

sacubitril/valsartan (Rx)

(sak-ue′bi-tril/val-sar′tan)

Entresto

Func. class.: Antihypertensive, angiotensin II receptor blocker, neprilysin inhibitor

USES: Reduce the risk of cardiovascular death and hospitalization for heart failure (HF) in patients with chronic HF (New York Heart Association Class II-IV) and reduced ejection fraction; symptomatic HF with systemic left ventricular systolic dysfunction in child ≥1 yr

CONTRAINDICATIONS

Hypersensitivity to sacubitril, valsartan, or any component; use within 36 hr of ACE inhibitors; use with aliskiren in diabetes, angioedema

DOSAGE AND ROUTES

Heart failure

• **Adult: Patients previously taking a moderate- to high-dose ACE inhibitor (>10 mg/day of enalapril or equivalent) or angiotensin II receptor blocker (>160 mg/day of valsartan or equivalent): PO** Sacubitril 49 mg/valsartan 51 mg bid, double the dose after 2-4 wk to the target of sacubitril 97 mg/valsartan 103 mg bid

• **Adult: Patients previously taking low doses of an ACE inhibitor (≤10 mg/day of enalapril or equivalent) or ARB (≤160 mg/day of valsartan or equivalent): PO** Sacubitril 24 mg/valsartan 26 mg bid double the dose q2-4 wk to the target of sacubitril 97 mg/valsartan 103 mg bid

• **Adult: Patients not currently taking an ACE inhibitor or an ARB: PO** Sacubitril 24 mg/valsartan 26 mg bid, double the dose q2-4 wk to the target of sacubitril 97 mg/valsartan 103 mg bid

Symptomatic HF with systemic left ventricular systolic dysfunction in child ≥1 yr

• **Child/adolescent <40 kg: PO solution (extemporaneously prepared):** Initial: 1.6 mg/kg/dose bid; titrate dose in 2 wk to 2.3 mg/kg/dose bid, then 2 wk later to 3.1 mg/kg/dose bid

• **Child/adolescent 40 to <50 kg: PO Tablets:** Sacubitril 24 mg/valsartan 26 mg bid; titrate dose in 2 wk to sacubitril 49 mg/valsartan 51 mg bid, then 2 wk later to sacubitril 72 mg/valsartan 78 mg (three 24/26-mg tablets) bid; **≥50 kg:** sacubitril 49 mg/valsartan 51 mg bid; titrate dose in 2 wk to sacubitril 72 mg/valsartan 78 mg (three 24/26-mg tablets) bid, then 2 wk later to sacubitril 97 mg/valsartan 103 mg bid

Available forms: Tabs 24/26, 49/51, 97/103 mg

safinamide (Rx)

(sa-fin′-a-mide)

Xadago

Func. class.: Antiparkinson agent

Chem. class.: MAO type B inhibitor

ACTION: The precise mechanism of action is unknown; one mechanism may

be related to its MAO-B inhibitory activity, which causes an increase in DOPamine levels centrally

USES: For adjunctive treatment to levodopa-carbidopa therapy in patients with Parkinson's disease experiencing "off" episodes

CONTRAINDICATIONS: Hypersensitivity, MAOI therapy

Precautions: Abrupt discontinuation, alcoholism, breastfeeding, pregnancy, cataracts, use with CNS depressants, dental work, diabetic retinopathy, hypertension, hepatic disease, impulse control problems, psychosis, schizophrenia, surgery, uveitis

DOSAGE AND ROUTES

• **Adult: PO** Initially, 50 mg/day. May increase after 2 wk to 100 mg/day based on need and tolerability. Max 100 mg/day

Available forms: Tabs 50, 100 mg

Administer:

• Give at same time each day; may be given with or without food

• If a dose is missed, take the next dose at the usual time on the following day

• Food and drug interactions with safinamide can be serious. Patients should avoid foods/beverages containing large amounts of tyramine

SIDE EFFECTS

CNS: Drowsiness, dyskinesia, insomnia, impulse control symptoms, neuroleptic malignant syndrome, psychosis, serotonin syndrome

CV: Orthostatic hypotension

MISC: Cough, dyspepsia, cataracts

PHARMACOKINETICS

Not highly protein bound, excreted via kidneys 5% (unchanged), 76% recovered in the urine; half-life 20-26 hr, peak 2-3 hr; inhibits intestinal breast cancer resistance protein (BCRP)

INTERACTIONS

• **Increase:** severe somnolence—anxiolytics, sedatives, hypnotics, barbiturates, ALPRAZolam, clonazePAM, zolpidem, zaleplon; avoid using together

• **Increase:** hypertension, hypertensive crisis—MAOIs, linezolid; do not use within 14 days of these products

• **Increase:** serotonin syndrome—meperidine, some other opioids; SNRIs; tricyclic antidepressants and other cyclic antidepressants; triazolopyridine antidepressants; cyclobenzaprine; stimulants (methylphenidate, amphetamines), dextromethorphan; use the lowest dose of safinamide

• **Decrease:** safinamide effects—atypical antipsychotics

NURSING CONSIDERATIONS

Assess:

• **Parkinson's disease:** assess for changes before and during treatment; tremors, pin-rolling, movement, balance, anxiety, drooling, depression, delusions, hallucinations, insomnia, shuffling gait; decreasing of "off" periods

• **Mental status:** affect, depression, mood, complete suicide assessment

• **Hypertension:** Monitor for new-onset hypertension or hypertension not adequately controlled after starting product; adjust dose if needed; monitor for hypertension if used with sympathomimetics

• **Drug interactions:** review before use; there are many serious reactions

• **Impulse control:** Assess for new or worsening impulse control symptoms (gambling, increased sexual urges, binge eating, intense urges to spend money, or other intense urges); if these occur, dose reduction or discontinuation may be needed

• **Hepatic disease:** monitor LFTs baseline and periodically in those with hepatic disease

• **Neuroleptic malignant syndrome–like symptoms:** elevated temperature, muscular rigidity, altered consciousness, and autonomic instability; may occur with rapid dose reduction

• **Serotonin syndrome:** nausea, vomiting, sedation, dizziness, diaphoresis (sweating), facial flushing, mental status changes, myoclonus, restlessness, shivering, and hypertension. If serotonin syndrome occurs, any serotonergic agents should be discontinued

• **Pregnancy/breastfeeding:** may cause fetal harm; use in pregnancy only if the potential benefit outweighs fetal risk; do not use in breastfeeding, serious adverse reactions may occur

Teach patient/family:

• **Impulse control:** that symptoms (gambling, increased sexual urges, binge eating, intense urges to spend money, or other intense urges) may occur; to report to provider
• Not to drive or engage in hazardous activities until effect of product is known; drowsiness may occur
• To take B/P regularly
• To change position slowly to prevent orthostatic hypotension
• To use product as prescribed; if discontinued abruptly, neuroleptic malignant syndrome–like symptoms may occur; to taper gradually; to take at same time of day; to take with levodopa-carbidopa
• To use physical activity to maintain mobility, lessen spasms
• **Serotonin syndrome:** to report dry, hot skin; fever, agitation, delirium, diarrhea; to avoid use with other serotonergic products
• To avoid use of tyramine-containing products; give list to patient
• Pregnancy/breastfeeding: to report if pregnancy is planned or suspected or if breastfeeding

salicylic acid topical

See Appendix B

salmeterol (Rx)

(sal-met′er-ole)

Serevent Diskus

Func. class.: β_2-Adrenergic agonist (long acting), bronchodilator

ACTION: Causes bronchodilation by action on β_2 (pulmonary) receptors by increasing levels of cAMP, which relaxes smooth muscle with little effect on heart rate; maintains improvement in FEV from 3 to 12 hr; prevents nocturnal asthma symptoms

USES: Prevention of exercise-induced bronchospasm, COPD, asthma

CONTRAINDICATIONS: Hypersensitivity to sympathomimetics, tachydysrhythmias, severe cardiac disease, monotherapy treatment of asthma

Precautions: Pregnancy, breastfeeding, cardiac disorders, hyperthyroidism, diabetes mellitus, hypertension, closed-angle glaucoma, seizures, acute asthma, as a substitute to corticosteroids, QT prolongation

Black Box Warning: Asthma-related death, children <4 yr

DOSAGE AND ROUTES

• **Adult/child ≥4 yr: Asthma INH** 50 mcg (1 inhalation as dry powder) q12hr; **exercise-induced bronchospasm prophylaxis** 50 mcg (1 inhalation) ½-1 hr before exercise

Available forms: Inhalation powder 50 mcg/blister

Administer:

• Gum, sips of water for dry mouth
• Use only as add-on therapy
• Use ½ hr before exercise for exercise-induced bronchospasm prevention, do not use additional doses if using bid
• Use this medication before other medications, allow at least 1 min between other inhaled products
• Do not use spacer with this product
• Store in foil pouch; do not expose to temperature >86°F (30°C); discard 6 wk after removal from foil pouch

SIDE EFFECTS

CNS: *Tremors, anxiety,* insomnia, headache, dizziness, fever
CV: Palpitations, tachycardia, hypo/hypertension, angina
EENT: Dry nose, irritation of nose and throat
GI: Nausea, vomiting, abdominal pain, heartburn
MS: Muscle cramps
RESP: bronchospasm, cough, asthma-related death

PHARMACOKINETICS

INH: Onset 30-50 min; peak 4 hr; duration 12 hr; metabolized in liver; excreted in urine, breast milk; crosses placenta, blood-brain barrier; protein binding 94%-98%; terminal half-life 3-5 hr

INTERACTIONS

Increase: CV effect—CYP3A4 inhibitors (itraconazole, ketoconazole, nelfinavir, nefazodone, saquinavir), avoid using together
Increase: action of aerosol bronchodilators
Increase: action of salmeterol—tricyclics, MAOIs
Decrease: salmeterol action—other β-blockers

NURSING CONSIDERATIONS

Assess:

• **Respiratory function:** vital capacity, forced expiratory volume, ABGs, lung sounds, heart rate and rhythm baseline and periodically
• Product should not be used as monotherapy for asthma; product should not be used for rescue breathing treatment
• **Paradoxical bronchospasm:** dyspnea, wheezing, chest tightness; do not use in bronchospasm

Black Box Warning: Children should not use this product as monotherapy for asthma; use only with persistent asthma in those whose symptoms are not controlled with a long-term asthma agent; after product controls asthma, use another bronchodilator

• **Hypersensitivity:** assess for rash, urticaria; rarely leads to anaphylaxis, angioedema

Black Box Warning: **Asthma-related death:** long-acting beta agonists have been associated with severe asthma and asthma-related death. If wheezing worsens and cannot be relieved during an acute asthma attack, patients should be instructed to seek immediate medical attention. Avoid use of single-ingredient long-acting beta agonists for asthma. Do not use in those with significantly worsening asthma, which may be life-threatening

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: absence of dyspnea, wheezing

Teach patient/family:

Black Box Warning: **Asthma-related deaths:** to seek medical attention immediately for serious asthma attack; death may be greater in black patients

• Not to use for acute bronchospasm; never to exhale into Diskus; to hold level, keep mouthpiece dry
• Not to use OTC medications, extra stimulation may occur
• If using to prevent exercise-induced bronchospasm, to use ½-1 hr before exercise
• Review package insert with patient
• To avoid getting powder in eyes
• To avoid smoking, smoke-filled rooms, persons with respiratory infections
• Not for treatment of acute exacerbation; a fast-acting β-blocker should be used instead
• To immediately report dyspnea after use if ≥1 canister is used in 2 mo time
• To notify prescriber if >4 inhalations are needed or if product is no longer working
• To take other products as prescribed
• To notify prescriber if pregnancy is suspected or if breastfeeding

TREATMENT OF OVERDOSE:

β_2-Adrenergic blocker

saquinavir (Rx)

(sa-kwin′a-veer)

Invirase

Func. class.: Antiretroviral-protease inhibitor

USES: Treatment of HIV-1 infection in adults (>16 yr) in combination with other antiretrovirals. Saquinavir is not recommended as a component of initial therapy for the treatment of HIV

CONTRAINDICATIONS: Hypersensitivity or any component, congenital QT prolongation, refractory hypokalemia/hypomagnesemia, complete AV block, use of saquinavir/ritonavir with CYP3A substrates

DOSAGE AND ROUTES

• **Adult: PO** 1 g bid with ritonavir 100 mg bid; for those already taking ritonavir 100 mg bid, no additional ritonavir is needed

Treatment-naive patients or patients switching from a regimen containing delavirdine

• **Adult: PO Initial:** Saquinavir 500 mg bid with ritonavir 100 mg bid × 7 days

Adult: PO Maintenance: Saquinavir 1 g bid with ritonavir 100 mg bid

Available forms: Tabs 500 mg; capsules 200 mg

sarecycline (Rx)

(sar-e-sye'kleen)

Seysara

Func. class.: Antibiotic, tetracycline

USES: Treatment of inflammatory lesions of non-nodular moderate-severe acne vulgaris in those ≥9 yr

CONTRAINDICATIONS: Hypersensitivity to sarecycline, tetracyclines, or any component

DOSAGE AND ROUTES

Acne vulgaris, non-nodular, moderate to severe

Adult/child ≥9 yr PO 33-54 kg: 60 mg daily; **55-84 kg:** 100 mg daily; **85-136 kg:** 150 mg daily

Available forms: Tabs 60, 100, 150 mg

⚠ HIGH ALERT

sargramostim, GM-CSF (Rx)

(sar-gram'oh-stim)

Leukine

Func. class.: Biologic modifier, hematopoietic agent

Chem. class.: Granulocyte macrophage colony-stimulating factor (GM-CSF)

ACTION: Stimulates proliferation and differentiation of hematopoietic progenitor cells (granulocytes, macrophages)

USES: Acceleration of myeloid recovery in patients with non–Hodgkin's lymphoma, acute lymphoblastic leukemia, acute myelogenous leukemia, autologous bone marrow transplantation in Hodgkin's disease; bone marrow transplantation failure or engraftment delay, mobilization and transplant of peripheral blood progenitor cells (PBPCs)

Unlabeled uses: Aplastic anemia, Crohn's disease, ganciclovir- or zidovudine-induced neutropenia, malignant melanoma, myelodysplastic syndrome (MDS)

CONTRAINDICATIONS: Neonates; hypersensitivity to GM-CSF, benzyl alcohol, yeast products; excessive leukemic myeloid blast in bone marrow, peripheral blood

Precautions: Pregnancy, breastfeeding, children; lung/cardiac/renal/hepatic disease; pleural, pericardial effusions, peripheral edema, leukocytosis, mannitol hypersensitivity, hepatic/renal disease

DOSAGE AND ROUTES

Myeloid recovery in Hodgkin's disease, non-Hodgkin's lymphoma, acute lymphocytic leukemia

• **Adult/adolescent/child ≥2 yr: IV** 250 mcg/m^2/day over a 2-hr period beginning 2-4 hr after infusion of bone marrow and not <24 hr after last dose of chemotherapy or radiotherapy

Following engraftment failure

• **Adult/adolescent/child ≥2 yr: IV** 250 mcg/m^2/day × 14 days; give over 2 hr; may repeat in 7 days; may repeat 500 mcg/m^2/day × 14 days after another 7 days if no improvement

Mobilization of PBPCs

• **Adult: CONT IV** 250 mcg/m^2/24 hr or **SUBCUT** daily; continue through collection

After PBPC transplantation

• **Adult: CONT IV** 250 mcg/m^2/day until ANC >1500 cells/mm^3

Aplastic anemia (unlabeled)

• **Adult: SUBCUT** 250-500 mcg/day or 5 mcg/kg/day × 14-90 days, used with erythropoietin or immunosuppressive therapy

Available forms: Powder for inj lyophilized 250 mcg; sol for inj 500 mcg/mL

Administer:

• Store in refrigerator; do not freeze

SUBCUT route

• No further dilution of reconstituted sol is needed; take care not to inject intradermally

Intermittent IV INFUSION route

• After reconstituting with 1 mL sterile water for inj without preservative; do not reenter vial; discard unused portion; direct reconstitution sol at side of vial; rotate contents; do not shake

• Dilute in 0.9% NaCl inj to prepare IV infusion; if final concentration is <10 mcg/mL, add human albumin to make final concentration of 0.1% to NaCl before adding sargramostim to prevent adsorption; for a final concentration of 0.1% albumin, add 1 mg human albumin/1 mL 0.9% NaCl inj run over 2 hr **(bone marrow transplant or failure of graft);** over 4 hr **(chemotherapy for AML);** over 24 hr as cont infusion **(PBPCs);** give within 6 hr after reconstitution

Y-site compatibilities: Amikacin, aminophylline, aztreonam, bleomycin, butorphanol, calcium gluconate, CARBOplatin, carmustine, ceFAZolin, cefepime, cefotaxime, cefoTEtan, ceftizoxime, cefTRIAXone, cefuroxime, cimetidine, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DACTINomycin, dexamethasone, diphenhydrAMINE, DOPamine, DOXOrubicin, doxycycline, droperidol, etoposide, famotidine, fentaNYL, floxuridine, fluconazole, fluorouracil, furosemide, gentamicin, granisetron, heparin, IDArubicin, ifosfamide, immune globulin, magnesium sulfate, mannitol, mechlorethamine, meperidine, mesna, methotrexate, metoclopramide, metroNIDAZOLE, minocycline, mitoXANTRONE, netilmicin, pentostatin, piperacillin/tazobactam, potassium chloride, prochlorperazine, promethazine, ranitidine, teniposide, ticarcillin, ticarcillin-clavulanate, trimethoprim-sulfamethoxazole, vinBLAStine, vinCRISTine, zidovudine

SIDE EFFECTS

CNS: Fever, malaise, CNS disorder, weakness, chills, dizziness, syncope, headache

CV: Transient supraventricular tachycardia, peripheral edema, pericardial effusion, hypotension, tachycardia

GI: Nausea, vomiting, diarrhea, anorexia, GI hemorrhage, stomatitis, liver damage, hyperbilirubinemia

GU: Urinary tract disorder, abnormal kidney function

HEMA: Blood dyscrasias, hemorrhage

INTEG: Alopecia, rash, peripheral edema

MS: Bone pain, myalgia

RESP: Dyspnea

PHARMACOKINETICS

Half-life elimination: IV 60 min, SUBCUT 2-3 hr; detected within 5 min after administration, peak 2 hr

INTERACTIONS

Increase: myeloproliferation—lithium, corticosteroids

Drug/Lab Test

Increase: bilirubin, BUN, creatinine, eosinophils, LFTs, leukocytes

NURSING CONSIDERATIONS

Assess:

• **Blood studies:** CBC, differential count before treatment, 2× weekly; leukocytosis may occur (WBC >50,000 cells/mm^3, ANC >20,000 cells/mm^3), platelets; if ANC

>20,000/mm³ or 10,000/mm³ after nadir has occurred or platelets >500,000/mm³, reduce dose by ½ or discontinue; if blast cells occur, discontinue

- Renal, hepatic studies before treatment: BUN, creatinine, urinalysis; AST, ALT, alk phos; 2× weekly monitoring is needed in renal/hepatic disease
- **Hypersensitivity, anaphylaxis** rashes, local inj-site reactions; usually transient
- Body weight, hydration status; increased fluid retention in cardiac disease; pulmonary function
- **Constitutional symptoms:** asthenia, chills, fever, headache, malaise
- Myalgia, arthralgia in legs, feet; use analgesics, antipyretics
- **Gasping syndrome in neonates:** due to benzyl alcohol hypersensitivity, do not use
- **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding, excretion unknown

Evaluate:

- Therapeutic response: WBC and differential recovery

Teach patient/family:

- That bone pain may occur with use of the product and is normal
- To report excessive diarrhea, B/P increase, or respiratory symptoms to health care provider immediately
- To review all aspects of product use

sarilumab (Rx)

(sar-il'ue-mab)

Kevzara

Func. class.: Antirheumatic, immunosuppressive

Chem. class.: Interleukin antagonist, monoclonal antibody

ACTION: Inhibits interleukin-6 (IL-6) receptors by binding to both forms of IL-6 receptors, antiinflammatory action and a reduction in C-reactive protein

USES: Treatment of adults with moderately to severely active rheumatoid arthritis in patients who have had an inadequate response or intolerance to one or more disease-modifying antirheumatic drugs (DMARDs); used as monotherapy or in combination with methotrexate or DMARDs

CONTRAINDICATIONS: Hypersensitivity, active infections, active severe hepatic disease, ANC <2000/mm³, platelets <150,000/mm³, TB

Precautions: Chronic/recurrent infections, corticosteroid therapy, diabetes mellitus, diverticulitis, risk of GI perforation, hepatic disease (Child-Pugh B), severe renal disease, pregnancy, lactation, children, geriatric patients, HIV, neoplastic disease

Black Box Warning: Infection

DOSAGE AND ROUTES

- **Adult: SUBCUT** 200 mg q2wk

Dosage modifications

Lab Value	Recommendation
ANC 0.5-1 × 10^9/L	Hold until ANC 1 × 10^9/L
ANC <0.5 × 10^9/L	Discontinue
Platelets 50-100 × 10^3/mcl	Hold until >100 × 10^3/mcl
Platelets < 50 × 10^3/mcl	Discontinue
ALT >1 to ≤3 × ULN	Consider dose modification
ALT >3 to ≤5 × ULN	Hold until ALT <3 × ULN
ALT >5 × ULN	Discontinue

Available forms: Sol for SUBCUT inj 150 mg/1.14 mL, 200 mg/1.14 mL single-use prefilled syringes or prefilled pen

Administer:

SUBCUT route

- A TB test before use; do not start therapy if patient has latent TB, treat first

• Visually inspect for particulate matter and discoloration before use; product is clear and colorless to pale yellow
• Allow to sit at room temperature for 30 min, do not warm any other way
• Inject full amount of the syringe
• Do not rub the injection site
• Dispose of used syringe or pen properly. Do not recap after use. Do not reuse the pen or syringe
• Rotate injection sites with each injection
• **Missed dose:** Give as soon as possible if it has been ≤3 days; if longer discuss with health care provider
• **Storage:** Use within 14 days after being taken out of the refrigerator

SIDE EFFECTS

GI: GI perforation, abscess, gastroenteritis
GU: UTI
HEMA: Thrombocytopenia, neutropenia, leukopenia, anemia
INTEG: Injection site reactions, rash, pruritus
MISC: Infections (TB), hypersensitivity, immunosuppression, malignancy
RESP: *URI,* dyspnea, nasopharyngitis

PHARMACOKINETICS

Peak 2-4 days, duration 28-43 days depending on dose, half-life 150-mg dose is 8 days, 200-mg dose 10 days

INTERACTIONS

• **Increase:** immunosuppression, infections—DMARDs, TNF antagonists, corticosteroids, live virus vaccines
• **Altered effect:** CYP450 substrates (cyclosporine, atorvastatin, lovastatin, theophylline, warfarin, hormonal contraceptives); monitor substrate levels

NURSING CONSIDERATIONS

Assess

• **Infection:** flulike symptoms, fever, dyspnea, inflammation of wounds; perform TB test before starting treatment
• **Reactivation of viral herpes zoster:** blisters, rash, hepatitis B, dark urine, jaundice, clay-colored stools, weakness, fatigue, anorexia, nausea, vomiting, abdominal pain; immediately report symptoms
• **GI reactions:** assess for ulceration, abscess, perforation; monitor bowel habits, bowel sounds
• **Blood studies: AST, ALT** at baseline, 4 wk and 8 wk after starting therapy, and q3mo thereafter; **lipid levels:** at baseline, 4 wk and 8 wk after starting treatment, and q6mo thereafter; **platelets** at baseline, 4 wk and 8 wk after starting therapy, and q3mo thereafter; **neutrophils:** at baseline, 4 wk and 8 wk after starting therapy, and q3mo thereafter

Evaluate:

• Therapeutic response: slowing progression of rheumatoid arthritis

Teach patient/family:

• The reason for therapy and expected result
• The correct technique for subcut injection and proper disposal of syringes; to review the Medication Guide
• **Infection:** to report immediately fever, flulike symptoms, cough, blood in emesis, urine, stools; hypersensitivity: rash, itching
• To avoid live virus vaccines while taking this product; that vaccinations should be brought up-to-date before treatment
• To avoid OTC, herbal products or supplements without consent of prescriber; to discuss with all prescribers all medications and products taken
• **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected or if breastfeeding; that pregnant women should enroll in the pregnancy registry at 877-311-8972

⚠ HIGH ALERT

SAXagliptin (Rx)

(sax-a-glip′tin)

Onglyza

Func. class.: Antidiabetic, oral
Chem. class.: Dipeptidyl-peptidase-4 inhibitor (DPP-4 inhibitor)

Do not confuse:
SAXagliptin/SITaGLIPtin

ACTION: Slows the inactivation of incretin hormones; improves glucose homeostasis, improves glucose-dependent insulin synthesis, lowers glucagon secretions, and slows gastric emptying time

USES: In adults, type 2 diabetes mellitus as monotherapy or in combination with other antidiabetic agents

CONTRAINDICATIONS: Hypersensitivity, angioedema, serious rash, type 1 diabetes, ketoacidosis
Precautions: Pregnancy, geriatric patients, GI obstruction, surgery, thyroid/renal/hepatic disease, trauma, diabetic, heart failure

DOSAGE AND ROUTES

• **Adult: PO** 2.5-5 mg; may use with other antidiabetic agents other than insulin; if used with insulin, a lower dose may be needed; max 2.5 mg with strong 3A4-5 inhibitors

Renal dose

• **Adult: PO** CCr ≤50 mL/min, 2.5 mg daily; **hemodialysis:** 2.5 mg/day after hemodialysis

Available forms: Tabs 2.5, 5 mg
Administer:
PO route
• May be taken with/without food
• Do not break or cut tabs
• Conversion from other antidiabetic agents; change may be made with gradual dosage change
• Store in tight containers at room temperature

SIDE EFFECTS

CNS: *Headache*
ENDO: Hypoglycemia (renal impairment)
GI: *Nausea, vomiting,* abdominal pain, pancreatitis
INTEG: Urticaria, angioedema, anaphylaxis
CV: Edema, HF
EENT: Sinusitis

PHARMACOKINETICS

Rapidly absorbed, metabolized by liver—CYP3A4, excreted by the kidneys (unchanged 24%), half-life 2.5 hr, 3.1 hr metabolite, peak 2 hr, duration 24 hr

INTERACTIONS

Increase: hypoglycemia—androgens, insulins, β-blockers, cimetidine, corticosteroids, salicylates, MAOIs, fibric acid derivatives, FLUoxetine, insulin, sulfonylureas, ACE inhibitors; strong CYP3A4/5 inhibitors; dosage reduction may be needed

Drug/Herb
Increase: antidiabetic effect—garlic, horse chestnut

Drug/Lab Test
Decrease: lymphocytes, glucose

NURSING CONSIDERATIONS

Assess:
• **Hypoglycemic reactions** (sweating, weakness, dizziness, anxiety, tremors, hunger); monitor blood glucose, HbA1c
• **Renal studies:** BUN, creatinine during treatment
• **Heart failure:** history of risk factors for heart failure; use cautiously in these patients; assess daily weight, edema, dyspnea, crackles, tachycardia/bradycardia
• **Pancreatitis:** abdominal pain, nausea; discontinue product immediately; previous pancreatitis may be a contributing factor
• **Pregnancy/breastfeeding:** use only if clearly needed, usually insulin is used in pregnancy; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait, blood glucose at normal level

Teach patient/family:
• To perform regular self-monitoring of blood glucose using blood-glucose meter
• About the symptoms of hypo/hyperglycemia; what to do about each
• That product must be continued on daily basis; about consequences of discontinuing product abruptly

• To avoid OTC medications, alcohol, digoxin, exenatide, insulins, nateglinide, repaglinide, and other products that lower blood glucose unless approved by prescriber
• That diabetes is lifelong; that this product is not a cure, only controls symptoms
• That all food included in diet plan must be eaten to prevent hypo/hyperglycemia
• To carry emergency ID
• To take product without regard to food
• To notify prescriber when surgery, trauma, stress occurs because dose may need to be adjusted or insulin used
• **Pancreatitis:** to immediately report and stop product if severe abdominal pain with vomiting occurs
• **Hypersensitivity:** to immediately get medical assistance and stop product if itching; rash; swelling of face, tongue occurs

scopolamine (Rx)

(skoe-pol′a-meen)

Transderm Scop

Func. class.: Cholinergic blocker
Chem. class.: Belladonna alkaloid

USES: Preoperatively to produce amnesia, sedation and to decrease secretions; motion sickness, parkinsonian symptoms

CONTRAINDICATIONS: Hypersensitivity, closed-angle glaucoma, myasthenia gravis, GI/GU obstruction, hypersensitivity to belladonna, barbiturates

DOSAGE AND ROUTES

Motion sickness
• **Adult: TD** 1 patch 4 hr before travel and q3days

Preoperatively
• **Adult: IM/IV/SUBCUT** 0.32-0.65 mg; **TD** apply 1 patch PM before surgery or 1 hr before C-section

Nausea and vomiting
• **Adult: SUBCUT** 0.6-1 mg
• **Child: SUBCUT** 0.006 mg/kg; max 0.3 mg/dose

Available forms: TD patch 1 mg/72 hr (1.5 mg/2.5 m^2)

secnidazole (Rx)

Solosec

Func. class.: Antiinfective

USES: Bacterial vaginosis

DOSAGE AND ROUTES

• **Adult: PO** 2 g as a single dose

Available forms: Oral granules 2 g

secukinumab (Rx)

(sek′-ue-kin′-ue-mab)

Cosentyx, Cosentyx Sensoready, Cosentyx Sensoready Pen

Func. class.: Immune response modifier
Chem. class.: Monoclonal antibody

ACTION: Interleukin (IL)-12, IL-23 antagonist, decrease inflammatory response

USES: Plaque psoriasis, ankylosing spondylitis, psoriatic arthritis, axial spondyloarthritis

CONTRAINDICATIONS: Hypersensitivity, active TB

Precautions: Pregnancy, breastfeeding, Crohn's disease, infection, latex hypersensitivity, vaccination

DOSAGE AND ROUTES

Ankylosing spondylitis
• **Adult: SUBCUT** 150 mg at weeks 0, 1, 2, 3, and 4 and q4wk thereafter, or 150 mg **SUBCUT** q4wk

Psoriatic arthritis
• **Adult: SUBCUT** 150 mg at weeks 0, 1, 2, 3, and 4 and q4wk thereafter; may give with or without methotrexate; may consider a dose of 300 mg if active disease persists

Psoriatic arthritis with plaque psoriasis:

• **Adult: SUBCUT** Initially, 300 mg (2 injections of 150 mg) at weeks 0, 1, 2, 3, and 4; **Maintenance:** 300 mg (2 injections of 150 mg) q4wk

Available forms: Solution for injection 150 mg/mL (pen, prefilled syringe), 2-pack and single

Administer:

• Visually inspect for particulate matter or discoloration; solution should be slightly yellow and may contain a few small translucent or white particles; do not use if discolored, cloudy, or if foreign particulate matter is present; do not shake

• Use a 27-G, 0.5-inch needle

• May be administered SUBCUT into upper arm, abdomen, or thigh; rotate injection sites

• Use by SUBCUT injection only

• Those with latex hypersensitivity should not handle cap

SUBCUT injection:

• Patients may use the prefilled syringe or Sensoready pen after proper training; the lyophilized powder is for health care provider use only

• Each 300-mg dose is used as 2 SUBCUT injections of 150 mg

• Do not administer where skin is tender, bruised, erythematous, indurated, or affected by psoriasis

• **Reconstitution of lyophilized powder:** allow to warm to room temperature for 15-30 min, use 1 mL sterile water for injection to reconstitute, rotate, do not shake or invert vial, allow to stand for 10 min, again rotate vial, allow to stand for another 5 min (150 mg/mL)

• Storage: use immediately or refrigerate for up to 24 hr. Do not freeze. If refrigerated, allow reconstituted solution to reach room temperature (15-30 min) before administration

• **Preparation for use of prefilled syringe or Sensoready pen:** remove prefilled syringe or Sensoready pen from refrigerator and allow 15-30 min to reach room temperature

• Storage: the prefilled syringe or Sensoready should be used within 1 hr

SIDE EFFECTS

EENT: Ocular infections, sinusitis, oral ulceration, rhinitis

GI: Diarrhea

HEMA: Bleeding

INTEG: *Injection-site reaction,* urticaria

SYST: Serious infections, anaphylaxis, antibody formation, candidiasis

RESP: URI

PHARMACOKINETICS

Maximum serum concentration: 13.5 days after a single 45-mg SUBCUT dose, 7 days after a single 90-mg SUBCUT dose; half-life 14.9-45.6 days

INTERACTIONS

• Do not give concurrently with vaccines; immunizations should be brought up-to-date before treatment

• Avoid use with immunosuppressives

Drug/Lab tests

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

• **TB:** TB testing should be done before starting treatment

• For injection-site pain, swelling

• Bring immunizations up-to-date before starting treatment

• **Infection:** monitor for fever, sore throat, cough; do not use during active infections

• **Malignancy:** skin cancer may occur, especially in older patients who have used ultraviolet treatments with immunosuppressants

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decreased plaque psoriasis

Teach patient/family:

• That product must be continued for prescribed time to be effective; to use as prescribed

• Not to receive live vaccinations during treatment; that vaccinations should be brought up-to-date before use of this product

• To notify prescriber of possible infection (upper respiratory or other) or allergic reactions
• To report to provider the presence of inflammatory bowel disease, persistent diarrhea; product can cause inflammatory bowel disease
• To report latex allergy; prefilled injection device (Sensoready) may contain latex
• Not to use pen if fluid contains particulate; to use within 1 hr of removing from refrigerator
• Injection techniques and disposal of equipment; not to reuse needles, syringes; to rotate injection sites with each dose; not to inject into bruised or damaged skin

segesterone/ethinyl estradiol (Rx)

(se-jes′ter-one/eth′in-il es-tra-dye′ole)

Annovera

Func. class.: Contraceptive, estrogen/progestin combination

USES: To prevent pregnancy in females of reproductive potential

CONTRAINDICATIONS: Hypersensitivity to segesterone, ethinyl estradiol, or any component; breast cancer, estrogen/progestin-sensitive cancers, liver tumors, acute hepatitis, severe (decompensated) cirrhosis, undiagnosed abnormal uterine bleeding; use of ombitasvir/paritaprevir/ritonavir, with or without dasabuvir, high risk of arterial/venous thrombotic diseases, migraine headaches if >35 yr of age, hypertension (uncontrolled), subacute bacterial endocarditis, females >35 yr who smoke

Black Box Warning: Tobacco smoking

DOSAGE AND ROUTES

Contraception

• **Adult:** Females: Vaginal: Insert 1 ring vaginally, ring should remain in place for 21 days, then removed for 7 days. One ring provides contraception for 13 cycles (1 yr)

Available forms: Vaginal ring 103 mg/17.4 mg

selegiline (Rx)

(se-le′ji-leen)

Eldepryl, Emsam, Zelapar

Func. class.: Antiparkinson agent, antidepressant

Chem. class.: MAOI, type B

Do not confuse:
selegiline/Salagen
Zelapar/ZyPREXA

ACTION: Increased dopaminergic activity by inhibition of MAO type B activity; not fully understood

USES: Adjunct management of Parkinson's disease for patients being treated with levodopa/carbidopa who had poor response to therapy; depression (transdermal)

CONTRAINDICATIONS: Children/adolescents (suicide/hypertensive crisis), hypersensitivity, breastfeeding, MAOIs

Black Box Warning: Suicidal ideation

Precautions: Pregnancy, abrupt discontinuation, alcoholism, ambient temperature increase, behavioral changes, bipolar disorders, driving or operating machinery, geriatrics, heating pad, hepatic disease, hypertension, hypotension, melanoma, phenylketonuria, psychosis, renal disease, sunlight exposure

DOSAGE AND ROUTES

• **Adult: PO** 5 mg bid given with levodopa/carbidopa in divided doses, after 2-3 days, begin to reduce dose of levodopa/carbidopa 10%-30%; **ORAL DISINTEGRATING** 1.25 mg (1 tab) × 6 wk or more initially, then 2.5 mg (2 tabs) dissolved on tongue daily before breakfast; max 2.5 mg/day; **TRANSDERMAL**

(depression) 6 mg/24 hr initially, increase by 3 mg/24 hr at ≥2 wk, up to 12 mg/24 hr if needed

Major depression

Adult: TD 6 mg/24 hr daily, may increase by 3 mg/24 hr q2wK

Available forms: Tabs 5 mg; caps 5 mg; oral disintegrating tabs 1.25 mg; transdermal 6 mg/24 hr (20 mg/20 cm^2), 9 mg/24 hr (30 mg/30 cm^2), 12 mg/24 hr (40 mg/40 cm^2)

Administer:

PO route

- Do not use in children due to risk for hypertensive crisis
- Product until NPO before surgery
- Adjust dosage to response
- With meals; limit protein taken with product
- Dosing bid in AM and afternoon; avoid PM or bedtime dosing
- At doses of <10 mg/day because of risks associated with nonselective inhibition of MAO
- **Oral disintegrating tab:** peel back foil; remove tab; do not push through foil; place tab on tongue; allow to dissolve; swallow with saliva; no fluids 5 min before or after use; avoid using >2.5 mg/day, hypertensive crisis is more common

Transdermal route (depression)

- Apply to dry intact skin on upper torso, upper thigh, or outer surface of upper arm q24hr

Black Box Warning: Do not use in children <12 yr

- When using 9 mg/24 hr or 12 mg/24 hr, specific manufacturer's recommendation for tyramine intake must be followed to prevent hypertensive crisis

SIDE EFFECTS

CNS: Increased tremors, tardive dyskinesia, dystonic symptoms, hallucinations, *dizziness,* mood changes, nightmares, delusions, serotonin syndrome, headache, migraine, confusion, anxiety, suicide in child/adolescent, suicidal ideation in adults

CV: Orthostatic hypotension, angina pectoris, hypertensive crisis (children)

EENT: Tinnitus

GI: Nausea, weight loss, vomiting, flatulence

GU: Slow urination, nocturia, prostatic hypertrophy, urinary hesitation, retention, frequency, sexual dysfunction

INTEG: Increased sweating, melanoma, acne, pruritus; site reactions (transdermal)

RESP: Asthma, SOB

PHARMACOKINETICS

PO peak ½-2 hr, orally disintegrating tab 10-15 min, TD 2 wk; rapidly metabolized (active metabolites: *N*-desmethyldeprenyl, amphetamine, methamphetamine); metabolites excreted in urine; half-life 10 hr, orally disintegrating tab 1.3 hr, transdermal 18-25 hr; protein binding up to 85%

INTERACTIONS

- **Fatal interaction:** opioids (especially meperidine); do not administer together
- **Serotonin syndrome (confusion, seizures, fever, hypertension, agitation; death):** FLUoxetine, PARoxetine, sertraline, fluvoxaMINE (discontinue 5 wk before selegiline treatment); do not use together

Increase: side effects of levodopa/carbidopa

Increase: unusual behavior, psychosis—dextromethorphan

Increase: hypotension—antihypertensives

Drug/Lab Test

Decrease: VMA

False positive: urine ketones, urine glucose

False negative: urine glucose (glucose oxidase)

False increase: uric acid, urine protein

NURSING CONSIDERATIONS

Assess:

- **Parkinson's symptoms:** decreased rigidity, unsteady gait, weakness, tremors
- Cardiac status: tachycardia/bradycardia; B/P, respiration throughout treatment

Black Box Warning: Depression: affect, mood, behavioral changes, depression; perform suicide assessment on all patients; suicidal ideation may occur

• **Opioids:** if patient has received, do not administer selegiline; fatal reactions have occurred
• **Orthostatic hypotension:** may occur during first few months of treatment, usually in patients >60 yr

Evaluate:
• Therapeutic response: decrease in akathisia, improved mood

Teach patient/family:
• To change positions slowly to prevent orthostatic hypotension
• **Hypertensive crisis:** to notify prescriber immediately of nausea, vomiting, sweating, agitation, change in mental status, headache, chest pain
• **Serotonin syndrome:** to report twitching, sweating, shivering, diarrhea to prescriber immediately
• To use product exactly as prescribed; that if discontinued abruptly, parkinsonian crisis may occur
• To use during the day to prevent insomnia
• To avoid heating pads, hot tubs when using transdermal products
• To avoid hazardous activities until response is known
• To avoid foods high in tyramine: cheese, pickled products, wine, beer, large amounts of caffeine as per manufacturer

Black Box Warning: Suicidal ideation: to report change in symptoms, worsening depression, or suicidal thoughts, behaviors; treatment may need to be changed

• Not to exceed recommended dose of 10 mg (PO) because this might precipitate hypertensive crisis; to report severe headache, other unusual symptoms
• **Pregnancy:** to report if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE:
IV fluids for hypertension, IV dilute pressure agent for B/P titration

selenium topical
See Appendix B

selexipag (Rx)
(se-lex′-i-pag)
Uptravi
Func. class.: Vasodilator, prostacyclin

USES:
Treatment of PAH (WHO Group I)

CONTRAINDICATIONS
Hypersensitivity, use with strong CYP2C8 inhibitors

DOSAGE AND ROUTES
PAH
• **Adult:** PO 200 mcg bid; increase by 200 mcg bid, usually at weekly intervals, max 1600 mcg bid

Available forms: Tabs ext rel 200, 400, 600, 800, 1000, 1200, 1400, 1600 mcg

⚠ HIGH ALERT

selinexor (Rx)
(sel-ih-nex′-or)
Xpovio
Func. class.: Antineoplastic
Chem class.: Small molecule antineoplastic nuclear export inhibitor

USES:
Multiple myeloma in those who have received at least 4 prior therapies and who are refractory to at least 2 proteasome inhibitors, at least 2 immunomodulatory agents, and an anti-CD38 monoclonal antibody, in combination with dexamethasone

CONTRAINDICATIONS
Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES
•**Adult: PO** 80 mg in combination with dexamethasone 20 mg orally on days 1 and 3 of each week; repeat weekly until disease progression or unacceptable toxicity

Available forms: Tablets twice-weekly blister pack 40, 60, 80 mg; once-weekly blister pack 40, 60, 80, 100 mg

⚠ HIGH ALERT

selpercatinib (Rx)

Retevmo

Func. class.: Antineoplastic

USES:

Metastatic RET fusion–positive non-small cell lung cancer (NSCLC), advanced or metastatic RET-mutant medullary thyroid cancer who require systemic therapy, or advanced or metastatic RET fusion-positive thyroid cancer who require systemic therapy and who are radioactive iodine-refractory

DOSAGE AND ROUTES

Non-small cell lung cancer/thyroid cancer:

• **Adult: <50 kg: PO** 120 mg bid until disease progression or unacceptable toxicity; **≥50 kg 160 mg** bid until disease progression or unacceptable toxicity

Available forms: Capsules 40, 80 mg

⚠ HIGH ALERT

selumetinib (Rx)

(sel'ue-me'ti-nib)

Koselugo

Func. class.: Antineoplastic

USES: Treatment of neurofibromatosis type 1 in children ≥2 yr

CONTRAINDICATIONS:

Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES

Child ≥2 yr: body surface area 0.55 m(2) or greater and able to swallow capsule whole: **PO** 25 mg/m(2) twice daily (approximately every 12 hours) until disease progression or unacceptable toxicity; body surface area 1.9 m(2) or greater, give 50 mg twice daily

Available forms: Capsule 10, 25 mg

semaglutide (Rx)

Ozempic, Rybelsus, Wegory

Func. class.: Antidiabetic

USES: For the treatment of type II diabetes, obesity

DOSAGE AND ROUTES

Black Box Warning: Thyroid-cell tumor, multiple endocrine neoplasm

Type 2 diabetes mellitus with diet and exercise

• **Adult: SUBCUT** Initially, 0.25 mg q7days (weekly); give at any time of day, with or without meals; after 4 wk increase dose to 0.5 mg weekly; may increase 1 mg weekly if additional glycemic control is needed after at least 4 wk of the 0.5-mg wk dosage; **PO** 3 mg daily × 30 days, then 7 mg daily

Obesity

Adult: SUBCUT 0.25 mg weekly × 4 wk, then 0.5 mg weekly × 3 wk, then 1 mg × 4 wk, 1.7 mg weekly × 3 wk, then 2.4 mg weekly onward

Available forms: Injection 2 mg/1.5 mL prefilled pen; tabs 3, 7, 14 mg

sertaconazole (Rx)

(ser-ta-KOE-na-zole)

Ertaczo

Func. class.: Antifungal, imidazole derivative

USES: Interdigital tinea pedis caused by Trichophyton rubrum, Trichophyton mentagrophytes, and Epidermophyton floccosum

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult/child ≥12 yr

Topical: Apply to affected area(s) bid × 4 wk

Available forms: Topical cream 2%

sertraline (Rx)

(ser′tra-leen)

Zoloft

Func. class.: Antidepressant

Chem. class.: SSRI

Do not confuse:
Sertraline/cetirizine
Zoloft/Zocor

ACTION: Inhibits serotonin reuptake in CNS; increases action of serotonin; does not affect dopamine, norepinephrine

USES: Major depressive disorder, obsessive-compulsive disorder (OCD), posttraumatic stress disorder (PTSD), panic disorder, social anxiety disorder, premenstrual dysphoric disorder (PMDD)
Unlabeled uses: Generalized anxiety disorder, premature ejaculation, pruritus (cholestatic liver disease), separation anxiety disorder

CONTRAINDICATIONS: Hypersensitivity to this product or SSRIs
Precautions: Pregnancy, breastfeeding, geriatric patients, renal/hepatic disease, epilepsy, recent MI, latex sensitivity (dropper of oral concentration)

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

Major depression/OCD
- **Adult/geriatric patient/adolescent (unlabeled): PO** 25-50 mg/day; may increase to max of 200 mg/day; do not change dose at intervals of <1 wk; administer daily in AM or PM
- **Child 6-12 yr (unlabeled): PO** 25 mg/day, increase by 25-50 mg/wk

PTSD/social anxiety disorder/panic disorder
- **Adult: PO** 25 mg/day, may increase by 50 mg/day after 7 days, range 50-200 mg

Premenstrual dysphoric disorder
- **Adult: PO** 50-150 mg nightly

Hepatic dose
- **Adult: PO** use lower dose or less frequent dosing intervals

Available forms: Tabs 25, 50, 100 mg; concentrate 20 mg/mL; capsules 25 🍁, 50 🍁, 100 mg 🍁

Administer:
- Store at room temperature; do not freeze
- Increased fluids, bulk in diet for constipation, urinary retention
- With food, milk for GI symptoms
- Tablets crushed if patient is unable to swallow medication whole
- Sugarless gum, hard candy, frequent sips of water for dry mouth
- **Oral concentration:** dilute before use with 4 oz (½ cup) of water, orange juice, ginger ale, or lemon/lime soda; do not mix with other liquids
- Avoid use with other CNS depressants
- Dropper contains latex

SIDE EFFECTS

CNS: *Insomnia, agitation, dizziness, headache, fatigue,* confusion, gait abnormality (geriatric patients), neuroleptic malignant syndrome–like reaction, serotonin syndrome, suicidal ideation, anxiety, drowsiness
CV: Palpitations, chest pain
EENT: Vision abnormalities, yawning, tinnitus, intraocular pressure
ENDO: SIADH (geriatric patients); diabetes mellitus
GI: *Diarrhea, nausea, constipation, anorexia, dry mouth,* dyspepsia, *vomiting, flatulence,* weight gain/loss
GU: *Male sexual dysfunction,* menstrual disorders, urinary frequency
INTEG: Increased sweating, rash, hot flashes
MISC: Hyponatremia, neonatal abstinence syndrome

PHARMACOKINETICS

PO: Peak 4.5-8.4 hr; protein binding 98%; distribution to tissues, half-life 26 hr; extensively metabolized; metabolite excreted in urine, bile; weak inhibitor of CYP3A4, moderate inhibitor of CYP2D6

INTERACTIONS

- Altered lithium levels: lithium

• Disulfiram reaction: disulfiram and oral concentration due to alcohol content
• **Fatal reactions:** MAOIs, pimozide; avoid use within 2 wk
Increase: sertraline levels—cimetidine, warfarin, other highly protein-bound products
Increase: effects of antidepressants (tricyclics), diazepam, TOLBUTamide, warfarin, benzodiazepines, SUMAtriptan, phenytoin, cloZAPine
Increase: bleeding risk—anticoagulants, NSAIDs, thrombolytic, platelet inhibitors, salicylates
Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs, serotonin-receptor agonists, tricyclics, cyclobenzaprine, sibutramine, traZODone, busPIRone, linezolid, traMADol; avoid concurrent use

Drug/Herb
Increase: SSRI, serotonin syndrome—St. John's wort, SAM-e, tryptophan; do not use together
Increase: CNS effect—kava, valerian

Drug/Lab Test
Increase: AST, ALT
False positive: urine screen for benzodiazepines

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Depression/OCD/PTSD: mood, sensorium, affect, suicidal tendencies (child/young adult), increase in psychiatric symptoms, depression, panic attacks, OCD, PTSD, social anxiety disorder; symptoms usually occur in first few months of treatment

• **Premenstrual dysphoric disorder:** emotional lability, sad, hopelessness, insomnia, anxiety, food cravings, breast pain/tenderness
• **Serotonin syndrome** (hyperthermia, hypertension, rigidity, delirium, coma, myoclonus) or **neuroleptic malignant syndrome–like reaction** (muscle cramps, fever, unstable B/P, agitation, tremors, mental changes)
• **Bleeding (platelet serotonin depletion):** GI bleeding, ecchymoses, epistaxis, hematomas, petechiae, hemorrhage
• LFTs, thyroid function tests, growth rate, weight at baseline and periodically
• **Hypotension:** B/P (lying/standing), pulse q4hr; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; VS q4hr in patients with CV disease
• Weight weekly; appetite may decrease with product
• Urinary retention, constipation, especially in geriatric patients
• Alcohol consumption; hold dose until morning
• **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; serious complications may occur in neonates; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: significant improvement in depression, OCD, PTSD, PMDD

Teach patient/family:
• That therapeutic effect may take ≥1 wk
• To use caution when driving, performing other activities requiring alertness because drowsiness, dizziness, blurred vision may occur
• Not to discontinue medication quickly after long-term use; may cause nausea, headache, malaise
• To avoid alcohol
• May be taken without regard to food
• That follow-up exams will be needed
• **Serotonin syndrome:** agitation, nausea, vomiting, diarrhea, twitching, sweating, shivering; report to prescriber immediately

Black Box Warning: Suicidal ideation: that suicidal thoughts/behaviors may occur in children/adolescents; to notify prescriber immediately if suicidal thoughts, panic attacks, severe anxiety occur

• To notify prescriber if pregnant or if planning to become pregnant, or if breastfeeding

sevelamer (Rx)

(se-vel′a-mer)

Renagel, Renvela

Func. class.: Phosphate binder

USES: Control of serum phosphorous in those with chronic kidney disease on hemodialysis

CONTRAINDICATIONS

Hypersensitivity to sevelamer or any component, bowel obstruction

DOSAGE AND ROUTES

Control of serum phosphorous

• **Adult: PO Those not taking a phosphate binder:** 800-1600 mg tid; if based on serum phosphorous levels: >5.5 mg/dL to <7.5 mg/dL: 800 mg tid; ≥7.5 mg/dL to <9 mg/dL: 1200-1600 mg tid; ≥9 mg/dL: 1600 mg tid

Maintenance dose adjustment based on serum phosphorous concentration:

>5.5 mg/dL: Increase by 400-800 mg per meal at 2-wk intervals; 3.5-5.5 mg/dL: Maintain current dose; <3.5 mg/dL: Decrease by 400-800 mg per meal

Dosage adjustment when switching between phosphate-binder products: 667 mg of calcium acetate is equivalent to 800 mg sevelamer

Conversion based on dose per meal: Calcium acetate 667 mg: Convert to 800 mg Renagel/Renvela; calcium acetate 1334 mg: Convert to 1600 mg as Renagel/Renvela (800-mg tablets × 2) or 1200 mg as Renagel (400-mg tablets × 3); calcium acetate 2001 mg: Convert to 2400 mg as Renagel/Renvela (800-mg tablets × 3) or 2000 mg as Renagel (400-mg tablets × 5)

Available forms: Tabs 400, 800 mg; oral suspension 0.8, 2.4 g packets

sildenafil (Rx)

(sil-den′a-fill)

Revatio, Viagra

Func. class.: Erectile agent, antihypertensive, pulmonary vasodilator

Chem. class.: Phosphodiesterase type-5 inhibitor

Do not confuse:

Viagra/Allegra

ACTION: Enhances the effect of nitric oxide (NO) by inhibiting phosphodiesterase type 5 (PDE5), which is necessary for degrading cGMP in the corpus cavernosum

USES: Treatment of erectile dysfunction (Viagra); improvement in exercise ability, pulmonary hypertension (Revatio)

Unlabeled uses: Sexual dysfunction (women); altitude sickness, Raynaud's disease

CONTRAINDICATIONS: Hypersensitivity to this product or nitrates

Precautions: Pregnancy, anatomic penile deformities, sickle cell anemia, leukemia, multiple myeloma, retinitis pigmentosa, bleeding disorders, active peptic ulceration, CV/renal/hepatic disease, multiproduct antihypertensive regimens, geriatric patients

DOSAGE AND ROUTES

Erectile dysfunction (Viagra only)

• **Adult male <65 yr: PO** 50 mg 1 hr before sexual activity; may be increased to 100 mg or decreased to 25 mg; max frequency 1×/day; use with alpha blockers: space 50-100-mg dose ≥4 hr of alpha blocker

• **Adult ≥65 yr (male): PO** 25 mg as needed about 1 hr before sexual activity

Renal/hepatic dose

• **Adult: PO** (Child-Pugh A, B) 25 mg, take 1 hr before sexual activity; max 1×/day; CCr <30 mL/min, 25 mg starting dose

Pulmonary hypertension (Revatio only)

• **Adult: PO** 20 mg tid; take 4-6 hr apart; **IV BOL** 10 mg tid

Pulmonary hypertension induced by altitude sickness (unlabeled)

• **Adult: PO** 50 mg 8 hr starting the day before accent and continuing for 5 days

after reaching the target altitude or until descent is initiated

Anorgasmy in antidepressant therapy/sexual dysfunction in women (unlabeled)

• **Adult: PO** 50 mg 60-90 min before sexual activity

Available forms: Tabs (Viagra), 25, 50, 100 mg; tabs (Revatio) 25 mg; sol for inj 10 mg/12.5 mL; powder for oral suspension 10 mg/mL (Revatio)

Administer:

• **Erectile dysfunction:** give approximately 1 hr before sexual activity; do not use more than 1×/day; give on empty stomach for better absorption

• **Pulmonary hypertension:** give 3×/day, 4-6 hr apart

IV Push Route

• Give undiluted, check that solution is not discolored or precipitate is present, give tid

SIDE EFFECTS

CNS: *Headache, flushing, dizziness,* transient global amnesia, seizures

CV: MI, sudden death, CV collapse, TIAs, ventricular dysrhythmias, CV hemorrhage

MISC: *Dyspepsia, nasal congestion, UTI, abnormal vision, diarrhea, rash,* nonarteritic ischemic optic neuropathy, hearing loss, priapism, sickle cell crisis

PHARMACOKINETICS

Rapidly absorbed; bioavailability 40%; metabolized by P45 CYP3A4, 2C9 in the liver (active metabolites); terminal half-life 4 hr; peak 15-30 min; reduced absorption with high-fat meal; excreted in feces, urine

INTERACTIONS

Do not use with nitrates, riociguat; fatal fall in B/P

Increase: sildenafil levels—cimetidine, erythromycin, ketoconazole, itraconazole, antiretroviral protease inhibitors, tacrolimus

Decrease: sildenafil levels—CYP450 inducers, rifampin, barbiturates, bosentan, carBAMazepine, dexamethasone, phenytoin, nevirapine, rifabutin, troglitazone; antacids

Decrease: B/P—α-blockers, alcohol, amLODIPine, angiotensin II receptor blockers

Drug/Food

Increase: product effect—grapefruit

Decrease: absorption—high-fat meal

NURSING CONSIDERATIONS

Assess:

• **For erectile dysfunction before use (Viagra):** question about any failure to achieve erection or failure to maintain intercourse, anorgasmia

• **Phosphodiesterase type 5 inhibitors with lopinavir/ritonavir (Kaletra):** assess for hypotension, visual changes, prolonged erection, syncope; give only 25 mg q48hr and monitor for adverse reactions

• **Vision loss:** any severe loss of vision while taking this or any similar products; products should not be used

• Use of organic nitrates that should not be used with this product

• **MI, sudden death, CV collapse:** those with an MI within 6 mo, resting hypotension <90/50, resting hypertension >170/100, fluid depletion should use this product cautiously; may occur right after sexual activity to days afterward

• **Sickle cell crisis (vasoocclusive crisis):** when used for pulmonary hypertension; may require hospitalization

• **Pulmonary hypertension:** Cardiac status, hemodynamic parameters, exercise tolerance in pulmonary hypertension: B/P, pulse (Revatio)

Evaluate:

• Therapeutic response: decreasing pulmonary hypertension/improved exercise tolerance (Revatio); ability to perform sexually (male) (Viagra)

Teach patient/family:

• That product does not protect against sexually transmitted diseases, including HIV

• That product absorption is reduced with a high-fat meal, to take on empty stomach for faster action; to take 30 min to 4 hr before sexual activity; peak is 2 hr

• That product should not be used with nitrates or soluble guanylate cyclase stimulators (riociguat) (PAH)

• That tabs may be split

• To notify prescriber immediately and to stop taking product if vision/hearing loss occurs or erection lasts >4 hr
• Do not use more than 100 mg in 24 hr
• To use only as directed
• That color vision may be altered
• **About cardiac risk:** usually in cardiac disease
• **Pregnancy/breastfeeding:** not indicated for women (Viagra), unknown in PAH, cautious use in breastfeeding (Revatio)

silodosin (Rx)

(si-lo´do-seen)

Rapaflo

Func. class.: Selective α_1-adrenergic blocker, BPH agent

Chem. class.: Sulfamoylphenethylamine derivative

ACTION: Binds preferentially to α_{1A}-adrenoceptor subtype located mainly in the prostate

USES: Symptoms of benign prostatic hyperplasia (BPH)

CONTRAINDICATIONS: Hypersensitivity, renal failure, hepatic disease

Precautions: Pregnancy, breastfeeding, children, females, geriatric patients, renal/hepatic disease, hypotension, ocular surgery, orthostatic hypotension, prostate cancer, syncope

DOSAGE AND ROUTES

BPH Adult: PO 8 mg daily with a meal

Renal dose

• **Adult: PO** CCr 30-49 mL/min, 4 mg/day; CCr <30 mL/min, not recommended

Available forms: Cap 4, 8 mg

Administer:

• Give with meal at same time each day
• Cap may be opened and sprinkled on applesauce, if unable to swallow, use water after applesauce
• Store at room temperature; protect from light and moisture

SIDE EFFECTS

CNS: *Dizziness, headache,* insomnia, syncope
CV: Orthostatic hypotension
EENT: Nasal congestion
GI: Diarrhea
GU: *Abnormal ejaculation,* urinary incontinence, priapism
INTEG: Rash, pruritus, allergic reactions

PHARMACOKINETICS

Decreased absorption with high-fat/high-calorie meal, half-life 13.3 hr of metabolite 24 hr, metabolized in liver extensively by CYP3A4, UGT2B7, excreted via urine, feces (55%) extensively protein bound (97%), onset rapid, peak up to 24 hr, duration up to 24 hr

INTERACTIONS

Increase: silodosin effect—CYP3A4 inhibitors (clarithromycin, itraconazole, ritonavir, antiretroviral protease inhibitors, aprepitant, chloramphenicol, conivaptan, dalfopristin, danazol, delavirdine, efavirenz, fosaprepitant, fluconazole, fluvoxaMINE, imatinib, isoniazid, miFEPRIStone, nefazodone, tamoxifen, telithromycin, troleandomycin, voriconazole, zileuton, zafirlukast); P-gb inhibitors

Drug/Food

Increase: silodosin effect—grapefruit juice

Drug Lab/Test

Increase: LFTs

NURSING CONSIDERATIONS

Assess:

• **Prostatic hyperplasia:** change in urinary patterns at baseline and throughout treatment; testing for prostate cancer before administration is recommended
• BUN, uric acid, urodynamic studies (urinary flow rates, residual volume), CCr; contraindicated in CCr <30 mL/min; I&O ratios, weight daily, edema, report weight gain or edema

• B/P (sitting, standing) during initial treatment; monitor for orthostatic hypotension; increased risk in elderly >65 yr
• **Pregnancy/breastfeeding:** not indicated for women

Evaluate:
• **Therapeutic response:** decreased symptoms of BPH

Teach patient/family
• Not to drive or operate machinery until effect is known; orthostatic hypotension occasionally occurs after first dose
• Not to use with grapefruit juice
• To take with same meal each day; contents of capsule may be sprinkled on room-temperature applesauce if consumed within 5 min; follow with 8 oz cool water

⚠ HIGH ALERT

siltuximab (Rx)

(sil-tux′-i-mab)

Sylvant

Func. class.: Antineoplastic: immune response modifier

USES: Multicentric Castleman disease (MCD) patients who are HIV-negative and human herpesvirus-8 (HHV-8)–negative

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

• **Adult: IV** 11 mg/kg over 1 hr q3wk until treatment failure

Available forms: Lyophilized powder for IV use: 100, 400 mg in single-dose vial

silver nitrate 1% ophthalmic

See Appendix B

silver nitrate 1% sulfacetamide sodium ophthalmic

See Appendix B

silver sulfADIAZINE topical

See Appendix B

simethicone (OTC, Rx)

(si-meth′i-kone)

Barriere, Gas Relief, Gas-Relief, Gas Relief Extra Strength, Gas Relief Infants, Gas Relief Ultra Strength, Gas Relief, Gas-X Childrens, Gas-X Extra Strength, Gas-X Infant Drops, Gas-X Ultra Strength, Infants Gas Relief, Mi-Acid Gas Relief, Ovol, Phazyme

Func. class.: Antiflatulent

USES: Flatulence
Unlabeled uses: Dyspepsia

CONTRAINDICATIONS

Hypersensitivity, GI obstruction/perforation

DOSAGE AND ROUTES

• **Adult and child >12 yr: PO** 40-125 mg after meals and at bedtime prn, max 500 mg/day, 750 mg/day chewable
• **Child 2-12 yr: PO** 40-50 mg after meals and at bedtime prn, max 480 mg/day
• **Child <2 yr: PO** 20 mg qid prn, max 480 mg/day

simvastatin (Rx)

(sim-va-sta′tin)

FloLipid, Zocor

Func. class.: Antilipemic

Chem. class.: HMG-CoA reductase inhibitor

Do not confuse:
Zocor/Cozaar/Zoloft

ACTION: Inhibits HMG-CoA reductase enzyme, which reduces cholesterol synthesis

USES: As an adjunct for primary hypercholesterolemia (types IIa, IIb), isolated hypertriglyceridemia (Fredrickson type IV), and type III hyperlipoproteinemia, CAD, heterozygous familial hypercholesterolemia; MI/stroke prophylaxis

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, active hepatic disease
Precautions: Past hepatic disease, alcoholism, severe acute infections, trauma, severe metabolic disorders, electrolyte imbalances, Chinese patients

DOSAGE AND ROUTES

Hyperlipidemia
Adult: PO 10-20 mg daily in the evening (range 5-40 mg)
Atherosclerosis (unlabeled)
• **Adult: PO** 20-40 mg/day in PM initially; usual range 5-40 mg/day in PM, max 40 mg/day for most patients, max 80 mg/day for patients taking 80 mg/day chronically without myopathy; dosage adjustments may be made in ≥4-wk intervals; those taking verapamil and amiodarone max 20 mg/day; max <80 mg for Chinese patients taking lipid-modifying niacin doses
Heterozygous familial hypercholesterolemia
• **Child/adolescent ≥10 yr including girls ≥1 yr postmenarche: PO** 10 mg in PM, range 10-40 mg/day
Renal dose
• **Adult: PO** 5 mg/day in the evening (severe renal disease)
Available forms: Tabs 5, 10, 20, 40, 80 mg
Administer:
• Discontinuing use before surgery is recommended in renal failure; restart afterward
• Avoid grapefruit juice
• Total daily dose in evening
• Store in cool environment in tight container protected from light

SIDE EFFECTS

CNS: Headache, cognitive impairment
GI: Nausea, constipation, diarrhea, dyspepsia, flatus, abdominal pain, liver dysfunction, pancreatitis, hyperglycemia
INTEG: Rash, pruritus
MS: Muscle cramps, myalgia, myositis, rhabdomyolysis, myopathy
RESP: Upper respiratory tract infection

PHARMACOKINETICS

Metabolized in liver (active metabolites); >98% protein bound; excreted primarily in bile, feces (60%), kidneys (15%); peak 1-2 hr; half-life 3 hr

INTERACTIONS

• Do not use with cycloSPORINE, gemfibrozil
Increase: effects of warfarin
Increase: rhabdomyolysis, myalgia; do not use concurrently—CYP3A4 inhibitors, niacin, erythromycin, clofibrate, clarithromycin, ketoconazole, itraconazole, protease inhibitors, macrolide antibiotics, danazol, delavirdine, nefazodone, verapamil, diltiaZEM, amiodarone, azole antifungals, telithromycin, voriconazole
Increase: simvastatin effect—ATP1B1 inhibitors
Increase: serum level of digoxin
Drug/Herb
Increase: effect—red yeast rice, kava, eucalyptus
Decrease: effect—St. John's wort
Drug/Food
Increase: simvastatin level—grapefruit juice (large amounts)
Drug/Lab Test
Increase: CK, LFTs, HbA1c

NURSING CONSIDERATIONS

Assess:
• **Diet history:** fat consumption; baseline and lipid profile: LDL, HDL, TG, cholesterol
• Hepatic studies at baseline, if clinically indicated; AST, ALT may increase
• **Rhabdomyolysis:** muscle tenderness, increased CPK levels (10 × ULN); therapy should be discontinued, more likely in

those receiving >80 mg/day, first year of treatment, those ≥65 yr, females
• **Chinese patients:** avoid high doses (80 mg) if taking niacin >1 g/day due to increased risk of myopathies
• Renal studies in patients with compromised renal systems: BUN, I&O ratio, creatinine
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding
Evaluate:
• Therapeutic response: decrease in LDL, total cholesterol, triglycerides; increase in HDL; slowing CAD
Teach patient/family:
• That blood work, follow-up exams will be necessary during treatment
• To report severe GI symptoms, headache
• That previously prescribed regimen will continue: low-cholesterol diet, exercise program, smoking cessation
• To take in evening, avoid using grapefruit juice
• To report muscle pain, weakness, abdominal pain, dark urine; yellowing of skin, eyes; memory loss
• This product may affect blood sugar levels in diabetes
• That compliance is needed for positive results, not to skip or double doses
• To notify prescriber if pregnancy is suspected or planned; not to breastfeed

siponimod (Rx)
Mayzent
Func. class.: MS agent

USES: MS

DOSAGE AND ROUTES
MS with CYP2C9 genotypes *1/*1, *1/*2, *2/*2
• **Adult: PO** Use the 5-day titration schedule: 0.25 mg on day 1, 0.25 mg on day 2, 0.5 mg on day 3, 0.75 mg on day 4, and 1.25 mg on day 5; begin maintenance dosage of 2 mg daily on day 6

Available forms: Tablet 0.25, 1, 2 mg; starter packs 0.25 mg (for 1-mg maintenance), 0.25 (for 2-mg maintenance)

⚠ HIGH ALERT

sirolimus (Rx)
(seer-oh-lie′mus)
Fyarro, Rapamune
Func. class.: Immunosuppressant
Chem. class.: Macrolide

ACTION: Produces immunosuppression by inhibiting T-lymphocyte activation and proliferation

USES: Organ transplants to prevent rejection; recommended use is with cycloSPORINE and corticosteroids

CONTRAINDICATIONS: Breastfeeding, hypersensitivity to this product, components of product
Precautions: Pregnancy, children <13 yr, severe cardiac/renal/hepatic disease; diabetes mellitus, hyperkalemia, hyperuricemia, hypertension, interstitial lung disease, hyperlipidemia, soya lecithin hypersensitivity

Black Box Warning: Lymphomas, infection, other malignancies, liver transplant, lung transplant; requires a specialized setting; requires an experienced clinician

S

DOSAGE AND ROUTES
Kidney transplant
• **Adult/adolescent ≥40 kg: PO** 2 mg/day with 6-mg loading dose; **IV infusion** 100 mg/m^2 over 30 min on days 1 and 8 of each 21-day cycle until disease progression or unacceptable toxicity
• **Child <13 yr weighing <40 kg (88 lb): PO** 1 mg/m^2/day, 3 mg/m^2 loading dose
Hepatic dose
• **Adult/child ≥13 yr/<40 kg: PO** reduce by 33% for maintenance dose (mild to moderate hepatic impairment); reduce

by 50% for maintenance dose (severe hepatic impairment)

Lymphangioleimyotosis

Adult: PO 2 mg daily trough level (whole blood) after 10-20 days, titrate to 5-15 ng/mL, then monitor trough q3mo

Available forms: Oral sol 1 mg/mL; tabs 0.5 mg, 1 mg, 2 mg; lyophilized powder for injectable suspension 100 mg

Administer:

- Prophylaxis for *Pneumocystis jiroveci* pneumonia for 1 yr after transplantation; prophylaxis for CMV is recommended for 90 days after transplantation in those at increased risk for CMV
- All medications PO if possible; avoid IM inj; bleeding may occur
- For 3 days before transplant surgery; place in protective isolation; give at same time of day; give 4 hr after cycloSPORINE oral sol or caps; do not give with grapefruit juice
- Use amber oral syringe and withdraw amount needed; empty dose into plastic/glass container holding 60 mL of water/orange juice; stir vigorously and have patient drink at once; refill container with additional 120-mL water/orange juice; stir, have patient drink; if using a pouch, squeeze entire contents into container; follow above directions
- Store protected from light, refrigerate; stable for 30 days after opening (sol)
- Do not crush, chew; store tabs at room temperature

Black Box Warning: Only those experienced in immunosuppressant therapy and transplant should use this drug; must use in a specialized care setting with adequate medical equipment

SIDE EFFECTS

CNS: *Tremors, headache, insomnia, paresthesia,* chills, fever, progressive multifocal leukoencephalopathy (PML)

CV: Hypertension, *atrial fibrillation, HF, hypotension, palpitation, tachycardia,* peripheral edema, thrombosis

EENT: Blurred vision, photophobia

GI: Nausea, vomiting, diarrhea, constipation, hepatotoxicity, CDAD

GU: UTIs, albuminuria, hematuria, proteinuria, renal failure, nephrotic syndrome, increased creatinine, amenorrhea

HEMA: Anemia, leukopenia, thrombocytopenia

INTEG: *Rash, acne,* photosensitivity, exfoliative dermatitis

META: Hyperglycemia, increased creatinine, edema, hypercholesterolemia, *hyperlipemia,* hypophosphatemia, weight gain, hypo/hyperkalemia, hyperuricemia, hypomagnesemia, hypertriglyceridemia

MS: Arthralgia

RESP: Pleural effusion, atelectasis, *dyspnea,* pneumonitis, pulmonary embolism/fibrosis, pulmonary hypertension, interstitial lung disease

SYST: Lymphoma

PHARMACOKINETICS

Rapidly absorbed; peak 1 hr single dose, 2 hr multiple dosing; protein binding 92%; distribution to major organs, extensively metabolized by CYP3A4 excretion 91% feces, half-life 57-63 hr

INTERACTIONS

- **Increase:** Sirolimus metabolism strong CYP3A4 or P-gp inducers, avoid use

Increase: angioedema—ACE inhibitors, angiotensin II–receptor antagonists, cephalosporins, iodine-containing radiopaque contrast media, neuromuscular blockers, NSAIDs, penicillins, salicylates, thrombolytics

Increase: blood levels—antifungals, calcium channel blockers, cimetidine, danazol, erythromycin, cycloSPORINE, metoclopramide, bromocriptine, HIV-protease inhibitors

Decrease: Sirolimus metabolism causing toxicity, CYP3A4 inhibitors, avoid use

Decrease: blood levels—carBAMazepine, PHENobarbital, phenytoin, rifamycin, rifapentine

Decrease: effect of vaccines

Drug/Herb

- St. John's wort: may **decrease** the effect of sirolimus

Drug/Food

• Alters bioavailability; use consistently with/without food; do not use with grapefruit juice

Drug/Lab Test

Increase: LFTs, alk phos, lipids, triglycerides, total cholesterol, BUN, creatinine, LDH, phosphate

Decrease: platelets, sodium

Increase or decrease: magnesium, glucose, calcium

NURSING CONSIDERATIONS

Assess:

• High risk: those with Banff grade 3 acute rejection or vascular rejection before cycloSPORINE withdrawal, dialysis dependent, creatinine >4.5 mg/dL, African descent, retransplants, multiorgan transplant, high panel of reactive antibodies

• **Blood levels** in patients who may have altered metabolism, trough level ≥15 ng/mL is associated with increased adverse reactions; monitor trough concentrations in all patients

• **Renal status:** monitor fluid imbalance, edema, electrolytes, creatinine/BUN, CBC, serum potassium

• **Lipid profile:** cholesterol, triglycerides; lipid-lowering agent may be needed

Black Box Warning: Infection: immunosuppression may lead to susceptibility to infection, assess for infection

Black Box Warning: Neoplastic disease: lymphoma, skin cancer may occur; limit UV exposure; use protective clothing, sunscreen

Black Box Warning: Liver/lung transplant: not recommended; mortality and graft loss may occur

• **Pulmonary fibrosis, pulmonary effusion, pneumonitis:** dyspnea, cough, hypoxia; some fatal cases have occurred

• **Wound dehiscence and anastomotic disruption:** wound, vascular, airway, ureteral, biliary, inhibition of growth factors; do not combine with corticosteroids, not recommended in lung or liver transplant

• **Anaphylaxis, angioedema, exfoliative dermatitis:** more common when given with ACE inhibitors; do not use if a hypersensitivity reaction occurs

• **Bone marrow suppression:** HB, WBC, platelets during treatment each month; if leukocytes <3000/mm^3 or platelets <100,000/mm^3, product should be discontinued or reduced; decreased hemoglobin level

• **Hepatotoxicity:** alk phos, AST, ALT, amylase, bilirubin, dark urine, jaundice, itching, light-colored stools; product should be discontinued

• **Pregnancy/breastfeeding:** avoid use in pregnancy; obtain pregnancy test at baseline; use effective form of contraception, continue for 12 wk after discontinuing; notify prescriber if pregnancy occurs; unknown breastfeeding effects; weigh benefits, risks with prescriber

Evaluate:

• Therapeutic response: absence of graft rejection; immunosuppression with autoimmune disorders

Teach patient/family:

• To report fever, rash, severe diarrhea, chills, sore throat, fatigue; serious infections may occur; clay-colored stools, cramping (hepatotoxicity); fever, chills, sore throat (infection)

• To avoid crowds, persons with known infections to reduce risk for infection

• To use sunscreen, protective clothing to prevent burns, skin cancer

• Not to use with grapefruit juice

• To avoid live virus vaccines during treatment

• That lifelong use will be required to prevent rejection

• That continuing follow-up exams and blood work will be required

• To take with or without regard to food, at same time, consistently

• Take 4 hr after oral cycloSPORINE when used for renal transplant

• **Pregnancy/breastfeeding:** to use contraception before, during, for 12 wk after product discontinued; to avoid breastfeeding

⚠ HIGH ALERT

sitaGLIPtin (Rx)

(sit-a-glip'tin)

Januvia

Func. class.: Antidiabetic, oral

Chem. class.: Dipeptidyl-peptidase-4 inhibitor (DPP-4 inhibitor)

Do not confuse:
Januvia/Enjuvia/Jantoven/Janumet

ACTION: Slows the inactivation of incretin hormones; improves glucose homeostasis, improves glucose-dependent insulin secretion, lowers glucagon secretions, and slows gastric emptying time

USES: Type 2 diabetes mellitus as monotherapy or in combination with other antidiabetic agents

CONTRAINDICATIONS: Angioedema, diabetic ketoacidosis (DKA)
Precautions: Pregnancy, geriatric patients, GI obstruction, surgery, thyroid/renal/hepatic disease, trauma, breastfeeding, pancreatitis, hypercortisolism, hyperglycemia, hyperthyroidism, hypoglycemia, ileus, pituitary insufficiency, surgery, type 1 diabetes mellitus, diabetic ketoacidosis, adrenal insufficiency, burns

DOSAGE AND ROUTES

• **Adult: PO** 100 mg/day; lower dose may be needed when used with a sulfonylurea or insulin

Renal dose

• **Adult: PO** CCr 30-50 mL/min, 50 mg daily; CCr <30 mL/min, 25 mg daily

Available forms: Tabs 25, 50, 100 mg

Administer:

• May be taken with/without food
• Do not split, crush, chew; swallow whole
• Conversion from other antidiabetic agents: change may be made with gradual dosage change
• Store in tight container at room temperature

SIDE EFFECTS

CNS: *Headache*
ENDO: Hypoglycemia
GI: *Nausea, vomiting,* abdominal pain, diarrhea, pancreatitis, constipation
GU: Acute renal failure, UTI
MISC: *Peripheral edema, upper respiratory infection*
SYST: Anaphylaxis, Stevens-Johnson syndrome, angioedema

PHARMACOKINETICS

Rapidly absorbed, excreted by the kidneys (unchanged 79%), half-life 12.4 hr, peak 1-4 hr, duration up to 24 hr

INTERACTIONS

Increase: levels of digoxin (minimal)
Increase: hypoglycemia—antidiabetics, chloroquine, hydroxychloroquine, androgens, beta-blockers, salicylates, MAOIs
Increase: sitagliptin level—cimetidine, disopyramide
Decrease: antidiabetic action thiazides, ACE inhibitors, protease inhibitors, estrogens, progestins, hormonal contraceptives, sympathomimetics

Drug/Herb

Increase: antidiabetic effect—garlic, green tea, horse chestnut

Drug/Lab Test

Increase: creatinine, LFTs

NURSING CONSIDERATIONS

Assess:

• **Hypoglycemic reactions:** sweating, weakness, dizziness, anxiety, tremors, hunger; hyperglycemic reactions soon after meals
• **Serious skin reactions:** swelling of face, mouth, lips; dyspnea; wheezing
• **Pancreatitis:** severe abdominal pain, nausea, vomiting; discontinue product, monitor amylase, lipase
• **Renal studies:** BUN, creatinine during treatment, especially in geriatric patients or those with renal disease
• Glycosylated hemoglobin A1c; monitor blood glucose (BG) as needed

Evaluate:

• Therapeutic response: decrease in polyuria, polydipsia, polyphagia; clear sensorium; absence of dizziness; stable gait, blood glucose, A1c improvement

Teach patient/family:
- To perform regular self-monitoring of blood glucose using blood-glucose meter
- About the symptoms of hypo/hyperglycemia; what to do about each; to carry emergency ID
- To report severe joint pain immediately; may have a late onset
- That product must be continued on daily basis; about consequences of discontinuing product abruptly; to continue health regimen (diet, exercise)
- To avoid OTC medications, alcohol, digoxin, exenatide, insulins, nateglinide, repaglinide, and other products that lower blood glucose unless approved by prescriber
- That diabetes is a lifelong illness; that product is not a cure, only controls symptoms
- That all food included in diet plan must be eaten to prevent hypo/hyperglycemia
- To immediately notify prescriber of hypersensitivity reactions (rash, swelling of face, trouble breathing)
- To notify prescriber if pregnancy is planned, suspected

sitagliptin/metformin (Rx)

(sit-a-glip'tin/met-for'-min)

Janumet, Janumet XR

Func. class.: Antidiabetic

USES: Adjunct to diet and exercise to improve glycemic control in type 2 diabetes mellitus

CONTRAINDICATIONS

Hypersensitivity to sitagliptin, metformin, or any component, eGFR <30 mL/min/1.73 m^2); acute/chronic metabolic acidosis, diabetic ketoacidosis

Black Box Warning: Lactic acidosis

DOSAGE AND ROUTES

Diabetes mellitus, type 2, treatment
Total daily dose should be taken divided bid (immediate release) or daily (extended release)
- **Adult: PO patients already on metformin:** Sitagliptin 100 mg/day plus current daily dose of metformin. Patients currently on metformin 1.7 g/day (850 mg bid) may use sitagliptin 100 mg/metformin 2 g daily; **those not on metformin:** Sitagliptin 100 mg/metformin 1 g daily

Available forms: Tabs 50/500, 50/1000 mg; tabs ext rel 50/500, 50/1000, 100/1000 mg

sodium bicarbonate (Rx, OTC)

Baking soda, Alka-Seltzer, Accusol, Bibag, Bicort

Func. class.: Alkalinizer

Chem. class.: $NaHCO_3$

ACTION: Orally neutralizes gastric acid, which forms water, NaCl, CO_2; increases plasma bicarbonate, which buffers H^+ ion concentration; reverses acidosis IV

USES: Acidosis (metabolic), cardiac arrest, alkalinization (systemic/urinary), antacid, salicylate poisoning

CONTRAINDICATIONS:

Metabolic/respiratory alkalosis, hypochloremia, hypocalcemia

Precautions: Pregnancy, children, HF, cirrhosis, toxemia, renal disease, hypertension, hypokalemia, breastfeeding, hypernatremia, Bartter's syndrome, Cushing syndrome, hyperaldosteronism

DOSAGE AND ROUTES

Conversions: 84 mg = 1 mmol (1 mEq) = 1 mmol (1 mEq) each of sodium and bicarbonate 10 ms

Acidosis, metabolic (not associated with cardiac arrest)

• **Adult/child: IV INFUSION** 2-5 mEq/kg over 4-8 hr depending on CO_2, pH, ABGs

Metabolic acidosis in chronic renal failure

Adults: PO 0.5-1 mEq/kg/day (42-84 mg/kg/day) in 2-3 divided doses or 650 or 1300 mg twice daily for a serum bicarbonate concentration of 19-21 mEq/L or 18 mEq/L or less, respectively. Titrate dose up to 1950 mg 3 times daily to target serum bicarbonate concentration (22 mEq/L or more)

Infants, children, and adolescents: PO 1-2 mEq/kg/day (84-168 mg/kg/day) in 2-3 divided doses. Titrate dose to target serum bicarbonate concentration

Cardiac arrest

• **Adult/child: IV BOL** 1 mEq/kg of 7.5% or 8.4% sol, then 0.5 mEq/kg q10min, then doses based on ABGs

• **Infant: IV** 1 mEq/kg over several min (use only the 0.5 mEq/mL [4.2%] sol for inj)

Alkalinization of urine

• **Adult: PO** 325 mg to 2 g qid or 48 mEq (4 g), then 12-24 mEq q4hr

• **Child: PO** 84-840 mg/kg/day (1-10 mEq/kg) in divided doses q4-6hr

Antacid

• **Adult: PO** 300 mg to 2 g chewed, taken with water daily-qid

Available forms: Tabs 300, 325, 600, 650 mg; inj 4.2%, 5%, 7.5%, 8.4%

Administer:

PO route

• Chew antacid tablets and drink 8 oz water

• Do not take antacid with milk because milk-alkali syndrome may result

Direct IV route

• Use for cardiac emergencies, not used often in cardiac arrest

• Use ampules or prefilled syringes only; give by rapid bolus dose; flush with NS before, after use

Continuous IV INFUSION route

• Diluted in an equal amount of compatible sol given 2-5 mEq/kg over 4-8 hr, max 50 mEq/hr; slower rate in children

• Extravasation with IV administration (tissue sloughing, ulceration, necrosis)

Y-site compatibilities: Acyclovir, amifostine, asparaginase, aztreonam, bivalirudin, bumetanide, ceFAZolin, cefepime, cefTAZidime, ceftizoxime, cefTRIAXone, chloramphenicol, cimetidine, cladribine, clindamycin, cyclophosphamide, cyclosporine, cytarabine, DAPTOmycin, DAUNOrubicin, dexamethasone sodium phosphate, dexmedetomidine, digoxin, DOCEtaxel, DOXOrubicin, enalaprilat, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fentaNYL, filgrastim, fluconazole, fludarabine, furosemide, gallium nitrate, gemcitabine, gentamicin, granisetron, heparin, hydrocortisone sodium succinate, ifosfamide, indomethacin, insulin, ketorolac, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, melphalan, mesna, meperidine, methylPREDNISolone sodium succinate, metoclopramide, metoprolol, metroNIDAZOLE, milrinone, morphine, nafcillin, nitroglycerin, nitroprusside, PACLitaxel, palonosetron, pantoprazole, PEMEtrexed, penicillin G potassium, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, propranolol, propofol, protamine, raNITIdine, remifentanil, tacrolimus, teniposide, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, tolazoline, vasopressin, vit B complex with C, voriconazole

SIDE EFFECTS

CNS: Irritability, headache, confusion, stimulation, tremors, *twitching, hyperreflexia,* tetany, weakness, seizures of alkalosis

CV: Irregular pulse, cardiac arrest, water retention, edema, weight gain

GI: Flatulence, *belching, distention*

META: *Metabolic alkalosis*

MS: Muscular twitching, tetany, irritability

PHARMACOKINETICS

PO: Onset rapid, duration 10 min

IV: Onset 15 min, duration 1-2 hr, excreted in urine

INTERACTIONS

Increase: effects—amphetamines, mecamylamine, quiNINE, quiNIDine, pseudoephedrine, flecainide, anorexiants, sympathomimetics
Increase: sodium and decrease potassium—corticosteroids
Decrease: effects—lithium, chlorproPAMIDE, barbiturates, salicylates, benzodiazepines, ketoconazole, corticosteroids
Drug/Lab Test
Increase: sodium, lactate
Decrease: potassium

NURSING CONSIDERATIONS

Assess:
• Respiratory and pulse rate, rhythm, depth, lung sounds; notify prescriber of abnormalities
• **Fluid balance** (I&O, weight daily, edema); notify prescriber of fluid overload; assess for edema, crackles, shortness of breath
• Electrolytes, blood pH, PO_2, HCO_3^- during treatment; ABGs frequently during emergencies
• Weight daily with initial therapy
• **Alkalosis:** irritability, confusion, twitching, hyperreflexia stimulation, slow respirations, cyanosis, irregular pulse
• **Milk-alkali syndrome:** confusion, headache, nausea, vomiting, anorexia, urinary stones, hypercalcemia
• For GI perforation secondary to carbon dioxide in GI tract; may lead to perforation if ulcer is severe enough
• **Pregnancy/breastfeeding:** use as an antacid is considered unsafe; may breastfeed

Evaluate:
• Therapeutic response: ABGs, electrolytes, blood pH, HCO_3^- WNL

Teach patient/family:
• Not to take antacid with milk because milk-alkali syndrome may result; not to use antacid for >2 wk
• To notify prescriber if indigestion accompanied by chest pain; trouble breathing; diarrhea; dark, tarry stools; vomit that looks like coffee grounds; swelling of feet/ankles
• About sodium-restricted diet; to avoid use of baking soda for indigestion

sodium polystyrene sulfonate (Rx)

(po-lee-stye′reen)
Kalexate, Solystat, Kionex, SPS
Func. class.: Potassium-removing resin, antidote
Chem. class.: Cation exchange resin

ACTION: Removes potassium by exchanging sodium for potassium in body, primarily in large intestine

USES: Hyperkalemia in conjunction with other measures

CONTRAINDICATIONS: Hypersensitivity to saccharin or parabens that may be in some products, GI obstruction, neonate (reduced gut motility)
Precautions: Pregnancy, geriatric patients, renal failure, HF, severe edema, severe hypertension, sodium restriction, constipation, GI bleeding, hypocalcemia

DOSAGE AND ROUTES

• **Adult: PO** 15 g daily-qid; **RECT** enema 30-50 g q1-2hr initially prn, then q6hr prn
• **Child (unlabeled): PO** 1 g/kg q6hr prn; **RECT** 1 g/kg q2-6hr prn
Available forms: Powder for susp 453.6 g, 454 g; oral susp 15 g/60 mL
Administer:
PO route
• **Powdered resin:** given as a suspension in water or syrup; the amount of fluid ranges from 20 to 100 mL, depending on the dosage, or 3-4 mL/g of resin; suspensions should be freshly prepared and not stored for >24 hr; the powder should not be mixed with foods or liquids that contain a large amount of potassium (bananas or orange juice)

S

Rectal route
• Precede retention enema with a cleansing enema
• Use the suspension retained in the colon for at least 30-60 min or for several hours, if possible
• After several hours have passed, administer a cleansing enema using a non–sodium-containing solution at body temperature; up to 2 quarts of fluid may be necessary; drain fluid through a Y-tube connection; observe the drainage if sorbitol was used

SIDE EFFECTS

GI: Constipation, anorexia, nausea, vomiting, diarrhea (sorbitol), fecal impaction, gastric irritation
META: Hypocalcemia, hypokalemia, hypomagnesemia, sodium retention

INTERACTIONS

Increase: hypokalemia—loop diuretics, cardiac glycosides
Increase: metabolic alkalosis—magnesium/calcium antacids
Increase: colonic necrosis—sorbitol; do not use concurrently
Decrease: effect of—lithium, thyroid hormones

NURSING CONSIDERATIONS

Assess:
• **Hyperkalemia:** serum potassium >5.5 mol/L; confusion, dyspnea, weakness, dysrhythmias; ECG for spiked T waves, depressed ST segments, prolonged QT and widening QRS complex
• **Hypokalemia:** serum potassium <3.5 mmol/L; muscle weakness, polyuria, cardiac hyperexcitability with poor contractility
• Bowel function daily; note consistency of stools, times/day
• **Hypotension:** confusion, irritability, muscular pain, weakness
• **Electrolytes:** serum potassium, calcium, magnesium, sodium; acid-base balance
• I&O ratio, weight daily; crackles, dyspnea, jugular venous distention, edema
• **Digoxin toxicity** (nausea, vomiting, blurred vision, anorexia, dysrhythmias) in those receiving digoxin

Evaluate:
• Therapeutic response: potassium level 3.5-5 mg/dL

Teach patient/family:
• About reason for medication and expected results
• To follow a low-potassium diet, provide sample diet
• To avoid laxatives, antacids, electrolyte-based products unless approved by prescriber

sodium zirconium cyclosilicate (Rx)

(sow′dee-um zir-koe′-nee-um sye′-kloe-sil′i-kate)

Lokelma

Func. class.: Antidote, potassium binder

USES: Treatment of hyperkalemia

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Hyperkalemia
• **Adult: PO** 10 g tid for ≤48 hr; adjust dose by 5 g daily at 1-wk intervals as needed based on serum potassium; maintenance 10 g daily; max maintenance 15 g/day

Available forms: Powder for oral suspension 5-, 10-g packets

sofosbuvir (Rx)

(soe-fos′bue-vir)

Sovaldi

Func. class.: Antiviral, antihepatitis agent
Chem. class.: Nucleotide analog polymerase inhibitor

ACTION: Inhibits hepatitis C virus RNA polymerase by incorporating the polymerase into the viral RNA; also acts as a chain terminator

USES: Chronic hepatitis C (genotypes 1, 2, 3, 4) with compensated liver disease in combination

CONTRAINDICATIONS: Hypersensitivity, pregnancy in combination; male-mediated teratogenicity

Precautions: Breastfeeding, children, hepatic/renal disease

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Chronic hepatitis C

Genotype 1, 4

• **Adult: PO** 400 mg daily with peginterferon alfa and ribavirin × 12 wk; may consider use for genotype 1 with only ribavirin × 24 wk

Chronic hepatitis C

Genotype 2

• **Adult: PO** 400 mg daily with ribavirin × 12 wk

Chronic hepatitis C

Genotype 3

• **Adult: PO** 400 mg daily with ribavirin or daclatasvir × 24 wk

Chronic hepatitis C with hepatocellular carcinoma in those waiting for liver transplant

• **Adult: PO** 400 mg daily with ribavirin × 48 wk or until transplant

Available forms: Tabs 400 mg

Administer:

• By mouth without regard to food
• Do not use as monotherapy
• Do not crush, break tabs

SIDE EFFECTS

CNS: Headache, chills, weakness, fatigue, fever, insomnia

GI: Diarrhea, hyperbilirubinemia, nausea

MISC: Rash, pruritus, neutropenia, anemia, myalgia

PHARMACOKINETICS

PO: Peak ½-2 hr, excreted by kidneys 80%, 61%-65% protein binding; half-life 0.4-27 hr

INTERACTIONS

Decrease: sofosbuvir-P-glycoprotein (P-gp) inducers (carBAMazepine, PHENobarbital, phenytoin, rifAMPin); OXcarbazepine, rifabutin, rifapentine, tipranavir; avoid concurrent use

Increase: bradycardia—amiodarone; avoid using together

Increase: sofosbuvir level—carvedilol, cobicistat

Drug/Herb

Decrease: sofosbuvir level—St. John's wort; do not use together

NURSING CONSIDERATIONS

Assess:

• Heart rate, B/P; severe bradycardia may occur with amiodarone used concurrently
• Serum HCV-RNA baseline and periodically
• Severe renal disease/GFR <30 mL/min/1.73 m^2: monitor BUN, creatinine
• Closer monitoring in geriatric patients; may develop renal, cardiac symptoms more rapidly
• **HBV reactivation:** test is required before beginning therapy; monitor throughout, monitor coinfected patients closely

Black Box Warning: Hepatitis B exacerbation: monitor HBsAg, HBV DNA, hepatic enzymes, bilirubin

• **Pregnancy:** if planned or suspected; if pregnant, call the Antiretroviral Pregnancy Registry, 1-800-258-4263; obtain pregnancy test before starting treatment; women who have HIV-1 and HCV who are taking antiretrovirals also should enroll with the registry

Evaluate:

• Therapeutic response: decreased symptoms of chronic hepatitis C

Teach patient/family:

• That optimal duration of treatment is unknown; that product is not a cure; that transmission may still occur
• To avoid use with other medications unless approved by prescriber
• Not to stop abruptly unless directed; worsening of hepatitis may occur, not to use alone, keep in original container
• **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or

suspected; to use two forms of reliable contraception; to avoid breastfeeding

Black Box Warning: Hepatitis B exacerbation: to notify prescriber immediately of liver toxicity: yellow eyes or skin, fatigue, weakness, loss of appetite, nausea/vomiting, light-colored stools

sofosbuvir/velpatasvir (Rx)

(soe-fos′bue-vir/vel-pat′as-vir)

Epclusa

Func. class.: Antiviral, antihepatitis agent

ACTION: Sofosbuvir: A nucleotide prodrug that prevents hepatitis C viral (HCV) replication by inhibiting the activity of HCV NS5B RNA polymerase
Velpatasvir: Inhibits the HCV NS5A protein, which is required for viral replication

USES: Treatment of chronic hepatitis C infection, including genotypes 1, 2, 3, 4, 5, and 6, in those without cirrhosis and in patients with compensated cirrhosis (Child-Pugh A); treatment of chronic hepatitis C infection in patients with decompensated cirrhosis (Child-Pugh B or C)

CONTRAINDICATIONS: Hypersensitivity
Precautions: Breastfeeding, hepatitis C and HIV coinfection, male-mediated teratogenicity, pregnancy, renal failure/impairment

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Chronic hepatitis C infection without cirrhosis and with compensated cirrhosis (Child-Pugh A)

• **Adult: PO** 1 tablet (400 mg sofosbuvir; 100 mg velpatasvir) daily × 12 wk

Chronic hepatitis C infection in patients with decompensated cirrhosis (Child-Pugh B or C)

• **Adult/child/adolescent 3-17 yr and ≥30 kg: PO** 1 tablet (400 mg sofosbuvir; 100 mg velpatasvir) daily plus ribavirin × 12 wk. The dose of ribavirin is based on weight as follows: <75 kg give 500 mg bid; ≥75 kg give 600 mg bid

Available forms: Tabs 400 mg sofosbuvir-100 mg velpatasvir; granules 150 mg/37.5 mg; 200 mg/50 mg pellets

Administer:

• Take without regard to food
• If given with ribavirin, take ribavirin with food
• Pellets: may be poured in the mouth and swallowed without chewing, water may be taken after swallowing the pellets or may be taken with soft food

SIDE EFFECTS

CNS: *Fatigue, headache,* insomnia, depression, irritability, asthenia
GI: *Nausea, diarrhea*
INTEG: Rash
META: Hyperbilirubinemia
HEMA: Anemia

PHARMACOKINETICS

• **Sofosbuvir:** 61% to 65% protein binding, converted in the liver from the nucleotide prodrug to active nucleoside analog triphosphate; elimination via kidneys 80%, feces 14%, expired air 2.5%, terminal elimination half-life of 25 hr, peak 0.5-1 hr, high-fat meal increases bioavailability
• **Velpatasvir:** 99.5% protein binding, metabolized by CYP2B6, CYP2C8, and CYP3A4, excretion in bile 77% of the parent drug, 95% feces, 0.4% urine, terminal elimination half-life 15 hr, peak 3 hr, increased by high-fat meal

INTERACTIONS

Increase: velpatasvir level—CYP3A4 inhibitors (aldesleukin, aliskiren, amLODIPine, clarithromycin, aprepitant, fosaprepitant, atazanavir, bromocriptine, chloramphenicol, ciprofloxacin, cycloSPORINE, delavirdine, dasatinib, danazol, darunavir, diltiaZEM, dronedarone,

erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, idelalisib, imatinib, indinavir, isavuconazonium, amprenavir, bocenavir, ketoconazole, itraconazole, dalfopristin/quinupristin, ritonavir, tipranavir, isoniazid, miconazole), P-gp inhibitors
Increase: bradycardia—amiodarone; avoid using together
Increase: myopathy, rhabdomyolysis—atorvastatin
Increase: sofosbuvir level—carvedilol, cobicistat
Increase: effect of both products—clarithromycin, azithromycin, boceprevir, canagliflozin, carvedilol, crizotinib
Decrease: velpatasvir level—CYP3A4 inducers (armodafinil, barbiturates, bexarotene, bosentan, carBAMazepine, dexamethasone, efavirenz, enzalutamide, eslicarbazepine, ethanol, etravirine, felbamate, flutamide, griseofulvin, lesinurad, modafinil, nafcillin, nevirapine, rifAMPin, rifapentine, rifabutin, phenytoin, PHENobarbital, pioglitazone, primidone); antacids, PPIs separate by 4 hr
Decrease: sofosbuvir level—P-glycoprotein (P-gp) inducers (carBAMazepine, PHENobarbital, phenytoin, rifAMPin); OXcarbazepine, rifabutin, rifapentine, tipranavir; avoid concurrent use
Decrease: levels of—ritonavir

Drug/Herb
Decrease: sofosbuvir level—St. John's wort; do not use together

NURSING CONSIDERATIONS

Assess

Black Box Warning: Hepatitis B exacerbation: monitor serum HCV-RNA baseline and periodically, monitor coinfected patients during and after treatment for signs of hepatitis B exacerbation (HBsAg, HBV DNA, hepatic enzymes, bilirubin), assess for signs of liver toxicity (yellow eyes or skin, fatigue, weakness, loss of appetite, nausea, vomiting, or light-colored stools); screen all potential recipients for current or prior HBV infection by testing HBsAg and anti-HBc concentrations. For those whose screening reveals evidence of HBV infection, a baseline HBV DNA should be obtained before starting sofosbuvir/velpatasvir; monitor LFTs

- Heart rate, B/P; severe bradycardia may occur with amiodarone used concurrently
- Severe renal disease/GFR <30 mL/min/1.73 m^2; monitor BUN, creatinine
- Closer monitoring in geriatric patients; may develop renal, cardiac symptoms more rapidly
- **Anemia:** Monitor HB/Hct if anemia is suspected
- **Pregnancy/breastfeeding:** contraindicated in pregnant women and in the male partners of women who are pregnant; two reliable forms of effective contraception are needed during treatment and for 6 mo after use of these combination therapies. Pregnancy test immediately before initiation of therapy, monthly and for 6 mo post-therapy. To monitor maternal-fetal outcomes of pregnancies in female patients and female partners of male patients exposed to ribavirin during treatment and for 6 mo following cessation of treatment, report any cases to the Ribavirin Pregnancy Registry, 800-593-2214. For patients who are also infected with HIV and taking concomitant antiretrovirals, an Antiretroviral Pregnancy Registry is available at 800-258-4263; do not breastfeed

Evaluate:
- Decreased symptoms of chronic hepatitis C

Teach Patient/Family:
- That optimal duration of treatment is unknown; that product is not a cure, that transmission to others may still occur
- To avoid use with other products unless approved by prescriber
- Not to stop abruptly unless directed, worsening of hepatitis may occur; to keep in original container
- **Pregnancy/breastfeeding:** teach patients that they and their partners are

S

required to use two reliable forms of effective contraception during treatment and for 6 mo after use; that pregnancy tests are needed immediately before, monthly during therapy, and for 6 mo post-therapy; not to breastfeed

Black Box Warning: Hepatitis exacerbation: report to provider immediately signs of liver toxicity (yellow eyes or skin, fatigue, weakness, loss of appetite, nausea, vomiting, or light-colored stools)

sofosbuvir/velpatasvir/voxilaprevir (Rx)

(soe-fos′-bue-vir/vel-pat′-as-vir/vox-i-la′pre-vir)

Vosevi

Func. class.: Antiviral, antihepatitis agent

USES: Treatment of chronic hepatitis C virus (HCV) infection without cirrhosis or with compensated cirrhosis (Child-Pugh class A) who have genotype 1, 2, 3, 4, 5, or 6 and have previously been treated with an HCV regimen containing an NS5A inhibitor or who have genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor

CONTRAINDICATIONS

Hypersensitivity, use with rifampin

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Chronic hepatitis C (without cirrhosis or with compensated cirrhosis) Child-Pugh class A

• **Adult: PO** Genotype 1, 2, 3, 4, 5, or 6 (previously treated with a combination therapy with a direct-acting antiviral): 1 tablet daily × 12 wk. For those with genotype 3 with prior NS5A inhibitor failure/cirrhosis, use ribavirin also; genotype 1a (previously treated with combination therapy containing sofosbuvir without an NS5A inhibitor): 1 tablet daily × 12 wk

Available forms Tabs 400/100/100 mg

solifenacin (Rx)

(sol-i-fen′a-sin)

VESIcare, Vesicare LS

Func. class.: Urinary antispasmodic, anticholinergic

Chem. class.: Antimuscarinic

Do not confuse:
Vesicare/Vesanoid

ACTION: Relaxes smooth muscles in urinary tract by inhibiting acetylcholine at postganglionic sites

USES: Overactive bladder (urinary frequency, urgency, incontinence), neurogenic detrusor overactivitiy (NDO) in pediatrics

CONTRAINDICATIONS:

Hypersensitivity, uncontrolled closed-angle glaucoma, urinary retention, gastric retention

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal/hepatic disease, controlled closed-angle glaucoma, bladder outflow obstruction, GI obstruction, decreased GI motility, history of QT prolongation

DOSAGE AND ROUTES

• **Adult: PO** 5 mg/day, max 10 mg/day

• **Child: PO ≥2 yr 9 to 15 kg:** 2 mg (2 mL)/day, max 4 mg (4 mL)/day; **>15 kg to 30 kg:** 3 mg (3 mL/day), max 5 mg (5 mL)/day; **31-45 kg:** 3 mg (3 mL/day); **46-60 kg:** 4 mg (4 mL/day)

Renal/hepatic dose

• **Adult: PO** (Child-Pugh B) max 5 mg/day; CCr ≤30 mL/min, 5 mg/day

With CYP3A4 inhibitors: **Adult: PO** 5 mg/day (max)

Available forms: Tabs 5, 10 mg; oral solution 1 mg/mL

Administer:

PO route

• Without regard to meals

• Swallow product whole with water, liquid

SIDE EFFECTS

CNS: *Dizziness,* headache, confusion, depression, drowsiness
CV: Palpitations, sinus tachycardia, chest pain, QTc prolongation
EENT: *Vision abnormalities*
GI: *Nausea, anorexia,* abdominal pain, *constipation, dry mouth*
INTEG: Angioedema, exfoliative dermatitis

PHARMACOKINETICS

90% absorbed; 98% protein bound; extensively metabolized by CYP3A4; excreted in urine 69% (metabolites), feces 22%; half-life 45-68 hr; peak 4-8 hr, duration up to 24 hr

INTERACTIONS

Increase: QT prolongation—Class IA, III antidysrhythmias
Increase: CNS depression—sedatives, hypnotics, benzodiazepines, opioids
Increase: effects—CYP3A4 inhibitors (ketoconazole, clarithromycin, diclofenac, doxycycline, erythromycin, isoniazid, nefazodone, propofol, protease inhibitors, verapamil), max dose 5 mg
Decrease: effects—CYP3A4 inducers (carBAMazepine, nevirapine, PHENobarbital, phenytoin)
Drug/Herb
Decrease: effects—St. John's wort
Drug/Food
Increase: effect—grapefruit juice
Drug/Lab Test
Increase: LFTs

NURSING CONSIDERATIONS

Assess:
- **Urinary patterns:** distention, nocturia, frequency, urgency, incontinence
- **Allergic reactions:** rash
- **Cardiac patients:** monitor ECG for QTc prolongation, avoid products that cause QT prolongation
- **Angioedema** of the face, lips, tongue, larynx
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: decreasing dysuria, frequency, nocturia, incontinence

Teach patient/family:
- To avoid hazardous activities because dizziness may occur
- That constipation, blurred vision may occur; to notify prescriber if abdominal pain with constipation occurs
- To take without regard to food
- To swallow tab whole; do not split, crush, chew
- To call prescriber if severe abdominal pain or constipation lasts for ≥3 days
- That heat prostration may occur if used in hot environment, sweating is decreased
- About **anticholinergic effects:** blurred vision, constipation, urinary retention, hyperthermia

solriamfetol (Rx)

(sol′ri-am′fe-tol)

Sunosi

Func. class.: Narcolepsy agent
Chem. class.: Dopamine norepinephrine reuptake inhibitor

Controlled Substance Schedule IV

ACTION: Unknown, action may be due to its inhibitor of a dopamine and norepinephrine reuptake

USES: Excessive daytime sleepiness due to narcolepsy or obstructive sleep apnea

CONTRAINDICATIONS: Hypersensitivity, MAOIs
Precautions:
Alcoholism, bipolar disorder, cardiac disease, breastfeeding, diabetes mellitus, geriatrics, heart failure, hepatic disease, hypertension, MI, pregnancy, renal disease, schizophrenia, stroke, substance abuse, valvular heart disease, ventricular dysfunction

DOSAGE AND ROUTES

Narcolepsy

Adults: PO 75 mg daily on awakening; may increase to 150 mg after ≥3 days; max 150 mg/day

Obstructive sleep apnea

• **Adults: PO** 37.5 mg daily on awakening; double the dose at intervals of at least 3 days if needed; max 150 mg/day

Renal dose

Adult: PO 37.5 mg/day; may increase to 75 mg/day after ≥7 days

Available forms: Tablet 75, 150 mg

Administer:

• Without regard to food

• Take on awakening; avoid within 9 hr of bedtime

SIDE EFFECTS

CNS: *Insomnia, anxiety, headache,* dizziness

CV: Palpitations, chest discomfort

GI: *Anorexia, nausea, dry mouth, constipation,* abdominal pain

INTEG: Hyperhidrosis

PHARMACOKINETICS

Protein binding <20%, minimally metabolized; half-life 7.1 hr, increased in renal disease; excreted 95% unchanged, peak 1.2-3 hr

INTERACTIONS

Increased: hypertensive reaction—MAOIs; do not use within 14 days

Use caution when using dopaminergic agents or drugs that increase B/P or heart rate

NURSING CONSIDERATIONS

Assess:

• **Narcolepsy:** assess for trouble staying awake baseline and after 1 wk, 2 wk

• B/P and heart rate baseline and periodically; hypertension should be treated before starting this product

• **Psychiatric symptoms:** assess for symptoms baseline and periodically; those with renal disease may be at higher risk

• Abuse: assess for those with a recent history of drug abuse, especially alcohol, amphetamines, cocaine, methylphenidate; watch for drug-seeking behaviors

Evaluate:

• Therapeutic response: ability to stay awake

Teach patient/family:

• To discuss all Rx, OTC, herbs, and supplements taken and if taking an MAOI

• That if a dose is missed, skip missed dose and administer the next dose the following day in the morning on wakening

• To report to healthcare provider if inability to stay awake continues or if you develop anxiety, agitation, irritability, problems sleeping

• **Pregnancy/breastfeeding:** identify if pregnancy is planned to suspected, encourage to enroll in the pregnancy registry if she becomes pregnant; to enroll or obtain information from the registry, online at www.SunosiPregnancyRegistry.com or by calling 1-877-283-6220; present in breast milk

somapacitin-beco (Rx)

(soe″ma-pas′i-tan

Sogroya

Func. class.: Growth hormone

USES: Growth hormone deficiency

CONTRAINDICATIONS

Hypersensitivity, open heart/abdominal surgery, trauma; respiratory failure; malignancy; diabetic retinopathy

DOSAGE AND ROUTES

Growth hormone deficiency Adult: SUBCUT 1.5 mg weekly; may increase by 0.5-1.5 mg/wk q2-4wk based on response, max 8 mg/wk

⚠ HIGH ALERT

somatropin (Rx)

(soe-ma-troe′pin)

Genotropin, Genotropin MiniQuick, Humatrope, Norditropin FlexPro, Nutropin AQ NuSpin 10, Nutropin AQ, NuSpin 20, Nutropin AQ NuSpin 5, Omnitrope, Saizen, Saizenprep, Serostim, Zomacton, Zomacton

Func. class.: Pituitary hormone
Chem. class.: Growth hormone

Do not confuse:
somatropin/SUMAtriptan/somatrem

ACTION: Stimulates growth; somatropin is similar to natural growth hormone; both preparations were developed with the use of recombinant DNA

USES: Pituitary growth hormone deficiency (hypopituitary dwarfism), children with human growth hormone deficiency/growth failure, AIDS wasting syndrome, cachexia, adults with somatropin deficiency syndrome (SDS), short stature in Noonan syndrome, SHOX deficiency, Turner's syndrome, Prader-Willi syndrome

CONTRAINDICATIONS: Hypersensitivity to benzyl alcohol, creosol; closed epiphyses, intracranial lesions, acute respiratory failure, Prader-Willi syndrome with obesity, trauma

Precautions: Pregnancy, breastfeeding, newborn, geriatric patients, diabetes mellitus, hypothyroidism, prolonged treatment in adults, scoliosis, sleep apnea, chemotherapy, respiratory disease, glycerin hypersensitivity (with formulations that contain these products)

DOSAGE AND ROUTES

Genotropin

- **Child: SUBCUT** 0.16-0.24 mg/kg/wk divided into 6 or 7 daily inj; give in abdomen, thigh, buttocks
- **Adult: SUBCUT** 0.04-0.08 mg/kg/wk divided into 6-7 daily doses

Humatrope

- **Adult: IM** 0.006 international units/kg/day, max 0.0125 units/kg/day
- **Child: SUBCUT/IM** 0.18 mg/kg divided into equal doses either on 3 alternate days or 6×/wk, max weekly dose 0.3 mg/kg

Nutropin/Nutropin AQ (growth hormone deficiency)

- **Child: SUBCUT** 0.3 mg/kg/wk

Serostim

- **Adult: SUBCUT** at bedtime >55 kg, 6 mg; >45-55 kg, 5 mg; 35-45 kg, 4 mg

Norditropin

- **Child: SUBCUT** 0.024-0.034 mg/kg 6-7×/wk

GH deficiency

- **Adult: SUBCUT** (Saizen) 0.005 mg/kg/day; may increase after 4 wk to max 0.01 mg/kg/day

Available forms: Powder for inj (lyophilized) 1.5 mg (4 units/mL), 4 mg (12 units/vial), 5 mg (13 units/vial), 5 mg (15 units/vial) rDNA origin, 5.8 mg (15 units/mL), 6 mg (18 units/mL), 8 mg (24 units/vial), 10 mg (26 units/vial); inj 10 mg (30 units/vial), 5 mg/1.5 mL, 10 mg/1.5 mL, 15 mg/1.5 mL

Administer:

- Give IM or subcut; do not use IV
- Discontinue therapy if final height is achieved or epiphyseal fusion occurs
- Visually inspect parenteral products for particulate matter and discoloration

Reconstitution and storage

Genotropin

- Powder, available in a 5-mg cartridge (green tip) and a 12-mg cartridge (purple tip); the 5- and 12-mg cartridges may be used with the Genotropin Pen or the Genotropin Mixer; also in various doses ranging from 0.2 mg to 2 mg, in single use, auto-mix devices called Genotropin Miniquicks
- **Cartridges:** store cartridges refrigerated before reconstitution, do not freeze; protect from light; after the powder and diluent are mixed, gently tip the cartridge upside down a few times until

powder is dissolved; if solution is cloudy, do not use; following reconstitution, the 5-mg cartridge contains 5 mg/mL; the 12-mg cartridge contains 12 mg/mL; 5-mg and 12-mg cartridges contain overfill; the cartridges contain diluent with preservative (m-cresol) and may be stored refrigerated ≤28 days after reconstitution; do not use the 5-mg and 12-mg cartridges in patients with m-cresol hypersensitivity

• **Genotropin Miniquicks:** after dispensing but before reconstitution, store at ≤77° ≤3 mo; a reconstitution device is supplied; this product contains a diluent with no preservative, refrigerate after reconstitution and use within 24 hr; use reconstituted solution only once and discard remaining

Humatrope

• Before reconstitution, store refrigerated

• **Vials:** reconstitute each 5-mg vial with 1.5-5 mL of the diluent (contains m-cresol as a preservative) or bacteriostatic water for injection (contains benzyl alcohol as a preservative); swirl until contents are dissolved; do not shake; if the solution is cloudy, do not use; small, colorless particles may be present after refrigeration; vials reconstituted with the diluent or bacteriostatic water are stable for 14 days when refrigerated; for vials reconstituted with sterile water, use the vial only once and discard if not used immediately, refrigerate and use within 24 hr; avoid freezing

• **Cartridges:** reconstitute cartridges using *only* the supplied diluent syringe; once reconstituted, the cartridges are stable for up to 28 days when stored refrigerated; store the injection device without the needle attached; avoid freezing reconstituted solutions

Norditropin

• Do not use reconstituted solution if cloudy or contains particulate matter

• Before use, store refrigerated

• Reconstitution of the cartridges is not required; each cartridge size (5 mg, 10 mg, or 15 mg per 1.5-mL cartridge)

• After a cartridge has been inserted into the NordiPen injector or once a NordiFlex pen is in use, the pen should be stored refrigerated and used within 4 wk; alternatively, the 5-mg and 10-mg cartridges may be stored in the pen at room temperature, for ≤3 wk

Nutropin

• Before reconstitution, store refrigerated

• Reconstitute each 5-mg vial with 1-5 mL bacteriostatic water for injection (benzyl alcohol preserved) and each 10-mg vial with 1-10 mL of bacteriostatic water for injection (benzyl alcohol preserved); if using for newborns, reconstitute with sterile water for injection; swirl vial; do not shake; if the solution is cloudy after reconstitution or refrigeration, do not use; small, colorless particles may be present after refrigeration

• Solutions reconstituted with bacteriostatic water for injection are stable for 14 days refrigerated

• Solutions reconstituted with sterile water for injection should be used immediately and only once; discard any unused portions; avoid freezing reconstituted solutions

Nutropin AQ

• Does not require reconstitution; solution should be clear; small, colorless particles may be present after refrigeration; allow vial or pen cartridge to come to room temperature, and gently swirl; if solution is cloudy, do not use

• **Pen cartridge:** use only with Nutropin AQ Pen; the Nutropin AQ 10 pen allows use of a minimum 0.1-mg dose to a maximum 4-mg dose, in 0.1-mg increments; the Nutropin AQ 20 pen allows use of a minimum 0.2-mg dose to a maximum 8-mg dose, in 0.2-mg increments

• **Prefilled device:** a prefilled multidose, dial-a-dose device is available in 3 strengths; administer using disposable needles

• After initial use, products are stable for 28 days refrigerated; avoid freezing; protect from light

Omnitrope

• Before reconstitution, store vials refrigerated; store in the carton; Omnitrope is sensitive to light

• **Vials:** reconstitute with diluent provided; swirl do not shake; if the solution is cloudy after reconstitution, the contents must not be used; after reconstitution, the 1.5-mg vial may be refrigerated ≤24 hr; the 1.5-mg vial does not contain a preservative and should only be used once; discard remaining; the 5.8-mg vial diluent contains benzyl alcohol as a preservative; after reconstitution, the contents must be used within 3 wk; after the first injection, store the 5.8-mg vial in the carton, to protect from light, in the refrigerator; avoid freezing

• **Omnitrope Pen 5 cartridge:** each 5-mg cartridge must be inserted into the Omnitrope Pen 5 delivery system; the cartridge contains benzyl alcohol as a preservative; after the first use, store refrigerated ≤28 days; protect from light, avoid freezing

• **Omnitrope Pen 10 cartridge:** each 10-mg cartridge must be inserted into the Omnitrope Pen 10 delivery system; after the first use, store refrigerated ≤28 days; protect from light, avoid freezing

Saizen

• Before reconstitution, store at room temperature

• **Vials:** reconstitute each 5-mg vial/1-3 mL bacteriostatic water for injection; reconstitute each 8.8-mg vial/ 2-3 mL bacteriostatic water for injection (benzyl alcohol preserved); swirl until contents are dissolved completely; do not shake; the solution should be clear; if it is cloudy immediately after reconstitution or refrigeration, do not use; small colorless particles may be present after refrigeration; after reconstitution, store vials mixed with bacteriostatic water for injection refrigerated use within 14 days; for vials mixed with sterile water for injection, use immediately, and any unused portion should be discarded; avoid freezing

• **Cartridges:** available in 4-mg and 8.8-mg Click.easy cartridges

Serostim

• Before reconstitution, store vials and diluent at room temperature (15°-30°C; 59°-86°F)

• **Vials:** reconstitute 5-mg or 6-mg vials/ 0.5-1 mL of supplied diluent (sterile water for injection); reconstitute the 4-mg vial with 0.5-1 mL of bacteriostatic water for injection (benzyl alcohol preserved), 8.8-mg vial with 1-2 mL of bacteriostatic water for injection (benzyl alcohol preserved); swirl; do not shake; the solution should be clear; if it is cloudy, do not use; small colorless particles may be present after refrigeration; if reconstituted with sterile water for injection, use within 24 hr; if reconstituted with bacteriostatic water for injection (benzyl alcohol preserved), the solution is stable for up to 14 days under refrigeration (2°-8°C or 36°-46°F); avoid freezing

• **Cartridges:** available in 8.8-mg Click.easy® cartridges after reconstitution, cartridges are stable refrigerated for ≤21 days; avoid freezing

Serostim LQ

• Before use, store refrigerated

• Available in 6-mg single-use cartridges that do not require reconstitution; administer using sterile disposable syringes and needles

• Bring to room temperature before use; discard single-use cartridge after use, discard cartridges after the expiration date; do not freeze; protect from light

Zomacton (formerly Tev-Tropin)

• Before reconstitution, store refrigerated

• Reconstitute each 5-mg vial with 1-5 mL bacteriostatic 0.9% sodium chloride (benzyl alcohol preserved) for injection; swirl; do not shake; the solution should be clear; if it is cloudy immediately after reconstitution, do not inject; small, colorless particles may be present after refrigeration; when administering to newborns, reconstitute with sterile normal saline for injection that is unpreserved

• Solution reconstituted with bacteriostatic 0.9% sodium chloride is stable

for 14 days when stored refrigerated; solution reconstituted with sterile normal saline should be used only once; discard remaining solution; avoid freezing

Valtropin

• Before dispensing, store vials and diluent refrigerated; after dispensing, may be stored at or below 77°F for up to 3 mo
• Reconstitute each 5-mg vial with the entire contents of the accompanying diluent, which contains metacresol as a preservative; swirl vial; do not shake; the solution should be clear, if it is cloudy or contains particulate matter, do not use; final concentration 3.33 mg/mL
• After reconstitution with the provided diluent, solutions may be stored refrigerated for up to 14 days; after reconstitution with sterile water for injection, use only one dose of Valtropin per vial and discard the unused portion

Zorbtive

• Unreconstituted vials of drug and diluent may be stored at room temperature until expiration date
• Reconstitute each vial of 4 mg, 5 mg, or 6 mg with 0.5-1 mL sterile water for injection, reconstitute each 8.8 mg with 1-2 mL bacteriostatic water for injection (0.9% benzyl alcohol preserved); in newborns or those with a benzyl alcohol hypersensitivity, sterile water for injection may be used; swirl; do not shake; the solution should be clear; if it is cloudy after reconstitution or refrigeration, do not use; small colorless particles may be present after refrigeration
• After reconstitution with sterile water for injection, use the solution immediately and discard any unused portion; when using bacteriostatic water for injection, reconstituted solutions are stable for up to 14 days refrigerated; avoid freezing

IM route

• Inject deeply into a large muscle; aspirate; rotate injection sites daily

SUBCUT route

• Volumes >1 mL of reconstituted solution are not recommended; do not inject intradermally
• Allow refrigerated solutions to come to room temperature before injection
• Subcutaneous injections may be given in the thigh, buttocks, or abdomen; rotate injection sites daily

SIDE EFFECTS

CNS: Headache, growth of intracranial tumor, fever, aggressive behavior
ENDO: Hyperglycemia, ketosis, hypothyroidism, thyroid hormone replacement may be needed
GI: Nausea, vomiting, pancreatitis
GU: *Hypercalciuria*
INTEG: Rash, urticaria, pain; inflammation at inj site, hematoma
MS: Tissue swelling, joint and muscle pain
SYST: Antibodies to growth hormone

PHARMACOKINETICS

Half-life 15-60 min, duration 7 days, metabolized in liver

INTERACTIONS

Increase: epiphyseal closure—androgens, thyroid hormones
Decrease: growth—glucocorticosteroids
Decrease: insulin, antidiabetic effect—dosage adjustment may be needed

Drug/Lab Test

Increase: glucose, urine glucose
Decrease: glucose, thyroid hormones

NURSING CONSIDERATIONS

Assess:

• Signs/symptoms of diabetes
• Growth hormone antibodies if patient fails to respond to therapy
• Thyroid function tests: T_3, T_4, TSH to identify hypothyroidism
• **Allergic reaction:** rash, itching, fever, nausea, wheezing
• **Hypercalciuria:** urinary stones; groin, flank pain; nausea, vomiting, urinary frequency, hematuria, chills
• Growth rate, bone age of child at intervals during treatment
• **Respiratory infection:** in those with Prader-Willi syndrome, may have sleep

apnea, upper airway obstruction; discontinue if obstruction occurs
• Rapid growth: assess for slipped capital femoral epiphysis; may also occur in endocrine disorders
• Monitor ophthalmologic status baseline and periodically; intracranial hypertension may occur
• **Beers:** avoid in older adults except as hormone replacement following pituitary gland removal
• **Pregnancy/breastfeeding:** effects unknown; cautious use in breastfeeding
Evaluate:
• Therapeutic response: growth in children
Teach patient/family:
• That treatment may continue for years; that regular assessments are required
• To maintain a growth record; to report knee/hip pain or limping
• That treatment is very expensive
• About subcut injection; to rotate injection site to avoid tissue atrophy; not to shake medication; to report peripheral edema, swelling to the provider

sonidegib (Rx)
(soe′-ni-deg′-ib)
Odomzo
Func. class.: Antineoplastic

USES: Locally advanced basal cell carcinoma that has recurred after surgery or radiation therapy or in those who are not candidates for surgery or radiation therapy

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Pregnancy, intrauterine fetal death, contraceptive requirement

DOSAGE AND ROUTES
• **Adult: PO** 200 mg daily until disease progression or unacceptable toxicity; take on an empty stomach ≥1 hr before or 2 hr after a meal. Avoid use with strong CYP3A inhibitors or strong and moderate CYP3A inducers
Available forms: Capsules 200 mg

⚠ HIGH ALERT

sorafenib (Rx)
(sor-af′-e-nib)
NexAVAR
Func. class.: Antineoplastic, tyrosine kinase inhibitor

USES: Treatment of unresectable hepatocellular carcinoma, advanced renal cell carcinoma, progressive, differentiated thyroid carcinoma (refractory to radioactive iodine treatment)

CONTRAINDICATIONS
Hypersensitivity to sorafenib or any component

DOSAGE AND ROUTES
Adult
PO 400 mg bid; continue as long as beneficial
Available forms: Tabs 200 mg

sotalol (Rx)
(sot′ah-lahl)
Betapace, Betapace AF, Sorine, Sotylize
Func. class.: Antidysrhythmic group III
Chem. class.: Nonselective β-blocker

Do not confuse:
sotalol/Sudafed

ACTION: Blockade of β_1- and β_2-receptors leads to antidysrhythmic effect, prolongs action potential in myocardial fibers without affecting conduction, prolongs QT interval, no effect on QRS duration

USES: Life-threatening ventricular dysrhythmias; Betapace AF: to maintain sinus rhythm with symptomatic atrial fibrillation/flutter
Unlabeled uses: Atrial fibrillation prophylaxis, cardiac surgery, PSVT, Wolff-Parkinson-White (WPW) syndrome

CONTRAINDICATIONS: Hypersensitivity to β-blockers, cardiogenic shock, heart block (2nd/3rd degree), sinus bradycardia, HF, bronchial asthma, CCr <40 mL/min, hypokalemia

Black Box Warning: Congenital or acquired long QT syndrome

Precautions: Pregnancy, breastfeeding, major surgery, diabetes mellitus, renal/thyroid disease, COPD, well-compensated heart failure, CAD, nonallergic bronchospasm, electrolyte disturbances, bradycardia, peripheral vascular disease

Black Box Warning: Cardiac dysrhythmias, torsades de pointes, ventricular dysrhythmias, ventricular fibrillation; requires a specialized care setting

DOSAGE AND ROUTES

Atrial fibrillation/atrial flutter

• **Adult: PO** Initially, 80 mg bid; may increase in increments of 80 mg/day q3days if QTc is <500 msec; 320 mg/day; **IV** Initially, 75 mg bid; may increase by 75 mg/day q3days if the QTc is <500 msec; max 300 mg/day

Life-threatening tachycardia

• **Adult: PO** Initially, 80 mg bid; may increase by 80 mg/day q3days if the QTc is <500 msec to 160-320 mg/day. 480-640 mg/day may be used in refractory life-threatening arrhythmias; **IV** Initially, 75 mg bid; may increase by 75 mg/day q3days if the QTc is <500 msec to 150-300 mg/day. 550-600 mg/day may be used in refractory life-threatening arrhythmias
• **Adolescent/child 6-17 yr (unlabeled): PO** Initially, 30 mg/m^2/dose tid titrated up as needed at intervals of ≥36 hr (**max** 60 mg/m^2/dose tid)

Renal dose

• **Betapace/Betapace AF and Sorine (both for ventricular arrhythmias)**
• **Adult:** CCr ≥60 mL/min: no change; CCr 30-59 mL/min: extend dosage interval to q24hr. Dose may be titrated after at least 5 doses; CCr 10-29 mL/min: extend dosage interval to 36-48 hr according to clinical response. Dose may be titrated after at least 5 doses; CCr <10 mL/min: individualize

Betapace/Betapace AF (for atrial fibrillation/atrial flutter), Sotylize, and intravenous (IV) sotalol

• **Adult:** CCr ≥60 mL/min: no change; CCr 40-59 mL/min: extend dosage interval to q24hr. Dose may be titrated after at least 5 doses; CCr <40 mL/min: use is contraindicated

Available forms: Tabs 80, 120, 160, 240 mg; (Betapace AF) 80, 120, 160 mg; inj 150 mg/10 mL (15 mg/mL)

Administer:

PO route

• Before, at bedtime; tab may be crushed or swallowed whole; give 1 hr before or 2 hr after meals
• Reduced dosage in renal dysfunction
• Betapace and Betapace AF are not interchangeable
• Do not give within 2 hr of antacids
• Store in dry area at room temperature; do not freeze

IV route

• Dilute to vol of either 120 mL or 300 mL with D_5W, LR
• **75-mg dose:** withdraw 6 mL sotalol inj (90 mg), add 114 mL diluent to make 120 mL (0.75 mg/mL); or withdraw 6 mL sotalol inj (90 mg), add 294 mL diluent to make 300 mL (0.3 mg/mL)
• **112.5-mg dose:** withdraw 9 mL sotalol inj (135 mL), add 111 mL diluent to make 120 mL (1.125 mg/mL); or withdraw 9 mL sotalol (135 mg), add 291 mL diluent to make 300 mL (0.45 mg/mL)
• **150-mg dose:** withdraw 12 mL of sotalol (180 mg), add 108 mL diluent to make 120 mL (1.5 mg/mL); or withdraw 12 mL sotalol (180 mg), add 288 mL diluent to make 300 mL (0.6 mg/mL)

• Use infusion pump and infuse 100 or 250 mL over 5 hr at a constant rate

SIDE EFFECTS

CNS: Dizziness, mental changes, drowsiness, fatigue, headache, depression, anxiety, paresthesia, insomnia, decreased concentration
CV: Prodysarrhythmia, prolonged QT, orthostatic hypotension, HF, ventricular dysrhythmias, AV block, palpitations, torsades de pointes; life-threatening ventricular dysrhythmias (Betapace AF)
EENT: Tinnitus, visual changes
GI: Nausea, vomiting, diarrhea, dry mouth, constipation, anorexia
GU: Impotence, dysuria
INTEG: Rash, alopecia, urticaria, pruritus, fever, diaphoresis
MS: Arthralgia, muscle cramps
RESP: Bronchospasm, wheezing

PHARMACOKINETICS

PO: Onset 1-2 hr, peak 2-4 hr, duration 8-12 hr; **IV:** onset 5-10 min, peak/duration unknown; half-life 12 hr, excreted unchanged in urine, crosses placenta, excreted in breast milk, protein binding 0%

INTERACTIONS

Black Box Warning: Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Increase: hypoglycemia effect—insulin
Increase: effects of lidocaine
Increase: hypotension—diuretics, other antihypertensives, nitroglycerin
Decrease: β-blocker effects—sympathomimetics
Decrease: bronchodilating effects of theophylline, β_2-agonists
Decrease: hypoglycemic effects of sulfonylureas

Drug/Lab Test
False increase: urinary catecholamines
Interference: glucose, insulin tolerance tests

Drug/Herb
• Do not use with hawthorn

NURSING CONSIDERATIONS

Assess:
• I&O, weight daily; edema in feet, legs daily
• B/P, pulse q4hr; note rate, rhythm, quality
• Potassium, magnesium levels

Black Box Warning: Requires a specialized care setting: for a minimum of at least 3 days on maintenance dose with continuous ECG monitoring; calculate creatinine clearance before dosing

Black Box Warning: Cardiogenic shock, acute pulmonary edema: do not use, effect can further depress cardiac output

Black Box Warning: QT syndrome: apical/radial pulse before administration: notify prescriber of any significant changes; monitor ECG continuously (Betapace AF); use QT interval to determine patient eligibility; baseline QT must be ≤450 msec, if ≥500 msec, frequency or dosage must be decreased or drug discontinued

• Baselines of renal studies before therapy begins
• **Abrupt discontinuation:** do not discontinue abruptly, taper over 1-2 wk
• Dose should be adjusted slowly, with at least 3 days between changes; monitor ECG for QT interval
• Monitor electrolytes (hypokalemia, hypomagnesemia); may increase dysrhythmias
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excreted in breast milk

Evaluate:
• Therapeutic response: absence of life-threatening dysrhythmias
Teach patient/family:
• Not to discontinue product abruptly; to taper over 2 wk or may precipitate angina; to take exactly as prescribed
• Not to use antacids or OTC products containing α-adrenergic stimulants (nasal decongestants, OTC cold preparations) unless directed by prescriber
• To report bradycardia, dizziness, confusion, depression, fever
• To take pulse at home; advise patient when to notify prescriber
• To avoid alcohol, smoking, sodium intake
• To carry emergency ID to identify product being taken, allergies
• To avoid hazardous activities if dizziness present
• To report symptoms of HF, including difficulty breathing, especially on exertion or when lying down; night cough, swelling of extremities
• To wear support hose to minimize effects of orthostatic hypotension
• To monitor blood glucose if diabetic
• That hospitalization will be required for ≥3 days

spinosad (Rx)

(spin′oh-sad)

Natroba

Func. class.: Antiparasitic

USES: Topical treatment of head lice (*Pediculosis capitis*) infestation in adults and children ≥6 mo of age

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Head lice
• **Adult/child:** Topical: Apply needed amount to cover dry scalp and completely cover dry hair; if live lice are seen 7 days after first treatment, repeat
Available forms: Topical solution 0.9%

spironolactone (Rx)

(speer′on-oh-lak′tone)

Aldactone, CaroSpir

Func. class.: Potassium-sparing diuretic

Chem. class.: Aldosterone antagonist

Do not confuse:
Aldactone/Aldactazide

ACTION: Competes with aldosterone at receptor sites in distal tubule, thereby resulting in the excretion of sodium chloride and water and the retention of potassium and phosphate

USES: Edema of HF, hypertension, diuretic-induced hypokalemia, primary hyperaldosteronism (diagnosis, short-term treatment, long-term treatment), edema of nephrotic syndrome, cirrhosis of liver with ascites
Unlabeled uses: HF

CONTRAINDICATIONS:

Hypersensitivity, anuria, severe renal disease, hyperkalemia
Precautions: Breastfeeding, dehydration, hepatic disease, renal impairment, electrolyte imbalances, metabolic acidosis, gynecomastia, pregnancy

Black Box Warning: Secondary malignancy

DOSAGE AND ROUTES

Edema/hypertension
• **Adult: PO** 25-100 mg/day in 1-2 divided doses
Heart failure (unlabeled)
• **Adult: PO** 12.5-25 mg/day; max 50 mg/day
Edema
• **Child: PO** 1.5-3.3 mg/kg/day as single dose or in divided doses
Hypertension
• **Child (unlabeled): PO** 1.5-3.3 mg/kg/day in divided doses

Hypokalemia
• **Adult: PO** 25-100 mg/day; if **PO,** potassium supplements must not be used
Primary hyperaldosteronism diagnosis
• **Adult: PO** 400 mg/day × 4 days or 4 wk depending on test, then 100-400 mg/day maintenance
Edema (nephrotic syndrome, HF, hepatic disease)
• **Adult: PO** 100 mg/day given as single dose or in divided doses, titrate to response
• **Child: PO** 1.5-3.3 mg/kg/day or 60 mg/m^2/day given daily or in 2-4 divided doses
Renal dose
• **Adult: PO** CCr 10-50 mL/min, give dose q12-24hr; CCr <10 mL/min, avoid use
Available forms: Tabs 25, 50, 100 mg; oral suspension 25 mg/5 mL
Administer:
• In AM to avoid interference with sleep
• With food; if nausea occurs, absorption may be decreased slightly
• Effect may take 2 wk
• **Oral suspension:** Shake well, use calibrated measuring device

SIDE EFFECTS

CNS: *Headache,* confusion, drowsiness, lethargy, ataxia
ELECT: Hyperchloremic metabolic acidosis, hyperkalemia, hyponatremia
ENDO: Impotence, gynecomastia, irregular menses, amenorrhea, postmenopausal bleeding, hirsutism, deepening voice, breast pain
GI: *Diarrhea,* cramps, bleeding, gastritis, *vomiting,* anorexia, nausea, hepatocellular toxicity
HEMA: Agranulocytosis
INTEG: *Rash, pruritus,* urticaria

PHARMACOKINETICS

Onset 24-48 hr, peak 48-72 hr, metabolized in liver, excreted in urine, crosses placenta, protein binding >90%, terminal half-life 10-35 hr

INTERACTIONS

Increase: action of antihypertensives, digoxin, lithium
Increase: hyperchloremic acidosis in cirrhosis—cholestyramine
Increase: hyperkalemia—potassium-sparing diuretics, potassium products, ACE inhibitors, salt substitutes, angiotensin II receptor antagonists
Decrease: effect of anticoagulants, monitor INR/PT
Decrease: effect of spironolactone—ASA, NSAIDs
Drug/Food
Increase: hyperkalemia—potassium-rich foods, potassium salt substitutes
Drug/Herb
Increase: hypotension—hawthorn, horse chestnut
Decrease: antihypertensive effect—ephedra
Increase: severe photosensitivity—St. John's wort
Increase: BUN, potassium
Decrease: sodium, magnesium
Drug/Lab Test
Interference: 17-OHCS, 17-KS, radioimmunoassay, digoxin assay

NURSING CONSIDERATIONS

Assess:
• **Hypokalemia:** polyuria, polydipsia; dysrhythmias, including a U wave on ECG
• **Hyperkalemia:** weakness, fatigue, dyspnea, dysrhythmias, confusion, fatigue
• **Hyponatremia:** headache, weakness, lethargy, confusion, seizures, coma
• Electrolytes (sodium, chloride, potassium), BUN, serum creatinine, ABGs, CBC; potassium must be checked within 3 days, 1 wk, 1 mo × 3, then q3mo; recheck after starting products that alter potassium
• **HF assessment daily:** weight, I&O to determine fluid loss; effect of product may be decreased if used daily; ECG periodically with long-term therapy, breath sounds, edema, B/P
• Signs of metabolic acidosis: drowsiness, restlessness
• Confusion, especially in geriatric patients; take safety precautions if needed
• **Hydration:** skin turgor, thirst, dry mucous membranes

Black Box Warning: Secondary malignancy: assess periodically

• **Beers:** avoid in older adults with heart-failure or CCr <30 mL/min
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; fetal harm has occurred; do not breastfeed, excreted in breast milk

Evaluate:
• Therapeutic response: improvement in edema of feet, legs, sacral area daily if medication is being used in HF

Teach patient/family:
• To avoid foods with high potassium content: oranges, bananas, salt substitutes, dried apricots, dates; to avoid potassium salt substitutes
• That drowsiness, ataxia, mental confusion may occur; to observe caution when driving
• To notify prescriber of cramps, diarrhea, lethargy, thirst, headache, skin rash, menstrual abnormalities, deepening voice, breast enlargement
• To take in AM to prevent sleeplessness
• To avoid hazardous activities until reaction is known
• To notify prescriber if pregnancy is planned or suspected; not to breastfeed

TREATMENT OF OVERDOSE: Lavage if taken orally; monitor electrolytes, administer IV fluids, monitor hydration, renal, CV status

spironolactone/hydrochlorothiazide (Rx)

(speer-on-oh-lak´tone/hye-droe-klor-oh-thye´-a-zide)

Aldactazide

Func. class.: Antihypertensive-diuretic

USES: Treatment of edema in CHF, nephrotic syndrome, cirrhosis of the liver with edema/ascites; treatment of mild-moderate hypertension

CONTRAINDICATIONS
Hypersensitivity to thiazides or sulfonamide-derived drugs; acute renal disease; anuria; renal decompensation; hypercalcemia; hyperkalemia; Addison disease; hepatic disease

DOSAGE AND ROUTES

Edema
• **Adult: PO** Hydrochlorothiazide 25-200 mg daily/spironolactone 25-200 mg daily or divided

Hypertension
• **Adult: PO** Hydrochlorothiazide 50-100 mg daily/spironolactone 50-100 mg daily

Available forms: Tabs 25 mg/25 mg, 50 mg/50 mg

stavudine (d4T) (Rx)

(sta´vyoo-deen)

Func. class.: Antiretroviral

Chem. class.: Nucleoside reverse transcriptase inhibitor (NRTI)

Do not confuse:
Zerit/ZyrTEC

ACTION: Prevents replication of HIV by the inhibition of the enzyme reverse transcriptase; causes DNA chain termination

USES: Treatment of HIV-1 in combination with other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity to this product or zidovudine; didanosine, zalcitabine; severe peripheral neuropathy

Precautions: Breastfeeding, advanced HIV infection, bone marrow suppression, renal disease, peripheral neuropathy, osteoporosis, obesity

Black Box Warning: Pregnancy, hepatic disease, pancreatitis, lactic acidosis

DOSAGE AND ROUTES
• **Adult >60 kg: PO** 40 mg q12hr
• **Adult <60 kg: PO** 30 mg q12hr
• **Child <30 kg: PO** 1 mg/kg q12hr

- **Child ≥30 kg, ≤60 kg: PO** 30 mg q12hr
- **Child >60 kg: PO** 40 mg q12hr

Renal dose

- **Adult: PO** CCr 26-50 mL/min, reduce by 50%, give q12hr; CCr 10-25 mL/min, reduce by 50%, give q24hr

Available forms: Caps 15, 20, 30, 40 mg; powder for oral sol 1 mg/mL

Administer:

- With/without meals; absorption does not appear to be lowered when taken with food
- Use after hemodialysis
- Every 12 hr around the clock
- Shake suspension well before using

SIDE EFFECTS

CNS: *Peripheral neuropathy,* insomnia, anxiety, depression, dizziness, confusion, *headache,* chills/fever, malaise, neuropathy

CV: Chest pain, vasodilation, hypertension

EENT: Conjunctivitis, abnormal vision

GI: Hepatotoxicity, *diarrhea, nausea, vomiting,* anorexia, dyspepsia, constipation, stomatitis, pancreatitis

HEMA: Bone marrow suppression, leukopenia, macrocytosis

INTEG: *Rash,* sweating, pruritus, benign neoplasms

MISC: Lactic acidosis, asthenia, lipodystrophy

MS: Myalgia, arthralgia

RESP: Dyspnea, pneumonia, asthma

PHARMACOKINETICS

Excreted in urine, breast milk; peak 1 hr; half-life: elimination 1-1.6 hr

INTERACTIONS

Increase: myelosuppression—other myelosuppressants

Increase: peripheral neuropathy—lithium, dapsone, chloramphenicol didanosine, ethambutol, hydrALAZINE, phenytoin, vinCRISTine, zalcitabine

Increase: stavudine levels—probenecid

Decrease: stavudine effect—methadone, zidovudine

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Lactic acidosis and severe hepatomegaly with steatosis: death may result; monitor LFTs

Black Box Warning: Pancreatitis: severe upper abdominal pain, radiating to back, nausea, vomiting usually when used in combination with didanosine

- Blood studies: WBC, differential, RBC, Hct, HB, platelets, serum amylase, lipase, blood glucose, plasma hepatitis C RNA, pregnancy test, serum cholesterol, serum lipids, hepatitis serology, baseline and periodically
- Renal tests: urinalysis, protein, blood, serum creatinine
- Lipoatrophy/lipodystrophy during treatment
- Bowel pattern before, during treatment
- Weakness, tremors, confusion, dizziness; product may have to be decreased, discontinued
- Viral load, CD4 counts, plasma HIV RNA at baseline and throughout treatment
- **Peripheral neuropathy:** tingling, pain in extremities; discontinue product, may not resolve after treatment is discontinued
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; register patient in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed

Evaluate:

- Therapeutic response: decreased symptoms of HIV

Teach patient/family:

- **About the signs of peripheral neuropathy:** burning, weakness, pain, prickling feeling in extremities
- That product should not be given with antineoplastics
- That product is not a cure for AIDS but will control symptoms
- To notify prescriber if sore throat, swollen lymph nodes, malaise, fever occur; that other products may be needed to prevent other infections
- That, even with use of product, patient may pass AIDS virus to others

S

• That follow-up visits are necessary; that serious toxicity may occur; that blood counts must be done q2wk
• That serious product interactions may occur if other medications are ingested; to discuss with prescriber before taking chloramphenicol, dapsone, ClSplatin, didanosine, ethambutol, lithium, antifungals, antineoplastics
• To notify prescriber if pregnancy is planned or suspected; that fatal lactic acidosis may occur; to avoid breastfeeding
• That product may cause fainting or dizziness

stiripentol (Rx)

(stir-i-pen'tol)

Diacomit

Func. class.: Anticonvulsant—miscellaneous

ACTION: Several possible mechanisms of action, including effects on the gamma-aminobutyric acid (GABA) A receptor and novel inhibition of lactate dehydrogenase

USES: Seizures associated with Dravet syndrome in patients taking clobazam

CONTRAINDICATIONS: Hypersensitivity
Precautions: Abrupt discontinuation, breastfeeding, children, depression, driving or operating machinery, growth inhibition, hepatic disease, neutropenia, PKU, pregnancy, renal disease, suicidal ideation, thrombocytopenia

DOSAGE AND ROUTES

• **Adult/adolescent/child 12-17 yr: PO** 50 mg/kg/day in 2 or 3 divided doses; round to nearest possible dosage, which is usually within 50 to 150 mg of the recommended 50 mg/kg/day. Max 3000 mg/day
Available forms: Caps 250, 500 mg
Administer:
• Use seizure precautions
• Give during a meal, swallow whole with glass of water; do not break or open capsules
• Take missed doses as soon as possible; if it is almost time for the next dose, take only that dose, do not take double doses

SIDE EFFECTS

CNS: Suicidal ideation, depression, drowsiness, dizziness, ataxia, tremor, agitation, fatigue, insomnia, fever
GI: Anorexia, weight loss or gain, nausea, vomiting

HEMA: Neutropenia, thrombocytopenia
MISC: Infection, hypersalivation

PHARMACOKINETICS

Protein binding 99%, half-life 4.5-15 hr, peak 2-3 hr

INTERACTIONS

None known

NURSING CONSIDERATIONS

Assess:
• Monitor weight for increase or decrease; nausea, vomiting, anorexia; closely monitor growth rate, weight in pediatric patients
• **Depression, suicidal ideation:** assess for depression, suicidal thoughts and behaviors any time during treatment; monitor mental status (orientation, mood, behavior) baseline and often during treatment
• **Pregnancy/breastfeeding:** encourage pregnant patients to enroll in the North American Antiepileptic Drug (NAAED) Pregnancy Registry by calling 1-888-233-2334; no data on breastfeeding
• Monitor CBC baseline and periodically during treatment; significant neutropenia and thrombocytopenia may occur
Evaluate:
• Therapeutic response: lessening amount and duration of seizures with minimal sedation
Teach patient/family:
• To take only as prescribed, not to skip or double doses, to take at the same times of the day
• To notify all professional health care providers of products used, including OTC, Rx,

herbals, and supplements; not to change products unless approved by prescriber
• To notify health care providers before surgery of product use
• **Depression, suicidal thoughts/behaviors:** that suicidal thoughts and behaviors that may increase with use of this product
• **Pregnancy/breastfeeding:** to inform health care provider if pregnancy is planned or suspected or if breastfeeding
• To avoid driving or hazardous activities until reaction is known; dizziness, drowsiness may occur; resume driving only with prescriber clearance
• That exams and blood work will be needed throughout treatment
• To report excessive sedation, severe nausea/vomiting, depression, suicidal thoughts and behaviors

succimer (Rx)

(suks′-si-mer)

Chemet

Func. class.: Antidote

USES: Treatment of lead poisoning in children with serum lead levels >45 mcg/dL

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Child/adolescent: PO 10 mg/kg/dose (or 350 mg/m^2/dose) q8hr × 5 days, then 10 mg/kg/dose (or 350 mg/m^2/dose) q12hr × 14 days; max 500 mg/dose; child< 5 yr should be based on body weight
Available forms: Capsules 100 mg

⚠ HIGH ALERT

succinylcholine (Rx)

(suk-sin-ill-koe′leen)

Anectine, Quelicin

Func. class.: Neuromuscular blocker (depolarizing, ultra short)

ACTION: Inhibits transmission of nerve impulses by binding with cholinergic receptor sites, thus antagonizing action of acetylcholine; causes release of histamine

USES: Facilitation of endotracheal intubation, skeletal muscle relaxation during orthopedic manipulations

CONTRAINDICATIONS:

Hypersensitivity, malignant hyperthermia, trauma
Precautions: Pregnancy, breastfeeding, geriatric or debilitated patients, cardiac disease, severe burns, fractures (fasciculations may increase damage), electrolyte imbalances, dehydration, neuromuscular/respiratory/cardiac/renal/hepatic disease, collagen diseases, glaucoma, eye surgery, hyperkalemia

Black Box Warning: Children <2 yr, myopathy, rhabdomyolysis

DOSAGE AND ROUTES

• **Adult: IV** 0.3-1.1 mg/kg, max 150 mg, maintenance 0.04-0.07 mg/kg q5-10min as needed; **CONT IV INFUSION** dilute to concentration of 1-2 mg/mL in D_5W or NS 10-100 mcg/kg/min
• **Child: IV** initially 1-2 mg/kg; **CONT IV INFUSION** not recommended
Available forms: Inj 20, 50, 100 mg/mL; powder for inj 100, 500 mg/vial, 1 g/vial
Administer:
• Give IV or IM; only experienced clinicians familiar with the use of neuromuscular blocking drugs should administer or supervise the use of this product
• Visually inspect parenteral products for particulate matter and discoloration before use
• Monitor heart rate and mechanical ventilator status during use
• Store in refrigerator, powder at room temperature; close tightly
IM route
• Recommended for infants and other patients in whom a suitable vein is not accessible
• Inject into a large muscle, preferably high into the deltoid muscle; aspirate before injection

S

Rapid IV injection route

• Owing to tachyphylaxis and prolonged apnea, this method is not recommended for prolonged procedures; rapid IV injection of succinylcholine can result in profound bradycardia or asystole in pediatric patients; as with adults, the risk increases with repeated doses; pretreatment with atropine may be needed

• No dilution of injection solution is necessary

• Inject rapidly IV over 10-30 sec

Continuous IV infusion route

• Not recommended for infants and children owing to risk of malignant hyperthermia

• This route is preferred for long surgical procedures

• Dilute succinylcholine to a concentration of 1-2 mg/mL with D_5W, D_5NS, NS, or 1/6 M sodium lactate injection; 1 g of the powder for injection or 20 mL of a 50-mg/mL solution may be added to 1 L or 500 mL of diluent to give solutions containing 1 or 2 mg/mL, respectively; alternatively, 500 mg of the powder for injection or 10 mL of a 50 mg/mL solution may be added to 500 mL or 250 mL of diluent to give solutions containing 1 or 2 mg/mL, respectively

• Infuse IV at a rate of 2.5 mg/min (range = 0.5-10 mg/min); adjust rate based on patient's response and requirements

Y-site compatibilities: Etomidate, heparin, potassium chloride, propofol, vit B/C

SIDE EFFECTS

CV: Bradycardia, tachycardia; increased, decreased B/P; sinus arrest, dysrhythmias, edema

EENT: Increased secretions, intraocular pressure

HEMA: Myoglobulinemia

INTEG: Rash, flushing, pruritus, urticaria

MS: Weakness, muscle pain, fasciculations, prolonged relaxation, myalgia, rhabdomyolysis

RESP: Prolonged apnea, bronchospasm, cyanosis, respiratory depression, wheezing, dyspnea

SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

Hydrolyzed in blood, excreted in urine (active/inactive metabolites)

IM: Onset 2-3 min, duration 10-30 min

IV: Onset 1 min, peak 2-3 min, duration 6-10 min

INTERACTIONS

Increase: dysrhythmias: theophylline

Increase: neuromuscular blockade—aminoglycosides, β-blockers, cardiac glycosides, clindamycin, lincomycin, procainamide, quiNIDine, local anesthetics, polymyxin antibiotics, lithium, opioids, thiazides, enflurane, isoflurane, magnesium salts, oxytocin

Drug/Herb

• Blocks succinylcholine: melatonin

NURSING CONSIDERATIONS

Assess:

• Electrolyte imbalances (potassium, magnesium); may lead to increased action of product

• VS (B/P, pulse, respirations, airway) until fully recovered; rate, depth, pattern of respirations, strength of hand grip

• I&O ratio; check for urinary retention, frequency, hesitancy

• **Recovery:** decreased paralysis of face, diaphragm, leg, arm, rest of body

• **Allergic reactions:** rash, fever, respiratory distress, pruritus; product should be discontinued

Black Box Warning: Myopathy, rhabdomyolysis: in pediatric patients (rare)

• Assess temperature for malignant hyperthermia, previous reactions to anesthesia or paralytics

• Reassurance if communication is difficult during recovery from neuromuscular blockade; postoperative stiffness is normal, soon subsides

• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: paralysis of jaw, eyelid, head, neck, rest of body
Teach patient/family
• Reason for product, expected results

sucralfate (Rx)
(soo-kral′fate)
Carafate
Func. class.: Protectant, antiulcer
Chem. class.: Aluminum hydroxide, sulfated sucrose

ACTION: Forms a complex that adheres to ulcer site, adsorbs pepsin

USES: Duodenal ulcer, oral mucositis, stomatitis after radiation of head and neck
Unlabeled uses: Gastric/aphthous ulcers, gastroesophageal reflux, NSAID-induced ulcer prophylaxis, proctitis, stomatitis, stress gastritis prophylaxis, *C. difficile*

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, renal failure; hypoglycemia (diabetics)

DOSAGE AND ROUTES
Duodenal ulcers
• **Adult: PO** 1 g qid 1 hr before meals, at bedtime
• **Child: PO** 40-80 mg/kg/day divided
Aphthous ulcer/stomatitis (unlabeled)
• **Adult: PO** 5-10 mL (500 mg-1 g) swished in mouth for several min; spit or swallow qid
Gastric ulcer/NSAID-induced ulcer prophylaxis/esophagitis/GERD (unlabeled)
• **Adult: PO** 1 g qid, 1 hr before meals and at bedtime
Available forms: Tabs 1 g; oral susp 1 g/10 mL
Administer:
PO route
• Do not crush or chew tabs; tabs may be broken or dissolved in water
• Do not take antacids 30 min before or after sucralfate
• On an empty stomach 1 hr before meals or other medications and at bedtime
• Store at room temperature
Side effects
GI: *Dry mouth, constipation*

PHARMACOKINETICS
PO: Duration up to 6 hr

INTERACTIONS
Decrease: action of tetracyclines, phenytoin, fat-soluble vitamins, digoxin, ketoconazole, theophylline
Decrease: absorption of fluoroquinolones
Decrease: absorption of sucralfate—antacids, cimetidine, raNITIdine

NURSING CONSIDERATIONS
Assess:
• **GI symptoms:** abdominal pain, blood in stools
• **Hypoglycemia:** may occur in patients with diabetes mellitus; monitor blood glucose carefully
Evaluate:
• Therapeutic response: absence of pain, GI complaints
Teach patient/family:
• To take on empty stomach
• To take full course of therapy; not to use for >8 wk; to avoid smoking
• To avoid antacids, milk, alkaline water within 1 hr of this product
• To increase fluids, bulk, exercise to lessen constipation

sugammadex (Rx)
(soo-gam′ma-dex)
Bridion
Func. class.: Antidote, selective relaxant binder

USES: Reversal of neuromuscular blockade induced by rocuronium/vecuronium in surgery

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Routine reversal of rocuronium/vecuronium blockade

• **Adult: IV: Deep block:** 4 mg/kg as a single dose; **moderate block:** 2 mg/kg as a single dose

Immediate reversal of rocuronium-induced blockade

• **Adult: IV:** 16 mg/kg as a single dose given (3 min) after use of a single dose of rocuronium 1.2 mg/kg

Available forms: Injection 200 mg/2 mL, 500 mg/5 mL single-dose vials

sulfamethoxazole-trimethoprim (Rx)

(sul-fa-meth-ox′a-zole-trye-meth′oh-prim)

Bactrim, Bactrim DS, Septra, Septra DS, SMZ/TMP, Sulfatrim, Sulfatrim Pediatric, Novo-Trimel, Nu-Cotrimox, Septra Pediatric

Func. class.: Antiinfective

Chem. class.: Sulfonamide—miscellaneous

ACTION: Sulfamethoxazole (SMZ) interferes with the bacterial biosynthesis of proteins by competitive antagonism of PABA when adequate levels are maintained; trimethoprim (TMP) blocks the synthesis of tetrahydrofolic acid; the combination blocks 2 consecutive steps in the bacterial synthesis of essential nucleic acids and protein

USES: UTI, otitis media, acute and chronic prostatitis, shigellosis, chancroid, traveler's diarrhea, *Enterobacter* sp., *Escherichia coli, Haemophilus influenzae (beta-lactamase negative), Haemophilus influenzae (beta-lactamase positive), Klebsiella* sp., *Morganella morganii, Pneumocystis carinii, Pneumocystis jiroveci, Proteus mirabilis, Proteus* sp., *Proteus vulgaris, Shigella flexneri, Shigella sonnei, Streptococcus pneumoniae;* **may also be effective for** *Acinetobacter baumannii, Actinomadura madurae, Actinomadura pelletieri, Bordetella pertussis, Burkholderia pseudomallei, Cyclospora cayetanensis, Haemophilus ducreyi, Isospora belli, Klebsiella granulomatis, Legionella micdadei, Legionella pneumophila, Listeria monocytogenes, Moraxella catarrhalis, Neisseria gonorrhoeae, Nocardia asteroides, Nocardia brasiliensis, Nocardia otitidiscaviarum, Pediculus capitis, Plasmodium falciparum, Providencia* sp., *Salmonella* sp., *Serratia* sp., *Shigella* sp., *Staphylococcus aureus (MRSA), Staphylococcus aureus (MSSA), Staphylococcus epidermidis, Stenotrophomonas maltophilia, Streptococcus pyogenes* (group A beta-hemolytic streptococci), *Streptomyces somaliensis, Toxoplasma gondii, Vibrio cholerae,* viridans streptococci, *Yersinia enterocolitica*

CONTRAINDICATIONS: Breastfeeding, infants <2 mo; hypersensitivity to trimethoprim or sulfonamides; pregnancy at term, megaloblastic anemia, CCr <15 mL/min

Precautions: Pregnancy, geriatric patients, infants, renal disease, G6PD deficiency, impaired hepatic/renal function, possible folate deficiency, severe allergy, bronchial asthma, UV exposure, porphyria, hyperkalemia, hypothyroidism

DOSAGE AND ROUTES

Based on TMP content

Most infections

• **Adult/child >2 mo:** PO/IV 6-12 mg TMP/kg/day divided q12hr

UTI

• **Adult: PO** 160 mg TMP q12hr × 10-14 days

• **Child: PO** 8 mg/kg TMP/day in 2 divided doses q12hr (treatment): 2 mg/kg/day (prophylaxis)

Otitis media

• **Child: PO** 8 mg/kg TMP/day in 2 divided doses q12hr × 10 days

Chronic bronchitis

• **Adult: PO** 160 mg TMP q12hr × 10-14 days

Serious infections/*Pneumocystis jiroveci* pneumonitis

• **Adult/child: PO** 15-20 mg/kg TMP daily in 4 divided doses q6hr × 14-21 days; **IV** 15-20 mg/kg/day (based on TMP) in 3-4 divided doses for ≤14 days

Renal dose

• **Adult: PO** CCr >30 mL/min, usual dose; CCr 15-30 mL/min, give 50% of usual dose; CCr <15 mL/min, not recommended

Available forms: Tabs 20 mg TMP/100 SMX ✱, 80 mg trimethoprim/400 mg sulfamethoxazole, 160 mg trimethoprim/800 mg sulfamethoxazole; susp 40 mg-200 mg/5 mL, 160 mg-800 mg/20 mL; IV 16 mg/80 mg/mL

Administer:

PO route

• Medication after C&S; repeat C&S after full course of medication

• With resuscitative equipment, EPINEPHrine available; severe allergic reactions may occur

• Without regard to meals

• With full glass of water to maintain adequate hydration; increase fluids to 2 L/day to decrease crystallization in kidneys

• Store in tight, light-resistant container at room temperature

Intermittent IV INFUSION route

• After diluting 5 mL of product/125 mL D_5W, run over 1-1½ hr, if using Septra ADD-Vantage vials dilute each 10-mL vial in ADD-Vantage diluent containers containing 250 mL of D_5W, infuse over 60-90 min, change site q48-72hr

Y-site compatibilities: Acyclovir, aldesleukin, allopurinol, amifostine, amphotericin B cholesteryl, atracurium, aztreonam, cefepime, cyclophosphamide, diltiaZEM, DOXOrubicin liposome, enalaprilat, esmolol, filgrastim, fludarabine, gallium, granisetron, HYDROmorphone, labetalol, LORazepam, magnesium sulfate, melphalan, meperidine, morphine, pancuronium, perphenazine, piperacillin/tazobactam, remifentanil, sargramostim, tacrolimus, teniposide, thiotepa, vecuronium, zidovudine

SIDE EFFECTS

CNS: Headache, insomnia, hallucinations, depression, vertigo, fatigue, anxiety, seizures, drug fever, chills, aseptic meningitis

CV: Allergic myocarditis

EENT: Tinnitus

GI: *Nausea, vomiting, abdominal pain,* stomatitis, hepatitis, glossitis, pancreatitis, diarrhea, enterocolitis, anorexia, CDAD

GU: Renal failure, toxic nephrosis; increased BUN, creatinine; crystalluria

HEMA: Leukopenia, neutropenia, thrombocytopenia, agranulocytosis, hemolytic anemia, hypoprothrombinemia, Henoch-Schönlein purpura, methemoglobinemia, eosinophilia

INTEG: Rash, dermatitis, urticaria, Stevens-Johnson syndrome, erythema, photosensitivity, pain, inflammation at inj site, toxic epidermal necrolysis, erythema multiforme

RESP: Cough, SOB

SYST: Anaphylaxis, SLE

PHARMACOKINETICS

PO: Rapidly absorbed; peak 1-4 hr; half-life 8-13 hr; excreted in urine (metabolites and unchanged), breast milk; crosses placenta; 68% bound to plasma proteins; TMP achieves high levels in prostatic tissue and fluid

INTERACTIONS

Increase: thrombocytopenia—thiazide diuretics

Increase: potassium levels—potassium-sparing diuretics, potassium supplements

Increase: hypoglycemic response—sulfonylurea agents

S

Increase: anticoagulant effects—oral anticoagulants
Increase: levels of dofetilide
Increase: crystalluria—methenamine
Increase: bone marrow depressant effects—methotrexate
Decrease: hepatic clearance of phenytoin, CYP2C9, CYP3A4 inducers
Decrease: response—cycloSPORINE
Drug/Lab Test
Increase: creatinine, bilirubin
Decrease: HB, platelets

NURSING CONSIDERATIONS

Assess:
• I&O ratio; note color, character, pH of urine if product administered for UTI
• Renal studies: BUN, creatinine, urinalysis with long-term therapy
• Type of infection; obtain C&S before starting therapy
• Blood dyscrasias, skin rash, fever, sore throat, bruising, bleeding, fatigue, joint pain
• **Allergic reaction:** rash, dermatitis, urticaria, pruritus, dyspnea, bronchospasm; product should be discontinued at 1st sign of rash; AIDS patients more susceptible, identify if patient has a sulfa allergy
Pregnancy/breastfeeding: use only if benefits outweigh fetal risk, may be harmful to fetus, do not breastfeed
Evaluate:
• Therapeutic response: absence of pain, fever; C&S negative
Teach patient/family:
• To take each oral dose with full glass of water to prevent crystalluria; to drink 8-10 glasses of water/day; to take product on an empty stomach 1 hr before meals, 2 hr after meals, not to treat diarrhea with OTC product, to notify health care professional if diarrhea lasts more than 2 days
• To complete full course of treatment to prevent superinfection
• To avoid sunlight; to use sunscreen to prevent burns
• To avoid OTC medications (aspirin, vit C) unless directed by prescriber
• To notify prescriber if skin rash, sore throat, fever, mouth sores, unusual bruising, bleeding occur; to notify prescriber of CNS effects: anxiety, depression, hallucinations, seizures

sulfaSALAzine (Rx)

(sul-fa-sal'a-zeen)
Azulfidine, Azulfidine EN-tabs
Func. class.: GI antiinflammatory, antirheumatic (DMARD)
Chem. class.: Sulfonamide

Do not confuse:
sulfaSALAzine/sulfiSOXAZOLE

ACTION: Prodrug to deliver sulfapyridine and 5-aminosalicylic acid to colon; antiinflammatory in connective tissue also

USES: Ulcerative colitis; RA; juvenile RA (Azulfidine EN-tabs)
Unlabeled uses: Crohn's disease

CONTRAINDICATIONS: Pregnancy at term, children <2 yr; hypersensitivity to sulfonamides or salicylates; intestinal, urinary obstruction; porphyria
Precautions: Pregnancy, breastfeeding, impaired renal/hepatic function, severe allergy, bronchial asthma, megaloblastic anemia

DOSAGE AND ROUTES

Ulcerative colitis
• **Adult: PO** 3-4 g/day in divided doses; maintenance 2 g/day in divided doses q6hr
• **Child ≥2 yr: PO** 40-60 mg/kg/day in 4-6 divided doses, then 30 mg/kg/day in 4 doses, max 2 g/day
Rheumatoid arthritis
• **Adult: PO** 0.5-1 g/day, then increase daily dose by 500 mg/wk to 2 g/day in 2-3 divided doses
Juvenile rheumatoid arthritis
• **Child ≥6 yr: PO** 30-50 mg/kg/24 hr in 2 divided doses
Renal dose
• Modify dose based on renal impairment, response
Crohn's disease (unlabeled)
• **Adult: PO** 1 g/15 kg, max 5 g/day

Available forms: Tabs 500 mg; oral susp 250 mg/5 mL; del rel tabs 500 mg
Administer:
• Do not break, crush, chew del rel tabs
• With full glass of water to maintain adequate hydration; increase fluids to 2 L/day to decrease crystallization in kidneys
• Total daily dose in evenly spaced doses and after meals to help minimize GI intolerance
• Store in tight, light-resistant container at room temperature

SIDE EFFECTS

CNS: Headache, neuropathy
GI: *Nausea, vomiting, abdominal pain,* stomatitis, **hepatitis,** glossitis, pancreatitis, diarrhea
GU: Orange-colored urine
HEMA: **Leukopenia, neutropenia, thrombocytopenia, agranulocytosis, hemolytic anemia**
INTEG: Rash, dermatitis, urticaria, **Stevens-Johnson syndrome,** erythema, photosensitivity
SYST: **Anaphylaxis**

PHARMACOKINETICS

PO: Partially absorbed; peak 1½-6 hr; duration 6-12 hr; half-life 6 hr; excreted in urine as sulfaSALAzine (15%), sulfapyridine (60%), 5-aminosalicylic acid, metabolites (20%-33%); excreted in breast milk; crosses placenta

INTERACTIONS

Increase: leukopenia risk—thiopurines (azaTHIOprine, mercaptopurine)
Increase: hypoglycemic response—oral hypoglycemics
Increase: anticoagulant effects—oral anticoagulants
Decrease: effect of cycloSPORINE, digoxin, folic acid
Decrease: renal excretion of methotrexate
Drug/Food
Decrease: iron/folic acid absorption
Drug/Lab Test
False positive: urinary glucose test

NURSING CONSIDERATIONS

Assess:
• **Ulcerative colitis, proctitis, other inflammatory bowel disease:** character, amount, consistency of stools; abdominal pain, cramping, blood, mucus
• **Rheumatoid arthritis:** assess mobility, joint swelling, pain, ability to complete activities of daily living
• Renal studies: BUN, creatinine, urinalysis (long-term therapy)
• **Blood dyscrasias:** skin rash, fever, sore throat, bruising, bleeding, fatigue, joint pain; monitor CBC before therapy and q3mo
• **Allergic reaction:** rash, dermatitis, urticaria, pruritus, dyspnea, bronchospasm; identify sulfa, salicylate allergy
• **Pregnancy/breastfeeding:** use only if clearly needed; cautious use in breastfeeding, excreted in breast milk
Evaluate:
• Therapeutic response: absence of fever, mucus in stools, pain in joints
Teach patient/family:
• To take each oral dose with full glass of water to prevent crystalluria
• That contact lenses, urine, skin may be yellow-orange
• To avoid sunlight or use sunscreen to prevent burns
• To notify prescriber of skin rash, sore throat, fever, mouth sores, unusual bruising, bleeding
• That decreased sperm production may occur; that it resolves after completion of medication
• To notify prescriber if enteric-coated tablets are seen in stool; discontinue if present

SUMAtriptan (Rx)
(soo-ma-trip′tan)
Imitrex, Imitrex STAT-Dose, Sumavel DosePro, Onzetra Xsail, Tosymra, Zembrance SymTouch
Func. class.: Antimigraine agent
Chem. class.: 5-HT_1B/D receptor agonist, abortive agent, triptan

Do not confuse:
SUMAtriptan/somatropin

ACTION: Binds selectively to the vascular 5-HT_1B/D receptor subtype; exerts antimigraine effect; causes vasoconstriction in cranial arteries

USES: Acute treatment of migraine with/without aura and cluster headache

CONTRAINDICATIONS: Angina pectoris, history of MI, documented silent ischemia, Prinzmetal's angina, ischemic heart disease, IV use, concurrent ergotamine-containing preparations, uncontrolled hypertension, hypersensitivity, basilar or hemiplegic migraine
Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, postmenopausal women, men >40 yr, risk factors for CAD, hypercholesterolemia, obesity, diabetes, impaired renal/hepatic function, overuse

DOSAGE AND ROUTES

• **Adult: SUBCUT** ≤6 mg; may repeat in 1 hr; max 12 mg/24 hr; **PO** 25 mg with fluids, if no relief in 2 hr, give another dose, max 200 mg/day; **NASAL** single dose of 5, 10, or 20 mg in 1 nostril, may repeat in 2 hr, max 40 mg/24 hr; 1 puff each nostril q2hr; **nasal powder** 11 mg in each nostril may repeat after 2 hr

Hepatic dose

• **Adult: PO** 25 mg; if no response after 2 hr, give ≤50 mg

Available forms: Inj 4, 6 mg/0.5 mL; tabs 25, 50, 100 mg; nasal spray 5 mg/100 mcl-U; dose spray device 20 mg/100 mcl-U

Administer:

PO route

• Swallow tabs whole; do not break, crush, or chew

• Take tabs with fluids as soon as symptoms appear; may take a 2nd dose >4 hr; max 200 mg/24 hr

SUBCUT route

• SUBCUT only just below the skin; avoid IM or IV administration; use only for actual migraine attack

• Give 1st dose supervised by medical staff to patients with coronary artery disease or those at risk for CAD

Nasal route

• May give as 2 sprays of 5 mg in 1 nostril or 1 spray in each nostril (10 mg)

Nasal powder: fully press and release button, insert into nostril with tight seal, rotate mouthpiece to place in mouth, blow forcefully to deliver powder, discard nosepiece repeat

SIDE EFFECTS

CNS: *Tingling, hot sensation, burning, feeling of pressure, tightness, numbness, dizziness, sedation,* headache, anxiety, fatigue, cold sensation
CV: *Flushing,* MI, hypo/hypertension
EENT: Throat, mouth, nasal discomfort; vision changes
GI: Abdominal discomfort
INTEG: Inj-site reaction, sweating
MS: *Weakness, neck stiffness,* myalgia
RESP: Chest tightness, pressure

PHARMACOKINETICS

Onset of pain relief 10 min-2 hr, peak 2-4 hr, duration 24 hr; nasal onset 60 min, peak 2 hr; 10%-20% protein binding; metabolized in liver (metabolite); excreted in urine, feces; nasal spray half-life 2 hr

INTERACTIONS

Increase: vasospastic effects: ergot, ergot derivatives
Increase: serotonin syndrome—SSRIs, SNRIs, serotonin-receptor agonists, sibutramine
Increase: SUMAtriptan effect—MAOIs
Drug/Herb
• **Increase:** serotonin syndrome: SAM-e, St. John's wort

NURSING CONSIDERATIONS

Assess:

• **Migraine:** type of pain, aura; alleviating, aggravating factors; sensitivity to light, noise

• Increase: **serotonin syndrome:** delirium, coma, agitation, diaphoresis, hypertension, fever, tremors; may resemble neuroleptic malignant syndrome in patients taking SSRIs, SNRIs
• B/P; signs, symptoms of coronary vasospasms, ECG
• Tingling, hot sensation, burning, feeling of pressure, numbness, flushing, inj-site reaction
• Stress level, activity, recreation, coping mechanisms
• Neurologic status: LOC, blurring vision, nausea, vomiting, tingling in extremities preceding headache
• Ingestion of tyramine foods (pickled products, beer, wine, aged cheese), food additives, preservatives, colorings, artificial sweeteners, chocolate, caffeine, which may precipitate these types of headaches
• Renal function, urinary output
• Quiet, calm environment with decreased stimuli: noise, bright light, excessive talking
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; avoid breastfeeding

Evaluate:
• Therapeutic response: decrease in frequency, severity of migraine

Teach patient/family:
• To report chest pain, tightness; sudden, severe abdominal pain; swelling of eyelids, face, lips; skin rash to prescriber immediately
• To notify prescriber if pregnancy is planned or suspected; to use contraception while taking product
• **Risk of medication overuse:** do not use for abortive headache treatments more than 10 days/mo (ergotamines, triptans, opioids, or combinations)
• **Nasal spray:** to use 1 spray in 1 nostril; may repeat if headache returns; not to repeat if pain continues after 1st dose
• To have a dark, quiet environment
• To avoid hazardous activities if dizziness, drowsiness occur
• To avoid alcohol; may increase headache
• To use SUBCUT inj technique, nasal route if prescribed
• That product does not reduce number of migraines; to be used for acute migraine; to use as symptoms occur
• **Nasal powder:** Use in each nostril using nosepiece and mouthpiece
• **SUBCUT:** provide pamphlet from manufacturer, review with patient

sumatriptan/naproxen (Rx)

(soo-ma-trip′tan/na-proks′-en)

Treximet

Func. class.: Antimigraine, NSAIDs

USES: Acute treatment of migraine with/without aura in adults/child ≥12 yr

CONTRAINDICATIONS

Hypersensitivity to sumatriptan, naproxen, or any component; asthma, urticaria, or allergic-type reactions after taking aspirin or other NSAIDs, angina pectoris, MI, Prinzmetal angina, CABG; Wolff-Parkinson-White syndrome stroke, hemiplegic/basilar migraine, PVD, uncontrolled hypertension; use within 24 hr of ergots or another 5-HT_1 agonist; use within 2 wk of a MAOI-A; third trimester of pregnancy; severe hepatic disease

DOSAGE AND ROUTES

• **Adult: PO** Sumatriptan 85 mg/naproxen 500 mg, may repeat after 2 hr, max Sumatriptan 170 mg/naproxen 1000 mg/24 hr

Available forms: Tabs 85 mg/500 mg

S

⚠ HIGH ALERT

SUNItinib (Rx)

(soo-nit′-in-ib)

Sutent

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Multitargeted Protein-tyrosine kinase inhibitor

ACTION: Inhibits multiple receptor tyrosine kinases (RTKs); some are responsible for tumor growth

USES: Gastrointestinal stromal tumors (GIST) after disease progression or intolerance to imatinib; advanced renal carcinoma, pancreatic neuroendocrine tumors (pNET) in patients with unresectable locally advanced/metastatic disease

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity
Precautions: Children, geriatric patients, active infections, QT prolongation, torsades de pointes, stroke, heart failure

Black Box Warning: Hepatotoxicity

DOSAGE AND ROUTES

Gastrointestinal stromal tumors (GIST)/renal cell cancer

• **Adult: PO** 50 mg/day × 4 wk, then 2 wk off; may increase or decrease dose by 12.5 mg; if administered with CYP3A4 inducers, give 87.5 mg/day; if given with CYP3A4 inhibitors, give 37.5 mg/day

Pancreatic neuroendocrine (pNET)

• **Adult: PO** 37.5 mg daily continuously, increase or decrease by 12.5 mg based on tolerance, avoid potent CYP3A4 inhibitors/inducers; if used with CYP3A4 inhibitors, decrease SUNItinib dose to minimum of 25 mg/day; if used with CYP3A4 inducers, increase SUNItinib to max 62.5 mg/day

Available forms: Caps 12.5, 25, 37.5, 50 mg

Administer:

• With meal and large glass of water to decrease GI symptoms
• Store at 25°C (77°F)

SIDE EFFECTS

CNS: Headache, dizziness, insomnia, fatigue, reversible posterior leukoencephalopathy syndrome (RPLS)
CV: Hypertension, left ventricular dysfunction, QT prolongation, torsades de pointes, thrombotic microangiopathy, cardiac arrest, thromboembolism
ENDO: Hypo/hyperthyroidism
GI: *Nausea,* hepatotoxicity, vomiting, dyspepsia, *anorexia, abdominal pain,* altered taste, *constipation,* stomatitis, mucositis, pancreatitis, diarrhea, GI bleeding/perforation
GU: Nephrotic syndrome
HEMA: Neutropenia, thrombocytopenia, hemolytic anemia, leukopenia
INTEG: *Rash, yellow skin discoloration,* depigmentation of hair or skin, alopecia, necrotizing fasciitis, pyoderma gangrenosum
MS: Pain, arthralgia, myalgia, myopathy, rhabdomyolysis
RESP: Cough, dyspnea, pulmonary embolism
SYST: Bleeding, electrolyte abnormalities, hand-foot syndrome, serious infection, tumor lysis syndrome

PHARMACOKINETICS

Protein binding 95%; metabolized by CYP3A4; excreted in feces, small amount in urine; peak levels 6-12 hr; half-life 40-60 hr (SUNItinib); active metabolite 80-110 hr

INTERACTIONS

Increase: microangiopathic hemolytic anemia—bevacizumab; avoid concurrent use
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)
Increase: hepatotoxicity—acetaminophen
Increase: plasma concentrations of simvastatin, calcium channel blockers, warfarin; avoid use with warfarin, use low-molecular-weight anticoagulants instead
Decrease: SUNItinib concentrations—dexamethasone, phenytoin, carBAMazepine, rifAMPin, PHENobarbital

Drug/Herb

Decrease: SUNItinib concentration—St. John's wort

Drug/Food

Increase: plasma concentrations—grapefruit juice

NURSING CONSIDERATIONS

Assess:

- ANC and platelets; if ANC <1 × 10^9/L and/or platelets <50 × 10^9/L, stop until ANC >1.5 × 10^9/L and platelets >75 × 10^9/L; if ANC <0.5 × 10^9/L and/or platelets <10 × 10^9/L, reduce dosage by 200 mg; if cytopenia continues, reduce dosage by another 100 mg; if cytopenia continues for 4 wk, stop product until ANC ≥1 × 10^9/L
- **CV status:** hypertension, QT prolongation can occur; monitor left ventricular ejection fraction (LVEF), MUGA at baseline, periodically; ECG
- **Renal toxicity:** if bilirubin >3 × IULN, withhold SUNItinib until bilirubin levels return to <1.5 × IULN; electrolytes

Black Box Warning: Hepatotoxicity: monitor LFTs before treatment, monthly; if liver transaminases >5 × IULN, withhold SUNItinib until transaminase levels return to <2.5 × IULN

- **Nephrotic syndrome:** monitor urinalysis and proteinuria
- **Hand-foot syndrome:** redness, swelling, numbness, desquamation on palms and soles of the feet may occur days to months after use; if these occur, product should be discontinued
- **HF:** adrenal insufficiency in those experiencing trauma
- **QT prolongation:** those taking CYP3A4 inhibitors, those with sinus bradycardia, cardiac disease or electrolyte disturbances are at greater risk; monitor electrolytes, especially magnesium, potassium; monitor ECG
- **Osteonecrosis of the jaw:** dental disease or use of bisphosphonates may increase risk; invasive dental procedures should be avoided
- **Tumor lysis syndrome:** usually in renal cell carcinoma or GI stromal tumor; may be fatal, monitor for hyperkalemia, severe muscle weakness, hypocalcemia, hyperphosphatemia, myopathy, hyperuricemia; monitor serum electrolytes before each dose
- Bleeding: epistaxis; rectal, gingival, upper GI, genital, wound bleeding; tumor-related hemorrhage may occur rapidly
- Nutritious diet with iron, vitamin supplement, low fiber, few dairy products
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: decrease in size of tumor

Teach patient/family:

- **To report adverse reactions immediately:** SOB, bleeding
- About reason for treatment, expected result
- That many adverse reactions may occur: high B/P, bleeding, mouth swelling, taste change, skin discoloration, depigmentation of hair/skin
- To avoid persons with known upper respiratory infections; that immunosuppression is common
- To avoid grapefruit juice
- To report if pregnancy is planned or suspected or if breastfeeding

⚠ HIGH ALERT

suvorexant (Rx)

(soo′voe-rex′ant)

Belsomra

Func. class.: Psychotropic—sedative/hypnotic, anxiolytic

Chem. class.: Orexin receptor antagonist

Controlled Substance Schedule IV

S

ACTION: Suvorexant alters the signaling of neurotransmitters called orexins, which are responsible for regulating the sleep-wake cycle

USES: The treatment of insomnia characterized by difficulties with sleep onset and/or sleep maintenance

CONTRAINDICATIONS:
Narcolepsy, hypersensitivity

Precautions: Preexisting respiratory disease, COPD, breastfeeding, pregnancy, labor, geriatrics, hepatic disease, sleep apnea, substance abuse, alcohol use, suicidal ideation, mental changes, depression

DOSAGE AND ROUTES
• **Adult: PO** 10 mg every night within 30 min of going to bed, and with ≥7 hr remaining before the planned time of awakening, may increase to maximum 20 mg every night

Available forms: Tabs 5, 10, 15, 20 mg

Administer:
• Give 30 min before bedtime
• Effect may be delayed if taken with food, take on empty stomach for faster effect

SIDE EFFECTS
CNS: Amnesia, suicidal ideation, anxiety, dizziness, drowsiness, hallucinations, headache, memory impairment, sleep paralysis

GI: Diarrhea

PHARMACOKINETICS
High protein binding, peak 2 hr, half-life 12 hr, excreted by feces (66%), urine (23%)

INTERACTIONS
Avoid use with CYP3A inhibitors

Increase: effects of both products—CNS depressants

Decrease: suvorexant effect—CYP3A inducers

Drug/Herb:

Increase: suvorexant effect—kava, valerian, melatonin

NURSING CONSIDERATIONS
Assess:
• **Sleeping patterns:** waking in the night, inability to fall asleep or stay asleep, amnesia
• **Beers:** avoid in older adults with delirium or at high risk for delirium
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: normalized sleeping patterns

Teach patient/family:
• To use on an empty stomach for faster effect
• To report immediately suicidal thoughts/behaviors or if depression worsens
• To avoid use with other products unless approved by prescriber
• To notify provider if pregnancy is planned or suspected, or if breastfeeding
• That complex sleep behaviors may occur (sleep driving, sleep eating)
• That daytime drowsiness or dizziness may occur; to avoid hazardous activities until response is known
• To avoid grapefruit juice

tacrolimus (Rx) (PO, IV) (NTI)

(tak-row'lim-us)

Advagraf, Envarsus ER, Envarsus PA, Astagraf XL, Prograf

tacrolimus (TOPICAL) (Rx)

Protopic

Func. class.: Immunosuppressant, calcineurin inhibitor

Chem. class.: Macrolide, calcineurin inhibitor

Do not confuse:
Prograf/PROzac Proscar
tacrolimus/tamsulosin

ACTION: Produces immunosuppression by inhibiting T-lymphocytes

USES: Organ transplants to prevent rejection; **topical:** atopic dermatitis

CONTRAINDICATIONS: Children <2 yr (topical); hypersensitivity to this product or to some kinds of castor oil (IV); long-term use (topical)

Precautions: Pregnancy, breastfeeding, severe renal/hepatic disease; diabetes mellitus, hyperkalemia, hyperuricemia, hypertension, acute bronchospasm, African-American patients, heart failure, seizures, QT prolongation

Black Box Warning: Children <12, lymphomas, infection, neoplastic disease, neonates, infants, requires a specialized setting, requires an experienced clinician; liver transplant (ext rel)

DOSAGE AND ROUTES—NTI

Kidney transplant rejection prophylaxis

• **Adult: IV** 0.03-0.05 mg/kg/day as **CONT INFUSION,** begin within 24 hr of transplantation, delay until renal function has recovered; **PO** 0.2 mg/kg/day in 2 divided doses q12hr with azaTHIOprine and corticosteroids, may give first dose within 24 hr of transplantation, delay until renal function has recovered; **EXT REL CAPS** 0.1 mg/kg daily preoperatively on empty stomach, 1st dose 12 hr before reperfusion and 0.2 mg/kg once daily postoperatively, 1st dose within 12 hr of reperfusion but ≥4 hr after preoperative dose in combination with mycophenolate and corticosteroids

Liver transplant rejection prophylaxis

• **Adult: PO** 0.1-0.15 mg/kg/day in 2 divided doses q12hr; give no sooner than 6 hr after transplantation; **IV** 0.03-0.05 mg/kg/day as **CONT INFUSION;** give no sooner than 6 hr after transplantation

Heart transplant rejection prophylaxis

• **Adult: PO** 0.075 mg/kg/day in 2 divided doses q12hr; give no sooner than 6 hr after transplantation; **IV** 0.01 mg/kg/day as **CONT INFUSION;** give no sooner than 6 hr after transplantation

Atopic dermatitis

• **Adult: TOP** use 0.03% or 0.1% ointment; apply bid × 7 days after clearing of signs

• **Child ≥2-15 yr: TOP** 0.03% ointment; apply bid × 7 days after clearing of signs

Graft-versus-host disease (orphan drug) (unlabeled)

• **Adult/adolescent: IV** 0.1 mg/kg/day in 2 divided doses given with other immunosuppressants or **PO** 0.3 mg/kg/day in 2 divided doses

• **Child: CONT IV INFUSION** 0.1 mg/kg/day

Available forms: Inj 5 mg/mL; caps 0.5, 1, 5 mg; ext rel cap (Astragraf XL) 0.5, 1, 3, 5 mg; ointment 0.03%, 0.1%; ext rel cap (Envarsus XR) 0.75, 1.4 mg

Administer

PO route

Conventional immediate-release capsules

• Give consistently with or without food

Extended-release capsules (Astagraf XL)
- Take in the AM, preferably on an empty stomach at least 1 hr before a meal or at least 2 hr after a meal
- Swallow whole; do not chew, divide, or crush capsules
- Do not administer with an alcoholic beverage
- If a dose is missed up to 14 hr from the scheduled time, take the dose; if a dose is missed at >14 hr from the scheduled time, skip the dose and take the next dose at the regularly scheduled time

Extended-release tablets (Envarsus XR)
- Take in the AM, preferably on an empty stomach at least 1 hr before a meal or at least 2 hr after a meal
- Swallow whole; do not chew, divide, or crush capsules
- Do not administer with an alcoholic beverage
- If a dose is missed up to 15 hr from the scheduled time, take the dose; if a dose is missed at >15 hr from the scheduled time, skip the dose and take the next dose at the regularly scheduled time

Topical route
- Apply thin layers to affected skin only; rub in gently
- Do not use occlusive dressings
- Use on small area of skin
- Topical ointment carries risk of developing cancer; use only when other options have failed

IV route
- Visually inspect for particulate matter and discoloration before use
- Because of the risk of hypersensitivity reactions, IV use should be reserved for those who cannot take tacrolimus orally. PO should replace IV therapy as soon as possible
- Observe patients for 30 min after beginning the infusion and frequently thereafter for possible hypersensitivity reactions
- Do not mix or infuse with solutions with a pH of 9 or more (acyclovir or ganciclovir)

Dilution
- The concentrate for injection must be diluted with NS or D_5W injection to a final concentration between 0.004 mg/mL and 0.02 mg/mL
- Prepare solutions in polyethylene or glass containers to allow storage for 24 hr; do not use polyvinyl chloride (PVC) containers, stability is decreased and the polyoxyl 60 hydrogenated castor oil in the formulation may leach phthalates from PVC containers

Continuous IV infusion
- Give through non-PVC tubing to minimize the potential for drug adsorption onto the tubing
- Infuse the required daily dose of the diluted IV solution over 24 hr

Y-site compatibilities: Alemtuzumab, alfentanil, amifostine, amikacin, aminophylline, amiodarone, amphotericin B colloidal, amphotericin B liposome, anidulafungin, argatroban, atracurium, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium acetate/chloride/gluconate, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefoperazone, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium, DOXOrubicin hydrochloride, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, foscarnet, fosphenytoin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, imipenem/cilastatin, inamrinone, insulin,

isoproterenol, ketorolac, labetalol, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, meropenem, mesna, metaraminol, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, micafungin, midazolam, milrinone, mitoMYcin, mitoXANTRONE, mivacurium, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pancuronium, PEMEtrexed, penicillin G, pentamidine, pentazocine, perphenazine, phentolamine, phenylephrine, piperacillin/tazobactam, potassium chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quinupristin/dalfopristin, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphates, streptozocin, succinylcholine, SUFentanil, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: *Tremors, headache,* insomnia, paresthesia, chills, fever, seizures, BK virus–associated nephropathy, coma, posttransplant lymphoproliferative disorder (PTLD)

CV: Hypertension, myocardial hypertrophy, prolonged QTc, cardiomyopathy

EENT: Blurred vision, photophobia

GI: Nausea, vomiting, diarrhea, constipation, GI bleeding, GI perforation

GU: UTIs, albuminuria, hematuria, proteinuria, renal failure, hemolytic uremic syndrome

HEMA: Anemia, leukocytosis, thrombocytopenia, purpura

INTEG: Rash, flushing, itching, alopecia

META: Hyperglycemia, hyperuricemia, hypokalemia, hypomagnesemia, hyperkalemia

MS: Back pain, muscle spasms

RESP: Pleural effusion, atelectasis, dyspnea, interstitial lung disease

SYST: Anaphylaxis, infection, malignancy

PHARMACOKINETICS

PO: Extensively metabolized, half-life 10 hr, 75% protein binding

INTERACTIONS

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone); do not use together

Increase: toxicity—aminoglycosides, CISplatin, cycloSPORINE

Increase: blood levels—antifungals, calcium channel blockers, cimetidine, danazol, mycophenolate, mofetil

Decrease: blood levels—carBAMazepine, PHENobarbital, phenytoin, rifamycin

Decrease: effect of live virus vaccines

Drug/Herb

Decrease: immunosuppression—astragalus, echinacea, melatonin, ginseng, St. John's wort

Drug/Food

Increase: effect—grapefruit juice

Decreased absorption: food

Drug/Lab Test

Increase: glucose, BUN, creatinine

Increase or decrease: LFTs, potassium

Decrease: magnesium, HB, platelets

NURSING CONSIDERATIONS

Assess:

- **Blood studies:** HB, WBC, platelets during treatment monthly; if leukocytes $<3000/mm^3$ or platelets $<100,000/mm^3$, discontinue or reduce; decreased hemoglobin level may indicate bone marrow suppression
- **Hepatic studies:** alk phos, AST, ALT, amylase, bilirubin; for hepatotoxicity: dark urine, jaundice, itching, light-colored stools; product should be discontinued
- **Atopic dermatitis:** Check lesions baseline and during treatment

• Assess for castor oil allergy (HCO-60); do not use if present
• Serum creatinine/BUN, serum electrolytes, lipid profile, serum tacrolimus concentration
• **Anaphylaxis:** rash, pruritus, wheezing, laryngeal edema; stop infusion, initiate emergency procedures
• **QT prolongation:** ECG, ejection fraction; assess for chest pain, palpitations, dyspnea
• **PTLD:** Malaise, fever, weight loss, night sweats, decreased appetite can be fatal, allogenic hematopoietic stem cell transplant (HSCT) may be required
• **Blood level monitoring:** maintain tacrolimus whole blood (7-20 ng/mL) then 5-15 ng/mL for 1 yr in kidney transplant; 1-3 mo maintain whole blood at 8-20 ng/mL, then 6-18 ng/mL 3-18 mo after transplant (heart)

Black Box Warning: Liver transplant: ext rel product should not be used because of increased female mortality rate

Black Box Warning: Specialized care setting, experienced clinician: only use when equipped and staffed with adequate supportive services and by those experienced in immunosuppressive therapy and organ transplantation

Black Box Warning: Children, infants, neonates: not approved use of ointment in those <2 yr, ext rel in those <16 yr; not approved for pediatric kidney/heart transplant

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:
• Therapeutic response: absence of graft rejection; immunosuppression in patients with autoimmune disorders

Teach patient/family:

PO route
• To report fever, rash, severe diarrhea, chills, sore throat, fatigue; that serious infections may occur; to report clay-colored stools, cramping (hepatotoxicity), nephrotoxicity, signs of diabetes mellitus
• To avoid exposure to natural or artificial sunlight
• Not to breastfeed while taking product
• That repeated lab tests will be needed during treatment
• To avoid vaccines
• Not to use with alcohol, grapefruit, grapefruit juice
• **Organ rejection:** B/P, provide treatment for hypertension to help prevent rejection

Black Box Warning: To report symptoms of lymphoma, skin cancer; to avoid crowds, persons with known infections to reduce risk for infection; to avoid eating raw shellfish

Topical route
• To stop using topical product when atopic dermatitis is resolved; not to use >6 wk if symptoms do not improve; not to shower or swim after applying
• To report if pregnancy is planned or suspected

tadalafil (Rx)

(tah-dal'a-fil)

Adcirca, Cialis, Alyq

Func. class.: Impotence agent

Chem. class.: Phosphodiesterase type 5 inhibitor

ACTION: Inhibits phosphodiesterase type 5 (PDE5); enhances erectile function by increasing the amount of cGMP, which causes smooth muscle relaxation and increased blood flow into the corpus cavernosum; improves erectile function for up to 36 hr

USES: Treatment of erectile dysfunction (Cialis), benign prostatic hyperplasia (BPH) with or without erectile dysfunction, pulmonary arterial hypertension (PAH) (Adcirca only)

CONTRAINDICATIONS: Newborns, children, women, hypersensitivity, patients taking organic nitrates either regularly and/or intermittently, patients taking any α-adrenergic antagonist other than 0.4 mg once-daily tamsulosin

Precautions: Pregnancy, anatomic penile deformities, sickle cell anemia, leukemia, multiple myeloma, CV/renal/hepatic disease, bleeding disorders, active peptic ulcer, prolonged erection

DOSAGE AND ROUTES

Erectile dysfunction

• **Adult: PO (Cialis)** 10 mg taken before sexual activity; dose may be reduced to 5 mg or increased to max 20 mg; usual max dosing frequency is 1×/day; once-daily dosing 2.5 mg/day at same time each day

BPH

• **Adult: PO** 5 mg daily at the same time every day

Pulmonary hypertension (Adcirca, Alyq)

• **Adult: PO** 40 mg (two 20-mg tablets) daily with or without food

Concomitant use with ketoconazole, itraconazole, ritonavir

• **Adult: PO** max 10 mg q72hr

Renal dose (Adcirca)

• **Adult: PO** CCr 51-80 mL/min: no adjustment for erectile dysfunction, 20 mg/day initially for pulmonary hypertension; CCr 31-50 mL/min, 5 mg/day, max 10 mg q48hr; CCr <30 mL/min, max 5 mg q72hr

Hepatic dose (Adcirca)

• **Adult: PO** (Child-Pugh A, B) max 10 mg/day or 20 mg/day (pulmonary hypertension) max 40 mg/day; (Child-Pugh C) not recommended

Available forms: Tabs (Cialis) 2.5, 5, 10, 20 mg; tabs (Adcirca Alyq) 20 mg

Administer:

• Product should not be used with nitrates in any form

• **Erectile dysfunction:** give before sexual activity; do not use more than 1×/day

• **Pulmonary hypertension:** give Adcirca, Alyq with/without meals

SIDE EFFECTS

CNS: *Headache, flushing, dizziness,* seizures, transient global amnesia

CV: Hypotension, QT prolongation

INTEG: Stevens-Johnson syndrome, exfoliative dermatitis, urticaria

MISC: Back pain/myalgia, *dyspepsia, nasal congestion, UTI,* blurred vision, changes in color vision, *diarrhea,* pruritus, priapism, nonarteritic ischemic optic neuropathy (NAION), hearing loss

PHARMACOKINETICS

Rapidly absorbed; metabolized by liver by CYP3A4; terminal half-life 17.5 hr; peak ½-6 hr; excreted primarily as metabolites in feces, urine; excreted 61% in feces, 36% in urine; 94% protein bound; rate and extent of absorption not influenced by food

INTERACTIONS

Do not use with nitrates because of unsafe drop in B/P, which could result in MI or stroke

Increase: tadalafil levels—itraconazole, ketoconazole, ritonavir (although not studied, may also include other HIV protease inhibitors)

Decrease: B/P—alcohol, α-blockers, amLODIPine, angiotensin II receptor blockers, enalapril

Decrease: effects of tadalafil—bosentan, antacids

Drug/Food

Increase: tadalafil effect—grapefruit

NURSING CONSIDERATIONS

Assess:

• **Cialis:** underlying cause of erectile dysfunction before treatment; use of organic nitrates that should not be used with this product; any severe loss of vision while taking this or any similar products

• **BPH:** urinary hesitancy, poor stream, dribbling baseline and periodically

• **Adcirca, Alyq:** hemodynamic parameters to exercise tolerance at baseline and periodically

T

• **Respiratory changes:** dyspnea, wheezing
• **CV status:** B/P, angina, palpitation, HR, edema, dizziness
• **Pregnancy/breastfeeding:** use only if clearly needed (Adcirca only); Cialis is not indicated for women; not used in breastfeeding
• **Beers:** use with caution in older adults; may exacerbate syncope; monitor frequently for syncope

Evaluate:
• Therapeutic response: ability to engage in sexual intercourse, improvement in exercise ability in pulmonary hypertension

Teach patient/family:
• To take 1 hr before sexual activity
• Not to drink large amounts of alcohol
• To discuss with provider all OTC, Rx, herbals, supplements taken
• That product does not protect against sexually transmitted diseases, including HIV
• That product has no effect in the absence of sexual stimulation; to seek medical help if erection lasts >4 hr
• To notify physician about all medicines, vitamins, herbs being taken, especially ritonavir, indinavir, ketoconazole, itraconazole, erythromycin, nitrates, α-blockers; that tadalafil is contraindicated for use with α-blockers except 0.4 mg/day tamsulosin
• To notify prescriber immediately and to stop taking product if vision, hearing loss occurs or if erection lasts >4 hr or if chest pain occurs

tafamidis (Rx)

(ta-fam′id-is)
Vyndamax, Vyndaqel
Func. class.: Metabolic agent

USES: Treatment of the cardiomyopathy of wild-type/hereditary transthyretin-mediated amyloidosis to reduce mortality and hospitalization

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Amyloid cardiomyopathy
• **Adult: PO Vyndamax:** 61 mg daily; **Vyndaqel:** 80 mg daily

Available forms: Capsules 20 mg (tafamidis meglumine); capsules 61 mg (tafamidis)

tafenoquine (Rx)

(ta fen′oh-kwin)
Krintafel, Arakoda
Func. class.: Antimalarial
Chem. class.: 8-aminoquinoline

ACTION: Activity against the preerythrocytic liver stages of the parasite prevents the development of the erythrocytic forms, which are responsible for malarial relapse; may inhibit hematin polymerization, inducing apoptotic-like death of the parasite

USES: Prevention of relapse of *Plasmodium vivax* malaria in those receiving antimalarial therapy for acute *P. vivax* infection (Krintafel); for malaria prophylaxis (Arakoda)

CONTRAINDICATIONS:

Hypersensitivity to this product or iodoquinol or primaquine, G6PD deficiency, psychosis

Precautions: Breastfeeding, contraception requirements, hepatic disease, methemoglobin reductase deficiency, pregnancy, pregnancy testing, psychiatric events, renal disease, reproductive risk

DOSAGE AND ROUTES

Prevention of relapse of *Plasmodium vivax* malaria (Krintafel)
• **Adult/adolescent ≥16 yr: PO** 300 mg as a single dose on the first or second day of the antimalarial therapy (chloroquine)

For malaria prophylaxis (Arakoda)
• **Adult: PO** 200 mg daily for 3 days before travel as loading dose, then 200 mg weekly starting 7 days after the last loading dose, continue during travel to area as maintenance, then 200 mg once at 7 days after the last maintenance dose in the wk after exit from area; may be given for ≤6 mo of continuous dosing

Administer:
- Give with food
- Swallow tablets whole. Do not break, crush, or chew
- If vomiting occurs within 1 hr after dosing, repeat the dose; do not attempt to redose more than once (prevention of relapse single-dose therapy)
- **Storage:** At room temperature in original container, protect from moisture

SIDE EFFECTS
CNS: Dizziness, headache, anxiety, abnormal dreams, insomnia, somnolence
EENT: Vortex keratopathy, photophobia
GI: Nausea, vomiting
HEMA: Decreased HB
INTEG: Angioedema, urticaria

PHARMACOKINETICS
Protein binding 99.5%, peak 12-15 hr, half-life 12-15 days (Krintafel). Affected cytochrome P450 isoenzymes and drug transporters: OCT2, MATE-1, MATE2-K

INTERACTIONS
- Avoid use with MATE (multidrug and toxin extrusion substrates) and OCT2 (organic cation transporter-2) (dofetilide, metformin); if these products must be given, monitor for toxicity

Drug/Lab:
Increase: methemoglobin, ALT, creatinine

NURSING CONSIDERATIONS
Assess
- **Malaria symptoms:** anemia, jaundice, diarrhea, sweating, vomiting, fast heart rate, low B/P; report symptoms to health care provider
- **Methemoglobinemia:** monitor for increased methemoglobin; report immediately shortness of breath, cyanosis, mental status changes; O_2 and methylene blue may be given
- **Psychiatric effects:** serious psychiatric adverse reactions have been observed in patients with a previous history of psychiatric conditions at doses higher than the approved dose; the effects may occur during or after treatment.
- **Hypersensitivity reactions:** serious hypersensitivity reactions (angioedema) may occur; these reactions may occur during or after conclusion of therapy
- **Pregnancy/breastfeeding:** avoid use in pregnancy, a pregnancy test is required in all females of reproductive potential, adequate contraception is required during and for 3 mo after last dose; infant should be tested for G6PD deficiency before breastfeeding

Evaluate:
- Therapeutic response: prevention of relapse or prevention of malaria

Teach patient/family:
- **Pregnancy/breastfeeding:** not to use during pregnancy; adequate contraception should be used during and for 3 mo after last dose; infant should have a lab test performed before breastfeeding
- To swallow tablets whole, not to split or cut; to take with food
- To report immediately dark urine or lips as these may be symptoms of hemolytic anemia
- To use sunglasses in bright light to prevent photophobia

tafluprost (Rx)
(ta′floo-prost)
Zioptan
Func. class.: Ophthalmic, antiglaucoma

USES: Reduction of IOP in open-angle glaucoma/ocular hypertension

CONTRAINDICATIONS
Hypersensitivity

DOSAGE AND ROUTES
Adult: Ophthalmic 1 drop in affected eye(s) daily in the PM
Available forms: Ophthalmic solution 0.0015%

⚠ HIGH ALERT

tagraxofusp-erzs
(tag-rax′oh-fusp)
Elzonris
Func. class.: Antineoplastic, miscellaneous

USES:
Treatment of blastic plasmacytoid dendritic cell neoplasm

CONTRAINDICATIONS
Hypersensitivity

Black Box Warning: Capillary leak syndrome

DOSAGE AND ROUTES
• **Adult/child ≥2 yr IV:** 12 mcg/kg daily on days 1-5 of a 21-day cycle; continue until disease progression or unacceptable toxicity
Available forms: Injection 1000 mcg/mL single-dose vial

⚠ HIGH ALERT

talazoparib (Rx)
(tal'a-zoe'pa-rib)
Talzenna
Func. class.: Antineoplastic
Chem. class.: Poly (ADP-ribose) polymerase (PARP) inhibitors

ACTION: An inhibitor of (ADP-ribose) (PARP) enzymes (PARP1 and PARP2) that are involved in DNA repair. Cytotoxicity involve inhibition of PARP enzymatic activity and increased formation of PARP-DNA, resulting in DNA damage, decreased cell proliferation, and apoptosis

USES: Deleterious/suspected deleterious germline BRCA-mutated (gBRCAm), HER2-negative locally advanced or metastatic breast cancer

CONTRAINDICATIONS:
Hypersensitivity
Precautions: Anemia, bone marrow suppression, breastfeeding, contraception requirements, infertility, leukemia, leukopenia, male-mediated teratogenicity, myelodysplastic syndrome, neutropenia, new primary malignancy, pregnancy, pregnancy testing, reproductive risk, thrombocytopenia

DOSAGE AND ROUTES
• **Adult: PO** 1 mg daily until disease progression or unacceptable toxicity

Renal dose
• **Adult: PO** Moderate renal impairment (CrCL 30-59 mL/min): 0.75 mg daily; severe impairment (CCl 15-29 mL/min): 0.5 mg PO daily

Hematologic toxicity dose
• Do not start until patient has adequately recovered from hematologic toxicity caused by previous therapy
• Hemoglobin <8 g/dL: Hold, monitor blood counts weekly. When HB recovers to ≥9 g/dL, reduce daily dose by 0.25 mg and resume
• Neutrophil count <1000 cells/mm^3: Hold, monitor blood counts weekly. When neutrophils recover to ≥1500 cells/mm^3, reduce daily dose by 0.25 mg and resume
• Platelet count <50,000 cells/mm^3: Hold, monitor blood counts weekly. When platelets recover to ≥75,000 cells/mm^3, reduce daily dose by 0.25 mg and resume

Nonhematologic toxicity dose
• **Grade 3 or 4:** Hold; when toxicity resolves to grade ≤1, consider reducing dose by 0.25 mg and resuming
Available forms: Caps 0.25 mg, 0.5, 0.75, 1 mg
Administer:
• Swallow capsules whole; do not open or dissolve
• May be taken with or without food
• If patient vomits or misses a dose, an additional dose should not be taken; take the next dose at regularly scheduled time
• **Storage:** At room temperature

SIDE EFFECTS
CNS: Fatigue, headache, dizziness
GI: Nausea, vomiting, diarrhea, anorexia, abdominal pain
HEMA: Anemia, neutropenia, thrombocytopenia
META: Hyperglycemia, hypocalcemia
MISC: New primary malignancy, leukemia, MDS/AML

PHARMACOKINETICS

74% protein binding, metabolized in liver, excretion in urine 68.7%, 19.8 % in feces

INTERACTIONS

- **Increase:** effect of talazoparib—P-gp inhibitors (amiodarone, carvedilol, clarithromycin, itraconazole, verapamil); monitor for potential increased adverse reactions
- **Increase:** effect of talazoparib—BCRP inhibitors; monitor for potential increased adverse reactions when coadministering

Drug/Lab:

- **Increase:** glucose, ALT, AST, alk phos
- **Decrease:** hemoglobin, platelets, neutrophils, lymphocytes, leukocytes, calcium

NURSING CONSIDERATIONS

Assess:

- Monitor CBC with differential baseline and monthly; serum creatinine; do not start until patient has recovered from hematologic toxicities from other chemotherapy
- **Pregnancy/breastfeeding:** obtain pregnancy test in females of reproductive potential before use; fetal harm may occur; effective contraception is needed during treatment and for ≥7 mo after the last dose; male patients with female partners of reproductive potential or pregnant partners should use effective contraception during treatment and for ≥4 mo following the last dose; fertility may be impaired in males

Evaluate:

- Therapeutic response: decreased growth, spread of breast cancer

Teach patient/family:

- **MDS/AML:** to report to health care provider if feeling tired or experiencing symptoms of weakness, fever, weight loss, frequent infections, bruising, bleeding easily, breathlessness, blood in urine or stool
- **Myelosuppression:** that product may cause anemia, leukopenia/neutropenia, and/or thrombocytopenia; that frequent lab testing will be required
- To take daily with or without food; that if a dose is missed, to take next normal dose at the usual time; to swallow each capsule whole; that capsules must not be opened or dissolved
- **Pregnancy/breastfeeding:** to notify health care provider if pregnant or planning to become pregnant; that females of reproductive potential must use effective contraception during treatment and for ≥7 mo after last dose; not to breastfeed during treatment or for ≥1 mo after receiving the last dose; that male patients with female partners of reproductive potential or who are pregnant should use effective contraception during treatment and for ≥4 mo after last dose
- To notify health care provider of nausea, vomiting to obtain options to lessen these side effects
- To notify health care provider of all Rx, OTC, herbals, or supplements taken; not to add or change medications unless approved by provider

⚠ HIGH ALERT

tamoxifen (Rx)

(ta-mox′i-fen)

Nolvadex-D ✱ Soltamox

Func. class.: Antineoplastic

Chem. class.: Antiestrogen hormone

T

ACTION: Inhibits cell division by binding to cytoplasmic estrogen receptors; resembles normal cell complex but inhibits DNA synthesis and estrogen response of target tissue

USES: Advanced breast carcinoma not responsive to other therapy in estrogen-receptor–positive patients (usually postmenopausal), prevention of breast cancer, after breast surgery/radiation for ductal carcinoma in situ

Unlabeled uses: Mastalgia, to reduce pain/size of gynecomastia, bipolar

disorder, infertility, osteoporosis, ovarian cancer, precocious puberty

CONTRAINDICATIONS:

Pregnancy, breastfeeding, hypersensitivity

Black Box Warning: Thromboembolic disease, endometrial cancer, stroke

Precautions: Women of childbearing age, leukopenia, thrombocytopenia, cataracts

Black Box Warning: Uterine cancer, new primary malignancy

DOSAGE AND ROUTES

Breast cancer (men/women)

• **Adult: PO** 20 mg/day for 5 yr; doses >20 mg/day, divide AM/PM

High risk for breast cancer

• **Adult: PO** 20 mg/day × 5 yr

Mastalgia/gynecomastia in men with prostate cancer (unlabeled)

• **Adult (male): PO** 20 mg/day for ≤1 yr

Available forms: Tabs 10, 20 mg; oral solution 10 mg/5 mL

Administer:

• Do not break, crush, or chew tabs

• Do not give antacid within 1-2 hr of dosing; give product after evening meal, before bedtime; give with food or fluids for GI symptoms

• Antiemetic 30-60 min before product to prevent vomiting

• Store in light-resistant container at room temperature

Oral solution: Use calibrated container, dose >20 mg/day should be divided morning and evening, may be used with food for gastric irritation

SIDE EFFECTS

CNS: *Hot flashes, headache, lightheadedness,* depression, mood changes, stroke

CV: Chest pain, stroke, fluid retention, flushing

EENT: Blurred vision (high doses)

GI: *Nausea, vomiting,* altered taste

GU: Vaginal bleeding, uterine malignancies, *altered menses, amenorrhea*

HEMA: Thrombocytopenia, leukopenia, DVT

INTEG: *Rash,* alopecia

META: Hypercalcemia

RESP: Pulmonary embolism

PHARMACOKINETICS

PO: Peak 4-7 hr, half-life 7 days (1 wk terminal), metabolized in liver, excreted primarily in feces

INTERACTIONS

Increase: risk for death from breast cancer—PARoxetine

Increase: bleeding—anticoagulants

Increase: tamoxifen levels—bromocriptine

Increase: thromboembolic events—cytotoxics

Increase: toxicity—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)

Decrease: tamoxifen levels—aminoglutethimide, rifamycin

Decrease: letrozole levels—letrozole

Decrease: tamoxifen effect—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifampin)

Decrease: tamoxifen effects—CYP2D6 inhibitors (antidepressants)

Drug/Herb

• Avoid use with St. John's wort, dong quai, black cohosh

Drug/Lab Test

Increase: serum calcium, T_4, AST, ALT, cholesterol, triglycerides, BUN

NURSING CONSIDERATIONS

Assess:

• **Labs/diagnostics:** CBC, differential, platelet count baseline and weekly, withhold product if WBC is $<3.5 \times 10$ 9/L or platelets $<100 \times 10$ 9/L notify prescriber; breast exam, mammogram, pregnancy test, bone mineral density, LFTs, serum calcium, serum lipid profile, periodic eye exams (cataracts, retinopathy), pap smear

Black Box Warning: Bleeding q8hr: hematuria, guaiac, bruising, petechiae, mucosa, or orifices

• Effects of alopecia on body image; discuss feelings about body changes

Black Box Warning: Uterine malignancies, symptoms of stroke, pulmonary embolism that may occur in women with ductal carcinoma in situ (DCIS) and women at high risk for breast cancer; monitor gynecologic exams baseline and periodically

• **Severe allergic reactions:** rash, pruritus, urticaria, purpuric skin lesions, itching, flushing
• **Bone pain:** may give analgesics; pain usually transient
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:
• **About risk of stroke and PE:** to seek medical attention immediately in case of blurred vision, headache, weakness on one side of the body (stroke signs); or chest pain, fainting, sweating, difficulty breathing (PE)
• To report any complaints, side effects to prescriber; that use may be 5 yr
• To increase fluids to 2 L/day unless contraindicated
• To wear sunscreen, protective clothing, sunglasses
• That vaginal bleeding, pruritus, hot flashes are reversible after discontinuing treatment
• To immediately report decreased visual acuity, which may be irreversible; about need for routine eye exams; that care providers should be told about tamoxifen therapy
• To report vaginal bleeding immediately
• That **tumor flare**—increase in size of tumor, increase in bone pain—may occur and will subside rapidly; that analgesics may be taken for pain
• That hair may be lost during treatment; that a wig or hairpiece may make patient feel better; that new hair may be different in color, texture
• To use nonhormonal contraception during and for 2 mo after discontinuing treatment, that premenopausal women must use mechanical birth control because ovulation may be induced

tamsulosin (Rx)

(tam-sue-lo′sen)

Flomax

Func. class.: Selective α_1-peripheral adrenergic blocker, BPH agent
Chem. class.: Sulfamoylphenethylamine derivative

Do not confuse:
Flomax/fosamax
Tamsulosin/tacrolimus/tamoxifen

ACTION: Binds preferentially to α_{1A}-adrenoceptor subtype, which is located mainly in the prostate

USES: Symptoms of benign prostatic hyperplasia (BPH)
Unlabeled Uses: Ureteral stones as adjunctive treatment

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, hepatic disease, CAD, severe renal disease, prostate cancer; cataract surgery (floppy iris syndrome)

DOSAGE AND ROUTES

BPH
• **Adult: PO** 0.4 mg/day increasing to 0.8 mg/day if required after 2-4 wk

Ureteral stones (unlabeled)
• **Adult: PO** 0.4 mg daily at bedtime up to 6 wk or expulsion of stones

Available forms: Caps 0.4 mg

Administer:
• Without regard to food
• Swallow caps whole; do not break, crush, or chew
• Give ½ hr after same meal each day
• If treatment is interrupted for several days, restart at lowest dose (0.4 mg/day)

T

• Store in tight container in cool environment

SIDE EFFECTS

CNS: *Dizziness, headache,* asthenia, insomnia
CV: Chest pain, orthostatic hypotension
EENT: Amblyopia, floppy iris syndrome
GI: Nausea, diarrhea, dysgeusia
GU: Decreased libido, abnormal ejaculation, priapism
INTEG: Rash, pruritus, urticaria
MS: Back pain
RESP: Rhinitis, pharyngitis, cough
SYST: Angioedema

PHARMACOKINETICS

Peak 4-5 hr, duration 9-15 hr, half-life 9-13 hr, metabolized in liver, excreted via urine, extensively protein bound (98%)

INTERACTIONS

Increase: B/P—prazosin, terazosin, doxazosin, α-blockers, vardenafil
Increase: toxicity—cimetidine

NURSING CONSIDERATIONS

Assess:
• **Prostatic hyperplasia:** change in urinary patterns at baseline and throughout treatment; I&O ratios, weight daily; edema; report weight gain or edema
• **Orthostatic hypotension:** monitor B/P, standing, sitting, significant fall in B/P may occur
• **Pregnancy/breastfeeding:** not to be used for women

Evaluate:
• Therapeutic response: decreased symptoms of benign prostatic hyperplasia

Teach patient/family:
• Not to drive or operate machinery for 4 hr after 1st dose or after dosage increase
• To continue to take even if feeling better
• To advise providers of all products, herbs taken
• To make position changes slowly because orthostatic hypotension may occur
• To take ½ hr after same meal each day
• To teach about priapism (rare)
• Not to crush, break, chew
• That decreased ejaculate or absence may occur; resolves after discontinuing product

⚠ HIGH ALERT

tapentadol (Rx)

(ta-pen'ta-dol)

Nucynta, Nucynta ER

Func. class.: Analgesic, misc.
Chem. class.: μ-Opioid receptor agonist

Controlled Substance Schedule II

ACTION: Centrally acting synthetic analgesic; μ-opioid agonist activity is thought to result in analgesia; inhibits norepinephrine uptake

USES: Moderate to severe pain, diabetic peripheral neuropathy

CONTRAINDICATIONS: Hypersensitivity, asthma, ileus, respiratory depression

Black Box Warning: Respiratory depression

Precautions: Pregnancy, breastfeeding, children <18 yr, increased intracranial pressure, MI (acute), severe heart disease, respiratory depression, renal/hepatic disease, GI obstruction, ulcerative colitis, sleep apnea, seizure disorder

Black Box Warning: Accidental exposure, avoid ethanol, substance abuse, neonatal opioid withdrawal syndrome, potential for overdose, poisoning, coadministration with other CNS depressants

DOSAGE AND ROUTES

• **Adult: PO** 50-100 mg q4-6hr, may give 2nd dose ≥1 hr after 1st dose, max 700 mg on day 1, max 600 mg/day thereafter; ext rel 50 mg q12hr (opioid-naive), titrate to 50 mg/dose bid q3days, max 250 mg q12hr

Hepatic disease

• **Adult: PO** Immediate rel 50 mg q8hr, may titrate to response; ext rel 50 mg daily, max 100 mg/day

Available forms: Tabs 50, 75, 100 mg; tabs ext rel 50, 100, 150, 200, 250 mg; oral solution 20 mg/mL

Administer:

• With antiemetic if nausea, vomiting occur
• When pain is beginning to return; determine dosage interval by response
• Do not crush, chew, break ext rel product, or use with alcohol; swallow whole with sufficient liquid
• Preferred analgesic in those with altered cytochrome P450 or mild hepatic, mild to moderate renal disease
• Store in light-resistant area at room temperature

Black Box Warning: These products have high potential for overdose, poisoning; may be fatal because of respiratory depression

• **Oral solution:** measure using calibrated syringe

SIDE EFFECTS

CNS: *Drowsiness, dizziness, confusion, headache, euphoria,* hallucinations, restlessness, syncope, anxiety, flushing, psychological dependence, insomnia, lethargy, tremors, seizures
CV: Palpitations, bradycardia, hypo/hypertension, orthostatic hypotension, sinus tachycardia
GI: *Nausea, vomiting, anorexia, constipation, cramps,* gastritis, dyspepsia, biliary spasms
GU: Urinary retention/frequency
INTEG: *Rash,* urticaria, diaphoresis, pruritus
RESP: Respiratory depression, cough
SYST: Anaphylaxis, infection, serotonin syndrome

PHARMACOKINETICS

Bioavailability 32%, extensively metabolized by liver, excreted in urine 99%, terminal half-life 4 hr, protein binding 20%

INTERACTIONS

Black Box Warning: Increase: effects with other CNS depressants—alcohol, opioids, sedative/hypnotics, antipsychotics, skeletal muscle relaxants

Increase: toxicity—MAOIs
Increase: serotonin syndrome—SSRIs, SNRIs, serotonin-receptor agonists, tricyclics

Black Box Warning: Do not use with alcohol; fatal overdose may occur

Drug/Herb

Increase: sedative effect—kava, St. John's wort, valerian

NURSING CONSIDERATIONS

Assess:

• **Pain:** intensity, location, type, characteristics; need for pain medication by pain/sedation scoring; physical dependence
• I&O ratio; check for decreasing output; may indicate urinary retention
• CNS changes: dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction
• **Serotonin syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist if needed
• **Seizures:** history of seizures increased with SSRIs, SNRIs, tricyclic antidepressants
• Allergic reactions: rash, urticaria, anaphylaxis

Black Box Warning: Addiction risk, previous substance abuse: assess before using ext rel product; some may crush ext rel product and snort, inject product that is dissolved

Black Box Warning: Accidental exposure: identify if alcohol has been used before giving this product; may be fatal if used with tapentadol; keep from pets, children; avoid coadministration with other CNS depressants

Black Box Warning: Respiratory dysfunction: respiratory depression, character, rate, rhythm; notify prescriber if respirations are <10/min; B/P, pulse

Black Box Warning: Neonatal opioid withdrawal syndrome: may be fatal; monitor neonates for irritability, hyperactivity, abnormal sleep pattern, high-pitched crying, tremors, vomiting, diarrhea, failure to gain weight

- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, including neonatal opioid withdrawal syndrome; do not breastfeed, excretion unknown

Evaluate:

- Therapeutic response: decrease in pain

Teach patient/family:

- To report any symptoms of CNS changes, allergic reactions, seizures, serotonin syndrome
- That physical dependency may result from extended use
- That withdrawal symptoms may occur: nausea, vomiting, cramps, fever, faintness, anorexia
- To avoid CNS depressants, alcohol
- To avoid driving, operating machinery if drowsiness, dizziness occur
- To change positions slowly to decrease orthostatic hypotension
- Teach patient to take as directed, not to double doses, if breakthrough pain occurs, notify provider, do not discontinue abruptly, gradually taper
- **Seizures:** Teach patient that if seizure occurs, discontinue, notify provider
- **Not to drive or perform other hazardous activities until response is known**
- **Orthostatic hypertension:** To rise slowly to prevent orthostatic hypertension
- **Serotonin syndrome:** Teach patient symptoms of serotonin syndrome and when to contact provider
- To discuss with provider all OTC, Rx, herbals, supplements taken

Black Box Warning: Not to use with alcohol; may be fatal

- To notify prescriber if pregnancy is planned or suspected, or if breastfeeding

⚠ HIGH ALERT

tasimelteon (Rx)

(tas′i-mel′tee-on)

Hetlioz

Func. class.: Anxiolytic/sedative/hypnotics

USES: Sleep-wake disorder in the blind, Smith-Magenis syndrome

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

- **Adult: PO** 20 mg before bedtime at the same time every night; take without food

Available forms: Capsules 20 mg; oral suspension 4 mg/mL

tavaborole topical

See Appendix B

⚠ HIGH ALERT

tazemetostat (Rx)

(taz′e-met′oh-stat)

Tazverik

Func. class: Antineoplastic

USES: Epithelioid sarcoma, metastatic/locally advanced, follicular lymphoma, relapsed/refractory

CONTRAINDICATIONS: Hypersensitivity

DOSAGE AND ROUTES

Adult: PO 800 mg bid until disease progression or unacceptable toxicity

Available forms: Tablet 200 mg

tecovirimat (Rx)

(tek′oh-vir′i-mat)

Func. class.: Antiviral

USES: Treatment of human smallpox disease, variola virus

Unlabeled uses: Monkeypox virus

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Smallpox

- **Adult 40 to ≤120 kg: PO:** 600 mg bid × 14 days; **IV** 200 mg q12hr × 14 days; **>120 kg: PO** 600 mg (3 capsules) tid with meals for 14 days: **IV** 300 mg q12hr × 14 days
- **Child/adolescent: PO 13 to <25 kg:** 200 mg bid × 14 days; **25 to <40 kg:** 400 mg bid × 14 days; **≥40 kg:** 600 mg bid × 14 days

Available forms: Capsules 200 mg; solution for injection 200 mg/20 mL

tedizolid (Rx)

Sivextro

Func. class.: Antibiotic

USES: Skin and skin structure infections

DOSAGE AND ROUTES

Skin and skin structure infections:

- **Adult/child ≥12 yr: PO/IV** 200 mg daily × 6 days

Available forms: Tabs 200 mg; inj for IV 200 mg

teduglutide (Rx)

(te′due-gloo′tide)

Gattex, Revestive

Func. class.: Functional GI disorder agent

Chem. class.: Recombinant glucagon-like peptide-2 analog

USES: Short bowel syndrome, dependent on parenteral support

DOSAGE AND ROUTES

- **Adult: SUBCUT** 0.05 mg/kg daily

Available forms: Injection (SUBCUT) 3.8 mg/0.38 mL, (5 mg)

tegaserod (Rx)

(teg-a-seer′od)

Zelnorm

Func. class.: IBS agent

USES: IBS with constipation

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Adult woman <65 yr: PO 6 mg bid 30 min before meals, discontinue after 4-6 wk if poor response

Available forms: Tabs 6 mg

telavancin (Rx)

(tel-a-van′sin)

Vibativ

Func. class.: Antiinfective, miscellaneous

Chem. class.: Lipoglycopeptide

ACTION: Inhibits bacterial cell-wall synthesis, disrupts cell membrane integrity, blocks glycopeptides

USES: Complicated skin/skin structure infections caused by *Enterococcus faecalis, E. faecium, Staphylococcus aureus* (MRSA), *S. aureus* (MSSA), *S. epidermidis, S. haemolyticus, Streptococcus agalactiae* (group B), *S. dysgalactiae, S. pyogenes* (group A β-tremolytic), *S. anginosus, S. intermedius, S. constellatus;* nosocomial pneumonia caused by susceptible gram-positive bacteria

Unlabeled uses: Bacteremia

CONTRAINDICATIONS: Hypersensitivity

Precautions: Breastfeeding, children, geriatric patients, renal disease, antimicrobial

resistance, diabetes mellitus, diarrhea, GI disease, heart failure, hypertension, pseudomembranous colitis, QT prolongation, vancomycin hypersensitivity

Black Box Warning: Pregnancy, renal disease

DOSAGE AND ROUTES

Complicated skin/skin-structure infections

• **Adult: IV INFUSION** 10 mg/kg over 60 min q24hr × 7-14 days

Hospital-acquired nosocomial pneumonia

• **Adult: IV INFUSION** 10 mg/kg q24hr × 7-21 days

Renal dose

• **Adult: IV** CCr 30-50 mL/min 7.5 mg/kg q24hr; CCr 10-29 mL/min 10 mg/kg q48hr

Available forms: Lyophilized powder for inj 750 mg

Administer:

• Use only for susceptible organisms to prevent drug-resistant bacteria

• Antihistamine if red man syndrome occurs: decreased B/P; flushing of neck, face

• Avoid IM, subcut use

Intermittent IV INFUSION route

• After reconstitution with 15 mL D_5W sterile water for inj; 0.9% NaCl (15 mg/mL) **250-mg vial;** add 45 mL to **750-mg vial** (15 mg/mL) for dose of 150-800 mg; further dilute with 100-250 mL of compatible sol; for dose <150 mg or >800 mg, further dilute to concentration of 0.6-8 mg/mL with compatible sol; give over 60 min, avoid rapid IV; reconstituted or diluted sol is stable for 4 hr room temperature, 7 hr refrigerated; avoid rapid IV; may cause red man syndrome

Y-site compatibility: Amphotericin B lipid complex (Abelcet), ampicillin-sulbactam, azithromycin, calcium gluconate, caspofungin, cefepime, cefTAZidime, cefTRIAXone, ciprofloxacin, dexamethasone, diltiaZEM, DOBUTamine, DOPamine, doripenem, doxycycline, ertapenem, famotidine, fluconazole, gentamicin, hydrocortisone, labetalol, magnesium sulfate, mannitol, meropenem, metoclopramide, milrinone, norepinephrine, ondansetron, pantoprazole, phenylephrine, piperacillin-tazobactam, potassium chloride/phosphates, raNITIdine, sodium bicarbonate, sodium phosphates, tigecycline, tobramycin, vasopressin

SIDE EFFECTS

CNS: Anxiety, chills, flushing, headache, insomnia, dizziness

CV: QT prolongation, irregular heartbeat

EENT: Hearing loss

GI: Nausea, vomiting, CDAD, abdominal pain, constipation, diarrhea, metallic/soapy taste

GU: Nephrotoxicity, *increased BUN, creatinine,* renal failure, foamy urine

HEMA: Leukopenia, eosinophilia, anemia, thrombocytopenia

INTEG: Chills, fever, rash, thrombophlebitis at inj site; urticaria, pruritus, necrosis (red man syndrome)

SYST: Anaphylaxis, superinfection

PHARMACOKINETICS

Onset rapid, half-life 8-9 hr, excreted in urine (76%), protein binding 90%, hepatic metabolism

INTERACTIONS

Increase: otoxicity or nephrotoxicity—aminoglycosides, cephalosporins, colistin, polymyxin, bacitracin, CISplatin, amphotericin B, nondepolarizing muscle relaxants, cidofovir, tacrolimus, IV pentamidine, acyclovir, adefovir, cycloSPORINE, foscarnet, ganciclovir, pamidronate, streptozocin, zoledronic acid, NSAIDs, salicylates, ACE inhibitors

Increase: QT prolongation—class IA, III antidysrhythmics; some phenothiazines; chloroquine, clarithromycin, droperidol, dronedarone, erythromycin, haloperidol, methadone, pimozide, ziprasidone

Decrease: CYP450 enzymes

Drug/Lab Test

False increase: INR, PT, PTT

NURSING CONSIDERATIONS

Assess:

• **Infection:** WBC, urine, stools, sputum, characteristics of wound throughout treatment, C&S

Black Box Warning: Nephrotoxicity: I&O ratio; report hematuria, oliguria; monitor BUN, CCr, avoid in those with CCr ≤50 mL/min; more common in those with diabetes, HF, hypertension, geriatric patients, renal disease

- **CDAD:** monitor for diarrhea, fever, blood in stools, abdominal pain; may happen several weeks after therapy ends, report to prescriber immediately
- **Anaphylaxis:** monitor for rash, itching, wheezing, laryngeal edema; discontinue and notify prescriber immediately; emergency equipment and EPINEPHrine should be nearby
- **Auditory function during, after treatment;** hearing loss; ringing, roaring in ears; product should be discontinued
- **B/P during administration;** sudden drop may indicate red man syndrome; also flushing, pruritus, rash, use slow IV infusion to prevent
- **Respiratory status:** rate, character, wheezing, tightness in chest
- Adequate intake of fluids (2 L/day) to prevent nephrotoxicity

Black Box Warning: Pregnancy: obtain a pregnancy test before use; if a woman has taken this product during pregnancy, the national registry should be notified

Evaluate:
- Therapeutic response: negative culture

Teach patient/family:
- About all aspects of product therapy; that culture may be taken after completed course of medication
- To notify prescriber if infection continues
- That bitter taste, nausea, vomiting, headache may occur
- To report sore throat, fever, fatigue; could indicate superinfection; diarrhea (CDAD); hearing loss; rash, wheezing, tightness of chest, itching, tightening of throat (anaphylaxis)

Black Box Warning: To use contraception while taking this product; not to breastfeed; to notify prescriber if pregnancy is planned or suspected

telmisartan (Rx)

(tel-mih-sar'tan)

Micardis

Func. class.: Antihypertensive

Chem. class.: Angiotensin II receptor (Type AT_1) antagonist

ACTION: Blocks the vasoconstricting and aldosterone-secreting effects of angiotensin II; selectively blocks the binding of angiotensin II to the AT_1 receptor found in tissues

USES: Hypertension, alone or in combination; stroke, MI prophylaxis (>55 yr) in patients unable to take ACE inhibitors
Unlabeled uses: Acute coronary syndrome, stable coronary artery disease

CONTRAINDICATIONS: Hypersensitivity

Black Box Warning: Pregnancy

Precautions: Pregnancy, breastfeeding, children, geriatric patients; hypersensitivity to ACE inhibitors; renal/hepatic disease, renal artery stenosis, dialysis, HF, hyperkalemia, hypotension, hypovolemia, African descent

DOSAGE AND ROUTES

Hypertension
- **Adult: PO** 40 mg/day; range 20-80 mg/day

Stroke, MI prophylaxis
- **Adult >55 yr: PO** 80 mg/day

Available forms: Tabs 20, 40, 80 mg

Administer:
- Without regard to meals
- Increased dose to African-American patients or consider alternative agent; B/P response may be reduced
- Do not remove from blister pack until ready to use

SIDE EFFECTS

CNS: *Dizziness, insomnia, anxiety, headache,* fatigue, syncope
CV: Chest pain, edema, palpitations, bradycardia, orthostatic hypotension

GI: Diarrhea, dyspepsia, *anorexia, vomiting*
META: Hyperkalemia
MS: Myalgia, pain
RESP: *Cough, upper respiratory infection,* sinusitis, pharyngitis
SYST: Angioedema

PHARMACOKINETICS

Onset of antihypertensive activity 3 hr, peak 0.5-1 hr, extensively metabolized, terminal half-life 24 hr, protein binding 99.5%, excreted in feces >97%, B/P response is less in Black patients

INTERACTIONS

Increase: digoxin peak/trough concentrations—digoxin
Increase: antihypertensive action—diuretics, other antihypertensives, NSAIDs
Increase: hyperkalemia—potassium-sparing diuretics, potassium salt substitutes, ACE inhibitors
Decrease: antihypertensive effect—NSAIDs, salicylates
Drug/Lab Test
Increase: LFTs

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Pregnancy/breastfeeding: if pregnancy test is positive, stop treatment; can cause death to fetus; do not breastfeed

- B/P, pulse standing, lying; note rate, rhythm, quality; if severe hypotension occurs, place in supine position; usually occurs during first few weeks of treatment
- Baselines of renal, hepatic, electrolyte studies before therapy begins
- **Heart failure:** edema in feet, legs daily; jugular venous distention; dyspnea, crackles; weight increase >5 lb per week

Evaluate:

- Therapeutic response: decreased B/P

Teach patient/family:

- To comply with dosage schedule, even if feeling better; to take at same time of day; that therapeutic effect may take 2-4 wk
- To notify prescriber immediately of mouth sores, fever, swelling of hands or feet, swelling of face or lips, irregular heartbeat, chest pain, decreased urine output
- Not to stop abruptly; increased B/P will occur
- That excessive perspiration, dehydration, vomiting, diarrhea may lead to fall in blood pressure; to consult prescriber if these occur
- That product may cause dizziness, fainting, light-headedness; to avoid hazardous activities until response is known

Black Box Warning: To notify prescriber if pregnancy is planned or suspected; do not use in pregnancy, breastfeeding

- To notify prescriber of all prescriptions, OTC products, and supplements taken; to rise slowly from sitting to prevent drop in B/P
- **Overdose:** dizziness, bradycardia, or tachycardia

telmisartan/hydrochlorothiazide (Rx)

(te-me-sar′tan/hye-droe-klor-oh-thye′-a-zide)

Micardis HCT

Func. class.: Antihypertensive, thiazide diuretic

USES:

Treatment of hypertension

CONTRAINDICATIONS

Hypersensitivity

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Patients currently on telmisartan monotherapy

Adult: PO not currently controlled on telmisartan 80 mg monotherapy: telmisartan 80 mg/hydrochlorothiazide

12.5 mg daily, may titrate up to telmisartan 160 mg/hydrochlorothiazide 25 mg daily after 2-4 wk

Patients currently on hydrochlorothiazide monotherapy

Adult: PO not currently controlled on hydrochlorothiazide 25 mg daily monotherapy, hypokalemia while on hydrochlorothiazide 25 mg monotherapy: telmisartan 80 mg/hydrochlorothiazide 12.5 mg daily; may be titrated up to telmisartan 160 mg/hydrochlorothiazide 25 mg daily after 2-4 wk

Available forms: Tabs 40 mg/12.5 mg, 80 mg/12.5 mg, 80 mg/25 mg

telotristat (Rx)

(tel-oh´tri-stat)

Xermelo

Func. class.: Antidiarrheal

Chem. class.: Tryptophan hydroxylase inhibitor

Do not confuse:
Xermelo/Xarelto

ACTION: Reduces serotonin production; this decreases stools in carcinoid syndrome

USES: Carcinoid syndrome diarrhea; used with somatostatin analogue (SSA) when SSA alone does not control symptoms

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Abdominal pain, breastfeeding, constipation, GI perforation/obstruction, pregnancy

DOSAGE AND ROUTES

- **Adult: PO** 250 mg tid

Available forms: Tablet 250 mg

Administer:

- With food
- If dose is missed, give at regularly scheduled time, do not double
- Store at room temperature

SIDE EFFECTS

CNS: Headache, depression, fever

CV: Peripheral edema

GI: Nausea, constipation, flatulence, anorexia, abdominal pain

PHARMACOKINETICS

Peak 0.5-2 hr, half-life 0.6 hr, 99% plasma protein binding, excreted in urine (93.2%), affected by CYP3A4, P-glycoprotein (P-gp)

INTERACTIONS

Decrease: effect of—CYP3A4 substrates; monitor for ineffective results; dose of CYP3A4 may need to be increased

Decrease: effect of—octreotide; give short-acting octreotide 30-60 min after telotristat

Increase: telotristat effect—P-glycoprotein (P-gp) products

Drug/Lab

Increase: ALT, AST, alk phos

NURSING CONSIDERATIONS

Assess:

- **Stools:** volume, color, characteristics, frequency; bowel pattern before product; rebound constipation, abdominal pain; discontinue if abdominal pain or constipation is severe
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, not studied in pregnancy; breastfeeding not recommended, effects unknown

Evaluate:

- Therapeutic response: decreased diarrhea without abdominal pain or severe constipation

Teach Patient/Family:

- To take with food
- That if dose is missed, do not double; take regular dose at next scheduled time
- **Pregnancy/breastfeeding:** to contact health care provider if pregnancy is suspected or planned, or if breastfeeding
- To discontinue and notify health care provider if abdominal pain or severe constipation occurs

⚠ HIGH ALERT

temazepam (Rx)

(te-maz′e-pam)

Restoril

Func. class.: Sedative/hypnotic

Chem. class.: Benzodiazepine, short to intermediate acting

Controlled Substance Schedule IV (USA), Schedule F (Canada)

Do not confuse:
Restoril/RisperDAL

ACTION: Produces CNS depression at limbic, thalamic, hypothalamic levels of the CNS; may be mediated by neurotransmitter γ-aminobutyric acid (GABA); results are sedation, hypnosis, skeletal muscle relaxation, anticonvulsant activity, anxiolytic action

USES: Insomnia, short-term treatment (generally 7-10 days)

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity to benzodiazepines

Precautions: Children <15 yr, geriatric patients, anemia, renal/hepatic disease, suicidal individuals, drug abuse, psychosis, acute closed-angle glaucoma, seizure disorders, angioedema, sleep-related behaviors (sleepwalking), intermittent porphyria, COPD, dementia, myasthenia gravis

Black Box Warning: Coadministration with other CNS depressants, abrupt discontinuation, substance abuse

DOSAGE AND ROUTES

- **Adult: PO** 7.5 to 30 mg at bedtime
- **Geriatric: PO** 7.5 mg at bedtime

Available forms: Caps 7.5, 15, 22.5, 30 mg

Administer:

- 15-30 min before bedtime for sleeplessness
- Without regard to food

Black Box Warning: Avoid use with CNS depressants; serious CNS depression may result

- Store in tight container in cool environment

SIDE EFFECTS

CNS: *Lethargy, drowsiness, daytime sedation,* dizziness, confusion, lightheadedness, headache, anxiety, irritability, complex sleep-related reactions (sleep driving, sleep eating), fatigue

CV: Chest pain, pulse changes, hypotension

EENT: Blurred vision

RESP: Apnea, respiratory depression, increased bronchial secretions

GI: Nausea, vomiting, diarrhea, heartburn, abdominal pain, constipation, anorexia

SYST: Severe allergic reactions

PHARMACOKINETICS

Onset 30 min, peak 1-2 hr, duration 6-8 hr, half-life 10-20 hr, metabolized by liver, excreted by kidneys, crosses placenta, excreted in breast milk, 98% protein binding

INTERACTIONS

Increase: effects of cimetidine, disulfiram, oral contraceptives

Black Box Warning: Increase: action of both products—alcohol, CNS depressants

Increase: effect of temazepam—probenecid

Decrease: effect of antacids, theophylline, rifAMPin

Drug/Herb

Increase: CNS depression—hops, kava, valerian, chamomile, skullcap

Drug/Food

Decrease: temazepam effect—caffeine

Drug/Lab Test

Increase: ALT, AST

NURSING CONSIDERATIONS

Assess:

- **Mental status:** mood, sensorium, affect, memory (long, short), orientation

• **Sleep patterns:** falling asleep, staying asleep, baseline, periodically
• **Dependency:** restrict amount given to patient, assess for physical/psychological dependency; high-level risk for abuse
• **Fall risk:** Assistance with ambulation after receiving dose
• **Beers:** avoid in older adults; increased sensitivity to benzodiazepines and decreased metabolism; may cause delirium

Evaluate:
• Therapeutic response: ability to sleep at night, decreased early morning awakening if taking product for insomnia

Teach patient/family:
• To avoid driving, other activities requiring alertness until stabilized; may cause dizziness, drowsiness

Black Box Warning: To avoid alcohol ingestion, other CNS depressants

• That effects may take 2 nights for benefits to be noticed
• To take as directed; not to increase dose unless approved by prescriber
• To limit to 7-10 days of continuous use
• About alternative measures to improve sleep: reading, exercise several hours before bedtime, warm bath, warm milk, TV, self-hypnosis, deep breathing
• Not to discontinue abruptly, withdraw gradually
• That complex sleep-related behaviors may occur: sleep driving/eating/walking
• That hangover, memory impairment are common in geriatric patients but less common than with barbiturates
• To notify prescriber if pregnancy is planned or suspected; to use contraception while taking this product; not to use in pregnancy; to use caution in breastfeeding, excretion unknown

TREATMENT OF OVERDOSE:
monitor electrolytes, VS

⚠ HIGH ALERT

temozolomide (Rx)
(tem-oh-zole′oh-mide)
Temodar, Temodal 🍁
Func. class.: Antineoplastic-alkylating agent
Chem. class.: Imidazotetrazine derivative

ACTION:
Prodrug that undergoes conversion to MTIC; MTIC action prevents DNA transcription

USES:
Anaplastic astrocytoma with relapse, glioblastoma multiforme, malignant glioma
Unlabeled uses: Metastatic malignant melanoma

CONTRAINDICATIONS:
Pregnancy, breastfeeding; hypersensitivity to this product, carbazine, or gelatin
Precautions: Geriatric patients, radiation therapy, renal/hepatic disease, bone marrow suppression, infection, myelosuppression

DOSAGE AND ROUTES
Glioblastoma multiforme
• **Adult: PO/IV** 75 mg/m^2/day × 42 days with focal radiotherapy, then maintenance of 6 cycles; maintenance dose: 150 mg/m^2 on days 1-5 of a 28-day cycle

Refractory anaplastic astrocytoma
• **Adult: PO** 150 mg/day × 5 days, repeated q28days; **IV** 150 mg/m^2/day over 90 min on days 1-5 q28days, may increase to 200 mg/m^2/day on days 1-5 q28days if hematologic parameters permit

Available forms: Caps 5, 20, 100, 140, 180, 250 mg; powder for inj 100 mg/vial

Administer:
PO route
• Do not break, crush, chew, open caps
• Antiemetic 30-60 min before product to prevent vomiting
• Caps 1 at a time with 8 oz of water at same time of day
• Fluids IV or PO before chemotherapy to hydrate patient

T

• If caps accidentally damaged, do not allow contact with skin or inhale
• Use proper procedures for handling/disposing of chemotherapy products
• Give on empty stomach at bedtime to prevent nausea/vomiting
• Store in light-resistant container in a dry area

IV route

• Bring vial to room temperature; discard if cloudy
• Inject 41 mL sterile water for inj into vial (2.5 mg/mL)
• Gently swirl; do not shake

Intermittent IV INFUSION route

• Withdraw up to 40 mL from each vial to make total dose; transfer to empty 250-mL PVC infusion bag; flush before and after infusion
• Run over 90 min
• Use reconstituted sol within 14 hr, including infusion time
• Do not admix

SIDE EFFECTS

CNS: Seizures, *hemiparesis, dizziness, poor coordination, amnesia, insomnia, paresthesia, somnolence, paresis, ataxia, anxiety, dysphagia, depression, confusion*
GI: *Nausea, anorexia, vomiting,* abdominal pain, constipation
GU: Urinary incontinence, UTI, frequency
HEMA: Thrombocytopenia, leukopenia, anemia, myelosuppression, neutropenia
INTEG: *Rash, pruritus*
MISC: Headache, fatigue, asthenia, fever, edema, back pain, weight increase, diplopia
RESP: URI, pharyngitis, sinusitis, coughing
SYST: Anaphylaxis, secondary malignancy

PHARMACOKINETICS

Absorption complete, rapid; crosses blood-brain barrier; excreted in urine, feces; half-life 1.8 hr; peak 1 hr

INTERACTIONS

Increase: myelosuppression—radiation, other antineoplastics
Increase: bleeding risk—NSAIDs, anticoagulants, platelet inhibitors, thrombolytics
Decrease: antibody reaction—live virus vaccines, toxoids
Decrease: action of digoxin
Drug/Food
Decrease: drug absorption
Drug/Lab Test
Decrease: HB, platelets, WBC, neutrophils

NURSING CONSIDERATIONS

Assess:

• CBC on day 22 (21 days after 1st dose), CBC weekly until recovery if ANC is $<1.5 \times 10^9$/L and platelets $<100 \times 10^9$/L; do not administer to patients who do not tolerate 100 mg/m^2; myelosuppression usually occurs late during the treatment cycle
• Seizures throughout treatment; mental status
• Tumor response during treatment
• **Monitor temperature;** may indicate beginning infection
• **Hepatic studies** before, during therapy (bilirubin, AST, ALT, LDH), as needed or monthly
• **Bleeding:** hematuria, guaiac, bruising, petechiae, mucosa or orifices
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:

• To report signs of infection: fever, sore throat, flulike symptoms
• To report signs of anemia: fatigue, headache, faintness, SOB, irritability
• To report bleeding; to avoid use of razors, commercial mouthwash
• To notify prescriber if pregnancy is planned or suspected; not to breastfeed

⚠ HIGH ALERT

temsirolimus (Rx)

(tem-sir-oh'li-mus)

Torisel

Func. class.: Antineoplastic
Chem. class.: Kinase inhibitor, mTOR antagonist

USES: Renal cell carcinoma

CONTRAINDICATIONS: Pregnancy, breastfeeding; hypersensitivity to this product or to sirolimus; polysorbate 80

Precautions: Children <13 yr, females, severe pulmonary/renal/hepatic disease (bilirubin >1-1.5 × ULN or AST >ULN but bilirubin ≤ULN), diabetes mellitus, hyperkalemia, hyperuricemia, hypertension, bone marrow suppression, hypertriglyceridemia/hyperlipidemia, surgery, brain tumors

DOSAGE AND ROUTES

• **Adult: IV** 25 mg over 30-60 min weekly; treat until disease progression or severe toxicity occurs

Hepatic dose

• **Adult: IV** (mild impairment) bilirubin >1-1.5×ULN or AST >ULN but bilirubin ≤ULN: reduce to 15 mg/wk; moderate or severe impairment, do not use

Available forms: Solution (IV) 25 mg/mL

tenapanor (Rx)

(ten-a′pa-nor)

Ibsrela

Func. class.: IBS agent

USES: Irritable bowel syndrome with constipation in adults

CONTRAINDICATIONS: Hypersensitivity, GI obstruction

Black Box Warning: Children

DOSAGE AND ROUTES

• **Adult: PO** 50 mg bid immediately before breakfast or the first meal of the day and immediately before dinner

⚠ HIGH ALERT

tenecteplase (TNK-tPA) (Rx)

(ten-ek′ta-place)

TNKase

Func. class.: Thrombolytic/fibrinolytic

Chem. class.: Tissue plasminogen activator

Do not confuse:
TNKase/Activase

ACTION: Activates conversion of plasminogen to plasmin (fibrinolysin): plasmin breaks down clots (fibrin), fibrinogen, factors V, VII; occlusion of venous access lines

USES: Acute myocardial infarction, coronary artery thrombosis

CONTRAINDICATIONS: Hypersensitivity, arteriovenous malformation, aneurysm, active bleeding, intracranial/intraspinal surgery or trauma within 2 mo, CNS neoplasms, severe hypertension, severe renal/hepatic disease, history of CVA, increased ICP/stroke

Precautions: Pregnancy, breastfeeding, children, geriatric patients, arterial emboli from left side of heart, hypocoagulation, subacute bacterial endocarditis, rheumatic valvular disease, cerebral embolism/thrombosis/hemorrhage, intraarterial diagnostic procedure or surgery (10 days), recent major surgery, dysrhythmias, hypertension

DOSAGE AND ROUTES

Total dose, max 50 mg based on patient's weight

• **Adult <60 kg: IV BOL** 30 mg, give over 5 sec

• **Adult ≥60-<70 kg: IV BOL** 35 mg, give over 5 sec

• **Adult ≥70-<80 kg: IV BOL** 40 mg, give over 5 sec

• **Adult ≥80-<90 kg: IV BOL** 45 mg, give over 5 sec

• **Adult ≥90 kg: IV BOL** 50 mg, give over 5 sec, max 50 mg total dose

Available forms: Powder for inj, lyophilized 50 mg/vial

Administer:

IV bolus route

• Total dose is based on patient's weight, max 50 mg

• Refer to product insert for instruction on how to use product

• As soon as thrombi are identified; not useful for thrombi >1 wk old

• Cryoprecipitate or fresh frozen plasma if bleeding occurs

T

• Heparin after fibrinogen level >100 mg/dL; heparin infusion to increase PTT to 1.5-2× baseline for 3-7 days; IV heparin with loading dose is recommended
• Aseptically withdraw 10 mL of sterile water for inj from diluent vial; use red cannula syringe-filling device; inject all contents of syringe into product vial; direct into powder, swirl, withdraw correct dose; discard any unused sol; stand shield with dose vertically on flat surface and recap red cannula; remove entire shield assembly by twisting counterclockwise; give by IV BOL
• IV therapy: use upper-extremity vessel that is accessible to manual compression
• If product not used immediately, refrigerate; use within 8 hr; not compatible with dextrose; flush dextrose-containing lines with saline before and after administration

SIDE EFFECTS

CNS: Intercranial bleeding
CV: Dysrhythmias, hypotension, cardiogenic shock, cardiac arrest, heart failure, myocardial reinfarction, myocardial rupture, tamponade, pericarditis, pericardial effusion, thrombosis, CVA
RESP: Pulmonary edema/embolism
GI: GI bleed
GU: Hematuria
HEMA: Decreased Hct, bleeding
INTEG: Rash, urticaria, phlebitis at IV infusion site, itching, flushing
SYST: Retroperitoneal bleeding, surface bleeding, anaphylaxis

PHARMACOKINETICS

IV: Onset immediate, half-life 20-24 min, metabolized by liver

INTERACTIONS

Increase: bleeding—aspirin, indomethacin, phenylbutazone, anticoagulants, antithrombolytics, glycoprotein IIb/IIIa inhibitors, dipyridamole, clopidogrel, ticlopidine, NSAIDs, cefamandole, cefoperazone, cefoTEtan, SSRIs, SNRIs

Drug/Herb
Increase: risk of bleeding—feverfew, garlic, ginger, ginkgo, green tea, horse chestnut

Drug/Lab Test
Increase: INR, PT, PTT

NURSING CONSIDERATIONS

Assess:
• **Hypersensitivity:** fever, rash, itching, chills; mild reaction may be treated with antihistamines
• Cholesterol embolism, blue-toe syndrome, renal failure, MI, cerebral/spinal cord/bowel/retinal infarction, hypertension; can be fatal
• **Bleeding during 1st hr of treatment;** hematuria, hematemesis, bleeding from mucous membranes, epistaxis, ecchymosis; may require tranfusion (rare), continue to assess for bleeding for 24 hr
• **AVM, recent surgery, actual bleeding:** assess for contraindications before use
• **Blood studies:** Hct, platelets, PTT, PT, TT, aPTT before starting therapy; PT or aPTT must be <2× control before starting therapy; PTT or PT q3-4hr during treatment; also monitor CPK, ECG, fibrin degradation products (FDPs), fibrinogen, INR
• VS, B/P, pulse, respirations, neurologic signs, temperature at least q4hr; temperature >104°F (40°C) indicates internal bleeding; systolic pressure increase >25 mm Hg should be reported to prescriber
• **Neurologic changes** that may indicate intracranial bleeding; if suspected, a CT scan should be performed
• **Retroperitoneal bleeding:** back pain, leg weakness, diminished pulses
• Bed rest during entire course of treatment
• Avoidance of venous or arterial puncture, inj, rectal temperature, any invasive treatment, if possible; if arterial puncture is needed, use upper extremity, use pressure dressing for at least 30 min, monitor closely
• Treatment of fever with acetaminophen or aspirin
• Pressure for 30 sec to minor bleeding sites; inform prescriber if this does not attain hemostasis; apply pressure dressing
• **Pregnancy/breasfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: resolution of MI

Teach patient/family:
• About proper dental care to avoid bleeding

- To notify prescriber immediately of sudden, severe headache
- To notify prescriber of bleeding; hypersensitivity; fast, slow, or uneven heart rate; feeling of faintness; blood in urine, stools; nosebleeds

tenofovir disoproxil fumarate (Rx)

(ten-oh-foh′veer)

Viread

Func. class.: Antiretroviral

Chem. class.: Nucleoside reverse transcriptase inhibitor (NRTI)

ACTION: Inhibits replication of HIV virus by competing with the natural substrate and then incorporating into cellular DNA by viral reverse transcriptase, thereby terminating cellular DNA chain

USES: HIV-1 infection with at least 2 other antiretrovirals, hepatitis B

CONTRAINDICATIONS: Hypersensitivity, lactic acidosis

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, CCr <60 mL/min, osteoporosis, immune reconstitution syndrome

Black Box Warning: Hepatitis B exacerbation

DOSAGE AND ROUTES

Human immunodeficiency virus (HIV) infection

- **Adult/adolescent/child weighing ≥35 kg: PO** Tablet: 300 mg once daily; Oral powder 300 mg/day (7.5 scoops) with 2-4 oz soft food
- **Adolescent/child weighing 28-34 kg: PO** Tablet: 250 mg/day
- **Child ≥2 yr and weighing 22-27 kg: PO** Tablet: 200 mg/day
- **Child ≥2 yr and weighing 17-21 kg: PO** Tablet: 150 mg/day
- **Child/adolescent ≥2 yr and weighing <35 kg: PO** Oral powder: 8 mg/kg/dose daily with 2-4 oz soft food. Round dose to nearest 20-mg increment

Hepatitis B infection

Adult/child/adolescent >35 kg: 300 mg/day × ≥12 mo

Renal dose

- **Adult: PO** CCr 30-49 mL/min, 300 mg q48hr; CCr 10-29 mL/min, 300 mg q72-96hr; CCr <10 mL/min, not recommended

Available forms: Tabs 150, 200, 250, 300 mg; oral powder 40 mg/scoop

Administer:

- Without regard to food
- Store at 25°C (77°F)
- **Missed dose:** take when remembered on same day, do not double doses
- **Oral powder:** use scoop provided, mix powder into 2-4 oz (¼-½ cup) of applesauce, yogurt, do not mix with liquid, product will not mix, product is bitter, use immediately after mixing, clean scoop

SIDE EFFECTS

CNS: *Headache, asthenia*

GI: *Nausea, vomiting, diarrhea,* anorexia, *flatulence, abdominal pain,* pancreatitis

GU: Renal failure, renal tubular acidosis/necrosis, Fanconi's syndrome

HEMA: Neutropenia, osteopenia

INTEG: *Rash,* angioedema

META: Lactic acidosis, hypokalemia, hypophosphatemia

MS: Arthralgia, myalgia, decreased bone mineral density, rhabdomyolysis

SYST: Lipodystrophy

PHARMACOKINETICS

Rapidly absorbed, distributed to extravascular space, excreted unchanged in urine 70%-80%, terminal half-life 17 hr, peak 1-2 hr

INTERACTIONS

Increase: tenofovir level—cidofovir, acyclovir, valACYclovir, ganciclovir, valGANciclovir

Increase: level of didanosine when given with tenofovir

Increase: tenofovir level—any product that decreases renal function

NURSING CONSIDERATIONS

Assess:

- **HIV:** Viral load, CD4+ T-cell count, plasma HIV RNA, serum creatinine/BUN/phosphate
- Resistance testing at start of therapy and at treatment failure

Black Box Warning: Hepatitis exacerbations: monitor hepatic studies: AST, ALT, bilirubin; amylase, lipase, triglycerides baseline and periodically during treatment, after treatment, assess for exacerbations for 6 mo after last dose

- **Bone, renal toxicity:** if bone abnormalities are suspected, obtain tests; serum phosphorus, creatinine
- **Lactic acidosis, severe hepatomegaly with steatosis, Fanconi's syndrome:** obtain baseline liver function tests; if elevated, discontinue treatment; discontinue even if liver function tests normal but lactic acidosis, hepatomegaly present; may be fatal
- **Pregnancy/breastfeeding:** use only if clearly needed; register patients in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed

Evaluate:

- Therapeutic response: decrease in signs, symptoms of HIV; hepatitis B

Teach patient/family:

- To take without regard to food
- That GI complaints resolve after 3-4 wk of treatment
- Not to breastfeed while taking this product
- That product must be taken daily even if patient feels better
- That follow-up visits must be continued because serious toxicity may occur; that blood counts must be done q2wk
- That product will control symptoms but is not a cure for HIV; that patient is still infectious, may pass HIV virus on to others
- To discuss with provider all OTC, Rx, herbals, supplements taken
- **Hepatotoxicity:** To notify provider of yellow skin, eyes; dark urine, clay-colored stools, nausea, abdominal pain
- That other products may be necessary to prevent other infections
- If used for prophylaxis (PREP): does not prevent sexually transmitted infections; use appropriate barrier protection and safe sex practices
- That changes in body fat distribution; usually in the breasts, neck, and back, may occur
- To notify prescriber of symptoms of lactic acidosis (nausea, vomiting, weakness, abdominal pain)

teprotumumab-trbw (Rx)

(tep′roe-toom′ue-mab)

Tepezza

Func. class.: Insulin-like growth factor-1 antagonist

USES: Treatment of thyroid eye disease

CONTRAINDICATIONS:

Hypersensitivity

DOSAGE AND ROUTES

Thyroid eye disease

- **Adult: IV:** 10 mg/kg as a single dose, then 20 mg/kg q3wk × 7 more doses

Available forms: Powder for injection 500 mg

terazosin (Rx)

(ter-ay′zoe-sin)

Func. class.: Antihypertensive

Chem. class.: α-Adrenergic blocker

ACTION: Decreases total vascular resistance, which is responsible for a decrease in B/P; this occurs by the blockade of α_1-adrenoreceptors

USES: Hypertension, as a single agent or in combination with diuretics or β-blockers; BPH

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, prostate cancer, syncope

DOSAGE AND ROUTES

Hypertension

• **Adult: PO** 1 mg at bedtime, may increase dose slowly to desired response; max 20 mg/day divided q12hr

Benign prostatic hyperplasia

• **Adult: PO** 1 mg at bedtime, gradually increase up to 5-10 mg; max 20 mg divided q12hr

Available forms: Caps 1, 2, 5, 10 mg

Administer:

• Give dose at bedtime; patient should not operate machinery because fainting may occur

• If treatment is interrupted for several days, restart with initial dose

• Without regard to food; feeding tube: place cap in 60 mL of warm tap water; stir until liquid spills from ruptured shell (5 min); stir until cap dissolves; draw solution into oral syringe; give through feeding tube; flush with water

• Store at room temperature

SIDE EFFECTS

CNS: *Dizziness, headache, drowsiness,* anxiety, depression, vertigo, weakness, fatigue, syncope

CV: *Palpitations, orthostatic hypotension,* tachycardia, *edema,* rebound hypertension

EENT: Blurred vision, epistaxis, tinnitus, dry mouth, red sclera, nasal congestion, sinusitis

GI: *Nausea,* vomiting, diarrhea, constipation, abdominal pain

GU: Urinary frequency, incontinence, impotence, priapism

RESP: Dyspnea, cough, pharyngitis, nasal congestion

PHARMACOKINETICS

Half-life 9-12 hr; protein binding 90%-94%; metabolized in liver; excreted in urine, feces; peak 2-3 hr, onset 15 min, duration 24 hr

INTERACTIONS

Increase: hypotensive effects—β-blockers, nitroglycerin, verapamil, other antihypertensives, alcohol, phosphodiesterase (PDE5) inhibitors (vardenafil, tadalafil, sildenafil)

Decrease: hypotensive effects—estrogens, NSAIDs, sympathomimetics, salicylates

Drug/Herb

Increase: antihypertensive effect—hawthorn

Decrease: antihypertensive effect—ephedra

Drug/Lab Test

Decrease: HB, WBC, platelets, albumin

NURSING CONSIDERATIONS

Assess:

• **BPH:** urinary patterns (hesitancy, frequency, change in stream, dribbling, dysuria, urgency)

• **Hypertension:** crackles, dyspnea, orthopnea q30min; orthostatic B/P, pulse, jugular venous distention q4hr; weight daily, I&O

• **First dose effect:** hypotension/syncope; orthostatic B/P

• **Labs:** BUN, uric acid if patient receiving long-term therapy

• **Beers:** avoid use in older adults as antihypertensive; high risk of orthostatic hypotension

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decreased B/P, edema in feet, legs; decreased symptoms of BPH

Teach patient/family:

• That fainting occasionally occurs after 1st dose; not to drive or operate machinery for 4 hr after 1st dose or after an increase in dose; to take 1st dose at bedtime

• To rise slowly from sitting or lying position

T

• Not to discontinue abruptly; if doses have been missed for several days, notify prescriber; dose may need to be retitrated
• Not to drink alcohol
• **Hypertension:** to continue with regimen, including diet, exercise

terbinafine, oral (Rx)

(ter-bin´a-feen)

Lamisil, Terbinex

Func. class.: Antifungal
Chem. class.: Synthetic allylamine derivative

Do not confuse:
terbinafine/terbutaline
LamISIL/LaMICtal

ACTION: Interferes with cell-membrane permeability of fungi such as *Trichophyton rubrum, Trichophyton mentagrophytes, Trichophyton tonsurans, Epidermophyton floccosum, Microsporum canis, Microsporum audouinii, Microsporum gypseum, Candida;* broad-spectrum antifungal

USES: (Oral) onychomycosis of toenail or fingernail due to dermatophytes, tinea capitis/corporis/cruris/pedis/versicolor
Unlabeled uses: Sporotrichnosis, aspergillosis

CONTRAINDICATIONS: Hypersensitivity, chronic/active hepatic disease
Precautions: Pregnancy, breastfeeding, children, renal disease GFR ≤50 mL/min, immunosuppression depression, HIV, insomnia, hemolytic-uremic syndrome, suicidal ideation, TTP

DOSAGE AND ROUTES

• **Adult: PO** 250 mg/day × 6 wk (fingernail); × 12 wk (toenail)
Available forms: Tabs 250 mg; oral granules 125, 187.5 mg
Administer:
• **PO:** without regard to food
• Store at <25°C (77°F); protect from light
• **Granules:** take with food; sprinkle packet contents on pudding or nonacidic soft food; swallow without chewing; do not use fruit-based foods

SIDE EFFECTS

CNS: Depression
EENT: Tinnitus, hearing impairment
GI: Diarrhea, dyspepsia, vertigo, abdominal pain, nausea, hepatitis
HEMA: Neutropenia
INTEG: Rash, pruritus, urticaria, Stevens-Johnson syndrome, photosensitivity
MISC: Headache, hepatic enzyme changes, taste, visual/olfactory disturbance

PHARMACOKINETICS

Peak 1-2 hr, >99% protein binding, half-life 36 hr

INTERACTIONS

Increase: levels of dextromethorphan
Increase: terbinafine clearance—rifAMPin
Increase: clearance of cycloSPORINE
Decrease: terbinafine clearance—cimetidine
Decrease: metabolism of—CYP2D6 (antidysrhythmics IC, III, amoxapine, atomoxetine, cloZAPine)
Drug/Herb
• Side effects: cola nut, guarana, yerba maté, tea (black, green), coffee
Drug/Lab Test
Increase: LFTs

NURSING CONSIDERATIONS

Assess:
• Hepatic studies (ALT, AST) before beginning treatment; do not use in presence of hepatic disease
• CBC in treatment >6 wk
• **Continuing infection:** increased size, number of lesions
• **Pregnancy/breastfeeding:** avoid during pregnancy and breastfeeding
Evaluate:
• Therapeutic response: decrease in size, number of lesions

Teach patient/family:
- That treatment may take 12 wk (toenail), 6 wk (fingernail)
- To notify prescriber of nausea, vomiting, fatigue, jaundice, dark urine, clay-colored stool, RUQ pain; may indicate hepatic dysfunction
- To take without regard to meals; granules may be sprinkled on soft food but not chewed; do not mix with fruit-based products

terbinafine topical

See Appendix B

terbutaline (Rx)

(ter-byoo'ta-leen)
Func. class.: Selective β_2-agonist; bronchodilator
Chem. class.: Catecholamine

ACTION: Relaxes bronchial smooth muscle by direct action on β_2-adrenergic receptors through the accumulation of cAMP at β-adrenergic receptor sites; bronchodilation, diuresis, CNS, cardiac stimulation occur; relaxes uterine smooth muscle

USES: Bronchospasm
Unlabeled uses: Premature labor, nonresponsive status asthmaticus in children (IV)

CONTRAINDICATIONS: Hypersensitivity to sympathomimetics, closed-angle glaucoma, tachydysrhythmias
Precautions: Pregnancy, breastfeeding, geriatric patients, cardiac disorders, hyperthyroidism, diabetes mellitus, prostatic hypertension, hypertension, seizure disorder

Black Box Warning: Premature labor

DOSAGE AND ROUTES

Asthma maintenance
- **Adult/adolescent ≥16 yr: PO** 2.5-5 mg q6h while awake
- **Child/adolescent 12-15 yr: PO** 2.5 mg q6h while awake, max 7.5 mg/day

Bronchospasm
- **Adult/child ≥12 yr: SUBCUT** 0.25 mg q15-30min, max 0.5 mg in 4 hr

Renal dose
- **Adult: PO** CCr 10-50 mL/min, 50% of dose; CCr <10 mL/min, avoid use

Tocolytic (preterm labor) (unlabeled)
- **Adult: SUBCUT** 0.25 mg q20min to 6 hr, hold if pulse >120 bpm

Available forms: Tabs 2.5, 5 mg; inj 1 mg/mL

Administer:
- With food; may be crushed
- 2 hr before bedtime to avoid sleeplessness

IV route (unlabeled)
- Only used if subcut is ineffective
- IV after diluting each 5 mg/1 L D_5W for infusion
- IV, run 5 mcg/min; may increase 5 mcg q10min, titrate to response; after ½-1 hr, taper dose by 5 mcg; switch to PO as soon as possible
- Store at room temperature; do not use discolored sol

SIDE EFFECTS

CNS: Tremors, anxiety, insomnia, headache, dizziness, stimulation, restlessness
CV: Palpitations, tachycardia, hypertension, dysrhythmias, cardiac arrest, QT prolongation
GI: Nausea, vomiting
META: Hypokalemia, hyperglycemia
RESP: Paradoxical bronchospasm, dyspnea
MS: Muscle cramps
SYST: Angioedema, hypersensitivity

PHARMACOKINETICS

PO: Onset ½ hr, peak 1-2 hr, duration 4-8 hr, half-life 3.4 hr
SUBCUT: Onset 6-15 min, peak ½-1 hr, duration 1½-4 hr, half-life 5.7 hr

INTERACTIONS

Increase: hypertensive crisis—MAOIs
Increase: effects of both products—other sympathomimetics
Decrease: action—β-blockers; do not use together
Drug/Herb
Increase: effect—green tea (large amounts), guarana

NURSING CONSIDERATIONS

Assess:
- **Respiratory function:** vital capacity, forced expiratory volume (FEV), ABGs, B/P, pulse, respiratory pattern, lung sounds, sputum before and after treatment
- **CV status:** HR/rhythm, chest pain, palpitations
- **CNS:** tremors, anxiety, insomnia, dizziness
- Tolerance in patients receiving long-term therapy; dose may have to be changed; monitor for rebound bronchospasm
- **Paradoxical bronchospasm:** dyspnea, wheezing; keep emergency equipment nearby

Black Box Warning: Premature labor: maternal heart rate, B/P, contraction, fetal heart rate; can inhibit uterine contractions, labor; monitor for hypoglycemia; do not use injectable product for prevention or treatment over 72 hr in preterm labor; do not use oral product for preterm labor; avoid breastfeeding

Evaluate:
- Therapeutic response: absence of dyspnea, wheezing

Teach patient/family:
- Avoid cough/cold/allergy OTC medications because extra stimulation may occur
- About all aspects of product; to avoid smoking, smoke-filled rooms, persons with respiratory infections
- To maintain adequate hydration; to allow 15 min between inhalation of product and inhaled product containing steroid
- To take on time; if missed, not to make up after 1 hr; to wait until next dose

terconazole vaginal antifungal

See Appendix B

teriflunomide (Rx)

(ter'i-floo'noe-mide)

Aubagio

Func. class.: Multiple sclerosis agent
Chem. class.: Pyrimidine synthesis inhibitor

ACTION: Antiproliferative effects including peripheral T- and B-lymphocytes, might reduce inflammatory demyelination

USES: Reduction of the frequency of relapses or remitting MS

CONTRAINDICATIONS: Hypersensitivity to this product or leflunomide

Black Box Warning: Pregnancy

Precautions: Breastfeeding, alcoholism, diabetes mellitus, eosinophilic pneumonia, hepatitis, jaundice, male-mediated teratogenicity, pneumonitis, pulmonary disease/fibrosis, sarcoidosis, TB, vaccination, children, geriatrics

Black Box Warning: Hepatic disease, contraception requirements, male-mediated teratogenicity

DOSAGE AND ROUTES

Adult: PO 7 or 14 mg/day, max 14 mg/day
Available forms: Tabs 7, 14 mg
Administer:
PO route
- May be taken without regard to food
- Use precautions in handling, use gloves

SIDE EFFECTS

CNS: Anxiety, headache

CV: Palpitations, hypertension, MI
EENT: Blurred vision, conjunctivitis, sinusitis
GI: Nausea, vomiting, diarrhea, cystitis, hepatotoxicity
HEMA: Leukopenia, lymphopenia, neutropenia
INTEG: Acne vulgaris, alopecia, pruritus
META: Weight loss
MISC: Infection, cystitis, Stevens-Johnson syndrome

PHARMACOKINETICS

Protein binding >99%, median half-life 18-19 days, peak 1-4 hr

INTERACTIONS

- **Do not use with leflunomide, live virus vaccines**

Increase: teriflunomide effect—cycloSPORINE, eltrombopag, gefitinib

Black Box Warning: Increase: hepatotoxicity—methotrexate, HMG-CoA reductase inhibitors

Increase: hematologic toxicity—zidovudine
Increase: effect of—oral contraceptives, repaglinide, pioglitazone, rosiglitazone, PACLitaxel, naproxen, topotecan, bosentan, furosemide
Decrease: effect of—warfarin, alosetron, DULoxetine, theophylline, tiZANidine, quiNINE, tamoxifen, bendamustine, rasagiline, rOPINIRole, selegiline, propafenone, mexiletine, lidocaine, anagrelide, cloZAPine, cinacalcet, caffeine; monitor closely
Decrease: effect of teriflunomide—cholestyramine

NURSING CONSIDERATIONS

Assess:

- **Labs:** ALT/AST, bilirubin, CBC within 6 mo of starting; measure ALT q6mo, CBC if infection is suspected, obtain TB test before beginning therapy
- **CNS symptoms:** anxiety, confusion, vertigo
- **GI status:** diarrhea, vomiting, abdominal pain
- **Cardiac status:** tachycardia, palpitations, vasodilation, chest pain; monitor B/P
- **Stevens-Johnson syndrome, toxic epidermal necrolysis:** Assess for fever, blisters, aches, fatigue, if these occur, stop product immediately
- **Hepatotoxicity:** Monitor LFTs after 6 mo or less of treatment, and monthly after start of treatment, do not use if ALT >2X ULN, discontinue if >3X ULN, monitor bilirubin
- **Blood dyscrasias:** Monitor CBC, platelets 6 mo before use and periodically, monitor for infection, monitor INR

Black Box Warning: Pregnancy: obtain pregnancy test in those of reproductive potential; this product should not be used during pregnancy or for 2 yr after last dose; those wishing to become pregnant must discontinue the product and undergo an accelerated elimination procedure with verification of teriflunomide plasma level <0.02 mg/L; do not use in breastfeeding

Evaluate:

- Therapeutic response: decreased symptoms of MS

Teach patient/family:

- That blurred vision can occur
- That hair may be lost, that a wig or hairpiece may be used
- Not to change dosing or stop taking without advice of prescriber
- To report skin changes, rashes immediately
- To avoid live virus vaccines; that updated vaccines should be done before use
- To report signs, symptoms of infection
- Teach patient to take as directed, provide "Medication Guide"
- Teach patient to notify provider of nausea, vomiting, loss of appetite, dark urine, yellow eyes or skin

Black Box Warning: To notify prescriber if pregnancy is planned or suspected; do not use in pregnancy or breastfeeding

teriparatide (Rx)

(tah-ree-par′ah-tide)

Forteo

Func. class.: Parathyroid hormone (rDNA)

Chem. class.: Teriparatide

ACTION: Contains human recombinant parathyroid hormone to stimulate new bone growth

USES: Postmenopausal women with osteoporosis, men with primary or hypogonadal osteoporosis who are at high risk for fracture, glucocorticoid-induced osteoporosis

Unlabeled uses: Hypoparathyroidism

CONTRAINDICATIONS: Hypersensitivity, increased baseline risk for osteosarcoma (Paget's disease, open epiphyses; previous bone radiation), bone metastases, history of skeletal malignancies, other metabolic bone diseases, preexisting hypercalcemia

Precautions: Pregnancy, breastfeeding, children, urolithiasis, hypotension, use >2 yr, cardiac disease

Black Box Warning: Secondary malignancy (osteogenic sarcoma)

DOSAGE AND ROUTES

• **Adult: SUBCUT** 20 mcg/day up to 2 yr

Available forms: Prefilled pen delivery device (delivers 20 mcg/day)

Administer:

SUBCUT route

• Solution should be clear/colorless

• Give by SUBCUT using disposable pen only; inject in thigh or abdomen; lightly pinch fold of skin; insert needle; release skin; inject at 90-degree angle over 5 sec; rotate inj sites

• Have patient sit or lie down; orthostatic hypotension may occur

• Protect from freezing, light; refrigerate pen

• Store refrigerated; do not freeze; may be used for 28 days after first inj

SIDE EFFECTS

CNS: Dizziness, headache, insomnia, depression, vertigo

CV: Hypertension, angina, syncope

GI: Nausea, diarrhea, dyspepsia, vomiting, constipation

INTEG: Rash, sweating

MISC: Pain, asthenia, hyperuricemia

MS: Arthralgia, leg cramps, back/leg pain, weakness, osteosarcoma (rare)

RESP: Rhinitis, cough, pharyngitis, pneumonia, dyspnea

PHARMACOKINETICS

SUBCUT: Extensively and rapidly absorbed, metabolized by liver, excreted by kidneys, terminal half-life 1 hr, onset rapid, peak ½ hr, duration 3 hr

INTERACTIONS

Increase: digoxin toxicity: digoxin

Drug/Lab Test

Increase: calcium, uric acid, urinary calcium

Decrease: phosphorous, magnesium

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Secondary malignancy: osteosarcoma, dependent on length of treatment; those at higher risk for osteosarcoma should not use this product, monitor for bone pain, fracture risk

• **Labs:** Uric acid, magnesium, creatinine, BUN, urine pH, vit D, phosphate for normal serum levels; serum calcium may be transiently increased after dosing (max at 4-6 hr after dose)

• **Adverse reactions:** Bone pain, headache, fatigue, changes in LOC, leg cramps

• **Signs of persistent hypercalcemia:** nausea, vomiting, constipation, lethargy, muscle weakness

• **Nutritional status:** diet for sources of vit D (milk, some seafood), calcium (dairy products, dark green vegetables), phosphates (dairy products)

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; not to be used in pregnant females; do not breastfeed

Evaluate:

• Therapeutic response: increased bone mineral density

Teach patient/family:

• About the symptoms of hypercalcemia
• About foods rich in calcium, vit D
• How to use delivery device, dispose of needles; not to share pen with others; to use at same time of day
• To sit or lie down if dizziness or fast heartbeat occurs after 1st few doses
• To report persistent bone pain, severe fatigue, weight loss, falls, swelling
• To rotate administration sites
• To store pen in refrigerator; pen may be used for 28 days

tesamorelin (Rx)

Egrifta

Func. class.: Pituitary hormone, growth hormone modifiers

ACTION: Binds to growth hormone (GH) releasing factor receptors on the pituitary somatotroph cells; binding stimulates the production, release of endogenous GH

USES: Treatment of excess abdominal fat in HIV-infected patients with lipodystrophy

CONTRAINDICATIONS: Hypersensitivity to this product or mannitol, neoplastic disease, pregnancy, disruption of the hypothalamic-pituitary axis (hypothalamic-pituitary-adrenal [HPA] suppression) due to hypophysectomy, hypopituitarism, pituitary tumor/surgery, radiation therapy of the head or head trauma, IV/IM administration

Precautions: Breastfeeding, CABG, diabetes, diabetic retinopathy, edema, geriatric patients, children, infants, adolescents

DOSAGE AND ROUTES

• **Adult: SUBCUT** 2 mg/day

Available forms: Powder for injection 1 mg

Administer:

Subcut route:

• Visually inspect parenteral products for particulate matter and discoloration before use
• To **reconstitute,** use 2, 1-mg vials, inject 2.1 mL sterile water for inj into the first 1-mg vial; use syringe with needle attached; to avoid foaming, push plunger in slowly and roll for 30 sec until mixed; do not shake; withdraw 2.1 mL of the reconstituted sol and add to second 1-mg vial; roll, do not shake
• Use a 0.5-inch 27-G safety injection needle; use immediately; **inject** subcut into abdomen; avoid scar tissues, bruises, navel; rotate sites; slowly push plunger down until all sol has been injected
• Use a piece of sterile gauze to rub the inj site clean; if bleeding, apply pressure to site with gauze for 30 sec; if bleeding continues, apply a bandage to site
• Properly dispose of used syringe, needles, vial, and sterile water for injection bottle

SIDE EFFECTS

CNS: Depression, peripheral neuropathy paresthesias, hypoesthesia, flushing, night sweats, insomnia, headache
CV: Hypertension, edema, peripheral edema, chest pain, palpitations
GI: *Nausea, vomiting,* upper abdominal pain, dyspepsia, diarrhea, constipation
INTEG: *Pruritus,* urticaria, rash, flushing, *injection site reactions*
MS: *Arthralgia, joint swelling, stiffness, myalgias,* carpal tunnel syndrome
RESP: Upper respiratory tract infection
SYST: Secondary malignancy
META: Hypercalcemia, hyperuricemia

PHARMACOKINETICS

Half-life 26 min in healthy patients, 38 min in those with HIV infection; peak 0.15 hr

INTERACTIONS

Decrease: effect of—simvastatin, ritonavir, cortisone, predniSONE

NURSING CONSIDERATIONS

Assess:

- **Lipodystrophy:** sunken cheeks, thinning arms and legs, fat accumulation in the abdomen, jaws, and back of neck; after treatment these should lessen
- Monitor for edema, joint pains, carpal tunnel syndrome, therapy may need to be discontinued
- Monitor glycosylated hemoglobin A1c (HbA1c), serum IGF-1 concentrations, ophthalmologic exam
- **Beers:** avoid in older adults except as hormone replacement following pituitary gland removal; may cause edema, arthralgia
- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:

- Decreasing lipodystrophy in HIV patients

Teach Patient/Family:

- That body fat distribution should change
- That lab exams will be needed
- If dose is missed, skip and continue with regular schedule
- About injection technique and preferred injection sites; to avoid bruised, scarred, or broken skin
- About expectations; the product is not indicated for weight-loss management
- **Hypersensitivity:** To report rash, swelling of face, trouble breathing immediately
- **Fluid retention:** To report edema, joint pain
- To notify prescriber if pregnancy is planned or suspected, to avoid breastfeeding

testosterone cypionate (Rx)
Depo-Testosterone
testosterone enanthate (Rx)
Xyosted
testosterone buccal (Rx)
Striant
testosterone topical (Rx)
Axiron, Vogelxo, AndroGel, Testim, Fortesta
testosterone nasal gel
Natesto
testosterone pellets (Rx)
Testopel
testosterone transdermal (Rx)
Androderm, AndroGel, Fortesta, Testim, Vogelxo
testosterone undecanoate
Aveed, Jatenzo

Func. class.: Androgenic anabolic steroid

Chem. class.: Halogenated testosterone derivative

Controlled Substance Schedule III

Do not confuse:
Testoderm/Testoderm TTS

ACTION: Increases weight by building body tissue; increases potassium, phosphorus, chloride, nitrogen levels, bone development

USES: Female breast cancer, hypogonadism, eunuchoidism, male climacteric, oligospermia, impotence, vulvar dystrophies, low testosterone levels, delayed male puberty (inj)

CONTRAINDICATIONS: Pregnancy, breastfeeding, severe cardiac/renal/hepatic disease, hypersensitivity, genital bleeding (rare), male breast/prostate cancer

Precautions: Diabetes mellitus, CV disease, MI, urinary tract disorders, prostate cancer, hypercalcemia

Black Box Warning: Children, accidental exposure, pulmonary oil microembolism, risk of serious hypersensitivity reactions or anaphylaxis

DOSAGE AND ROUTES

Replacement

• **Adult: IM (enanthate or cypionate)** 50-400 mg q2-4wk; **TOPICAL SOL (Axiron)** 60 mg (2 pump actuations); apply each AM

• **Adult (male)/child: SUBCUT (pellets)** 150-450 mg (2-6 pellets) inserted q3-6mo

• **Adult: TRANSDERMAL (Testoderm, Androderm)** 4-6 mg applied q24hr; **GEL (AndroGel)** 1% 5 mg applied q24hr, once daily; 1.62% 40.5 mg (2 pump actuations) every AM; topical sol **(Axiron)** 30 mg/actuation; **NASAL GEL** 1 pump actuation in each nostril tid

Breast cancer, palliative

• **Adult: IM** 200-400 mg q2-4wk (cypionate or enanthate)

Delayed male puberty

• **Adolescent males:** 50-200 mg q2-4wk for a limited period (cypionate or enathate)

Available forms: Enanthate: inj 200 mg/mL; **cypionate:** inj 100, 200 mg/mL; pellets 75 mg; **transdermal** 2, 4 mg/24 hr; **gel** 1%, 1.62%, 10 mg/actuation; **topical sol** 30 mg/actuation; **nasal gel** 5.5 mg/actuation

Administer:

• Titrated dose; use lowest effective dose

• IM inj deep into upper outer quadrant of gluteal muscle

• **Transdermal patches:** Testoderm to skin of scrotum; Androderm to skin of back, upper arms, thighs, abdomen; area must be dry shaved; may be reapplied after bathing, swimming

• **Gel:** products are not interchangeable; dosage and administration for AndroGel 1% differs from that of AndroGel 1.62%; apply daily to clean, dry area on shoulders, upper arms, or abdomen; women, children should not touch treated skin

Topical solution route

• Use the applicator, apply to clean, dry intact skin of the axilla at the same time each AM; do not apply to any other part of the body; allow to dry; if deodorant is used, apply at least 2 min before using; prime pump 3×; discard any solution that is released; to dispense, position the nozzle over the applicator cup and depress the pump once fully; with the applicator upright, place it up into the axilla and wipe steadily down and up into the axilla; do not use fingers or hand to rub the solution; if multiple applications are necessary for the required dose, alternate application between the left and right axilla; when repeat application to the same axilla is necessary, allow the solution to dry completely before the next application; after use, rinse the applicator under running water and pat dry with tissue; wash hands with soap and water

• Following application, allow the site to dry before putting on clothing

• Direct contact of the medicated skin with the skin of another person can result in the transfer of residual testosterone and absorption by the other person; to reduce accidental transfer, the patient should cover the application site(s) with clothing after the solution has dried; wash with soap and water before any skin-to-skin contact in the case of direct contact, the other person should wash the area of contact with soap and water

• Topical solution is flammable; fire, flame, and smoking should be avoided during use

• Avoid swimming or washing the application site until 2 hr after application

SIDE EFFECTS

CNS: Dizziness, headache, fatigue, tremors, paresthesias, flushing, sweating, anxiety, lability, insomnia, carpal tunnel syndrome

CV: Increased B/P

EENT: Conjunctival edema, nasal congestion

ENDO: Abnormal glucose tolerance test

GI: Nausea, vomiting, constipation, weight gain, cholestatic jaundice

GU: Hematuria, amenorrhea, vaginitis, decreased libido, decreased breast size, clitoral hypertrophy, testicular atrophy, gynecomastia, large prostate
HEMA: Polycythemia
INTEG: Rash, acneiform lesions, oily hair/skin, flushing, sweating, acne vulgaris, alopecia, hirsutism
MS: Cramps, spasms

PHARMACOKINETICS

PO: Metabolized in liver; excreted in urine, breast milk; crosses placenta

INTERACTIONS

• Edema: ACTH, adrenal steroids, buPROPion
Increase: effects of oxyphenbutazone
Increase: PT—anticoagulants
Decrease: glucose levels—may alter need for oral antidiabetics, insulin
Drug/Lab Test
Increase: serum cholesterol, blood glucose, urine glucose, Hct, Hgb, WBC
Decrease: serum calcium, serum potassium, T_4, T_3, thyroid ^{131}I uptake test, urine 17-OHCS, 17-KS, PBI

NURSING CONSIDERATIONS

Assess:
• **CV status:** B/P q4hr, HB/HCT; weight daily; notify prescriber if weekly weight gain >5 lb
• **Fluid volume:** I&O ratio; be alert for decreasing urinary output, increasing edema
• Growth rate, bone age in children; growth rate may be uneven (linear/bone growth) with extended use
• **Electrolytes:** potassium, sodium, chlorine, calcium; cholesterol
• **Hepatic studies:** ALT, AST, bilirubin
• Edema, hypertension, cardiac symptoms, jaundice

Black Box Warning: Anaphylaxis: usually with testosterone undecanoate (Aveed) oil for injection; may occur after any injection, observe for 30 min after each use; this product is contraindicated in those with castor oil, benzyl alcohol, benzoic acid hypersensitivity

Black Box Warning: Accidental exposure in children has occurred with topical product after contact with application site, with clothing; wash hands with soap, water

Black Box Warning: Pulmonary oil microembolism: occurs immediately after 1000 mg IM injected of testosterone undecanoate; symptoms include cough, dyspnea, chest pain, dizziness, throat tightening; some events resolve with supportive measures after a few minutes, some require emergency measures

• **Mental status:** affect, mood, behavioral changes, aggression
• **Signs of masculinization in female:** increased libido, deepening of voice, decreased breast tissue, enlarged clitoris, menstrual irregularities; **male:** gynecomastia, impotence, testicular atrophy
• **Hypercalcemia:** lethargy, polyuria, polydipsia, nausea, vomiting, constipation; product may have to be decreased
• **Hypoglycemia** in diabetic patients; oral antidiabetic action is increased
• Diet with increased calories, protein; decrease sodium if edema occurs
• **Beers:** avoid in older adults unless indicated for confirmed hypogonadism with clinical symptoms; potential for cardiac problems; do not use in prostate cancer
• **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding

Evaluate:
• Therapeutic response: 4-6 wk in osteoporosis

Teach patient/family:
• That product must be combined with complete health plan: diet, rest, exercise
• To notify prescriber if therapeutic response decreases, if edema occurs
• About changes in sex characteristics: priapism, gynecomastia, increased libido
• That women should report menstrual irregularities, voice changes, acne, facial hair growth; if pregnancy is planned or suspected, or if breastfeeding
• That course of 1-3 mo is necessary for response with breast cancer

• About the proper application of patches and how to use gel, IM injection, buccal system, intranasal gel; about SUB-CUT implant complications
• **Nasal:** Teach patient to report nasal bleeding, irritation, pain
• **Topical:** Teach patient to avoid contact with area that has been treated, to wash area before contact
• **Buccal:** Teach patient how to administer buccal tab to gum
• **Transdermal:** Advise patient to notify provider of virilization in females

tetracaine ophthalmic

See Appendix B

tetracaine topical

See Appendix B

tetracycline (Rx)

(tet-ra-sye′kleen)
Func. class.: Broad-spectrum antiinfective
Chem. class.: Tetracycline

ACTION: Inhibits protein synthesis and phosphorylation in microorganisms; bacteriostatic

USES: Syphilis, *Chlamydia trachomatis,* gonorrhea, lymphogranuloma venereum; uncommon gram-positive, gram-negative organisms; rickettsial infections
Acinetobacter sp., *Actinomyces* sp., *Bacillus anthracis, Bacteroides* sp., *Balantidium coli, Bartonella bacilliformis, Borrelia recurrentis, Brucella* sp., *Campylobacter fetus, Chlamydia trachomatis, Chlamydophila psittaci, Clostridium* sp., *Entamoeba histolytica, Entamoeba sp., Escherichia coli, Francisella tularensis, Fusobacterium fusiforme, Haemophilus ducreyi, Haemophilus* influenzae (beta-lactamase negative), *Haemophilus influenzae* (beta-lactamase positive), *Klebsiella aerogenes, Klebsiella granulomatis, Klebsiella* sp., *Listeria monocytogenes, Mycoplasma pneumoniae, Neisseria gonorrhoeae, Rickettsia* sp., *Shigella* sp., *Staphylococcus aureus* (MRSA), *Staphylococcus aureus* (MSSA), *Streptococcus pneumoniae, Streptococcus pyogenes* (group A beta-hemolytic streptococci), *Treponema pallidum, Treponema pertenue, Vibrio cholerae, Yersinia pestis*

CONTRAINDICATIONS: Pregnancy, breastfeeding, children <8 yr, hypersensitivity to tetracyclines, severe renal/hepatic disease, myasthenia gravis
Precautions: Renal/hepatic disease, UV exposure, geriatrics

DOSAGE AND ROUTES

Susceptible infections
• **Adult: PO** 250-500 mg q6hr
• **Child >8 yr: PO** 25-50 mg/kg/day in divided doses q6hr, max 3 g/day
Chlamydia trachomatis
• **Adult: PO** 500 mg qid × 7 days
Syphilis
• **Adult and adolescent: PO** 500 mg qid × 2 wk; if syphilis duration >1 yr, must treat 28 days
Brucellosis
• **Adult: PO** 500 mg q6hr × 3 wk with **IM** 1 g streptomycin bid × 1st wk, then daily × 2nd wk
Urethral, endocervical, rectal infections *(C. trachomatis)*
• **Adult: PO** 500 mg qid × 7 days
Acne
• **Adult/adolescent: PO** 250 mg q6hr, then 125-500 mg/day or every other day
Renal dose
• **Adult: PO** CCr 51-90 mL/min, give dose q8-12hr; CCr 10-50 mL/min, give dose q12-24hr; CCr <10 mL/min, give dose q24hr
Available forms: Caps 250, 500 mg
Administer:
• After C&S obtained, therapy may start before results are received
• 2 hr before or after iron products; 1 hr after antacid products

• Should be given on empty stomach (1 hr before or 2 hr after meals), avoid using at bedtime and take with a full glass of water to prevent irritation and ulceration
• Store in tight, light-resistant container at room temperature

SIDE EFFECTS

CNS: Fever, headache, paresthesia, ICP
CV: Pericarditis
EENT: Dysphagia, glossitis, decreased calcification, discoloration of deciduous teeth, oral candidiasis, oral ulcers
GI: *Nausea,* abdominal pain, *vomiting, diarrhea,* anorexia, enterocolitis, hepatotoxicity, flatulence, abdominal cramps, epigastric burning, stomatitis, hepatitis, CDAD
GU: *Increased BUN,* azotemia, acute renal failure
HEMA: Eosinophilia, neutropenia, thrombocytopenia, leukocytosis, hemolytic anemia
INTEG: *Rash, urticaria, photosensitivity, increased pigmentation,* exfoliative dermatitis, pruritus, angioedema, Stevens-Johnson syndrome
MISC: Increased intracranial pressure, candidiasis

PHARMACOKINETICS

PO: Peak 2-3 hr; duration 6 hr; half-life 6-12 hr; excreted in urine, breast milk; crosses placenta; 65% protein bound

INTERACTIONS

Fatal nephrotoxicity: methoxyflurane; do not use together
Do not take iron supplements, multivitamins, calcium supplements, antacids, laxatives within 2 hr of this product
Increase: Pseudotumor cerebi—ISOtretinoin; avoid concurrent use
Increase: effect of warfarin—digoxin
Decrease: hormonal contraceptive (possible but unlikely); use additional contraception
Decrease: effect of tetracycline—antacids, sodium bicarbonate, alkali products, iron, cimetidine
Decrease: effect of penicillins
Drug/Herb
• Photosensitivity: dong quai
Drug/Food
Decrease: tetracycline effect—dairy products
Drug/Lab Test
Increase: BUN, LFTs

NURSING CONSIDERATIONS

Assess:
• **CDAD:** diarrhea, abdominal pain, fever, fatigue, anorexia; possible anemia, elevated WBC count, low serum albumin; stop product; usually either vancomycin or IV metroNIDAZOLE is given
• **Signs of anemia:** Hct, HB, fatigue
• **Fluid status:** I&O ratio
• **Blood studies:** PT, CBC, AST, ALT, BUN, creatinine if on prolonged therapy
• **Hypersensitivity:** rash, itching, pruritus, angioedema, Stevens-Johnson syndrome, exfoliative dermatitis; report immediately after stopping product
• **GI symptoms:** Nausea, vomiting, diarrhea; administer antiemetic, antacids as ordered
• **Superinfection:** fever, malaise, redness, pain, swelling, drainage, perineal itching, diarrhea, changes in cough or sputum if on prolonged therapy
• **Pregnancy/breastfeeding:** do not use in pregnancy, toxic to fetus; do not breastfeed, excreted in breast milk
Evaluate:
• Therapeutic response: absence of lesions, negative C&S, resolution of infection, prevention of malaria
Teach patient/family:
• To avoid sun exposure; that sunscreen does not seem to decrease photosensitivity
• That all prescribed medication must be taken to prevent superinfection
• To avoid milk products, antacids or to separate by 2 hr; to take with full glass of water; to take 1 hr before bedtime to prevent esophageal ulceration
• That tooth discoloration may occur, especially in children; not to use in child <8 yr, may cause bone formation abnormalities
• To notify prescriber immediately of diarrhea with pus, mucus, fever, abdominal pain
• To notify prescriber if pregnancy is planned or suspected
• Not to use outdated products; Fanconi's syndrome (nephrotoxicity) may occur

tetrahydrozoline nasal agent

See Appendix B

tetrahydrozoline ophthalmic

See Appendix B

thiamine (vit B_1) (PO-OTC; IV, IM-Rx)

Vitamin B_1

Func. class.: Vit B_1

Chem. class.: Water soluble

Do not confuse:
thiamine/Tenormin

ACTION:

Needed for pyruvate metabolism, carbohydrate metabolism

USES:

Vit B_1 deficiency or polyneuritis, cheilosis adjunct with thiamine beriberi, Wernicke-Korsakoff syndrome, pellagra, metabolic disorders, alcoholism

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Pregnancy

DOSAGE AND ROUTES

RDA

- **Adult: PO** (males) 1.2-1.5 mg; (females) 1.1 mg; (pregnancy) 1.4 mg; (breastfeeding) 1.4 mg
- **Child 9-13 yr: PO** 0.9 mg
- **Child 4-8 yr: PO** 0.6 mg
- **Child 1-3 yr: PO** 0.5 mg
- **Infant 7 mo-1 yr: PO** 0.3 mg
- **Neonate/infant ≤6 mo: PO** 0.2 mg

Beriberi

- **Adult: PO** 5-30 mg daily or in 3 divided doses × 1 mo; **IM/IV** 5-30 mg daily or in 3 divided doses, then convert to **PO**
- **Infant/child: PO** 10-50 mg daily × 2 wk, then 5-10 mg daily × 1 mo; **IV/IM** 10-25 mg/day × 2 wk, then 5-10 mg daily × 1 mo

Wernicke-Korsakoff syndrome

- **Adult: IV** 100 mg, then 50-100 mg every day

Available forms: Tabs 50, 100, 250, 500 mg; inj 100 mg/mL; enteric-coated tabs 20 mg

Administer:

IM route

- By IM inj; rotate sites if pain and inflammation occur; do not mix with alkaline sol; Z-track to minimize pain

Direct IV route

- Undiluted at 100 mg/mL over 5 min

Continuous IV INFUSION route

- Diluted in compatible IV sol

SIDE EFFECTS

CNS: Weakness, restlessness
CV: Collapse, pulmonary edema, hypotension
EENT: Tightness of throat
GI: Hemorrhage, *nausea, diarrhea*
INTEG: Angioneurotic edema, cyanosis, sweating, warmth
SYST: Anaphylaxis

PHARMACOKINETICS

PO/INJ: Unused amounts excreted in urine (unchanged)

NURSING CONSIDERATIONS

Assess:

- **Anaphylaxis (IV only):** swelling of face, eyes, lips, throat, wheezing
- **Alcoholism:** Give thiamine prior to glucose-containing IV fluids to chronic alcoholics
- **Thiamine deficiency:** anorexia, weakness/pain, depression, confusion, blurred vision, tachycardia
- Nutritional status: yeast, beef, liver, whole or enriched grains, legumes
- Application of cold to help decrease injection site pain
- **Pregnancy/breastfeeding:** considered compatible with pregnancy, breastfeeding

Evaluate:

- Therapeutic response: absence of nausea, vomiting, anorexia, insomnia, tachycardia, paresthesias, depression, muscle weakness

T

Teach patient/family:

• About the necessary foods to be included in diet: yeast, beef, liver, legumes, whole grains

thioridazine (Rx)

(thye-or-rid′a-zeen)

Func. class.: Antipsychotic (typical)

Chem. class.: Phenothiazine piperidine

USES: Psychotic disorders, schizophrenia, behavioral problems in children, anxiety, major depressive disorders, organic brain syndrome

CONTRAINDICATIONS: Children <2 yr, hypersensitivity, coma, CNS depression

Black Box Warning: QT prolongation, cardiac dysrhythmias, dementia-related psychosis, torsade de pointes

DOSAGE AND ROUTES

Schizophrenia

• **Adult: PO** 50-100 mg tid, max 800 mg/day; dose gradually increased to desired response, then reduced to minimum maintenance

Depression/behavioral problems/dementia

• **Geriatric: PO** 10-25 mg daily-tid, increase 4-7 days by 10-25 mg to desired dose, max 800 mg/day for short period

Available forms: Tablet 10, 25, 50, 100

thiotepa (Rx)

(thye-oh-tep′a)

Tepadina

Func. class.: Antineoplastic, alkylating agent

USES: To reduce the risk of graft rejection when used with busulfan and cyclophosphamide as a preparative regimen for allogeneic hematopoietic progenitor (stem) cell transplantation in children with class 3 beta-thalassemia

CONTRAINDICATIONS

Hypersensitivity, use with live/attenuated vaccines

DOSAGE AND ROUTES

Child: IV: 5 mg/kg IV over 3 hours (via a central venous catheter) approximately 12 hours apart for 2 doses on day -6 prior to an allogeneic hematopoietic progenitor cell transplantation (HSCT) in combination with high-dose busulfan and cyclophosphamide

Available forms: Injection 15 mg

thyroid USP, porcine (desiccated) (Rx)

(thye′roid)

Armour Thyroid, Nature-Throid, NP Thyroid, Westhroid

Func. class.: Thyroid hormone

Chem. class.: Active thyroid hormone in natural state and ratio

USES: Hypothyroidism, cretinism (juvenile hypothyroidism), myxedema

CONTRAINDICATIONS: Adrenal insufficiency, MI, thyrotoxicosis, porcine protein hypersensitivity

Black Box Warning: Obesity treatment

DOSAGE AND ROUTES

Hypothyroidism

• **Adult: PO** 30 mg/day, increased by 15 mg/mo until desired response; maintenance dose 60-120 mg/day

• **Geriatric: PO** 7.5-15 mg/day, increase dose q6-8wk until desired response

Cretinism/juvenile hypothyroidism

• **Child: PO** 15 mg/day, then 30 mg/day after 2 wk, then 60 mg/day after another 2 wk; maintenance dose 60-180 mg/day

Myxedema

• **Adult: PO** 15 mg/day, double dose q2wk, maintenance 60-180 mg/day

Available forms: Tabs 15, 16.25, 30, 32.5, 60, 65, 90, 120, 130, 180, 195, 240, 300 mg

tiaGABine (Rx)

(tie-ah-ga′been)

Gabitril

Func. class.: Anticonvulsant

Do not confuse:
tiaGABine/tiZANidine

ACTION: Inhibits reuptake and metabolism of GABA, may increase seizure threshold; structurally similar to GABA; tiaGABine binding sites in neocortex, hippocampus

USES: Adjunct treatment of partial seizures in adults and children ≥12 yr

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children <12 yr, geriatric patients, renal/hepatic disease, suicidal thoughts/behaviors, status epilepticus, mania, bipolar disorder, abrupt discontinuation, depression

DOSAGE AND ROUTES

• **Adult (those receiving an enzyme-inducing antiepileptic product): PO** 4 mg/day in divided doses, may increase by 4-8 mg/wk until desired response, max 56 mg/day
• **Child 12-18 yr: PO** 4 mg/day, may increase by 4 mg at beginning of wk 2; may increase by 4-8 mg/wk until desired response; max 32 mg/day

Hepatic dose

• **Adult: PO** reduce dose or increase dosing interval

Available forms: Tabs 2, 4, 12, 16 mg

Administer:

• Store at room temperature, away from heat and light
• Use with food

SIDE EFFECTS

CNS: *Dizziness, anxiety,* somnolence, ataxia, confusion, *asthenia,* unsteady gait, depression, suicidal ideation, seizures, tremors, hostility, EEG changes, insomnia
CV: Vasodilation, tachycardia, hypertension
ENDO: Goiter, hypothyroidism
GI: Nausea, vomiting, diarrhea, increased appetite
INTEG: Pruritus, rash, Stevens-Johnson syndrome, alopecia, hyperhidrosis
MS: Myalgia
RESP: Pharyngitis, coughing

PHARMACOKINETICS

Absorption >95%; peak 45 min; protein binding 96%; metabolized in the liver via CYP3A4; half-life 7-9 hr without enzyme inducers, 2-5 hr with enzyme inducers

INTERACTIONS

• Lower doses may be needed when used with valproate
Increase: CNS depression—CNS depressants, alcohol
Decrease: tiaGABine effect—sevelamer
Decrease: effect—carBAMazepine, PHENobarbital, phenytoin, primidone

Drug/Food

Decrease: rate of absorption—high-fat meal

NURSING CONSIDERATIONS

Assess:

• Hepatic studies: ALT, AST, bilirubin at baseline and periodically
• **Seizures:** location, duration, presence of aura; assess for weakness
• Withdraw gradually to prevent seizures
• May cause status epilepticus and unexplained death
• **Mental status:** mood, sensorium, affect, behavioral changes, suicidal thoughts/behaviors; if mental status changes, notify prescriber, hypomania may be present before suicide attempt
• Assistance with ambulation during early part of treatment; dizziness occurs
• **Seizure precautions:** padded side rails; move objects that may harm patient
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risks, may be fetal toxic; pregnant women should enroll in the North American Antiepileptic Drug Pregnancy Registry at 1-888-233-2334; avoid breastfeeding, likely to be excreted in breast milk

• **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function

Evaluate:

• Therapeutic response: decreased seizure activity; document on patient's chart

Teach patient/family:

• To carry emergency ID stating patient's name, products taken, condition, prescriber's name and phone number

• To avoid driving, other activities that require alertness, until response is known

• Not to discontinue medication quickly after long-term use

• To take with food

• To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding

• To report suicidal thoughts, behaviors immediately

⚠ HIGH ALERT

ticagrelor (Rx)

Brilinta

Func. class.: Platelet inhibitor

Chem. class.: ADP receptor antagonist

ACTION: Reversibly binds to the platelet receptor, preventing platelet activation

USES: Arterial thromboembolism prophylaxis in acute coronary syndrome (ACS) (unstable angina, acute MI), including in patients undergoing percutaneous coronary intervention (PCI), stroke

CONTRAINDICATIONS: Hypersensitivity, severe hepatic disease

Black Box Warning: Bleeding, intracranial bleeding

Precautions: Pregnancy, breastfeeding, infants, neonates, children, GI bleeding, hepatic disease, abrupt discontinuation

Black Box Warning: Coronary artery bypass graft surgery (CABG), surgery, abrupt discontinuation, aspirin coadministration

DOSAGE AND ROUTES

Acute coronary syndrome

• **Adult: PO** loading dose 180 mg with aspirin (usually 325 mg PO); then give 90 mg bid with aspirin 75-100 mg/day, do not give maintenance doses of aspirin >100 mg/day

MI prophylaxis

• **Adult: PO** 60 mg bid with aspirin 75-100 mg daily

Available forms: Tab 60, 90 mg

Administer:

PO route

• May be taken without regard to food

• Discontinue 5-7 days before surgery

• May be crushed (90 mg tab) and mixed with purified water, 100 mL (PO) or 50 mL (NG); ensure entire dose is given by flushing mortar, syringe, NG tube with 2 additional 50 mL of water

• Store at room temperature, in original container in dry place

SIDE EFFECTS

CNS: *Headache,* dizziness, fatigue

CV: Hypertension, hypotension, chest pain, atrial fibrillation, bradyarrhythmias, syncope, ventricular pauses, HF

GI: Nausea, diarrhea

HEMA: Serious, fatal bleeding

MISC: Back pain, hyperuricemia, gynecomastia

RESP: Dyspnea, cough

PHARMACOKINETICS

Absolute bioavailability 36%, protein binding (>99%), metabolism by CYP3A4, weak P-glycoprotein substrates and inhibitors, elimination for product and metabolite are hepatic and biliary, 84% excreted in feces, 16% in urine, half-life is 7 hr for ticagrelor, 9 hr for metabolite, maximum inhibition of platelet aggregation (IPA) effect 2 hr, maintained ≥8 hr, peak 1.5 hr product, 2.5 hr metabolite

INTERACTIONS

Black Box Warning: Increase: bleeding risk—CYP3A4 inhibitors (ketoconazole, itraconazole, voriconazole, clarithromycin, telithromycin, nefazodone, ritonavir, lopinavir, ritonavir, saquinavir, nelfinavir, indinavir, atazanavir, delavirdine, isoniazid, dalfopristin, quinupristin, tipranavir); cycloSPORINE, anticoagulants, atazanavir, thrombolytics

Increase: effect of—simvastatin, lovastatin
Increase: bleeding risk—NSAIDs, anticoagulants, platelet inhibitors
Decrease: ticagrelor action—CYP3A4 inducers (rifAMPin, dexamethasone, phenytoin, carBAMazepine, PHENobarbital)
Increase or decrease: digoxin
Drug/Lab Test
Increase: serum creatinine

NURSING CONSIDERATIONS

Assess:

- **Thromboembolism:** Monitor CBC with differential with platelet count baseline and periodically during treatment

Black Box Warning: Bleeding: assess for bleeding that may occur when aspirin is combined with this product; some bleeding can be fatal, usually aspirin doses >100 mg/day; watch for frank bleeding, hypotension; avoid with active bleeding, history of intracranial hemorrhage

Black Box Warning: CABG: do not use in those undergoing CABG; discontinue ≥5 days before surgery

Black Box Warning: Aspirin coadministration: use with 75-100 mg of aspirin/day, avoid higher doses; ticagrelor efficacy is decreased with aspirin >100 mg/day

Black Box Warning: Abrupt discontinuation: do not discontinue abruptly; may increase risk for MI, stent thrombosis, death

- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may be fetal toxic; do not breastfeed, excretion unknown

Evaluate:

- Prevention of thromboembolism

Teach patient/family:

- To take only as prescribed; not to skip or double doses; if a dose is missed, to take next dose at scheduled time

Black Box Warning: To notify prescriber of chills, fever, bruising, bleeding; not to use aspirin >100 mg/day

- Not to use any prescription, OTC products, herbs without approval of prescriber; products with aspirin, NSAIDs may cause bleeding; to be taken with aspirin; prescriber will order, do not alter dose
- To notify all health care providers of product use
- That product can be taken without regard to meals
- That it may take longer for bleeding to stop
- To notify prescriber if pregnancy is planned or suspected, not to breastfeed

ticlopidine (Rx)

Func. class.: Platelet aggregation inhibitors

USES: Prevention of thrombotic stroke, prevention of coronary artery stent thrombosis

DOSAGE AND ROUTES

Black Box Warning: Life-threatening adverse hematologic effects (neutropenia, agranulocytosis, thrombotic thrombocytopenic purpura, aplastic anemia)

Prevention of thrombotic stroke

- **Adult: PO** 250 mg bid

Prevention of coronary artery stent thrombosis

- **Adult: PO** 250 mg bid, beginning after stent implantation and for ≥30 days with aspirin

Available forms: Tabs 250 mg

tigecycline (Rx)

(tye-ge-sye'kleen)

Tygacil

Func. class.: Broad-spectrum antiinfective

Chem. class.: Glycylcyclines

ACTION: Inhibits protein synthesis and phosphorylation in microorganisms; bacteriostatic structurally similar to the tetracyclines

USES: Complicated skin/skin-structure infections *(Escherichia coli, Enterococcus faecalis* [vancomycin-susceptible only], *Staphylococcus aureus, Streptococcus agalactiae, S. anginosus* group, *S. pyogenes, Bacteroides fragilis);* complicated intraabdominal infections *(Citrobacter freundii, Enterobacter cloacae, E. coli, Klebsiella oxytoca, K. pneumoniae, E. faecalis* [vancomycin-susceptible only], *S. aureus* [methicillin-susceptible only], *S. anginosus* group, *B. fragilis, Bacteroides thetaiotaomicron, B. uniformis, B. vulgatus, Clostridium perfringens, Peptostreptococcus micros);* community-acquired pneumonia

CONTRAINDICATIONS: Pregnancy, breastfeeding, children <18 yr, hypersensitivity to tigecycline

Precautions: Renal/hepatic disease, hypersensitivity to tetracyclines, ventilator-associated/hospital-acquired pneumonias

Black Box Warning: Lab test interference due to maltose, mortality

DOSAGE AND ROUTES

• **Adult: IV infusion** 100 mg then 50 mg q12hr, **IV INFUSION** given over 30-60 min q12hr; × 5-14 days, depending on infection

Hepatic dose

• **Adult: IV** (Child-Pugh C) 100 mg, then 25 mg q12hr

Available forms: Powder for inj, lyophilized 50 mg

Administer:

• Tigecycline allergy test before using; obtain C&S, do not begin treatment before results or if susceptible organism is strongly suspected

Intermittent IV INFUSION route

• **Reconstitute** each vial with 5.3 mL of 0.9% NaCl or D_5 (10 mg/mL); swirl to dissolve; immediately withdraw 5 mL of reconstituted sol **dilute by adding** to 100-mL IV bag for infusion (1 mg/mL); may be yellow or orange; if not, sol should be discarded; do not give if particulate matter is present, use a dedicated IV line or Y-site, flush with NS before and after use, give over ½ hr

• Store in tight, light-resistant container at room temperature, diluted sol at room temperature for up to 24 hr, 6 hr in vial, and remaining time in IV bag, ≤48 hr refrigerated

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amphotericin B liposome, ampicillin, ampicillin/sulbactam, argatroban, azithromycin, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, ceftRIAXone, cefuroxime, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin hydrochloride, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, DOXOrubicin hydrochloride, DOXOrubicin liposome, droperidol, enalaprilat, EPINEPHrine, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate,

granisetron, haloperidol, heparin, hydrocortisone, HYDROmorphone, ifosfamide, imipenem/cilastatin, insulin, irinotecan, isoproterenol, ketorolac, labetalol, lansoprazole, lepirudin, leucovorin, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methohexital, methotrexate, methyldopa, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, mitoMYcin, mitoXANTRONE, morphine, moxifloxacin, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, PEMEtrexed, pemtamidine, pentazocin, PENTobarbital, PHENobarbital, phenylephrine, piperacillin/tazobactam, potassium acetate/chloride/phosphate, procainamide, prochlorperazine, promethazine, propofol, propranolol, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphate, streptozocin, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, topotecan, trimethoprim/sulfamethoxazole, vancomycin, vasopressin, vecuronium, vinBLAStine, vinCRIStine, vinorelbine, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Headache, dizziness, insomnia
CV: Hypo/hypertension, phlebitis
EENT: Tooth discoloration
GI: *Nausea, vomiting, diarrhea,* anorexia, constipation, dyspepsia, abdominal pain, hepatotoxicity, hepatic failure, CDAD
HEMA: Anemia, leukocytosis, thrombocytopenia
INTEG: *Rash,* pruritus, sweating, photosensitivity
META: Increased ALT, AST, BUN, lactic acid, alk phos, amylase; hyperglycemia, hypokalemia, hypoproteinemia, bilirubinemia
MISC: Back pain, fever, abnormal healing, abdominal pain, abscess, asthenia, infection, pain, peripheral edema, local reactions
RESP: Cough, dyspnea
SYST: Anaphylaxis, infection

PHARMACOKINETICS

Not extensively metabolized, 22% of unchanged product excreted in urine, terminal half-life 42 hr, primarily biliary excreted, protein binding 71%-89%

INTERACTIONS

Increase: effect of warfarin, monitor INR
Decrease: effect of oral contraceptives
Drug/Lab Test
Increase: amylase, LFTs, alk phos, BUN, creatinine, LDH, WBC, INR, PTT, PT
Decrease: potassium, calcium, sodium, HB/Hct, platelets

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Increased mortality risk: use only with confirmation of strongly suspected bacterial infection; do not use as a prophylactic

- **CDAD:** diarrhea, abdominal pain, fever, fatigue, anorexia; possible anemia, elevated WBC level, low serum albumin; stop product; usually either vancomycin or IV metroNIDAZOLE is given
- **Signs of anemia:** Hct, HB, fatigue
- **Blood studies:** PT, CBC, AST, ALT, BUN creatinine
- **Hypersensitivity:** rash, itching, pruritus, angioedema, Stevens-Johnson syndrome, anaphylaxis
- **GI reactions:** Nausea, vomiting, diarrhea; administer antiemetic, antacids as ordered
- **Toxicity:** pseudotumor cerebri, photosensitivity, antianabolic actions (azotemia, BUN, hypophosphatemia, metabolic acidosis); tigecycline is structurally similar to tetracycline; pancreatitis, hyperamylasemia (may be fatal); if these occur,

T

discontinue, improvement usually occurs after product is discontinued
- **Overgrowth of infection:** fever, malaise, redness, pain, swelling, drainage, perineal itching, diarrhea, changes in cough or sputum
- **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding; may cause fetal harm

Evaluate:
- Therapeutic response: decreased temperature, absence of lesions, negative C&S

Teach patient/family:
- To avoid sun exposure; sunscreen does not seem to decrease photosensitivity
- To avoid pregnancy while taking this product; fetal harm may occur; to avoid breastfeeding
- To report infection, increase in temperature; to report burning, pain at inj site
- To report diarrhea, fatigue, abdominal pain, severe nausea, vomiting

tildrakizumab-asmn (Rx)

(til-drakiz′ue-mab)

Ilumya

Func. class.: Antipsoriatic, interleukin-23 inhibitor

USES: Treatment of adults with moderate to severe plaque psoriasis

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Plaque psoriasis
- **Adult: SUBCUT:** 100 mg at weeks 0, 4, and then q12wk

Available forms: Injection 100 mg/mL single-dose syringe

⚠ HIGH ALERT

timolol (Rx)

(tye′moe-lole)

Func. class.: Antihypertensive

Chem. class.: Nonselective β-blocker

ACTION: Competitively blocks stimulation of β-adrenergic receptor within vascular smooth muscle (decreases rate of SA node discharge, increases recovery time); slows conduction of AV node and decreases heart rate, which decreases O_2 consumption in myocardium; also decreases renin-aldosterone-angiotensin system; at high doses, inhibits β_2-receptors in bronchial system

USES: Mild to moderate hypertension, migraine prophylaxis, to decrease mortality after MI

Unlabeled uses: Tremors, angina pectoris

CONTRAINDICATIONS: Hypersensitivity to β-blockers, cardiogenic shock, heart block (2nd/3rd degree), sinus bradycardia, HF, cardiac failure, severe COPD, asthma

Precautions: Pregnancy, breastfeeding, major surgery, diabetes mellitus, COPD, well-compensated heart failure, nonallergic bronchospasm, peripheral vascular disease, thyroid/renal/hepatic disease

Black Box Warning: Abrupt discontinuation

DOSAGE AND ROUTES

Hypertension
- **Adult: PO** 10 mg bid or 20 mg/day, may increase by 10 mg q7days, max 60 mg/day
- **Geriatric patients: PO** initiate dose cautiously

Myocardial infarction prophylaxis
- **Adult: PO** 10 mg bid beginning 1-4 wk after MI for ≥2 yr

Migraine headache prevention
- **Adult: PO** 10 mg bid or 20 mg/day; may increase to 30 mg/day, 20 mg in AM, 10 mg in PM; discontinue if not effective after 8 wk

Available forms: Tabs 5, 10, 20 mg

Administer:

• PO before or immediately after meals, at bedtime; tab may be crushed or swallowed whole
• Reduced dosage in renal dysfunction
• Store at room temperature; do not freeze

SIDE EFFECTS

CNS: *Insomnia, dizziness,* hallucinations, anxiety, fatigue, depression, headache
CV: Hypotension, bradycardia, HF, edema, chest pain, claudication, angina, AV block, ventricular dysrhythmias
EENT: *Visual changes;* sore throat; *double vision;* dry, burning eyes
GI: *Nausea,* vomiting, ischemic colitis, diarrhea, *abdominal pain,* mesenteric arterial thrombosis, flatulence, constipation
GU: Impotence, urinary frequency
HEMA: Agranulocytosis, thrombocytopenia, purpura
INTEG: Rash, alopecia, pruritus, fever
META: Hypoglycemia
MUSC: *Joint pain, muscle pain*
RESP: Bronchospasm, *dyspnea,* cough, crackles, nasal stuffiness

PHARMACOKINETICS

Peak 1-2 hr; half-life 4 hr; metabolized by liver; excreted in urine, breast milk; protein binding <10%

INTERACTIONS

Increase: hypotension, bradycardia—hydrALAZINE, methyldopa, prazosin, anticholinergics, alcohol, reserpine, nitrates
Increase: effects of β-blockers, calcium channel blockers
Decrease: antihypertensive effects—NSAIDs, sympathomimetics, thyroid, salicylates
Decrease: hypoglycemic effects—insulin, sulfonylureas
Decrease: bronchodilation—theophyllines
Drug/Lab Test
Increase: renal, hepatic studies, uric acid
Interference: glucose, insulin tolerance test

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Abrupt discontinuation: may result in myocardial ischemia, MI, severe hypotension, ventricular dysrhythmias in those with preexisting cardiovascular disease

• **Headaches:** location, severity, duration, frequency at baseline and throughout treatment
• I&O, weight daily, edema in feet, legs daily
• B/P during initial treatment, periodically thereafter, pulse q4hr; note rate, rhythm, quality
• Apical/radial pulse before administration; notify prescriber of any significant changes
• Baselines of renal, hepatic studies before therapy begins
• Edema in feet, legs daily
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, do not breastfeed, excreted in breast milk

Evaluate:

• Therapeutic response: decreased B/P after 1-2 wk

Teach patient/family:

• To take before or immediately after meals

Black Box Warning: Not to discontinue product abruptly; to taper over 2 wk; may precipitate angina

• Not to use OTC products containing α-adrenergic stimulants (nasal decongestants, cold preparations) unless directed by prescriber
• To report bradycardia, dizziness, confusion, depression, fever, sore throat, SOB to prescriber
• Product masks hypoglycemia; monitor blood sugar
• To take pulse at home; when to notify prescriber
• To avoid alcohol, smoking, sodium intake
• To comply with weight control, dietary adjustments, modified exercise program
• To carry emergency ID to identify product, allergies
• To avoid hazardous activities if dizziness is present

• To report symptoms of HF: difficulty breathing, especially on exertion or when lying down; night cough; swelling of extremities
• To take medication at bedtime; to wear support hose to minimize effect of orthostatic hypotension

TREATMENT OF OVERDOSE: Lavage, IV atropine for bradycardia, IV theophylline for bronchospasm, digoxin, O_2, diuretic for cardiac failure, hemodialysis; administer vasopressor (norepinephrine)

timolol (ophthalmic) Rx

(tie-moe'lol)

Betimol, Istalol, Timop ✱, Timol ✱, Timoptic-XE, Timoptic

Func. class.: Antiglaucoma

Chem. class.: β-Blocker

ACTION: Can decrease aqueous humor and increase outflows

USES: Treatment of chronic open-angle glaucoma and ocular hypertension

CONTRAINDICATIONS: Hypersensitivity, AV block, heart failure, bradycardia, sick sinus syndrome, asthma

Precautions: Abrupt discontinuation, pregnancy, breastfeeding, children, COPD, depression, diabetes mellitus, myasthenia gravis, hyperthyroidism, pulmonary disease, angle-closure glaucoma

DOSAGE AND ROUTES

• **Adult:** instill 1 drop in each affected eye bid (0.25% solution) initially; if no response, 1 drop in each affected eye bid (0.5% solution) or 1 drop of gel in each affected eye daily

Available forms: Ophthalmic solution 0.25, 0.5%; ophthalmic gel 0.25%, 0.5%

Administer:

• For ophthalmic use only
• Do not touch the tip of the dropper to the eye, fingertips, or other surface to prevent contamination
• Wash hands before and after use
• If >1 topical ophthalmic drug product is being used, the drugs should be administered at least 5 min apart
• Administer other topically applied ophthalmic medications at least 10 min before gel-forming solution
• To avoid contamination or the spread of infection, do not use dropper for more than one person
• Some products contain the preservative benzalkonium chloride, which can be absorbed by soft contact lenses; remove contact lenses before using solution; lenses may be reinserted 15 min after administration
• Decreased intraocular pressure can take several weeks, monitor IOP after a month

SIDE EFFECTS

CNS: *Insomnia,* headache, *dizziness,* anxiety, depression, headache, nightmares, *fatigue*
CV: Palpitations, heart failure, hypotension
EENT: Eye stinging/burning, tearing, photophobia, visual disturbances
GI: Nausea, dry mouth
RESP: Bronchospasm

PHARMACOKINETICS

Onset 30 min, peak 1-2 hr, duration 12-24 hr

INTERACTIONS

Increase: β-blocking effect—oral β-blockers
Increase: intraocular pressure reduction—topical miotics, dipivefrin, EPINEPHrine, carbonic anhydrase inhibitors; this may be beneficial
Increase: B/P, severe—when abruptly stopping cloNIDine
Increase: depression of AV nodal conduction, bradycardia, or hypotension—adenosine, cardiac glycosides, disopyramide, other antiarrhythmics, class 1C antiarrhythmic drugs (flecainide, propafenone, moricizine, encainide,

quiNIDine, calcium-channel blockers, or drugs that significantly depress AV nodal conduction)
Increase: AV block nodal conduction, induce AV block—high doses of procainamide
Increase: antihypertensive effect—other antihypertensives

NURSING CONSIDERATIONS

Assess:
- **Systemic absorption:** when used in the eye, systemic absorption is common with the same adverse reactions and interactions
- Glaucoma: monitor intraocular pressure
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risks; do not breastfeed, excreted in breast milk

Evaluate:
- Decreasing intraocular pressure

Teach patient/family:
- That product is for ophthalmic use only
- Not to touch the tip of the dropper to the eye, fingertips, or other surface to prevent contamination
- To wash hands before and after use
- To tilt the head back slightly and pull the lower eyelid down with the index finger to form a pouch; squeeze the prescribed number of drops into the pouch; close eyes to spread drops
- To apply finger pressure on the lacrimal sac for 1-2 min following use to prevent excessive systemic absorption
- To administer drugs at least 5 min apart if more than one topical ophthalmic drug product is being used
- To administer other topically applied ophthalmic medications at least 10 min before timolol gel-forming solution
- To not use dropper for more than one person to avoid contamination or the spread of infection
- That some products contain the preservative benzalkonium chloride, which may be absorbed by soft contact lenses; to remove contact lenses before administration of the solution; that lenses may be reinserted 15 min after administration

⚠ HIGH ALERT

tinidazole (Rx)

(tye-ni′da-zole)

Tindamax

Func. class.: Antiprotozoal
Chem. class.: Nitroimidazole derivative

ACTION: Interferes with DNA/RNA synthesis in protozoa

USES: Amebiasis, giardiasis, trichomoniasis
Unlabeled uses: Helicobacter pylori, prophylaxis against STDs following sexual assault, urethritis, nongonococcal

CONTRAINDICATIONS: Pregnancy, breastfeeding; hypersensitivity to this product or nitroimidazole derivative
Precautions: Children, geriatric patients, hepatic disease, CNS depression, blood dyscrasias, candidiasis, seizures, viral infection, alcoholism, pregnancy

Black Box Warning: Secondary malignancy

DOSAGE AND ROUTES

Intestinal amebiasis/amebic involvement of the liver
- **Adult: PO** 2 g daily × 3 days
- **Child ≥3 yr/adolescent: PO** 50 mg/kg/day × 3 days, max 2 g/day

Giardiasis
- **Adult: PO** 2 g as a single dose
- **Child ≥3 yr: PO** 50 mg/kg as a single dose, max 2 g

Trichomoniasis
- **Adult: PO** 2 g as a single dose

Bacterial vaginosis
- **Adult (nonpregnant woman): PO** 2 g/day × 2 days with food or 1 g/day × 5 days with food

Available forms: Tabs 250, 500 mg
Administer:
- Tabs can be crushed and mixed with artificial cherry syrup for children
- With food to increase plasma concentrations, minimize epigastric distress and other GI effects

T

SIDE EFFECTS

CNS: *Dizziness, headache,* seizures, *peripheral neuropathy,* malaise, fatigue
GI: *Nausea, vomiting,* anorexia, increased AST/ALT, constipation, abdominal pain, indigestion, altered taste
HEMA: Leukopenia, neutropenia
INTEG: Pruritus, urticaria, *rash,* oral candidiasis
SYST: Angioedema, cramping

PHARMACOKINETICS

Peak 1½ hr; metabolized extensively in liver; excreted unchanged (20%-25%) in urine, (12%) feces; half-life 12-14 hr; crosses blood-brain barrier

INTERACTIONS

- Do not use within 2 wk of disulfiram

Increase: tinidazole action—CYP3A4 inhibitors (cimetidine, ketoconazole): increased action of tinidazole
Increase: action of anticoagulants, cyclosporine, tacrolimus, fluorouracil, hydantoins, lithium
Decrease: tinidazole action—CYP3A4 inducers (PHENobarbital, rifampin, phenytoin); cholestyramine, oxytetracycline: decreased action of tinidazole

Drug/Herb
Increase or decrease: tinidazole level—St. John's wort

Drug/Lab Test
Increase: triglycerides, LDH, AST/ALT, glucose
Decrease: WBCs

NURSING CONSIDERATIONS

Assess:
- **Giardiasis:** obtain 3 stool samples several days apart beginning q3-4wk after treatment
- **Amebic liver abscess:** monitor CBC, ESR, amebic gel diffusion test, ultrasound; also total and differential leukocyte count

Black Box Warning: Secondary malignancy: avoid unnecessary use

- Signs of infection, anemia
- Bowel pattern before, during treatment
- **Pregnancy/breastfeeding:** contraindicated during first trimester; do not breastfeed

Evaluate:
- Therapeutic response: decrease in infection as evidenced by negative culture

Teach patient/family:
- To take with food to increase plasma concentrations, minimize epigastric distress and other GI effects; not to use alcoholic beverages during or for 3 days after treatment
- **Trichomoniasis:** that all partners should be notified and treated at the same time
- To avoid alcohol; may cause disulfiram reaction
- To avoid doing hazardous activities until reaction is known
- That product causes unpleasant taste
- Not to use OTC, Rx, or herbal products unless approved by prescriber

tioconazole vaginal antifungal

See Appendix B

tiotropium (Rx)

(ty-oh'tro-pee-um)
Spiriva HandiHaler, Spiriva Respimat
Func. class.: Anticholinergic, bronchodilator
Chem. class.: Synthetic quaternary ammonium compound

Do not confuse:
Spiriva/Apidra/Inspra

ACTION: Inhibits interaction of acetylcholine at receptor sites on the bronchial smooth muscle, thereby resulting in decreased cGMP and bronchodilation

USES: COPD; for the long-term treatment and once-daily maintenance of bronchospasm associated with COPD, including chronic bronchitis and emphysema

CONTRAINDICATIONS:

Hypersensitivity to this product, atropine, or its derivatives

Precautions: Pregnancy, breastfeeding, children, geriatric patients, closed-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, renal disease

DOSAGE AND ROUTES

• **Adult: INH** content of 1 cap/day (18 mcg) using HandiHaler inhalation device or 2 INH (spray) (2.5 mcg each) daily

Available forms: Powder for INH 18 mcg in blister packs containing 6 caps with inhaler; 30 caps with inhaler; spray inhaler (Respimat) 2.5 mcg/spray

Administer:

Inhalation route (caps)

• Not for acute bronchospasm or acute symptoms

• Caps are for INH only; do not swallow

• Check package insert for directions on how to use

• Rinse mouth after use

Inhalation route (spray)

• Insert cartridge into inhaler, prime inhaler, must reprime once if not used for >3 days, if not used for >21 days, prime until aerosol is visible, and 3 more times

SIDE EFFECTS

CNS: Depression, paresthesia

CV: Chest pain, increased heart rate, angina, atrial fibrillation, supraventricular tachycardia

EENT: Dry mouth, blurred vision, glaucoma

GI: Vomiting, abdominal pain, constipation, dyspepsia, paralytic ileus

GU: Urinary difficulty, urinary retention, UTI

INTEG: Rash, angioedema

MISC: Candidiasis, flulike syndrome, herpes zoster, infections, angina pectoris

MS: Arthritis, myalgic leg/skeletal pain

RESP: *Cough, sinusitis, upper respiratory tract infection,* epistaxis, pharyngitis

PHARMACOKINETICS

Half-life 5-6 days in animals, does not cross blood-brain barrier, very little metabolized in the liver, excreted in urine, 72% protein binding

INTERACTIONS

• Other anticholinergics: avoid use with other anticholinergics

Drug/Lab Test

Increase: cholesterol, glucose

NURSING CONSIDERATIONS

Assess:

• **Respiratory status:** oral thrush, dyspnea, rate, breath sounds before and during treatment; pulmonary function tests at baseline and periodically; upper respiratory infections, cough, sinusitis

• **Tolerance over long-term therapy;** dose may have to be increased or changed

• Patient's ability to use HandiHaler

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, cautious use in breastfeeding, unlikely to cause harm in the infant

Evaluate:

• Therapeutic response: ability to breathe easier

Teach patient/family:

• Signs of closed-angle glaucoma (eye pain, blurred vision, visual halos)

• That product is used for long-term maintenance, not for immediate relief of breathing problems; that effect takes 20 min, lasts 24 hr

• To avoid getting the powder in the eyes; may cause blurred vision and pupil dilation

• To breathe out completely; not to breathe into mouthpiece at any time

• To hold HandiHaler with mouthpiece upward; to press button in once, completely, and release; this allows for medication to be released

• To raise device to mouth and close lips tightly around mouthpiece

• With head upright, to breathe in slowly and deeply, but allow the cap to vibrate; to breathe until the lungs fill; to hold breath and remove mouthpiece; to resume normal breathing
• To rinse mouth after use; to use hard candy or regular oral hygiene to reduce dry mouth
• To report immediately blurred vision, eye pain, halos
• To keep caps in sealed blisters before use; to store at room temperature

tipranavir (Rx)

(ti-pran′a-veer)

Aptivus

Func. class.: Antiretroviral
Chem. class.: Protease inhibitor

ACTION: Inhibits human immunodeficiency virus (HIV) protease, thereby preventing the maturation of the virus

USES: HIV in combination with other antiretrovirals

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, renal disease, history of renal stones, sulfa allergy, hemophilia, diabetes mellitus, pancreatitis, alcoholism, immune reconstitution syndrome, surgery, trauma, infection

Black Box Warning: Intracranial bleeding, hepatitis, hepatic disease (Child-Pugh B, C)

DOSAGE AND ROUTES

• **Adult: PO** 500 mg coadministered with ritonavir 200 mg bid with food
• **Adolescent and child ≥2 yr: PO** 14 mg/kg given with ritonavir 6 mg/kg bid or 375 mg/m^2 given with ritonavir 150 mg/m^2 bid, max 500 mg with ritonavir 200 mg bid
Available forms: Caps 250 mg; oral solution 100 mg/mL
Administer:
• Not to be used in those who are treatment-naive
• Swallow cap whole; do not break, crush, chew; store caps in refrigerator before use; after opening, store at room temperature; use within 60 days
• After meals
• In equal intervals around the clock to maintain blood levels

SIDE EFFECTS

CNS: *Headache, insomnia,* dizziness, somnolence, fatigue, *fever,* intracranial bleeding
GI: *Diarrhea, abdominal pain, nausea, vomiting,* anorexia, dry mouth, hepatitis B or C, pancreatitis, fatalities when given with ritonavir
GU: Nephrolithiasis
INTEG: *Rash,* urticaria, lipodystrophy, serious rash
MS: Pain
OTHER: Asthenia, insulin-resistant hyperglycemia, *hyperlipidemia,* ketoacidosis

PHARMACOKINETICS

Terminal half-life 6 hr, peak 3 hr, plasma protein binding 99.9%, steady state 7-10 days, metabolism CYP3A4, 80% fecal excretion

INTERACTIONS

Life-threatening dysrhythmias: amiodarone, astemizole, cisapride, ergots, flecainide, midazolam, pimozide, propafenone, quiNIDine, rifabutin, rifAMPin, terfenadine, triazolam
Increase: myopathy, rhabdomyolysis—HMG-CoA reductase inhibitors (lovastatin, simvastatin)
Increase: tipranavir levels—ketoconazole, delavirdine, itraconazole
Increase: levels of both products—clarithromycin, zidovudine
Increase: levels of tipranavir—oral contraception
Decrease: tipranavir levels—rifamycins, fluconazole, nevirapine, efavirenz
Drug/Herb
Decrease: tipranavir levels—St. John's wort; avoid concurrent use
Drug/Food

Decrease: tipranavir absorption—grapefruit juice; high-fat, high-protein foods
Drug/Lab Test
Increase: AST/ALT, cholesterol, blood glucose, amylase, lipase, triglycerides

NURSING CONSIDERATIONS

Assess:
• Signs of infection, anemia; presence of other sexually transmitted diseases

Black Box Warning: Hepatitis, pancreatitis: ALT, AST; total bilirubin, amylase; all may be elevated, discontinue in those with hepatic insufficiency or hepatitis or AST/ALT 10 × upper limit or AST/ALT 5-10 × ULN and total bilirubin 2.5 × ULN; assess for anorexia, nausea, jaundice, hepatomegaly, clay-colored stools

• **HIV:** Viral load, CD4, plasma HIV RNA, serum cholesterol profile, serum triglycerides during treatment
• Bowel pattern before, during treatment; if severe abdominal pain with bleeding occurs, product should be discontinued; monitor hydration
• **Serious rash:** if serious rash occurs, product should be discontinued
• **Immune reconstitution syndrome:** has been reported with combination antiretroviral therapy, patients may develop pain (MAC, CMV, PcP, TB) and autoimmune disease months after treatment

Black Box Warning: Intracranial bleeding: more common in those with trauma, surgery, or those taking antiplatelets or anticoagulants; assess for headache, nausea, vomiting, seizures, confusion, inability to speak, can be fatal

• Cushingoid symptoms: buffalo hump, facial/peripheral wasting, breast enlargement, central obesity
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; enroll pregnant women in the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed

Evaluate:
• Therapeutic response: improving CD4 counts, viral load
Teach patient/family:
• To take as prescribed; if dose is missed, to take as soon as remembered up to 1 hr before next dose; not to double dose; that this product must be taken with other antivirals
• That product must be taken in equal intervals around the clock to maintain blood levels for duration of therapy
• That hyperglycemia may occur; to watch for increased thirst, weight loss, hunger, dry, itchy skin; to notify prescriber
• That product does not cure AIDS, only controls symptoms; not to donate blood
• That redistribution of body fat may occur
• Not to use with other products unless approved by prescriber, many drug interactions
• That product must be taken in combination with ritonavir
• To stop product and notify prescriber if anorexia, nausea, vomiting, yellowing of skin or eyes, clay-colored stools, fatigue, pain in upper abdomen

⚠ HIGH ALERT

tirofiban (Rx)

(tie-roh-fee′ban)

Aggrastat

Func. class.: Antiplatelet
Chem. class.: Glycoprotein IIb/IIIa inhibitor

Do not confuse:
Aggrastat/argatroban

ACTION: Antagonist of platelet glycoprotein (GP) IIb/IIIa receptor that prevents binding of fibrinogen and von Willebrand's factor, which inhibits platelet aggregation

USES: Acute coronary syndrome in combination with heparin

CONTRAINDICATIONS: Hypersensitivity, active internal bleeding, stroke, major surgery, severe trauma within 30 days, intracranial neoplasm, aneurysm, hemorrhage, acute pericarditis, platelets <100,000/mm^3, history of thrombocytopenia, coagulopathy, systolic B/P >180 mm Hg or diastolic B/P >110 mm Hg

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal disease, bleeding tendencies, hypertension, platelets <150,000/mm^3

DOSAGE AND ROUTES

• **Adult: IV** 25 mcg/kg within 5 min, then 0.15 mcg/kg/min for up to 18 hr after

Renal dose

• **Adult: IV** CCr <60 mL/min, 25 mcg/kg, then 0.075 mcg/kg/min

Available forms: Inj 50-mL vials; inj premixed bag 50 mcg/mL in 100, 250 mL

Administer:

Intermittent IV INFUSION route

• Discontinue no less than 2-4 hr before CABG
• Do not use if particulates are present
• Dilute inj: withdraw and discard 100 mL from 500-mL bag of sterile 0.9% NaCl or D_5W and replace this vol with 100 mL of tirofiban inj from 2 vials
• Tirofiban inj for sol is premixed in containers of 500 mL 0.9% NaCl (50 mg/mL), infuse over 30 min
• Minimize other arterial/venous punctures, IM inj, catheter use, intubation to reduce bleeding risk
• Discard unused solution after 24 hr from start of infusion

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, ampicillin, ampicillin/sulbactam, anidulafungin, argatroban, arsenic trioxide, atracurium, atropine, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, capreomycin, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefepime, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, DOXOrubicin, DOXOrubicin liposome, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, IDArubicin, ifosfamide, imipenem/cilastatin, insulin, irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methylhexital, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, mitoXANTRONE, morphine, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, PEMEtrexed, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, piperacillin/tazobactam, potassium acetate, potassium chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quinupristin/dalfopristin, raNITIdine, remifentanil, rocuronium, sodium acetate/bicarbonate, streptozocin, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin/clavulanate, tigecycline,

tobramycin, topotecan, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Dizziness, headache
CV: Bradycardia, hypotension, edema
GI: Nausea, vomiting, GI hemorrhage
HEMA: Bleeding, thrombocytopenia
INTEG: *Rash*
MISC: Dissection, edema, pain in legs/pelvis, sweating
SYST: Anaphylaxis

PHARMACOKINETICS

Half-life 2 hr; excretion via urine, feces; plasma clearance 20%-25% lower in geriatric patients with CAD; renal insufficiency decreases plasma clearance

INTERACTIONS

Increase: bleeding—aspirin, heparin, NSAIDs, abciximab, eptifibatide, clopidogrel, ticlopidine, dipyridamole, cefamandole, cefoTEtan, cefoperazone, valproic acid, heparins, thrombin inhibitors, SSRIs, SNRIs
Increase: tirofiban clearance—levothyroxine, omeprazole
Drug/Lab
Decrease: platelets, Hct, HB

NURSING CONSIDERATIONS

Assess:
- **Bleeding:** platelet counts, Hct, HB before treatment, within 6 hr of loading dose, and at least daily thereafter; watch for bleeding from puncture sites, catheters; or in stools, urine; discontinue if platelets (100 × 10 9/L); if platelets (<90 × 10 9/L) additional platelet counts should be performed to exclude pseudothrombocytopenia; if thrombocytopenia is confirmed, tirofiban and heparin should be discontinued
- Assess for contraindications to therapy: recent major surgery, active bleeding, peptic ulcer disease, trauma within 30 days
- **Pregnancy/breastfeeding:** do not use unless clearly needed; do not breastfeed, excretion unknown

Evaluate:
- Therapeutic response: treatment of acute coronary syndrome

Teach patient/family:
- That it is necessary to quit smoking to prevent excessive vasoconstriction
- About signs, symptoms of bleeding and low platelets; report bleeding (blood in stool/urine) to prescriber; use mechanical razors, soft-bristle toothbrush
- That there are many product and herbal interactions; do not use unless approved by prescriber

⚠ HIGH ALERT

tisagenlecleucel (Rx)

(TIH-suh-jen-LEK-loo-sel)
Kymriah
Func. class.: Antineoplastic

USES: For the treatment of refractory B-cell precursor acute lymphoblastic leukemia

Black Box Warning: Cytokine release syndrome, infection, neurotoxicity

DOSAGE AND ROUTES

- **Adult ≤25 yr/adolescent/child/infant/neonate: IV (>50 kg):** Infuse a single dose of 0.1-2.5 × 10^8 CAR-positive viable T cells (non–weight-based); **(≤50 kg):** Infuse a single dose of 0.2-5 × 10^6 CAR-positive viable T cells per kg of body weight. Give at 2-14 days after the completion of lymphocyte depletion with fludarabine and cyclophosphamide

Available forms: IV infusion single dose 10-50 mL with chimeric antigen receptor-positive viable T cell (infusion bag)

tisotumab vedotin-tftv (Rx)

(tye-sot′ue-mab ve-doe′tin)
Tivdak
Func. class.: Antineoplastic

USES:
Recurrent or metastatic cervical cancer

DOSAGE AND ROUTES
• **Adult: IV** 2 mg/kg (max 200 mg, weight of 100 kg or greater) give over 30 min q3wk until disease progression or unacceptable toxicity
Available forms: IV 40 mg single-dose vial

tiZANidine (Rx)
(ti-za´nih-deen)
Zanaflex
Func. class.: Skeletal muscle relaxant, α_2-adrenergic agonist
Chem. class.: Imidazoline

Do not confuse:
tiZANidine/tiaGABine

ACTION:
Increases presynaptic inhibition of motor neurons and reduces spasticity by α_2-adrenergic agonism

USES:
Acute/intermittent management of increased muscle tone associated with spasticity, symptoms of MS
Unlabeled uses: Muscle spasm, MS pain

CONTRAINDICATIONS:
Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, geriatric patients, hypotension, renal/hepatic disease

DOSAGE AND ROUTES
• **Adult: PO** initial 2mg every 6-8 hours, up to 3 doses in 24 hours; increase by 2-4mg per dose at 1-4 day intervals, max 36mg/day
Renal dose
• **Adult: PO** CCr <25 mL/min, start with lower dose
Available forms: Tabs 2, 4 mg; caps 2, 4, 6 mg
Administer
• Consistently either with/without food; food may affect absorption
• Titrate doses carefully
• Avoid use with other CNS depressants
• Caps, tabs are equivalent if used on empty stomach

SIDE EFFECTS
CNS: Somnolence, dizziness, speech disorder, dyskinesia, nervousness, hallucination, psychosis
CV: Hypotension, bradycardia, HF, CAD, MI
GI: Dry mouth, vomiting, increased ALT, abnormal LFTs, constipation
OTHER: Blurred vision, urinary frequency, pharyngitis, rhinitis, tremors, rash, muscle weakness, UTI

PHARMACOKINETICS
Completely absorbed, widely distributed, peak 1-2 hr, duration 3-6 hr, half-life 2.5 hr, protein binding 30%, metabolized by liver; excreted in urine, feces

INTERACTIONS
Increase: CNS depression—alcohol, other CNS depressants, opioids; do not use together unless absolutely needed
Increase: tiZANidine levels—other CYP1A2 inhibitors (acyclovir, amiodarone, famotidine, mexiletine, enoxacin, norfloxacin, propafenone, tacrine, verapamil, zileuton, oral contraceptives, ciprofloxacin), fluvoxaMINE; avoid concurrent use
Increase: hypotension—ACE inhibitors
Increase: effect of rasagiline
Increase: rebound hypertension risk—beta-blockers
Drug/Herb
Increase: CNS depression—kava, St. John's wort
Drug/Lab Test
Increase: alk phos, AST, ALT

NURSING CONSIDERATIONS
Assess:
• **Muscle spasticity** at baseline and throughout treatment
• **Hypotension:** gradual dosage increase should lessen hypotensive effects; have patient rise slowly from supine to upright; watch those patients receiving antihypertensives for increased effects
• **CNS:** Increased sedation, dizziness, hallucinations, psychosis; product may need to be discontinued

• Vision by ophthalmic exam; corneal opacities may occur
• **Hepatic studies:** baseline, at 1 mo after therapeutic dose is achieved and if clinically indicated during treatment and periodically thereafter
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; no well-controlled studies; cautious use in breastfeeding, excretion unknown
• **Beers:** avoid in older men; may cause urinary retention

Evaluate:
• Therapeutic response: decreased muscle spasticity

Teach patient/family:
• To rise slowly from lying or sitting to upright position to prevent orthostatic hypotension
• To ask for assistance if dizziness, sedation occur; to avoid drinking alcohol; to avoid operating machinery, driving until effects known
• To discontinue gradually
• To avoid hazardous activities until reaction is known
• Not to use other products unless approved by prescriber; to avoid use with other CNS depressants, opioids; to get medical assistance if adverse reaction occurs
• To use gum, lozenges for dry mouth
• To report vision changes, hallucinations immediately to prescriber
• To always take consistently either with food or without food; effects may be altered by taking differently

tobramycin (Rx)

(toe-bra-mye'sin)

Bethkis, Kitabis Pak, Nebcin, TOBI, TOBI Podhaler

Func. class.: Antiinfective
Chem. class.: Aminoglycoside

ACTION: Interferes with protein synthesis in bacterial cell by binding to ribosomal subunits, thereby causing inaccurate peptide sequences to form in protein chain causing bacterial death

USES: Severe systemic infections of CNS, respiratory, GI, urinary tract, bone, skin, soft tissues; cystic fibrosis (nebulizer) for *Acinetobacter calcoaceticus, Citrobacter* sp., *Enterobacter aerogenes, Enterobacter* sp., *Enterococcus* sp., *Escherichia coli, Haemophilus aegyptius, Haemophilus influenzae* (beta-lactamase negative), *Haemophilus influenzae* (beta-lactamase positive), *Klebsiella pneumoniae, Klebsiella* sp., *Moraxella lacunata, Morganella morganii, Neisseria* sp., *Proteus mirabilis, Proteus vulgaris, Providencia* sp., *Pseudomonas aeruginosa, Serratia* sp., *Staphylococcus aureus* (MSSA), *Staphylococcus epidermidis, Staphylococcus* sp., *Streptococcus pneumoniae, Streptococcus* sp.; may also be used for the following: *Acinetobacter* sp., *Aeromonas* sp., *Bacillus anthracis, Salmonella* sp., *Shigella* sp.

CONTRAINDICATIONS: Hypersensitivity to aminoglycosides

Black Box Warning: Pregnancy, severe renal disease

Precautions: Breastfeeding, geriatric patients, neonates, mild renal disease, myasthenia gravis, Parkinson's disease

Black Box Warning: Hearing deficits, neuromuscular disease

DOSAGE AND ROUTES

Serious infection
• **Adult: IM/IV** 3 mg/kg/day in divided doses q8hr; may give up to 6 mg/kg/day in divided doses q8-12hr; **once-daily dosing (pulse dosing)** (unlabeled) **IV** 5-7 mg/kg, dosing intervals determined using nomogram, based on random levels drawn 8-12 hr after 1st dose
• **Child ≥6 yr: NEB** 300 mg bid in repeating cycles of 28 days on/28 days off of product; give **INH** over 10-15 min us-

ing a handheld PARI LC PLUS reusable nebulizer with DeVilbiss Pulmo-Aide compressor

- **Neonate <1 wk: IM/IV** ≤4 mg/kg/day divided q12hr

Cystic fibrosis with *Pseudomonas aeruginosa*

- **Child: IM/IV** 6-7.5 mg/kg/day in 3-4 equal divided doses

Renal dose

Conventional dosing:

- Multiply the serum creatinine (mg/100 mL) by 6 to determine the dosing; to decrease the dose, divide the standard dose by the serum creatinine (mg/100 mL) to determine the lower recommended dose

Available forms: Inj 10, 40 mg/mL; powder for inj 1.2 g; neb sol 300 mg/5 mL; powder for inh 28 mg

Administer:

- After obtaining specimen for C&S; begin treatment before results
- Product in evenly spaced doses to maintain blood level; separate aminoglycosides and penicillins by ≥1 hr
- Use only on susceptible organisms to prevent development of product-resistant bacteria

IM route

- IM inj in large muscle mass; rotate inj sites, aspirate

Draw peak 1 hr after dose, trough right before next dose; absorption erratic

Inhalation route: (TOBI Podhaler)

- Use with Podhaler device; do not swallow caps; use device for 7 days, then discard
- Keep caps in blister pack until ready to use; administer other inhaled products or chest physiotherapy before

Intermittent IV INFUSION route

- Visually inspect sol; do not use if discolored or particulate is present
- **Vantage vials** are for IV only and only for exactly 60 or 80 mg
- Diluted in 50-100 mL 0.9% NaCl, D_5W ($D_{10}W$, Ringer's, LR); infuse over 20-60 min; volume for pediatric patients needs to be sufficient to allow for 20-60 min infusion

Y-site compatibilities: Acyclovir, aldesleukin, alfentanil, alprostadil, amifostine, aminophylline, amiodarone, amsacrine, anidulafungin, ascorbic acid, atracurium, atropine, aztreonam, bivalirudin, bretylium, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, chloramphenicol, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexmedetomidine, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doripenem, doxacurium, DOXOrubicin hydrochloride, DOXOrubicin liposome, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, epoetin alfa, ertapenem, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, foscarnet, furosemide, gemcitabine, gentamicin, glycopyrrolate, granisetron, HYDROmorphone, ifosfamide, imipenem/cilastatin, isoproterenol, ketorolac, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, metaraminol, methicillin, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, miconazole, midazolam, milrinone, minocycline, mitoXANTRONE, morphine, moxalactam, multiple vitamins, nafcillin, nalbuphine, naloxone, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, pantoprazole, papaverine, penicillin G, pentazocine, perphenazine, PHENobarbital, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, raNITIdine, remifentanil, riTUXimab, rocuronium, sodium acetate/bicarbonate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tolazoline, trastuzumab, trimethaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil,

vinCRIStine, vinorelbine, voriconazole, zidovudine

SIDE EFFECTS

CNS: Confusion, depression, numbness, tremors, seizures, muscle twitching, neurotoxicity, dizziness, vertigo
CV: Hypo/hypertension, palpitation
EENT: Ototoxicity, deafness, visual disturbances, tinnitus
GI: *Nausea, vomiting, anorexia;* increased ALT, AST, bilirubin, hepatomegaly, hepatic necrosis, splenomegaly
GU: Oliguria, hematuria, renal damage, azotemia, renal failure, nephrotoxicity
HEMA: Agranulocytosis, thrombocytopenia, leukopenia, eosinophilia, anemia
INTEG: *Rash,* burning, urticaria, dermatitis, alopecia

PHARMACOKINETICS

Plasma half-life 2-3 hr, prolonged in neonates; not metabolized; excreted unchanged in urine; crosses placental barrier; poor penetration into CSF
IM: Onset rapid, peak 1 hr, duration 8 hr
IV: Onset immediate, peak 30 min, duration 8 hr

INTERACTIONS

Black Box Warning: Increase: ototoxicity, neurotoxicity, nephrotoxicity—other aminoglycosides, amphotericin B, polymyxin, vancomycin, ethacrynic acid, furosemide, mannitol, methoxyflurane, CISplatin, cephalosporins, bacitracin, acyclovir, penicillins, cidofovir

Drug/Lab Test

Increase: eosinophils, BUN, creatinine, AST, ALT, LDH, alk phos, glucose
Decrease: potassium, calcium, sodium, magnesium, WBC, granulocytes, platelets

NURSING CONSIDERATIONS

Assess:

- Weight before treatment; dosage is usually based on ideal body weight but may be calculated on actual body weight
- **Fluid balance:** I&O ratio, urinalysis daily for proteinuria, cells, casts; report sudden change in urine output
- **VS** during infusion; watch for hypotension, change in pulse
- **IV** site for thrombophlebitis, including pain, redness, swelling; change site if needed; apply warm compresses to discontinued site

Black Box Warning: Serum aminoglycoside concentration; serum peak drawn at 30-60 min after IV infusion or 60 min after IM inj, trough drawn just before next dose, peak 4-10 mcg/mL, trough 0.5-2 mcg/mL, increased level may lead to serious toxicity

Black Box Warning: Renal impairment: CCr, BUN, serum creatinine; lower dosage should be given in renal impairment (CCr <80 mL/min); monitor electrolytes: potassium, sodium, chloride, magnesium monthly if patient receiving long-term therapy

Black Box Warning: Deafness by audiometric testing; ringing, roaring in ears; vertigo; assess hearing before, during, after treatment

- **Overgrowth of infection:** fever, malaise, redness, pain, swelling, perineal itching, diarrhea, stomatitis, change in cough, sputum
- **Vestibular dysfunction:** nausea, vomiting, dizziness, headache; product should be discontinued if severe
- Adequate fluids of 2-3 L/day unless contraindicated to prevent irritation of tubules

Black Box Warning: Pregnancy: identify if pregnancy is planned or suspected; do not use in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: absence of fever, draining wounds, negative C&S after treatment

Teach patient/family:
• To promptly report headache, dizziness, symptoms of overgrowth of infection, renal impairment

Black Box Warning: To report loss of hearing; ringing, roaring in ears; feeling of fullness in head

Black Box Warning: To notify prescriber if pregnancy is planned or suspected; not to use in pregnancy, breastfeeding

• To avoid hazardous activities until response is known

Nebulizer
• To use other therapies first, then tobramycin, not to use if cloudy or contains particulates

TREATMENT OF OVERDOSE: Hemodialysis; monitor serum levels of product

tobramycin ophthalmic
See Appendix B

tocilizumab (Rx)
(toe'si-liz'oo-mab)

Actemra, Actemra ACTPen

Func. class.: DMARDs (disease-modifying antirheumatoid drugs)/tumor necrosis factor (TNF) modifier
Chem. class.: Interleukin-6 receptor antagonist

ACTION: Interleukin-6 (IL-6) receptor inhibiting monoclonal antibody, decreases inflammation in RA

USES: Rheumatoid arthritis, active systemic juvenile idiopathic arthritis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Breastfeeding, pregnancy; risk for GI perforation, active hepatic disease, severe neutropenia/thrombocytopenia, demyelinating disorders

Black Box Warning: Invasive fungal infection, active TB

DOSAGE AND ROUTES

Moderate-severe rheumatoid arthritis
• **Adult: IV** 4 mg/kg over 1 hr q4wk, may increase to 8 mg/kg q4wk based on clinical response, max dose 800 mg/infusion; do not initiate if ANC <2000/mm^3, platelets <100,000/mm^3
• **Adult <100 kg: SUBCUT** 162 mg every other week (monotherapy or in combination); increase to 162 mg weekly based on response
• **Adult ≥100 kg: SUBCUT** 162 mg weekly (monotherapy or in combination)

Juvenile idiopathic arthritis
• **Child ≥2 yr/adolescent ≥30 kg: IV** 8 mg/kg over 1 hr q2wk
• **Child ≥2 yr/adolescent <30 kg: IV** 12mg/kg every 2 weeks

Polyarticular juvenile idiopathic arthritis (PJIA)
• **Child ≥2 yr and weighing ≥30 kg: IV INFUSION** 8 mg/kg over 1 hr q4wk
• **Child ≥2 yr and weighing <30 kg: IV INFUSION** 10 mg/kg over 1 hr q4wk

Therapeutic drug monitoring
• Before initiation of treatment, check ANC, platelet count, and liver function tests (ALT/AST concentrations). In adults, not recommended for use in those with ANC <2,000/mm^3, platelet count <100,000/mm^3, or ALT or AST >1.5 × ULN

Hepatic dose
• **Adult patients with rheumatoid arthritis or giant cell arteritis with hepatic impairment**
Do not initiate treatment with tocilizumab if baseline AST/ALT is >1.5× ULN

Available forms: Sol for inj 20 mg/mL; prefilled syringes 162 mg/0.9 mL

Administer:
SUBCUT route

• Remove syringe, allow to warm for 30 min at room temperature. Do not warm in any other way
• Use injection site such as the front of thigh, outer area of upper arm, or the abdomen except for the 2-inch area around the navel. Do not inject into moles; scars; or areas where skin is tender, bruised, red, hard, or not intact. Rotate injection sites with each injection. Inject at >1 inch from the last area injected

Intermittent IV INFUSION route

• Visually inspect for particulate matter, discoloration before administration; should be colorless to pale yellow liquid
• From 100-mL infusion bag or bottle, withdraw vol of 0.9% sodium chloride inj equal to vol of tocilizumab sol required for patient's dose
• Slowly add tocilizumab from each vial into infusion bag or bottle; gently invert bag to avoid foaming; fully diluted sols are compatible with polypropylene, polyethylene, polyvinyl chloride infusion bags and polypropylene, polyethylene, glass infusion bottles
• Fully diluted sol for infusion may be stored refrigerated or at room temperature for ≤24 hr and should be protected from light; do not use unused product remaining in vials; no preservatives
• Allow the fully diluted sol to reach room temperature before infusion
• Give over 60 min with infusion set; do not administer as IV push or bolus
• Do not infuse concomitantly in same IV line with other drugs

SIDE EFFECTS

CNS: Headache, dizziness
CV: Hypertension
GI: Perforation, abdominal pain, gastritis, mouth ulcerations
HEMA: Neutropenia, thrombocytopenia
INTEG: Rash, infusion reactions
RESP: Upper respiratory infections, nasopharyngitis, bronchitis
SYST: Serious infections, anaphylaxis, infusion-related reactions, anti-tocilizumab antibody formation, secondary malignancy

INTERACTIONS

Decrease: product level—cycloSPORINE, theophylline, warfarin

• Do not give with live virus vaccines
• Avoid use with TNF modifiers, DMARDs, immunosuppressives due to increased risk of infection

PHARMACOKINETICS

Half-life approx 6 days with single dose, approx 11 days with multiple (steady-state) doses

NURSING CONSIDERATIONS

Assess:

• **Rheumatoid arthritis:** ROM, pain, stiffness at baseline q1-2wk
• **Blood studies:** CBC with differential, LFTs, platelet count, serum lipid profile at baseline and periodically; LFTS 1-3 × ULN reduce dose, if 3-5 × ULN interrupt; platelets 50,000-100,000/mm^3 interrupt until platelets are >100,000/mm^3 then reduce at lower dose

Black Box Warning: Infection Assess before treatment and periodically; obtain TB screening before beginning treatment; **invasive fungal infections:** discontinue if infection occurs during administration; may use antituberculosis therapy before tocilizumab in past history of latent or active TB when adequate course of treatment cannot be confirmed and those with a negative TB with risk factors for infections

• **Anaphylaxis:** Assess for rash, facial swelling, dyspnea, antihistamine, corticosteroids, emergency equipment should be available
• **Fungal infection:** Assess for flulike symptoms, dyspnea, may lead to shock, notify provider immediately
• **Secondary malignancy:** assess for malignancy periodically
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; pregnant patients should enroll in the MotherToBaby Autoimmune Diseases in Pregnancy Registry; do not breastfeed, excretion unknown

T

Evaluate:
• Therapeutic response: ability to move more easily with less pain
Teach patient/family:
• That this treatment must continue unless safety or effectiveness is an issue
• About reason for use and expected results
• To avoid live vaccines; to bring immunizations up-to-date before treatment

Black Box Warning: To report signs, symptoms of infection, including TB and hepatitis B; to avoid others with infections

• To notify prescriber if pregnancy or suspected pregnancy; not to use if breastfeeding; to consider using a nonhormonal contraceptive because contraception may be decreased

tofacitinib (Rx)

(toe′fa-sye′ti-nib)

Xeljanz, Xeljanz XR

Func. class.: Antirheumatic agent (disease modifying), immunomodulator/biologic DMARD

Chem. class.: Janus kinase inhibitor

ACTION: Affects the signaling pathway of Janus kinase

USES: Rheumatoid arthritis (moderately to severely active) in those who have taken methotrexate with inadequate response or intolerance, juvenile arthritis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, neonates, infants, children, geriatric patients, neoplastic disease, ulcerative colitis, neutropenia, peptic ulcer disease, active infections, risk of lymphomas/leukemias, TB, posttransplant lymphoproliferative disorder (PTLD), kidney disease, diabetes mellitus, HIV, hypercholesterolemia, herpes virus infection reactivation, Asian patients

Black Box Warning: Infection, secondary malignancy

DOSAGE AND ROUTES

Psoriatic arthritis
• **Adult: PO** 5 mg bid with a DMARD if receiving potent CYP3A4 inhibitor, 5 mg/day if receiving moderate CYP3A4 inhibitor and 2C19 inhibitors; **EXT REL** 11 mg/day with a DMARD
Moderate to severe rheumatoid arthritis
• **Adult: PO** 5 mg bid with or without methotrexate or a DMARD; **EXT REL** 11 mg/day
Juvenile arthritis
• **Child ≥2 yr and ≥10 kg/adolescents: PO** 10-20 kg: PO solution 3.2 mg bid; 20-40 kg: 4 mg bid; ≥40 kg (solution/tablet) 5 mg bid
Ulcerative colitis
• **Adult: PO** 10 mg bid × 8 wk or more, then 5 or 10 mg bid (immediate release)
Available forms: Tabs 5 mg; ext rel tab 11 mg; oral solution
Administer:
PO route
• Without regard to food
• Do not chew, crush, split XR tablet, swallow whole
• Do not take missed dose, resume normal schedule

SIDE EFFECTS

CNS: Headache, paresthesias, insomnia, fatigue
CV: Hypertension, increased PR interval
GI: Abdominal pain, nausea, liver damage, dyspepsia, vomiting, diarrhea, gastritis, GI perforation, steatosis
HEMA: Anemia, lymphocytosis, lymphopenia, neutropenia
INTEG: Rash, pruritus, angioedema
MISC: Increased cancer risk, risk of infection (TB, invasive fungal infections, other opportunistic infections), may be fatal, posttransplant lymphoproliferative disorder (PTLD), osteoarthritis

PHARMACOKINETICS

Bioavailability 70%, protein binding 40% (albumin), metabolism mediated by CYP3A4, half-life 3 hr, peak 0.5-1 hr

INTERACTIONS

Black Box Warning: Do not use with TNF modifiers, vaccines, potent immunosuppressants, other biologic DMARDS; serious infections may occur

Increase: tofacinib effect—CYP3A4 inhibitors (amprenavir, boceprevir, delavirdine, ketoconazole, indinavir, itraconazole, dalfopristin/quinupristin, ritonavir, tipranavir, fluconazole, isoniazid, miconazole)

Decrease: tofacinib effect—CYP3A4 inducers (rifAMPin, rifapentine, rifabutin, primidone, phenytoin, PHENobarbital, nevirapine, nafcillin, modafinil, griseofulvin, etravirine, efavirenz, barbiturates, bexarotene, bosentan, carBAMazepine, enzalutamide, dexamethasone)

Drug/Lab Test

Increase: LFTs, cholesterol

Decrease: neutrophils, lymphocytes, Hct, HB

NURSING CONSIDERATIONS

Assess:

- Monitor lipid profile, Hct/HB, WBC, LFTs
- **RA:** Pain, stiffness, ROM, swelling of joints before, during treatment

Black Box Warning: Active infection, including localized infection: evaluate for latent or active TB before use; treat with antimycobacterials before use; may cause serious fatal infections (pulmonary or extrapulmonary TB; invasive fungal infections; and bacterial, viral, and opportunistic infections); during and after use, monitor for infection including TB in those who tested negative for latent TB before use; if a serious infection develops, interrupt receipt until the infection is controlled, reactivation of viral infections is higher in Asian patients

Black Box Warning: Secondary malignancy: lymphoma and other malignancies have been noted with product use

- **Epstein-Barr virus–associated post-transplant lymphoproliferative disorder (PTLD):** in kidney transplant patients when used with this product and immunosuppressives
- **Liver disease:** not recommended in severe liver disease, impairment; dose modification is needed with moderate liver impairment, monitor LFTs
- **GI perforation:** assess in those with diverticulitis, peptic ulcer disease, or ulcerative colitis

Black Box Warning: Immunosuppression: obtain neutrophil and lymphocyte counts before use; do not start the product in lymphocyte count <500 cells/mm^3 or ANC <1000 cells/mm^3; for ANC >1000 cells/mm^3, monitor neutrophil counts after 4-8 wk and every 3 mo thereafter; lymphocyte count >500 cells/mm^3, monitor lymphocyte counts every 3 mo

- **Anemia:** determine HB, do not start in HB <9 g/dL; in HB ≥9 g/dL, monitor HB after 4-8 wk and every 3 mo thereafter
- **Pregnancy/breastfeeding:** use during pregnancy only if the potential benefit justifies the potential risk to the fetus; if pregnancy occurs, enrollment in the pregnancy registry is encouraged by calling 1-877-311-8972; discontinue product or breastfeeding; serious adverse reactions can occur in nursing infants

Black Box Warning: Neoplastic disease (lymphomas/leukemias)

Evaluate:

- Therapeutic response: decreased inflammation, pain in joints, decreased joint destruction

T

Teach patient/family:
- Not to take any live virus vaccines during treatment; vaccines should be brought up-to-date before starting treatment
- To report signs of infection, allergic reaction
- **Pregnancy:** to report if pregnancy is planned or suspected; not to breastfeed

tolcapone (Rx)

(toll′cah′pone)

Tasmar

Func. class.: Antiparkinson agent
Chem. class.: COMT inhibitor

ACTION: Inhibits COMT; used as adjunct to levodopa/carbidopa therapy

USES: Parkinson's disease

CONTRAINDICATIONS: Hypersensitivity, rhabdomyolysis
Precautions: Pregnancy, breastfeeding, cardiac/renal disease, hypertension, asthma, history of rhabdomyolysis

Black Box Warning: Hepatic disease

DOSAGE AND ROUTES

- **Adult: PO** 100-200 mg tid with levodopa/carbidopa therapy; max 600 mg/day, discontinue if no benefit after 3 wk

Available forms: Tabs 100, 200 mg
Administer:
- Only to be used if levodopa/carbidopa does not provide satisfactory results
- Give without regard to food

SIDE EFFECTS

CNS: Dystonia, dyskinesia, dreaming, *fatigue, headache, confusion,* psychosis, hallucination, dizziness, sleep disorders
CV: *Orthostatic hypotension,* chest pain, hypotension
EENT: Cataract, eye inflammation
GI: *Nausea, vomiting, anorexia, abdominal distress,* diarrhea, constipation, fatal hepatic failure, increased LFTs
GU: UTI, urine discoloration, uterine tumor, micturition disorder, hematuria
HEMA: Hemolytic anemia, leukopenia, agranulocytosis
INTEG: Sweating, alopecia
MS: Rhabdomyolysis

PHARMACOKINETICS

Rapidly absorbed, peak 2 hr, protein binding 99%, extensively metabolized, half-life 2-3 hr, excreted in urine (60%)/feces (40%)

INTERACTIONS

Increase: CNS depression—CNS depressant
- May influence pharmacokinetics of α-methyldopa, DOBUTamine, apomorphine, isoproterenol
- Inhibition of normal catecholamine metabolism: MAOIs; MAO-B inhibitor may be used

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Hepatic disease: AST, ALT, alk phos, LDH, bilirubin, CBC; monitor ALT, AST q2wk × 1 yr, then q4wk × 6 mo, then q8wk thereafter; if LFTs elevated, product should not be used, if no improvement in 3 wk, discontinue; do not use in hepatic disease

- Involuntary movements of parkinsonism: akinesia, tremors, staggering gait, muscle rigidity, drooling
- B/P, respiration during initial treatment; hypo/hypertension should be reported
- Mental status: affect, mood, behavioral changes, avoid use in those with dystonia

Evaluate:
- Therapeutic response: decrease in akathisia, increased mood

Teach patient/family:
- To change positions slowly to prevent orthostatic hypotension
- That urine, sweat may change color
- That food taken within 1 hr before meals or 2 hr after meals decreases action of product by 20%; may be taken without regard to food

• To notify prescriber if pregnancy is planned or suspected
• That CNS changes may occur, hallucinations, involuntary movement
• To avoid hazardous activities until reaction is known; dizziness may occur
• To notify prescriber of poor impulse control, urges to gamble, spend money (rare)

Black Box Warning: To report signs of hepatic injury: clay-colored stools, jaundice, fatigue, appetite loss, lethargy, fatigue, itching, right upper abdominal pain

• To report diarrhea, nausea, vomiting, anorexia; that nausea may occur at beginning of treatment

tolnaftate topical

See Appendix B

tolterodine (Rx)

(toll-tehr'oh-deen)

Detrol, Detrol LA

Func. class.: Overactive bladder product

Chem. class.: Muscarinic receptor antagonist

ACTION: Relaxes smooth muscles in urinary tract by inhibiting acetylcholine at postganglionic sites

USES: Overactive bladder (urinary frequency, urgency), urinary incontinence

CONTRAINDICATIONS: Hypersensitivity, uncontrolled closed-angle glaucoma, urinary retention, gastric retention

Precautions: Pregnancy, breastfeeding, children, renal disease, controlled closed-angle glaucoma, bladder obstruction, QT prolongation, decreased GI motility

DOSAGE AND ROUTES

Overactive bladder

• **Adult and geriatric: PO** 2 mg bid; may decrease to 1 mg bid; **EXT REL** 4 mg/day, may decrease to 2 mg/day if needed, max 4 mg/day

Hepatic/renal dose

• **Adult: PO** 1 mg bid (50% dose) or **EXT REL** 2 mg/day; CCr ≤30 mL/min, reduce by 50%

CYP3A4 inhibitor dose

• **Adult: PO** 1 mg bid; **EXT REL** 2 mg/day

Available forms: Tabs 1, 2 mg; ext rel caps 2, 4 mg

Administer:

• Whole; take with liquids; do not crush, chew, or break ext rel product; without regard to meals

SIDE EFFECTS

CNS: Anxiety, paresthesia, fatigue, *dizziness, headache;* increasing dementia, memory impairment

CV: Chest pain, hypertension, QT prolongation

EENT: Vision abnormalities, xerophthalmia

GI: *Nausea, vomiting, anorexia,* abdominal pain, constipation, dry mouth, dyspepsia

GU: Dysuria, urinary retention, frequency, UTI

INTEG: Rash, pruritus

RESP: Bronchitis, cough, pharyngitis, upper respiratory tract infection

SYST: Angioedema, Stevens-Johnson syndrome

PHARMACOKINETICS

Rapidly absorbed; highly protein bound; extensively metabolized by CYP2D6; a portion of the population may be poor metabolizers; excreted in urine, feces half-life 2-3.7 hr

INTERACTIONS

• Do not use in those with known hypersensitivity to fesoterodine

• **Increase:** QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine

Increase: action of tolterodine—antiretroviral protease inhibitors, macrolide antiinfectives, azole antifungals
Increase: anticholinergic effect—antimuscarinics
Increase: urinary frequency—diuretics
Drug/Food
• Food increases bioavailability of tolterodine
Drug/Lab
Increase: LFTs, bilirubin

NURSING CONSIDERATIONS

Assess:
• **Urinary patterns:** distention, nocturia, frequency, urgency, incontinence, residual urine
• **Serious skin disorders:** angioedema, Stevens-Johnson syndrome; allergic reactions: rash; if this occurs, product should be discontinued; usually occurs in first few doses
• **QT prolongation:** ECG, ejection fraction; assess for chest pain, palpitations, dyspnea; may be compounded in those taking class IA/III dysrhythmics

Black Box Warning: Fatal hepatic injury: increased LFTs, bilirubin during first 18 mo of therapy in those with autosomal dominant polycystic kidney disease; assess for fatigue, anorexia, right upper abdominal pain, dark urine, jaundice; if these occur, discontinue product and do not restart if cause is liver injury

• **Beers:** avoid in older adults with delirium or at high risk for delirium; monitor for confusion, delirium frequently
Evaluate:
• Decreasing dysuria, frequency, nocturia, incontinence
Teach patient/family:
• To avoid hazardous activities; dizziness may occur
• Not to drink liquids before bedtime; to swallow ext rel product whole
• About the importance of bladder maintenance
• Not to breastfeed; to notify prescriber if pregnancy is planned or suspected
• To report signs of infection, skin effects, shortness of breath, urinary retention

tolvaptan (Rx)

(tole-vap′tan)

Jinarc, Jynarque, Samsca

Func. class.: Antihypertensive
Chem. class.: Vasopressin receptor antagonist, V2

ACTION: Arginine vasopressin (AVP) antagonist with affinity for V2 receptors; level of circulating AVP in circulating blood is critical for the regulation of water and the electrolyte balance, and it is usually elevated with euvolemic/hypervolemic hyponatremia

USES: Hypervolemic/euvolemic hyponatremia with heart failure, cirrhosis, SIADH

CONTRAINDICATIONS: Hypersensitivity, hypovolemia, anuria
Precautions: Pregnancy, breastfeeding, children, dehydration, geriatric patients, hyperkalemia, autosomal dominant PKD, malnutrition, alcoholism, hepatic disease

Black Box Warning: Osmotic demyelination syndrome; requires a specialized care setting

DOSAGE AND ROUTES

• **Adult: PO** 15 mg daily; after 24 hr, may increase to 30 mg daily; max 60 mg/day max 30 days
Available forms: Tabs 15, 30, 45, 60, 90 mg
Administer:
• PO with/without food
• Avoid fluid restriction for first 24 hr
• Initiate in hospital setting
• Do not use with grapefruit, grapefruit juice

SIDE EFFECTS

CNS: Fever, dizziness
CV: Ventricular fibrillation, DIC, stroke, thrombosis
GI: *Nausea,* vomiting, *constipation,* colitis, hepatic injury
GU: Polyuria

HEMA: Bleeding
META: *Dehydration, hyperglycemia,* hyperkalemia, hypernatremia
MS: Rhabdomyolysis
RESP: Respiratory depression, pulmonary embolism

PHARMACOKINETICS

Peak 2-4 hr, protein binding 99%, metabolized by CYP3A4, terminal half-life 12 hr

INTERACTIONS

Increase: concentrations of tolvaptan—CYP3A4 inhibitors (efavirenz, fosamprenavir, quiNINE); P-gp inhibitors (cycloSPORINE, azithromycin, mefloquine, palperidone, propafenone, quiNIDine, testosterone)
Decrease: concentration of tolvaptan—CYP3A4 inducers (carBAMazepine, dexamethasone, etravirine, flutamide, griseofulvin, metyraPONE, modafinil, nafcillin, nevirapine, OXcarbazepine, phenytoin, rifAMPin, rifabutin, rifapentine, topiramate)
Drug/Herb
Decrease: tolvaptan effect—CYP3A4 inducer (St. John's wort)
Drug/Food
• Grapefruit/grapefruit juice; do not use together

NURSING CONSIDERATIONS

Assess:
• Renal, hepatic function

Black Box Warning: Osmotic demyelination syndrome: frequent sodium vol status; overly rapid correction of sodium concentration (>12 mEq/L per 24 hr); may occur in alcoholism, severe malnutrition, advanced liver disease, syndrome of inappropriate antidiuretic hormone; correct sodium levels slowly, may result in dysarthria, mutism, dysphagia, coma, seizure, death

• CV status: ventricular fibrillation, hypertension; monitor B/P, pulse
• Monitor electrolytes (sodium, potassium)

Black Box Warning: Specialized care setting: needed so that neurologic status and sodium can be monitored

• **Liver injury:** fatigue, abdominal pain, dark urine, clay-colored stools, jaundice
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed

Evaluate:
• Therapeutic response: correction of serum sodium levels

Teach patient/family:
• About administration procedure and expected results; that product will be used for ≤30 days
• To report difficulty swallowing, speaking, seizures, dizziness, drowsiness; embolism may be the cause
• To drink fluid in response to thirst
• Not to use grapefruit juice
• To notify prescriber before using other products
• To report right upper abdominal pain, nausea, vomiting, anorexia, dark urine, yellowing of skin, eyes (hepatic injury)
• That product will be started or restarted in the hospital when monitoring is possible
• To avoid pregnancy, breastfeeding while taking this product

topiramate (Rx)

(toh-pire′ah-mate)

Eprontia, Qudexy XR, Topamax, Topamax Sprinkle, Trokendi XR

Func. class.: Anticonvulsant—miscellaneous
Chem. class.: Monosaccharide derivative

Do not confuse:
Topamax/Toprol XL

ACTION: May prevent seizure spread as opposed to an elevation of seizure threshold, increases GABA activity

USES: Partial seizures in adults and children 2-16 yr old; tonic-clonic seizures; seizures with Lennox-Gastaut syndrome; migraine prophylaxis

T

Unlabeled uses: Antipsychotic-induced weight gain, cluster headache, binge eating disorder, essential tremor

CONTRAINDICATIONS:

Hypersensitivity, metabolic acidosis, pregnancy

Precautions: Breastfeeding, children, renal/hepatic disease, acute myopia, secondary closed-angle glaucoma, behavioral disorders, COPD, dialysis, encephalopathy, status asthmaticus, status epilepticus, surgery, paresthesias, maculopathy, nephrolithiasis

DOSAGE AND ROUTES

Adjunctive therapy for seizures

- **Adult/adolescent/child ≥10 yr: PO** 25-50 mg/day initially, titrate by 25-50 mg/wk, up to 200-400 mg/day in 2 divided doses
- **Adult/adolescent/child ≥10 yr: PO** (Qudexy XR, Trokendi XR) 50 mg daily, increase by 50 mg weekly during wk 2, 3, 4, increase by 100 mg weekly, wk 5, 6, final dose 400 mg daily
- **Child 2-9 yr: PO** week 1: 25 mg in PM, then 25 mg bid if tolerated (week 2), then increase by 25-50 mg/day each week as tolerated over 5- to 7-wk titration period, maintenance given in 2 divided doses; <11 kg, minimum 150 mg/day, max 250 mg/day; 12-22 kg, minimum 200 mg/day, max 300 mg/day; 23-31 kg, minimum 200 mg/day, max 350 mg/day; 32-38 kg, minimum 250 mg/day, max 350 mg/day; >38 kg, minimum 250 mg/day, max 400 mg/day; Qudexy XR 25 mg daily at night, may increase to 50 mg week 2, if tolerated, increase by 25-50 mg each week over 5- to 7-wk titration period, max dose based on weight
- **Child ≤11 kg: PO** Qudexy XR minimum 150 mg daily, max 250 mg daily
- **Child 12-22 kg:** minimum 200 mg daily, max 300 mg daily
- **Child 23-31 kg:** minimum 200 mg daily, max 350 mg daily
- **Child 32-38 kg:** minimum 250 mg daily, max 350 mg daily
- **Child >38 kg:** minimum 250 mg daily, max 400 mg daily

Migraine prophylaxis

- **Adult: PO** 25 mg/day initially, increase by 25 mg/day/wk up to 100 mg/day in 2 divided doses

Renal dose

- **Adult: PO** CCr <70 mL/min, give $^1/_2$ dose

Available forms: Tabs 25, 50, 100, 200 mg; ext rel caps 25, 50, 100, 200 mg; ext rel cap (sprinkles 24 hr) 25, 50, 100, 150, 200 mg; oral solution 25 mg/mL

Administer:

- Swallow tabs whole; do not break, crush, or chew tabs; very bitter
- May take without regard to meals
- Sprinkle cap can be given whole or opened and sprinkled on soft food; do not chew, drink water after sprinkle
- Store at room temperature away from heat, light

SIDE EFFECTS

CNS: *Dizziness, fatigue*, cognitive disorders, insomnia, *anxiety*, depression, paresthesia, *memory loss, tremors,* motor retardation, suicidal ideation, poor balance, ataxia

CV: Flushing, chest pain

EENT: Diplopia, *vision abnormality*

GI: Diarrhea, *anorexia, nausea, dyspepsia*, abdominal pain, constipation, dry mouth, pancreatitis

GU: Breast pain, dysmenorrhea, menstrual disorder

INTEG: Rash, alopecia

MISC: Weight loss, leukopenia, metabolic acidosis, increased body temperature; unexplained death (epilepsy)

RESP: Upper respiratory tract infection, pharyngitis, sinusitis

PHARMACOKINETICS

Well absorbed, peak 2 hr, terminal half-life 19-25 hr, excreted in urine (55%-97% unchanged), crosses placenta, excreted in breast milk, protein binding (9%-17%), steady state 4 days

INTERACTIONS

Increase: renal stones—carbonic anhydrase inhibitors
Increase: effect of amitriptyline
Increase: CNS depression—alcohol, CNS depressants
Increase: topiramate levels—metFORMIN, hydroCHLOROthiazide, lamoTRIgine
Decrease: levels of hormonal contraceptives, estrogen, digoxin, valproic acid, lithium, risperiDONE
Decrease: topiramate levels—phenytoin, carBAMazepine, valproic acid, probenecid

NURSING CONSIDERATIONS

Assess:
• **Seizures:** location, type, duration, aura; **seizure precautions:** padded side rails; move objects that may harm patient
• **Bipolar disorder:** mood, behavior, activity
• **Renal studies:** urinalysis, BUN, urine creatinine, electrolytes q3mo; symptoms of renal colic
• **Hepatic studies:** ALT, AST, bilirubin if patient receiving long-term treatment
• CBC during long-term therapy (anemia); serum bicarbonate (metabolic acidosis)
• **Migraines:** pain location, duration; alleviating factors
• **Mental status:** mood, sensorium, affect, behavioral changes, **suicidal thoughts/behaviors;** if mental status changes, notify prescriber
• Body weight, perception of body image; eating disorders may occur or be exacerbated, especially in adolescents; evidence of cognitive disorder
• Assistance with ambulation during early part of treatment; dizziness occurs
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, birth defects have occurred; pregnant patients should register with the Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; may decrease effectiveness of hormonal contraceptives; cautious use in breastfeeding, excretion unknown
• **Beers:** avoid in older adults unless safer alternative is unavailable; may cause ataxia, impaired psychomotor function

Evaluate:
• Therapeutic response: decreased seizure activity

Teach patient/family:
• To carry emergency ID stating patient's name, products taken, condition, prescriber's name, and phone number
• To avoid driving, other activities that require alertness, until response is known
• Not to discontinue medication quickly after long-term use; do not restart without close supervision if several doses are missed; to follow prescriber's directions closely
• To notify prescriber immediately of blurred vision, periorbital pain; that vision loss may occur
• To maintain adequate fluid intake
• About administration procedure and expected results
• To use nonhormonal contraceptive; that effect of oral contraceptives is decreased
• To drink plenty of fluids to prevent kidney stones
• May need to increase amount of food consumed; weight loss may occur
• To swallow ext rel product whole
• That minor hair loss may occur; to report to prescriber if severe

T

⚠ HIGH ALERT

topotecan (Rx)

(toh-poh-tee'kan)

Hycamtin

Func. class.: Antineoplastic, natural; topoisomerase inhibitor
Chem. class.: Camptothecin analog

ACTION: Antitumor product with topoisomerase-I–inhibitory activity; topoisomerase I relieves torsional

strain in DNA by causing single-strand breaks; also causes double-strand DNA damage

USES: Metastatic ovarian cancer after failure of traditional chemotherapy; relapsed small-cell lung cancer; cervical cancer

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, severe bone marrow depression

Black Box Warning: Neutropenia, bone marrow suppression

Precautions: Children, renal disease, gelatin hypersensitivity, anemia, contraceptive requirements, dehydration, diarrhea, extravasation, herpes, infertility, neutropenia, pulmonary fibrosis, varicella

DOSAGE AND ROUTES

Metastatic carcinoma of the ovary

• **Adult: IV INFUSION** 1.5 mg/m^2 over 30 min daily × 5 days starting on day 1 of 21-day course × 4 courses

Persistent cervical cancer

• **Adult: IV INFUSION** 0.75 mg/m^2 on days 1, 2, 3 then 50 mg/m^2 cisplatin **IV** on day 1 then repeat q21days; adjust for toxicity

Relapsed small-cell lung cancer

• **Adult: PO** 2.3 mg/m^2/day × 5 days then repeat q21days

Renal dose

• **Adult: PO** CCr ≥50 mL/min: No change; CCr 30-49 mL/min: Reduce dose to 1.5 mg/m^2/day; dose may be increased by 0.4 mg/m^2/day after the first course if no severe hematologic or gastrointestinal toxicities occur; CCr <30 mL/min: Reduce dose to 0.6 mg/m^2/day; dose may be increased by 0.4 mg/m^2/day after the first course if no severe hematologic or gastrointestinal toxicities occur

• **Adult: IV** CCr 40-60 mL/min: No change; CCr 20-39 mL/min: Reduce dose to 0.75 mg/m^2; CCr <20 mL/min: unknown

Available forms

Lyophilized powder for inj 4 mg; caps 0.25, 1 mg

Administer:

• Store caps in refrigerator; IV INFUSION unopened at room temperature; protect both from light

PO route

• Do not break, crush, chew, or open caps; protect from light

• Take without regard to food

Intermittent IV INFUSION route

• Visually inspect for particulate matter and discoloration before use

• Reconstitute each 4-mg vial with 4 mL sterile water for injection; use immediately; no preservative

• Withdraw the appropriate volume of the reconstituted solution; dilute further; dilute in 0.9% NaCl or D_5W before administration

• The reconstituted solution is yellow or yellow-green

• Topotecan injection diluted for infusion is stable at room temperature with normal light for 24 hr

• Infuse over 30 min

SIDE EFFECTS

CNS: Arthralgia, *asthenia, headache,* myalgia, *pain,* weakness

GI: *Abdominal pain, constipation,* diarrhea, obstruction, *nausea,* stomatitis, *vomiting;* increased ALT, AST; anorexia

HEMA: Neutropenia, leukopenia, thrombocytopenia, anemia, sepsis

INTEG: *Total alopecia*

RESP: Dyspnea, cough, interstitial lung disease

PHARMACOKINETICS

Rapidly and completely absorbed, excreted in urine and feces as metabolites, half-life 2.8 hr, 7%-35% bound to plasma proteins, PO peak 1-2 hr

INTERACTIONS

• **Avoid use with P-glycoprotein,** breast cancer resistance protein inhibitors (amiodarone, clarithromycin, diltiaZEM, erythromycin, indinavir), quiNIDine, testosterone, verapamil, tamoxifen, itraconazole, mefloquine, RU-486, niCARdipine, vaccines, toxoids

Increase: myelosuppression when used with CISplatin
Increase: bleeding risk—NSAIDs, anticoagulants, thrombolytics, platelet inhibitors
Drug/Food
• Avoid use with grapefruit juice

NURSING CONSIDERATIONS

Assess:
• Hepatic studies: AST, ALT, alk phos, which may be elevated; creatinine, BUN

Black Box Warning: Bone marrow suppression: CBC, differential, platelet count weekly; withhold product if WBC is <3500/mm^3 or platelet count is <100,000/mm^3; notify prescriber of results; product should be discontinued

• **Pregnancy/breastfeeding:** do not use in pregnancy or breastfeeding, can cause fetal harm; use contraception during and for ≥1 mo after final dose (female), during and for 3 mo after final dose (males); may cause infertility in both males/females
• **Oral status:** Buccal cavity for dryness, sores or ulcerations, white patches, oral pain, bleeding, dysphagia
• **Interstitial lung disease (ILD):** fever, cough, dyspnea, hypoxia; may be fatal
• **Fluid balance:** Increased fluid intake to 2-3 L/day to prevent dehydration unless contraindicated
Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy
Teach patient/family:
• That total alopecia may occur; that hair grows back but is different in color and texture
• To avoid foods with citric acid, hot temperature, or rough texture if stomatitis is present; to drink adequate fluids
• To report stomatitis and any bleeding, white spots, ulcerations in mouth; to examine mouth daily; to report symptoms

Black Box Warning: To report signs of anemia: fatigue, headache, faintness, SOB, irritability

• Rinsing of mouth tid-qid with water, club soda; brushing of teeth bid-tid with soft brush or cotton-tipped applicator for stomatitis; to use unwaxed dental floss
• To use effective contraception during treatment and for 6 mo after; that males should use contraception during and for 3 mo after final dose; not to breastfeed
• To avoid OTC products without approval of prescriber
• To avoid driving or other activities requiring alertness
• To avoid vaccines, toxoids
• Not to crush, chew capsules
• Not to retake dose if vomiting occurs; to notify prescriber

toremifene (Rx)

(tor-em′ih-feen)
Fareston
Func. class.: Antineoplastic
Chem. class.: Antiestrogen hormone

USES: Advanced breast carcinoma not responsive to other therapy in estrogen receptor–positive patients (usually postmenopausal)

CONTRAINDICATIONS: Pregnancy, hypersensitivity, history of thromboembolism

Black Box Warning: QT prolongation

T

DOSAGE AND ROUTES

• **Adult: PO** 60 mg/day
Available forms: Tabs 60 mg

torsemide (Rx)

(tor′suh-mide)
Demadex
Func. class.: Loop diuretic
Chem. class.: Sulfonamide derivative

ACTION: Acts on loop of Henle by inhibiting absorption of chloride, sodium, water

USES: Treatment of hypertension and edema with HF, ascites

CONTRAINDICATIONS: Infants, hypersensitivity to sulfonamides, anuria
Precautions: Pregnancy, breastfeeding, diabetes mellitus, dehydration, severe renal disease, electrolyte depletion, hypovolemia, syncope, ventricular dysrhythmias

DOSAGE AND ROUTES

HF diuresis
• **Adult: PO** 10-20 mg/day, may increase as needed, max 200 mg/day
Diuresis in chronic renal failure
• **Adult: PO** 20 mg/day, may increase to 200 mg/day
Hepatic cirrhosis
• **Adult: PO** 5-10 mg/day, may increase as needed, max 40 mg/day
Hypertension
• **Adult: PO** 5mg/day, after 4-6 weeks may increase to 10mg/day
Available forms: Tabs 5, 10, 20, 100 mg
Administer:
PO route
• In AM to avoid interference with sleep if using product as diuretic
• With food or milk if nausea occurs; absorption may be decreased slightly

SIDE EFFECTS

CNS: *Headache, dizziness,* asthenia, insomnia, nervousness
CV: Orthostatic hypotension, chest pain, ECG changes, circulatory collapse, ventricular tachycardia, edema
EENT: *Loss of hearing,* ear pain, tinnitus, blurred vision
ELECT: *Hypokalemia, hypochloremic alkalosis, hyponatremia,* metabolic alkalosis
ENDO: *Hyperglycemia, hyperuricemia*
GI: *Nausea,* diarrhea, dyspepsia, cramps, constipation
GU: *Polyuria,* renal failure, glycosuria
INTEG: *Rash,* photosensitivity, pruritus
MS: Cramps, stiffness
RESP: Rhinitis, cough increase

PHARMACOKINETICS

PO: Rapidly absorbed; duration 6 hr; excreted in breast milk; crosses placenta; half-life 3.5 hr; protein binding 97%-99%, cleared through hepatic metabolism

INTERACTIONS

Increase: toxicity—lithium, nondepolarizing skeletal muscle relaxants, digoxin
Increase: action of antihypertensives, oral anticoagulants, nitrates; cautious use
Increase: ototoxicity—aminoglycosides, CISplatin, vancomycin; cautious use
Decrease: antihypertensive effect of torsemide—indomethacin, carBAMazepine, PHENobarbital, phenytoin, rifAMPin, NSAIDs
Decrease: hypoglycemic effect—antidiabetics; monitor blood glucose levels often
Drug/Herb
• Severe photosensitivity: St. John's wort
Drug/Lab Test
Increase: BUN, creatinine, uric acid, blood glucose, cholesterol
Decrease: potassium, magnesium, chloride sodium

NURSING CONSIDERATIONS

Assess:
• **Heart failure:** B/P lying, standing; postural hypotension may occur; weight, I&O daily to determine fluid loss; effect of product may be decreased if used daily
• Hearing when giving high doses
• **Sulfa allergy:** determine before using product
• Electrolytes: potassium, sodium, chlorine; include blood glucose, CBC, blood pH, ABGs, uric acid; calcium, magnesium, potassium supplements may be required
• Blood glucose of diabetic patients, glycosuria
• **Renal failure:** monitor urinalysis, BUN, CCr
• **Hyperuricemia:** exacerbation of gout may occur
• **Metabolic alkalosis:** drowsiness, restlessness

• **Hypokalemia:** postural hypotension, malaise, fatigue, tachycardia, leg cramps, weakness
• Rashes, temperature elevation daily
• Confusion, especially in geriatric patients; take safety precautions if needed
• **Pregnancy/breastfeeding:** use only if clearly needed, no well-controlled studies; cautious use in breastfeeding
• **Beers:** use with caution in older adults; may exacerbate or cause SIADH or hyponatremia; monitor sodium levels frequently

Evaluate:
• Therapeutic response: improvement in edema of feet, legs, sacral area daily if medication is being used with HF

Teach patient/family:
• To rise slowly from lying, sitting position
• To recognize adverse reactions: muscle cramps, weakness, nausea, dizziness, tinnitus
• To take with food or milk for GI symptoms; to limit alcohol use
• To take early during the day to prevent nocturia
• To use sunscreen, protective clothing to prevent sunburn
• To notify prescriber if pregnancy is planned or suspected
• To report tinnitus immediately; may indicate toxicity
• Not to use any OTC medications, herbal products before approved by prescriber

TREATMENT OF OVERDOSE:
Lavage if taken orally; monitor electrolytes; administer dextrose in saline; monitor hydration, CV, renal status

⚠ HIGH ALERT

traMADol (Rx)
(tram′a-dole)

ConZip, Durela ✱, Qdolo, Ralivia ✱, Tridural ✱, Ultram, Zytram XL ✱

Func. class.: Analgesic—miscellaneous

Controlled Substance Schedule IV

Do not confuse:
traMADol/traZODone
Ultram/lithium

ACTION: Binds to μ-opioid receptors, inhibits reuptake of norepinephrine, serotonin

USES: Management of moderate to severe pain, chronic pain
Unlabeled uses: Restless legs syndrome (RLS), premature ejaculation

CONTRAINDICATIONS: Hypersensitivity, acute intoxication with any CNS depressant, alcohol, asthma, children, adenoidectomy, GI obstruction ileus, MAOIs

Black Box Warning: Respiratory depression

Precautions: Pregnancy, breastfeeding, geriatric patients, seizure disorder, renal/hepatic disease, head trauma, increased intracranial pressure, acute abdominal condition, drug abuse, depression, suicidal ideation, abrupt discontinuation, constipation

Black Box Warning: Coadministration with other CNS depressants, neonatal opioid withdrawal syndrome

DOSAGE AND ROUTES
Mild to moderate pain
• **Adult: PO** 25 mg daily, titrate by 25 mg ≥3 days to 100 mg/day (25 mg qid), then may increase by 50 mg ≥3 days to 200 mg (50 mg qid), then 50-100 mg q4-6hr, max 400 mg/day, use caution in geriatric patients
• **Geriatric >75 years: PO** <300 mg/day in divided doses

Moderate to severe chronic pain
• **Adult: PO-ER** (Ultram ER) 100 mg daily, titrate upward q5days in 100-mg increments, max 300 mg/day; (Ryzolt) 100 mg, titrate upward q2-3days in 100-mg increments, max 300 mg/day; products are not interchangeable

T

Renal dose

• **Adult: PO** CCr <30 mL/min, give regular dose q12hr, max 200 mg/day; do not use ext rel tab

Hepatic dose

• **Adult: PO** (Child-Pugh C) 50 mg q12hr; do not use ext rel tab

Restless legs syndrome (RLS) (unlabeled)

• **Adult: PO** 50-150 mg/day × 15-24 mo

Available forms: Tabs 50 mg; ext rel tab 100, 200, 300 mg

Administer:

• Some ext rel products (Ultram ER) are not interchangeable

• Do not break, crush, or chew ext rel product

• With antiemetic for nausea, vomiting

• When pain is beginning to return; determine dosage interval by patient response

• With or without food; ER: always give with food, or always give on empty stomach

• Store in cool environment; protected from sunlight

SIDE EFFECTS

CNS: Dizziness, CNS stimulation, somnolence, headache, anxiety, confusion, euphoria, seizures, hallucinations, sedation, neuroleptic malignant syndrome–like reactions

CV: Vasodilation, orthostatic hypotension, tachycardia, hypertension, abnormal ECG

EENT: Visual disturbances

GI: Nausea, constipation, vomiting, dry mouth, diarrhea, abdominal pain, anorexia, flatulence, GI bleeding

GU: Urinary retention/frequency, menopausal symptoms, dysuria, menstrual disorder

INTEG: Pruritus, rash, urticaria, vesicles, flushing

SYST: Anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis, serotonin syndrome

PHARMACOKINETICS

Rapidly and almost completely absorbed, steady state 2 days, peak 1.5 hr, duration 6 hr, half-life 7.9-8.8 hr (PO), 8-10 hr (ext rel), may cross blood-brain barrier, extensively metabolized, 30% excreted in urine as unchanged product, protein binding 20%

INTERACTIONS

• Inhibition of norepinephrine and serotonin reuptake: MAOIs; use together with caution

Black Box Warning: Increase: CNS depression—alcohol, sedatives, hypnotics, opiates

Increase: serotonin syndrome—SSRIs, SNRIs, serotonin-receptor agonists

Increase: traMADol levels—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)

Decrease: traMADol effects—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifAMPin)

Decrease: levels of traMADol—carBAMazepine

Drug/Herb

• Avoid use with St. John's wort

Increase: CNS depression—chamomile, hops, kava, skullcap, valerian

Drug/Lab Test

Increase: creatinine, hepatic enzymes

Decrease: HB

NURSING CONSIDERATIONS

Assess:

• **Pain:** location, type, character; give before pain becomes extreme

Black Box Warning: Respiratory depression: withhold if respirations <12/min; may be compounded by use of other CNS depressants

Black Box Warning: Neonatal opioid withdrawal syndrome: prolonged use of opioids in the mother may cause withdrawal in the neonate; can be fatal; assess for irritability, hyperactivity, abnormal sleep pattern, high-pitched cry, tremor, vomiting, diarrhea, failure to gain weight in the neonate

- **Fluid balance:** I&O ratio: check for decreasing output; may indicate urinary retention
- **Need for product;** dependency, toleration, need for upward titration
- **Bowel pattern;** for constipation; increase fluids, bulk in diet
- **CNS changes:** dizziness, drowsiness, hallucinations, euphoria, LOC, pupil reaction; avoid use with other CNS depressants
- **Hypersensitivity:** usually after beginning treatment
- Increased side effects in renal/hepatic disease
- **Serotonin syndrome, neuroleptic malignant syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist if needed
- Safety: Assistance with ambulation; safety measures: side rails, nightlight, call bell within easy reach
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, no well-controlled studies; do not use in labor/delivery; do not breastfeed
- **Beers:** avoid in older adults; may lower seizure threshold; monitor for seizures frequently in those with a seizure disorder

Evaluate:

- Therapeutic response: decrease in pain

Teach patient/family:

- Before taking, inform health care provider of any history of head injury; seizures; liver, kidney, thyroid problems; problems in urinating; pancreas or gallbladder problems; abuse of street or prescription drugs; alcohol addiction; or mental health problems
- Not to take other prescription medications, OTC products, vitamins, or herbal supplements without approval from health care provider
- To take exactly as prescribed by health care provider; not to take more than prescribed dose and not to take >8 tablets/day. If dose is missed, to take the next dose at usual time
- To notify health care provider if the prescribed does not control pain
- Not to stop product abruptly if taking regularly without talking to health care provider
- Not to drive or operate heavy machinery until effects of product are known; may cause dizziness or lightheadedness
- Not to drink alcohol or use a prescription or OTC product that contains alcohol
- To notify health care provider of severe constipation, nausea, sleepiness, vomiting, tiredness, headache, dizziness, abdominal pain
- To get emergency medical help for difficulty in breathing, shortness of breath, fast heartbeat, chest pain, swelling of face, tongue, or throat, extreme drowsiness, light-headedness when changing positions, feeling faint, agitation, high body temperature, trouble walking, stiff muscles, or mental changes such as confusion
- **To notify health care provider if pregnancy is planned or suspected. Prolonged use during pregnancy can cause withdrawal symptoms in neonate that could be life threatening if not recognized and treated. Do not breastfeed**

T

⚠ HIGH ALERT

trametinib (Rx)

(tra-me′ti-nib)

MeKinist

Func. class.: Antineoplastic biologic response modifiers

Chem. class.: Signal transduction inhibitors (STIs), tyrosine kinase inhibitor

USES: Unresectable or metastatic BRAD V600E or BRAF V600K mutated malignant melanoma, non-small cell lung cancer, thyroid cancer

CONTRAINDICATIONS: Pregnancy, hypersensitivity

DOSAGE AND ROUTES

Unresectable or metastatic malignant melanoma

- **Adult: PO** 2 mg daily; may be used in combination with dacarbazine or PACLitaxel in those with BRAF V600E

Unresectable or metastatic malignant melanoma

- **Adult: PO** 2 mg daily with dabrafenib 150 mg q12hr until disease progression, take both at same time

Available forms: Tabs 0.5, 2 mg

trandolapril (Rx)

(tran-doe'la-prill)

Marik

Func. class.: Antihypertensive

Chem. class.: Angiotension-converting enzyme inhibitor

USES: Hypertension, heart failure, left ventricular dysfunction post MI

CONTRAINDICATIONS: Breastfeeding, hypersensitivity, history of angioedema

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Hypertension

- **Adult: PO** 1 mg/day; 2 mg/day in African Americans; make dosage adjustment ≥1 wk; max 8 mg/day

Heart failure, left ventricular dysfunction post MI

- **Adult: PO** 1 mg/day, titrate upward to 4 mg/day if tolerated, continue for 2-4 yr

Renal/hepatic dose

- **Adult: PO** CCr <30 mL/min or hepatic disease, 0.5 mg/day

Available forms: Tabs 1, 2 ,4 mg

trandolapril/verapamil (Rx)

(tran-doe'la-pril/ver-ap'a-mil)

Tarka

Func. class.: Antihypertensive, calcium channel blocker

USES: Management of hypertension

CONTRAINDICATIONS

Hypersensitivity, severe left ventricular dysfunction; systolic pressure <90 mm Hg, cardiogenic shock, sick sinus syndrome, atrial flutter/atrial fibrillation, angioedema, use within 36 hr of switching to/from a neprilysin inhibitor, 2nd/3rd-degree AV block, use with aliskiren in those with diabetes, use with flibanserin

DOSAGE AND ROUTES

Adult: PO: Trandolapril 1-4 mg/verapamil 180-240 mg daily

Available forms: Tabs, ext rel 1 mg/240 mg, 2 mg/180 mg, 2 mg/240 mg, 4 mg/240 mg

⚠ HIGH ALERT

trastuzumab (Rx)

(tras-tuz'uh-mab)

Herceptin

trastuzumab-anns

Kanjinti

trastuzumab-dkst

Ogivri

trastuzumab-dttb

Ontruzant

trastuzumab-pkrb

trastuzumab-gyyp

Trazimera

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Humanized monoclonal antibody

ACTION: DNA-derived monoclonal antibody selectively binds to extracellular portion of human epidermal growth factor receptor 2; it inhibits the proliferation of cancer cells

USES: Breast cancer; metastatic with overexpression of HER2, early breast cancer (adjuvant, neoadjuvant), gastric cancer; previously untreated HER2 overexpressing metastatic gastric or gastroesophageal junction adenocarcinoma with CISplatin, 5-fluorouracil, or capecitabine

CONTRAINDICATIONS: Hypersensitivity to this product, Chinese hamster ovary cell protein
Precautions: Breastfeeding, children, geriatric patients, pulmonary disease, anemia, leukopenia

Black Box Warning: Respiratory distress syndrome, respiratory insufficiency, infusion-related reactions, cardiomyopathy, contraception requirement, pregnancy, pulmonary toxicity

DOSAGE AND ROUTES

HER2-positive, node-positive or node-negative (ER/PR negative) in combination (AC-TH)

• **Adult: IV** 4 mg/kg over 90 min on day 1, then 2 mg/kg over 30 min weekly for a total of 12 wk, with PACLitaxel (either 80 mg/m^2 **IV** wk or 175 mg/m^2 q3wk) beginning on day 1 for a total of 4 cycles (12 wk). On week 13, begin trastuzumab 6 mg/kg over 30-90 min q3wk as monotherapy for a total of 52 wk of trastuzumab therapy; begin PACLitaxel plus trastuzumab after the completion of 4 cycles of AC chemotherapy (doxorubicin 60 mg/m^2 **IV** and cyclophosphamide 600 mg/m^2 **IV** q21days)

HER2-positive, node-positive or node-negative (ER/PR negative) in combination (AC-TH)

• **Adult: IV** 4 mg/kg over 90 min on day 1, then 2 mg/kg over 30 min weekly (total of 12 wk), with DOCEtaxel 100 mg/m^2 **IV** q21days beginning on day 1 for a total of 4 cycles (12 wk). On week 13, begin trastuzumab 6 mg/kg **IV** over 30-90 min q3wk as monotherapy for a total of 52 wk of trastuzumab therapy. Begin DOCEtaxel plus trastuzumab after the completion of 4 cycles of AC chemotherapy (doxorubicin 60 mg/m^2 **IV** and cyclophosphamide 600 mg/m^2 **IV** q21days)

HER2-positive, node-positive or node-negative (ER/PR negative) in combination (TCH)

• **Adult: IV** 4 mg/kg over 90 min on day 1, then 2 mg/kg over 30 min weekly (total of 18 wk), with DOCEtaxel 75 mg/m^2 **IV** followed by CARBOplatin AUC 6 **IV** over 30-60 min beginning on day 1, q3wk, for a total of 6 cycles (18 wk). On week 19, begin trastuzumab 6 mg/kg **IV** over 30-90 min q3wk as monotherapy (52 wk of trastuzumab)

HER2-positive, node-positive or node-negative (ER/PR negative) monotherapy

• **Adult: IV** 8 mg/kg over 90 min on day 1, followed by 6 mg/kg **IV** over 30-90 min q21days (total of 52 wk)

Available forms: Lyophilized powder 150, 440 mg

Administer:

• Check vial labels carefully, medication errors have occurred between Herceptin A and Kadeyla

• Acetaminophen as ordered to alleviate fever and headache

Intermittent IV INFUSION route

• Use cytotoxic handling procedures; avoid treatment >1 yr

• After **reconstituting** vial with 20 mL bacteriostatic water for inj, 1.1% benzyl alcohol preserved (supplied) to yield 21 mg/mL; mark date on vial 28 days from reconstitution date; if patient is allergic to benzyl alcohol, reconstitute with sterile water for inj; **Dilute:** withdraw amount of solution and add to 250 mL of 0.9% NaCl immediately; infuse over 90 min; subsequent 6 mg/kg dose may be given over 30-60 min

• Do not mix or dilute with other products or dextrose sol

SIDE EFFECTS

CNS: *Dizziness, numbness, paresthesias,* depression, *insomnia,* neuropathy, peripheral neuritis
CV: Tachycardia, heart failure
GI: Nausea, vomiting, *anorexia, diarrhea,* abdominal pain, hepatotoxicity, dysgeusia
HEMA: *Anemia,* leukopenia
INTEG: Rash, acne, herpes simplex
META: Edema, peripheral edema
MISC: *Flulike symptoms; fever, headache, chills*
MS: Arthralgia, *bone pain*
RESP: *Cough, dyspnea, pharyngitis, rhinitis,* sinusitis, pneumonia, pulmonary edema/fibrosis, acute respiratory distress syndrome (ARDS)
SYST: Anaphylaxis, angioedema

PHARMACOKINETICS

Half-life 1-32 days, 97% washout by 7 mo after end of treatment
Drug/Lab
Decrease: WBCs

INTERACTIONS

Increase: bleeding risk—warfarin
Increase: cardiomyopathy—anthracyclines, cyclophosphamide; avoid use
Decrease: immune response—vaccines, toxoids

NURSING CONSIDERATIONS

Assess:
- **Labs:** CBC, HER2 overexpression

Black Box Warning: HF, other cardiac symptoms: dyspnea, coughing; gallop; obtain full cardiac workup, ECG, baseline and q3mo during treatment and q6mo for ≥2 yr after adjuvant treatment (LVEF, MUGA, or ECHO); monitor for deterioration in those with decreased LVEF

- Symptoms of infection; may be masked by product
- **CNS reaction:** LOC, mental status, dizziness, confusion
- Hypersensitivity reactions, anaphylaxis

Black Box Warning: Infusion reactions that may be fatal: fever, chills, nausea, vomiting, pain, headache, dizziness, hypotension; discontinue product

- **Pulmonary toxicity:** dyspnea, interstitial pneumonitis, pulmonary hypertension, ARDS; can occur after infusion reaction, those with lung disease may have more severe toxicity
- **Benzyl alcohol hypersensitivity:** reconstitute with Sterile Water for Injection, USP; discard any unused portion
- **Hamster protein hypersensitivity** (Chinese hamster ovary cell hypersensitivity): increased risk of severe allergic reactions
- **Pregnancy/breastfeeding:** monitor for oligohydramnios. If oligohydramnios occurs, fetal testing should be done. Women should enroll in the MotHER Pregnancy Registry, 1-800-690-6720 or http://www.motherpregnancyregistry.com. Contraception should be used during and for ≥7 mo after last dose; pregnancy testing before use. Women who become pregnant while receiving or within 7 mo of the last dose should be apprised of potential hazard to the fetus. Unknown whether product is excreted into breast milk; advise women to discontinue breastfeeding during treatment and for 7 mo after last dose

Evaluate:
- Therapeutic response: decrease in size of tumors

Teach patient/family:
- To take acetaminophen for fever
- To avoid hazardous tasks because confusion, dizziness may occur
- To report signs of infection: sore throat, fever, diarrhea, vomiting
- That emotional lability is common; to notify prescriber if severe or incapacitating

Black Box Warning: Pregnancy/breastfeeding: to use contraception while taking this product and for 7 mo after last dose; breastfeed during and for 7 mo after treatment

Black Box Warning: To report pain at infusion site, usually with first dose

Black Box Warning: **Cardiomyopathy:** to report cough, swelling in extremities, shortness of breath; may occur during or after completion of treatment

⚠ HIGH ALERT

trastuzumab/hyaluronidase (Rx)

(tras-tooz′ue-mab/hye-al-ur-on′i-dase)

Herceptin Hylecta

Func. class.: Antineoplastic, endoglycosidases

USES: Adjuvant treatment of HER2-overexpressing node positive/node negative (ER/PR negative or with one high-risk feature) in breast cancer, as part of a regimen with doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel; as part of a regimen with docetaxel and carboplatin; as a single agent anthracycline-based therapy; HER2-overexpressing metastatic breast cancer (in combination with paclitaxel); single-agent treatment of HER2-overexpressing breast cancer

CONTRAINDICATIONS

Hypersensitivity

Black Box Warning: Pregnancy, CV toxicity, pulmonary toxicity

DOSAGE AND ROUTES

Breast cancer, adjuvant treatment, HER2+

• **Adult: SUBCUT:** Trastuzumab 600 mg/hyaluronidase 10,000 units once q3wk × 52 wk or until disease progression or unacceptable toxicity; give with doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel; or in combination with docetaxel and carboplatin; or as a single agent following multimodality anthracycline-based therapy

Breast cancer, metastatic, HER2+

• **Adult: SUBCUT:** Trastuzumab 600 mg/hyaluronidase 10,000 units once q3wk (with paclitaxel or as a single agent following one or more chemotherapy regimens for metastatic disease) until disease progression or unacceptable toxicity

Available forms: Injection 600 mg/10,000 units/5 mL in single-dose vial

travoprost ophthalmic

See Appendix B

traZODone (Rx)

(tray′zoe-done)

Desyrel

Func. class.: Antidepressant—miscellaneous

Chem. class.: Triazolopyridine

Do not confuse:
traZODone/traMADol

ACTION: Selectively inhibits serotonin uptake by brain; potentiates behavorial changes

USES: Major depressive disorder (unipolar)

Unlabeled uses: Aggressive or agitated behavior associated with dementia, insomnia

CONTRAINDICATIONS: Hypersensitivity to tricyclics

Precautions: Pregnancy, suicidal patients, severe depression, increased intraocular pressure, closed-angle glaucoma, urinary retention, cardiac/hepatic disease, hyperthyroidism, electroshock therapy, elective surgery, bleeding, abrupt discontinuation, bipolar disorder, breastfeeding, dehydration, hyponatremia, hypovolemia, recovery phase of MI, seizure disorders, prostatic hypertrophy, family history of long QT

Black Box Warning: Suicidal ideation in children/adolescents

DOSAGE AND ROUTES

Depression

• **Adult: PO** 150 mg/day in divided doses, may increase by 50 mg/day q3-4days, max 400 mg/day (outpatient), 600 mg/day (inpatient); **EXT REL** 150 mg in PM, may increase gradually by 75 mg/day q3days, max 375 mg/day

• **Child 6-18 yr (unlabeled): PO** 1.5-2 mg/kg/day in divided doses, may increase q3-4days up to 6 mg/kg/day or 400 mg/day, whichever is less

• **Geriatric: PO** 25-50 mg at bedtime, increase by 25-50 mg q3-7days to desired dose, usually 75-150 mg/day

Available forms: Tabs 50, 100, 150, 300 mg; ext rel tabs 150, 300 mg

Administer:

• Increased fluids, bulk in diet if constipation occurs, especially in geriatric patients

• With food, milk for GI symptoms

• Dosage at bedtime for oversedation during day; may take entire dose at bedtime; geriatric patients may not tolerate daily dosing

• Avoid use of CNS depressants

• Do not crush, break, chew ext rel product

• Store in tight, light-resistant container at room temperature

SIDE EFFECTS

CNS: *Dizziness, drowsiness,* confusion, headache, anxiety, tremors, stimulation, weakness, insomnia, nightmares, EPS (geriatric patients), increase in psychiatric symptoms, suicide in children/adolescents

CV: *Orthostatic hypotension, ECG changes, tachycardia,* hypertension, palpitations

EENT: *Blurred vision,* tinnitus, mydriasis

GI: *Diarrhea, dry mouth,* nausea, vomiting, paralytic ileus, increased appetite, cramps, epigastric distress, jaundice, hepatitis, stomatitis, constipation

GU: *Urinary retention,* acute renal failure, priapism

HEMA: Agranulocytosis, thrombocytopenia, eosinophilia, leukopenia

INTEG: Rash, urticaria, sweating, pruritus, photosensitivity

PHARMACOKINETICS

Peak 1 hr without food, 2 hr with food; metabolized by liver (CYP3A4); excreted by kidneys, in feces; half-life 4.4-7.5 hr

INTERACTIONS

Hyperpyretic crisis, seizures, hypertensive episode: MAOIs; do not use within 14 days of traZODone

Increase: toxicity, serotonin syndrome—FLUoxetine, nefazodone, other SSRIs, SNRIs, linezolid; methylene blue (IV)

Increase: effects of direct-acting sympathomimetics (EPINEPHrine), alcohol, barbiturates, benzodiazepines, CNS depressants, digoxin, phenytoin, carBAMazepine, traMADol

Increase: effects of traZODone—CYP3A4, 2D6 inhibitors (phenothiazines, protease inhibitors, azole antifungals)

Increase or decrease: effects of warfarin

Increase: QT prolongation—tricyclics

Decrease: effects of guanethidine, cloNIDine, indirect-acting sympathomimetics (ePHEDrine)

Drug/Herb

Increase: serotonin syndrome—SAM-e, St. John's wort

Increase: CNS depression—hops, kava, lavender, valerian

Drug/Lab Test

Increase: LFTs

Decrease: HB

NURSING CONSIDERATIONS

Assess:

• **CV status:** B/P lying, standing; pulse q4hr; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; take vital signs q4hr in patients with CV disease

• **Blood studies:** CBC, leukocytes, differential

• **Hepatic studies:** AST, ALT, bilirubin
• Weight weekly; appetite may increase with product
• ECG for flattening of T wave, bundle branch block, AV block, dysrhythmias in cardiac patients
• **EPS,** primarily in geriatric patients: rigidity, dystonia, akathisia

Black Box Warning: Mental status changes: mood, sensorium, affect, suicidal tendencies, increase in psychiatric symptoms, depression, panic; observe for suicidal behaviors in children/adolescents, not approved for children; if worsening depression occurs, product may need to be tapered as rapidly as possible, without abrupt discontinuation

• Urinary retention, constipation; constipation most likely in children
• Alcohol consumption; hold dose until morning
• **Serotonin syndrome, neuroleptic malignant syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, administer serotonin antagonist if needed
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; no well-controlled studies; cautious use in breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: decreased depression

Teach patient/family:
• That therapeutic effects may take 2-3 wk; to take ext rel product before bedtime; not to crush, chew ext rel product
• To use caution when driving, performing other activities requiring alertness because of drowsiness, dizziness, blurred vision
• To avoid alcohol ingestion
• Not to discontinue medication quickly after long-term use; may cause nausea, headache, malaise
• To report urinary retention, priapism >4 hr immediately
• To wear sunscreen or large hat because photosensitivity occurs

Black Box Warning: That suicidal thoughts/behaviors may occur (adolescents/children); to notify health care professional if there is an increase in depression, agitation

• To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding
• To rise slowly to prevent dizziness

TREATMENT OF OVERDOSE: ECG monitoring; administer anticonvulsant, atropine for bradycardia

treprostinil (Rx)

(treh-prah'stin-ill)

Orenitram, Remodulin, Tyvaso, Tyvaso Refill, Tyvaso Starter

Func. class.: Pulmonary, vasodilator
Chem. class.: Tricyclic benzidine prostacyclin analog

ACTION: Direct vasodilation of pulmonary, systemic arterial vascular beds; inhibition of platelet aggregation

USES: Pulmonary arterial hypertension (PAH) NYHA class II through IV

CONTRAINDICATIONS: Hypersensitivity to this product, other prostacyclin analogs
Precautions: Pregnancy, breastfeeding, children, geriatric patients, past renal/hepatic disease, thromboembolic disease, abrupt discontinuation, IV administration

DOSAGE AND ROUTES

Pulmonary arterial hypertension
• **Adult: SUBCUT CONT INFUSION/IV CONT INFUSION** 1.25 ng/kg/min. If not tolerated, reduce to 0.625 ng/kg/min. Increase dose by ≤1.25 ng/kg/min per wk × first 4 wk, then ≤2.5 ng/kg/min per wk; **ORAL INH:** 3 breaths (18 mcg) by Tyvaso

Inhalation System qid 4 hr apart during waking hours; **PO:** 0.25 mg q12hr or 0.125 mg q8hr, increase by 0.25 or 0.5 mg bid or 0.125 mg tid q3-4days as tolerated

• **Adult taking gemfibrozil (or other strong CYP2C8 inhibitor): PO** 0.125 mg q12hr, increase by 0.125 mg bid q3-4days, as tolerated

For patients transitioning from IV or SUBCUT to PO

• **Adult: PO** For patients already receiving **IV** or **SUBCUT,** use the following equation: Total daily PO dose = 0.0072 × IV or SUBCUT dose (ng/kg/min) × Weight (kg). Reduce dose of IV or SUBCUT by up to 30 ng/kg/min per day while increasing dose of PO up to 6 mg/day (2 mg PO tid), if tolerated

Hepatic dose

• **Adult: SUBCUT INFUSION** 0.625 ng/kg ideal body weight/min; increase cautiously

Available forms: Inj 1, 2.5, 5, 10 mg/mL; neb sol 1.74 mg/2.9 mL; ext rel tab 0.125, 0.25, 2.5 mg

Administer:

• Sudden decreased doses, abrupt withdrawal may worsen pulmonary arterial hypertension symptoms

PO route

• Give with food

• Swallow tablets whole; use only intact tablets

Injectable route

• Visually inspect for particulate matter and discoloration before use

• Administer injection by continuous SUBCUT infusion. May be administered by continuous IV infusion in those who do not tolerate continuous SUBCUT (severe injection site pain or reaction)

• Have immediate access to a backup infusion pump and infusion sets. Avoid abrupt discontinuation. The infusion can be restarted after a few hours at the previous dose and rate; if the infusion is stopped for longer than a few hours, retitration may be needed

• The infusion pump used should be: small and lightweight; adjustable to approximately 0.002 mL/hr; have alarms for occlusion, end of infusion and low battery, programming error and motor malfunctions; accurate to +/−6% of the programmed rate; positive-pressure driven. The reservoir should be made of polyvinyl chloride, polypropylene, or glass

• **Opened vials:** A single vial should be used ≤30 days after the initial entry into the vial

CONTINUOUS IV route

• Given via a surgically placed central venous catheter via an ambulatory infusion pump. A peripheral IV cannula, placed into a large vein, may be used temporarily; use of a peripheral vein for more than a few hours may increase the risk of thrombophlebitis

• Infusion sets with an in-line 0.22- or 0.2-micron pore size filter should be used

IV infusion preparation

• May dilute with Remodulin sterile diluent for injection or similar approved high-pH glycine diluents (sterile diluent for Flolan or sterile diluent for epoprostenol sodium), sterile water for injection, or 0.9% NaCl for injection

• The concentration of diluted treprostinil should be calculated using the following formula: diluted concentration = [dose (ng/kg/min) × weight (kg) × 0.00006] / IV infusion rate (mL/hr)

• Typical ambulatory infusion pump reservoirs have volumes of 50 or 100 mL. The IV infusion rate is predetermined based on the volume of the reservoir with a desired infusion length of 48 hr (i.e., for a 50-mL reservoir, the infusion rate would be 1 mL/hr; for a 100-mL reservoir, the infusion rate would be 2 mL/hr)

• The reservoir should be filled with the calculated volume and a sufficient amount of diluent to achieve the total volume of the reservoir

• Once diluted with any diluent, may be given for 48 hr at 40°C

• **Storage:** If diluted with sterile water for injection or 0.9% NaCl, store up to 4 hr at room temperature or 24 hr if refrigerated. If diluted with an approved high-pH glycine diluent (sterile diluent for Remodulin, Flolan, or epoprostenol sodium), it may be stored for 14 days at room temperature at concentrations as low as 0.004 mg/mL

SUBCUT continuous infusion

• Give via a self-inserted SUBCUT catheter using an ambulatory infusion pump designed for subcutaneous drug delivery

SUBCUT infusion preparation

• Further dilution is NOT required before continuous SUBCUT use

• Do not mix or co-infuse with other medications

• The SUBCUT infusion rate can be calculated using the following formula: SUBCUT infusion rate = [dose (ng/kg/min) × weight (kg) × 0.00006]/treprostinil vial strength (mg/mL)

• During SUBCUT use, a single reservoir (syringe) of product can be given ≤72 hr at a max temperature of 37°C (98.6°F)

Oral inhalation administration

• Must be used only with the Tyvaso Inhalation System

• Avoid skin or eye contact with solution. Do not take PO

• Have access to a backup Optineb-ir device to avoid interruptions in therapy

• Do not mix with other medications in the Optineb-ir device

• One ampule contains a volume for all 4 treatment sessions in a single day

SIDE EFFECTS

CNS: Dizziness, headache, syncope

CV: Vasodilation, *hypotension, edema,* right ventricular heart failure

GI: Nausea, *diarrhea*

INTEG: *Rash,* pruritus

OTHER: Jaw pain, cough, throat irritation, UTI, leg cramps

SYST: Infusion site reactions, pain; increased risk for infection

PHARMACOKINETICS

Metabolized by liver; excreted in urine, feces; terminal half-life 2-4 hr; 90% protein binding

INTERACTIONS

• **Excessive hypotension: diuretics, antihypertensives, vasodilators, MAOIs, β-blockers, calcium channel blockers**

Increase: bleeding tendencies—anticoagulants, aspirin, NSAIDs, thrombin inhibitors, SSRIs

NURSING CONSIDERATIONS

Assess:

• Avoid abrupt discontinuation

• **CV status:** monitor B/P, baseline and periodically, HR and rhythm, S3, chest pain, edema, dyspnea, fatigue, ABLs, syncope

• **Hepatic studies:** AST, ALT, bilirubin, creatinine with long-term therapy

• **Blood studies: CBC; CBC q2wk × 3 mo, Hct, HB, PT with long-term therapy, ABGs**

• **Bleeding time at baseline, throughout treatment; levels may be 2-5× normal limit**

• **Beers:** use with caution in older adults; may exacerbate episodes of syncope; monitor frequently

• **Pregnancy/breastfeeding:** use only if clearly needed, no well-controlled studies; cautious use in breastfeeding, excretion unknown

Evaluate:

• Therapeutic response: decreased pulmonary arterial hypertension (PAH)

Teach patient/family:

• That blood work will be necessary during treatment; that treatment may last for years

• To report side effects such as diarrhea, skin rashes

• That therapy will be needed for prolonged periods of time, sometimes years

• To use aseptic technique for preparation, administration of treprostinil to prevent infection

• That there are many product, herbal interactions
• **Tablet:** to take with food; not to crush or chew tablets, not to skip doses
• **Subcut:** about injection technique; to rotate injection sites; to avoid irritated, scarred, or bruised skin
• **Inhalation:** to avoid contact of solution with skin or eyes; to wash hands after handling inhaler; to follow directions for use in package insert
• How to use inhaled solution; how to care for equipment
• About signs, symptoms of bleeding; blood in urine, stools

tretinoin (vit A acid, retinoic acid) (Rx)

(tret′i-noyn)

Altreno, Atralin, Avita, Refissa, Renova, Renova Pump, Retin-A, Retin-A Micro, Retin-A Micro Pump, StieVA-A 🍁, Vesanoid 🍁, Vitamin A Acid 🍁

Func. class.: Vit A acid, acne product; antineoplastic (miscellaneous)
Chem. class.: Tretinoin derivative

ACTION: (Topical) Decreases cohesiveness of follicular epithelium, decreases microcomedone formation; (PO) induces maturation of acute promyelocytic leukemia, exact action is unknown

USES: (Topical) Acne vulgaris (grades 1-3); (PO) facial wrinkles, photoaging

CONTRAINDICATIONS: Hypersensitivity to retinoids or sensitivity to parabens

Black Box Warning: Pregnancy (PO)

Precautions: Pregnancy (topical), breastfeeding, eczema, sunburn, sun exposure

Black Box Warning: Rapid-evolving leukocytosis, respiratory compromise, acute promyelocytic leukemia differentiation syndrome, requires a specialized care setting, experienced clinician

DOSAGE AND ROUTES

• **Adult/child: TOP** cleanse area, apply 0.025%-0.1% cream or 0.05% liquid gel at bedtime, cover lightly

Available forms: Cream 0.01%, 0.02%, 0.025%, 0.05%, 0.1%; gel 0.01%, 0.025%, 0.04%, 0.05%, 0.1%; liquid 0.05%; caps 10 mg

Administer:

Topical route

• Once daily before bedtime; cover area lightly using gauze; use gloves to apply
• Store at room temperature
• Handwashing after application

SIDE EFFECTS

PO route

CNS: *Headache, fever, sweating,* fatigue
CV: Cardiac dysrhythmias, pericardial effusion
GI: *Nausea, vomiting,* hemorrhage, *abdominal pain, diarrhea, constipation, dyspepsia, distention, hepatitis*

Topical route

INTEG: Rash, stinging, warmth, redness, erythema, blistering, crusting, peeling, contact dermatitis, hypo/hyperpigmentation, dry skin, pruritus, scaly skin, retinoic acid syndrome (RAS)
META: Hypercholesterolemia, hypertriglyceridemia
RESP: Pneumonia, upper respiratory tract disease

PHARMACOKINETICS

PO: Terminal half-life 0.5-2 hr
TOPICAL: Poor systemic absorption

INTERACTIONS

• Use with caution: medicated, abrasive soaps; cleansers that have a drying effect; products with high concentration of alcohol astringents (topical)

Increase: peeling—medication containing agents such as sulfur, benzoyl peroxide, resorcinol, salicylic acid (topical)
Increase: plasma concentrations of tretinoin—ketoconazole (PO)
Increase: ICP, risk of pseudotumor cerebri—tetracyclines; do not use together (PO)
Increase: photosensitivity—retinoids, quinolones, phenothiazines, sulfonamides, sulfonylureas, thiazide diuretics
Increase: thrombotic complications—aminocaproic acid, aprotinin, tranexamic acid
Drug/Lab Test
Increase: AST, ALT

NURSING CONSIDERATIONS

Assess:
Topical route
• Area of body involved, what helps or aggravates condition; cysts, dryness, itching; lesions may worsen at beginning of treatment
PO route
• Hepatic function, coagulation, hematologic parameters; also cholesterol, triglycerides
• **Pregnancy/breastfeeding:** do not use PO in pregnancy, breastfeeding
Evaluate:
• Therapeutic response: decrease in size, number of lesions
Teach patient/family:
Topical route
• To avoid application on normal skin; to avoid getting cream in eyes, nose, other mucous membranes; not to use product on areas with cuts, scrapes
• To use cream/gel by applying a thin layer to affected skin; to rub gently; to use liquid by applying with fingertip or cotton swab
• To avoid sunlight, sunlamps; to use protective clothing, sunscreen
• That treatment may cause warmth, stinging; that dryness, peeling will occur
• That cosmetics may be used over product; not to use shaving lotions
• That rash may occur during first 1-3 wk of therapy
• That product does not cure condition, only relieves symptoms
• That therapeutic results may be seen in 2-3 wk but may not be optimal until after 6 wk
PO route

Black Box Warning: To notify prescriber if pregnancy is planned or suspected

tretinoin topical

See Appendix B

triamcinolone (ophthalmic)

See Appendix B

triamcinolone (Rx)

(trye-am-sin´oh-lone)

Kenalog, Kenalog-80, P-Care K40, P-Care K80, Pod-Care 100K, Pro-C-Dure 5, Pro-C-Dure 6, Zilretta

Func. class.: Corticosteroid, synthetic
Chem. class.: Glucocorticoid, intermediate acting

ACTION: Decreases inflammation by suppression of migration of polymorphonuclear leukocytes, fibroblasts; reversal of increased capillary permeability and lysosomal stabilization

USES: Severe inflammation, immunosuppression, neoplasms, asthma (steroid dependent); collagen, respiratory, dermatologic/rheumatic disorders

CONTRAINDICATIONS: Hypersensitivity, neonatal prematurity; epidural/intrathecal administration (triamcinolone acetonide injections [Kenalog]), systemic fungal infections
Precautions: Pregnancy, breastfeeding, diabetes mellitus, glaucoma, osteoporosis, seizure disorders, ulcerative colitis, HF, myasthenia gravis, renal disease, esophagitis, peptic ulcer, acne, cataracts, coagulopathy,

head trauma, children <2 yr, psychosis, idiopathic thrombocytopenia, acute glomerulonephritis, amebiasis, fungal infections, nonasthmatic bronchial disease, AIDS, TB, adrenal insufficiency, acute bronchospasm, acne rosacea, Cushing syndrome, acute MI, thromboembolism

DOSAGE AND ROUTES

• **Adult: IM** (acetonide) 40-80 mg q4wk; intraarticular (hexacetonide) 2-20 mg q3-4wk

• **Child: IM** acetonide 40 mg q4wk or 30-200 mcg/kg (1-6.25 mg/m^2) q1-7days (acetonide) 40-80 mg q4wk; intraarticular (hexacetonide) 2-20 mg q3-4wk

Available forms: Inj 3, 10, 40 mg/mL acetonide; inj 20, 5 mg/mL hexacetonide

Administer:

IM route

• After shaking susp (parenteral)

• Titrated dose; use lowest effective dose

• IM inj deep in large muscle mass; rotate sites; avoid deltoid; use 21-G needle

• Avoid SUBCUT administration, may damage tissue

SIDE EFFECTS

CNS: *Depression,* headache, mood changes

CV: *Hypertension,* circulatory collapse, embolism, tachycardia, edema

EENT: Fungal infections, increased intraocular pressure, blurred vision

GI: *Diarrhea, nausea, abdominal distention,* GI hemorrhage, *increased appetite,* pancreatitis

HEMA: Thrombocytopenia

INTEG: Acne, poor wound healing, ecchymosis, petechiae

MS: Fractures, osteoporosis, weakness

PHARMACOKINETICS

PO/IM: Peak 1-2 hr, half-life 2-5 hr

INTERACTIONS

Increase: side effects—alcohol, salicylates, indomethacin, amphotericin B, digoxin, cycloSPORINE, diuretics, quinolones

Increase: action of triamcinolone—salicylates, estrogens, indomethacin, oral contraceptives, ketoconazole, macrolide antiinfectives, carBAMazepine

Decrease: action of triamcinolone—cholestyramine, colestipol, barbiturates, rifAMPin, ePHEDrine, phenytoin, theophylline

Decrease: effects of anticoagulants, anticonvulsants, antidiabetics, ambenonium, neostigmine, isoniazid, toxoids, vaccines, anticholinesterases, salicylates, somatrem

Drug/Herb

• Hypokalemia: aloe, cascara, senna

Drug/Lab Test

Increase: cholesterol, sodium, blood glucose, uric acid, calcium, urine glucose

Decrease: calcium, potassium, T_4, T_3, thyroid ^{131}I uptake test, urine 17-OHCS, 17-KS, PBI

False negative: skin allergy tests

NURSING CONSIDERATIONS

Assess:

• Potassium, blood glucose, urine glucose while patient receiving long-term therapy; hypokalemia and hyperglycemia

• Weight daily; notify prescriber if weekly gain of >5 lb

• B/P, pulse; notify prescriber if chest pain occurs

• I&O ratio; be alert for decreasing urinary output, increasing edema

• Plasma cortisol levels during long-term therapy (normal level: 138-635 nmol/L SI units when drawn at 8 AM)

• **Infection:** increased temperature, WBC even after withdrawal of medication; product masks infection

• Potassium depletion: paresthesias, fatigue, nausea, vomiting, depression, polyuria, dysrhythmias, weakness

• Edema, hypertension, cardiac symptoms

• Mental status: affect, mood, behavioral changes, aggression

• Assistance with ambulation for patient with bone-tissue disease to prevent fractures

• **Beers:** avoid in older adults with delirium or at high risk for delirium; monitor for confusion, delirium

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, cleft lip/palate

has occurred (1st trimester); cautious use in breastfeeding, excreted in breast milk

Evaluate:

- Therapeutic response: ease of respirations, decreased inflammation

Teach patient/family:

- That emergency ID as corticosteroid user should be carried; not to discontinue abruptly, taper dose
- To notify prescriber if therapeutic response decreases; that dosage adjustment may be needed
- To avoid OTC products: salicylates, alcohol in cough products, cold preparations unless directed by prescriber; to avoid live vaccines
- About cushingoid symptoms
- **About the symptoms of adrenal insufficiency:** nausea, anorexia, fatigue, dizziness, dyspnea, weakness, joint pain

triamcinolone nasal agent

See Appendix B

triamcinolone (topical)

(try-am-sin′oh-lone)

Kenalog, Sila III, Trianex, Triderm

Func. class.: Corticosteroid, topical

ACTION: Crosses cell membrane to attach to receptors to decrease inflammation, itching; inhibits multiple inflammatory cytokines

USES: Inflammation/itching in corticosteroid-responsive dermatoses on the skin or inflammation in the mouth

CONTRAINDICATIONS: Hypersensitivity, use on face or ear canal, infections

Precautions: Pregnancy, breastfeeding, children

DOSAGE AND ROUTES

- Apply to the affected areas bid-qid

Available forms: Aerosol 0.2 mg; paste (dental) 0.1%; lotion, cream, ointment 0.025%; ointment 0.05%; lotion, cream, ointment 0.1%; ointment, cream 0.5%

Administer:

Topical route

- May be used with occlusive dressings
- **Cream/ointment/lotion:** apply sparingly in a thin film and rub gently into the cleansed, slightly moist affected area; may use gloves to apply cream/ointment/lotion
- **Paste:** apply without rubbing, press into lesion until film develops
- **Spray:** spray a small amount of preparation onto the lesion

SIDE EFFECTS

ENDO: HPA axis suppression, Cushing's syndrome

INTEG: Burning, folliculitis, pruritus, dermatitis, hypopigmentation

META: Hyperglycemia; glycosuria

PHARMACOKINETICS

Absorption varies

INTERACTIONS

Increase: blood glucose

NURSING CONSIDERATIONS

Assess:

- Skin reactions: burning, pruritus, folliculitis, mouth lesions

Evaluate:

- Decreasing itching, inflammation on the skin, decreasing mouth lesions

Teach patient/family:

- How to use each product
- That long-term use may cause thinning skin, loss of fat tissue; avoid long-term use

triamcinolone (topical-oral) (Rx, OTC)

(trye-am-sin′oh-lone)

Kenalog in Orabase, Oralone Dental

Func. class.: Topical anesthetic

Chem. class.: Synthetic fluorinated adrenal corticosteroid

ACTION: Binds with steroid receptors, decreases inflammation

USES: Oral pain

CONTRAINDICATIONS: Hypersensitivity, application to large areas; presence of fungal, viral, or bacterial infections of mouth or throat
Precautions: Pregnancy, children <6 yr, sepsis, denuded skin, geriatric patients

DOSAGE AND ROUTES

• **Adult: TOP** Press $^1/_4$ inch into affected area until film appears, repeat bid-tid
Available forms: Paste 0.1%
Administer:
• After cleansing oral cavity after meals

SIDE EFFECTS

INTEG: Rash, irritation, sensitization

NURSING CONSIDERATIONS

Assess:
• Allergy: rash, irritation, reddening, swelling
• Infection: if affected area is infected, do not apply
Evaluate:
• Therapeutic response: absence of pain in affected area
Teach patient/family:
• To report rash, irritation, redness, swelling
• How to apply paste

triamterene (Rx)

(trye-am´ter-een)

Dyrenium

Func. class.: Antihypertensive, potassium-sparing diuretic

USES: Treatment of edema (CHF, cirrhosis of the liver, nephrotic syndrome, steroid-induced edema, idiopathic edema, edema due to secondary hyperaldosteronism)

CONTRAINDICATIONS

Hypersensitivity to triamterene or any component, anuria, severe renal/hepatic disease, hyperkalemia; use with other potassium-sparing products

Black Box Warning: Hyperkalemia

DOSAGE AND ROUTES

Edema
• **Adult: PO** 100 mg bid, titrate as needed; max 300 mg/day
Available forms: Capsules 50, 100 mg

triamterene/hydrochlorothiazide (Rx)

(trye-am´ter-een/hye-droe-klor-oh-thye´a-zide)

Dyazide, Maxzide, Maxzide-25

Func. class.: Antihypertensive, potassium-sparing/thiazide diuretic

USES: Treatment of hypertension/edema (not initial treatment) when hypokalemia has developed on hydrochlorothiazide alone or when the development of hypokalemia must be avoided

CONTRAINDICATION

Hypersensitivity to hydrochlorothiazide, triamterene, sulfonamide-derived drugs, or any component, anuria; severe renal disease, use with other potassium-sparing diuretics/potassium salt substitutes/potassium supplements, hyperkalemia

DOSAGE AND ROUTES

Hypertension/edema
• **Adult: PO** hydrochlorothiazide 25 mg/triamterene 37.5 mg: 1-2 tablets/capsules daily; hydrochlorothiazide 25 mg/triamterene 50 mg: 1-2 capsules daily; hydrochlorothiazide 50 mg/triamterene 75 mg: 1 tablet daily
Available forms: Capsules 37.5 mg/25 mg; tabs 37.5 mg/25 mg, 75 mg/50 mg

⚠ HIGH ALERT

triazolam (Rx)

(trye-ay′zoe-lam)

Halcion

Func. class.: Sedative-hypnotic, antianxiety

Chem. class.: Benzodiazepine, short acting

Controlled Substance Schedule IV (USA), Targeted (CDSA IV) (Canada)

Do not confuse:
Halcion/Haldol/halcinonide

ACTION: Produces CNS depression at limbic, thalamic, hypothalamic levels of CNS; may be mediated by neurotransmitter γ-aminobutyric acid (GABA); results are sedation, hypnosis, skeletal muscle relaxation, anticonvulsant activity, anxiolytic action

USES: Insomnia, sedative/hypnotic

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity to benzodiazepines
Precautions: Children <15 yr, geriatric patients, anemia, renal/hepatic disease, suicidal individuals, drug abuse, psychosis, acute closed-angle glaucoma, seizure disorders, angioedema, respiratory disease, depression, sleep-related behaviors (sleep walking), intermittent porphyria, myasthenia gravis, Parkinson's disease

Black Box Warning: Coadministration with other CNS depressants, respiratory depression, abrupt discontinuation, substance abuse

DOSAGE AND ROUTES

- **Adult: PO** 0.125-0.5 mg at bedtime, max 0.5 mg/day
- **Geriatric: PO** 0.0625-0.125 mg at bedtime, max 0.25 mg/day

Available forms: Tabs 0.125, 0.25 mg
Administer:
- After trying conservative measures for insomnia
- ½ hr before bedtime for sleeplessness
- On empty stomach for fast onset; may be taken with food if GI symptoms occur
- Avoid use with CNS depressants; serious CNS depression may result

SIDE EFFECTS

CNS: *Headache, lethargy, drowsiness, daytime sedation,* dizziness, confusion, light-headedness, anxiety, irritability, amnesia, poor coordination, complex sleep-related reactions: sleep driving, sleep eating
CV: Chest pain, pulse changes, ECG changes
GI: Nausea, vomiting, diarrhea, heartburn, abdominal pain, constipation, hepatic injury
SYST: Severe allergic reactions

PHARMACOKINETICS

Onset 15-30 min, duration 6-8 hr, metabolized by liver, excreted by kidneys (inactive metabolites), crosses placenta, excreted in breast milk, half-life 1.5-5.5 hr

INTERACTIONS

- Smoking may decrease hypnotic effect

Increase: triazolam levels—CYP3A4 inhibitors, protease inhibitors (dilTIAZem, FLUoxetine, fluvoxaMINE, macrolides)
Increase: effects of cimetidine, disulfiram, erythromycin, clarithromycin, probenecid, isoniazid, oral contraceptives; do not use concurrently

Black Box Warning: Increase: action of both products—alcohol, CNS depressants

Increase: triazolam levels—CYP2C19 inhibitors (fluconazole, ketoconazole, omeprazole, hormonal contraceptives, ticlopidine
Decrease: triazolam levels—CYP3A4 inducers (carBAMazepine, phenobarbitol, phenytoin, rifamycins, valproate)
Decrease: effect of antacids, theophylline, rifAMPin

Drug/Herb
Increase: CNS depression—chamomile, hops, kava, lavender, valerian
Drug/Food
• Grapefruit may increase action; avoid concurrent use
Drug/Lab Test
Increase: ALT, AST, serum bilirubin
Decrease: RAI uptake
False increase: urinary 17-OHCS

NURSING CONSIDERATIONS

Assess:
• **Severe allergic reactions:** may occur during any use

Black Box Warning: Respiratory depression: may occur more frequently with coadministration of other CNS depressants; monitor respirations often

• **Blood studies:** Hct, HB, RBC if blood dyscrasias suspected (rare)
• **Hepatic studies:** AST, ALT, bilirubin if hepatic damage has occurred
• **Mental status:** mood, sensorium, affect, memory (long, short term), insomnia, withdrawal symptoms, excessive sedation, impaired coordination
• **Blood dyscrasias:** fever, sore throat, bruising, rash, jaundice, epistaxis (rare)
• Type of **sleep problem:** falling asleep, staying asleep
• **Safety:** Assistance with ambulation after receiving dose
• **Pregnancy/breastfeeding:** do not use in pregnancy; not recommended in breastfeeding
• **Beers:** avoid use in older adults; increased sensitivity to benzodiazepines and decreased metabolism; may cause or worsen delirium
Evaluate:
• Therapeutic response: ability to sleep at night, decreased amount of early morning awakening if taking product for insomnia
Teach patient/family:
• To use reliable contraception
• That dependence is possible after long-term use
• To avoid driving, other activities requiring alertness until product is stabilized

Black Box Warning: To avoid alcohol ingestion, sedatives, hypnotics

• That effects may take 2 nights for benefits to be noticed; that product is for short-term use only; to use for 7-10 continuous nights
• About alternative measures to improve sleep: reading, exercise several hours before bedtime, warm bath, warm milk, TV, self-hypnosis, deep breathing
• That complex sleep-related behaviors (sleep eating/driving) may occur
• That hangover is common in geriatric patients but less common than with barbiturates; that rebound insomnia may occur for 1-2 nights after discontinuing product; to discontinue by decreasing dose by 50% q2nights until 0.125 mg for 2 nights, then stop

TREATMENT OF OVERDOSE:

Lavage; monitor electrolytes, VS, flumazenil

triclabendazole (Rx)

(try-KLUH-bend-uh-zole)
Egaten
Func. class.: Anthelmintic

USES: Treatment of fascioliasis in children ≥6 yr

CONTRAINDICATIONS

Hypersensitivity to triclabendazole, other benzimidazoles, or any component

DOSAGE AND ROUTES

Fascioliasis
• **Child ≥6 yr: PO**
10 mg/kg q12hr × 2 doses
Available forms: Tabs 250 mg

trifarotene (Rx)

Aklief
Func. class.: Antiacne agent

USES: Acne vulgaris

DOSAGE AND ROUTES

• **Adult/child ≥9 yr: Topical** apply a layer to affected areas of face or torso daily in the evening

Available forms: Cream 0.005%

trifluridine ophthalmic

See Appendix B

⚠ HIGH ALERT

trifluridine/tipiracil (Rx)

(trye-flure′i-deen/tye-pir′a-sil)

Lonsurf

Func. class.: Antineoplastic, antimetabolite

USES: Treatment of metastatic colorectal cancer in those previously treated with fluoropyrimidine/oxaliplatin/irinotecan, an anti-VEGF, and if RAS wild-type, an anti-EGFR; treatment of metastatic gastric/gastroesophageal junction adenocarcinoma in those previously treated with ≥ prior regimens of chemotherapy, with fluoropyrimidine/platinum/either a taxane/irinotecan, and HER2/neu-targeted therapy if needed

CONTRAINDICATIONS

Hypersensitivity

DOSAGE AND ROUTES

Metastatic colorectal cancer/metastatic gastric cancer

• **Adult: PO** 35 mg/m² (based on trifluridine component) bid on days 1-5 and 8-12 of a 28-day cycle, max per dose: trifluridine 80 mg; continue until disease progression or unacceptable toxicity

Available forms: Tabs 15 mg/16.4 mg; 20 mg/8.19 mg

trimethobenzamide (Rx)

(trye-meth-oh-ben′za-mide)

Tigan

Func. class.: Antiemetic, anticholinergic

Chem. class.: Ethanolamine derivative

USES: Nausea, vomiting

CONTRAINDICATIONS: Children (parenterally), hypersensitivity to opioids, shock

DOSAGE AND ROUTES

Nausea/vomiting

• **Adult: IM** 200 mg 3-4×/day; **PO** 300 mg 3-4×/day

Postoperative

• **Adult: IM** 200 mg followed by 2nd dose 1 hr later

Renal dose

• **Adult: IM** CCr 15-30 mL/min, give 50% of dose

Available forms: Capsules 300 mg; injection 100 mg/mL

trospium (Rx)

(trose′pee-um)

Trosec

Func. class.: Anticholinergic, urinary antispasmodic

Chem. class.: Muscarinic receptor antagonist

ACTION: Relaxes smooth muscles in bladder by inhibiting acetylcholine effect on muscarinic receptors

USES: Overactive bladder (urinary frequency, urgency)

CONTRAINDICATIONS: Hypersensitivity, uncontrolled closed-angle glaucoma, urinary retention, gastric retention, myasthenia gravis

T

Precautions: Pregnancy, breastfeeding, children, geriatric patients, renal/hepatic disease, controlled closed-angle glaucoma, ulcerative colitis, intestinal atony, bladder outflow obstruction

DOSAGE AND ROUTES

• **Adult <75 yr: PO** 20 mg bid 1 hr before meals or on empty stomach; **EXT REL** 60 mg in AM
• **Geriatric ≥75 yr: PO** titrate down to 20 mg/day based on response and tolerance

Renal dose

• **Adult: PO** CCr <30 mL/min, 20 mg/day at bedtime, ext rel product not recommended

Available forms: Tabs 20 mg; caps ext rel 60 mg

Administer:

• 1 hr before meals or on empty stomach (reg rel); in AM (ext rel) ≥1 hr before meal

SIDE EFFECTS

CNS: Fatigue, dizziness, headache, confusion
CV: Tachycardia
EENT: Dry eyes, vision abnormalities
GI: Flatulence, abdominal pain, *constipation, dry mouth,* dyspepsia
GU: Urinary retention, UTI
INTEG: Dry skin, angioedema
MISC: Heat stroke, fever

PHARMACOKINETICS

Rapidly absorbed (10%); peak 5-6 hr; protein bound (50%-85%); extensively metabolized; excreted in urine, feces; excreted in urine by active tubular secretion; half-life 20 hr

INTERACTIONS

Increase: drowsiness—CNS depressants, alcohol
Increase or decrease: trospium effect—products excreted by active renal secretion (aMILoride, digoxin, morphine), metFORMIN, quiNIDine, procainamide, raNITIdine, tenofovir, triamterene, vancomycin

Drug/Food

Decrease: absorption—high-fat meal

NURSING CONSIDERATIONS

Assess:

• **Urinary patterns:** I&O ratio, CCr baseline and periodically, post-void residual distention, nocturia, frequency, urgency, incontinence, voiding patterns
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk
• **Beers:** avoid in older adults with delirium or at high risk for delirium

Evaluate:

• Therapeutic response: correction of urinary status: absence of dysuria, frequency, nocturia, incontinence

Teach patient/family:

• To avoid hazardous activities because dizziness may occur
• That alcohol may increase drowsiness
• About anticholinergic effects that may occur
• That overheating may occur with strenuous exercise
• To avoid all other products unless approved by prescriber
• To use hard candy for dry mouth (most common side effect)

⚠ HIGH ALERT

tucatinib (Rx)

(too-ka'ti-nib)

Tukysa

Func. class.: Antineoplastic

USES: Breast cancer, human epidermal growth factor receptor 2 positive, advanced unresectable/metastatic

CONTRAINDICATIONS:

Hypersensitivity, pregnancy, breastfeeding

DOSAGE AND ROUTES

Adult: PO 300 mg bid with trastuzumab and capecitabine until disease progression or unacceptable toxicity

Available forms: Tablet 50, 150 mg

ubrogepant (Rx)

Ubrelvy

Func. class.: Calcitonin gene–related peptide (CGRP) receptor antagonist

USES: Acute migraine

CONTRAINDICATIONS

Hypersensitivity, strong CYP3A4 inhibitors

DOSAGE AND ROUTES

• **Adult: PO** 50 or 100 mg; if needed, may take second dose at least 2 hr after initial dose; max: 200 mg/24 hr; safety of treating more than 8 migraines in a 30-day period has not been established

Available forms: Tablet 50-100 mg

ulipristal (Rx)

(ue-li-pris′tal)

Ella, Fibristal

Func. class.: Contraceptive, progestin receptor modulator

USES:

Emergency contraception (ella): Prevention of pregnancy following unprotected intercourse or contraceptive failure

Uterine fibroids (Fibristal): Treatment of moderate-severe signs/symptoms of uterine fibroids in those who are eligible for surgery; intermittent treatment of moderate-severe signs/symptoms of uterine fibroids

CONTRAINDICATIONS

Hypersensitivity, pregnancy

DOSAGE AND ROUTES

Emergency contraception (ella)

• **Adult women: PO:** 30 mg ASAP, but within 120 hr (5 days) of unprotected intercourse/contraceptive failure

Uterine fibroids (Fibristal)

• **Adult women PO: (premenopausal):** 5 mg daily × 3, first course within the first 7 days of menstruation; start subsequent treatment courses, the 1st week of the 2nd menstruation following completion of the prior course. The interval between courses is 2 menstrual cycles

Available forms: Tablet 30 mg

undecylenic acid topical

See Appendix B

unoprostone ophthalmic

See Appendix B

upadacitinib (Rx)

(Ue-pad′a-sye′ti-nib)

Rinvoq

Func. class.: Immunomodulating agent

Chem. class.: Janus associated kinase (JAK) inhibitor

ACTION: Oral JAK inhibitor; Janus kinase, a tyrosine kinase enzyme that transmits signals arising from cytokine or growth factor–receptor interactions on the cellular membrane to influence cellular processes of immune cell function and hematopoiesis

USES: Treatment of rheumatoid arthritis

CONTRAINDICATIONS

Hypersensitivity

Precautions: AIDS, anemia, breastfeeding, children, contraception requirements, corticosteroid use, diverticulitis, geriatrics, GI perforation, hepatic disease, hepatitis B exacerbation, herpes, HIV, neutropenia, pregnancy, pregnancy testing, vaccination

Black Box Warning: Infection, new primary malignancy, thrombosis, mortality, stroke

DOSAGE AND ROUTES

• **Adults: PO** 15 mg daily with or without methotrexate or other nonbiologic DMARDs

Available forms: Extended release tablet 15, 30, 45 mg
Administer:
• Give with or without food
• Swallow whole; do not split, crush, or chew

NURSING CONSIDERATIONS

Assess:
• **RA:** pain; stiffness; ROM; swelling of joints before, during treatment
• Infections (fever, flulike symptoms, dyspnea, change in urination, redness/swelling around any wounds)—stop treatment if present

Black Box Warning: Some serious infections including sepsis may occur, may be fatal; patients with active infections should not be started on this product

Black Box Warning: **Thrombosis (DVT, PE, arterial thrombosis):** Assess for symptoms and treat immediately, some have been fatal
May reactivate hepatitis B in chronic carriers; may be fatal

Black Box Warning: **Identify** latent TB before therapy; treat before starting this product

Blood dyscrasias: CBC, differential periodically

Black Box Warning: Assess for neoplastic disease (lymphomas/leukemia) monitor for these and skin cancer

• **Pregnancy/breastfeeding:** use only if clearly needed, no well-controlled studies; cautious use in breastfeeding, excreted in breast milk
Evaluate:
• Therapeutic response: decreased inflammation, pain in joints, decreased joint destruction

Teach patient/family:
• Not to take any live virus vaccines during treatment
• To report signs of infection, TB immediately

uridine (Rx)

(ure′i-deen)
Vistogard, Xuriden
Func. class.: Antidote

USES: Fluorouracil/capecitabine overdosage/toxicity; hereditary orotic aciduria

DOSAGE AND ROUTES

Fluorouracil/capecitabine overdosage or toxicity
• **Adult PO:** 10 g q6hr × 20 doses
• **Child PO:** 6.2 g/m² (max 10 g/dose) q6hr × 20 doses
Hereditary orotic aciduria
• **Adult PO:** 60 mg/kg daily; maintenance increase to 120 mg/kg daily
Available forms: Oral granules 2, 10 g packet

ustekinumab (Rx)

(us′te-kin′ue-mab)
Stelara
Func. class.: Immune response modifier, antipsoriatic agent
Chem. class.: Monoclonal antibody, interleukin-12 inhibitor

ACTION: Interleukin (IL)-12, IL-23 antagonist, binds to an interleukin protein, decreases inflammation

USES: Plaque psoriasis (adult/child), psoriatic arthritis

CONTRAINDICATIONS: Hypersensitivity, sepsis, active infections
Precautions: Pregnancy, breastfeeding, children ≤18 yr, geriatric patients, surgery, TB, diabetes mellitus, immunosuppression

DOSAGE AND ROUTES

Moderate to severe plaque psoriasis
• **Adult ≥100 kg with plaque psoriasis: SUBCUT** 90 mg, repeat in 4 wk, then 90 mg q12wk starting wk 16
• **Adult <100 kg SUBCUT** 45 mg, repeat in 4 wk, then 45 mg q12wk starting wk 16

• **Child 6-17 yr, >100 kg: SUBCUT** 90 mg, repeat in 4 wk, then q12wk
• **Child 6-17 yr, 60-100 kg: SUBCUT** 45 mg, repeat in 4 wk, then q12wk
• **Child 6-17 yr, <60 kg: SUBCUT** 0.75 mg/kg repeat in 4 wk, then q12wk

Crohn's disease/ulcerative colitis

• **Adult (weight-based dosing): IV** single induction dose **>85 kg,** 520 mg; **>55–85 kg,** 390 mg; **≤55 kg,** 260 mg; **maintenance:** 90 mg **SUBCUT** q8wk, starting 8 wk after induction dose

Available forms: Solutions for inj 45 mg/0.5 mL, 90 mg/mL, 130/25 mL

Administer:

• Do not shake the syringe or vial
• Visually inspect for particulate matter and discoloration before use; solution should be colorless to slightly yellow and may contain a few small translucent or white particles. Do not use if discolored, cloudy, or if foreign particulate matter is present

IV route

• **Preparation:** use an IV infusion only for the induction treatment of Crohn's disease
• Each vial is for single use only
• Calculate the dose and number of vials needed based on patient weight; each 26-mL vial contains 130 mg of product
• Withdraw and discard a volume of the 0.9% sodium chloride injection from a 250-mL infusion bag equal to the volume of needed product to be added
• Withdraw 26 mL of product from each vial needed and add it to 250-mL infusion bag. The final volume in the infusion bag should be 250 mL
• Gently mix; do not shake
• **Storage:** diluted solution must be used within 4 hr (no preservative). If administration is not immediate, store for up to 4 hr at room temperature up to 25°C (77°F). Do not freeze; discard unused portion

IV infusion route

• Give the diluted product over ≥1 hr
• Use only an infusion set with an in-line, sterile, nonpyrogenic, low protein-binding filter (pore size 0.2 micron)
• Do not infuse in the same line with other agents

SUBCUT route The first injection needs to be under the supervision of a qualified health care professional

• Inject in the front part of the middle thigh, the gluteal or abdominal region, and the outer area of the upper arm
• Do not give where skin is tender, bruised, red, or indurated
• Rotate injection sites. If a second injection is needed because two 45-mg vials or prefilled syringes are used for a 90-mg dose, repeat the injection process, and use a different injection site
• For the vial, use a 27-gauge, 0.5-inch needle to withdraw the dose
• The needle cover of the prefilled syringe contains latex. Persons allergic to natural rubber or latex should not handle the cover of the prefilled syringe

SIDE EFFECTS

CNS: Headache, **leukoencephalopathy,** depression, dizziness, fatigue
HEMA: Bleeding
INTEG: *Injection site reaction,* pruritus, skin irritation, erythema, exfoliative dermatitis, erythrodermic psoriasis
SYST: Serious infections, malignancies
MS: Myalgia, back pain
RESP: URI, oropharyngeal pain

PHARMACOKINETICS

Maximum serum concentration: 13.5 days after a single 45-mg subcut dose, 7 days after a single 90-mg subcut dose; half-life 14.9-45.6 days

INTERACTIONS

• Do not give concurrently with vaccines; immunizations should be brought up-to-date before treatment
• Avoid use with immunosuppressives

NURSING CONSIDERATIONS

Assess:

• Bring immunizations up-to-date before starting treatment; do not administer live vaccines during treatment and for 3 mo after treatment ends
• **Infection:** monitor for fever, sore throat, cough; do not use during active infections

U

• **Malignancy:** skin cancer may occur, especially in older patients who have used ultraviolet treatments with immunosuppressants
• **TB:** TB testing should be done before starting treatment
• For inj-site pain, swelling, rash
• **Pregnancy/breastfeeding:** pregnant patients should enroll in the Stelara pregnancy registry, 1-877-311-8972; use only if benefits outweigh fetal risk; cautious use in breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: decreased plaque psoriasis

Teach patient/family:
• That product must be continued for prescribed time to be effective; to use as prescribed
• Not to receive live vaccinations during treatment
• To notify prescriber of possible infection (upper respiratory or other) or allergic reactions
• Injection techniques and disposal of equipment; not to reuse needles, syringes
• That follow-up will be needed

valACYclovir (Rx)

(val-a-sye′kloh-vir)

Valtrex

Func. class.: Antiviral

Chem. class.: Synthetic purine nucleoside analog

Do not confuse:
valACYclovir/valGANciclovir
Valtrex/Valcyte

ACTION: Interferes with DNA synthesis by conversion to acyclovir, thereby causing decreased viral replication, time of lesional healing

USES: Treatment or suppression of herpes zoster (shingles), genital herpes, herpes labialis (cold sores), varicella, varicella zoster

CONTRAINDICATIONS: Hypersensitivity to this product or acyclovir, valGANciclovir

Precautions: Pregnancy, breastfeeding, geriatric patients, hepatic/renal disease, electrolyte imbalance, dehydration, penciclovir, famciclovir, ganciclovir, hypersensitivity, varicella

DOSAGE AND ROUTES

Herpes zoster (shingles)

• **Adult: PO** 1 g tid × 1 wk start within 72 hr of rash onset

Genital herpes (suppressive, initial)

• **Adult: PO** 1 g bid × 10 days initially start at earliest sign or recurrence

Genital herpes (recurrent episodes)

• **Adult: PO** 500 mg bid × 3 days start at earliest sign or recurrence

Genital herpes (suppressive therapy), long term

• **Adult: PO** 1 g/day with **normal immune function;** 500 mg/day for those with ≤9 recurrences/yr; 500 mg bid for **HIV-infected patients with CD4 count ≥100**

Reduction of transmission

• **Adult: PO** 500 mg/day for source partner up to 20 mo

Herpes labialis

• **Adult/child ≥12 yr: PO** 2 g bid × 1 day at first sign of lesions

Varicella (chickenpox)

• **Adolescent and child ≥2 yr: PO** 20 mg/kg/dose tid × 5 days, max 3 g/day

Renal dose

• **Adult: PO** CCr 30-49 mL/min, 1 g q12hr **(for regimens 1 g q8hr)**; 1 g q12hr × 1 day **(herpes labialis);** CCr 10-29 mL/min, 1 g q24hr **(genital herpes/herpes zoster);** 500 mg q24hr **(recurrent genital herpes);** CCr <10 mL/min, 500 mg q24hr **(genital herpes/herpes zoster),** 500 mg q24hr **(recurrent genital herpes)**

Available forms: Tabs 500 mg, 1 g

Administer:

• As soon as possible (herpes labialis, genital herpes); within 24 hr of rash (varicella)
• Within 72 hr of outbreak (herpes zoster), within 24 hr (chickenpox)
• Without regard to food
• Caps may be made into susp by pharmacy
• Store at room temperature; protect from light, moisture

SIDE EFFECTS

CNS: Tremors, lethargy, *dizziness, headache,* weakness, depression, hallucinations, seizures, encephalopathy
GU: Crystalluria, renal failure
ENDO: *Dysmenorrhea*
GI: *Nausea,* vomiting, diarrhea, abdominal pain, constipation, *increased AST*
HEMA: Thrombocytopenic purpura, hemolytic uremic syndrome
INTEG: *Rash*
MISC: Dehydration

PHARMACOKINETICS

Onset unknown, Peak 1.5-2.5 hr, duration up to 24 hr; half-life 2½-3½ hr; converted to acyclovir in intestine, liver, crosses placenta, enters breast milk; excreted in urine primarily as acyclovir; protein binding 13.5%-17.9%

INTERACTIONS

Increase: blood levels of valACYclovir—cimetidine, probenecid; only significant with renal disease

V

Drug/Lab Test
Increase: LFTs, creatinine
Decrease: WBC, platelets

NURSING CONSIDERATIONS

Assess:
- **Infection:** characteristics of lesions; therapy should be started at 1st sign or symptom of herpes; most effective within 72 hr of outbreak; C&S prior to product therapy; product may be taken as soon as culture is taken; repeat C&S after treatment; determine presence of other sexually transmitted diseases
- **Thrombocytopenic purpura, hemolytic uremic syndrome; may be fatal**
- **CNS/psychologic status:** assess cognition, sleep patterns, mood affect
- **Renal studies:** I&O, BUN/creatinine, GFR; hemolytic uremic syndrome (decreased output, fatigue, pallor) may occur in transplants (renal, bone marrow) or advanced HIV
- Bowel pattern before, during treatment
- Skin eruptions: rash
- Allergies before treatment, reaction to each medication
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; cautious use in breastfeeding, excreted in breast milk

Evaluate:
- Therapeutic response: absence of itching, painful lesions; crusting and healed lesions

Teach patient/family:
- To take as prescribed; if dose is missed, to take as soon as remembered up to 2 hr before next dose; not to double dose; to take without regard to meals
- That product may be taken orally before infection occurs; that product should be taken when itching or pain occurs, usually before eruptions
- To discuss all Rx, OTC, herbal supplements taken with health care professional
- That adequate hydration is needed to prevent crystalluria
- That partners need to be told that patient has herpes, they can become infected; that condoms must be worn to prevent reinfections
- That product does not cure infection, just controls symptoms; that product does not prevent infection of others
- **To report CNS changes (tremors, weakness, lethargy, hallucinations, seizures) immediately**
- Pregnancy/breastfeeding: Identify if pregnancy is planned or suspected or if breastfeeding

valbenazine (Rx)

(val-ben´-a-zeen)

Ingrezza

Func. class.: CNS agent; monoamine depletor

USES: For the treatment of tardive dyskinesia

DOSAGE AND ROUTES

- **Adult: PO** Initially, 40 mg daily; after 1 wk, increase to 80 mg daily

Available forms:
Capsules 40, 60, 80 mg; capsule titration pack

valGANciclovir (Rx)

(val-gan-sy´kloh-veer)

Valcyte

Func. class.: Antiviral
Chem. class.: Synthetic nucleoside

Do not confuse:
valGANciclovir/valACYclovir
Valcyte/Valtrex

ACTION: Metabolized to ganciclovir; inhibits replication of human cytomegalovirus by selective inhibition of viral DNA synthesis

USES: Cytomegalovirus (CMV) retinitis in immunocompromised persons, including those with AIDS, after indirect ophthalmoscopy confirms diagnosis; prevention of CMV with transplantation; prevention of CMV in at-risk patient going through transplant (kidney, heart, pancreas)

CONTRAINDICATIONS:
Breastfeeding, hypersensitivity to ganciclovir, valACYclovir; absolute neutrophil count <500/mm^3; platelet count <25,000/mm^3; hemodialysis; liver transplantation
Precautions: Children, geriatric patients, renal function impairment; hypersensitivity to acyclovir, penciclovir, famciclovir

Black Box Warning: Preexisting cytopenias, new primary malignancy, infertility, anemia, pregnancy

DOSAGE AND ROUTES
Treatment of CMV
- **Adult and adolescent: PO** 900 mg bid × 21 days with food; maintenance 900 mg/day with food

Transplant (CMV prophylaxis)
- **Adult/adolescent >16 yr: PO** 900 mg/day with food starting 10 days before transplantation until day 100 after transplantation (kidney/pancreas/heart); continue for 200 days (kidney)
- **Infant ≥4 mo/child/adolescent ≤16 yr: PO** give within 10 days of heart/kidney transplant; calculate dose as 7 × BSA × CCr, give as single daily dose

Renal dose
- **Adult: PO** CCr ≥60 mL/min, same as above; CCr 40-59 mL/min, 450 mg bid for 21 days, then 450 mg/day; CCr 25-39 mL/min, 450 mg/day, then 450 mg q2days; CCr 10-24 mL/min, 450 mg q2days, then 450 mg 2×/wk

Available forms: Tabs 450 mg, powder for oral sol 50 mg/mL
Administer:
- Do not get powder on skin, or handle broken tablets; potential carcinogen

PO tab
- With food for better absorption; avoid getting product on skin, wash hands if contact with skin; do not break, crush, or chew

Oral solution
- Oral with food
- Measure 9 mL purified water in graduated cylinder, shake bottle to loosen powder, add ½ liquid, shake well, add remaining water, shake; remove child-resistant cap and push bottle adapter into neck of bottle, close with cap, give using dispenser provided
- Store liquid in refrigerator; do not freeze; throw away any unused after 49 days

SIDE EFFECTS
CNS: *Fever,* chills, *confusion,* dizziness, *headache, insomnia,* psychosis, tremors, *paresthesia, weakness,* seizures
EENT: Retinal detachment with CMV retinitis
GI: *Nausea, vomiting, anorexia, diarrhea, abdominal pain*
GU: Hematuria, increased creatinine, BUN
HEMA: Thrombocytopenia, irreversible neutropenia, anemia, pancytopenia
INTEG: *Rash,* alopecia, *pruritus,* urticaria, pain at site, phlebitis, Stevens-Johnson syndrome
MISC: Local and systemic infections, sepsis

PHARMACOKINETICS
60% absorbed in GI tract, peak 1-3 hr, duration up to 24 hr. Metabolized to ganciclovir, which has a half-life of 3-4½ hr; excreted by kidneys (unchanged); crosses blood-brain barrier, CSF

INTERACTIONS
Increase: Severe granulocytopenia: immunosuppressants, zidovudine, antineoplastics, radiation; do not use together
Increase: toxicity—dapsone, pentamidine, flucytosine, vinCRIStine, vinBLAStine, adriamycin, DOXOrubicin, amphotericin B, trimethoprim-sulfamethoxazole combinations or other nucleoside analogs, cycloSPORINE
Increase: effect of both drugs—mycophenolate
Increase: seizures—imipenem-cilastatin
Increase: effect of didanosine; monitor for adverse effects, toxicity
Decrease: renal clearance of valGANciclovir—probenecid

Drug/Food
Increase: absorption—high-fat meal

V

Drug/Lab Test
Increase: creatinine, BUN
Decrease: RBC/WBC, Hct/HB

NURSING CONSIDERATIONS

Assess:
• CMV retinitis: determine diagnosis by ophthalmoscopy before beginning treatment, culture may be used, negative results do not confirm that CMV retinitis is not present, use ophthalmoscopy q2wk during treatment

Black Box Warning: Leukopenia/neutropenia/thrombocytopenia: WBCs, platelets q2days during 2×/day dosing, then q1wk, do not use if ANC <500 mm^3, platelets <25,000/mm^3, HB <8 g/dL; leukopenia with daily WBC count in patients with prior leukopenia with other nucleoside analogs or for whom leukopenia counts are <1000 cells/mm^3 at start of treatment

Black Box Warning: Malignancy: monitor for malignancy, avoid accidental exposure of broken, crushed tabs, powder; if these come in contact with skin, wash with soap and water

• Monitor serum creatinine or CCr, BUN ≥q2wk, I&O, and increase in fluid intake

Black Box Warning: Pregnancy/breastfeeding: Considered potentially teratogenic; adequate contraception should be used; do not breastfeed, obtain pregnancy test in those of childbearing potential prior to use

Evaluate:
• Therapeutic response: decreased symptoms of CMV
Teach patient/family:
• That product does not cure condition; that regular ophthalmologic q1mo and blood tests are necessary
• That major toxicities may necessitate discontinuing product
• To take with food, avoid high-fat meals
• **Blood dyscrasias:** bruising, bleeding, petechiae; seizures, dizziness; to avoid driving, hazardous activities
• To use sunscreen to prevent burns

Black Box Warning: Pregnancy/breastfeeding: To use contraception during treatment; that infertility may occur; that men should use barrier contraception for 90 days after treatment; not to breastfeed

valproate (Rx)
(val′proh-ate)
valproic acid (Rx)
(val′proh-ik)
DepaKene
divalproex sodium (Rx)
(dye-val′proh-ex)
Depakote, Depakote ER, Depakote Sprinkle, Epival
Func. class.: Anticonvulsant, vascular headache suppressant
Chem. class.: Carboxylic acid derivative

ACTION: Increases levels of γ-aminobutyric acid (GABA) in the brain, which decreases seizure activity

USES: Simple (petit mal), complex (petit mal), absence, mixed seizures; manic episodes associated with bipolar disorder, prophylaxis of migraine, adjunct for schizophrenia, tardive dyskinesia, aggression in children with ADHD, organic brain syndrome, mania, migraines; tonic-clonic (grand mal), myoclonic seizures

CONTRAINDICATIONS: Hypersensitivity, urea cycle disorders, mitochondrial disease, hepatic disease
Precautions: Breastfeeding, geriatric patients, abrupt discontinuation, carnitine deficiency, coagulopathy, depression, diarrhea, encephalopathy, head trauma, organic brain syndrome, HIV, renal disease, suicidal ideation, surgery, thrombocytopenia

Black Box Warning: Children <2 yr, contraception requirements, hepatotoxicity, pancreatitis, pregnancy

DOSAGE AND ROUTES

Simple/absence seizures

• **Adult/adolescent/child ≥10 yr: PO/IV** Initially, 10-15 mg/kg/day; increase by 5-10 mg/kg/day weekly, max 60 mg/kg/day

Acute mania

• **Adult: PO (delayed-release divalproex).** Initially, 750 mg/day in divided doses, then increase to the lowest effective dose, max 60 mg/kg/day; **PO (extended-release divalproex).** Initially, 25 mg/kg/day, to achieve the desired clinical effect

For migraine prophylaxis

• **Adult ≤65 yr: PO (delayed-release divalproex).** Initially, 250 mg bid, titrate as needed up to a max 500 mg bid; **PO (extended-release divalproex);** initially, 500 mg/day × 1 wk, then increasing to 1000 mg/day, max 1000 mg/day

Available forms: *Valproate:* inj 100 mg/mL; *valproic acid:* caps 250, 500 mg; syrup 250 mg/5 mL; *divalproex:* del rel tabs 125, 250, 500 mg; ext rel tabs 250, 500 mg; sprinkle cap 125 mg

Administer:

PO route

• Do not confuse different forms
• Swallow tabs or caps whole; do not break, crush, or chew ext rel or del rel tabs
• Sprinkle cap contents on food
• **Syrup:** Do not dilute with carbonated beverage; do not give syrup to patients with sodium restrictions, shake before use
• Give with food or milk to decrease GI symptoms
• Conversion from Depakote to Depakote ER, the ER product should be higher than immediate release
• Do not discontinue abruptly

IV Infusion route

• Dilute dose with ≥50 mL D_5W, NS, LR (2 mg/mL)
• Run over 60 min (20 mg/min)
• Draw drug level
• Use in those that cannot use PO

• **Y-site compatibilities:** cefepime, ceftazadime, cloxacillin, naloxone

SIDE EFFECTS

CNS: *Sedation, drowsiness,* dizziness, headache, depression, behavioral changes, tremors, aggression, weakness, coma, suicidal ideation, hypothermia
CV: Peripheral edema
EENT: Visual disturbances, taste perversion
GI: *Nausea, vomiting, constipation, diarrhea, dyspepsia,* anorexia, pancreatitis, stomatitis, weight gain, dry mouth, hepatotoxicity
HEMA: Thrombocytopenia, leukopenia
INTEG: *Rash,* alopecia, photosensitivity, dry skin, DRESS
META: Hyperammonemia, SIADH

PHARMACOKINETICS

Absorption complete (IV) well (PO); distribution widely, crosses blood-brain barrier. Metabolized by liver; excreted by kidneys, in breast milk; crosses placenta; half-life 6-16 hr; 90% protein binding; **PO:** Peak 4 hr (regular rel); 4-17 hr (ext rel)

INTERACTIONS

Increase: valproic acid toxicity level—erythromycin, felbamate, salicylates, NSAIDs, rifampin, carBAMazepine, cimetidine
Increase: CNS depression—alcohol, antidepressants, benzodiazepines, opioids, barbiturates, antihistamines, MAOIs, sedative/hypnotics
Increase: action of, possible toxicity—phenytoin, carBAMazepine, ethosuximide, barbiturates, zidovudine, LORazepam, rufinamide, lamoTRIgine
Increase: bleeding—warfarin
Decrease: valproate levels—carBAMazepine, cholestyramine, estrogen, hormonal contraceptives, carbapenem antibiotics

Drug/Lab Test

False positive: ketones, urine
Interference: thyroid function tests

V

Increase: LFTs, bleeding time, ammonia
Decrease: sodium

NURSING CONSIDERATIONS

Assess:

- **Seizure disorder:** location, aura, activity, duration; seizure precautions should be in place
- **Mental status:** bipolar disorder: mood, activity, sleeping/eating, behavior; suicidal thoughts/behaviors
- **Migraines:** frequency, intensity, alleviating factors
- Blood studies: Hct, HB, RBC, serum folate, PT/PTT, serum ammonia, platelets, vit D if patient receiving long-term therapy, thrombocytopenia may occur at higher doses

Black Box Warning: Hepatotoxicity: AST, ALT, bilirubin, ammonia baseline and periodically during 6 mo or more, discontinue if hyperammonemia occurs; hepatic failure has occurred; monitor for fever, anorexia, vomiting, lethargy, jaundice of skin, eyes that may occur during treatment; those with organic brain disorders, mental retardation, children <2 yr are at greater risk

- **DRESS:** eosinophilia, changes in lab work, fever, rash, lymphadenopathy if present and condition confirmed, discontinue immediately, do not restart
- **Suicidal thoughts/behaviors:** usually occurs during beginning of therapy, limit amount of product that is given to the patient, assess for increasing suicidal thoughts, behaviors, anxiety, restlessness, hostility may proceed destructive behaviors
- **Hyperammonemic encephalopathy:** can be fatal in those with urea cycle disorders (UCD); lethargy, confusion, coma, CV, respiratory changes; discontinue
- **Trough/peak:** serum blood levels: therapeutic level 50-125 mcg/mL

Black Box Warning: Pancreatitis: may be fatal; report immediately nausea, vomiting, anorexia, abdominal pain; may occur anytime during treatment or for several months/years after discontinuing treatment, check risk factors before starting

- **Beers:** avoid in older adults unless safer alternative is unavailable; ataxia, impaired psychomotor function may occur

Black Box Warning: Pregnancy/breastfeeding: do not use in pregnancy (migraine prophylaxis), use only in pregnancy (epilepsy, manic episodes) if other alternatives are unavailable; major malformations may occur; enroll pregnant patients in the North American Antiepileptic Drug Pregnancy Registry, 888-233-2334; cautious use in breastfeeding, excreted in breast milk

Evaluate:

- Therapeutic response: decreased seizures

Teach patient/family:

- To avoid driving, other activities that require alertness
- To drink plenty of fluids
- To discuss all OTC, Rx, herbals, supplements taken with health care professional
- Not to discontinue medication quickly after long-term use, seizures may result; to take as directed; not to skip, double doses; not to chew capsules; to take with milk for GI upset
- That syrup may be mixed with fluids that are not carbonated; sprinkle cap can be opened and sprinkled on applesauce or soft food, and swallowed

Black Box Warning: To report visual disturbances, rash, diarrhea, abdominal pain, light-colored stools, jaundice, protracted vomiting, weakness to prescriber

- **DRESS:** to report fever, swelling of lymph glands, rash
- **Hepatotoxicity:** to report immediately, anorexia, nausea, vomiting, abdominal pain, fever
- That continuing follow-up exams and blood work will be needed
- To carry an emergency ID with condition, medications taken
- **Overdose symptoms:** Heart block, coma

Black Box Warning: Pancreatitis: to report immediately; may be fatal, abdominal pain, nausea, vomiting, anorexia

• To report immediately suicidal thoughts/behaviors, increased depression, changes in mood, anxiety, hostility

Black Box Warning: Pregnancy/breastfeeding: To use contraception while taking this product; to notify prescriber if pregnancy is planned or suspected

valsartan (Rx)

(val'sahr-tan)

Diovan

Func. class.: Antihypertensive

Chem. class.: Angiotensin II receptor antagonist (Type AT_1)

Do not confuse:
Diovan/Zyban/Dioval

ACTION: Blocks the vasoconstrictor and aldosterone-secreting effects of angiotensin II; selectively blocks the binding of angiotensin II to the AT_1 receptor found in tissues

USES: Hypertension, alone or in combination in patients >6 yr, HF, post MI with left ventricular dysfunction/failure in stable patients

CONTRAINDICATIONS: Hypersensitivity, severe hepatic disease, bilateral renal artery stenosis

Black Box Warning: Pregnancy

Precautions: Breastfeeding, children, geriatric patients, hypersensitivity to ACE inhibitors; HF, hypertrophic cardiomyopathy, aortic/mitral valve stenosis, CAD, angioedema, renal/hepatic disease, hyperkalemia, hypovolemia, African descent

DOSAGE AND ROUTES

Hypertension

• **Adult: PO** 80 or 160 mg/day alone or with other antihypertensives, may increase to 320 mg/day

• **Geriatric: PO** adjust on clinical response; may start with lower dose

• **Child and adolescent 6-16 yr: PO** 1.3 mg/kg/dose daily, max 40 mg/day, initially adjust based on clinical response, max 2.7 mg/kg/day

Heart failure, classes II to IV

• **Adult: PO** 40 mg bid, up to 160 mg bid

Post MI

• **Adult: PO** 20 mg bid as early as 12 hr post MI, may be titrated within 7 days to 40 mg bid, then titrate to maintenance of 160 mg bid

Available forms: Tabs 40, 80, 160, 320 mg

Administer:

• Without regard to meals

• If dose is missed, give as soon as remembered; if close to next dose, skip

SIDE EFFECTS

CNS: *Dizziness, insomnia,* drowsiness, vertigo, headache, fatigue

CV: Angina pectoris, 2nd-degree AV block, cerebrovascular accident, hypotension, MI, *dysrhythmias*

EENT: Conjunctivitis

GI: *Diarrhea,* abdominal pain, nausea, hepatotoxicity

GU: Impotence, nephrotoxicity, renal failure

HEMA: *Anemia,* neutropenia

META: Hyperkalemia

MISC: Vasculitis, angioedema

MS: Cramps, myalgia, pain, stiffness

RESP: *Cough*

PHARMACOKINETICS

Onset up to 2 hr; peak 2-4 hr; duration 24 hr; extensively metabolized; protein binding 95%; half-life 6 hr; excreted in feces, urine, breast milk

INTERACTIONS

• Do not use with aliskiren in diabetes or severe renal disease

Increase: effects of lithium, antidiabetics

Increase: hyperkalemia—potassium-sparing diuretics, potassium supplements, ACE inhibitors, cycloSPORINE

Increase: valsartan level—rifampin, ritonavir, gemfibrozil, telithromycin

Decrease: antihypertensive effects—NSAIDs, salicylates

V

Drug/Herb
Increase: antihypertensive effect—garlic, hawthorn
Decrease: antihypertensive effect—ephedra, ma huang
Drug/Food
Increase: hyperkalemia—salt substitutes with potasssium

NURSING CONSIDERATIONS

Assess:
• **Vital signs:** B/P, pulse q4hr lying, sitting, standing; note rate, rhythm, quality periodically
• **Blood studies:** BUN, creatinine, LFTs, potassium, total/direct bilirubin before treatment
• **Angioedema:** facial swelling; SOB; edema in feet, legs daily
• **Dehydration:** Skin turgor, dryness of mucous membranes for hydration status; correct volume depletion before initiating therapy

Black Box Warning: Pregnancy/breastfeeding: Do not use in pregnancy, may cause fetal death; do not breastfeed

Evaluate:
• Therapeutic response: decreased B/P
Teach patient/family:
• To comply with dosage schedule, even if feeling better; that, if dose is missed, to take it as soon as possible unless it is within 1 hr of next dose
• To notify prescriber of fever, swelling of hands or feet, irregular heartbeat, chest pain, dizziness, persistent cough
• That excessive perspiration, dehydration, diarrhea may lead to fall in blood pressure; to consult prescriber if these occur; to maintain hydration
• That product may cause dizziness, fainting, light-headedness; to rise slowly to sitting or standing position to minimize orthostatic hypotension; to take B/P readings
• To avoid potassium supplements and foods, salt substitutes

Black Box Warning: Not to take product if pregnant or breastfeeding

• **Overdose symptoms:** bradycardia or tachycardia, circulatory collapse

valsartan/hydrochlorothiazide (Rx)

(val-sar′tan/hye-droe-klor-oh-thye′a-zide)
Diovan HCT
Func. class.: Antihypertensive, thiazide diuretic

USES: Management of hypertension

Black Box Warning: Pregnancy

DOSAGE AND ROUTES

Adult: PO Valsartan 160 mg/hydrochlorothiazide 12.5 mg daily; titrate as needed based after 1-2 wk, max valsartan 320 mg/hydrochlorothiazide 25 mg daily
Available forms: Valsartan 80 mg/ hydrochlorothiazide 12.5 mg; valsartan 160 mg/ hydrochlorothiazide 12.5 mg; valsartan 160 mg/hydrochlorothiazide 25 mg; valsartan 320 mg/hydrochlorothiazide 12.5 mg; valsartan 320 mg/hydrochlorothiazide 25 mg

vancomycin (Rx)

(van-koe-mye′sin)
Firvanq, Vancocin, Vancosol
Func. class.: Antiinfective—miscellaneous
Chem. class.: Tricyclic glycopeptide

ACTION: Inhibits bacterial cell-wall synthesis, blocks glycopeptides

USES: *Actinomyces* sp., *Bacillus* sp., *Clostridium difficile, Clostridium* sp., *Enterococcus faecalis, Enterococcus faecium, Enterococcus* sp., *Lactobacillus* sp., *Listeria monocytogenes, Staphylococcus aureus* (MRSA), *Staphylococcus aureus* (MSSA), *Staphylococcus epidermidis, Staphylococcus* sp., *Streptococcus agalactiae* (Group B), *Streptococcus bovis, Streptococcus pneumoniae, Streptococcus pyogenes*

(group A beta-hemolytic streptococci), viridans streptococci; may be effective against *Corynebacterium jeikeium, Corynebacterium* sp., CDAD, staphylococcal enterocolitis, endocarditis prophylaxis for dental procedures, bacteremia, joint/bone infections, osteomyelitis, pneumonia, septicemia

Unlabeled uses: Anthrax, intraabdominal infections, diptheria, bone/joint infections, surgical infection prophylaxis

CONTRAINDICATIONS:

Hypersensitivity to this product or corn

Precautions: Pregnancy, breastfeeding, neonates, geriatric patients, renal disease, hearing loss

DOSAGE AND ROUTES

Serious systemic infections

- **Adult: IV** 500 mg q6-8hr or 1 g q12hr or 15-20 mg/kg q12hr
- **Child: IV** 40-60 mg/kg/day divided q6-8hr
- **Neonate: IV** 15 mg/kg initially, then 10 mg/kg q8-24hr

CDAD

- **Adult: PO** 125 mg qid × 10-14 days
- **Child: PO (unlabeled)** 40 mg/kg/day divided q6hr × 7-10 days, max 2 g/day

Staphylococcal endocarditis prophylaxis

- **Adult: IV** 2 g divided (500 mg q6hr, or 1 g q12hr)
- **Child: IV** 20 mg/kg over 1 hr given 1 hr before procedure

Staphylococcal enterocolitis

- **Adult: IV PO** 500-2000 mg/day in 3-4 divided doses × 7-10 days
- **Child PO:** 40 mg/kg/day in 3-4 divided doses × 7-10 days, max 2000 mg/day

Renal dose

- **Adult: IV** 15-20 mg/kg loading dose in seriously ill; individualize all other doses

Available forms: Cap 125, 250 mg; powder for inj 500 mg, 750 mg, 1 g; dextrose sol for inj 500 mg/100 mL, 750 mg/150 mL, 1 g/200 mL, powder for oral solution 25 mg/mL, 50 mg/mL

Administer:

- Obtain C&S before use, use only for susceptible organisms to prevent product-resistant bacteria
- Antihistamine if red man syndrome occurs: decreased B/P; flushing of neck, face; stop or slow infusion
- Dose based on serum concentration

IT route

- Dilute with preservative-free normal saline (1-5 mg/mL), give into ventricular cerebrospinal fluid
- **PO:** without regard to food, swallow whole (used only for *Clostridium difficile, staphylococcal enterocolitis*)
- Use calibrated measuring device for liquid
- IV form may be used NG after diluting in 30 mL water
- Store at room temperature for ≤2 wk after reconstitution

Intermittent IV INFUSION route

- After reconstitution with 10 mL sterile water for inj (500 mg/10 mL, 750 mg/15 mL, 1 g/20 mL); further dilution is needed for IV, 500 mg/100 mL, 750 mg/150 mL, 1 g/200 mL 0.9% NaCl, D_5W given as intermittent infusion over 1 hr; decrease rate of infusion if red man syndrome occurs

Continuous IV INFUSION route (unlabeled)

- May infuse 1-2 g in volume to give over 24 hr if intermittent IV route cannot be used
- A central line may be considered for long-term therapy, assess peripheral lines for phlebitis

Y-site compatibilities: Acetylcysteine, acyclovir, alatrofloxacin, aldesleukin, alemtuzumab, alfentanil, allopurinol, alprostadil, amifostine, amikacin, amino acids injection, aminocaproic acid, amiodarone, amoxicillin-clavulanate, amsacrine, anidulafungin, argatroban, ascorbic acid injection, atenolol, atracurium, atropine, azithromycin, benztropine, bleomycin, bretylium, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, carmustine,

V

caspofungin, cefpirome, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clarithromycin, clindamycin, codeine, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAUNOrubicin liposome, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium, doxapram, DOXOrubicin, DOXOrubicin liposomal, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, folic acid (as sodium salt), gallium, gemcitabine, gentamicin, glycopyrrolate, granisetron, HYDROmorphone, hydrOXYzine, ifosfamide, insulin (regular), irinotecan, isoproterenol, isosorbide, ketamine, labetalol, lactated Ringer's injection, lepirudin, levofloxacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, metaraminol, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoXANtrone, morphine, multiple vitamins injection, mycophenolate, nalbuphine, naloxone, nesiritide, netilmicin, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ofloxacin, ondansetron, oxacillin, oxaliplatin, oxytocin, PACLitaxel (solvent/surfactant), palonosetron, pamidronate, pancuronium, papaverine, PEMEtrexed, penicillin G potassium/sodium, pentamidine, pentazocine, PENTobarbital, perphenazine, PHENobarbital, phentolamine, phenylephrine, phytonadione, piritramide, polymyxin B, potassium acetate/chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxine, quiNIDine, ranitidine, remifentanil, rifampin, Ringer's injection, riTUXimab, sodium acetate/bicarbonate/citrate, succinylcholine, SUFentanil, tacrolimus, teniposide, thiamine, thiotepa, tigecycline, tirofiban, TNA (3-in-1), tobramycin, tolazoline, TPN (2-in-1), trastuzumab, urapidil, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Headache
CV: Hypotension, peripheral edema cardiac arrest, vascular collapse
EENT: *Ototoxicity,* permanent deafness, tinnitus, nystagmus
GI: Nausea, CDAD
GU: Nephrotoxicity
HEMA: Leukopenia, eosinophilia
INTEG: Chills, fever, rash, thrombophlebitis at inj site (red man syndrome), skin/subcutaneous tissue disorders
MS: Back pain
RESP: Wheezing, dyspnea
SYST: Anaphylaxis, superinfection

PHARMACOKINETICS

Widely distributed, crosses placenta, penetration in CSF (20%-30%)
PO: Absorption poor
IV: Onset rapid, peak 1 hr, half-life 4-8 hr, excreted in urine (active form)
Pediatric elimination half-lives: Newborns 6.7 hr, infant 1 mo-1 yr: 4.1 hr; child 2.5-11 yr: 5.6 hr

INTERACTIONS

Increase: ototoxicity/nephrotoxicity—aminoglycosides, cephalosporins, colistin, polymyxin, bactracin, cisplatin, amphotericin B, methotrexate, NSAIDs, cyclosporine, acyclovir, adefovir, foscarnet, ganciclovir, pamidroate, IV pentamine, streptozocin, tacrolimus, zoledronic acid; do not use with cholestyramine, colestipol, cidofovir
Increase: lactic acidosis—metformin
Increase: neuromuscular effects—nondepolarizing muscle relaxants
Drug/Lab Test
Increase: BUN/creatinine, eosinophils
Decrease: WBC

NURSING CONSIDERATIONS

Assess:

- **Infection:** WBC, urine, stools, sputum, characteristics of wound throughout treatment; obtain C&S before starting treatment, may start treatment before results are received
- **Nephrotoxicity:** I&O ratio; report hematuria, oliguria; nephrotoxicity may occur; BUN, creatinine
- Serum levels: peak 1 hr after 1-hr infusion 25-40 mg/L, trough before next dose 5-10 mg/L, especially in renal disease; no trough levels are needed for oral form
- **CDAD:** watery or bloody diarrhea, abdominal cramps, fever, pus, mucus, nausea, dehydration; discontinue immediately
- **Auditory function** during, after treatment; hearing loss, ringing, roaring in ears; product should be discontinued
- B/P during administration; sudden drop may indicate red man syndrome
- Skin eruptions
- **Red man syndrome:** flushing of neck, face, upper body, arms, back, may lead to anaphylaxis; slow IV infusion to >1 hr
- EPINEPHrine, suction, tracheostomy set, endotracheal intubation equipment on unit; anaphylaxis may occur
- Adequate intake of fluids (2 L/day) to prevent nephrotoxicity

Evaluate:

- Therapeutic response: absence of fever, sore throat; negative culture

Teach patient/family:

- About all aspects of product therapy; about the need to complete entire course of medication to ensure organism death (7-10 days); that culture may be taken after completed course of medication
- To report sore throat, fever, fatigue; could indicate superinfection
- That product must be taken in equal intervals around the clock to maintain blood levels
- That labs will need to be regularly monitored with IV infusion
- To notify prescriber if there is no change in 72-96 hr
- That antiinfectives must be taken before dental/medical invasive procedures in rheumatic heart disease
- **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected or if breastfeeding

⚠ HIGH ALERT

vandetanib (Rx)

(van-det′a-nib)

Caprelsa

Func. class.: Antineoplastic-tyrosine kinase inhibitor

USES: Treatment of metastatic/unresectable locally-advanced medullary thyroid cancer

Black Box Warning: QTc prolongation

DOSAGE AND ROUTES

- **Adult:** PO 300 mg daily, do not initiate treatment unless QTcF ≤450 msec

Available forms: Tabs 100, 300 mg

Renal dose

Adult: PO *CCr ≥50 mL/min:* No change; *CCr 30-49 mL/min:* Reduce starting dose to 200 mg and monitor QT interval; *CCr <30 mL/min:* Do not use

vardenafil (Rx)

(var-den′a-fil)

Levitra, Staxyn

Func. class.: Erectile dysfunction agent

Chem. class.: Phosphodiesterase type 5 inhibitor

ACTION: Inhibits phosphodiesterase type 5 (PDE5), enhances erectile function by increasing the amount of cGMP, which in turn causes smooth muscle relaxation and increased blood flow into the corpus cavernosum

USES: Treatment of erectile dysfunction

Unlabeled uses: Pulmonary arterial hypertension, Raynaud's disease

V

CONTRAINDICATIONS:

Hypersensitivity, coadministration of α-blockers or nitrates, renal failure, congenital or acquired QT prolongation, women, pregnancy, children

Precautions: Hepatic impairment, retinitis pigmentosa, anatomic penile deformities, sickle cell anemia, leukemia, multiple myeloma, bleeding disorders, active peptic ulceration, CV/renal disease

DOSAGE AND ROUTES

Levitra

- **Adult: PO** 10 mg taken 1 hr before sexual activity; dose may be reduced to 5 mg or increased to max 20 mg; max dosing frequency once daily; orally disintegrating tab 10 mg 60 min before sexual activity; do not use with potent CYP3A4 inhibitors
- **Geriatric >65 yr: PO** 5 mg initially, titrated as needed/tolerated

Hepatic dose

- **Adult: PO** (Child-Pugh B) 5 mg, max 10 mg/day

Concomitant medications

- Ritonavir, max 2.5 mg q72hr; for indinavir, ketoconazole 400 mg/day and itraconazole 400 mg/day, max 2.5 mg/day; for ketoconazole 200 mg/day, itraconazole 200 mg/day and erythromycin max 5 mg/day

Staxyn

- Adult: PO 10 mg 1 hr before sexual activity, max 10 mg/24 hr

Available forms: Tabs 2.5, 5, 10, 20 mg; orally disintegrating tab 10 mg

Administer:

- Approximately 1 hr before sexual activity; do not use more than once daily; orally disintegrating tabs are not interchangeable with film-coated tabs
- Without regard to food; avoid taking with high-fat meal
- **Oral disintegrating tab:** place on tongue immediately after opening blister pack, allow to dissolve, do not use water

SIDE EFFECTS

CNS: *Headache, flushing, dizziness, insomnia*

EENT: Diminished vision, hearing loss

GU: Abnormal ejaculation, priapism

GI: Nausea

MISC: Flulike symptoms

PHARMACOKINETICS

Rapidly absorbed, bioavailability 15%, protein binding 95%, metabolized by liver by CYP3A4, distribution semen, terminal half-life 4-5 hr, onset 20 min, peak ½-1½ hr, duration <5 hr, reduced absorption with high-fat meal, primarily excreted in feces (91%-95%)

INTERACTIONS

- Do not use with nitrates because of unsafe decrease in B/P, which could result in MI or stroke
- **Serious dysrhythmias:** class IA/III antiarrhythmics, clarithromycin, droperidol, procainamide, quiNIDine, quinolones; do not use concurrently

Increase: hypotension—α-blockers, protease inhibitors, metoprolol, NIFEdipine, alcohol, amLODIPine, angiotensin II receptor blockers; do not use concurrently

Increase: vardenafil levels—erythromycin, azole antifungals (ketoconazole, itraconazole), cimetidine

Drug/Food

Decrease: absorption—high-fat meal

Increase: vardenafil level—grapefruit juice; avoid concurrent use

Drug/Lab Test

Increase: CK

NURSING CONSIDERATIONS

Assess:

- B/P, including orthostatic; vasodilator properties
- Erectile dysfunction and cause before treatment
- Any severe loss of vision while taking this or similar products; products should not be used
- Use of organic nitrates, which should not be used with this product
- **Pregnancy/breastfeeding:** not used in women

Teach patient/family:

- That product does not protect against STDs, including HIV
- That product absorption is reduced with high-fat meal

• That product should not be used with nitrates in any form; to inform physician of all medications being taken
• That product has no effect in the absence of sexual stimulation; that patient should seek immediate medical attention if erections last >4 hr
• To notify prescriber immediately and stop taking product if vision loss occurs
• To take 1 hr before sexual activity and only once per day
• To notify prescriber of all OTC, prescription, and herbal products taken

varenicline (Rx)

(var-e-ni'kleen)

Champix, Chantix, Tyrvaya

Func. class.: Smoking cessation agent

Chem. class.: Nicotine receptor agonist

ACTION: Partial agonist for nicotine receptors; partially activates receptors to help curb cravings; occupies receptors to prevent nicotine binding

USES: Adjunct to psychosocial interventions for tobacco cessation (smoking); dry eye disease (Tyrvaya)

CONTRAINDICATIONS: Hypersensitivity, eating disorders

Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, renal disease, recent MI, angioedema, bipolar disorder, depression, schizophrenia, suicidal ideation

DOSAGE AND ROUTES

Smoking cessation

• **Adult: PO** therapy should begin 1 wk before smoking stop date, take product plus tobacco for 7 days; titrate for 1 wk; days 1 through 3, 0.5 mg/day; days 4 through 7, 0.5 mg bid; day 8 through end of treatment, 1 mg bid; treatment is for 12 wk and may be repeated for another 12 wk

Dry eye disease

Adult: Nasal 1 spray in each nostril q12h

Renal dose

• **Adult: PO** CCr ≤50 mL/min, titrate to max 0.5 mg bid

Available forms: Tabs 0.5, 1 mg; nasal spray 0.03 mg

Administer:

• Do not break, crush, or chew tabs
• Increased fluids, bulk in diet if constipation occurs
• After eating with a full glass of water
• Sugarless gum, hard candy, frequent sips of water for dry mouth

SIDE EFFECTS

CNS: Headache, agitation, dizziness, insomnia, abnormal dreams, fatigue, malaise, behavioral changes, depression, homicidal ideation, suicidal ideation, amnesia, hallucinations, hostility, mania, psychosis, tremors, seizures, stroke

CV: Dysrhythmias, MI

EENT: *Blurred vision*

GI: *Nausea, vomiting, dry mouth,* increased/decreased appetite, *constipation,* flatulence, GERD, diarrhea, gingivitis, dyspepsia, enterocolitis

GU: Erectile dysfunction, urinary frequency, menstrual irregularities

INTEG: Rash, pruritus, angioedema, Stevens-Johnson syndrome, flushing, dermatitis

MS: *Back pain,* myalgia, *arthralgia*

HEMA: Anemia

PHARMACOKINETICS

Elimination half-life 24 hr; metabolism minimal; 93% excreted unchanged in urine; steady state 4 days, onset 4 days, peak 3-4 hr

NURSING CONSIDERATIONS

Assess:

• **Smoking history:** motivation for smoking cessation, years used, amount each day; smoking cessation after 12 wk; if progress not made, product may be used for additional 12 wk
• Renal function in geriatric patients; cardiac status in cardiac disease
• **Neuropsychiatric symptoms:** mood, sensorium, affect; behavioral changes, agitation, depression, suicidal ideation; suicide has occurred; possible worsening

V

of depression, schizophrenia, bipolar disorder, risk is increased in adolescents
• **Angioedema, Stevens-Johnson syndrome:** rash during treatment; discontinue if rash, fever, fatigue, joint pain, lesions occur
• **CV reactions:** Stroke, MI more common in those with CV disease
• **Seizures:** May be increased in those with seizure disorders
• Risk of hypotension: take B/P baseline and periodically
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, no well-controlled studies

Evaluate:
• Therapeutic response: smoking cessation

Teach patient/family:
• To set a date to quit smoking and to initiate treatment 1 wk before that date
• That treatment for smoking cessation lasts 12 wk and that another 12 wk may be required
• To use caution when driving, performing other activities requiring alertness; blurred vision may occur
• How to titrate product
• Not to use with nicotine patches unless directed by prescriber; may increase B/P
• That vivid dreams, insomnia may occur during beginning of treatment, but usually subside
• To notify prescriber of all OTC, prescription, or herbal products used
• To notify prescriber immediately of change in thought/behavior (suicidal ideation, hostility, depression); stop product
• Not to drive or operate machinery until effects are known
• To notify prescriber if pregnancy is planned or suspected or if breastfeeding

⚠ HIGH ALERT

vasopressin (Rx)

(vay-soe-press'in)

Vasostrict

Func. class.: Pituitary hormone
Chem. class.: Lysine vasopressin

Do not confuse:
vasopressin/desmopressin

ACTION: Promotes the reabsorption of water via action on the renal tubular epithelium; causes vasoconstriction

USES: Diabetes insipidus (nonnephrogenic/nonpsychogenic), hypotension, shock, septic shock, postcardiotomy cardiogenic shock
Unlabeled uses: Cardiac arrest, bleeding esophageal varies

CONTRAINDICATIONS: Hypersensitivity, chronic nephritis
Precautions: Pregnancy, breastfeeding, CAD, asthma, vascular/renal disease, migraines, seizures

DOSAGE AND ROUTES

Diabetes insipidus
• **Adult: IM/SUBCUT** 5-10 units bid-qid as needed; **CONT IV INFUSION** 0.0005 units/kg/hr (0.5 milliunit/kg/hr), double dose q30min as needed
• **Child: IM/SUBCUT** 2.5-10 units bid-qid as needed

Hypotension in septic shock
• **Adult: IV** 0.01 units/min, titrate by 0.005 units/min q10-15min until B/P target is achieved, to max 0.07 units/min after target B/P of 8 hr without use of catecholamines; taper 0.005 units/min q1hr to maintain B/P

GI hemorrhage (unlabeled)
• **Adult:** IV 0.2-0.4 units/min, titrate, max 0.8 units/min

Available forms: Sol for inj 20 units/mL

Administer

Direct IV route
• During adult CPR, resuscitation drugs may be administered intravenously by bolus injection into a peripheral vein, followed by an injection of 20 mL IV fluid; elevate the extremity for 10-20 sec

Continuous IV INFUSION route
• Dilute 2.5 or 5 mg/500 mL respectively of 0.9% NaCL or D_5W to 0.1 or 1 unit/mL in NS or D_5W. 1 unit/mL is suggested for those with fluid restrictions

• Discard unused solution after 18 hr at room temperature or 24 hr under refrigeration

IM route

• Inject deeply into a large muscle; aspirate prior to injection to avoid injection into a blood vessel

SUBCUT route:

• Inject SUBCUT, taking care not to inject intradermally

SIDE EFFECTS

CNS: Headache, lethargy, flushing, vertigo
CV: Chest pain, MI
GI: Nausea, heartburn, cramps, vomiting, flatus
MISC: urticaria

PHARMACOKINETICS

IM: Onset 1 hr; duration 3-8 hr; **IV** duration 60 min; half-life 15 min; metabolized in liver, kidneys; excreted in urine

INTERACTIONS

Increase: antidiuretic effect—tricyclics, SSRIs, carBAMazepine, chloropromide, fludrocortisone, clofibrate
Decrease: antidiuretic effect—lithium, demeclocycline, chlorpropamide, cyclophosphamide, enalapril, felbamate, haloperidol, pentamine

NURSING CONSIDERATIONS

Assess:

• Pulse, B/P, ECG periodically during treatment; if using for CPR, monitor continuously
• **Diabetes insipidus:** I&O ratio, weight daily; fluid/electrolyte balance, urine specific gravity; check for extreme thirst, poor skin turgor, dilute urine, large urine volume
• **Water intoxication:** lethargy, behavioral changes, disorientation, neuromuscular excitability
• Small doses may precipitate coronary adverse effects; keep emergency equipment nearby
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; breastfeeding women should pump and discard milk for 1½ hr after receiving product

Evaluate:

• Therapeutic response: absence of severe thirst, decreased urine output, osmolality

Teach patient/family:

• To measure and record I&O
• To avoid herbals, supplements, all OTC medications unless approved by prescriber
• To report immediately hypersensitivity; wheezing; trouble breathing; rash; swelling of face, lips
• To report adverse reactions promptly

vedolizumab (Rx)

(ve′-doe-liz′ue-mab)

Entyvio

Func. class.: GI antiinflammatory
Chem class.: Integrin receptor antagonist

ACTION: A specific integrin receptor antagonist that inhibits the migration of specific memory T-lymphocytes across the endothelium into inflamed gastrointestinal parenchymal tissue, reduces chronic inflammation in ulcerative colitis and Crohn's disease

USES: For moderately to severely active ulcerative colitis/Crohn's disease

CONTRAINDICATIONS: Hypersensitivity
Precautions: Hepatic disease, infections, progressive multifocal leukoencephalopathy (PML), pregnancy, breastfeeding, live vaccines, TB, human antichimeric antibody (HACA)

DOSAGE AND ROUTES

• **Adult: IV INFUSION** 300 mg give over 30 min at weeks 0, 2, and 6 as induction therapy, then 300 mg q8wk, continue if response occurs by week 14

Available forms: Powder for injection 300-mg/20-mL vial

V

Administer:

- Full response by 6 wk; those who do not respond by week 14 are unlikely to respond
- Give as IV infusion only, do not use as an IV push or bolus
- Make sure all immunizations are up to date
- **Reconstitute** with 4.8 mL of sterile water for injection, using a syringe with a 21- to 25-gauge needle
- Insert the syringe needle into the vial and direct the stream of sterile water for injection to the glass wall of the vial, gently swirl, do not shake
- Allow the solution to stand up to 20 min at room temperature
- Once dissolved, product should be clear or opalescent, colorless to light brownish yellow, and free of visible particulates. Discard if discolored or if foreign particles are present
- Before withdrawing solution from vial, gently invert 3 times. Withdraw 5 mL (300 mg) using a 21- to 25-gauge needle. Discard remaining product
- **Dilute by adding** the 5 mL (300 mg) of reconstituted product to 250 mL of sterile 0.9% NaCl and gently mix bag. Do not mix with other medications. Give product if necessary, may be stored for up to 4 hr refrigerated, do not freeze. Infuse over 30 min; then, flush line with 30 mL of sterile 0.9% NaCl injection. Discard any unused solution

SIDE EFFECTS

CNS: *Headache,* fatigue, dizziness
GI: Nausea, vomiting
MISC: Rash, pruritus, infusion-related reactions
MS: *Arthralgia,* back pain
RESP: Cough, bronchospasm
SYST: Anaphylaxis, progressive multifocal leukoencephalopathy (PML), increased infection risk, pyrexia

PHARMACOKINETICS

Absorption complete, onset up to 6 wk, duration up to 8 wk, half-life 25 days

INTERACTIONS

Increase: infection risk—immunosuppressives, natalizumab, antineoplastics
Do not use with tumor necrosis factor (TNF) modifiers
Decrease: immune response—vaccines, toxoids

NURSING CONSIDERATIONS

Assess:

- **Ulcerative colitis/Crohn's disease:** monitor symptoms before and after treatment
- **Infection:** fever, fatigue, malaise; flu-like symptoms, UTI, URI signs/symptoms sore throat, cough, dyspnea, reaction at infusion site
- **Hypersensitivity:** swelling of lips, tongue, throat, face; rash; wheezing; hypertension; if serious reactions occur, discontinue product
- **Liver dysfunction:** elevated hepatic enzymes, jaundice, malaise, nausea, vomiting, abdominal pain, and anorexia are indication of severe liver injury, may be fatal or may require a liver transplant; if hepatic dysfunction is suspected, discontinue
- **Tuberculosis (TB) latent/active:** obtain TB skin test both before and during treatment; do not give in active infections
- **Progressive multifocal leukoencephalopathy (PML):** increased weakness on one side or clumsiness of limbs, visual disturbance, and changes in thinking, memory, and orientation leading to confusion and personality changes; severe disability or death can occur over weeks or months

Evaluate:

- Therapeutic response: lessening of ulcerative colitis and Crohn's disease

Teach patient/family:

- About the symptoms of infection and to report to health care provider immediately
- To report allergic reactions, PML; teach symptoms
- Not to use live virus vaccines while taking this product; to bring vaccinations up-to-date before starting this product

• The reason for product, expected result
• Risk of infection is increased, to notify health care professional of fever, chills, trouble breathing
• To discuss with health care professional all Rx, OTC, herbals, supplements taken
• To report planned or suspected pregnancy, or if breastfeeding; if pregnant, call 877-825-3327 to enroll in the Entyvia Pregnancy Registry

⚠ HIGH ALERT

vemurafenib (Rx)

Zelboraf

Func. class.: Antineoplastic
Chem. class.: Kinase inhibitor

ACTION: Inhibitor of mutated forms of BRAF serine threonine kinase, blocking cellular proliferation in melanoma cells; inhibits kinases including CRAF, ARAF, wild-type BRAF, SRMA, ACK1, MAP4H5, and FGR

USES: Unresectable or metastatic malignant melanoma with V600E mutation of the BRAF gene

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, infants, neonates, hepatic disease, QT prolongation, secondary malignancy, torsades de pointes, hypokalemia, hypomagnesemia, sunlight exposure

DOSAGE AND ROUTES

• **Adult: PO** 960 mg (4 tabs) bid q12hr, continue until unacceptable toxicity or disease progression, if strong CYP3A4 inducers are used increase dose to 1200 mg (5 tablets)

Dose adjustments for toxicity from adverse reactions or QTc prolongation
Grade 1 or tolerable grade 2: no dosage change; **intolerable grade 2 or grade 3 (1st episode):** interrupt treatment until toxicity resolves to grade ≤1, then reduce to 720 mg (3 tabs) bid; **grade 2 or grade 3 (2nd episode):** interrupt treatment until toxicity resolves to grade ≤1, then reduce to 480 mg (2 tabs) bid; **grade 2 or grade 3 (3rd episode):** discontinue treatment permanently; **grade 4 (1st episode):** discontinue permanently or interrupt until toxicity resolves to grade ≤1, then reduce to 480 mg (2 tabs) bid; **grade 4 (2nd episode):** discontinue permanently
Available forms: Tabs 240 mg
Administer:
• Continue until disease progresses or unacceptable toxicity occurs
• Missed doses can be taken up to 4 hr before the next dose is due; take about 12 hr apart, take without regard to meals
• Swallow whole with a full glass of water; do not crush or chew
• Store at room temperature in original container

SIDE EFFECTS

CNS: *Fatigue,* fever, headache, dizziness, peripheral neuropathy, *weakness*
CV: QT prolongation, atrial fibrillation, torsades de pointes
EENT: Uveitis, blurred vision, iritis, photophobia
GI: Nausea, diarrhea, dysgeusia, hepatotoxicity
INTEG: *Alopecia, pruritus,* hyperkeratosis, *maculopapular rash,* actinic keratosis, *xerosis/dry skin,* papular rash, palmar-plantar erythrodysesthesia (hand and foot syndrome), *photosensitivity*
MS: *Arthralgia, myalgias,* extremity pain, musculoskeletal pain, back pain, arthritis
GU: *Acute tubular necrosis, interstitial nephritis*
SYST: Secondary malignancy, anaphylaxis, Stevens-Johnson syndrome, toxic epidermal necrolysis, drug reaction with eosinophilia, anaphylaxis

PHARMACOKINETICS

>99% protein binding (albumin and alpha-1 acid glycoprotein), an inhibitor

V

of CYP1A2, 2A6, 2C9, 2C19, 2D6, 3A4/5 CYP1A2 inhibitor, a weak CYP2D6 inhibitor, and a CYP3A4 inducer; elimination 94% in feces, 1% in urine, half-life 57 hr, peak 3 hr, duration up to 12 hr

INTERACTIONS

Increase: vemurafenib effect—CYP3A4/CYP1A2 inhibitors (enoxacin, cimetidine, delavirdine, indinavir, isoniazid, itraconazole, dalfopristin, quinupristin, tipranavir)

Increase: QT prolongation, torsades de pointes—arsenic trioxide, certain phenothiazines (chlorproMAZINE, mesoridazine, thioridazine), grepafloxacin, pentamidine, probucol, sparfloxacin, troleandomycin, class IA antiarrhythmics (disopyramide, procainamide, quiNIDine), class III antiarrhythmics (amiodarone, dofetilide, ibutilide, sotalol), clarithromycin, ziprasidone, pimozide, haloperidol, halofantrine, quiNIDine, chloroquine, dronedarone, droperidol, erythromycin, methadone, posaconazole, propafenone, saquinavir, abarelix, amoxapine, apomorphine, asenapine, β-agonists, ofloxacin, eribulin, ezogabine, flecainide, gatifloxacin, gemifloxacin, halogenated anesthetics, iloperidone, levofloxacin, local anesthetics, magnesium sulfate, potassium sulfate, sodium, maprotiline, moxifloxacin, nilotinib, norfloxacin, ciprofloxacin, OLANZapine, paliperidone, some phenothiazines (fluPHENAZine, perphenazine, prochlorperazine, trifluoperazine), telavancin, tetrabenazine, tricyclic antidepressants, venlafaxine, vorinostat, citalopram, alfuzosin, cloZAPine, cyclobenzaprine, dolasetron, palonosetron, QUEtiapine, rilpivirine, SUNItinib, tacrolimus, vardenafil, indacaterol, dasatinib, fluconazole, lapatinib, lopinavir/ritonavir, mefloquine, octreotide, ondansetron, ranolazine, risperiDONE, telithromycin, vemurafenib

Decrease: vemurafenib effect—CYP3A4 inducers (rifampin, barbiturates, carBAMazepine, phenytoin, erythromycin, ketoconazole, fluvoxaMINE, alcohol, etravirine, ritonavir, bexarotene, rifabutin, OXcarbazepine, nevirapine, modafinil, metyraPONE)

Drug/Lab Test:

Increase: serum creatinine, LFTs, alkaline phosphatase, bilirubin

NURSING CONSIDERATIONS

Assess:

- **Hepatotoxicity:** liver function test (LFT) abnormalities, altered bilirubin levels may occur; monitor LFTs and bilirubin levels before treatment, then monthly; more frequent testing is needed in those with grade 2 or greater toxicities; laboratory alterations should be managed with dose reduction, treatment interruption, or discontinuation
- **Pancreatitis:** Nausea, vomiting, severe abdominal pain
- **QT prolongation:** avoid in patients with QT prolongation; monitor ECG and electrolytes in HF, bradycardia, electrolyte imbalance (hypokalemia, hypomagnesemia), or those taking concomitant medications known to prolong the QT interval; treatment interruption, dosage adjustment, treatment discontinuation may be needed in those who develop QT prolongation
- **Malignancy:** New melanoma
- Serum electrolytes, CCr, bilirubin, ECG
- **BRAF testing:** obtain testing before use; do not use in wild-type BRAF; confirm BRAF V600E mutation
- **Skin reactions:** assess for skin reaction
- **Pregnancy/breastfeeding:** identify whether pregnancy is planned or suspected; do not use in pregnancy; avoid breastfeeding

Evaluate:

- Decreased spread of malignancy

Teach patient/family:

- That missed doses can be taken up to 4 hr before the next dose is due to maintain the twice-daily regimen; that if vomiting occurs, do not retake dose, take next dose as scheduled
- Not to crush, chew tablets; use with water, take consistently with or without food
- To notify prescriber of new skin lesions
- To avoid sun exposure; to wear sunscreen, protective clothing
- **Hepatotoxicity:** To notify health care professional of yellow skin, eyes, dark

urine, clay-colored stool, nausea/vomiting, pain in right side of abdomen
• **Allergic reactions:** To report rash, trouble breathing; swelling of face, lips; blisters
• To discuss with health care professional all RX, OTC, herbals, supplements taken
• **Pregnancy:** to use reliable contraception; that both women and men of childbearing age should use adequate contraceptive methods during therapy and for at least 90 days after completing treatment

⚠ HIGH ALERT

venetoclax (Rx)

(veh-neh′toh-klax)

Venclexta

Func. class.: Antineoplastic, signal transduction inhibitor

USES: Treatment of CLL in patients with a 17p deletion who have received at least 1 prior therapy

CONTRAINDICATIONS: Hypersensitivity, pregnancy

DOSAGE AND ROUTES

• **Adult: PO** 20 mg/day × 7 days, increase dose weekly × 5 wk: wk 2, 50 mg/day; wk 3, 100 mg/day; wk 4, 200 mg/day; wk 5 and beyond, 400 mg/day. Continue therapy until disease progression

Available forms: Tablet 10, 50, 100 mg; starter pack

venlafaxine (Rx)

(ven-la-fax′een)

Effexor XR

Func. class.: Antidepressant—SNRI

Chem. class.: SNRI

ACTION: Potent inhibitor of neuronal serotonin and norepinephrine uptake, weak inhibitor of dopamine; no muscarinic, histaminergic, or α-adrenergic receptors in vitro

USES: Prevention/treatment of major depression; depression at the end of life; long-term treatment of general anxiety disorder, panic disorder, social anxiety disorder (Effexor XR only)

Unlabeled uses: Vasomotor symptoms in menopause, andropause, fibromyalgia

CONTRAINDICATIONS: Hypersensitivity, MAOIs

Precautions: Pregnancy, breastfeeding, geriatric patients, mania, hypertension, seizure disorder, recent MI, cardiac/renal/hepatic disease, eosinophilic pneumonia, desvenlafaxine hypersensitivity, bipolar disorder, interstitial lung disease, glaucoma

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

Major Depression

• **Adult: PO** 75 mg/day in 2-3 divided doses; taken with food, may be increased to 150 mg/day; if needed, may be further increased to 225 mg/day; increments of 75 mg/day at intervals of ≥4 days; some hospitalized patients may require up to 375 mg/day in 3 divided doses; **EXT REL** 37.5-75 mg PO daily, max 225 mg/day; give XR daily

Anxiety disorders

• **Adult: PO** 75 mg/day or 37.5 mg/day × 4-7 days initially, max 225 mg/day

Social anxiety disorder (social phobia)

• **Adult: PO** 75 mg/day, may start at 37.5 mg/day × 4-7 days, then 75 mg/day

Panic disorder

• **Adult: PO** 37.5 mg/day × 7 days, titrate in increments of up to 75 mg/day at intervals of ≥7 days to max 225 mg/day if needed

Renal dose

• **Adult: PO** CCr 10-70 mL/min, reduce dose by 25%-50%; CCr <10 mL/min, reduce dose by 50%

Hepatic dose

• **Adult: PO** moderate impairment, 50% of dose

V

Hot flashes (unlabeled)

• **Adult (male, prostate cancer): PO** 12.5 mg bid × 4 wk; **females** 37.5-75 mg/day

Available forms: Tabs scored 25, 37.5, 50, 75, 100 mg; ext rel cap (Effexor XR) 37.5, 75, 150 mg, 225 mg

Administer:

• Once daily, AM or PM with food, milk for GI symptoms; do not crush, chew caps; caps can be opened and contents sprinkled on applesauce, given with full glass of water, use immediately

• Sugarless gum, hard candy, frequent sips of water for dry mouth

• Avoid use with CNS depressants

• Missed dose should not be made up by doubling, take next scheduled dose at usual time

• Give in small amounts because of suicide potential, especially at beginning of therapy

• Store in tight container at room temperature; do not freeze

SIDE EFFECTS

CNS: Emotional lability, *dizziness, weakness,* headache, hallucinations, insomnia, anxiety, suicidal ideation in children/adolescents, seizures, neuroleptic malignant syndrome–like reaction, *anxiety, abnormal dreams, paresthesia*

CV: Hypertension, chest pain, tachycardia, change in QTc interval, increased cholesterol, extrasystoles, syncope

EENT: *Abnormal vision,* taste, *ear pain*

GI: *Dysphagia, eructation, nausea,* anorexia, dry mouth, colitis, gastritis, gingivitis, *constipation,* stomatitis, stomach and mouth ulceration, *abdominal pain, vomiting, weight loss*

GU: *Anorgasmia,* abnormal ejaculation, urinary frequency, decreased libido, impotence, menstrual changes, *impaired urination*

INTEG: *Ecchymosis,* dry skin, photosensitivity, sweating, Stevens-Johnson syndrome; angioedema (ext rel)

META: *Peripheral edema, weight loss*

PHARMACOKINETICS

Well absorbed; extensively metabolized in liver by CYP2D6 to active metabolite, some are poor metabolizers 🧬; 87% of product recovered in urine; 27% protein binding; half-life 5, 11 hr (active metabolite), respectively, onset up to 14 days, peak up to 4 wk

INTERACTIONS

Increase: Hyperthermia, rigidity, rapid fluctuations of vital signs, mental status changes, neuroleptic malignant syndrome: MAOIs

Increase: bleeding risk—salicylates, NSAIDs, platelet inhibitors, anticoagulants

Increase: venlafaxine effect—cimetidine

Increase: CNS depression—alcohol, opioids, antihistamines, sedative/hypnotics

Increase: levels of cloZAPine, desipramine, haloperidol, warfarin

Increase: serotonin syndrome—lithium, sibutramine, SUMAtriptan, traZODone, traMADol, SSRIs, serotonin receptor agonist, linezolid, methylene blue, tryptophan

Decrease: effect of indinavir

Decrease: venlafaxine effect—cyproheptadine

Drug/Herb

• **Increase: serotonin syndrome:** St. John's wort, tryptophan

Increase: CNS depression—chamomile, hops, kava, valerian

Drug/Lab Test

Increase: alk phos, bilirubin, AST, ALT, BUN, creatinine, serum cholesterol, CPK, LDH

False positive: amphetamines, phencyclidine

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Mental status: mood, sensorium, affect, increase in psychiatric symptoms, depression, panic; assess for suicidal ideation in children/adolescents and in early treatment

• **Vital signs:** B/P lying, standing; pulse q4hr; if systolic B/P drops 20 mm Hg, hold product, notify prescriber; take VS q4hr in patients with CV disease

• **Bleeding:** GI, ecchymosis, epistaxis, hematomas, petechiae, hemorrhage

• **Blood studies:** CBC, differential, leukocytes, cardiac enzymes if patient is receiving long-term therapy
• **Hepatic studies:** AST, ALT, bilirubin
• Weight weekly; weight loss or gain; appetite may increase; peripheral edema may occur; monitor cholesterol
• **Withdrawal symptoms:** flulike symptoms, headache, nervousness, agitation, nausea, vomiting, muscle pain, weakness; not usual unless product is discontinued abruptly
• **Serotonin syndrome, neuroleptic malignant syndrome:** increased heart rate, shivering, sweating, dilated pupils, tremors, high B/P, hyperthermia, headache, confusion; if these occur, stop product, give serotonin antagonist if needed; usually worse if given with linezolid, methylene blue, tryptophan
• Assistance with ambulation during beginning therapy because drowsiness, dizziness occur
• **Beers:** use with caution in older adults; may exacerbate or cause syndrome of inappropriate antidiuretic hormone secretion (SIADH)
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; use in late 3rd trimester has resulted in neonatal complications; do not breastfeed, excreted in breast milk

Evaluate:
• Therapeutic response: decreased depression, anxiety; increased well-being

Teach patient/family:
• To notify prescriber of rash, hives, allergic reactions, bleeding
• To use with caution when driving, performing other activities requiring alertness because of drowsiness, dizziness, blurred vision

Black Box Warning: That worsening of symptoms, suicidal thoughts/behaviors may occur in children or young adults; discuss with family members

• To avoid alcohol ingestion
• Not to discontinue medication abruptly after long-term use; may cause nausea, headache, malaise; taper over 14 days
• To wear sunscreen or large hat because photosensitivity occurs
• To avoid pregnancy or breastfeeding; birth defects have occurred when used in the 3rd trimester
• To monitor B/P for new hypertension or if patient has history of hypertension
• **Serotonin syndrome, neuroleptic malignant syndrome:** to report immediately shivering, sweating, tremors, fever, dilated pupils
• To take as prescribed, contents of capsule may be sprinkled on applesauce if unable to swallow whole

TREATMENT OF OVERDOSE: ECG monitoring; lavage; administer anticonvulsant; may require whole-bowel irrigation for ext rel product

⚠ HIGH ALERT

verapamil (Rx)

(ver-ap′a-mill)

Calan, Calan SR, Isoptin, Isoptin SR, Verelan, Verelan PM

Func. class.: Calcium channel blocker; antihypertensive; antianginal, antidysrhythmic (class IV)

Chem. class.: Diphenylalkylamine

ACTION: Inhibits calcium ion influx across cell membrane during cardiac depolarization; produces relaxation of coronary vascular smooth muscle; dilates coronary arteries; decreases SA/AV node conduction; dilates peripheral arteries

USES: Chronic stable, vasospastic, unstable angina; dysrhythmias, hypertension, supraventricular tachycardia, atrial flutter or fibrillation.
Unlabeled uses: acute MI, claudication, mania, atrial tachycardia, peripheral vascular disease

CONTRAINDICATIONS: Sick sinus syndrome, 2nd-/3rd-degree heart block, hypotension <90 mm Hg systolic, cardiogenic shock, severe HF,

V

Lown-Ganong-Levine syndrome, Wolff-Parkinson-White syndrome

Precautions: Pregnancy, breastfeeding, children, geriatric patients, HF, hypotension, hepatic injury, renal disease, concomitant β-blocker therapy

DOSAGE AND ROUTES

Hypertension

• **Adult: PO IR** 80 mg tid, may titrate upward; **EXT REL** 120-240 mg/day as single dose, may increase to 240-480 mg/day

Angina

• **Adult: PO** 80-120 mg tid, increase weekly, max 480 mg/day

Atrial fibrillation/flutter

• **Adult: PO IR** 240-480 mg/day in 3-4 divided doses in digitalized patients

• **Adult: IV BOL** 5-10 mg (0.075-0.15 mg/kg) over 2 min, may repeat 10 mg (0.15 mg/kg) ½ hr after 1st dose; maintenance infusion 0.005 mg/kg/min infusion

• **Child 1-15 yr: IV BOL** 0.1-0.3 mg/kg over ≥2 min, repeat in 30 min, max 5 mg in single dose

• **Child 0-1 yr: IV BOL** 0.1-0.2 mg/kg over ≥2 min, may repeat after 30 min

To prevent paroxysmal supraventricular tachycardia

• **Adult: PO** IR 240-480 daily, divided in 3 or 4 doses, max 480 mg/day

Hepatic disease/geriatric patients/compromised ventricular function

• **Adult: PO** 40 mg tid initially, increase as tolerated

Available forms: Tabs 40, 80, 120 mg; ext rel tabs 120, 180, 240 mg; inj 2.5 mg/mL in ampules, syringes, vials; ext rel caps 100, 120, 180, 200, 240, 300, 360 mg

Administer:

PO route

• **IR:** Give without regard to food, give with meals or milk to prevent gastric upset

Ext rel route

• Do not crush or chew ext rel products; Verelan caps may be opened and contents sprinkled on food; do not dissolve chew cap contents

• Before meals, at bedtime; give ext rel product with food

Direct IV route

• Undiluted through Y-tube or 3-way stopcock of compatible sol; give over 2 min or 3 min for geriatric patients, with continuous ECG and B/P monitoring, discard unused solution

• **Do not use IV with IV β-blockers; may cause AV nodal blockade**

Y-site compatibilities: Alfentanil, amikacin, argatroban, ascorbic acid, atracurium, atropine, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, CARBOplatin, caspofungin, ceFAZolin, cefonicid, cefotaxime, cefoTEtan, cefOXitin, ceftizoxime, cefTRIAXone, cefuroxime, chlorproMAZINE, cimetidine, ciprofloxacin, clindamycin, cyanocobalamin, cyclophosphamide, cycloSPORINE, cytarabine, DACTINomycin, DAPTOmycin, dexamethasone, dexmedetomidine, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, DOPamine, doxacurium, DOXOrubicin hydrochloride, doxycycline, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, epoetin alfa, eptifibatide, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, ifosfamide, imipenem/cilastatin, inamrinone, insulin, isoproterenol, ketorolac, labetalol, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, miconazole, midazolam, milrinone, mitoXANtrone, morphine, multivitamins, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, palonosetron, papaverine, PEMEtrexed, penicillin G, pentamidine, pentazocine, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxime,

quinupristin/dalfopristin, ranitidine, rocuronium, sodium acetate, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiamine, ticarcillin/clavulanate, tirofiban, tobramycin, tolazoline, trimethaphan, urokinase, vancomycin, vasopressin, vecuronium, vinCRIStine, vinorelbine, voriconazole

SIDE EFFECTS

CNS: *Headache, drowsiness,* dizziness, anxiety, depression, weakness, insomnia, confusion, light-headedness, asthenia, fatigue
CV: *Edema,* HF, bradycardia, hypotension, palpitations, AV block, dysrhythmias
GI: *Nausea,* diarrhea, gastric upset, *constipation,* increased LFTs
GU: Impotence, gynecomastia, nocturia, polyuria
HEMA: Bruising, petechiae, bleeding
EENT: Blurred vision, tinnitus, equilibrium change, epistaxis
RESP: Cough
INTEG: Rash, bruising
MISC: Gingival hyperplasia
SYST: Stevens-Johnson syndrome

PHARMACOKINETICS

Metabolized by liver by CYP3A4, excreted in urine (70% as metabolites), protein binding 90%
PO: Onset variable; peak 3-4 hr; duration 17-24 hr; half-life 4 min, 3-12 hr
IV: Onset 3 min, peak 3-5 min, duration 10-20 min

INTERACTIONS

Increase: hypotension—prazosin, quiNIDine, fentaNYL, other antihypertensives, nitrates
Increase: effects of verapamil—β-blockers, cimetidine, clarithromycin, erythromycin, monitor for CV effects
Increase: levels of digoxin, theophylline, cycloSPORINE, carBAMazepine, nondepolarizing muscle relaxants
Decrease: effects of lithium
Decrease: antihypertensive effects—NSAIDs

Drug/Food

Increase: hypotensive effects—grapefruit juice

Drug/Herb

Increase: verapamil effect—ginseng, ginkgo
Increase: hypertension—ephedra (ma huang)
Decrease: verapamil effect—St. John's wort

Drug/Lab Test

Increase: AST, ALT, alk phos, BUN, creatinine, serum cholesterol

NURSING CONSIDERATIONS

Assess:

- **Cardiac status:** B/P, pulse, respiration, ECG intervals (PR, QRS, QT); notify prescriber if pulse <50 bpm, systolic B/P <90 mm Hg
- **HF:** I&O ratios, weight daily; crackles, weight gain, dyspnea, jugular venous distention
- Renal, hepatic studies during long-term treatment, serum potassium periodically
- **Stevens-Johnson syndrome:** rash with fever, fatigue, joint pain, lesions; discontinue immediately
- **Pregnancy/breastfeeding:** use only if benefit outweighs fetal risk; avoid breastfeeding
- **Beers:** avoid use in older adults; may cause fluid retention or exacerbate heart failure

Evaluate:

- Therapeutic response: decreased anginal pain, decreased B/P, dysrhythmias

Teach patient/family:

- To increase fluids, fiber to counteract constipation
- How to take pulse, B/P before taking product; to keep record or graph
- To avoid hazardous activities until stabilized on product, dizziness no longer a problem
- To limit caffeine consumption; to avoid alcohol products
- To avoid OTC or grapefruit products unless directed by prescriber
- To comply with all areas of medical regimen: diet, exercise, stress reduction, product therapy
- To change positions slowly to prevent syncope
- Not to discontinue abruptly; chest pain may occur

V

• To report chest pain, palpitations, irregular heartbeats, swelling of extremities, skin irritation, rash, tremors, weakness
• To notify prescriber if pregnancy is planned; to avoid breastfeeding

TREATMENT OF OVERDOSE: Defibrillation, atropine for AV block, vasopressor for hypotension, IV calcium

vigabatrin (Rx)

(vye-ga′ba-trin)
Sabril, Vigadrone
Func. class.: Anticonvulsant
Chem. class.: GABA transaminase inhibitor

ACTION: May inhibit reuptake and metabolism of GABA; may increase seizure threshold; structurally similar to GABA

USES: Adjunct treatment of partial seizures in adults and children ≥12 yr, infantile spasm

CONTRAINDICATIONS: Hypersensitivity to this product
Precautions: Pregnancy, breastfeeding, children <2 yr, geriatric patients, renal/hepatic disease, suicidal thoughts/behaviors, abrupt discontinuation

Black Box Warning: Visual disturbance; requires an experienced clinician

DOSAGE AND ROUTES

Partial seizures
• **Adult/child ≥17 yr/>60 kg: PO** 500 mg bid, titrate in 500-mg increments at weekly intervals up to 1.5 g bid
• **Child 2 to 16 years, greater than 60 kg: PO** initial, 500 mg twice daily orally; may increase by 500mg once weekly to MAX, 1500 mg twice daily.
• **Child 2-16 yr, 25-60 kg: PO** 500 mg/day divided bid, increase weekly; max 2000/day divided bid
• **Child 2 to 16 years, greater than 20 kg to 25 kg: PO** Initial, 500 mg/day orally given in 2 divided doses; may increase once weekly to MAX, 1500 mg/day given in 2 divided doses.
• **Child 2-16 yr, ≥15-20 kg: PO** 450 mg/day divided bid, increase weekly to max 1300 mg/day divided bid
• **Child 2-16 yr, 10-15 kg: PO** 350 mg/day divided bid, increase weekly to max 1050 mg/day divided bid

Renal dose
• **Adult: PO** CCr 50-80 mL/min, reduce dose by 25%; CCr 30-49 mL/min, reduce dose by 50%; CCr 10-29 mL/min, reduce dose by 75%

Infantile spasm
• **Infant >1 mo/child ≤2 yr: PO** 50 mg/kg/day in 2 divided doses, titrate in increments of 25 to 50 mg/kg/day q3days, max 150 mg/kg/day

Available forms: Tabs 500 mg; powder for oral solution 500 mg

Administer:
• Give without regard to meals

PO route (tab)
• Use safe handling procedures

PO route (oral sol)
• Reconstitute immediately before using
• Empty contents of appropriate number of packets into clean cup
• For each packet, dissolve 10 mL water, concentration 50 mg/mL; do not use other liquids
• Stir until dissolved, sol should be clear
• Use calibrated oral syringe to measure correct dosage
• Discard any unused sol
• Store at room temperature

SIDE EFFECTS

CNS: Headache, memory impairment, *dizziness,* irritability, lethargy, malignant hyperthermia, insomnia, suicidal ideation
CV: Edema
EENT: Visual impairment
GI: Nausea, vomiting, diarrhea, increased appetite, abdominal pain, GI bleeding, hemorrhoids, weight gain, constipation
GU: Impotence, dysmenorrhea
HEMA: Anemia
INTEG: Pruritus, rash

RESP: Coughing, respiratory depression, pulmonary embolism

PHARMACOKINETICS

Absorption >95%, no protein binding, widely distributed, not metabolized, excretion in urine 80% parent drug, excretion slowed in renal disease, peak 2 hr, half-life 7.5 hr

INTERACTIONS

Increase: CNS depression—CNS depressants

Increase: Serious ophthalmic effects (glaucoma, retinopathy): azaTHIOprine, chloroquine, corticosteroids, deferoxamine, ethambutol, hydroxychloroquine, interferons, loxapine, mecasermin, rh-IGF-1, pentostatin, phenothiazine, phosphodiesterase inhibitors, tamoxifen, thiothixene; avoid concurrent use

Drug/Lab Test

Decrease: ALT/AST

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Visual impairment: Prescribers must be registered with the SHARE program due to risk of permanent vision loss; if no clinical response in 2-4 wk of pediatric patients or 3 mo in adults discontinue, provide vision assessment before and after ≤4 wk at least q3mo, and 3-6 mo after last dose

- **Acute encephalopathy:** sedation, ataxia, confusion, disorientation, progressing to stupor; risk factors include high dose, rapid upward titration, renal impairment
- **Suicidal ideation:** changes in mood, increased depression, notify prescriber
- Renal studies: urinalysis, BUN, urine creatinine q3mo in those with renal disease
- Hepatic studies: ALT, AST, bilirubin
- Description of seizures: location, duration, presence of aura
- Mental status: mood, sensorium, affect, behavioral changes; if mental status changes, notify prescriber
- Assistance with ambulation during early part of treatment; dizziness occurs
- Seizure precautions: padded side rails; move objects that may harm patient
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; pregnant patients should enroll in the North American Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; do not breastfeed, excreted in breast milk

Evaluate:

- Therapeutic response: decreased seizure activity
- **Beers:** avoid in older adults unless safer alternatives are unavailable; may cause ataxia, impaired psychomotor function

Teach patient/family:

- To carry emergency ID stating patient's name, products taken, condition, prescriber's name and phone number
- To avoid driving, other activities that require alertness
- Not to discontinue medication quickly after long-term use
- To notify prescriber if pregnancy is planned or suspected
- To report suicidal thoughts/behaviors immediately
- To avoid alcohol; drowsiness, dizziness may occur

Black Box Warning: That drug may cause vision impairment; that regular exams will be needed; to notify prescriber at once if loss of vision occurs

- To notify prescriber if pregnancy is planned or suspected; not to breastfeed

vilazodone (Rx)

(vil-az′oh-done)

Viibryd

Func. class.: Antidepressant

Chem. class.: SSRI, benzofuran

V

ACTION: Novel antidepressant unrelated to other antidepressants, enhances serotonergic action by a dual mechanism

USES: Major depression

CONTRAINDICATIONS: Concomitant use of MAO inhibitors or within 14 days after discontinuing MAO

inhibitor or within 14 days after discontinuing vilazodone

Precautions: Pregnancy, labor, infants, geriatric patients, abrupt discontinuation, bipolar disorder, bleeding, operating machinery, ECT, hepatic disease, hyponatremia, hypovolemia, substance abuse, history of seizures, serotonin syndrome, neuroleptic malignant syndrome; use with serotonin precursors or serotonergic drugs; suicidal ideation, worsening depression or behavior

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

Major depressive disorder

• **Adult: PO** 10 mg × 7 days, then 20 mg × 7 days, then 40 mg/day; if taking potent CYP3A4 inhibitor, max 20 mg/day; potent CYP3A4 inducer increase dose up to double may be needed, max 80 mg/day

Available forms: Tabs 10, 20, 40 mg

Administer:

• With food to increase absorption
• Do not use within 2 wk of MAOIs
• Missed dose should be taken as soon as possible, unless it is almost time for next dose; do not double
• Store at room temperature, away from moisture, heat

SIDE EFFECTS

CNS: Restlessness, dizziness, drowsiness, fatigue, mania, insomnia, migraine, neuroleptic malignant syndrome–like reaction, paresthesias, seizures, suicidal ideation, tremors, night sweats, dream disorders

CV: Palpitations, ventricular extrasystole

EENT: Cataracts, blurred vision

GI: *Nausea,* vomiting, flatulence, *diarrhea, xerostomia,* altered taste, gastroenteritis, increased appetite

GU: Decreased libido, ejaculation disorder, increased frequency of urination, sexual dysfunction

HEMA: Bleeding, decreased platelets

INTEG: Sweating

MS: Arthralgia, fracture

SYST: Neonatal abstinence syndrome, withdrawal, serotonin syndrome

INTERACTIONS

Do not use within 2 wk of MAO inhibitors, linezolid, or methylene blue

Increase: serotonin syndrome—SSRIs, SNRIs, serotonin receptor agonists, selegiline, busPIRone, dextromethorphan, ergots, fenfluramine, dexfluramine, lithium, meperidine, fentaNYL, methylphenidate, dexmethylphenidate, metoclopramide, mirtazapine, nefazodone, pentazocine, phenothiazines, haloperidol, loxapine, thiothixene, molindone, amphetamines

Increase: bleeding—anticoagulants, thrombolytics, platelet inhibitors, salicylates, NSAIDs

Increase: vilazodone levels—CYP3A4 inhibitors (ketoconazole, erythromycin, efavirenz, dronedarone, clarithromycin and others)

Decrease: vilazodone effect—CYP3A4 inducers (carBAMazepine)

Drug/Food

• Avoid use with grapefruit juice

Drug/Herb

Increase: serotonin syndrome—St. John's wort

Drug/Lab Test

Decrease: sodium

PHARMACOKINETICS

Protein binding 96%-99%, metabolized by liver by CYP3A4 (major) and CYP2C19 and CYP2D (minor) and non-CYP pathways, peak 4-5 hr, half-life 25 hr

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Mental status: orientation, mood, behavior initially and periodically; initiate suicide precautions if indicated; history of seizures, mania

• **Bleeding risk:** assess for NSAIDs, ASA, anticoagulant use, check for bruising, black tarry stool, abdominal pain
• **Fracture risk:** assess diet for calcium, vitamin D; activity, bone density studies

• Renal/hepatic status: hyponatremia (confusion, weakness, headache); monitor serum sodium
• **Abrupt discontinuation:** do not discontinue abruptly, taper, monitor for symptoms of withdrawal; if intolerable, resume previous dose and decrease more slowly
• **Serotonin syndrome/NMS:** nausea, vomiting, sedation, sweating, facial flushing, high B/P; discontinue product, notify prescriber change in mental status, seizures, rigidity; discontinue product, notify prescriber immediately
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; if used in 3rd trimester, fetal complications may occur; avoid breastfeeding, excreted in breast milk

Evaluate:
• Therapeutic response: remission of depressive symptoms, decreased anxiety

Teach patient/family:
• To take as directed, with food, not to double dose, follow-up will be needed
• To avoid abrupt discontinuation unless approved by prescriber
• Not to drive or operate machinery until effects are known
• Not to use other products unless approved by prescriber, do not use alcohol
• **To contact prescriber for** allergic reactions; personality changes (aggression, anxiety, anger, hostility); extreme sleepiness confusion, nervous, restless, or clumsy; numbness, tingling, burning pain in hands, arms, legs, or feet; tremors; unusual behavior or thoughts about hurting oneself

Black Box Warning: Suicidal thoughts/behaviors: discuss with family the possibility of suicidal thoughts/behaviors and that prescriber should be notified immediately if these occur

• To notify prescriber if pregnancy is planned or suspected; to avoid breastfeeding

⚠ HIGH ALERT

vinBLAStine (VLB) (Rx)

(vin-blast'een)
Func. class.: Antineoplastic
Chem. class.: Vinca alkaloid

Do not confuse:
vinBLAStine/vinCRIStine/vinorelbine

ACTION: Inhibits mitotic activity, arrests cell cycle at metaphase; inhibits RNA synthesis, blocks cellular use of glutamic acid needed for purine synthesis; vesicant

USES: Breast, testicular cancer, lymphomas, neuroblastoma; Hodgkin's/non-Hodgkin's lymphoma; mycosis fungoides, histiocytosis, Kaposi's sarcoma, Langerhans cell histiocytosis
Unlabeled uses: Lung, bladder cancer; desmoid tumor

CONTRAINDICATIONS: Pregnancy, breastfeeding, infants, hypersensitivity, leukopenia, granulocytopenia, bone marrow suppression, infection
Precautions: Renal/hepatic disease, tumor lysis syndrome

Black Box Warning: Extravasation, intrathecal use

DOSAGE AND ROUTES

Doses vary greatly

Breast cancer
• **Adult: IV** 4.5 mg/m^2 on day 1 of every 21 days in combination with DOXOrubicin and thiotepa

Hodgkin's disease
• **Adult: IV** 6 mg/m^2 on days 1 and 15 of every 28 days with DOXOrubicin, bleomycin, dacarbazine (ABVD regimen)
• **Child: IV** 2.5-6 mg/m^2/day once q1-2wk × 3-6 wk, max weekly dose 12.5 mg/m^2

Letterer-Sine disease
• **Child: IV** 6.5 mg/m^2

V

Testicular cancer (germ cell)
• **Child: IV** 3 mg/m^2/day on days 1 through 5 with other antineoplastics
Bladder cancer (unlabeled)
• **Adult: IV** 3 mg/m^2 on day 2, q14days in combination with other antineoplastics
NSCLC (unlabeled)
• **Adult: IV** 4 mg/m^2 on days 1, 8, 15, 22, 29, then q2wk with cisplatin
Available forms: Inj, powder 10 mg for 10 mL IV; sol for inj 1 mg/mL
Administer:
• Use safe handling procedures

Black Box Warning: Extravasation: aspirate, give hyaluronidase 150 units/mL in 1 mL NaCl, through IV catheter or subcut in circular pattern around extravasated site, warm compress for extravasation for vesicant activity treatment

Black Box Warning: Do not administer intrathecally; fatal

IV inj route
• Use a minibag if possible, or; give through sideport or directly over 1 min

Y-site compatibilities: Acyclovir, alemtuzumab, alfentanil, allopurinol sodium, amifostine, amikacin, aminophylline, amiodarone, amphotericin B cholesteryl (Amphotec), amphotericin B lipid complex (Abelcet), ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, arsenic trioxide, atenolol, atracurium, aztreonam, bivalirudin, bleomycin, bretylium, bumetanide, buprenorphine, busulfan, butorphanol, calcium chloride/gluconate, capreomycin, carboplatin, carmustine, caspofungin, cefazolin, cefoperazone, cefotaxime, cefotetan, cefOXitin, cefTAZidime, ceftazidime (L-arginine), ceftizoxime, cefTRIAXone, cefuroxime, chloramphenicol sodium succinate, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, cisplatin, clindamycin, codeine, cyclophosphamide, cycloSPORINE, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, DOXOrubicin, DOXOrubicin liposomal, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, gallium, ganciclovir, garenoxacin, gatifloxacin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, inamrinone, insulin (regular), irinotecan, isoproterenol, ketorolac, labetalol, lepirudin, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, metaraminol, methadone, methohexital, methotrexate, methyldopate, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoMYcin, mitoXANTRONE, morphine, moxifloxacin, nafcillin, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ofloxacin, ondansetron, oxaliplatin, PACLitaxel, palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, piperacillin, piperacillin-tazobactam, polymyxin B, potassium acetate/chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quiNIDine, quinupristin-dalfopristin, raNITIdine, remifentanil, riTUXimab, sargramostim, sodium acetate/bicarbonate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, topotecan, trastuzumab, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinCRIStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: Paresthesias, peripheral neuropathy, depression, headache, seizures, malaise
CV: Tachycardia, orthostatic hypo/hypertension
GI: *Nausea, vomiting,* ileus, *anorexia, stomatitis, constipation,* abdominal pain, GI/rectal bleeding, hepatotoxicity, pharyngitis
GU: Urinary retention, renal failure, hyperuricemia
HEMA: Thrombocytopenia, leukopenia, myelosuppression, agranulocytosis, granulocytosis, aplastic anemia, neutropenia, pancytopenia
INTEG: *Rash, alopecia,* photosensitivity, extravasation, tissue necrosis
META: SIADH
RESP: Fibrosis, pulmonary infiltrate, bronchospasm
SYST: Tumor lysis syndrome (TLS)

PHARMACOKINETICS

Half-life (triphasic) <5 min, 50-155 min, 23-85 hr; metabolized in liver; excreted in urine, feces; crosses blood-brain barrier

INTERACTIONS

Increase: synergism—bleomycin
• Do not use with radiation
Increase: bleeding risk—NSAIDs, anticoagulants, thrombolytics, antiplatelets
Increase: toxicity, bone marrow suppression—antineoplastics
Increase: action of methotrexate
Increase: adverse reactions—live virus vaccines
Increase: toxicity—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)
Decrease: vinBLAStine effect—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifAMPin)
Drug/Herb
• Avoid use with St. John's wort
Drug/Lab Test
Increase: uric acid, bilirubin
Decrease: HB, platelets, WBC

NURSING CONSIDERATIONS

Assess:
• B/P baseline and during use

• **Bone marrow toxicity** CBC, differential, platelet count weekly; withhold product if WBC is <2000/mm^3 or platelet count is <75,000/mm^3; notify prescriber; RBC, Hct, HB may be decreased, nadir occurs on days 4-10 (leukopenia) and continues for another 1-2 wk
• **Infection:** check for sore mouth/throat, fever, rash, bruising, cough, flulike symptoms, diarrhea, nausea
• **Tumor lysis syndrome:** monitor for hyperkalemia, hyperphosphatemia, hyperuricemia; usually occurs with leukemia, lymphoma; alkalinization of the urine, allopurinol should be used to prevent urate nephropathy; monitor electrolytes and renal function (BUN, uric acid, urine CCR)
• **Hepatitis:** transient hepatitis may occur with continuous IV
• **Bleeding:** hematuria, guaiac, bruising, petechiae, mucosa or orifices
• **Bronchospasm:** can be life-threatening; usually occurs when giving mitoMYcin
• Effects of alopecia on body image; discuss feelings about body changes
• Sensitivity of feet/hands, which precedes neuropathy
• **Liver toxicity:** Jaundiced skin, sclera; dark urine, clay-colored stools, itchy skin, abdominal pain, fever, diarrhea
• Buccal cavity q8hr for dryness, sores, ulcerations, white patches, oral pain, bleeding, dysphagia
• Brushing of teeth bid-tid with soft brush or cotton-tipped applicator for stomatitis, use unwaxed dental floss

Black Box Warning: Extravasation: local irritation, pain, burning, discoloration at IV site (vesicant)

• **Severe allergic reaction:** rash, pruritus, urticaria, purpuric skin lesions, itching, flushing
• Increased fluid intake to 2-3 L/day to prevent urate deposits, calculi formation

V

• **Pregnancy/breastfeeding:** do not use in pregnancy; do not breastfeed

Evaluate:

• Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:

• To report any bleeding, white spots, ulcerations in mouth to prescriber; to examine mouth daily

• To report any changes in breathing or coughing; to avoid exposure to persons with infection

• That hair may be lost during treatment; that a wig or hairpiece may make patient feel better; that new hair may be different in color, texture

• To report change in gait or numbness in extremities; may indicate neuropathy

• To avoid foods with citric acid, hot temperature, or rough texture

• To wear sunscreen, protective clothing, sunglasses

• To avoid receiving vaccinations

• **Infection:** to report sore throat, flulike symptoms; to avoid persons with known infections

• **Pregnancy:** not to breastfeed; that product may cause male infertility; to notify prescriber if pregnancy is planned or suspected

⚠ HIGH ALERT

vinCRIStine (VCR) (Rx)

(vin-kris'teen)

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Vinca alkaloid

Do not confuse:

vinCRIStine/vinBLAStine/vinorelbine

ACTION: Inhibits mitotic activity, arrests cell cycle at metaphase; inhibits RNA synthesis, blocks cellular use of glutamic acid needed for purine synthesis; vesicant

USES: Lymphomas, neuroblastoma, Hodgkin's disease, acute lymphoblastic and other leukemias, rhabdomyosarcoma, Wilms' tumor, non-Hodgkin's lymphoma, malignant glioma, soft-tissue sarcoma; liposomal: Philadelphia chromosome—negative ALL in second or greater relapse or that has progressed after ≥2 antileukemia therapies

Unlabeled uses: CNS tumors, chronic lymphocytic leukemia/small lymphocytic lymphoma (CLL/SLL), Ewing sarcoma, trophoblastic tumors, merkel cell carcinoma, multiple myeloma, ovarian germ cell tumors, malignant pheochromocytoma

CONTRAINDICATIONS: Pregnancy, breastfeeding, infants, hypersensitivity, radiation therapy

Black Box Warning: Intrathecal use

Precautions: Renal/hepatic disease, hypertension, neuromuscular disease

Black Box Warning: Extravasation

DOSAGE AND ROUTES

• **Adult: IV** 0.4-1.4 mg/m²/wk, max 2 mg

• **Child: IV** 1-2 mg/m²/wk, max 2 mg

Available forms: Inj 1 mg/mL

Administer:

• **Cytotoxic:** Use safe handling procedures

• Vesicant, IV route only

Black Box Warning: Label syringes: IV use only, fatal if given intrathecally

IV route

• Label syringe for "IV Use Only"

• Give by IV injection by those experienced with the product

• Give IV push through sidearm of free-flowing IV (D5 or NS), inject over at least 1 min, flush with NS

• May be mixed in 50 mL minibag D5 or NS, given over 15 min, use of minibag is recommended

• Protect from light, use diluted solution within 6 hr (room temperature) or 24 hr (refrigerated)

Black Box Warning: Hyaluronidase 150 units/mL in 1 mL NaCl; apply warm compress for extravasation

Y-site compatibilities: Acyclovir, alemtuzumab, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B cholesteryl, amphotericin B lipid complex, amphotericin B liposome, ampicillin, ampicillin-sulbactam, anidulafungin, argatroban, arsenic trioxide, asparaginase, atenolol, atracurium, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride/gluconate, capreomycin, CARBOplatin, carmustine, caspofungin, ceFAZolin, cefoperazone, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, cefuroxime, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, cladribine, clindamycin, codeine, cyclophosphamide, cycloSPORINE, cytarabine, D_5W-dextrose 5%, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin, DAUNOrubicin citrate liposome, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doxacurium, doxapram, DOXOrubicin, DOXOrubicin liposomal, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epiRUBicin, ertapenem, erythromycin, esmolol, etoposide, famotidine, fenoldopam, fentaNYL, filgrastim, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, gallium, ganciclovir, garenoxacin, gatifloxacin, gemcitabine, gentamicin, granisetron, haloperidol, heparin, hydrocortisone sodium phosphate/succinate, HYDROmorphone, hydrOXYzine, ifosfamide, imipenem-cilastatin, inamrinone, insulin (regular), isoproterenol, ketorolac, labetalol, lepirudin, leucovorin, levoFLOXacin, levorphanol, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methadone, methohexital, methotrexate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, minocycline, mitoMYcin, mitoXANtrone, mivacurium, morphine, moxifloxacin, nalbuphine, naloxone, nesiritide, niCARdipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, PACLitaxel (solvent/surfactant), palonosetron, pamidronate, pancuronium, PEMEtrexed, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phenylephrine, piperacillin, piperacillin–tazobactam, potassium acetate/chloride/phosphates, procainamide, prochlorperazine, promethazine, propranolol, quinupristin-dalfopristin, ranitidine, remifentanil, riTUXimab, rocuronium, sargramostim, sodium acetate/phosphates, succinylcholine, SUFentanil, sulfamethoxazole-trimethoprim, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin, ticarcillin-clavulanate, tigecycline, tirofiban, tobramycin, topotecan, trastuzumab, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinorelbine, voriconazole, zidovudine, zoledronic acid

SIDE EFFECTS

CNS: *Decreased reflexes, numbness, weakness, motor difficulties,* CNS depression, cranial nerve paralysis, seizures, peripheral neuropathy
CV: Orthostatic hypotension
EENT: *Diplopia*
GI: *Nausea, vomiting, anorexia, stomatitis, constipation,* paralytic ileus, *abdominal pain,* hepatotoxicity
GU: Renal tubular obstruction
HEMA: Thrombocytopenia, leukopenia, myelosuppression, anemia
INTEG: *Alopecia,* extravasation
SYST: Tumor lysis syndrome (TLS)

PHARMACOKINETICS

Half-life (triphasic) <5 min, 50-155 min, 23-85 hr; metabolized in liver; excreted in bile, feces; crosses placental, blood-brain barrier

INTERACTIONS

Decrease: immune response—vaccines, toxoids

Decrease: digoxin level—digoxin

Decrease: vinCRIStine effect—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifAMPin)

- Do not use with radiation
- **Acute pulmonary reactions:** mitoMYcin C
- **Increase:** toxicity—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)

Drug/Herb

- Avoid use with St. John's wort

Drug/Lab Test

Increase: uric acid

Decrease: HB, WBC, platelets, sodium

NURSING CONSIDERATIONS

Assess:

- CBC, differential, platelet count before each dose; withhold product if WBC is $<4000/mm^3$ or platelet count is $<75{,}000/mm^3$; notify prescriber; RBC, Hct, HB; may be decreased, nadir occurs on day 4-10 (leukopenia); continues for another 1-2 wk
- **Bronchospasm/dyspnea:** more common with mitoMYcin
- **GI autonomic neuropathy:** presents as severe constipation, cramps, ileus
- Hepatic studies before, during therapy (bilirubin, AST, ALT, LDH) as needed or monthly
- Sensitivity of feet/hands, which precedes neuropathy
- **Tumor lysis syndrome:** hyperkalemia, hyperphosphatemia, hyperuricemia, hypocalcemia; more common in leukemia, lymphoma; use alkalinization of urine with allopurinol, monitor electrolytes, renal function (BUN, urine, CCR, uric acid)

Black Box Warning: Extravasation: pain, swelling, poor blood return; if extravasation occurs, local inj of hyaluronidase and moderate heat to area may help disperse product

- **Pregnancy/breastfeeding:** do not use in pregnancy, breastfeeding
- **Bleeding:** hematuria, guaiac, bruising, petechiae, mucosa or orifices q8hr
- Effects of alopecia on body image; discuss feelings about body changes
- Buccal cavity q8hr for dryness, sores, ulcerations, white patches, oral pain, bleeding, dysphagia
- Symptoms indicating severe allergic reaction: rash, pruritus, urticaria, purpuric skin lesions, itching, flushing

Evaluate:

- Therapeutic response: decreased tumor size, spread of malignancy

Teach patient/family:

- To brush teeth bid-tid with soft brush or cotton-tipped applicator for stomatitis; to use unwaxed dental floss
- To report change in gait or numbness in extremities; may indicate neuropathy
- To report any bleeding, white spots, or ulcerations in mouth to prescriber; to examine mouth daily
- To increase bulk, fluids, exercise to prevent constipation
- **Infection:** to report sore throat, fever, flulike symptoms; to avoid persons with known infection
- To avoid vaccinations
- That hair may be lost; that hair will grow back but with different texture, color
- **Pregnancy/breastfeeding:** to notify prescriber if pregnancy is planned or suspected; to use effective contraception during and for 2 mo after therapy; not to breastfeed

⚠ HIGH ALERT

vinorelbine (Rx)

(vi-nor′el-bine)

Navelbine

Func. class.: Antineoplastic—miscellaneous

Chem. class.: Semisynthetic vinca alkaloid

ACTION: Inhibits mitotic spindle activity, arrests cell cycle at metaphase; inhibits RNA synthesis, blocks cellular use of glutamic acid needed for purine synthesis; vesicant

USES: Unresectable advanced non–small-cell lung cancer (NSCLC) stage IV; may be used alone or in combination with CISplatin for stage III or IV NSCLC

Unlabeled uses: Hodgkin's disease, breast/ovarian/head/neck cancer, desmoid tumor

CONTRAINDICATIONS: Pregnancy, breastfeeding, infants, hypersensitivity, granulocyte count <1000 cells/mm^3 pretreatment

Black Box Warning: Severe neutropenia, intrathecal administration

Precautions: Children, geriatric patients, renal/hepatic/pulmonary/neurologic disease, anemia, bone marrow suppression, severe neutropenia, intrathecal administration, extravasation

Black Box Warning: Extravasation

DOSAGE AND ROUTES

• **Adult: IV** 30 mg/m^2/wk (monotherapy) or 25 mg/m^2 weekly with cisplatin 100 mg/m^2 q4wk

HER-2+ breast cancer (advanced) (unlabeled)

• **Adult: IV** 25 or 30 mg/m^2 q7days (monotherapy)

Available forms: Inj 10 mg/mL

Administer:

Black Box Warning: Do not give intrathecally, fatal; syringes with this product should be labeled "Warning, for IV use only, fatal if given intrathecally"

Intermittent IV INFUSION route

• Use minibag if possible

• Dilute to 0.5-2 mg/mL with 0.9% NaCl, 0.45% NaCl, D_5W, D_5/0.45% NaCl, LR, Ringer's sol, give over 6-10 min into side port of free-flowing IV line or central line, flush line with 75-125 mL of diluent or more

Black Box Warning: Extravasation: stop infusion, give hyaluronidase 150 units/mL in 1 mL NaCl through IV catheter or subcut in circular pattern around site, warm compress for extravasation for vesicant activity treatment

• If accidental exposure occurs to skin, mucosa, eye, immediately flush with large amounts of water/NS, wash skin with soap and water

Y-site compatibilities: Amikacin, aztreonam, bleomycin, bumetanide, buprenorphine, butorphanol, calcium gluconate, CARBOplatin, carmustine, cefotaxime, cefTAZidime, ceftizoxime, chlorproMAZINE, cimetidine, CISplatin, clindamycin, cyclophosphamide, cytarabine, dacarbazine, DACTINomycin, DAUNOrubicin, dexamethasone, diphenhydrAMINE, DOXOrubicin, DOXOrubicin liposome, doxycycline, droperidol, enalaprilat, etoposide, famotidine, filgrastim, floxuridine, fluconazole, fludarabine, gallium, gentamicin, granisetron, haloperidol, heparin, hydrocortisone, HYDROmorphone, hydrOXYzine, IDArubicin, ifosfamide, imipenem-cilastatin, LORazepam, mannitol, mechlorethamine, melphalan, meperidine, mesna, methotrexate,

V

metoclopramide, metroNIDAZOLE, minocycline, mitoXANtrone, morphine, nalbuphine, netilmicin, ondansetron, plicamycin, streptozocin, teniposide, ticarcillin, ticarcillin-clavulanate, tobramycin, vancomycin, vinBLAStine, vinCRIStine, zidovudine

SIDE EFFECTS

CNS: Paresthesias, peripheral neuropathy, depression, headache, seizures, weakness, jaw pain, asthenia
CV: Chest pain
GI: *Nausea, vomiting,* ileus, *anorexia, stomatitis,* constipation, abdominal pain, *diarrhea,* hepatotoxicity, GI obstruction/perforation
HEMA: Neutropenia, anemia, thrombocytopenia, granulocytopenia
INTEG: *Rash, alopecia,* photosensitivity, inj site reaction, necrosis
META: SIADH
MS: Myalgia
RESP: SOB, dyspnea, pulmonary edema, acute bronchospasm, acute respiratory distress syndrome (ARDS)

PHARMACOKINETICS

Half-life 27-43 hr; peak 1-2 hr; highly bound to platelets, lymphocytes; metabolized in liver; excreted in feces; small amount unchanged in kidneys

INTERACTIONS

Increase: bleeding risk—NSAIDs, anticoagulants
Increase: toxicity—CYP3A4 inhibitors (aprepitant, antiretroviral protease inhibitors, clarithromycin, danazol, delavirdine, diltiaZEM, erythromycin, fluconazole, FLUoxetine, fluvoxaMINE, imatinib, ketoconazole, mibefradil, nefazodone, telithromycin, voriconazole)
Decrease: vinorelbine effect—CYP3A4 inducers (barbiturates, bosentan, carBAMazepine, efavirenz, phenytoins, nevirapine, rifabutin, rifampin)
Drug/Herb
• Avoid use with St. John's wort
Drug/Lab Test
Increase: LFTs, bilirubin
Decrease: HB, WBC, platelets

NURSING CONSIDERATIONS

Assess:
• B/P (baseline) during administration

Black Box Warning: Bone marrow suppression: CBC, differential, platelet count before each dose; withhold product if WBC is <4000/mm^3 or platelet count is <75,000/mm^3; notify prescriber of results; recovery will take 3 wk

• **Respiratory status: Bronchospasm:** more common with mitoMYcin; also dyspnea, wheezing; may be treated with oxygen, bronchodilators, corticosteroids, especially if there is underlying pulmonary disease
• **Neurologic status:** paresthesia, peripheral neuropathy, weakness; these may occur even after termination of treatment
• **Renal studies:** BUN, serum uric acid, urine CCr before, during therapy; I&O ratio; report fall in urine output to <30 mL/hr; decreased hyperuricemia
• **Infection,** cold, fever, sore throat; notify prescriber if these occur; effects of alopecia on body image
• **Bleeding:** hematuria, guaiac, bruising, petechiae, mucosa or orifices, no rectal temperatures; avoid IM inj; apply pressure to venipuncture sites
• **Hepatic function tests:** AST, ALT, bilirubin, LDH
• **Severe allergic reactions:** rash, pruritus, urticaria, itching, flushing, bronchospasm, hypotension; EPINEPHrine and crash cart should be nearby
• **Pregnancy:** determine pregnancy before starting treatment; do not use in pregnancy; do not breastfeed
Evaluate:
• Therapeutic response: decreased tumor size, spread of malignancy
Teach patient/family:
• To report change in gait or numbness in extremities, continuing constipation; may indicate neurotoxicity

• To brush teeth bid-tid with soft brush or cotton-tipped applicator for stomatitis; to use unwaxed dental floss
• To examine mouth daily for bleeding, white spots, ulcerations; to notify prescriber
• **Infection:** report sore throat, fever, flulike symptoms
• To avoid crowds, people with infections, vaccinations, OTC products
• **Pregnancy:** to notify prescriber if pregnancy is planned or suspected; to use effective contraception during treatment and for ≥2 mo after product is discontinued; not to breastfeed
• That hair may be lost; that hair will grow back but with different texture, color

⚠ HIGH ALERT

vismodegib (Rx)

(vis′moe-deg′ib)

ERIVEDGE

Func. class.: Antineoplastic biologic response modifier

Chem. class.: Signal transduction inhibitor (STI)

Do not confuse:
vismodegib/vemurafenib/vandatanib

ACTION: A hedgehog (Hh) signaling pathway inhibitor

USES: Patients who have metastatic basal cell carcinoma, locally advanced

CONTRAINDICATIONS: Hypersensitivity, breastfeeding, females at risk of becoming pregnant; pregnancy, males who do not adhere to contraceptive measures, children/adolescents <18 yr

Black Box Warning: Intrauterine fetal death, male-mediated teratogenicity, pregnancy

Precautions: Children, blood donation renal/hepatic impairment, CV disease, history of pancreatitis, history of gallbladder disease, osteoporosis, respiratory disease

DOSAGE AND ROUTES

• **Adult: PO** 150 mg/day
Available forms: Cap 150 mg
Administer:
• Should be initiated and monitored only under the supervision of a health care provider qualified in the use of cancer therapies and with a full understanding of the risk of ERIVEDGE therapy and monitoring requirements
• Can cause embryo-fetal death or severe birth defects
• Not recommended for use in patients with severe renal or hepatic impairment; limited data are available for these patients
• ERIVEDGE is available only through the controlled distribution program, the ERIVEDGE Pregnancy Prevention Program (EPPP): 1-888-748-8926
• Can cause irreversible premature fusion of the epiphyses in children
• Give without regard to food
• Swallow whole, do not open or crush caps
• If a dose is missed, do not take additional dose, take at usual time
• Store at 77°F (25°C)

SIDE EFFECTS

CNS: Syncope, paresthesia, ischemic stroke, depression
CV: Hemorrhage, atrial fibrillation, cardiac failure, deep vein thrombosis (DVT), hypovolemic shock, angina, MI
GI: *Nausea, vomiting, dysgeusia, constipation, anorexia, diarrhea*
GU: Amenorrhea, azotemia
INTEG: *Alopecia*
META: Hyponatremia
MISC: *Fatigue, decreased weight*
MS: *Arthralgia*
RESP: Pneumonia, pulmonary embolism

PHARMACOKINETICS

Protein binding >99%, elimination half-life 4 days

INTERACTIONS

Increased effect of each product: P-gp inhibitors (amiodarone, clarithromycin, cyclosporine, dilTIAZem, erythromycin, itraconazole, ketoconazole, nelfinovir,

V

nicardipine, propefenone, guiNIDine, ritonavir, saquinavir, tacrolimus, tamoxifen, verapamil); CYP2C19 substrates (amitriptyline, clomipramine, imipramine, citalopram, diazepam, phenytoin, phenobarbital, lansoprazole, omeprazole, pantoprazole, rabeprazole,, esopmeprazole, clopidogrel, propanolol, carisoprodol, chloramphenicol, cyclophosphamide, indomethacin, nelfinavir, niLUTAmide, progesterone, teniposide, warfarin)
Increase: vismodegib effect—osimertinib
Increase: effect of sofosbuvir, velpatasvir, topotecan
Increase: INR levels—warfarin; increase INR monitoring

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Pregnancy: Obtain pregnancy test of all women within 7 days before therapy; contraception is needed during and for 24 mo after treatment; men receiving this product should use condoms with spermicide (even after vasectomy) during sexual intercourse with female partners and for 2 mo after the last dose; semen donation is contraindicated during treatment and for 3 mo after treatment; report exposure during pregnancy to the Genentech Adverse Event Line at 1-888-835-2555

GI toxicity: nausea, vomiting, anorexia, diarrhea, constipation
Evaluate:
• Therapeutic response: decreased spread of tumor
Teach patient/family:

Black Box Warning: Pregnancy: Teach patients to notify providers immediately if pregnancy is suspected (or in a female partner for male patients); use effective contraception during and for 7 mo after treatment; men taking this product should use condoms with spermicide (even after vasectomy) and for 2 mo after the last dose; if product is used during pregnancy, should be apprised of the potential hazard to the fetus; encourage exposed women (either directly or through seminal fluid) to enroll in the ERIVEDGE pregnancy pharmacovigilance program

• About reason for treatment, expected results
• That if dose is missed, do not take, but resume scheduled doses; to swallow whole, not to crush or chew
• Not to donate blood during therapy or for ≥24 mo after conclusion of product
• **Amenorrhea:** it is unknown if reversible after completion of treatment

vitamin A (Rx, PO-OTC, Rx-IM)

Aquasol A
Func. class.: Vitamin, fat soluble
Chem. class.: Retinol

ACTION: Needed for normal bone, tooth development; visual dark adaptation; skin disease; mucosa tissue repair; assists with production of adrenal steroids, cholesterol, RNA

USES: Vit A deficiency

CONTRAINDICATIONS: Pregnancy (IM), hypersensitivity to vit A, malabsorption syndrome, hypervitaminosis A, IV administration
Precautions: Pregnancy (PO), breastfeeding, impaired renal function, children, hepatic disease, infants, alcoholism, hepatitis

DOSAGE AND ROUTES

• **Adult and child >8 yr: PO** 100,000-500,000 international units/day × 3 days then 50,000 international units/day × 2 wk; dose based on severity of deficiency; maintenance 10,000-20,000 international units for 2 mo
• **Child 1-8 yr: IM** 5000-15,000 international units/day × 10 days
• **Infant <1 yr: IM** 5000-15,000 international units/day × 10 days

Maintenance
- **Child 4-8 yr: IM** 15,000 international units/day × 2 mo
- **Child <4 yr: IM** 10,000 international units/day × 2 mo

Available forms: Caps 10,000, 25,000, 50,000 international units; drops 5000 international units; inj 50,000 international units/mL; tabs 10,000, 25,000, 50,000 international units

Administer:

PO route
- With food (PO) for better absorption
- Do not administer IV because of risk of anaphylactic shock; IM only
- Oral preparations not indicated for vit A deficiency in those with malabsorption syndrome
- Store in tight, light-resistant container

IM route
- Give deep in large muscle mass; do not use deltoid muscle for administration of >1 mL

SIDE EFFECTS

CNS: Headache, increased intracranial pressure, intracranial hypertension, lethargy, malaise
EENT: Gingivitis, papilledema, exophthalmos, inflammation of tongue and lips
GI: Nausea, vomiting, anorexia, abdominal pain, jaundice
INTEG: Drying of skin, pruritus, increased pigmentation, night sweats, alopecia
META: Hypomenorrhea, hypercalcemia
MS: Arthralgia, retarded growth, hard areas on bone

PHARMACOKINETICS

Stored in liver, kidneys, fat; excreted (metabolites) in urine, feces

INTERACTIONS

Increase: levels of vit A—corticosteroids, oral contraceptives
Decrease: absorption of vit A—mineral oil, cholestyramine, colestipol

Drug/Lab Test
False increase: bilirubin, serum cholesterol

NURSING CONSIDERATIONS

Assess:
- Nutritional status: yellow and dark green vegetables, yellow/orange fruits, vit A–fortified foods, liver, egg yolks
- **Vit A deficiency:** decreased growth; night blindness; dry, brittle nails; hair loss; urinary stones; increased infection; hyperkeratosis of skin; drying of cornea
- **Pregnancy/breastfeeding:** do not use IM in pregnancy, fetal complications may occur; breastfeeding is considered safe at recommended dietary levels

Evaluate:
- Therapeutic response: increased growth rate, weight; absence of dry skin and mucous membranes, night blindness

Teach patient/family:
- That if dose is missed, it should be omitted
- That ophthalmic exams may be required periodically throughout therapy
- Not to use mineral oil while taking this product
- To notify prescriber of nausea, vomiting, lip cracking, loss of hair, headache
- Not to take more than prescribed amount

TREATMENT OF OVERDOSE:

Discontinue product

vitamin C (ascorbic acid) (otc, Rx)

(a-skor'bic)
Func. class.: Vit C—water-soluble vitamin

ACTION: Wound healing, collagen synthesis, antioxidant, carbohydrate metabolism

USES: Vit C deficiency, scurvy; delayed wound, bone healing; chronic disease; urine acidification; before gastrectomy; dietary supplement
Unlabeled uses: Common cold prevention

CONTRAINDICATIONS: Tartrazine, sulfite sensitivity; G6PD deficiency
Precautions: Pregnancy, gout, diabetes, renal calculi (large doses)

V

DOSAGE AND ROUTES

Dietary supplementation

- **Adult: PO** 50-500 mg/day
- **Child 14-18 yr: PO** 65 mg (female), 75 mg (male)
- **Child 9-13 yr: PO** 45 mg/day
- **Child 4-8 yr: PO** 25 mg/day
- **Child 1-3 yr: PO** 15 mg/day
- **Infant: PO** 40-50 mg/day

Scurvy

- **Adult: PO/SUBCUT/IM/IV** 100-250 mg/day × 2 wk, then 50 mg or more daily
- **Child: PO/SUBCUT/IM/IV** 100-300 mg/day × 2 wk, then 35 mg or more daily

Wound healing/chronic disease/fracture (may be given with zinc)

- **Adult: SUBCUT/IM/IV/PO** 200-500 mg/day for 1-2 mo
- **Child: SUBCUT/IM/IV/PO** 100-200 mg added doses for 1-2 mo

Urine acidification

- **Adult: PO** 4-12 g/day in divided doses
- **Child: PO** 500 mg q6-8hr

Available forms: Tabs 25, 50, 100, 250, 500, 1000, 1500 mg; effervescent tabs 1000 mg; chewable tabs 100, 250, 500 mg; timed-release tabs 500, 750, 1000, 1500 mg; timed-release caps 500 mg; crys 4 g/tsp; powder 4 g/tsp; liq 35 mg/0.6 mL; sol 100 mg/mL; syr 20 mg/mL, 500 mg/5 mL; inj SUBCUT, IM, IV 100, 250, 500 mg/mL

Administer:

PO route

- Do not crush or chew ext rel tabs or caps
- Caps may be opened and contents mixed with jelly

IV, direct route

- 100 mg undiluted by direct IV over at least 1 min; rapid infusion may cause fainting

Intermittent IV INFUSION route

- Diluted with D_5W, D_5NaCl, NS, LR, Ringer's, sodium lactate and given over 15 min

Syringe compatibilities: Metoclopramide, aminophylline, theophylline

Y-site compatibilities: Warfarin

SIDE EFFECTS

CNS: Headache, insomnia, dizziness, fatigue, flushing

GI: Nausea, vomiting, diarrhea, anorexia, heartburn, cramps

GU: Polyuria, urine acidification, oxalate/urate renal stones, dysuria

HEMA: Hemolytic anemia in patients with G6PD

INTEG: Inflammation at inj site

PHARMACOKINETICS

PO/INJ: Readily absorbed PO, metabolized in liver; unused amounts excreted in urine (unchanged), metabolites; crosses placenta, breast milk

INTERACTIONS

Drug/Lab Test

False negative: occult blood, urine bilirubin, leukocyte determination

NURSING CONSIDERATIONS

Assess:

- I&O ratio; urine pH (acidification)
- Ascorbic acid levels throughout treatment if continued deficiency is suspected
- Nutritional status: citrus fruits, vegetables
- Inj sites for inflammation
- Thrombophlebitis if receiving large dose
- **Pregnancy/breastfeeding:** use only recommended dietary allowances in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: absence of anorexia, irritability, pallor, joint pain, hyperkeratosis, petechiae, poor wound healing

Teach patient/family:

- Necessary foods to include in diet, such as citrus fruits
- That smoking decreases vit C levels; not to exceed prescribed dose; that excesses will be excreted in urine, except when taking timed-release forms

vitamin E (otc)

Aquasol E

Func. class.: Vit E

Chem. class.: Fat soluble

ACTION: Needed for digestion and metabolism of polyunsaturated fats; decreases platelet aggregation, blood clot formation; promotes normal growth and development of muscle tissue, prostaglandin synthesis

USES: Vit E deficiency, impaired fat absorption, hemolytic anemia in premature neonates, prevention of retrolental fibroplasia, sickle cell anemia, supplement for malabsorption syndrome

CONTRAINDICATIONS: IV use in infants

Precautions: Pregnancy, anemia, breastfeeding, hypoprothrombinemia

DOSAGE AND ROUTES

Deficiency

- **Adult: PO** 60-75 units/day
- **Child: PO** 1 unit/kg/day (malabsorption)

Prevention of deficiency

- **Adult: PO** 30 units/day; **TOP** apply to affected areas
- **Infant: PO** 5 units/day

Available forms: Caps 100, 200, 400, 500, 600, 1000 units; tabs 100, 200, 400 units; drops 15 mg/0.3 mL; chew tabs 400 units; ointment; cream; lotion; oil

Administer:

PO route

- Administer with or after meals
- Chew chewable tabs well
- Sol may be dropped in mouth or mixed with food
- Store in tight, light-resistant container

Topical route

- To moisturize dry skin

SIDE EFFECTS

CNS: Headache, fatigue
CV: Increased risk for thrombophlebitis
EENT: Blurred vision
GI: Nausea, cramps, diarrhea
GU: Gonadal dysfunction
INTEG: Sterile abscess, contact dermatitis
META: Altered metabolism of hormones (thyroid, pituitary, adrenal), altered immunity
MS: Weakness

PHARMACOKINETICS

PO: Metabolized in liver, excreted in bile

INTERACTIONS

Increase: action of oral anticoagulants
Decrease: absorption—cholestyramine, colestipol, mineral oil, sucralfate

NURSING CONSIDERATIONS

Assess:

- Nutritional status: wheat germ; dark green, leafy vegetables; nuts; eggs; liver; vegetable oils; dairy products; cereals
- **Pregnancy/breastfeeding:** use only recommended dietary allowances in pregnancy, breastfeeding

Evaluate:

- Therapeutic response: absence of hemolytic anemia, adequate vit E levels, improvement in skin lesions, decreased edema

Teach patient/family:

- About the necessary foods for diet
- To omit dose if missed
- To avoid vitamin supplements unless directed by prescriber

⚠ HIGH ALERT

vorapaxar (Rx)

(vor′a-pax′ar)

Zontivity

Func. class.: Platelet aggregation inhibitor

ACTION: Antagonizes the protease-activated receptor-1 (PAR-1) expressed on platelets

USES: Secondary myocardial infarction prophylaxis or stroke prophylaxis or thrombosis prophylaxis for reduction of thrombotic cardiovascular events in patients with a history of myocardial infarction or with peripheral arterial disease

CONTRAINDICATIONS

Black Box Warning: Bleeding, intracranial bleeding, stroke

V

Precautions: Breastfeeding, coronary artery bypass graft surgery (CABG), geriatric patients, hepatic disease, labor, obstetric delivery, pregnancy, renal impairment, surgery

DOSAGE AND ROUTES

• **Adult: PO** 2.08 mg once daily with aspirin and/or clopidogrel

Available forms: Tab 2.08 mg

Administer:

• May be administered without regard to food

• May be given with clopidogrel in addition to ASA

• Give missed dose as soon as possible unless almost time for next scheduled dose, do not double

SIDE EFFECTS

HEMA: Bleeding

CNS: Depression, intracranial bleeding

EENT: Retinal changes, diplopia, epistaxis

INTEG: Rash

GI: GI bleed, melena

GU: Hematuria, rectal hemorrhage

PHARMACOKINETICS

Within 1 week of treatment reaches ≥80% inhibition of thrombin receptor, half-life is 8 days, protein binding 99%, primarily eliminated feces; peak 1 hr

INTERACTIONS

Increase: bleeding risk—anticoagulants, aspirin, NSAIDs, other platelet inhibitors, SSRIs, rifampin, SNRIs, thrombolytics, ethyl estradiol, calcium channel blockers

Decrease: vorapaxar effect—CYP3A inducers (carBAMazepine, phenytoin, rifAMPin)

Increase: vorapaxor effect—CYP3A4 inhibitors (clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, posaconazole, ritonavir, saquinavir, telepravir)

Drug/Herb

Decrease: vorapaxar level—St. John's wort; avoid concurrent use

NURSING CONSIDERATIONS

Assess:

Black Box Warning: For bleeding, intracranial bleeding/stroke during treatment; bleeding should be suspected in hypotension in those who have recently undergone surgery, coronary angiography, (PCI), CABG; avoid products that increase bleeding risk (salicylates, NSAIDs, SSRIs, SNRIs); avoid use in liver failure

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed, excretion unknown

Evaluate:

• Therapeutic response: absence of MI, stroke

Teach patient/family:

• To report any unusual bruising, bleeding to prescriber; that it may take longer to stop bleeding; that no true antidote exists and that there is an increased bleeding risk for 4 wk after last dose

• To take without regard to food

• To inform all providers that this product is being used; not to use OTC, prescription, or herbal products without approval of prescriber

• Not to breastfeed; to report if pregnancy is planned or suspected

• To take as prescribed with aspirin or clopidogrel; not to use alone; not to discontinue without prescriber approval

voriconazole (Rx)

(vohr-i-kahn´a-zol)

Vfend, Vfend IV

Func. class.: Antifungal, systemic

Chem. class.: Triazole derivative

Do not confuse:

Vfend/Venofer

ACTION: Inhibits fungal CYP450-mediation demethylation; needed for biosynthesis; causes leakage from cell membrane

USES: Invasive aspergillosis, serious fungal infections (*Candida* sp.,

Scedosporium apiospermum, Fusarium sp., *Monosporium apiospermum*)

Unlabeled uses: *Acremonium* sp., *Blastomyces dermatitidis, Coccidioides immitis, Cryptococcus neoformans,* febrile neutropenia, fungal keratitis, *Histoplasma capsulatum,* oropharyngeal candidiasis, *Rhodotorula* sp., *Scedosporium* sp., cutaneous aspergillosis, candidemia (premature neonates), fungal infections in children ≥12 yr

CONTRAINDICATIONS:

Pregnancy, breastfeeding, children, hypersensitivity, severe bone marrow depression, severe hepatic disease

Precautions: Renal disease (IV); patients of Asian/African descent; cardiomyopathy, cholestasis, chemotherapy, lactase deficiency, visual disturbances, renal failure, pancreatitis, QT prolongation, hypokalemia; ventricular dysrhythmias, torsades de pointes

DOSAGE AND ROUTES

Esophageal candidiasis

• **Adult/geriatric/child ≥12 yr and ≥40 kg: PO/IV** 200 mg q12hr; **<40 kg,** 100 mg q12hr

• **Child 2-12 yr; 12-14 yr <50 kg:** IV 4 mg/kg q12hr; minimum treatment 14 days, ≥7 days after resolution of symptoms

Candidemia of the skin, kidney, bladder wall, abdomen (nonneutropenic patients)

• **Adult/child ≥12 yr: IV** loading dose 6 mg/kg q12hr × 24 hr, then 3-4 mg/kg q12hr × ≥14 days and ≥7 days after resolution of symptoms; **PO** after loading dose **>40 kg** 200 mg q12hr × ≥14 days and ≥7 days after resolution of symptoms; **<40 kg** 100 mg q12hr × ≥14 days and ≥7 days after resolution of symptoms

Invasive aspergillosis

• **Adult/adolescent: IV** 6 mg/kg q12hr (loading dose), then 4 mg/kg q12hr, may reduce to 3 mg/kg q12hr if intolerable

• **Child 12-14 yr ≥50 kg; ≥15 yr: IV:** 6 mg/kg q12hr × 2, then 4 mg/kg q12hr. Continue IV ≥7 days, switch to PO when able

• **Child >12 yr, ≥40 kg: PO** loading dose 400 mg bid on day 1, then 200 mg bid × ≤6 mo

• **Child >12 yr, <40 kg: PO** loading dose 200 mg bid on day 1, then 100 mg bid × ≤6 mo

Renal dose

• **Adult: PO** CCr <50 mL/min, use orally only

Hepatic dose

• **Adult: PO/IV** (Child-Pugh Class A or B) standard loading dose, then 50% of maintenance dose; (Child-Pugh class C) avoid use

Available forms: Tabs 50, 200 mg; powder for inj, lyophilized 200 mg, powder for oral susp 45 g (40 mg/mL after reconstitution)

Administer:

PO route

• **Oral susp:** tap bottle; add 46 mL of water to bottle; shake well; remove cap; push bottle adapter into neck of bottle; replace cap; write expiration date (14 days); shake before each use; give using oral dispenser supplied, 1 hr before or after meals; tabs and susp may be interchanged

• Store at room temperature (powder, tabs)

Intermittent IV INFUSION route

• Product only after C&S confirms organism and product needed to treat condition; make sure product used only in life-threatening infections

• **Reconstitute** powder with 19 mL water for inj to 10 mg/mL; shake until dissolved;

• **Further dilute** with NS, LR, D5W by calculating dosing volume infuse over 1-2 hr at concentration of ≤5 mg/mL; do not admix with other products

Y-site compatibilities: Acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B liposome, ampicillin, ampicillin/sulbactam, anidulafungin, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium acetate/chloride/gluconate,

V

CARBOplatin, carmustine, caspofungin, ceFAZolin, cefotaxime, cefoTEtan, cefOXitin, cefTAZidime, ceftizoxime, cefTRIAXone, chloramphenicol, chlorproMAZINE, cimetidine, ciprofloxacin, cisatracurium, CISplatin, clindamycin, cyclophosphamide, cytarabine, dacarbazine, DACTINomycin, DAPTOmycin, DAUNOrubicin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiaZEM, diphenhydrAMINE, DOBUTamine, DOCEtaxel, dolasetron, DOPamine, doripenem, doxacurium, doxycycline, droperidol, enalaprilat, ePHEDrine, EPINEPHrine, epirubicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentaNYL, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrALAZINE, hydrocortisone, ifosfamide, imipenem/cilastatin, inamrinone, insulin, irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, levoFLOXacin, lidocaine, linezolid, LORazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, metaraminol, methohexital, methotrexate, methyldopate, methylPREDNISolone, metoclopramide, metoprolol, metroNIDAZOLE, midazolam, milrinone, mitoMYcin, morphine, nafcillin, nalbuphine, naloxone, niCARdipine, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, PACLitaxel, pamidronate, pancuronium, pentamidine, pentazocine, PENTobarbital, PHENobarbital, phentolamine, phenylephrine, piperacillin/tazobactam, potassium chloride/phosphates, procainamide, promethazine, propranolol, quinupristin/dalfopristin, remifentanil, rocuronium, sodium acetate/bicarbonate/phosphates, streptozocin, succinylcholine, SUFentanil, tacrolimus, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, topotecan, trimethobenzamide, trimethoprim/sulfamethoxazole, vancomycin, vasopressin, vecuronium, verapamil, vinBLAStine, vinCRIStine, vinorelbine, zidovudine

SIDE EFFECTS

CNS: *Headache,* paresthesias, peripheral neuropathy, *hallucinations,* psychosis, EPS, depression, Guillain-Barré syndrome, insomnia, suicidal ideation, dizziness, fever

CV: Tachycardia, hypo/hypertension, vasodilation, atrial arrhythmias, atrial fibrillation, AV block, bradycardia, HF, MI, QT prolongation, torsades de pointes, peripheral edema

EENT: *Blurred vision,* eye hemorrhage, visual disturbances

GI: *Nausea, vomiting, anorexia, diarrhea,* cramps, hemorrhagic gastroenteritis, acute hepatic failure, hepatitis, intestinal perforation, pancreatitis

GU: *Hypokalemia,* azotemia, renal tubular necrosis, permanent renal impairment, anuria, oliguria

HEMA: Anemia, eosinophilia, hypomagnesemia, thrombocytopenia, leukopenia, pancytopenia

INTEG: *Burning, irritation,* pain, necrosis at inj site with extravasation, dermatitis, *rash,* photosensitivity

MISC: Respiratory disorder

SYST: Stevens-Johnson syndrome, toxic epidermal necrolysis, sepsis; melanoma, photosensitivity reactions

PHARMACOKINETICS

By CYP3A4, CYP2C9 enzymes; max serum concentration 1-2 hr after dosing; eliminated via hepatic metabolism; protein binding 58%; elimination half-life 6 hr (dose dependent)

INTERACTIONS

Increase: effects of benzodiazepines, calcium channel blockers, cycloSPORINE, ergots, HMG-CoA reductase inhibitors, pimozide, quiNIDine, prednisoLONE, sirolimus, sulfonylureas, tacrolimus, vinca alkaloids, warfarin, rifabutin, proton pump inhibitors, NNRTIs, protease inhibitors, phenytoin

Increase: nephrotoxicity—other nephrotoxic antibiotics (aminoglycosides,

CISplatin, vancomycin, cycloSPORINE, polymyxin B)
Increase: hypokalemia—corticosteroids, digoxin, skeletal muscle relaxants, thiazides
Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β agonists, local anesthetics, tricyclics, haloperidol, chloroquine, droperidol, pentamidine; CYP3A4 inhibitors (amiodarone, clarithromycin, erythromycin, telithromycin, troleandomycin), arsenic trioxide; CYP3A4 substrates (methadone, pimozide, QUEtiapine, quiNIDine, risperiDONE, ziprasidone)

Drug/Herb
- Do not use with St. John's wort

Drug/Food
- Avoid use with high-fat meals, take 1 hr before or after meal

Drug/Lab Test
Increase: AST/ALT, alk phos, creatinine, bilirubin
Decrease: HB/Hct, platelets, WBC

NURSING CONSIDERATIONS

Assess:
- VS q15-30min during first infusion; note changes in pulse, B/P
- I&O ratio; watch for decreasing urinary output, change in specific gravity; discontinue product to prevent permanent damage to renal tubules
- Blood studies: CBC, potassium, sodium, calcium, magnesium, q2wk; BUN, creatinine weekly
- Weight weekly; if weight increases >2 lb/wk, edema is present; renal damage should be considered
- **Renal toxicity:** increasing BUN, serum creatinine; if BUN is >40 mg/dL or if serum creatinine >3 mg/dL, product may be discontinued or dosage reduced
- **Hepatotoxicity:** increasing AST, ALT, alk phos, bilirubin, baseline and periodically
- **Allergic reaction:** dermatitis, rash; product should be discontinued, antihistamines (mild reaction) or EPINEPHrine (severe reaction) administered
- **Hypokalemia:** anorexia, drowsiness, weakness, decreased reflexes, dizziness, increased urinary output, increased thirst, paresthesias
- **Ototoxicity:** tinnitus (ringing, roaring in ears), vertigo, loss of hearing (rare); visual disturbance
- **QT prolongation:** ECG, ejection fraction; assess for chest pain, palpitations, dyspnea
- **Pregnancy/breastfeeding:** do not use in pregnancy, may cause fetal harm; do not breastfeed

Evaluate:
- Therapeutic response: decreased fever, malaise, rash, negative C&S for infecting organism

Teach patient/family:
- That long-term therapy may be needed to clear infection (2 wk-3 mo, depending on type of infection)
- To notify prescriber of bleeding, bruising, soft-tissue swelling, dark urine, persistent nausea or diarrhea, headache, rash, yellow skin/eyes
- Take 1 hr before or after meal (PO)
- Not to drive at night because of vision changes
- Avoid strong, direct sunlight
- Women of childbearing age should use effective contraceptive

vortioxetine (Rx)

(vor′tye-ox′e-teen)
Brintellix
Func. class.: Antidepressant
Chem. class.: Serotonin modulator

Do not confuse:
Brintellix/ Brilinta

ACTION: Reuptake inhibition at the serotonin transporter and agonist, or antagonist effects at serotonin receptors

USES: Major depressive disorder in adults

CONTRAINDICATIONS: Hypersensitivity, MAOI therapy

V

Precautions: Pregnancy, breastfeeding, seizure disorder, bipolar disorder, hyponatremia, hypovolemia, abrupt discontinuation, anticoagulant therapy, bleeding, closed-angle glaucoma, geriatric patients, hepatic disease

Black Box Warning: Children, suicidal ideation

DOSAGE AND ROUTES

• **Adult: PO** 10 mg/day, may start with 5 mg/day initially, increase to 20 mg/day as tolerated, max 20 mg/day; poor metabolizers of CYP2D6 max 10 mg/day

Available forms: Tabs 5, 10, 20 mg

Administer: Without regard to food

SIDE EFFECTS

CNS: Flushing, mania, serotonin syndrome, vertigo, dizziness, suicidal attempts

GI: *Nausea, diarrhea,* dyspnea, constipation, vomiting, flatulence

GU: Impotence, *ejaculation/orgasm dysfunction*

INTEG: Pruritus

SYST: Serotonin syndrome, neonatal abstinence syndrome, angioedema, pulmonary hypertension of the newborn, SIADH

PHARMACOKINETICS

Protein binding 98%, excreted in urine (59%), feces (26%)

INTERACTIONS

Increase: effect of tricyclics; use cautiously

Increase: serotonin syndrome—serotonin receptor agonists, SSRIs, traMADol, lithium, MAOIs, traZODone, SNRIs (venlafaxine, DULoxetine)

Increase: bleeding risk—NSAIDs, salicylates, thrombolytics, anticoagulants, antiplatelets

Increase: CNS effects—barbiturates, sedative/hypnotics, other CNS depressants

Decrease: vortioxetine levels—carBAMazepine

Drug/Herb:

Increase: serotonin syndrome—St. John's wort

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Mental status: mood, sensorium, affect, suicidal tendencies, increase in psychiatric symptoms, depression, panic

• **Serotonin syndrome:** increased heart rate, sweating, dilated pupils, tremors, twitching, hyperthermia, agitation

• Alcohol consumption; if alcohol is consumed, hold dose until AM

• **Sexual dysfunction:** impotence

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; do not breastfeed

Evaluate:

• Therapeutic response: decreased depression

Teach patient/family:

• That therapeutic effect may take several weeks

• That decrease in libido or impotence may occur

• To use caution when driving, performing other activities that require alertness because of drowsiness, dizziness, blurred vision; to report signs, symptoms of bleeding

• To avoid alcohol, other CNS depressants

Black Box Warning: That suicidal ideas, behaviors may occur in children or young adults

• To notify prescriber if pregnant, planning to become pregnant, or breastfeeding

Black Box Warning: About the effects of **serotonin syndrome:** nausea/vomiting, tremors; if symptoms occur, to discontinue immediately, notify prescriber

vosoritide (Rx)

(voe-SOR-i-tide)

Voxzogo

Func. class.: Misc. agent affecting bone structure

USES:

Increase linear growth in pediatric patients with achondroplasia

DOSAGE AND ROUTES

- **Child: SUBCUT** based on body weight

Available forms: Lyophilized powder for injection 0.4 mg, 0.56 mg, 1.2 mg single-dose vial

V

⚠ HIGH ALERT

warfarin (Rx)

(war′far-in)

Jantoven

Func. class.: Anticoagulant, vitamin K antagonist

Chem. class.: Coumarin derivative

Do not confuse:
Coumadin/Cardura/Avandia
Jantoven/Janumet/Januvia

ACTION: Interferes with blood clotting by indirect means; depresses hepatic synthesis of vit K–dependent coagulation factors (II, VII, IX, X)

USES: Antiphospholipid antibody syndrome, arterial thromboembolism prophylaxis, DVT, MI prophylaxis, after MI, stroke prophylaxis, thrombosis prophylaxis, pulmonary embolism

CONTRAINDICATIONS: Pregnancy, breastfeeding, hypersensitivity, hemophilia, leukemia with bleeding, peptic ulcer disease, thrombocytopenic purpura, hepatic disease (severe), malignant hypertension, subacute bacterial endocarditis, acute nephritis, blood dyscrasias, eclampsia, preeclampsia, hemorrhagic tendencies; surgery of CNS, eye; traumatic surgery with large open surface, bleeding tendencies of GI/GU/respiratory tract, stroke, aneurysms, pericardial effusion, spinal puncture, major regional/lumbar block anesthesia

Black Box Warning: Bleeding

Precautions: Geriatric patients, alcoholism, HF, debilitated patients, trauma, indwelling catheters, severe hypertension, active infections, protein C deficiency, polycythemia vera, vasculitis, severe diabetes, 🧬 Asian patients (CYP2C9), protein C, S deficiency or VKORC1 AA genotype

DOSAGE AND ROUTES–NTI

- **Adult: PO** 2-5 mg/day × 2-4 days, then titrated to INR/PT
- **Adolescent/child/infant: PO** 0.2 mg/kg/day × 2 days titrated to INR, max 10 mg

Available forms: Tabs 1, 2, 2.5, 3, 4, 5, 6, 7.5, 10 mg

Administer:

PO route

- Obtain coagulation studies—INR, PT—before use; INR level should be 2.0-3.0
- At same time each day to maintain steady blood levels without regard to food; food decreases rate but not extent of absorption; do not change brands
- Tabs whole or crushed
- Avoiding all IM inj that may cause bleeding
- Store in tight container

SIDE EFFECTS

GI: Nausea, cramps, calciphylaxis
GU: Hematuria
HEMA: Hemorrhage, agranulocytosis, leukopenia, eosinophilia, anemia, ecchymosis, petechiae
INTEG: *Rash,* dermal necrosis
MISC: Fever
MS: Bone fractures
SYST: Anaphylaxis, coma, cholesterol, microembolism, exfoliative dermatitis, purple toe syndrome

PHARMACOKINETICS

PO: Onset 12-24 hr, peak 1½-4 days, duration 3-5 days, effective half-life 20-60 hr; metabolized in liver; excreted in urine, feces (active/inactive metabolites); crosses placenta, 99% bound to plasma proteins

INTERACTIONS

Increase: warfarin action—allopurinol, amiodarone, azithromycin, chloral hydrate, chloramphenicol, cimetidine, clofibrate, cotrimoxazole, COX-2 selective inhibitors, dextrothyroxine, diflunisal,

disulfiram, erythromycin, ethacrynic acids, furosemide, glucagon, heparin, HMG-CoA reductase inhibitors, indomethacin, isoniazid, levoFLOXacin, mefenamic acid, metroNIDAZOLE, miFEPRIStone, NSAIDs, oxyphenbutazone, penicillins, phenylbutazone, quiNIDine, quinolone antiinfectives, RU-486, salicylates, sulfinpyrazone, sulfonamides, sulindac, SSRIs, steroids, thrombolytics, thyroid, tricyclics

Increase/decrease: effectiveness—assess for use of products that may increase or decrease effect

Increase: toxicity—oral sulfonylureas, phenytoin

Decrease: warfarin action—aprepitant, azaTHIOprine, barbiturates, bile acid sequestrants, bosentan, carBAMazepine, dicloxacillin, estrogens, ethchlorvynol, factor IX/VIIa, griseofulvin, nafcillin, oral contraceptives, phenytoin, rifAMPin, sucralfate, sulfaSALAzine, vit K, vit K foods

Drug/Herb

Increase: risk for bleeding—anise, chamomile, dong quai, evening primrose, feverfew, fish oil, garlic, ginger, ginkgo, ginseng, horse chestnut, licorice, melatonin, red yeast rice, saw palmetto

Decrease: anticoagulant effect—coenzyme Q10, St. John's wort

Drug/Lab Test

Increase: T_3 uptake, LFTs, INR, PT, PTT

NURSING CONSIDERATIONS

Assess:

Black Box Warning: Blood studies (Hct, PT, platelets, occult blood in stools) q3mo; INR: in hospital daily after 2nd or 3rd dose; when in therapeutic range (2-3) for 2 consecutive days, monitor 2-3× wk for 1-2 wk, then less frequently, depending on stability of INR results; *Outpatient:* monitor every few days until stable dose, then periodically thereafter, depending on stability of INR results, usually at least monthly

Black Box Warning: Bleeding: bleeding gums, petechiae, ecchymosis, black tarry stools, hematuria, occult bleeding (cerebral, intraabdominal; fatal hemorrhage can occur; do not use in uncontrolled bleeding

- Fever, skin rash, urticaria
- **Pregnancy/breastfeeding:** do not use in pregnancy; use effective contraception during and for 1 mo after final dose; cautious use in breastfeeding

Evaluate:

- Therapeutic response: decrease in deep venous thrombosis, absence of pulmonary embolism

Teach patient/family:

- To avoid OTC preparations that may cause serious product interactions unless directed by prescriber; to avoid alcohol, herbs, supplements
- To carry emergency ID identifying product taken
- About the importance of compliance with exams and doses

Black Box Warning: Bleeding: to report any signs of bleeding: gums, nosebleed, under skin, urine, stools; to use soft-bristle toothbrush to avoid bleeding gums; to use electric razor

- To avoid hazardous activities (e.g., football, hockey, skiing), dangerous work that can induce bleeding episodes
- To inform all health care providers of anticoagulant intake
- To take exactly as prescribed; dosage changes are common for desired effect; not to skip, double doses; take missed dose when remembered
- To eat a diet that is not varied; several foods contain vitamin K and can alter warfarin effect
- To report to prescriber fever, rash, trouble breathing
- That continuing follow-up exams and lab work will be needed

TREATMENT OF OVERDOSE:
Administer vit K

witch hazel (OTC)
(wich ha′zel)
A.E.R Witch Hazel, Medi Pads, Preparation H Wipes
Func. class.: Astringents

USES:
Anal/vaginal irritation

CONTRAINDICATIONS
None known

DOSAGE AND ROUTES
Adult/child ≥12 yr: Topical, apply to affected area ≤6 times/day

zafirlukast (Rx)

(za-feer'loo-cast)

Accolate

Func. class.: Bronchodilator

Chem. class.: Leukotriene receptor antagonist

Do not confuse:
Accolate/Accupril/Accutane

ACTION: Antagonizes the contractile action of leukotrienes (LTD_4, LTE_4) in airway smooth muscle; inhibits bronchoconstriction caused by antigens

USES: Prophylaxis and chronic treatment of asthma in adults/children >5 yr

CONTRAINDICATIONS: Hypersensitivity, hepatic encephalopathy
Precautions: Pregnancy, breastfeeding, children, geriatric patients, hepatic disease, Churg-Strauss syndrome, acute bronchospasm

DOSAGE AND ROUTES

- **Adult/child ≥12 yr: PO** 20 mg bid
- **Child 5-11 yr: PO** 10 mg bid

Available forms: Tabs 10, 20 mg
Administer:
- 1 hr before or 2 hr after meals

SIDE EFFECTS

CNS: Headache, dizziness, suicidal ideation, insomnia, fever
GI: Nausea, diarrhea, abdominal pain, vomiting, dyspepsia, hepatic failure, hepatitis
HEMA: Agranulocytosis
OTHER: Infections, pain, asthenia, myalgia, fever, increased ALT, urticaria, rash, angioedema

PHARMACOKINETICS

Rapidly absorbed, peak 3 hr, 99% protein binding (albumin), extensively metabolized, inhibits CYP2C9 and 3A4 enzyme systems, excreted in feces, clearance reduced in geriatric patients, hepatic impairment, half-life 10 hr

INTERACTIONS

Increase: plasma levels of zafirlukast—aspirin, acetaminophen
Increase: bleeding risk—warfarin, monitor INR closely
Decrease: plasma levels of zafirlukast—erythromycin, theophylline
Drug/Food
Decrease: bioavailability

NURSING CONSIDERATIONS

Assess:
- **Churg-Strauss syndrome** (rare): eosinophilia, vasculitic rash, worsening pulmonary symptoms, cardiac complications, neuropathy; may be caused by reducing oral corticosteroids
- Respiratory rate, rhythm, depth; auscultate lung fields bilaterally; notify prescriber of abnormalities; not to be used for acute bronchospasm in acute asthma
- **Hepatic dysfunction:** right upper quadrant abdominal pain, nausea/vomiting, fatigue, lethargy, pruritus, jaundice, and flulike symptoms, discontinue; monitor LFTs; should be measured immediately and the patient managed if needed
- **Pregnancy/breastfeeding:** use only if clearly needed; do not breastfeed, excreted in breast milk

Evaluate:
- Therapeutic response: ability to breathe more easily

Teach patient/family:
- To check OTC medications, current prescription medications that may increase stimulation, do not stop other asthma medications unless instructed to do so
- To avoid hazardous activities because dizziness may occur
- That if GI upset occurs, to take product with 8 oz water; to take 1-2 hr after a meal; to avoid taking with food if possible because absorption may be decreased
- To notify prescriber of nausea, vomiting, diarrhea, abdominal pain, fatigue, jaundice, anorexia, flulike symptoms (hepatic dysfunction)
- Not to use for acute asthma episodes
- To take even if symptom free
- Not to take if breastfeeding

⚠ HIGH ALERT

zaleplon (Rx)

(zal′eh-plon)

Func. class.: Hypnotic, nonbarbiturate

Chem. class.: Pyrazolopyrimidine

Controlled Substance Schedule IV

Do not confuse:
Zaleplon/Zelapron/Zemplar/Zolpidem

ACTION: Binds selectively to omega-1 receptor of the $GABA_A$ receptor complex; results are sedation, hypnosis, skeletal muscle relaxation, anticonvulsant activity, anxiolytic action

USES: Insomnia (short-term treatment)

CONTRAINDICATIONS: Hypersensitivity, severe hepatic disease

Black Box Warning: Complex sleep-related behaviors

Precautions: Pregnancy, breastfeeding, children <15 yr, geriatric patients, respiratory/renal/hepatic disease, psychosis, angioedema, depression, sleep-related behaviors (sleep walking), Asian descent, CNS depression, suicidal ideation, sleep apnea; salicylate, tartrazine dye, hypersensitivity

DOSAGE AND ROUTES

- **Adult: PO** 10 mg at bedtime; may increase to 20 mg if needed; 5 mg may be used in low-weight persons, use for only 7-10 days
- **Geriatric/hepatic dose: PO** 5 mg at bedtime; may increase if needed

Available forms: Caps 5, 10 mg

Administer:

- Immediately before bedtime for sleeplessness
- On empty stomach for fast onset
- Store in tight container in cool environment

SIDE EFFECTS

CNS: *Lethargy, drowsiness, daytime sedation,* dizziness, confusion, anxiety, amnesia, depersonalization, hallucinations, hyperesthesia, paresthesia, somnolence, tremors, vertigo, complex sleep-related reactions: sleep driving, sleep eating
CV: Chest pain, peripheral edema
EENT: Vision change, ear/eye pain, hyperacusis, parosmia
GI: Nausea, abdominal pain, constipation, anorexia, colitis, dyspepsia, dry mouth
MISC: Asthenia, fever, headache, myalgia, dysmenorrhea
MS: Myalgia, back pain, arthritis
RESP: Bronchitis
SYST: Severe allergic reactions

PHARMACOKINETICS

Rapid onset, metabolized by liver extensively, excreted by kidneys (inactive metabolites), half-life 1 hr, onset, peak 1 hr, duration 3-4 hr

INTERACTIONS

Increase: effect of zaleplon—cimetidine
Decrease: zaleplon bioavailability—CYP3A4 inducers
Increase: CNS depression—CNS depressants
Increase: respiratory depression, death—opioids

Drug/Food

- Prolonged absorption, sleep onset reduced: high-fat/heavy meal

Drug/Lab

Increase: lipids

NURSING CONSIDERATIONS

Assess:

- **Mental status:** mood, sensorium, affect, memory (long, short term), excessive sedation, impaired coordination
- **Sleep disorder:** type of sleep problem: falling asleep, staying asleep

Black Box Warning: Complex sleep-related behaviors: Assess for previous complex sleep-related behaviors, and do not use with these patients, sleep eating, driving, walking, all while not fully awake

- **Beers:** avoid in older adults with delirium or at high risk for delirium; potential for worsening or inducing delirium

Evaluate:
• Therapeutic response: ability to sleep at night, decreased amount of early morning awakening
Teach patient/family:
• To avoid driving or other activities requiring alertness until product is stabilized
• To avoid alcohol ingestion, advise prescriber of all other OTC/Rx/herbals taken

Black Box Warning: That product may cause memory problems, dependence (if used for longer periods of time), changes in behavior/thinking, complex sleep-related behaviors (sleep eating/driving)

• That product is for short-term use only and when patient can sleep ≥4 hr
• To take immediately before going to bed
• Not to ingest a high-fat/heavy meal before taking
• To be aware that allergic reactions may occur
• **Pregnancy/breastfeeding:** Identify if pregnancy is planned or suspected or if breastfeeding

zanamivir (Rx)

(zan′ah-mih-veer)

Relenza Diskhaler

Func. class.: Antiviral

Chem. class.: Neuraminidase inhibitor

USES: Treatment of influenza types A and B for patients who have been symptomatic for ≤2 days, seasonal influenza prophylaxis

DOSAGE AND ROUTES

Treatment of influenza A and B
• **Adult/child >7 yr: INH** 2 inhalations (two 5-mg blisters) q12hr × 5 days; on the 1st day, 2 doses should be taken with at least 2 hr between doses
Prophylaxis of influenza A and B
• **Adult/child >5 yr: INH** 10 mg (2 inhalations) daily × 28 days

Available forms: Blisters of powder for inhalation: 5 mg for Diskhaler

zidovudine (Rx)

(zye-doe′-vue-deen)

Retrovir

Func. class.: Antiretroviral

Chem. class.: Nucleoside reverse transcriptase inhibitor (NRTI)

Do not confuse:
Retrovir/ritonavir

ACTION: Inhibits replication of HIV-1 virus by incorporating into cellular DNA by viral reverse transcriptase, thereby terminating the cellular DNA chain

USES: Used in combination with at least 2 other antiretrovirals for HIV-1 infection, prevention of perinatal HIV

CONTRAINDICATIONS: Hypersensitivity
Precautions: Pregnancy, breastfeeding, children, granulocyte count <1000/mm^3 or HB <9.5 g/dL, severe renal disease, obesity

Black Box Warning: Hepatotoxicity, anemia, lactic acidosis, myopathy, neutropenia

DOSAGE AND ROUTES

HIV with other antiretroviral agents
• **Adult/adolescents: PO** 300 mg bid or 200 mg tid; **IV INFUSION** 1 mg/kg over 1 hr q4hr. Initiate oral therapy as soon as possible
• **Child 4 wk to <18 yr: PO** max adult dose; **≥30 kg:** 300 mg bid or 200 mg tid; **9-29 kg: PO** 9 mg/kg bid or 6 mg/kg tid; **4-8 kg: PO** 12 mg/kg bid or 8 mg/kg tid
Perinatal (HIV) prophylaxis
• **Pregnant females (intrapartum): IV INFUSION** 2 mg/kg over 1 hr, followed by 1 mg/kg/hr **IV CONT INFUSION** until clamping of the umbilical cord
• **Neonate ≥35 wk gestational age: IV** 3 mg/kg q12hr beginning as soon as possible after birth, convert to PO as soon as possible

Renal dose

- **Adult: PO** CCr ≥15 mL/min: no change; CCr <15 mL/min, 100 mg q8hr or 300 mg/day
- **Pediatric patients: PO** GFR ≥10 mL/min/1.73 m^2: no change; GFR <10 mL/min/1.73 m^2: reduce dose by 50%

Available forms: Caps 100; tabs 300 mg; inj 10 mg/mL; oral syrup 50 mg/5 mL

Administer:

- By mouth; capsules should be swallowed whole
- Trimethoprim-sulfamethoxazole, pyrimethamine, or acyclovir as ordered to prevent opportunistic infections; if these products are given, watch for neurotoxicity
- Store in cool environment; protect from light

Intermittent IV INFUSION route

- Latex is in vial stopper
- After diluting in D_5W to ≤4 mg/mL; give over 1 hr
- Discard any unused portions
- Protect unopened product from light; use diluted sol within 8 hr room temperature, 24 hr refrigerated, do not use discolored solutions

Y-site compatibilities: Acyclovir, alemtuzumab, allopurinol, amifostine, amikacin, amphotericin B, amphotericin B cholesteryl, anidulafungin, argatroban, aztreonam, cefepime, cefTAZidime, cefTRIAXone, cimetidine, cisatracurium, clindamycin, dexamethasone, DOBUTamine, DOPamine, DOXOrubicin liposome, erythromycin, filgrastim, fluconazole, fludarabine, gentamicin, granisetron, heparin, imipenem-cilastatin, LORazepam, melphalan, metoclopramide, morphine, nafcillin, ondansetron, oxacillin, PACLitaxel, pentamidine, phenylephrine, piperacillin, piperacillin-tazobactam, potassium chloride, raNITIdine, remifentanil, sargramostim, tacrolimus, teniposide, thiotepa, tobramycin, trimethoprim-sulfamethoxazole, trimetrexate, vancomycin, vinorelbine, zoledronic acid

SIDE EFFECTS

CNS: *Fever, headache, malaise,* diaphoresis, *dizziness, insomnia,* paresthesia, somnolence, chills, tremors, twitching, anxiety, confusion, depression, lability, vertigo, loss of mental acuity, seizures, malaise

EENT: Taste change, hearing loss, photophobia

GI: *Nausea, vomiting, diarrhea, anorexia,* cramps, *dyspepsia, constipation,* dysphagia, *flatulence,* rectal bleeding, mouth ulcer, abdominal pain, hepatomegaly

GU: Dysuria, polyuria, urinary frequency, hesitancy

HEMA: Granulocytopenia, anemia, severe bone marrow suppression

INTEG: *Rash,* acne, pruritus, urticaria

MS: Myalgia, arthralgia, muscle spasm

RESP: Dyspnea, cough, wheezing

SYST: Lactic acidosis, Stevens-Johnson syndrome

PHARMACOKINETICS

PO: Rapidly absorbed from GI tract, peak ½-1½ hr; IV peak infusions end; metabolized in liver (inactive metabolites), excreted by kidneys, protein binding 38%, half-life ½-3 hr

INTERACTIONS

Increase: bone marrow depression—antineoplastics, radiation, ganciclovir, valGANciclovir, trimethoprim-sulfamethoxazole

Increase: zidovudine level—methadone, atovaquone, fluconazole, probenecid, trimethoprim, valproic acid; may need to reduce zidovudine dose

Increase: toxicity-fluconazole, probenecid

Decrease: zidovudine levels—clarithromycin, interferons, NRTIs, DOXOrubicin, ribavirin, stavudine; avoid concurrent use

Drug/Lab Test

Decrease: platelets, granulocytes

Increase: LFTs, amylase, CPK

NURSING CONSIDERATIONS

Assess:

- **HIV:** monitor for symptoms of HIV, baseline and throughout treatment

Black Box Warning: Bone marrow suppression: monitor blood counts q2wk; watch for decreasing granulocytes, HB; if low, therapy may have to be discontinued and restarted after hematologic recovery; blood transfusions may be required; viral load, CD4 counts, LFTs, plasma HIV RNA, serum creatinine/BUN at baseline and throughout treatment

Black Box Warning: Lactic acidosis, severe hepatomegaly with steatosis (rare): Obtain baseline LFTs; if elevated, discontinue; discontinue even if liver function tests are normal but lactic acidosis, hepatomegaly are present; may be fatal; more common in females, may develop dyspnea, tachypnea

Black Box Warning: Myopathy may occur with long-term use, assess for myalgia, arthralgia during long-term use

- **Lipoatrophy:** May occur, another treatment may be needed to prevent it
- **Hypersensitivity:** Do not use if previous serious hypersensitivity to this product, Stevens-Johnson syndrome may occur
- **Immune reconstitution syndrome:** Assess for rash, fever, lymphadenopathy, abdominal pain due to opportunistic infections
- Monitor lipid profile, blood glucose, hepatitis B serology, plasma hepatitis C RNA, serum cholesterol, pregnancy test, urinalysis, serum lipase, amylase
- **Pregnancy/breastfeeding:** register pregnant patients at the Antiretroviral Pregnancy Registry, 1-800-258-4263; do not breastfeed, excreted in breast milk, max suppression of virus should be attained before pregnancy is considered; to be used near delivery even if HIV RNA status is unknown

Evaluate:
- Therapeutic response: decreased viral load, increased CD4 counts, decreased symptoms of HIV

Teach patient/family:
- That GI complaints and insomnia resolve after 3-4 wk of treatment
- **HIV:** That repeat testing in 4-6 wk is needed due to risk of false positive if used in newborn
- That product is not a cure for AIDS but will control symptoms; that compliance with treatment is required
- To notify prescriber of sore throat, swollen lymph nodes, malaise, fever, shortness of breath because other infections may occur; to avoid crowds or people with known infections
- That patient is still infective, may pass AIDS virus on to others
- That follow-up visits must be continued because serious toxicity may occur; that blood counts must be done q2wk; that blood transfusions may be needed for severe anemia
- That product must be taken bid or tid around the clock to prevent variations in blood levels
- To notify prescriber of rash, nausea, vomiting, weakness
- That serious product interactions may occur if OTC products are ingested; to check with prescriber before taking aspirin, acetaminophen, indomethacin
- That other products may be necessary to prevent other infections
- To take without regard to meals
- Not to take other antiretrovirals except those prescribed
- That product may cause fainting or dizziness; to avoid driving or other hazardous tasks until response is known
- That redistribution of body fat may occur
- Not to breastfeed during treatment, that use during pregnancy reduces transmission to neonate

zinc (Rx, OTC)

Galzin

Func. class.: Trace element; nutritional supplement

ACTION: Needed for adequate healing, bone and joint development (23% zinc)

USES: Prevention of zinc deficiency, adjunct to vit A therapy
Unlabeled uses: Wound healing
Precautions: Pregnancy, parenteral; breastfeeding, neonates, hypocupremia, neonatal prematurity, renal disease

DOSAGE AND ROUTES

Dietary supplement (elemental zinc)
- **Adult/adolescent/pregnant female: PO** 11-13 mg/day

- **Adult/lactating female: PO** 12-14 mg/day × 12 mo
- **Adult/adolescent male ≥14 yr: PO** 11 mg/day
- **Adult female ≥19 yr: PO** 8 mg/day
- **Adolescent female ≥14 yr: PO** 9 mg/day
- **Child 9-13 yr: PO** 8 mg/day
- **Child 4-8 yr: PO** 5 mg/day
- **Child 1-3 yr: PO** 3 mg/day
- **Infant 7-12 mo: PO** 3 mg/day
- **Infant birth to 6 mo: PO** 2 mg/day (adequate intake)

Nutritional supplement (IV)
- **Adult:** 2.5-4 mg/day; may increase by 2 mg/day if needed
- **Child 1-5 yr: IV** 50 mcg/kg/day

Wound healing
- **Adult: PO** 50 mg tid until healed (elemental zinc)

Available forms: Tabs 66, 110, 220 mg; inj 1 mg/mL, 5 mg/mL; caps 25, 50 mg

Administer:
- With meals to decrease gastric upset; avoid dairy products

SIDE EFFECTS

GI: Nausea, vomiting, cramps, heartburn, ulcer formation

OVERDOSE: Diarrhea, rash, dehydration, restlessness

INTERACTIONS

Decrease: absorption of fluoroquinolones—tetracyclines

Drug/Food

Decrease: absorption of PO zinc—dairy products, caffeine

NURSING CONSIDERATIONS

Assess:
- **Zinc deficiency:** poor wound healing, absence of taste, smell, slowing growth
- Alkaline phosphatase, HDL monthly in long-term therapy
- Zinc levels during treatment, CBC
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk (IV); considered safe in breastfeeding

Evaluate:
- Therapeutic response: absence of zinc deficiency

Teach patient/family:
- That element must be taken for 2-3 mo to be effective
- To immediately report nausea, diarrhea, rash, severe vomiting, restlessness, abdominal pain, tarry stools

ziprasidone (Rx)

(zi-praz′ih-dohn)

Geodon, Zeldox

Func. class.: Antipsychotic/neuroleptic

Chem. class.: Benzisoxazole derivative

ACTION: Unknown; may be mediated through both dopamine type 2 (D_2) and serotonin type 2 ($5\text{-}HT_2$) antagonism

USES: Schizophrenia, acute agitation, acute psychosis, bipolar disorder, mania, psychotic depression

CONTRAINDICATIONS: Breastfeeding, hypersensitivity, acute MI, heart failure, QT prolongation, breastfeeding, drugs that increase QT interval

Precautions: Pregnancy, children, geriatric patients, cardiac/renal/hepatic disease, breast cancer, diabetes, seizure disorders, AV block, CNS depression, abrupt discontinuation, agranulocytosis, ambient temperature increase, suicidal ideation, torsades de pointes, strenuous exercise, diuretics, diarrhea

Black Box Warning: Increased mortality in geriatric patients with dementia-related psychosis

DOSAGE AND ROUTES

Schizophrenia
- **Adult: PO** 20 mg bid with food, adjust dosage every 2 days upward to max of 80 mg bid; **IM** 10-20 mg; may give 10 mg q2hr; doses of 20 mg may be given q4hr; max 40 mg/day (acute episodes)

Acute mania/mixed episodes bipolar disorder

• **Adult: PO** 20-40 mg bid with food; increase ≥q2days as needed **maintenance as adjunct to lithium/valproate** 40-80 mg bid

Available forms: Caps 20, 40, 60, 80 mg; inj 20 mg/mL (after reconstituting) single-dose vials

Administer:

PO route

• Take cap whole and with food, with plenty of fluid at same time of day

• Reduced dose in geriatric patients

• Anticholinergic agent to be used for EPS

• Store in tight, light-resistant container

IM route

• Add 1.2 mL sterile water for inj to vial; shake vigorously until dissolved; do not admix; give only IM; give deeply in large muscle; do not use if particulates are present, keep patient recumbent for 30 min after injection

• Do not give over 3 consecutive days, switch to PO as soon as possible

• Store injection at room temperature, protect from light, after reconstituting may be stored at room temperature × 24 hr, 7 days refrigerated

SIDE EFFECTS

CNS: *EPS, pseudoparkinsonism, akathisia, dystonia, tardive dyskinesia; drowsiness, insomnia, agitation, anxiety, headache,* seizures, neuroleptic malignant syndrome, dizziness, tremors, facial droop

CV: Orthostatic hypotension, tachycardia, prolonged QT/QTc, hypertension, sudden death, heart failure (geriatric patients), torsades de pointes

HEMA: Agranulocytosis

EENT: Blurred vision, diplopia

ENDO: Hypoglycemia

GI: *Nausea,* vomiting, *anorexia, constipation,* jaundice, weight gain, diarrhea, dry mouth, abdominal pain

GU: Priapism

INTEG: Rash, injection-site pain, sweating, DRESS, Steven's Johnson Syndrome photosensitivity

RESP: Infection, cough

PHARMACOKINETICS

IM: Peak 60 min

PO: Peak 6-8 hr, extensively metabolized by liver to major active metabolite, plasma protein binding 99%, half-life 7 hr

INTERACTIONS

Increase: respiratory depression-opioids, avoid concurrent use

Increase: Ziprasidone level-CYP3A4 inhibitors (Ketoconazole, itraconazole); dose may need to be reduced

Increase: QT prolongation—class IA/III antidysrhythmics, some phenothiazines, β-agonists, local anesthetics, tricyclics, haloperidol, methadone, chloroquine, clarithromycin, droperidol, erythromycin, pentamidine, moxifloxacin

Increase: sedation—other CNS depressants, alcohol

Increase: hypotension—antihypertensives, monitor B/P

Increase: serotonin syndrome, neuroleptic malignant syndrome—SSRIs, SNRIs

Decrease: ziprasidone effect—carbamazepine, may need ziprasidone dose increased

Drug/Lab

Increase: lipids, glucose

Decrease: WBCs

NURSING CONSIDERATIONS

Assess:

• Mental status before initial administration, AIMS assessment

Black Box Warning: Assess geriatric patient with dementia closely; heart failure, sudden death have occurred; this product is not approved for the treatment of dementia-related psychosis in the elderly

• **DRESS:** Assess for rash, fever, swollen lymph nodes, product should be discontinued

• **Steven's Johnson Syndrome:** rash with fever, aches, blisters, swelling of face, discontinue product immediately

• **Seizures:** Seizures in those with seizure disorders, provide seizure precautions, seizure threshold is lowered

• Assess for metabolic syndrome (hyperglycemia, hypertension, increased cholesterol/lipids, increased BMI/abdominal obesity)
• Watch for suicidal thoughts/behaviors
• Bilirubin, CBC, LFTs, fasting blood glucose, cholesterol profile; potassium, magnesium when taken with loop/thiazide diuretics monthly, not to be used with electrolyte abnormalities
• B/P standing and lying; also pulse, respirations; take these q4hr during initial treatment; establish baseline before starting treatment; report drops of 30 mm Hg; watch for ECG changes; QT prolongation may occur; discontinue product if QTc >500 msec
• Dizziness, faintness, palpitations, tachycardia on rising, may be serious dysrthmia
• **EPS,** including akathisia (inability to sit still, no pattern to movements), tardive dyskinesia (bizarre movements of the jaw, mouth, tongue, extremities), pseudoparkinsonism (rigidity, tremors, pill rolling, shuffling gait)
• **Neuroleptic malignant syndrome, serotonin syndrome:** hyperthermia, increased CPK, altered mental status, muscle rigidity
• Constipation, urinary retention daily; if these occur, increase bulk and water in diet or stool softener
• Fall risk assessment, supervised ambulation until patient is stabilized on medication; do not involve patient in strenuous exercise program because fainting is possible; patient should not stand still for a long time
• **Beers:** avoid use in older adults except for schizophrenia, bipolar disorder, or short term as an antiemetic during chemotherapy; increased risk of stroke and cognitive decline
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause EPS in the neonate, enroll pregnant women in the Atypical Antipsychotic Pregnancy Registry, 1-866-961-2388; avoid breastfeeding, excretion unknown

Evaluate:
• Therapeutic response: decrease in emotional excitement, hallucinations, delusions, paranoia; reorganization of patterns of thought, speech

Teach patient/family:
• That orthostatic hypotension may occur; to rise from sitting or lying position gradually
• To avoid hot tubs, hot showers, tub baths because hypotension may occur
• To avoid tanning beds, excessive sunlight, photosensitivity may occur
• To avoid abrupt withdrawal of product because EPS may result; that product should be withdrawn slowly
• To avoid OTC preparations (cough, hay fever, cold), herbals, supplements unless approved by prescriber because serious product interactions may occur; to avoid use with alcohol because increased drowsiness may occur
• To avoid hazardous activities if drowsy or dizzy
• To report impaired vision, tremors, muscle twitching, diarrhea
• That results may take up to 6 wk
• To notify prescriber if pregnancy is planned or suspected or if breastfeeding
• To report immediately mouth sores, rash, swollen face/mouth/eyes, swollen lymph nodes
• To take with food; not to break, crush, or chew capsules
• Not to use opioids with benzodiazepines, other CNS depressants; to seek emergency services for dizziness, severe sleepiness, change in breathing
• That continuing follow-up exams will be needed
• In hot weather, that heat stroke may occur; to take extra precautions to stay cool, take adequate liquids

TREATMENT OF OVERDOSE:

Lavage if orally ingested; provide airway; *do not induce vomiting*

⚠ HIGH ALERT

ziv-aflibercept (Rx)

(ziv-a-flih′ber-sept)

Zaltrap

Func. class.: Antineoplastic

Chem. class.: Signal transduction inhibitor (STI), fusion protein

USES: Metastatic colorectal cancer that is resistant or has progressed after an oxaliplatin-containing regimen in combination with 5-fluorouracil, leucovorin, irinotecan (FOLFIRI)

DOSAGE AND ROUTES

- **Adult: IV** 4 mg/kg over 1 hr on day 1 q2wk with the FOLFIRI regimen
- Do not use in severe hypertension until controlled, then use lower dose

Available forms: Solution for injection 100 mg/4 mL; 200 mg/8 mL

zoledronic acid (Rx)

(zoh′leh-drah′nick ass′id)

Aclasta, Reclast, Zometa

Func. class.: Bone-resorption inhibitor

Chem. class.: Bisphosphonate

USES: Moderate to severe hypercalcemia associated with malignancy; multiple myeloma; bone metastases from solid tumors (used with antineoplastics); active Paget's disease; osteoporosis, glucocorticoid-induced osteoporosis, osteoporosis prophylaxis in postmenopausal women

DOSAGE AND ROUTES

Hypercalcemia of malignancy

- **Adult: IV INFUSION** 4 mg, given as single infusion over ≥15 min; may re-treat with 4 mg if serum calcium does not return to normal within 1 wk

Multiple myeloma/metastatic bone lesions

- **Adult: IV INFUSION** 4 mg, give over 15 min q3-4wk

Osteoporosis

- **Adult: IV INFUSION** 5 mg over ≥15 min q12mo

Active Paget's disease (Reclast)

- **Adult: IV INFUSION** 5 mg over ≥15 min with 1500 mg elemental calcium in divided doses and 800 IU of vitamin D

Osteoporosis prophylaxis (Reclast), postmenopausal women

- **Adult: IV INFUSION** 5 mg every other year

Osteoporosis prophylaxis (Reclast) when taking systemic glucocorticoids

- **Adult: IV** 5 mg every year

Renal dose

- **Adult: IV INFUSION** CCr 50-60 mL/min, 3.5 mg; CCr 40-49 mL/min, 3.3 mg; CCr 30-39 mL/min, 3 mg; CCr <30 mL/min, do not use

Osteopenia prevention in androgen deprivation treatment (prostate cancer) (unlabeled)

- **Adult: IV** 4 mg q6-12mo or 5 mg q12mo

Available forms: sol for inj 4 mg/5 mL; (Aclasta, Reclast) inj 5 mg/100 mL

ZOLMitriptan (Rx)

(zole-mih-trip′tan)

Zomig, Zomig-ZMT

Func. class.: Migraine agent, abortive

Chem. class.: Serotonin 5-HT_{1B}/$5HT_{1D}$ receptor agonist (triptan)

ACTION: Binds selectively to the vascular 5-HT_{1B}/$5HT_{1D}$ receptor subtype, exerts antimigraine effect; causes vasoconstriction in cranial arteries

USES: Acute treatment of migraine with/without aura

CONTRAINDICATIONS:
Angina pectoris, history of MI, documented silent ischemia, ischemic heart disease, uncontrolled hypertension, hypersensitivity, basilar or hemiplegic migraine, risk of CV events

Precautions: Pregnancy, breastfeeding, children, postmenopausal women, men >40 yr, geriatric patients, risk factors for CAD, hypercholesterolemia, obesity, diabetes, impaired renal/hepatic function

DOSAGE AND ROUTES
• **Adult: PO** start at 2.5 mg (tab may be broken), may repeat after 2 hr, max single dose 5 mg, max 10 mg/24 hr; **NASAL** 1 spray in 1 nostril at onset of migraine, repeat in 2 hr if no relief

Available forms: Tabs 2.5, 5 mg; orally disintegrating tabs 2.5, 5 mg; nasal spray 2.5, 5 mg

Administer:

PO route (conventional tablet)
• Tablet may be split
• Take with fluids as soon as symptoms of migraine occur
• Not approved for more than 3-4 uses in a month
• **Orally disintegrating tab:** do not crush or chew; allow to dissolve on tongue

Nasal route
• Blow nose before use
• Remove top, insert in nostril, hold other nostril shut
• Do not prime
• Press on plunger while breathing gently through the nose
• Discard for single use only

SIDE EFFECTS
CNS: *Tingling, hot sensation, burning, feeling of pressure, tightness, numbness, dizziness, sedation*
CV: Palpitations, chest pain
GI: Abdominal discomfort, nausea, dry mouth, dyspepsia, dysphagia
MISC: Odd taste (spray)
MS: *Weakness, neck stiffness,* myalgia
RESP: Chest tightness, pressure

PHARMACOKINETICS
Peak 1½-3 hr (PO), 3 hr (nasal); 25% protein binding; half-life 3-3½ hr; metabolized in liver (metabolite); excreted in urine (60%-80%), feces (20%-40%)

INTERACTIONS
• Increase: Extended vasospastic effects: ergot, ergot derivatives, avoid using with ZOLMitriptan, space by 24 hr
• Do not use within 2 wk of MAOIs
• Increase: Weakness, hyperreflexia, incoordination: SSRIs (FLUoxetine, fluvoxaMINE, PARoxetine, sertraline), SNRI, methylene blue, traMADol

Increase: half-life of ZOLMitriptan—cimetidine, oral contraceptives, monitor

Drug/Herb
• Increase: Serotonin syndrome: SAM-e, St. John's wort

Drug/Lab Test
Increase: ALP

NURSING CONSIDERATIONS
Assess:
• **CNS/PANS:** Assess for tingling, hot sensation, burning, feeling of pressure, numbness, flushing
• **Neurologic status:** LOC, blurring vision, nausea, vomiting, tingling in extremities preceding headache
• **Diet and possible triggers:** Ingestion of tyramine foods (pickled products, beer, wine, aged cheese), food additives, preservatives, colorings, artifical sweeteners, chocolate, caffeine, which may precipitate these types of headaches, use over 10 day/month may lead to exacerbation of headache
• **Serotonin syndrome** if also taking SSRI, SNRI (agitation, tachycardia, hypertension, diarrhea, sweating, spasms/rigidity)
• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk; may cause harm, death to fetus; do not breastfeed, excreted in breast milk

Evaluate:
• Therapeutic response: decrease in frequency, severity of headache
Teach patient/family:
• To report any side effects to prescriber
• To use contraception while taking product
• That product does not prevent or reduce number of migraines; not to use for other headaches
• To report chest pain, rash, swelling of face, slurred speech
• Not to double doses; if second dose is needed, wait at least 2 hr; disintegrating dosage form—do not split, break, alter; to remove from blister pack immediately before taking

⚠ HIGH ALERT

zolpidem (Rx)

(zole′pih-dem)

Ambien, Ambien CR, Edluar, Sublinox 🍁, Zolpimist, Intermezzo

Func. class.: Hypnotic
Chem. class.: Imidazopyridine

Controlled Substance Schedule IV

Do not confuse:
zolpidem/Zyloprim

ACTION: Produces CNS depression at limbic, thalamic, hypothalamic levels of CNS; may be mediated by neurotransmitter γ-aminobutyric acid (GABA), not a benzodiazepine; results are sedation, hypnosis, skeletal muscle relaxation, anticonvulsant activity, anxiolytic action

USES: Insomnia, short-term treatment

CONTRAINDICATIONS: Hypersensitivity to benzodiazepines
Precautions: Pregnancy, breastfeeding, children <18 yr, geriatric patients, anemia, hepatic disease, suicidal individuals, drug abuse, seizure disorders, angioedema, depression, respiratory disease, sleep apnea, myasthenia gravis, pulmonary disease, next-morning impairments; females (lower dose needed)

Black Box Warning: Sleep-related behaviors (sleepwalking)

DOSAGE AND ROUTES

Sleep-maintenance insomnia, 7-8 hours planned sleep

• **Adult: PO** ER 6.25 mg (females) or 6.25-12.5 mg (males) immediately before bedtime with ≥7-8 hours of planned sleep before waking (max 12.5 mg); IR tablet, spray, SL (unlabeled) 5 mg (females) or 5-10 mg (males) immediately before bedtime with ≥7-8 hours of planned sleep before waking
Available forms: Tabs 5, 10 mg; ext rel tabs 6.25, 12.5 mg; SL: 1.75, 3.5, 5, 10 mg; oral spray 5 mg/spray
Administer:
PO route
• Do not break, crush, or chew ext rel
• Take with full glass of water
• ½-1 hr before bedtime (PO); right before retiring (ext rel)
• On empty stomach for fast onset; may be taken with food if GI symptoms occur
• Store in tight container in cool environment
Spray route
• Prime before first use (5 sprays) or if pump is not used for ≥14 days (1 spray)
• Spray directly over tongue
• Do not use spray with or after a meal
Sublingual route
• Place product under tongue; allow to dissolve before swallowing; do not take with water

SIDE EFFECTS

CNS: Headache, lethargy, drowsiness, daytime sedation, dizziness, confusion, light-headedness, anxiety, irritability, amnesia, poor coordination, complex sleep-related reactions (sleep driving, sleep eating), depression, somnolence, suicidal ideation, abnormal thinking/behavioral changes
CV: Chest pain, palpitations
GI: Nausea, vomiting, diarrhea, heartburn, abdominal pain, constipation
HEMA: Leukopenia, granulocytopenia (rare)

MISC: Myalgia
SYST: Severe allergic reactions, angioedema, anaphylaxis

PHARMACOKINETICS

PO: Onset up to 1.5 hr, metabolized by liver, excreted by kidneys (inactive metabolites), crosses placenta, excreted in breast milk, half-life 2-3 hr

INTERACTIONS

Increase: action of both products—alcohol, CNS depressants, monitor carefully
Increase or decrease: zolpidem levels—CYP3A4 inhibitors/inducers
Decrease: zolpidem effect—rifamycins; avoid use
Drug/Herb
Increase: CNS depression—Chamomile, kava, valerian
St. John's wort: Decreased zolpidem effect, avoid use
Drug/Food
Food: Delayed action, absorption

NURSING CONSIDERATIONS

Assess:
- **Mental status:** mood, sensorium, affect, memory (long, short term), excessive sedation, impaired coordination, **suicidal thoughts/behaviors**
- Type of sleep problem: falling asleep, staying asleep
- **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause fetal harm; cautious use in breastfeeding

Black Box Warning: Complex sleep disorders (rare): monitor for sleep eating/driving/walking, do not use if these occur with opioids

- **Beers:** avoid in older adults; CNS effects occur

Evaluate:
- Therapeutic response: ability to sleep at night, decreased amount of early morning awakening if taking product for insomnia

Teach patient/family:
- That dependence is possible after long-term use

Black Box Warning: That complex sleep-related behaviors may occur (sleep driving/eating), to stop product if these occur

- To avoid driving or other activities requiring alertness until dosage is stabilized
- To avoid alcohol ingestion
- That effects may take 2 nights for benefits to be noticed; next-morning impairment may occur, to take immediately before bed
- Not to use during pregnancy, breastfeeding
- That hangover is common in geriatric patients but less common than with barbiturates; that rebound insomnia may occur for 1-2 nights after discontinuing product; not to discontinue abruptly; to taper, avoid use
- **SL:** Place tablet under tongue, allow to dissolve
- Not to crush, chew, break ext rel tabs
- **Spray:** To prime spray pump before using (5 sprays before new use, 1 spray if not used ≥14 days), spray directly over tongue

TREATMENT OF OVERDOSE:

Lavage; monitor electrolytes, VS

zonisamide (Rx)

(zone-is'a-mide)
Zonegran
Func. class.: Anticonvulsant
Chem. class.: Sulfonamides

ACTION: May act through action at sodium and calcium channels, but exact action is unknown; serotonergic action

USES: Adjunctive therapy for partial seizures

CONTRAINDICATIONS: Hypersensitivity to this product or sulfonamides
Precautions: Pregnancy, breastfeeding, children <16 yr, geriatric patients, allergies, renal/hepatic disease; psychiatric condition, hepatic failure, pulmonary

disease, suicidal ideation

DOSAGE AND ROUTES

• **Adult/child >16 yr:** 100 mg/day, may increase after 2 wk to 200 mg/day, may increase q2wk, max dose 600 mg/day

Available forms: Caps 25, 50, 100 mg

Administer:

• Without regard to food; swallow whole

SIDE EFFECTS

CNS: Dizziness, insomnia, paresthesias, depression, fatigue, headache, confusion, somnolence, agitation, irritability, speech disturbance, suicidal ideation, seizures, status epilepticus

EENT: Diplopia, verbal difficulty, speech abnormalities, taste perversion, amblyopia, pharyngitis, rhinitis, tinnitus, nystagmus

GI: Nausea, constipation, anorexia, weight loss, diarrhea, dyspepsia, dry mouth, abdominal pain

GU: Kidney stones

HEMA: Aplastic anemia, granulocytopenia (rare); ecchymosis

INTEG: Rash, pruritus

MISC: Flulike symptoms

SYST: Stevens-Johnson syndrome, metabolic acidosis

PHARMACOKINETICS

Peak 2-6 hr, half-life 63 hr, metabolized by liver, excreted by kidneys, protein binding 40%

INTERACTIONS

Increase: metabolic acidosis severity—other carbonic anhydrase inhibitors

Decrease: half-life of zonisamide—carBAMazepine, phenytoin, PHENobarbital

Altered product levels: CYP3A4 inhibitors/inducers

Increase: CNS depression—alcohol, other CNS depressants

Drug/Herb

Increase: effect of this product—St. John's wort

Drug/Food

• Do not use with grapefruit

Drug/Lab Test

Increase: BUN, creatinine

NURSING CONSIDERATIONS

Assess:

• **Seizures:** duration, type, intensity, precipitating factors

• Assess for hypersensitivity reactions

• Renal function: albumin concentration, BUN, urinalysis, creatinine, serum bicarbonate at baseline and periodically, renal failure may occur; increase fluid intake to prevent calculi

• **Mental status:** mood, sensorium, affect, memory (long-, short-term), **suicidal thoughts/behaviors**

• **Stevens-Johnson syndrome, aplastic anemia, fulminant hepatic necrosis (rare);** may cause death; monitor for rashes and hypersensitivity reactions, stop product immediately, notify prescriber

• Obtain bicarbonate level before treatment/periodically; metabolic acidosis may occur in children

• **Beers:** avoid in older adults unless safer alternative is unavailable; may cause ataxia, impaired psychomotor function

• **Pregnancy/breastfeeding:** use only if benefits outweigh fetal risk, may cause fetal harm; pregnant women should enroll in the North American Antiepileptic Drug Pregnancy Registry, 1-888-233-2334; do not breastfeed, excreted in breast milk, monitor for metabolic acidosis in mother and newborn

Evaluate:

• Therapeutic response: decrease in severity of seizures

Teach patient/family:

• Not to discontinue product abruptly because seizures may occur

• To avoid hazardous activities until stabilized on product

• To use without regard to food, swallow capsule whole

• To carry emergency ID stating product use

• To notify prescriber of rash immediately; to notify prescriber of back pain, abdominal pain, blood in urine; to increase fluid intake to reduce risk of kidney stones

• To notify prescriber if pregnancy is planned, suspected, to use contraception

- To avoid grapefruit
- To notify prescriber of sore throat, fever, easy bruising

- To report suicidal thoughts, behaviors immediately, assess for mood changes, increase in depressive symptoms

Appendix A

abrocitinib (Rx)

(a-broe-SYE-ti-nib)

Cibinqo

Func. class.: Antineoplastic/immunomodulating agent

Chem. class.: Janus-associated kinase (JAK) inhibitor

ACTION: Janus kinases are intracellular enzymes that transmit signals arising from cytokine interactions on the cellular membrane to influence cellular processes of immune cell function

USES: Refractory, moderate to severe atopic dermatitis in those not controlled with other therapies

CONTRAINDICATIONS

Hypersensitivity, antiplatelets (excluding low-dose aspirin)

Precautions: HIV/AIDS, breastfeeding, pregnancy, hepatitis, hepatitis exacerbation, cardiac/renal/pulmonary disease, infertility, immunosuppression, thrombocytopenia

Black Box Warning: Infection, stroke, thrombosis, MI, new primary malignancy

DOSAGES AND ROUTES

Adults: PO 100 mg once daily, if an adequate response is not achieved after 12 wk, may increase to 200 mg once daily

Adults who are poor CYP2C19 metabolizers: PO 50 mg once daily. If an adequate response is not achieved after 12 wk, may increase dose to 100 mg once daily

Available forms: Tablets 50, 100, 200 mg

SIDE EFFECTS

CNS: Headache, dizziness, fatigue

GI: Nausea, vomiting, upper abdominal pain, gastroenteritis

INTEG: Acne, impetigo, contact dermatitis, acne

EENT: Nasopharyngitis, herpes simplex

HEMA: Thrombocytopenia

GU: UTI

CV: Hypertension, MI

MISC: Increased CK, oropharyngeal pain, herpes zoster, influenzae

PHARMACOKINETICS

Half-life 3-5 hr, affected cytochrome P450 (CYP450) isoenzymes and drug transporters: CYP2C19, CYP2C9, CYP3A4, CYP2B6, P-glycoprotein (P-gp), organic anion transporter (OAT3), organic cation transporter (OCT1)

INTERACTIONS

Decreased abrocitinib effect: Strong inhibitors of CYP2C19: give 50 mg daily or 100 mg once daily for those patients who are not responding to 50 mg once daily

Increased bleeding: Moderate-strong inhibitors of both CYP2C19 and CYP2C9 or strong CYP2C19 or CYP2C9 inducers: Avoid concomitant use

Increased serious toxicity: P-gp substrates, monitor dosage of P-gp substrate

NURSING CONSIDERATIONS

Assess:

- **TB:** Obtain a TB before starting product, latent TB should be treated before starting this product
- Monitor CBC with differential, hemoglobin/hematocrit
- **Hepatitis:** Monitor hepatitis B serology, LFTs, plasma hepatitis C RNA baseline and periodically
- Monitor serum cholesterol profile, serum creatinine/BUN, skin cancer screening exam baseline and periodically

Evaluate:
- Therapeutic response: resolution of moderate-severe atopic dermatitis

Teach patient/family:
- Advise the patient to read the medication guide
- **Herpes zoster:** advise patients that is increased and may be serious
- **New primary cancer:** inform patients to check the skin often, as the risk of certain cancers, including skin cancers, may occur; to stay out of the sun or use protective clothing and sunscreen
- To report immediately and seek medical attention for signs/symptoms of MI, stroke, DVT, PE, retinal changes
- That vaccinations with live vaccines is not recommended during treatment, to bring vaccinations up to date before treatment
- Not to chew, crush, or split tablets
- To notify clinicians of treatment and all prescription, OTC drugs, and herbals
- **Infections:** inform patients that they may develop infections when taking abrocitinib. Instruct patients to tell their health care provider if they develop any signs or symptoms of an infection
- **Pregnancy/breastfeeding:** identify if pregnancy is planned or suspected, or if breastfeeding; advise patients to report pregnancy to 877-311-3770 and not to breastfeed; that this product may impair fertility

daxibotulinumtoxin A-lann (Rx)

Daxxify

Func. class.: Muscle relaxant

USES: Temporary improvement in moderate to severe glabellar (frown) lines

DOSAGE AND ROUTES

Black Box Warning: Distant spread of toxin effects

Adults: IM 40 units administered in 5 equal aliquots of 8 units each: 2 injections in each corrugator muscle and 1 injection in the procerus muscle. Do not administer more frequently than every 3 mo

Available forms: Injection 50 units, 100 units

deucravacitinib (Rx)

(doo-krav-a-sih-ti-nib)

Sotyktu

Func. class.: Systemic antipsoriasis agent

Chem. class.: Tyrosine kinase 2 (TYK2) inhibitor

ACTION: Mediates multiple cytokine pathways and also pairs with JAK2 to transmit signals through activation of signal transducers and activators of transcription (STATs). By binding to TYK2, deucravacitinib stabilizes an inhibitory interaction between the regulatory and catalytic domains of the enzyme

USES: Moderate to severe plaque psoriasis

CONTRAINDICATIONS

Hypersensitivity

Precautions: Pregnancy, children, geriatric patients, breastfeeding, cardiac/hepatic/neoplastic disease, HF, hepatitis B carriers, infections, MI, stroke, rhabdomyolysis, thromboembolism, immunosuppression

DOSAGE AND ROUTES

Plaque psoriasis

Adult: PO 6 mg once daily

Available forms: Tablet 6 mg

Administer:

PO route
- Swallow whole; do not cut, break, crush
- Give without regard to food

SIDE EFFECTS

EENT: Sinusitis, rhinitis, stomatitis, oral ulceration
INTEG: *Rash,* angioedema, severe hypersensitivity reactions
MS: Rhabdomyolysis
MISC: Infection, increased cancer risk

PHARMACOKINETICS

Protein binding 90%, terminal half-life 10 hr, peak 2-3 hr, metabolized by CYP1A2, CYP2B6, CYP2D6, CES2, and UGT1A9. The drug is also a substrate for the transporters P-gp, BCRP, and OCT1, an inhibitor of BCRP and OATP1B3

INTERACTIONS

Do not give concurrently with live virus vaccines; immunizations should be brought up to date before treatment
Drug/Lab Test: Increase: ALT, cholesterol, lipids

NURSING CONSIDERATIONS

Assess:
- **Plaque psoriasis:** improvement in raised, red, inflamed lesions; dry skin with cracking and bleeding; itching, burning, or painful skin; silvery, scaly plaques; pitted nails or separation from the nail bed
- Monitor serum triglycerides
- Infections (fever, flulike symptoms, dyspnea, change in urination, redness/swelling around any wounds), stop treatment if some serious infections occur, may be fatal; patients with active infections should not be started on this product
- May reactivate hepatitis B in chronic carriers, may be fatal, monitor hepatitis B serology, plasma hepatitis C RNA, LFTs; watch for reactivation in these individuals
- Latent TB before therapy; obtain TB test; if positive, treat before starting this product
- Neoplastic disease (lymphomas/leukemia): monitor for primary cancers
- Pregnancy/breastfeeding: identify if pregnancy is planned or suspected, effects in pregnancy or breastfeeding are unknown

Evaluate:
- Therapeutic response: improvement in symptoms of plaque psoriasis

Teach patient/family:
- The reason for the medication and expected result
- Not to take any live virus vaccines during, bring up to date before treatment
- Treatment and to read the "medication guide"
- To report signs of infection, allergic reaction, TB, immediately
- To advise all health care professionals of Rx, OTC, herbals, supplements taken
- To do regular skin assessments and report changes to provider
- That rhabdomyolysis may occur, to report muscle pain, weakness, especially with fever
- That continuing laboratory exams will be needed
- Pregnancy/breastfeeding: to advise health care professional if pregnancy is planned or suspected or if breastfeeding

eflapegrastim (Rx)

(ef′la-peg′ra-stim)
Rolvedon
Func. class.: Hemopoietic agent
Chem. class.: Granulocyte colony stimulating factor

ACTION: Stimulates proliferation and differentiation of neutrophils

USES: For chemotherapy-induced neutropenia prophylaxis, to decrease the incidence of febrile neutropenia, in patients with nonmyeloid malignancies receiving myelosuppressive anticancer drugs

CONTRAINDICATIONS

Hypersensitivity to this product, other granulocyte colony stimulating factors, *Escherichia coli* proteins
Precautions: Pregnancy, breastfeeding, myeloid malignancies, sickle cell

disease, leukocytosis, splenic rupture, allergic-type reaction

DOSAGE AND ROUTES

Adults: SUBCUT 13.2 mg once per chemotherapy cycle; administer approximately 24 hr after chemotherapy.
Available forms: Solution for injection 13.2 mg/0.6 mL
Administer:
SUBCUT route
• Using single-use vials; after dose is withdrawn, do not reenter vial
• Inspect solution for discoloration, particulates; if present, do not use
• Allow the prefilled syringe to reach room temperature for 30 min prior to use
• Give entire contents of prefilled syringe
• Do not administer during the period 14 days prior to and 24 hr after cytotoxic chemotherapy
• Store in refrigerator; do not freeze; may store at room temperature up to 12 hr; avoid shaking, protect from light

SIDE EFFECTS

CNS: Fever, fatigue, headache, dizziness, insomnia, peripheral edema
GI: Splenic rupture
HEMA: Leukocytosis
INTEG: Alopecia
MISC: Chest pain, hyperuricemia, anaphylaxis, capillary leak syndrome
GU: Glomerulonephritis
MS: Skeletal pain
RESP: Respiratory distress syndrome

PHARMACOKINETICS

Half-life: 15-80 hr; 20-38 hr (children), Tmax 25 hr

INTERACTIONS

• Do not use product concomitantly, 2 wk prior to, or 24 hr after administration of cytotoxic chemotherapy
• Do not use abemaciclib for ≥48 hr after last dose of this product, if required
• Avoid use of eflapegrastim for 21 days after betibeglogene autotemcel infusion

NURSING CONSIDERATIONS

Assess:
• Allergic reactions, anaphylaxis: rash, urticaria; discontinue product, have emergency equipment nearby
• ARDS: dyspnea, fever, tachypnea, occasionally confusion; obtain ABGs, chest x-ray; product may need to be discontinued
• Bone pain: give mild analgesics
• Blood studies: CBC with differential, platelet count before treatment, 2× weekly; neutrophil counts may be increased for 2 days after therapy
• B/P, respirations, pulse prior to and during therapy
• Pregnancy/breastfeeding: use only if benefits outweigh fetal risk, possible major birth defects; cautious use in breastfeeding, excretion unknown
Evaluate:
• Therapeutic response: absence of infection
Teach patient/family:
• To notify prescriber immediately of allergic reaction, trouble breathing, abdominal pain
• To notify provider if dose is missed
• To notify provider if pregnancy is planned or suspected or if breastfeeding

elivaldogene autotemcel (Rx)

(EL′i′VAL′doe′jeen AW′toe′TEM′sel)

Skysona

Func. class.: Gene therapy

USES: Cerebral adrenoleukodystrophy (CALD)

DOSAGE AND ROUTES

Child/adolescent 4-17 yr: IV 5×10^6 CD34-positive cells/kg as a single dose; calculate dose based on patient's weight before first apheresis

Available forms: Suspension for infusion

faricimab-svoa (Rx)

(far′IK′i′mab)

Vabysmo

Func. class.: Ophthalmic

Chem. class.: Selective vascular endothelial growth factor antagonist

ACTION: Binds to receptor-binding site of active forms of vascular endothelial growth factor A (VEGF-A), which causes angiogenesis and cell proliferation

USES: Age-related macular degeneration (neovascular) (wet), macular edema after retinal vein occlusion (RVO), diabetic macular edema

CONTRAINDICATIONS

Hypersensitivity, ocular infections

Precautions: Pregnancy, breastfeeding, children, retinal detachment, increased intraocular pressure

DOSAGE AND ROUTES

Neovascular (wet) age-related macular degeneration (nAMD)

• **Adult: INTRAVITREAL** 6 mg every 4 wk (approximately every 28 +/− 7 days) for the first 4 doses, then perform optical coherence tomography and visual acuity evaluations 8 and 12 wk after the fourth dose. Based on the results of these evaluations, subsequent 6-mg intravitreal injections may be given using 1 of the following 3 regimens: (1) wk 28 and 44; (2) wk 24, 36, 48; or (3) wk 20, 28, 36, 44

Available forms: Solution for injection 120 mg/mL

Administer:

• By ophthalmologist via intravitreal injection using adequate anesthesia

• Gather supplies needed, kit containing the faricimab single-use glass vial and single-use 5-micron blunt, 18-gauge × 1.5-inch transfer filter needle; sterile 1 mL Luer-Lok syringe with 0.05-mL dose mark; sterile 30-gauge × 0.5-inch injection needle. Note: A 30-gauge needle is recommended to avoid increased injection force; alcohol swab; remove from refrigerator, allow to come to room temperature

SIDE EFFECTS

EENT: Blepharitis, cataract, conjunctival hemorrhage/hyperemia, detachment of retinal pigment epithelium, dry eye, irritation/pain in eye, visual impairment, vitreous floaters, ocular infection

PHARMACOKINETICS

Elimination half-life 7.5 days, peak 2 days

INTERACTIONS

None known

NURSING CONSIDERATIONS

Assess:

• Eye changes: redness; sensitivity to light, vision change; increased intraocular pressure change; report infection to ophthalmologist immediately, complete procedure with anesthesia and antibiotic prior to use, check perfusion of optic nerve after use

• Hypersensitivity: monitor for inflammation

Evaluate:

• Therapeutic response: prevention of increasing macular degeneration

Teach patient/family:

• If eye becomes red, sensitive to light, painful, or if there is a change in vision, to seek immediate care from ophthalmologist

• About reason for treatment, expected results; that product is injected into the eye, an anesthetic will be used

⚠ HIGH ALERT

futibatinib (Rx)

(FUE-ti-BA-ti-nib)

Lytgobi

Func. class.: Antineoplastic

USES: Previously treated, unresectable, locally advanced or metastatic intrahepatic cholangiocarcinoma with a fibroblast growth factor receptor 2 (FGFR2) fusion or other rearrangement

DOSAGE AND ROUTES

Adult: PO 20 mg orally once daily until disease progression

Available forms: Tablet 12, 16, 20 mg

ganaxolone (Rx)

Ztalmy

Func. class.: Anticonvulsant

USES: Seizures associated with cyclin-dependent kinase-like 5 deficiency disorder (CDD)

DOSAGE AND ROUTES

Adults: PO 150 mg tid × 7 days. Uptitrate per this schedule based on tolerability: 300 mg tid × 7 days, then 450 mg tid × 7 days. Increase to 600 mg tid and maintain dose. Max: 1800 mg/day

Children and adolescents 2-17 yr and >28 kg: PO 150 mg tid × 7 days. Uptitrate per this schedule based on tolerability: 300 mg tid × 7 days, then 450 mg tid × 7 days. Increase to 600 mg tid and maintain dose. Max: 1800 mg/day

Children and adolescents 2-17 yr and ≤28 kg: PO 6 mg/kg/dose tid × 7 days. Uptitrate per this schedule based on tolerability: 11 mg/kg/dose tid × 7 days, then 16 mg/kg/dose tid × 7 days. Increase to 21 mg/kg/dose tid and maintain dose. Max: 63 mg/kg/day

Available forms: Suspension 50 mg/mL

mavacamten (Rx)

(MAV′a′KAM′ten)

Camzyos

Func. class.: Cardiac myosin inhibitor

USES: Adults with symptomatic New York Heart Association (NYHA) class II-III obstructive hypertrophic cardiomyopathy (HCM) to improve functional capacity and symptoms

DOSAGE AND ROUTES

Check manufacturer's information

Available forms: Capsules: 2.5, 5, 10, 15 mg

mirvetuximab (Rx)

(mir-ve-tux-i-mab)

Elahere

Func. class.: Antineoplastic

USES: Adults with FRα-positive, platinum-resistant epithelial ovarian, fallopian tube, or primary peritoneal cancer who have received 1-3 prior systemic regimens

DOSAGE AND ROUTES

Adult: IV INF 6 mg/kg q3wk until disease progression or unacceptable toxicity; premedicate with a corticosteroid, antihistamine, and antipyretic; antiemetic; ophthalmic topical steroids; and lubricating eye drops

Available forms: Injection: 100 mg/20 mL (5 mg/mL) in a single-dose vial

mitapivat (Rx)

(MYE-ta-PIV-at)

Pyrukynd

Func. class.: Antianemic agent

USES: Hemolytic anemia in patients with pyruvate kinase (PK) deficiency

DOSAGE AND ROUTES

Adults: PO 5 mg bid, then increase dose to 20 mg bid and then 50 mg bid q4wk if hemoglobin (Hb) is below normal or patient has required a transfusion within the last 8 wk. Maintain current dose if Hb is within normal and patient has not required a transfusion within the last 8 wk

Available forms: Tablet 5, 20, 50

⚠ HIGH ALERT

nivolumab/relatlimab (Rx)

(nye-vol′-ue-mab/rel-at-li-mab)

Opdualag

Func. class.: Antineoplastic

Chem. class.: Human IgG4 monoclonal antibody

ACTIONS: A combination product with a programmed death receptor-1 (PD-1) blocking antibody and a lymphocyte activation gene-3 (LAG-3) blocking antibody. When combined leads to additive inhibitory effects on T-cell function and results in improved tumor response in melanoma

USES: Unresectable or metastatic melanoma in adults and those over 12 yr

CONTRAINDICATIONS

Hypersensitivity

Precautions: Pregnancy, breastfeeding, Crohn disease, hepatitis, immunosuppression, inflammatory bowel disease, iritis, ocular disease, organ transplant, pancreatitis, renal disease, rheumatoid arthritis, sarcoidosis, systemic lupus erythematosus, thyroid disease, ulcerative colitis, uveitis, adrenal insufficiency, diarrhea, Guillain-Barré syndrome, hepatic disease, myasthenia gravis, hypo/hyperthyroidism, hypopituitarism, peripheral neuropathy, serious rash, hypophysitis

DOSAGE AND ROUTES

• **Adult/child >12 yr and >40 kg: IV** 480 mg nivolumab and 160 mg relatlimab q4wk; max volume 160 mL (nivolumab: 3 mg/mL to 12 mg/mL; relatlimab: 1 mg/mL to 4 mg/mL)

Available forms: Injection: 240 mg nivolumab and 80 mg relatlimab per 20 mL (12 mg and 4 mg per mL) in a single-dose vial

Administer:

Intermittent IV INFUSION route

• May be administered diluted or undiluted and administered at a final concentration as ordered

• Withdraw the required volume of and transfer into an IV container made of PVC, EVA, PO

• If diluting, dilute solution with 0.9% NaCl injection, USP or 5% dextrose injection, USP to final concentration and maximum infusion volume, mix by inversion, do not shake

• Discard any unused solution

• Run over 30 min, do not give with other products; after each infusion, flush the line with 0.9% sodium chloride injection

• Store once diluted for no more than 24 hr refrigerated, 8 hr at room temperature

SIDE EFFECTS

CNS: Severe and fatal immune-mediated neuropathies, fatigue, headache, fever

EENT: Uveitis, iritis, episcleritis

ENDO: Severe and fatal immune-mediated endocrinopathies

GI: Severe and fatal immune-mediated enterocolitis, hepatitis, pancreatitis, abdominal pain, nausea, diarrhea, appetite decreased, vomiting, constipation, colitis

INTEG: Severe and fatal immune-mediated dermatitis, pruritus, rash, urticaria

MISC: Cough, dyspnea, anemia, eosinophilia, nephritis
SYST: Antibody formation, Stevens-Johnson syndrome, toxic epidermal necrolysis

PHARMACOKINETICS:
Terminal half-life 26.5 days

NURSING CONSIDERATIONS
Assess:
- Serious skin disorders: Stevens-Johnson syndrome, toxic epidermal necrolysis: permanently discontinue in these or rash complicated by full-thickness dermal ulceration; give systemic corticosteroids at a dose of 1-2 mg/kg/day of predniSONE or equivalent; when dermatitis is controlled, taper corticosteroids over at least 1 mo, withhold in patients with moderate to severe reactions; for mild to moderate dermatitis (localized rash and pruritus), give topical or systemic corticosteroids
- Immune-mediated reactions: prior to starting treatment, assess for enterocolitis, hepatitis, dermatitis, neuropathy, endocrinopathy; take LFTs, ACTH, and thyroid function tests; permanently discontinue if these conditions occur
- Hepatotoxicity: LFTs baseline and prior to each dose; increase the frequency of liver function test monitoring until resolution; permanently discontinue in grade 3-5 toxicity; give systemic corticosteroids at a dose of 1-2 mg/kg/day of predniSONE or equivalent
- Neuropathy: monitor for motor or sensory neuropathy (unilateral or bilateral weakness, sensory alterations, or paresthesias) prior to each dose; permanently discontinue if severe neuropathy (interfering with daily activities), such as Guillain-Barré–like syndromes, occurs
- Endocrinopathy: monitor thyroid function tests at baseline and prior to each dose; monitor hypophysitis, adrenal insufficiency, adrenal crisis, hypo/hyperthyroidism (fatigue, headache, mental status changes, abdominal pain, unusual bowel habits, hypotension, or nonspecific symptoms that may resemble other causes)
- Vision changes: uveitis, iritis; corticosteroids may be used
- Pregnancy/breastfeeding: do not use in pregnancy, breastfeeding, pregnancy testing prior to first dose

Evaluate:
- Decreasing spread or recurrence of malignant melanoma

Teach patient/family:
- To immediately report allergic reactions, skin rash, severe abdominal pain, yellowing of skin or eyes, tingling of extremities, change in bowel habits, diarrhea, cough, chest pain, decreased urine
- About the reason for treatment and expected results; to read medication guide provided
- Pregnancy/breastfeeding: to notify prescriber if pregnancy is planned or suspected or if breastfeeding; to use contraception during and for 5 mo after final dose, not to breastfeed

olipudase alfa (Rx)
(oh-LIP-ue-dase AL-fa)
Xenpozyme
Func. class.: Enzyme

USES: Noncentral CNS effects of acid sphingomyelinase deficiency (ASMD)

DOSAGE AND ROUTES
ASMD during dose escalation and maintenance phase
Adult: IV 0.1 mg/kg/dose initially, titrate dose q2wk: 0.3 mg/kg/dose on wk 2 and 4, 0.6 mg/kg/dose on wk 6 and 8, 1 mg/kg/dose on wk 10, 2 mg/kg/dose on wk 12, and 3 mg/kg/dose on wk 14; maintenance is 3 mg/kg/dose q2wk
Infant/child/adolescent: IV 0.03 mg/kg/dose initially, titrate q2wk: 0.1 mg/kg/dose

on wk 2, 0.3 mg/kg/dose on wk 4 and 6, 0.6 mg/kg/dose on wk 8 and 10, 1 mg/kg/dose on wk 12, 2 mg/kg/dose on wk 14, and 3 mg/kg/dose on wk 16; maintenance is 3 mg/kg/dose q2wk
Neonate: IV 0.03 mg/kg/dose initially, titrate q2wk: 0.1 mg/kg/dose on wk 2, 0.3 mg/kg/dose on wk 4 and 6, 0.6 mg/kg/dose on wk 8 and 10, 1 mg/kg/dose, on wk 12, 2 mg/kg/dose, on wk 14, 3 mg/kg/dose on wk 16; maintenance 3 mg/kg/dose q2wk
Available forms: Powder for injection 20 mg

oteseconazole (Rx)

(o-tes-a-KAA-nuh-zowl)

Vivjoa

Func. class.: Antifungal, systemic
Chem. class.: Azole

ACTIONS: An azole inhibitor targeting the fungal sterol, which is required for fungal cell membrane formation and integrity

USES: Reduces the incidence of recurrent vulvovaginal candidiasis (RVVC) in females with a history of RVVC who are NOT of reproductive potential

CONTRAINDICATIONS:

Pregnancy, breastfeeding, hypersensitivity
Precautions: Renal/hepatic disease

DOSAGE AND ROUTES

Esophageal candidiasis

• **Adult: PO Oteseconazole-only dosage regimen: On day 1:** Give 600 mg (as a single dose). **On day 2:** Give 450 mg (as a single dose). **Beginning on day 14:** Give 150 mg once a week (q7days) × 11 wk (wk 2 through 12). **Fluconazole/oteseconazole dosage regimen: On day 1, day 4, day 7.** Give **fluconazole 150 mg PO; on days 14-20.** Give oteseconazole 150 mg once daily × 7 days. **Beginning on day 28:** Give oteseconazole 150 mg once a week (every 7 days) × 11 wk (wk 4-14)
Available forms: Capsule 150 mg
Administer:
• Protect from light when removed from packaging, store at room temperature

SIDE EFFECTS

CNS: Headache
GI: Nausea

PHARMACOKINETICS

Peak 5-10 hr, half-life 139 days

INTERACTIONS

Increased: Breast cancer resistance protein (BCRP) substrate effect, increases the risk of adverse reactions, a lower dose may be needed

NURSING CONSIDERATIONS

Assess:
• Pregnancy/breastfeeding: do not use in pregnancy, may cause fetal harm; do not breastfeed
Evaluate:
• Therapeutic response: decreased candidiasis
Teach patient/family:
• Women of childbearing age should use effective contraceptive

pacritinib (Rx)

(pak-RI-ti-nib)

Vonjo

Func. class.: Antineoplastic/immunomodulating agent

USES: Myelofibrosis, intermediate- or high-risk primary or secondary (post–polycythemia vera or post–essential thrombocythemia) myelofibrosis in patients with a platelet count below 50 × 109 cells/L

DOSAGE AND ROUTES

Adults: PO 200 mg bid
Available forms: Capsule 100 mg

sodium phenylbutyrate/ taurursodiol (Rx)

(SOE-dee-um FEN-il-BUE-ti-rate/ taur-UR-so-DYE-ol)

Relyvrio

Func. class.: Neuroprotective agent

USES: Amyotrophic lateral sclerosis (ALS)

DOSAGE AND ROUTES

Adults: PO 3 g sodium phenylbutyrate and 1 g taurursodiol (1 packet) once daily for the first 3 wk, then increase the dose to 3 g sodium phenylbutyrate and 1 g taurursodiol (1 packet) twice daily

Available forms: Powder for suspension 3 g/1 g

spesolimab (Rx)

(spes-o′li-mab)

Spevigo

Func. class.: Systemic antipsoriasis agent

Chem. class.: Monoclonal immunoglobulin antibody

ACTIONS: Humanized monoclonal immunoglobulin G1 (IgG1) antibody that inhibits interleukin-36 (IL-36) signaling by specifically binding to the IL-36 receptor (IL36R) and prevents downstream activation of proinflammatory and profibrotic pathways.

USES: Generalized pustular psoriasis (GPP) flares

CONTRAINDICATIONS

Hypersensitivity, serious rash

Precautions: Pregnancy, breastfeeding, TB, infection, vaccination

DOSAGE AND ROUTES

Generalized pustular psoriasis (GPP) flares

Adults: IV INFUSION 900 mg over 90 min. A second 900-mg IV infusion may be given 1 wk after the initial dose if flare symptoms persist

Available forms: Solution for injection (IV) 450 mg/7.5 mL (60 mg/mL)

Administer:

IV infusion route

- Visually inspect for particulate matter and discoloration prior to use, the solution should be colorless to slightly brownish-yellow, clear to slightly opalescent. Do not use if the solution is cloudy, discolored, or contains large or colored particulates
- **Dilution: Use** aseptic technique; remove and discard 15 mL from a 100-mL container of sterile 0.9% sodium chloride injection; slowly add 15 mL of spesolimab solution (complete contents from two 450-mg/7.5-mL vials) into the 0.9% sodium chloride injection, gently mix; do not add or mix with other medications or diluents
- **Administer** diluted solution immediately, give as a continuous infusion over 90 min through an IV line containing a sterile, non-pyrogenic, low-protein-binding in-line filter (pore size of 0.2 microns)
- A preexisting IV line may be used for administration of the infusion if the line is flushed with sterile 0.9% sodium chloride injection prior to and at the end of the infusion. No other infusion should be administered in parallel via the same IV access
- If the infusion is slowed or temporarily stopped, the total infusion time (including stop time) must not exceed 180 min
- **Storage:** If not used immediately, the diluted solution may be stored 2 hr refrigerated at 36° to 46°F (2° to 8°C) for no more than 4 hr, protect from light

SIDE EFFECTS

GI: Diarrhea, nausea, vomiting, gastritis

INTEG: Pruritus, infusion-related reactions

MISC: Infection, Guillian-Barre syndrome, DRESS

PHARMACOKINETICS
Terminal half-life 25.5 days

INTERACTIONS
Do not give concurrently with live virus vaccines; immunizations should be brought up to date prior to treatment

NURSING CONSIDERATIONS
Assess:
- **Plaque psoriasis:** improvement in raised, red, inflamed lesions; dry skin with cracking and bleeding; itching, burning, or painful skin; silvery, scaly plaques; pitted nails or separation from the nail bed
- Infections (fever, flulike symptoms, dyspnea, change in urination, redness/swelling around any wounds), stop treatment if some serious infections occur, may be fatal; patients with active infections should not be started on this product
- Latent TB prior to therapy; obtain TB test, if positive, treat before starting this product
- Pregnancy/breastfeeding: identify if pregnancy is planned or suspected, effects in pregnancy or breastfeeding are unknown

Evaluate:
- Therapeutic response: improvement in symptoms of plaque psoriasis

Teach patient/family:
- Not to take any live virus vaccines during treatment
- To report signs of infection, allergic reaction, TB, immediately
- To advise all health care professionals of Rx, OTC, herbals, supplements taken
- Pregnancy/breastfeeding: to advise health care professional if pregnancy is planned or suspected or if breastfeeding
- To do regular skin assessments and report changes to provider

sutimlimab-jome (Rx)
Enjaymo
Func. class.: Antineoplastic/immunomodulating agent

USES: Cold agglutinin disease to decrease the need for red blood cell transfusion due to hemolysis

DOSAGE AND ROUTES
Adults weighing ≥75 kg: IV 7500 mg once a week for 2 wk, then q2wk
Adults weighing 39-74 kg: IV 6500 mg once a week for 2 wk then q2wk
Available forms: Solution for injection 1100 mg/22 mL

tapinarof (Rx)
(ta-pin′ar-of)
Vtama
Func. class.: Topical antipsoriasis agent

USES: Plaque psoriasis

DOSAGE AND ROUTES
Adult: TOPICAL Apply a thin layer of cream to affected areas once daily
Available forms: Topical cream 1%

tebentafusp-tebn (Rx)
Kimmtrak
Func. class.: Antineoplastic

USES: HLA-A*02:01-positive unresectable/metastatic uveal melanoma

DOSAGE AND ROUTES
Adults: IV 20 mcg day 1, 30 mcg day 8, 68 mcg day 15, then 68 mcg once weekly until disease progression.
Available forms: Solution for injection 100 mcg/0.5 mL

teclistamab (Rx)

(tek-LIS-tuh-mab)

Tecvayli

Func. class.: Antineoplastic

Chem. class.: Bispecific B-cell maturation antigen

ACTIONS: It is a T-cell antibody that binds to the receptor expressed on the surface of T cells to the B-cell antigen (BCMA) expressed on the surface of multiple myeloma cells

USES: Relapsed multiple myeloma; available only through restricted program (Tecvayli REMS)

CONTRAINDICATIONS:

Hypersensitivity

Precautions: Anemia, contraception requirements, pregnancy, infection, neutropenia, requires a specialized care setting, requires an experienced clinician

Black Box Warning: Cytokine release syndrome, neurotoxicity, restricted program only

DOSAGE AND ROUTES

Adult: SUBCUT Step-up dosing day 1 0.06 mg/kg; day 4 0.3 mg/kg; day 7 first treatment 1.5 mg/kg; thereafter weekly 1.5 mg/kg

Available forms: Injection 30 mg/3 mL (10 mg/mL), 153 mg/1.7 mL (90 mg/mL) single-dose vial

Administer:

- Prior to each dose corticosteroid (PO/IV dexamethasone 16 mg); histamine-1 (H1) receptor antagonist (PO/IV diphenhydramine 50 mg or equivalent); antipyretics acetaminophen (650-1000 mg or equivalent)
- Remove from refrigerator and let warm at room temperature for 15 min
- Withdraw needed amount after swirling gently
- The appropriate injection volume is based on vial concentration, patient weight, and type of dose

SIDE EFFECTS

CNS: Fever, fatigue, headache, Gillian Barre syndrome, encephalopathy, seizures, peripheral neuropathy

CV: Hypotension/hypertension, edema

MS: MS pain, bone pain

GI: Nausea, increased LFTs, diarrhea, constipation, anorexia, vomiting, hepatic failure

HEMA: Lymphopenia, neutropenia, hypoalbuminemia, thrombocytopenia

INTEG: Injection site reaction

META: Hypophosphatemia, hyponatremia, hypocalcemia

SYST: Cytokine release syndrome, infection

PHARMACOKINETICS

Bioavailability 72%

INTERACTIONS

Decreased CYP enzyme activity, toxicity; monitor for toxicity and adjust the dose as needed for CYP substrates, especially during the first 2 wk

NURSING CONSIDERATIONS

Assess:

- For injection site pain, swelling, redness—usually occur after 2 injections (4-5 days); use cold compress to relieve pain/swelling
- Infections (fever, flulike symptoms, dyspnea, change in urination, redness/swelling around any wounds), stop treatment if some serious infections occur
- Blood dyscrasias: CBC, differential periodically
- Lab: LFTs, serum Ig concentrations will be drawn, and neurologic status will be reviewed periodically

Evaluate:

- Therapeutic response: Lessened spread of multiple myeloma

Teach patient/family:

- Cytokine release syndrome: discuss signs/symptoms (fever, hypoxia, chills, hypotension, sinus tachycardia, headache,

elevated liver enzymes). Advise patients to immediately contact their health care provider if they experience any of these signs/symptoms

- Advise patients that hospitalization will be required × 48 hr after administration of all doses within the step-up dosing schedule
- Hepatotoxicity: advise patient to report dark urine, yellowing eyes, skin, fatigue, anorexia, right upper abdominal pain
- Not to take any live virus vaccines during treatment
- To report signs of infection, allergic reaction, immediately
- To advise all health care professionals of Rx, OTC, herbals, supplements taken
- Pregnancy/breastfeeding: To advise health care professional if pregnancy is planned or suspected or if breastfeeding, not to breastfeed or become pregnant during or for 5 mo after last dose, use effective contraception; that a pregnancy test may be done prior to starting treatment
- This product is available through a restricted program, Tecvayli REMS, that each patient is given a Tecvayli Patient Wallet Card that they should carry with them at all times and show to all of their health care providers. This card describes signs/symptoms of CRS and neurologic toxicity, which, and if experienced, the patient should seek medical attention immediately

teplizumab-mzwv (Rx)

Tzield

Func. class.: Antidiabetic

USES: To delay the onset of stage 3 type 1 diabetes (T1D) in adults and pediatric patients aged 8 yr and older with stage 2 T1D

DOSAGE AND ROUTES

See manufacturer's information

Available forms: Injection: 2 mg per 2 mL (1 mg/mL) single-dose vial

terlipressin (Rx)

(tur-luh-preh-sn)

Terlivaz

Func. class.: Pituitary hormone

Chem. class.: Vasopressin receptor agonist

ACTIONS: A vasopressin receptor agonist indicated to improve kidney function in adults with hepatorenal syndrome (HRS) with rapid reduction in kidney function

USES: Hepatorenal syndrome

CONTRAINDICATIONS

Acute myocardial ischemia, bowel ischemia, hypoxia, peripheral vascular ischemia

Black Box Warning: Acute-on-chronic liver failure, respiratory failure

Precautions: Volume overload, pregnancy, breastfeeding, liver failure, liver transplant

DOSAGE AND ROUTES

Adult: IV Days 1-3 0.85 mg (1 vial) q6hr; day 4 assess serum creatinine vs. baseline, if serum creatinine has decreased by ≥30% continue 0.85 mg (1 vial) q6hr; if serum creatinine has decreased by <30% give 1.7 mg (2 vials) q6hr; if no change in serum creatinine discontinue; continue until 24 hr after 2 consecutive serum creatinine tests <1.5 mg/dL at least 2 hr apart, max 14 days

Available forms: Lyophilized powder for single dose IV 0.85 mg/vial

Administer:

- Reconstitute each vial with 5 mL of 0.9% NaCl injection for a 0.85 mg/5 mL solution
- Visually inspect for particulate matter and discoloration prior to administration
- Prior to initial dosing, assess patient for ACLF grade 3 and obtain patient baseline oxygenation level. Monitor patient oxygen saturation with pulse

- Intermittent IV push route
- Give by slow IV bolus over 2 min
- Administer through a peripheral or central line. A dedicated central line is not required
- Flush the line after use
- If not used immediately, store at 36°F to 46°F (2°C to 8°C) for up to 48 hr, do not freeze. The reconstituted solution does not need protection from light

PHARMACOKINETICS
Terminal half-life 0.9 hr, lysine 3 hr, max change in B/P and heart rate is 1.2-2 hr

INTERACTIONS
None known

NURSING CONSIDERATIONS
Assess:
- Oxygen saturation (SpO_2) prior to starting treatment; do not start in persons experiencing hypoxia (SpO_2 <90%) until improvement of oxygen saturation occurs
- Monitor for changes in respiratory status, including hypoxia, during therapy using continuous pulse oximetry and regular clinical assessments
- Discontinue if SpO_2 decreases below 90% or if increased respiratory symptoms occur
- Pregnancy/breastfeeding: not to be used, as fetal harm may occur

Evaluate:
- Positive therapeutic outcome

Teach patient/family:
- Pregnancy/breastfeeding: to notify provider if pregnancy is planned or suspected or if breastfeeding. Not to be used in pregnancy and breastfeeding, effects are unknown

tirzepatide (Rx)
(tir-ZEP-a-tide)

Mounjaro

Func. class.: Antidiabetic

USES:
Used together with diet and exercise to improve blood sugar control in adults with type 2 diabetes mellitus

DOSAGE AND ROUTES
Adult: SUBCUT 2.5 mg once a wk, then after 4 wk increase to 5 mg once a wk; max 15 mg once a wk

Available forms: Injection 15 mg/0.5 mL; 12.5 mg/0.5 mL; 10 mg/0.5 mL; 7.5 mg/0.5 mL; 5 mg/0.5 mL; 2.5 mg/0.5 mL

⚠ HIGH ALERT

tremelimumab (Rx)
(treh-meh-LIM-moo-mab)

Imjudo

Func. class.: Antineoplastic

Chem. class.: Monoclonal antibody

ACTIONS:
Cytotoxic T-lymphocyte antigen blocking antibody

USES:
Hepatocellular carcinoma in combination with durvalumab; non–small-cell lung cancer with durvalumab and platinum-based chemotherapy

CONTRAINDICATIONS:
Hypersensitivity, pregnancy

Precautions: Immune-mediated pneumonitis, immune-mediated colitis, immune-mediated hepatitis, immune-mediated endocrinopathies, immune-mediated nephritis with renal dysfunction, immune-mediated pancreatitis, hypo/hyperthyroidism, active infections

DOSAGE AND ROUTES
Adults <30 kg: IV 4 mg/kg on day 1. Observe the patient for signs of an infusion reaction for 60 min, then give durvalumab (20 mg/kg IV); continue durvalumab (4 mg/kg IV) as monotherapy q4wk until disease progression or unacceptable toxicity

Adults ≥30 kg: IV 300 mg on day 1. Observe the patient for signs of an infusion reaction for 60 min, then give durvalumab (1500 mg IV); continue durvalumab (1500 mg IV) as monotherapy q4wk until disease progression or unacceptable toxicity

Available forms: Solution for injection 25 mg/1.25 mL, 300 mg/15 mL

Administer:

IV route

- Inspect for particulate matter and discoloration. Discard if the solution is cloudy, discolored, or visible particles are observed
- Do not shake
- Give tremelimumab prior to durvalumab when given on the same day; use separate infusion bags and filters for durvalumab and tremelimumab
- Withdraw the required volume of drug and transfer into an IV bag of 0.9% sodium chloride injection or 5% dextrose injection
- The maximum diluent volume for patients weighing 30 kg or more (300-mg dose) is 150 mL
- The maximum diluent volume for patients weighing less than 30 kg (4 mg/kg dose) is 80 mL
- The final concentration should not exceed 10 mg/mL
- Mix by gentle inversion; do not shake
- Discard partially used or empty vials
- *Storage after dilution:* The storage time of diluted product from start of preparation until completion of the infusion max 24 hr under refrigeration (36°F to 46°F [2° to 8°C]) or 24 hr at room temperature (up to 86°F [up to 30°C]). Do not freeze
- Give over 60 min using a sterile, low-protein-binding, 0.2- or 0.22-micron in-line filter
- Observe the patient for 60 min following completion of the infusion
- Do not coadminister with other drugs through the same intravenous line

SIDE EFFECTS

CNS: Fatigue
GI: Diarrhea, nausea, abdominal pain
MS: Pain
ENDO: Hypoparathyroidism
HEMA: Hemorrhage
INTEG: Infusion-related reactions, rash
SYST: Immune-mediated reactions

INTERACTIONS

None known

NURSING CONSIDERATIONS

Assess:

- For injection site pain, swelling, redness: use cold compress to relieve pain/swelling
- Infections (fever, flulike symptoms, dyspnea, change in urination, redness/swelling around any wounds), stop treatment if some serious infections, including sepsis, may occur, may be fatal; patients with active infections should not be started on this product
- Immune mediated reactions, may be fatal
- Pregnancy/breastfeeding: Not to use during pregnancy and for 3 months after last dose and not to use during breastfeeding, confirm pregnancy status before using

Evaluate:

- Therapeutic response: decrease

Teach patient/family:

- To report signs of infection, allergic reaction, immediately
- To advise all health care professionals of Rx, OTC, herbals, supplements taken
- Pregnancy/breastfeeding: To advise health care professional if pregnancy is planned or suspected or if breastfeeding

vutrisiran (Rx)

(VUE-tri-SIR-an)

Amvuttra

Func. class.: Polyneuropathy agent

USES: Hereditary transthyretin amyloidosis–associated polyneuropathy

DOSAGE AND ROUTES

Adults: SUBCUT 25 mg q3mo, given by a health care professional

Available forms: Prefilled syringe solution for injection 25 mg/0.5 mL

Rescula

β-ADRENERGIC BLOCKERS

ACTION: Reduces production of aqueous humor by unknown mechanism

USES: Ocular hypertension, chronic open-angle glaucoma

ANESTHETICS

ACTION: Decreases ion permeability by stabilizing neuronal membrane

USES: Cataract extraction, tonometry, gonioscopy, removal of foreign objects, corneal suture removal, glaucoma surgery (ophthalmic); pruritus, sunburn, toothache, sore throat, cold sores, oral pain, rectal pain and irritation, control of gagging (topical)

ANTIINFECTIVES

ACTION: Inhibits folic acid synthesis by preventing PABA use, which is necessary for bacterial growth

USES: Conjunctivitis, superficial eye infections, corneal ulcers, prophylaxis against infection after removal of foreign matter from the eye

ANTIINFLAMMATORIES

ACTION: Decreases inflammation, resulting in decreased pain, photophobia, hyperemia, cellular infiltration

USES: Inflammation of eye, eyelids, conjunctiva, cornea; uveitis, iridocyclitis, allergic conditions, burns, foreign bodies, postoperatively in cataract

CARBONIC ANHYDRASE INHIBITOR

ACTION: Converted to epINEPHrine, which decreases aqueous production and increases outflow

USES: Open-angle glaucoma, ocular hypertension

DIRECT-ACTING MIOTIC

ACTION: Acts directly on cholinergic receptor sites; induces miosis, spasm of accommodation, fall in intraocular pressure, caused by stimulation of ciliary, pupillary sphincter muscles, which leads to pulling away of iris from filtration angle, resulting in increased outflow of aqueous humor

USES: Primary glaucoma, early stages of wide-angle glaucoma (less useful in advanced stages), chronic open-angle glaucoma, acute closed-angle glaucoma before emergency surgery; also neutralizes mydriatics used during eye exam; may be used alternately with mydriatics to break adhesions between iris and lens

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children, aphakia, hypersensitivity to carbonic anhydrase inhibitors, sulfonamides, thiazide diuretics, ocular inhibitors, renal/hepatic insufficiency

Administer

- Storage at room temperature away from light

ADVERSE EFFECTS

CNS: Headache
CV: Hypertension, tachycardia, dysrhythmias
EENT: Burning, stinging
GI: Bitter taste

NURSING CONSIDERATIONS

Assess

- Monitor ophthalmic exams and intraocular pressure readings
- Monitor blood counts; renal/hepatic function tests and serum electrolytes during long-term treatment

Teach patient/family

- Teach how to instill drops
- Advise patient that product may cause burning, itching, blurring, dryness of eye area

Evaluate

Positive therapeutic outcome

- Absence of increased intraocular pressure

NASAL AGENTS

NASAL ANESTHESIAS

triamcinolone (OTC)
(trye-am-sin′oh-lone)

GoodSense Nasal Allergy Spray, Nasacort Allergy 24HR Children's, Nasacort Allergy 24HR, Nasal Allergy 24 Hour

NONSTEROIDAL ANTIINFLAMMATORY

ketorolac (Rx)
(kee′toe-role-ak)

Sprix

ACTION: Produces vasoconstriction (rapid, long acting) of arterioles, thereby decreasing fluid exudation, mucosal engorgement by stimulation of α-adrenergic receptors in vascular smooth muscle

Therapeutic outcome: Absence of nasal congestion

USES: Nasal congestion

CONTRAINDICATIONS: Hypersensitivity to sympathomimetic amines

Precautions: Pregnancy, children <6 yr, geriatric patients, diabetes, CV disease, hypertension, hyperthyroidism, increased ICP, prostatic hypertrophy, glaucoma

Administer

- Have patient tilt head back, squeeze bulb to create a vacuum, and draw correct amount of sol into dropper; insert 2 gtt of sol into nostril; repeat in other nostril
- Store in light-resistant container; do not expose to high temperature or let sol come into contact with aluminum
- Give for <4 consecutive days
- Provide environmental humidification to decrease nasal congestion, dryness

ADVERSE EFFECTS

CNS: Anxiety, restlessness, tremors, weakness, insomnia, dizziness, fever, headache
EENT: Irritation, burning, sneezing, stinging, dryness, rebound congestion
GI: Nausea, vomiting, anorexia
INTEG: Contact dermatitis

NURSING CONSIDERATIONS

Assess

- Assess for redness, swelling, pain in nasal passages before, during treatment
- Assess for systemic absorption; hypertension, tachycardia; notify prescriber; systemic absorption occurs at high doses or after prolonged use

Teach patient/family

- Advise patient that stinging may occur for several applications; drying of mucosa may be decreased by environmental humidification
- Caution patient to notify prescriber if irregular pulse, insomnia, dizziness, or tremors occur
- Teach patient proper administration to avoid systemic absorption
- Advise patient to rinse dropper with very hot water to prevent contamination

Evaluate

Positive therapeutic outcome

- Decreased nasal congestion

TOPICAL GLUCOCORTICOIDS

alclometasone (Rx)
(al-kloe-met′a-sone)
Aclovate

amcinonide
(am-sin′oh-nide)

betamethasone (Rx)
(bay-ta-meth′a-sone)
Beta Derm, Betanate, Del-Beta, Diprolene, Luxiq, Sernivo

(bay-ta-meth′a-sone)
Diprolene AF

clobetasol (Rx)
(kloe-bay′ta-sol)
Clobetavix, Clobex, Clodan, Impoyz, Olux, Olux-E, Tasoprol, Temovate, Tovet

desonide (Rx)
(dess′oh-nide)
Desonate, DesRx, LoKam, Tridesilon, Verdeso Foam

desoximetasone (Rx)
(dess-ox-i-met′a-sone)
Topicort

diflorasone (Rx)
(dye-flor′a-sone)
Apexicon E, Psorcon

fluocinolone (Rx)
(floo-oh-sin′oh-lone)
Derma-Smoothe/FS, Synalar

flurandrenolide (Rx)
(flure-an-dren′oh-lide)
Cordran, Nolix

fluticasone (Rx)
(floo-tik′a-sone)
Beser, Cutivate

halcinonide (Rx)
(hal-sin′oh-nide)
Halog

hydrocortisone (Rx)
(hye-droe-kor′ti-sone)
Ala-Cort, Ala-Scalp, Anti-Itch Maximum Strength, Anucort-HC, Anusol HC, Aquanil HC,

Maximum Strength, Cortifoam, Instacort 5, Locoid, MiCort-HC, NuCort, Pandel, Preparation H, Procto-Med HC, Procto-Pak, Proctocort, Proctozone-HC, Recort Plus, Sarnol-HC, Scalacort DK, Scalpicin Maximum Strength, Sarna HC , Uremol HC

triamcinolone (Rx)
(trye-am-sin′oh-lone)
Aristocort C, Aristocort R, Kenalog, Oralone, Sila III, Trianex, Triaderm, Triderm

ACTION: Antipruritic, antiinflammatory

Therapeutic outcome: Decreased itching, inflammation

USES: Psoriasis, eczema, contact dermatitis, pruritus; usually reserved for severe dermatoses that have not responded to less potent formulation

CONTRAINDICATIONS: Hypersensitivity, viral infections, fungal infections

Precautions: Pregnancy

DOSAGE AND ROUTES

Adult and child: Apply to affected area

Administer

- Apply only to affected areas; do not get in eyes
- Apply and leave site uncovered or lightly covered; occlusive dressing is not recommended—systemic absorption may occur
- Use only on dermatoses; do not use on weeping, denuded, or infected area
- Cleanse area before application of product
- Continue treatment for a few days after area has cleared
- Store at room temperature

ADVERSE EFFECTS

INTEG: *Acne, atrophy, epidermal thinning, purpura, striae*

NURSING CONSIDERATIONS

Assess

- Monitor temp; if fever develops, product should be discontinued
- Monitor for systemic absorption, increased temp, inflammation, irritation

Teach patient/family

- Teach patient to avoid sunlight on affected area; burns may occur
- Teach patient to limit treatment to 14 days

Evaluate

Positive therapeutic outcome

- Absence of severe itching, patches on skin, flaking

TOPICAL ANTIFUNGALS

clotrimazole (OTC)
(kloe-trye′ma-zole)

naftifine (Rx)
(naff′ti-feen)
Naftin

nystatin (Rx)
(nye-stat′in)
Nyamyc, Nystop

oxiconazole (Rx)
(ox-i-kon′a-zole)
Oxistat

sulconazole (Rx)
(sul-kon′a-zole)
Exelderm

tavaborole (Rx)
(ta′va-bor′ole)
Kerydin

terbinafine (OTC)
(ter-bin′a-feen)
LamISIL AT Jock Itch, LamISIL AT

tolnaftate (OTC)
(tole-naf′tate)
Absorbine Junior, Anti-Fungal, Antifungal, Athletes Foot Spray, Dr Gs Clear Nail, Fungi-Guard, Fungoid-D, Jock Itch Spray, Mycocide Clinical NS, Podactin, Proclearz, Tinactin Deodorant, Tinactin, Tinaspore

undecylenic acid (OTC)
(un-deh-sih-len′ik)

ACTION: Interferes with fungal cell membrane permeability

Therapeutic outcome: Absence of itching and white patches of the skin

USES: Tinea cruris, tinea pedis, diaper rash, minor skin irritations; amphotericin B is used for *Candida* infections

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children

DOSAGE AND ROUTES

Massage into affected area, surrounding area daily or bid, continue for 7-14 days, max 4 wk

Administer

- Apply to affected area, surrounding area; do not cover with occlusive dressings
- Store below 30° C (86° F)

ADVERSE EFFECTS

INTEG: Burning, stinging, dryness, itching, local irritation

NURSING CONSIDERATIONS

Assess

- Assess skin for fungal infections: peeling, dryness, itching before, throughout treatment
- Assess for continuing infection; increased size, number of lesions

Teach patient/family

- Instruct to apply with glove to prevent further infection; not to cover with occlusive dressings
- Teach patient that long-term therapy may be needed to clear infection (2 wk-6 mo depending on organism); compliance is needed even after feeling better
- Teach patient proper hygiene: handwashing technique, nail care, use of concomitant top agents if prescribed
- Caution patient to avoid use of OTC creams, ointments, lotions unless directed by prescriber
- Instruct patient to use medical asepsis (hand washing) before, after each application; to change socks and shoes once a day during treatment of tinea pedis
- Advise patient to report to health care prescriber if infection persists or recurs; if blisters, burning, oozing, swelling occur

• Caution patient to avoid alcohol because nausea, vomiting, hypertension may occur
• Caution patient to use sunscreen or avoid direct sunlight to prevent photosensitivity
• Advise patient to notify prescriber of sore throat, fever, skin rash, which may indicate overgrowth of organisms

Evaluate

Positive therapeutic outcome
• Decrease in size, number of lesions

TOPICAL ANTIINFECTIVES

azelaic acid (Rx)
(a-zuh-lay′ic)
Finacea
bacitracin (OTC)
(bass-i-tray′sin)

Silvadene, SSD
tretinoin (Rx)
(treh′tih-noyn)
Altreno, Atralin, Avita, Refissa, Retin-A, Renova, Tretin-X

ACTION: Interferes with bacterial protein synthesis

Therapeutic outcome: Resolution of infection

USES: Skin infections, minor burns, wounds, skin grafts, primary pyodermas, otitis externa

CONTRAINDICATIONS: Hypersensitivity, large areas, burns, ulcerations

Precautions: Pregnancy, breastfeeding, impaired renal function, perforated eardrum

Administer
• Apply enough medication to cover lesions completely
• Apply after cleansing with soap, water before each application; dry well
• Apply to less than 20% of body surface area when patient has impaired renal function
• Store at room temperature in dry place

ADVERSE EFFECTS
INTEG: Rash, urticaria, scaling, redness

NURSING CONSIDERATIONS
Assess
- Assess for allergic reaction: burning, stinging, swelling, redness
- Assess for signs of nephrotoxicity or ototoxicity

Evaluate
Positive therapeutic outcome
- Decrease in size, number of lesions

TOPICAL ANTIVIRALS

acyclovir (Rx)
(ay-sye′kloe-ver)
Sitavig, Zovirax Topical
penciclovir (Rx)
(pen-sye′kloe-ver)
Denavir

ACTION: Interferes with viral DNA replication
Therapeutic outcome: Resolution of infection

USES: Simple mucocutaneous herpes simplex, in immunocompromised clients with initial herpes genitalis

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding

Administer
- Apply with finger cot or rubber glove to prevent further infection
- Apply enough medication to cover lesions completely
- Apply after cleansing with soap, water before each application; dry well
- Store at room temperature in dry place

ADVERSE EFFECTS
INTEG: Rash, urticaria, stinging, burning, pruritus, vulvitis

NURSING CONSIDERATIONS
Assess
- Assess for allergic reaction: burning, stinging, swelling, redness, rash, vulvitis, pruritus
- Assess for signs of nephrotoxicity or ototoxicity

Teach patient/family
- Teach patient not to use in eyes or when there is no evidence of infection
- Advise patient to apply with glove to prevent further infection
- Advise patient to avoid use of OTC creams, ointments, lotions unless directed by prescriber
- Advise patient to use medical asepsis (hand washing) before, after each application and to avoid contact with eyes
- Advise patient to adhere strictly to prescribed regimen to maximize successful treatment outcome
- Advise patient to begin taking product when symptoms arise

Evaluate
Positive therapeutic outcome
- Decrease in size, number of lesions

TOPICAL ANESTHETICS

benzocaine (OTC)
(ben′zoe-kane)
Americaine Anesthetic, Anbesol Maximum Strength, Hurracaine, Mycinettes
dibucaine (OTC)
(dye′byoo-kane)
Nupercainal
lidocaine (Rx, OTC)
(lye′doe-kane)
Astero, Glydo, Lidomar, LidoRx, Zilactin-L
pramoxine (OTC)
(pra-mox′een)
Preparation H, Proctofoam, Vagisil Medicated

tetracaine (OTC, Rx)

(tet′ra-cane)

Pontocaine, Supracaine, Viractin

ACTION: Inhibits conduction of nerve impulses from sensory nerves

Therapeutic outcome: Decreasing inflammation, itching, pain

USES: Oral irritation, sore throat, toothache, cold sore, canker sore, sunburn, minor cuts, insect bites, pain, itching

CONTRAINDICATIONS: Hypersensitivity, infants <1 yr, application to large areas

Precautions: Pregnancy, children <6 yr, sepsis, denuded skin

DOSAGE AND ROUTES

Adult and child: TOP apply qid as needed; RECT insert tid and after each BM

Administer

- Store in tight, light-resistant container; do not freeze, puncture, or incinerate aerosol container

ADVERSE EFFECTS

INTEG: Rash, irritation, sensitization

NURSING CONSIDERATIONS

Assess

- Assess pain: location, duration, characteristics before, after administration
- Assess for infection: redness, drainage, inflammation; this product should not be used until infection is treated

Teach Patient/Family

- Teach patient to avoid contact with eyes
- Teach patient not to use for prolonged periods: use for <1 wk; if condition remains, prescriber should be contacted

Evaluate

Positive therapeutic outcome

- Decreased redness, swelling, pain

TOPICAL MISCELLANEOUS

docosanol (OTC)

(doh-koh′sah-nohl)

Abreva

pimecrolimus (Rx)

(pim-eh-kroh-ly′mus)

Elidel

oxymetazoline (Rx)

(ox-ee′meh-taz-oh-lin)

Rhofade

ACTION: Docosanol unknown; pimecrolimus may bind with macrophilin and inhibit calcium-dependent phosphatase

Therapeutic outcome: Decreased redness, swelling, pain

USES: Docosanol applied to fever blisters to promote more rapid healing; pimecrolimus used to treat mild to moderate atopic dermatitis in nonimmunocompromised patients ≥2 yr who are unresponsive to other treatment

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, dermal infections

DOSAGE AND ROUTES

Docosanol

Adult: TOP rub into blisters 5×/day until healing occurs

Pimecrolimus

Adult and child ≥2 yr: TOP apply thin layer 2×/day and rub in; use as long as needed

Administer

- Apply to skin, rub in gently

ADVERSE EFFECTS

Docosanol

NONE known

Pimecrolimus
INTEG: Burning

NURSING CONSIDERATIONS

Assess

- Assess skin condition (color, pain, inflammation) before, after administration
- Assess for signs and symptoms of skin infections (redness, draining lesions); if present, avoid use of product (pimecrolimus)

Teach patient/family

- Advise patient to avoid contact between medication and eyes
- Instruct patient to discontinue use of product when condition clears

Evaluate

Positive therapeutic outcome

- Decreased inflammation, redness

VAGINAL ANTIINFECTIVES

ANTIBACTERIALS

clindamycin (Rx)
(klin-da-my′sin)
Xaciato

ANTIFUNGALS

butoconazole (OTC)
(byoo-toh-kone′ah-zole)
Gynazol-1

clotrimazole (OTC)
(kloe-trye′ma-zole)
Gyne-Lotrimin

miconazole (OTC)
(mye-kon′a-zole)
Monistat 3, Monistat 7, Monistat-1 Day or Night, Vagistat-3

terconazole (OTC)
(ter-kone′ah-zole)

tioconazole (OTC)
(tye-oh-kone′ah-zole)
Vagistat-1

ACTION: Interferes with fungal DNA replication; binds sterols in fungal cell membranes, which increases permeability, leaking of nutrients

Therapeutic outcome: Fungistatic/fungicidal against susceptible organisms: *Candida* only

USES: Vaginal, vulval, vulvovaginal candidiasis (moniliasis)

CONTRAINDICATIONS: Hypersensitivity

Precautions: Pregnancy, breastfeeding, children <2 yr

Administer

Topical route

- Administer one full applicator every night high into the vagina
- Store at room temperature in dry place

ADVERSE EFFECTS

GU: Vulvovaginal burning, itching, pelvic cramps
INTEG: Rash, urticaria, stinging, burning
MISC: *Headache,* body pain

NURSING CONSIDERATIONS

Assess

- Assess for allergic reaction: burning, stinging, itching, discharge, soreness

Teach patient/family

- Instruct patient in asepsis (hand washing) before, after each application
- Teach patient to apply with applicator only; to avoid use of any other vaginal product unless directed by prescriber; sanitary napkin may prevent soiling of undergarments
- Instruct patient to abstain from sexual intercourse until treatment is completed; reinfection and irritation may occur
- Advise patient to notify prescriber if symptoms persist

Evaluate

Positive therapeutic outcome
- Decrease in itching or white discharge (vaginal)

OTIC ANTIINFECTIVES

ciprofloxacin (Rx)
(sip′roe-flox′a-sin)
Cetraxal, Otiprio
Ofloxacin (Rx)

ACTION: Inhibits protein synthesis in susceptible microorganisms

USES: Ear infection (external), short-term use

CONTRAINDICATIONS: Hypersensitivity, perforated eardrum

Precautions: Pregnancy

Administer
- After removing impacted cerumen by irrigation
- After cleaning stopper with alcohol
- After restraining child if necessary
- After warming sol to body temp

ADVERSE EFFECTS
EENT: Itching, irritation in ear
INTEG: Rash, urticaria

NURSING CONSIDERATIONS
Assess
- Assess for redness, swelling, fever, pain in ear, which indicates superinfection

Teach patient/family
- Teach patient correct method of instillation using aseptic technique, including not touching dropper to ear
- Inform patient that dizziness may occur after instillation

Evaluate

Positive therapeutic outcome
- Decreased ear pain

Appendix C Vaccines and Toxoids

GENERIC NAME	TRADE NAME	USES	DOSAGE AND ROUTES	CONTRAINDICATIONS
anthrax vaccine	BioThrax	Pre-/postexposure prophylaxis	**Preexposure** Adult: SUBCUT 0.5 mL at 0, 2, 4 wk, then 0.5 mL at 6, 12, 18 mo **Postexposure** Adult: SUBCUT 0.5 mL 0, 2, 4 wk, with antibiotics	Hypersensitivity
BCG vaccine	TICE BCG	TB exposure	Adult and child ≥1 mo: 0.2-0.3 mL Child <1 mo: Reduce dose by 50% using 2 mL of sterile water after reconstituting	Hypersensitivity, hypogammaglobulinemia, positive TB test, burns
COVID-19 vaccine	Moderna COVID-19 vaccine	COVID-19 (EUA)	Adult: IM 0.5 mL × 2, 1 mo apart, booster 0.25 mL ≥6 mo after last dose	Severe hypersensitivity
COVID-19 vaccine	Comirnaty (Pfizer)	COVID-19	Adult/child 12-18 yr: IM 30 mcg × 2 given 21 days apart Child 5-11 yr: IM 10 mcg × 2 given 21 days apart	Severe hypersensitivity
COVID-19 vaccine (EAU)	Janssen COVID-19 vaccine PF (Johnson & Johnson)	COVID-19 (EUA)	Adult: IM 0.5 mL once, then booster ≥6 mo after first dose 0.5 mL	Severe hypersensitivity
dengue tatravalent vaccine, live	Dengvaxia	Prevention of dengue disease	Child 9-16 yr SUBCUT 0.5 mL × 3 doses, 6 mo apart at mo 1, 6, 12	Hypersensitivity
diphtheria and tetanus toxoids, adsorbed	Tenivac	Induces antitoxins to provide immunity to diphtheria and tetanus	Adult and child ≥7 yr: IM (adult strength) 0.5 mL q4-8wk × 2 doses, then 3rd dose 6-12 mo after 2nd dose, booster IM 0.5 mL q10yr Child 1-6 yr: IM (pediatric strength) 0.5 mL q4wk × 2 doses, booster 6-12 mo after 2nd dose Infant 6 wk-1 yr: IM (pediatric strength) 0.5 mL q4wk × 3 doses, booster 6-12 mo after 3rd dose	Hypersensitivity to mercury, thimerosal; immunocompromised patients; radiation; corticosteroids; acute illness

diphtheria and tetanus toxoids and whole-cell pertussis vaccine (DPT, DTP)	DTwP, Tr-Immunol	Prevention of diphtheria, tetanus, pertussis	Doses vary Check product information	Hypersensitivity, active infection, poliomyelitis outbreak, immunosuppression, febrile illness
diphtheria and tetanus toxoids and acellular pertussis vaccine	Adacel, Boostrix, Daptacel, Infanrix	Prevention of diphtheria, tetanus, pertussis	Doses vary Check product information	Hypersensitivity, active infection, poliomyelitis outbreak, immunosuppression, febrile illness
diphtheria, tetanus, pertussis, haemophilus, polio IPV	Pentacel	Immunity to diphtheria, tetanus, pertussis, haemophilus, polio IPV	Infant >6 wk and child ≤5 yr: IM 0.5 mL at 2, 4, 6, and 15-18 mo	Hypersensitivity, polio outbreak, acute infection, immunosuppression
diphtheria, tetanus, pertussis, polio vaccine IPV	Kinrix, Quadracel	Immunity to diphtheria, tetanus, pertussis, polio vaccine IPV	Child: IM 0.5 mL	Hypersensitivity, polio outbreak, acute infection, immunosuppression
ebola zaire vaccine, live	Ervebo		1 mL (single-dose vial) once	Hypersensitivity
encephalitis, tick-borne vaccine	TicoVac	Prevention of tick-borne encephalitis	Child: 1-15 yr: IM 0.25 mL × 3 doses Adult/adolescent >16 yr: 0.50 mL × 3 doses	
H1N1 influenza A (swine flu) virus vaccine	Influenza A (H1N1)	Immunity to H1N1	Adult <50 yr, adolescent, child ≥2 yr: Intranasal 1 dose (roughly 0.1 mL) into each nostril; child 2-9 repeat dose ≥4 wk later Adult, adolescent, child ≥3 yr: IM 0.5 mL as a single dose; child 3-9 yr repeat dose ≥4 wk later (Sanofi) (CSL); child 4-9 yr repeat dose ≥4 wk later (Novartis); infants ≥6 mo, child <36 mo: IM 0.25 mL, repeat in 4 wk (Sanofi) Adult: IM 0.5 mL as a single dose (GSK)	
haemophilus b conjugate vaccine, diphtheria CRM_{197} protein conjugate (HbOC)	HibTITER	Polysaccharide immunization of children 2-6 yr against *H. influenzae* b, conjugate	**HibTITER (IM only)** Child: IM 0.5 mL Child 2-6 mo: 0.5 mL q2mo × 3 inj	Hypersensitivity, febrile illness, active infection

Continued

Appendix C Vaccines and Toxoids—cont'd

GENERIC NAME	TRADE NAME	USES	DOSAGE AND ROUTES	CONTRAINDICATIONS
haemophilus b conjugate vaccine, meningococcal protein conjugate (PRP-OMP)	PedvaxHIB	Immunization of child 2, 4, 6 mo	Child 7-11 mo: Previously unvaccinated 0.5 mL q2mo inj Child 12-14 mo: Previously unvaccinated 0.5 mL × 1 inj **PedvaxHIB (IM only)** Child 2-14 mo: 0.5 mL × 2 inj at 2, 4 mo of age (6 mo dose not needed), then booster at 12-18 mo against invasive disease Child ≥15 mo: Previously unvaccinated 0.5 mL inj	
hepatitis A vaccine, inactivated	Havrix, VAQTA	Active immunization against hepatitis A virus	Adult: IM 1440 EL units (Havrix) or 50 units (VAQTA) as a single dose; booster dose is the same given at 6, 12 mo Child 2-18 yr: IM 720 EL units (Havrix) or 25 units (VAQTA) as a single dose, booster dose is the same given at 6, 12 mo	Hypersensitivity
hepatitis B vaccine, recombinant	Engerix-B, PreHerbrion, Recombivax HB	Immunization against all subtypes of hepatitis B virus	Varies widely	Hypersensitivity to this vaccine or yeast
human papillomavirus recombinant vaccine, quadrivalent	Gardasil	Prevention of HPV types 6, 11, 16, 18, cervical cancer, genital warts, precancerous dysplastic lesions, anal cancer/anal intraepithelial neoplasia	Adult up to 26 yr and child >9 yr to 26 yr: IM give as 3 separate doses; 1st dose as elected; 2nd dose 2 mo after 1st dose; 3rd dose 6 mo after 1st dose	Child <9 yr, pregnancy, breastfeeding, geriatric patients, active disease, hypersensitivity
influenza virus vaccine	Afluria, FluMist, Fluvirin, Fluzone	Prevention of seasonal influenza	Adult and child >12 yr: IM 0.5 mL in 1 dose Adult 18-64 yr: ID 0.1 mL as a single dose Child 3-12 yr: IM 0.5 mL, repeat in 1 mo (split) unless 1978-1985 vaccine was given; also given nasal Child 6 mo to 3 yr: IM 0.25 mL, repeat in 1 mo (split) unless 1978-1985 vaccine was given; also given nasal child ≤2 yr	Hypersensitivity, active infection, chicken egg allergy, Guillain-Barré syndrome, active neurologic disorders
Japanese encephalitis virus vaccine, inactivated	Ixiaro	Active immunity against Japanese encephalitis (JE)	Adult and child >3 yr: IM 0.5 mL (deltoid), then 0.5 mL 28 days later. Give the second dose ≥1 wk before potential exposure Child ≥2 mo to <3 yr: IM 0.25 mL (anterolateral aspect of the thigh or deltoid for children 1-2 yr with adequate muscle mass), then 0.25 mL 28 days later	Hypersensitivity to murine, thimerosal; allergic reactions to previous dose

measles, mumps, and rubella vaccine, live	M-M-R-II	Prevention of measles, mumps, rubella	Adult: SUBCUT 1 vial; 2 vials separated by 1 mo, in person born after 1957 Child >15 mo and adult: SUBCUT 0.5 mL	Hypersensitivity, blood dyscrasias, anemia, active infection, immunosuppression; egg, chicken allergy; pregnancy, febrile illness, neomycin allergy, neoplasms
measles, mumps, rubella, varicella	ProQuad	Immunity to measles, mumps, rubella, varicella	Child: SUBCUT 0.5 mL	Hypersensitivity to eggs, neomycin, cancer, radiation, corticosteroids, blood dyscrasias, active untreated TB
meningococcal groups A, C, Y, W conjugate vaccine	MenQuadfi	Meningitis	Adult: IM 0.5 mL	Hypersensitivity to this product or any tetanus toxoid
meningococcal polysaccharide vaccine	Menomune-A/C	Prophylaxis to meningococcal meningitis	Adult and child >2 yr: SUBCUT 0.5 mL	Hypersensitivity to thimerosal, pregnancy, acute illness
pneumococcal 7-valent conjugate vaccine	Prevnar	Immunity against *Streptococcus pneumoniae*	Child: IM 0.5 mL × 3 doses (7-11 mo); × 2 doses (12-23 mo); × 1 dose >2-9 yr	Hypersensitivity to diphtheria toxoid or this product
pneumococcal 15-valent conjugate vaccine	Vaxneuvance	Pneumococcal immunization	Adult: IM 0.5 mL	
pneumococcal 20-valent conjugate vaccine	Prevnar 20	Pneumococcal immunization	Adult: IM 0.5 mL	
pneumococcal vaccine, polyvalent	Pneumovax 23	Pneumococcal immunization	Adult and child >2 yr: IM/SUBCUT 0.5 mL	Hypersensitivity, Hodgkin's disease, ARDS
poliovirus vaccine (IPV)	IPOL	Prevention of polio	Adult and child >2 yr: PO 0.5 mL, given q8wk × 2 doses, then 0.5 mL $^1/_2$-1 yr after dose 2 Infant: PO 0.5 mL at 2, 4, 18 mo; booster at 4-6 yr; may also be given: IPV at 2, 4 mo, then TOPV at 12-18 mo, booster at 4-6 yr	Hypersensitivity, active infection, allergy to neomycin/streptomycin, immunosuppression, vomiting, diarrhea
rabies vaccine, human diploid cell (HDCV)	Imovax, RabAvert	Active immunity to rabies	**Preexposure** Adult and child: IM 1 mL day 0, 7, 21, or 28 (total 4 doses) **Postexposure** Adult and child: IM 1 mL on day 0, 3, 7, 14, 28 (total 5 doses)	No contraindications

Continued

Appendix C Vaccines and Toxoids—cont'd

GENERIC NAME	TRADE NAME	USES	DOSAGE AND ROUTES	CONTRAINDICATIONS
rotovirus	RotaTeq, Rotarix	Prevents rotovirus	Infant: PO 3 doses given between 6 and 32 wk of age; 1st dose between 6-12 wk of age; 2nd and 3rd doses q4-10wk	Hypersensitivity to this product or latex, immunocompromised, blood products given within 6 wk, lymphatic disorders
smallpox and monkeypox vaccine, live, nonreplicating	Jynneos	Prevention of smallpox and monkeypox disease	Adult: SUBCUT 0.5 mL × 2 doses, 4 wk apart	Hypersensitivity
tetanus toxoid, adsorbed	No trade name	Tetanus toxoid: Used for prophylactic treatment of wounds	Adult and child: IM 0.5 mL q4-6wk × 2 doses, then 0.5 mL 1 yr after dose 2 (adsorbed); SUBCUT/IM 0.5 mL q4-8wk × 3 doses, then 0.5 mL ½-1 yr after dose 3, booster dose 0.5 mL q10yr	Hypersensitivity, active infection, poliomyelitis outbreak, immunosuppression
typhoid vaccine, parenteral typhoid vaccine, oral	Typhim Vi Vivotif Berna Vaccine	Active immunity to typhoid fever	Adult: PO 1 cap 1 hr before meals × 4 doses, booster q5yr Adult and child >10 yr: SUBCUT 0.5 mL, repeat in 4 wk, booster q3yr Child 6 mo-10 yr: SUBCUT 0.25 mL, repeat in 4 wk, booster q3yr	Parenteral: Systemic or allergic reaction, acute respiratory or other acute infection, intensive physical exercise in high temperatures Oral: Hypersensitivity, acute febrile illness, suppressive or antibiotic products
typhoid Vi polysaccharide vaccine	Typhim Vi	Active immunity to typhoid fever	Adult and child ≥2 yr: IM 0.5 mL as a single dose, reimmunize q2yr 0.5 mL IM, if needed	Hypersensitivity, chronic typhoid carriers
varicella-zoster virus vaccine	Varivax, Zostavax	Prevention of varicella zoster (chickenpox)	Adult and child ≥13 yr: SUBCUT 0.5 mL, 2nd dose SUBCUT 0.5 mL 4-8 wk later	Hypersensitivity to neomycin; blood dyscrasias, immunosuppression, active untreated TB, acute illness, pregnancy, diseases of lymphatic system
yellow fever vaccine	YF-Vax	Active immunity to yellow fever	Adult and child ≥9 mo: SUBCUT 0.5 mL deeply, booster q10yr Child 6-9 mo: same as above if exposed	Hypersensitivity to egg or chicken embryo protein, pregnancy, child <6 mo, immunodeficiency
zoster vaccine recombinant, adjuvanted	Shingrix	Prevention of herpes zoster (shingles)	Adult: IM 2 doses (0.5 mL each) at 0 and 2 to 6 months	History of severe allergic reaction (e.g., anaphylaxis) to any component of the vaccine or after a previous dose

Appendix D

Recent FDA Drug Approvals

GENERIC	TRADE	USE
daprodustat	Jesduvroq	To treat anemia caused by chronic kidney disease for adults on dialysis for at least four months
elacestrant	Orserdu	To treat estrogen receptor-positive, human epidermal growth factor receptor 2-negative, ESR1-mutated, advanced or metastatic breast cancer with disease progression following at least one line of endocrine therapy
tobruntinib	Jayprica	To treat relapsed or refractory mantle cell lymphoma in adults who have had at least two lines of systemic therapy, including a BTK inhibitor
bexagliflozin	Brenzavvy	To improve glycemic control in adults with type 2 diabetes mellitus as an adjunct to diet and exercise
lecanemab-irmb	Leqembi	To treat Alzheimer's disease

Formulas

Surface area rule:

$$\text{Child dose} = \frac{\text{Surface area } (m^2)}{1.73\ m^2} \times \text{Adult dose}$$

Calculating strength of a solution:

$$\frac{\textit{Solution Strength:}\ x}{100} = \frac{\textit{Desired Solution:}\ \text{Amount of drug desired}}{\text{Amount of finished solution}}$$

Calculating flow rate for IV:

$$\text{Rate of flow} = \frac{\text{Amount of fluid} \times \text{Administration set calibration}}{\text{Running time}}$$

$$\frac{x}{1} = \frac{(\text{mL})\ (\text{gtt/min})}{\text{min}}$$

Calculation of medication dosages:

Formula method:

$$\frac{\text{Amount ordered}}{\text{Amount on hand}} \times \text{Vehicle} = \text{Number of tablets, capsules, or amount of liquid}$$

Vehicle is the drug form or amount of liquid containing the dosage. Amounts used in calculation by formula must be in same system.

Ratio–proportion method:

1 tablet:tablet in mg on hand::*x* tablet order in mg
Know or have::Want to know or order

Multiply means and extremes, divide both sides by known amount to get *x*. Amounts used in equation must be in same system.

Dimensional analysis method:

$$\text{Order in mg} \times \frac{\text{1 tablet or capsule}}{\text{What 1 tablet or capsule is in mg}} = \text{Tablets or capsules to be given}$$

If amounts are in different systems:

$$\text{Order in mg} \times \frac{\text{1 tablet or capsule}}{\text{What 1 tablet or capsule is in g}} \times \frac{1}{1000\ \text{mg}} = \text{Tablets or capsules to be given}$$

Temperature conversion:

$F = C \times {}^{9}/_{5} + 32$
$C = {}^{5}/_{9}\ (F - 32)$

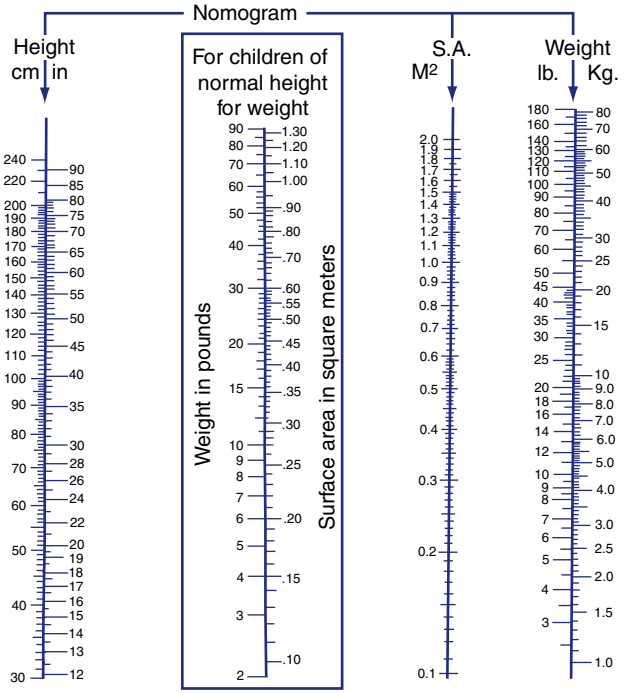
Nomogram for calculation of body surface area

Place a straight edge from the patient's height in the left column to the patient's weight in the right column. The point of intersection on the body surface area column indicates the body surface area (BSA). (Reproduced in Behrman RE, Kliegman RM, Jenson HB: *Nelson textbook of pediatrics,* ed 18, Philadelphia, 2011, WB Saunders; Nomogram modified from data of E. Boyd by CD West.)



Alternative (Mosteller's formula):

$$\text{Surface area } (m^2) = \sqrt{\frac{\text{Height (cm)} \times \text{Weight (kg)}}{3600}}$$

Antitoxins and antivenins

GENERIC NAME	TRADE NAME	USES	DOSAGE AND ROUTES	CONTRAINDICATIONS
Black widow spider antivenin (*Lactrodectus mactans*)	No trade name	Black widow spider bite	Adult and child: IM 2.5 ml, 2nd dose may be given if severe; give in anterolateral thigh, obtain test for sensitivity before inj	Hypersensitivity to this product or horse serum
Crotalidae antivenom, polyvalent	No trade name	Rattlesnake bite	Adult and child: IV 20-150 ml depending on seriousness of bite, may give additional doses based on response	Hypersensitivity
Diphtheria antitoxin, equine	No trade name	Diphtheria	Adult and child: IM/slow IV 20,000-120,000 units, may give additional doses after 24 hr	Hypersensitivity
Micrurus fulvius antivenin	No trade name	East/Texas coral snake bite	Adult and child: IV 30-50 ml, give through running IV line of normal saline, give 1st 1-2 ml over 4-5 min, watch for allergic reaction	Hypersensitivity
Scorpion antivenin (centruroides sculpturatus equine)	Anascorp	Scorpion stings	Adult and child: IV 3 vial/50 ml NS given over 10 min, may give other doses 1 vial/50 ml NS over 10 min q30-60min	N/A

Abbreviations

ABG	arterial blood gas
ADA	American Diabetes Association
ADH	antidiuretic hormone
ALT	alanine aminotransferase
ANA	antinuclear antibody
APLA	antiphospholipid antibody syndrome
APTT	activated partial thromboplastin time
ASA	acetylsalicylic acid, aspirin
AST	aspartate aminotransferase (SGOT)
AV	atrioventricular
bid	twice a day
BPH	benign prostatic hypertrophy
BPM	beats per minute
BUN	blood urea nitrogen
CAD	coronary artery disease
CBC	complete blood cell count
CCr	creatinine clearance
CHF	congestive heart failure
CNS	central nervous system
CONT	continuous
COPD	chronic obstructive pulmonary disease
CPAP	continuous positive airway pressure
CPK	creatine phosphokinase
CPS	carbamoyl phosphate synthetase
C&S	culture and sensitivity
CSF	cerebrospinal fluid
CTCL	cutaneous T-cell lymphoma
CV	cardiovascular
CVA	cerebrovascular accident
CVP	central venous pressure
D&C	dilatation and curettage
DIC	diffuse intravascular coagulation
DIR INF	direct infusion
D_5W	5% glucose in distilled water
DVT	deep vein thrombosis
ECG	electrocardiogram (EKG)
EDTA	ethylenediamine tetraacetic acid
EEG	electroencephalogram
EPS	extrapyramidal symptom
ESR	erythrocyte sedimentation rate
EXT REL	extended release
FBS	fasting blood sugar
FHT	fetal heart tones
FSH	follicle-stimulating hormone
GABA	γ-aminobutyric acid
GPC	giant papillary conjunctivitis
gr	grain
GT	glucose tolerance test
GU	genitourinary
GVHD	graft-versus-host disease
H_2	histamine$_2$
hCG	human chorionic gonadotropin
Hct	hematocrit
HDCV	human diploid cell rabies vaccine
Hgb	hemoglobin
H & H	hematocrit and hemoglobin
5-HIAA	5-hydroxyindoleacetic acid
HIV	human immunodeficiency virus (AIDS)
HR	heart rate
IBD	inflammatory bowel disease
IC	intracardiac
ICP	intracranial pressure
ID	intradermal
IgG	immunoglobulin G
IM	intramuscular
INF	infusion
INH	inhalation
inj	injection
I&O	intake and output
INT	intermittent
IPPB	intermittent positive-pressure breathing
IT	intrathecal
ITP	idiopathic thrombocytopenic purpura
IUD	intrauterine device
IV	intravenous
IVP	intravenous pyelogram
K	potassium
LDH	lactic dehydrogenase
LE	lupus erythematosus
LFT	liver function test
LH	luteinizing hormone
LOC	level of consciousness
LR	lactated Ringer's solution
LT	leukotriene
m	minim
m^2	square meter
MAC	monitored anesthesia care
MAOI	monoamine oxidase inhibitor
mcg	microgram
mEq	milliequivalent
mg	milligram
MI	myocardial infarction
ml	milliliter
mm	millimeter
mo	month
Na	sodium
ng	nanogram
NGU	non-gonococcal urethritis

NHL	non-Hodgkin's lymphoma
NPO	nothing by mouth (Lat. nulla per os)
NS	normal saline
OBS	organic brain syndrome
OTC	over-the-counter
P56	plasma-lyte 56
$PaCO_2$	arterial carbon dioxide tension (pressure)
PaO_2	arterial oxygen tension (pressure)
PAT	paroxysmal atrial tachycardia
PBI	protein-bound iodine
PCI	percutaneous coronary intervention
PCWP	pulmonary capillary wedge pressure
PEEP	positive end-expiratory pressure
pH	hydrogen ion concentration
PO	by mouth
PP	postprandial
PPHN	persistent pulmonary hypertension of the newborn
prn	as required
PT	prothrombin time
PTT	partial thromboplastin time
PVC	premature ventricular contraction
pwd	powder
qam	every morning
qhr	every hour
q2hr	every 2 hours
q3hr	every 3 hours
q4hr	every 4 hours
q6hr	every 6 hours
q12hr	every 12 hours
qid	four times daily
qpm	every night
RAIU	radioactive iodine uptake
RBC	red blood cell count or red blood cell
RECT	rectal
ROM	range of motion
SARS	severe acute respiratory syndrome
SCr	serum creatinine
SIMV	synchronous intermittent mandatory ventilation
SL	sublingual
SLE	systemic lupus erythematosus
sol	solution
STD	sexually transmitted disease
SUBCUT	subcutaneous
supp	suppository
SUS REL	sustained release
syr	syrup
TD	transdermal
tid	three times daily
tinc	tincture
TPN	total parenteral nutrition
TSH	thyroid-stimulating hormone
TT	thrombin time
UA	urinalysis
UTI	urinary tract infection
UV	ultraviolet
VMA	vanillylmandelic acid
VS	vital sign
WBC	white blood cell count
